* Tolimidone (CP-26154; MLR-1023) is a compound which was found to stimulate secretion of gastric mucosa. Tolimidone is also a novel, clinical stage drug candidate for the treatment of Type 2 Diabetes and Nonalcoholic Steatohepatis (NASH). Tolimidone improves glycemic control by selectively activating the enzyme lyn kinase, which has been shown to modulate the insulin-signaling pathway. Tolimidone is the first described specific and direct activator of Lyn kinase that elicits glycemic control activity through potentiation of insulin activity. Lyn kinase is an enzyme that modulates insulin sensitivity and dyslipidemia. Lyn kinase may also play a role in promoting liver regeneration and hepatocyte preservation. Tolimidone does not activate the PPAR pathway. Tolimidone has demonstrated improvement in multiple components of NASH in a comprehensive pre-clinical model of NASH: Reduction in NAS score, Decrease in liver weight, Reduction in adiposity, Decrease in insulin resistance. Adhera is developing MLR-1023 (tolimidone) as a new drug for Type I diabetes with a focus on C-peptide positive patients.

* Tropisetron hydrochloride is a serotonin 5-HT3 receptor antagonist used mainly as an antiemetic to treat nausea and vomiting following chemotherapy, although it has been used experimentally as an analgesic in cases of fibromyalgia. The drug has also been approved for the prophylaxis and treatment of post-operative nausea and vomiting. 5-HT3 receptors are excitatory ligand-gated cation channel receptors that can be found in the presynaptic vagal afferents, the area postrema and the gastrointestinal tract. Stimulation of these receptors seems to be important in the emetic response and the gag reflex. It has also been shown that tropisetron shows agonistic effects on the 7 nicotinic acetylcholine receptor. This receptor is associated with auditory sensory gating, a neural mechanism believed to have important roles in information processing and cognition, both diminished in people with schizophrenia. Tropisetron acts as both a selective 5-HT3 receptor antagonist and alpha7-nicotinic receptor agonist. Tropisetron is a well-tolerated drug with few side effects. Headache, constipation, and dizziness are the most commonly reported side effects associated with its use. Hypotension, transient liver enzyme elevation, immune hypersensitivity syndromes and extrapyramidal side effects have also been associated with its use on at least one occasion.There have been no significant drug interactions reported with this drug's use. It is broken down by the hepatic cytochrome P450 system and it has little effect on the metabolism of other drugs broken down by this system. Tropisetron improved the treatment of tendinopathies considerably, with the effect being comparable to the topical application of local anaesthetics combined with depot corticosteroids. Tropisetron as a treatment for

trigger points in myofascial pain syndrome also brought about rapid and prolonged relief in the majority of cases. The analgesic effect was far superior to the action of local anaesthetics. 5-HT3 receptor antagonists from various sources have been published for a wide variety of uses, for example for the treatment of visceral pain, migraine, vascular and cluster headache, trigeminal neuralgia, arrhythmia, serotonin-induced gastro-intestinal disorders, including emesis induced by anti-cancer agents, anxiety, stress-related psychiatric disorders, depression, cognitive disorders, social withdrawal, panic attacks, agoraphobia, lung embolism, rhinitis or serotonin-induced nasal disorders, fibromyalgia and local treatment of pain caused by various non-inflammatory or inflammatory conditions. Furthermore, 5-HT3 receptor antagonists are useful for the treatment of diseases caused or influenced by activation of thrombocytes. Thrombocytes play a central role in blood coagulation (clotting) and are therefore of high importance in the pathogenesis of cardiac infarction and stroke, also in thrombosis of the veins and inflammatory conditions in the development of atherosclerosis.

* VPS35 Factor or vacuolar protein sorting ortholog 35 is a protein involved in autophagy and is implicated in neurodegenerative diseases, such as Parkinson's Disease (PD) and Alzheimer's Disease (AD). There are numerous pathways affected by altered VPS35 levels and activity, which have clinical significance in neurodegeneration. VPS35 levels peak at postnatal days 10-15 and then decline to a low, stable level throughout adulthood. Various mechanisms in PD are thought to contribute to the generation of reactive oxygen species ROS, including the metabolism of dopamine, calcium homeostasis imbalances, dysfunction in PD-causing gene products (e.g. DJ-1, PINK1, parkin or alpha-synuclein), aging as well as mitochondrial dysfunctions. VPS35 represents an important regulator of crucial pathways involved in PD pathogenesis controlling the accumulation and clearance of alpha-syn, mitochondrial dynamics and synaptic functions. VPS35 can clear tau proteins, a hallmark of Alzheimer’s disease, in the brain. In progressive supra-nuclear palsy PSP and Picks’ disease, tau is the only protein to form deposits in the brain, unlike Alzheimer’s disease, where both tau and beta-amyloid accumulate.

* WAY-315193 is a norepinephrine reuptake inhibitor, used for multiple indications including major depressive disorder, attention deficit hyperactivity disorder, chronic fatigue syndrome, nervous system disorders, sexual dysfunction, gastrointestinal and genitourinary disorders, stress urinary incontinence, gynecological disorders, vasomotor symptoms, and pain disorders such as diabetic neuropathy and fibromyalgia.

1.3.1.41 RT-MB-53

https://archive.org/details/Resonant_Therapy-Molecular_Biology_53

Baicalein; Biapenem; BRL-44408; Cenicriviroc; Compound-4210; Cotadutide; ERDRP-0519; GKT-137831; IAP Factor-C188-9; Lanifibranor; Liver Dysfunction Mix; LX-9211; Masitinib; ML-290; Nadide; Natrocitral; Oolonghomobisflavan-A; Pepinemab; PF-00446687; Phenylmethimazole; Ponsegromab; PRI-724; PX-20606; Resmetirom; RG-7834; Solithromycin; Terlipressin; Tezepelumab; Verdiperstat

* Baicalein (5,6,7-trihydroxyflavone) is a flavone, a type of flavonoid. Baicalein shows an xiolytic effects in mice without incidence of sedation or myorelaxation. Baicalein is also an antagonist of the estrogen receptor, or an antiestrogen. Studies in cytokine signaling have uncovered the critical role of human TSLP (hTSLP) in allergic responses. Recentlt y, Baicalein was found to be the first small molecule to block TSLP signaling pathways. The flavonoid has been shown to inhibit certain types of lipoxygenases and act as an an ti-inflammatory agent. It has antiproliferative effects on ET-1-induced proliferation of pul monary artery smooth muscle cell proliferation via inhibition of TRPC1 channel expressi on. Possible antidepressant effects have also been attributed to baicalein in animal rese arch. Baicalein is an inhibitor of CYP2C9, an enzyme of the cytochrome P450 system th at metabolizes drugs in the body. Baicalein has been shown to inhibit Staphylococcus a ureus biofilm formation and the quorum sensing system in vitro. It has also been shown to be effective in vitro against all forms of Borrelia burgdorferi and Borrelia garinii. Baical ein has a role as an antioxidant, a hormone antagonist, a prostaglandin antagonist, an EC 1.13.11.31 (arachidonate 12-lipoxygenase) inhibitor, an EC 1.13.11.33 (arachidonate 15-lipoxygenase) inhibitor, a radical scavenger, an EC 3.4.21.26 (prolyl oligopeptidase) i nhibitor, an anti-inflammatory agent, a plant metabolite, a ferroptosis inhibitor, an anticor onaviral agent, an EC 3.4.22.69 (SARS coronavirus main proteinase) inhibitor, an angio genesis inhibitor, an antineoplastic agent, an EC 4.1.1.17 (ornithine decarboxylase) inhi bitor, an antibacterial agent, an antifungal agent and an apoptosis inducer.

* Biapenem is a carbapenem antibiotic. Carbapenems are a class of highly effective anti biotic agents commonly used for the treatment of severe or high-risk bacterial infections. This class of antibiotics is usually reserved for known or suspected multidrug-resistant (MDR) bacterial infections. Similar to penicillins and cephalosporins, carbapenems are members of the beta lactam class of antibiotics, which kill bacteria by binding to penicilli n-binding proteins, thus inhibiting bacterial cell wall synthesis. However, these agents in dividually exhibit a broader spectrum of activity compared to most cephalosporins and p enicillins. Furthermore, carbapenems are typically unaffected by emerging antibiotic resi stance, even to other beta-lactams. It has in vitro activity against anaerobes. Biapenem is a 1-beta-methylcarbapenem antibiotic with a wide range of antibacterial activity. Biape nem has similar antibacterial activity to that of imipenem, but is more stable against hum an renal dehydropeptidase-I and with less neurotoxicity.. Biapenem had activity compar able to those of imipenem and meropenem against all groups of anaerobes with MICs f or 90% of the strains tested of 0.06 to 2 micrograms/ml. Against the Bacteroides fragilis group, biapenem was more active than ampicillin-sulbactam, ticarcillin-clavulanate, pipe racillin, cefoxitin, cefotaxime, and ceftriaxone. Biapenem was also active against all of th e B. capillosus, Prevotella, Clostridium, and Eubacterium strains and anaerobic cocci te sted. Against all of the anaerobes tested, biapenem was 32- and 4-fold more active than clindamycin and metronidazole, respectively. These data indicate broad-spectrum activit y by biapenem against anaerobes.

* BRL-44408 is an adrenergic alpha-antagonist. Adrenergic alpha-antagonists are used i

n the treatment of hypertension, vasospasm, peripheral vascular disease, shock, and ph eochromocytoma. In experimental cholestatic cirrhosis, short-term therapy with the alph a2 antagonist BRL44408 significantly decreased portal pressure and did not alter syste mic haemodynamics even without beta-blocking agents cotherapy.

* Cenicriviroc. The C-C chemokine receptor (CCR) 5 is an important contributor in fibros is progression and hepatic stellate cells HSC-Kuppfer cell interaction, which makes it po ssible for cenicriviroc, an antagonist of CCR2/CCR5, to be a potential antifibrotic agent. The inhibitor of CCR5 is predicted to inhibit HSCs from activation, proliferation, and migr ation. has dramatic positive effects on anti-inflammation and antifibrosis in animal fibrosi s models. Furthermore, the antifibrotic effect of cenicriviroc was demonstrated in a phas e 2 clinical trial and in a phase 2b trial containing 289 NASH patients with significantly i mproved liver fibrosis but no worsening steatohepatitis (20%) when compared with plac ebo group (10%) after 1 year of cenicriviroc therapy.

* Compound 4210 (also 2,7-Diaminomitosene, or 2,7-DAM) is a synthetic molecule with therapeutic use for treating viral infections, especially encephalitic alphavirus infections. 2,7-Diaminomitosene, the major metabolite of the antitumor antibiotic mitomycin C, form s DNA adducts in tumor cells and, it is non-cytotoxic. The compound 4210 showed antiv iral efficacy by up regulation of type 1 interferon (IFN) specifically IFN-beta. The compou nd 4210 was designed and synthesized by a structure-based approach targeting the intr acellular adaptor protein, myeloid differentiation primary response protein 88 (MyD88). Besides having an antiviral effect, the compound 4210 also demonstrated therapeutic ef ficacy for treating inflammatory syndrome associated with Gram positive bacterial infecti ons such as exposure to staphylococcal enterotoxin B (SEB) induced toxic shock syndr ome (TSS) in mice and can potentially be used in clinical set up for treating sepsis and s eptic shock. In addition, the application of molecule 4210 can treat sepsis and septic sh ock triggered by exposure to other biological agents such as Francisella tularensis or Bu rkholderia mallei known to cause tularemia and glanders, respectively. The molecule 42 10 has the potential for a broad-spectrum therapeutic use.

* Cotadutide (MEDI0382), a dual GLP-1 and glucagon receptor GCGR agonist, has bee n reported to exert multifactorial reductions in NAFLD activity score, pro-peptide of type III collagen level, fibrosis-4 index to an extent more pronounced than the GLP-1 mono a gonist Liraglutide.

* ERDRP-0519 is an antiviral drug which is the first drug specifically developed to target the measles morbillivirus. It acts as an inhibitor of the viral enzyme RNA polymerase whi ch is essential for viral replication, and in animal studies showed good oral bioavailabilit y and protected ferrets from otherwise lethal doses of a morbillivirus when administered up to three days after infection.

* GKT-137831, a dual inhibitor of NADPH oxidase (NOX) 1/4, can inhibit both NOX 1 an d NOX 4 to reduce reactive oxidative species (ROS) effect in hepatic stellate cells HSCs. GKT137831 showed significant improvement of liver fibrosis in mice induced by carbon tetrachloride (CCL4) and duct ligation. What is more, in an ongoing clinical trial to asses

s safety and efficacy of GKT137831 in patients with primary biliary cholangitis, GKT137 831 significantly improved serological cholestasis parameters and other relevant results (such as serum enzymes levels and liver fibrosis).

* IAP Factor-C188-9. Alkaline phosphatase intestinal also known as IAP is a type of alka line phosphatase that in humans is encoded by the IAP gene. Endogenous IAP is decre ased during liver fibrosis, perhaps contributing to the gut barrier dysfunction and worsen ing fibrosis. Oral IAP protects the gut barrier and further prevents the development of liv er fibrosis via a TLR4-mediated mechanism. (doi:10.7150/thno.48468). C188-9 is a sm all molecule which showed antitumor activity in vitro in three hepatocellular carcinoma c ell lines. In mice with hepatocyte-specific deletion of Pten (HepPten- mice), C188-9 treat ment blocked hepatocellular carcinoma tumor growth, reduced tumor development, and reduced liver steatosis, inflammation, and bile ductular reactions, resulting in improvem ent of the pathological lesions of NASH. Remarkably, C188-9 also greatly reduced liver i njury in these mice as measured by serum aspartate transaminase and alanine transam inase levels. Analysis of gene expression showed that C188-9 treatment of HepPten- mi ce resulted in inhibition of signaling pathways downstream of STAT3, STAT1, TREM-1, a nd Toll-like receptors. In contrast, C188-9 treatment increased liver specification and diff erentiation gene pathways. (DOI: 10.1158/1078-0432.CCR-16-2253) Elevated liver enzy mes often indicate inflammation or damage to cells in the liver. Inflamed or injured liver cells leak higher than normal amounts of certain chemicals, including liver enzymes, int o the bloodstream, elevating liver enzymes on blood tests. The recording inhibits the pro duction of both alanine transaminase (ALT) and aspartate transaminase (AST).

* Lanifibranor is a pan-PPAR receptor agonist, meaning that it works by increasing the e ffects of all three PPAR receptors. It is hoped that by acting on all PPAR receptor subtyp es, Lanifibrinor will be more effective in reducing fibrosis than PPAR receptors that only act on one receptor subtype. Lanifibranor received orphan designation for the treatment of scleroderma from both the U.S. Food and Drug Administration (FDA) and the Europe an Medicines Agency (EMA). Lanafibranor is also undergoing a Phase 2b clinical trial in vestigating its efficacy in patients with non-alcoholic steatohepatitis (NASH) with compe nsated cirrhosis. NASH with compensated cirrhosis represents a serious stage of the di sease and is becoming the leading cause for liver transplantation, which today represen ts the only available treatment option for patients who have progressed to end-stage NA SH. Given the broad range of activity of lanifibranor as a pan-PPAR agonist on multiple f eatures of NASH, including beneficial effects on metabolism, inflammation, ballooning, fi brosis and vascular manifestations.

* Liver Dysfunction Mix adressess portal hypertension, enlarged liver, fatty liver (hepatic steatosis), liver cirrhosis, liver inflammation, hepatic fibrosis. hepatocellular injury, gastro intestinal motility, excess urination, liver enzyme levels (ALT, ASP, ALP), non-alcoholic fa tty liver (NAFL), non-alcoholic steatohepatitis (NASH) and, alcoholic liver disease (ALP). Each pair plays for 5m. In order,

* LX-9211 is a potent, orally delivered, selective small molecule inhibitor of AAK1. Preclinical studies of LX9211 demonstrated central nervous system penetration and reduction in pain behavior in models of neuropathic pain without affecting opiate pathways. LX9211 has received Fast Track designation from the U.S. Food and Drug Administration for the development in diabetic peripheral neuropathic pain.

* Masitinib is a tyrosine-kinase inhibitor used in the treatment of mast cell tumours in animals, specifically dogs. Since its introduction in November 2008 it has been distributed under the commercial name Masivet. It has been available in Europe since the second part of 2009. Masitinib has been studied for several human conditions including melanoma, multiple myeloma, gastrointestinal cancer, pancreatic cancer, Alzheimer disease, multiple sclerosis, rheumatoid arthritis, mastocytosis, amyotrophic lateral sclerosis and COVID-19. Masitinib is a tyrosine kinase inhibitor which inhibits tyrosine kinases, enzymes responsible for the activation of many proteins by signal transduction cascades. Specifically, masitinib targets the receptor tyrosine kinase c-Kit which is found to be overexpressed or mutated in several types of cancer. Masitinib has also additional targets, it also inhibits the platelet derived growth factor receptor (PDGFR), lymphocyte-specific protein tyrosine kinase (Lck), focal adhesion kinase (FAK) and fibroblast growth factor receptor 3 (FGFR3) as well as CSF1R. Masitinib has been shown to block the replication of SARS-CoV-2 by inhibiting its main protease, 3CLpro. Masitinib showed >200-fold reduction in viral titers in the lungs and nose of mice infected with SARS-CoV-2.

* ML-290 is a small molecule agonist of the human relaxin receptor, relaxin family peptide receptor 1 (RXFP1). ML290 targets the expression of fibrosis-related genes in primary human stellate cells. RNA sequencing analysis of TGF-b1–activated LX-2 cells showed that ML290 treatment primarily affected extracellular matrix remodeling and cytokine signaling, with expression profiles indicating an antifibrotic effect of ML290. ML290 treatment in human liver organoids with LPS-induced fibrotic phenotype resulted in a significant reduction of type-I collagen. The pharmacokinetics of ML290 in mice demonstrated its high stability in vivo, as evidenced by the sustained concentrations of compound in the liver. In mice expressing human RXFP1 gene treated with carbon tetrachloride, ML290 significantly reduced collagen content, a-smooth muscle actin expression, and cell proliferation around portal ducts. In conclusion, ML290 demonstrated antifibrotic effects in liver fibrosis. Chronic liver fibrosis plays a crucial role in the progression of most liver diseases, including chemical intoxication, viral infection, alcoholic liver disease, and nonalcoholic steatohepatitis. Liver fibrosis is accompanied

by changes in the extracellular matrix (ECM) with abnormal deposition of collagen, leading to the formation of permanent fibrous scar, inflammation,and subsequent degeneration of the liver tissue struc-ture. When liver fibrosis progresses unchecked, it often leads to organ failure or cancer.

* Nadide (Nicotinamide adenine dinucleotide, also NAD+) is a dinucleotide of adenine and nicotinamide. It has coenzyme activity in redox reactions and also acts as a donor of ADP-ribose moieties. During aging, NAD+ levels decline, and many enzymes associated with NAD+ degradation and biosynthesis are altered. Many of the cellular processes that influence or are influenced by aging — such as metabolic dysfunction, DNA repair failure, genomic instability, inflammation, cellular senescence, and neurodegeneration — are regulated by NAD+ levels. Also, this decline in NAD+ levels during aging has been linked to the development and progression of aging-related diseases, including atherosclerosis, arthritis, hypertension, cognitive decline, diabetes, and cancer. NAD+ decline at the core of hallmarks of aging. The age-dependent decline in NAD+ levels contribute to many hallmarks of aging. This includes DNA damage, epigenetic alteration, deregulated nutrient-sensing, loss of proteostasis, altered cellular communication, cellular senescence, stem cell exhaustion, mitochondrial dysfunction, compromised autophagy, and possibly telomere attrition.

* Natrocitral and water. From the medical point of view trisodium citrate is used as alkalinizing agent. It works by neutralizing excess acid in the blood and urine. It has been indicated for the treatment of metabolic acidosis. Natrocitral is an ingredient used for the anticoagulation of whole blood as part of automated apheresis procedures. Used as an anticoagulant during plasmophoresis as well as a neutralizing agent in the treatment of upset stomach and acidic urine. Natrocitral is also used to associated treatment for these conditions: Acidosis, Allergic cough, Allergies, Asthma, Asthma Chronic, Cough, Common Cold, Cough, Coughing caused by Bronchitis, Dehydration, Gouty Arthritis, Heartburn, Metabolic Acidosis, Phlegm, Airway secretion clearance therapy, Oral rehydration therapy, Plasmapheresis, Urine alkalinization therapy, Fluid and electrolyte maintenance therapy, Irrigation during surgical procedures, Irrigation of the ocular surface therapy. Upon absorption, trisodium citrate dissociates into sodium cations and citrate anions; organic citrate ions are metabolized to bicarbonate ions, resulting in an increase in the plasma bicarbonate concentration, the buffering of excess hydrogen ion, the raising of blood pH, and potentially the reversal of acidosis. In addition, increases in free sodium load due to trisodium citrate administration may increase intravascular blood volume, facilitating the excretion of bicarbonate compounds and an anti-urolithic effect.

* Oolonghomobisflavan-A Long-term molecular dynamics simulations revealed Oolonghomobisflavan-A (Tea bioactive molecule) as a potential lead molecule compared to repurposed drugs (Atazanavir, Darunavir, and Lopinavir) against the Main protease of SARS-CoV-2. Oolonghomobisflavan-A has been shown to inhibit the growth of the human immunodeficiency virus (HIV) as well. OFA exhibits antioxidant activity against both lipid peroxidation and oxidative modification of apo B-100 in LDL oxidized by ROS and RNS. Polyphenols in oolong tea may prevent atherosclerosis by reducing

oxidative stress. Oxidation of low-density lipoprotein (LDL) by reactive oxygen species (ROS) and reactive nitrogen species (RNS) has been suggested to be involved in the onset of atherosclerosis. This chemical also possess anticancer and antidiabetic properties.

* Pepinemab is a novel monoclonal antibody that blocks the activity of SEMA4D, and preclinical testing has demonstrated the beneficial effects of anti-SEMA4D treatment in a variety of neurodegenerative disease models. SEMA4D regulates the migration and activation of microglia and astrocytes, brain cells known for their role in promoting inflammation. Their chronic activation is thought to contribute to neurodegeneration. Astrocytes' overactivation also halts the cell's normal function, which includes supporting a balance between energy metabolism and nerve cell activity. Impaired brain metabolism is seen in several neurodegenerative disorders, including Huntington's. SEMA4D also has been shown to halt nerve cell development and repair of the loss of myelin (the protective sheath around nerve cell fibers), promote the death of nerve cells, and disrupt the blood-brain barrier. By blocking SEMA4D, pepinemab was designed to limit inflammation, normalize metabolism, promote myelin repair and prevent blood-brain barrier disruption. Preclinical data in a mouse model of the disease has shown that pepinemab can protect against brain shrinkage, a hallmark of Huntington's disease. The antibody also prevented spatial memory loss and lessened anxiety-like behaviors. The U.S. Food and Drug Administration has granted pepinemab fast track and orphan drug designations for the treatment of Huntington's disease. In addition to its potential in HD, pepinemab holds promise as a treatment for Alzheimer's disease (AD), multiple sclerosis (MS) and amyotrophic lateral sclerosis (ALS).

* PF-00446687 is a drug developed for the treatment of erectile dysfunction, which is a non-peptide agonist selective for the melanocortin receptor subtype MC4. It was found to be active in preliminary human trials, with the 200mg dose being of similar effectiveness to 100mg sildenafil, though lower doses were ineffective. While it is unclear whether PF-00446687 itself will be potent and effective enough to be developed for medical use, it has demonstrated that
selectively targeting the MC4 subtype can produce similar aphrodisiac effects to older non-selective peptide-based melanocortin receptor agonists like melanotan II and bremelanotide, without the side effects caused by action at the other melanocortin receptor subtypes.

* Phenylmethimazole (C10) is a derivative of methimazole with anti-inflammatory properties. It is a novel TLR signaling inhibitor, which could decrease constitutive Wnt5a and TLR3 levels together with cell growth and migration. TLR3 is functional in human pancreatic cancer and melanoma cell lines. C10 is effective at inhibiting human pancreatic cancer and malignant melanoma tumor growth in vivo in nude or severe combined immunodeficient mice and associate this with inhibition of signal transducers and activators of transcription 3 activation. Studies performed both in vitro and in vivo have shown that C10 is able to block the production of multiple cytokines, chemokines, and other proinflammatory molecules involved in the pathogenesis of nflammatory / autoimmune diseases, including diabetes and nonalcoholic fatty liver disease (NAFLD).

Particularly, C10 is effective in reducing the increased secretion of cytokines in animal models of endotoxic shock. These effects are not limited to the endotoxic shock, but might also be applied to any disease characterized by the presence of a “cytokine storm”.

* Ponsegromab is a monoclonal antibody directed against the human growth differentiation factor 15 (GDF15; MIC-1), with potential anti-cachexia activity. Upon administration, ponsegromab targets and binds to GDF15, thereby preventing the binding of GDF15 to its receptor glial-cell-derived neurotrophic factor (GDNF) family receptor alpha-like (GFRAL) and blocking GDF15 / GFRAL-mediated signaling. This may abrogate loss of appetite and uncontrolled weight loss associated with high serum levels of GDF15. GDF15, a stress response cytokine and divergent member of the transforming growth factor beta (TGF-beta) superfamily, plays a key role in the regulation of body weight through central mechanisms. High GDF15 plasma levels, as seen in individuals with advanced cancers, are associated with loss of body mass.

* PRI-724 (alias ICG-001) is an inhibitor of CBP/beta-catenin, which has shown antifibrotic effect through inhibiting expression of alpha-smooth muscle actin (alpha-SMA) and collagen 1. Previous studies reported that PRI-724 attenuated HSC activation and ECM accumulation in CCL4-induced mouse model of liver fibrosis and decreased fibrosis severity in liver fibrosis mouse model induced by hepatitis C virus (HCV). Noticeably, a single-center, open-label phase I trial showed that after the administration of PRI-724 in patients with HCV cirrhosis. Currently, a phase I/IIa clinical trial to assess safety and effectiveness of PRI-724 for patients with liver cirrhosis derived from hepatitis C or B virus is ongoing.

* PX-20606 is a farnesoid X receptor (FXR) non-steroidal agonist. This bile-acid-responsive transcription factor belongs to the nuclear receptor superfamily and is highly expressed in the liver and the small intestine. FXR controls the expression of genes involved in metabolic regulation, inflammation, hepatic fibrosis and vascular homeostasis. In contrast to other steroidal counterparts, PX-20606 evades enterohepatic recirculation. In vascular endothelial cells, FXR activation increased eNOS and thus nitric oxide (NO) content while, in endothelial cells and liver tissue, FXR suppressed the inflammatory response by reducing inducible NOS (iNOS) and COX2 expression. In addition, FXR agonism improved liver injury in experimental cholestatic, toxic and NASH liver disease models. Furthermore, in cirrhotic rats, FXR agonists significantly reduced liver inflammation and fibrosis, which was related to reduced expression of inflammatory and angiogenic cytokines. FXR agonists have been shown to reduce bacterial overgrowth, intestinal inflammation and mucosal injury, which improved the gut barrier and reduced bacterial translocation.

* Resmetirom. Non-alcoholic steatohepatitis (NASH) is characterised by hepatic steatosis, inflammation, hepatocellular injury, and progressive liver fibrosis. Resmetirom (MGL-3196) is a liver-directed, orally active, selective thyroid hormone receptor-beta agonist designed to improve NASH by increasing hepatic fat metabolism and reducing lipotoxicity. Preclinical, toxicology, Phase 1, and Phase 2 clinical data suggest

resmetirom has an attractive, differentiated profile as a potential treatment for non-alcoholic steatohepatitis (NASH), non-alcoholic fatty liver disease (NAFLD) and associated dyslipidemias.

* RG-7834 is a small-molecule compound belonging to the chemical class of the dihydroquinolizinones. This compound was first identified as a potent inhibitor for Hepatitis B Vitrus surface antigen secretion, and PAPD5 and PAPD7 were subsequently shown to be its cellular targets. Further studies revealed that small-molecule inhibition of PAPD5 and PAPD7 also reduce Hepatitis A Vitrus infection in human hepatocyte cells and human liver organoids. RG7834 inhibits both HAV and HBV. (https://doi.org/10.1016/j.celrep.2021.108859)

* Solithromycin, a strongly effective macrolide antibiotic, has shown in a phase 2 open-label trial that NAS (average reduction, 1.3) and alanine aminotransferase (ALT) serum level (average reduction, 17.8 U/L) was diminished after treatment with solithromycin for 90 days.

* Terlipressin is an analogue of vasopressin used as a vasoactive drug in the management of low blood pressure. It has been found to be effective when norepinephrine does not help. It also helps prevent urination. Indications for use include norepinephrine-resistant septic shock and hepatorenal syndrome. In addition, it is used to treat bleeding esophageal varices. Terlipressin must not be used during pregnancy. Terlipressin, commonly used in cirrhosis lowers the pressures in the portal venous system.

* Tezepelumab is a human monoclonal antibody designed for the treatment of asthma and atopic dermatitis. It blocks thymic stromal lymphopoietin (TSLP), an epithelial cytokine that has been suggested to be critical in the initiation and persistence of airway inflammation. TSLP is released in response to multiple triggers associated with asthma exacerbations, including allergens, viruses and other airborne particles. Expression of TSLP is increased in the airways of patients with asthma and has been correlated with disease severity. Blocking TSLP may prevent the release of pro-inflammatory cytokines by immune cells, resulting in the prevention of asthma exacerbations and improved asthma control. Tezepelumab acts at the top of the inflammation cascade and has the potential to treat a broad population of severe asthma patients regardless of their type of inflammation.

* Verdiperstat, also known as BHV-3241, is an oral, brain-penetrant, irreversible inhibitor of MPO. MPO is implicated in neurodegenerative diseases like ALS. Verdiperstat showed beneficial effects on microglial activation in animal models of neurodegenerative diseases including multiple system atrophy and Parkinson’s diseaseVerdiperstat received orphan drug designation from FDA for multiple system atrophy. Verdiperstat is currently being tested in patients with amyotrophic lateral sclerosis (ALS). The MPO enzyme catalyzes the generation of reactive oxygen species by activated microglia and other immune cells. The hypothesized mechanism of action of verdiperstat includes reduction of oxidative stress and neuroinflammation, and

countering cell death due to pathological microglia activation. Treating mice with verdiperstat reduced microglial activation, alpha-synuclein aggregation, and neurodegeneration, and improved motor function. Delaying treatment until mice had developed full-blown pathology still reduced microglial activation and alpha-synuclein aggregation, but did not improve neuron loss or motor impairments. Verdiperstat has been generally safe and well tolerated.

* Vosoritide is a medication used for the treatment of achondroplasia in people two years of age and older whose epiphyses are not closed. Achondroplasia is a genetic disorder whose primary feature is dwarfism. In those with the condition, the arms and legs are short, while the torso is typically of normal length. Those affected have an average adult height of 131 centimetres (4 ft 4 in) for males and 123 centimetres (4 ft) for females. Other features include an enlarged head and prominent forehead. Complications can include sleep apnea or recurrent ear infections. The disorder does not generally affect intelligence. Vosoritide works by binding to a receptor (target) called natriuretic peptide receptor type B (NPR-B), which reduces the activity of fibroblast growth factor receptor 3 (FGFR3). Achondroplasia is rare, and Vosoritide was designated an orphan medicine on January 2013.

1.3.1.42 RT-MB-54

https://archive.org/details/Resonant_Therapy-Molecular_Biology_54

Acitretin; Aldumastat; AMBMP; Bimekizumab; BNTA; CAR-DCN; Cartilage-Mix; Cartilage-Mix/CAR-DCN; Cartilage-Mix-P15-1/Hyaluronan; Daprodustat; Ginsenosides-Mix; Human albumin solution; Imeglimin; Itxasol; JNJ-A07; Kartogenin; Leucine-LL dipeptide; Lubiprostone; Meclinertant; Motilin polypeptide; Nepidermin; Neurotensin neuropeptide; P 15-1 Peptide-Hyaluronan; Proglumide; PY-60; Pyrimidine; Risankizumab; Sephin1;Telmisartan; Vibegron

* Acitretin is a second-generation retinoid. It is taken orally, and is typically used for psoriasis. Acitretin is an oral retinoid used in the treatment of severe resistant psoriasis. Because of the potential for problems and severe side effects it is generally used in only very severe cases of psoriasis that have been unresponsive to other treatments. It binds to nuclear receptors that regulates gene transcription. They induce keratinocyte differentiation and reduce epidermal hyperplasia, leading to the slowing of cell reproduction. Acitretin is readily absorbed and widely distributed after oral administration. A therapeutic effect occurs after two to four weeks or longer. Patients who have received the medication are advised against giving blood for at least three years due to the risk of birth defects. Acitretin is highly teratogenic and noted for the possibility of severe birth defects. It should not be used by pregnant women or women planning to get pregnant within 3 years following the use of acitretin. Sexually active women of childbearing age who use acitretin should also use at least two forms of birth control concurrently. Men and women who use it should not donate blood for three years after using it, because of the possibility that th

e blood might be used in a pregnant patient and cause birth defects. In addition, it may cause nausea, headache, itching, dry, red or flaky skin, dry or red eyes, dry or chapped lips, swollen lips, dry mouth, thirst, cystic acne or hair loss. It is a metabolite of etretinate, which was used prior to the introduction of acitretin. Etretinate was discontinued becau se it had a narrow therapeutic index as well as a long elimination half-life (t1/2=120 day s), making dosing difficult. In contrast, acitretin's half-life is approximately 2 days. Howe ver, because acitretin can be reverse metabolised into etretinate which has an extremel y long half-life, women must avoid becoming pregnant for at least three years after disc ontinuing acitretin. Therefore, acitretin is generally not recommended for women of chil d-bearing age with a risk of becoming pregnant.

* Aldumastat is a potent, selective and orally available ADAMTS5 inhibitor, demonstratin g significant protective efficacy on both cartilage and subchondral bone in two relevant i n vivo preclinical OA models. A disintegrin and metalloproteinase with thrombospondin motifs 5 (ADAMTS5) is a key enzyme in degradation of cartilage in osteoarthritis (OA). Multiple reports have highlighted a link between ADAMTS5 and human OA, suggesting t hat inhibition of this protease could result in reduced aggrecan degradation and eventua lly halt disease progression.

* AMBMP hydrochloride. Failure to properly induce the signaling pathways that are activ ated by exercise and which promote the slow-oxidative gene expression program in mu scle leads to limb girdle muscular dystrophy. AMBMP, a small molecule could activate th ese pathways and restore both the defective signaling and transcriptional patterns need ed to reverse the muscle phenotype. Exercise induces calcium calmodulin kinase activa tion and adaptive gene expression. This signaling is blunted in Capn3 deficiency, causin g limb girdle muscular dystrophy. AMBM, is an exercise mimetic that induces these path ways. AMBMP normalizes the Capn3−/− phenotype.
(https://doi.org/10.1016/j.xcrm.2020.100122)

* Bimekizumab. The active substance in bimekizumab is a monoclonal antibody, a protein designed to attach to interleukins IL-17A, IL-17F and IL-17AF, which are messenger molecules in the body’s immune system (the body’s natural defences). High levels of these interleukins have been shown to be involved in developing inflammatory diseases caused by the immune system, such as plaque psoriasis. By attaching to these interleukins, bimekizumab prevents them from interacting with their receptors (targets) on the surface of the epidermis (outer layer of the skin), which reduces inflammation and improves the symptoms related to plaque psoriasis. Bimekizumab is a humanized anti-IL17A, anti-IL-17F, and anti-IL17AF monoclonal antibody that is used to treat plaque psoriasis. Dual inhibitor antibodies target two different cytokines simultaneously potentially offering a better disease control. Interleukin (IL)-17A and IL-17F share structural homology and have a similar biologic function. IL-17A is classically considered to be the most biologically active, but recent studies have shown that IL-17F is also increased in psoriatic skin and synovial cell in psoriatic arthritis, supporting the rationale for targeting both IL-17A and IL-17F in psoriatic disease. Bimekizumab is the first-in-class monoclonal antibody designed to simultaneously target IL-17A and IL-17F. The most common side effects include upper respiratory tract infections (nose and

throat infection) and oral candidiasis (thrush, a fungal infection in the mouth or throat). Ongoing phase 3 trials are evaluating the drug to treat a variety of other conditions, including psoriatic arthritis, ankylosing spondylitis, non-radiographic axial spondyloarthritis and hidradenitis suppurativa.

* BNTA is a small molecule with extracellular matrix (ECM) modulatory properties. BNTA promotes generation of ECM components in cultured chondrocytes isolated from individuals with osteoarthritis. In human osteoarthritic cartilage explants, BNTA treatment stimulates expression of ECM components while suppressing inflammatory mediators. Intra-articular injection of BNTA delays the disease progression in a trauma-induced rat model of osteoarthritis. BNTA induces SOD3 expression and superoxide anion elimination in osteoarthritic chondrocyte culture, and ectopic SOD3 expression recapitulates the effect of BNTA on ECM biosynthesis.

* CAR-DCN. Most diseases associated with articular cartilage lead to exposure of the bone ends to friction and erosion which causes bone damage. Aberrant immunometabolism has also been implicated with the pathological mechanism driven via the deterioration of cartilage, bone erosion; hyperplastic synovium and systemic consequences. Some other disease/conditions related to cartilage degeneration are known to play crucial roles in the etiology of these diseases. Intravenous injection of CAR-decorin forms recombinant CAR-decorin complexes which selectively accumulate in wound sites, and promote wound healing, without scar formation in a mice wound model. The displayed peptide therefore can be employed for cartilage wound healing process, since osteoarthritis is characterized by a persistent deterioration of the cartilage tissue and non-healing wounds. In addition, selective delivery of decorin to the sites of skeletal muscle damage attenuates the progression of murine muscular dystrophy. Functional analysis revealed that CAR-DCN treatment significantly improved skeletal muscle function and reduced TGFbeta-driven pathologic sarcolemmal permeability in murine MD. The various muscle groups did not respond similarly to the CAR-DCN treatment in terms of fibrosis. Only the canonical skeletal muscles demonstrated decreased fibrosis after the CAR-DCN treatment.

* Cartilage-Mix is a mix of Aldumastat, BNTA, Kartogenin and Lorecivivint.

* Cartilage-Mix/CAR-DCN plays Cartilage-Mix (right) and CAR-DCN (left).

* Cartilage-Mix-P15-1/Hyaluronan plays Cartilage-Mix (right) and P15-1/Hyaluronan (left).

* Daprodustat (GSK1278863) is a drug which acts as a HIF prolyl-hydroxylase inhibitor and thereby increases endogenous production of erythropoietin, which stimulates production of hemoglobin and red blood cells. It is in Phase III clinical trials for the treatment of anemia secondary to chronic kidney disease. Due to its potential applications in athletic doping, it has also been incorporated into screens for performance-enhancing drugs. Daprodustat, improved haemoglobin levels in patients who had not received any standard care, and helped maintain the levels in those who

did. Daprodustat belongs to a new class of medicines that works by copying the body's response to hypoxia, or low oxygen levels, and boosts production of red blood cells by mimicking the body's response to high altitude. Daprodustat did not increase the risk of potentially deadly cardiovascular complications like heart attacks and strokes compared to standard treatment for anaemia associated with kidney disease. Daprodustat, approved only in Japan for use in patients with renal anaemia, was also well-tolerated in both dialysis and non-dialysis patients.

* Ginsenosides-Mix. Ginsenosides are unique to ginseng species, and there are more than 100 ginsenosides that have been identified. Ginsenosides have a variety of biological activities, such as neuroprotection, antioxidation, anticancer, antistress, anti-inflammatory, antiaging, antifatigue, cytotoxicity, inhibiting cell apoptosis, inhibiting platelet aggregation. Recent studies on the therapeutic potential of ginsenosides reveal the molecular mechanisms on cardiovascular diseases, anti-inflammatory, modulation of the endocrine system, immune system diseases, and nervous system diseases.

Left	Right
Ginsenoside RH2	Ginsenoside RG1
Ginsenoside RB1	Ginsenoside RB2
Ginsenoside RG2	Ginsenoside RE
Ginsenoside RD	Ginsenoside RH1

* Human albumin solution is human albumin, sodium chloride, potassium chloride, sodium acetyltryptophanate, sodium caprylate and water. Albumin is a protein produced by the liver that circulates in plasma (the clear liquid portion of your blood). Medicinal albumin is made of plasma proteins from human blood. This medicine works by increasing plasma volume or levels of albumin in the blood. Albumin is used to replace blood volume loss resulting from trauma such as a severe burns or an injury that causes blood loss. This medicine is also used to treat low albumin levels caused by surgery, dialysis, abdominal infections, liver failure, pancreatitis, respiratory distress, bypass surgery, ovarian problems caused by fertility drugs, and other many other conditions. You should not use albumin if you are allergic to it, or if you have: severe anemia (lack of red blood cells); or severe heart failure.

* Imeglimin hydrochloride is an experimental drug being developed as an oral anti-diabetic. It is an oxidative phosphoryl. Imeglimin is an oral anti-diabetic medication. It was approved for use in Japan in June 2021. It is an oxidative phosphorylation blocker that acts to inhibit hepatic gluconeogenesis, increase muscle glucose uptake, and restore normal insulin secretion. It is the first approved drug of this class of anti-diabetic medication. "We believe it is the only oral compound with a dual mechanism of action that is directly designed both to increase insulin secretion in response to glucose and to improve insulin resistance. The mitochondrion is the power station of the cell and its dysfunction is implicated in the pathophysiology of type 2 diabetes. By targeting the mitochondria – where dysfunction is a key feature of diabetes pathophysiology, Imeglimin can simultaneously promote insulin secretion from pancreatic b-cells in response to elevated glucose while also alleviating insulin resistance."

* Itxasol is composed of beta-arbutin, umbelliferon and n-acetylcysteine. This formulation, based on biomimetic principles, makes Itxasol a broad-spectrum antibiotic with bactericidal, bacteriostatic and antifungal properties that is capable of destroying the biofilm and stopping its formation. It also acts as an anti-inflammatory agent, without the adverse effects associated with the recurrent use of antibiotics that leads to renal nephrotoxicity and other side effects. All these characteristics make Itxasol an ideal candidate for the treatment of urinary tract infections (UTIs) since it behaves like an antibiotic and with better characteristics than other adjuvants, such as D-mannose and cranberry extracts. UTIs in women are often associated with sexual intercourse, poor social conditions that limit access to female hygiene products for menstruation and use of contraceptive devices such as diaphragms. In the case of postmenopausal women, recurrent UTIs are related to the low levels of estrogens that produce changes in the vaginal microbiota. In the case of men, UTIs are often related to prostatitis, prostate benign hyperplasia or any kind of urinary obstructive tract pathology. In addition, UTIs are related to smoking, which is also associated with the development of bladder cancer, and it has been reported to increase the risk of suffering from UTIs by up to 50%. Itxasol represents a promising tool in the treatment and prevention of ITUs, and it acts mainly as a broad-spectrum antibiotic protecting the kidney. It may be used for an extended time without generating bacterial resistance, which makes it an excellent alternative treatment to actual antibiotics and other coadjutants.

* JNJ-A07 is a pan-serotype dengue virus inhibitor targeting the NS3–NS4B interaction. JNJ-A07 is a highly potent dengue virus inhibitor that exerts nanomolar to picomolar activity against a panel of 21 clinical isolates that represent the natural genetic diversity of known genotypes and serotypes. The molecule has a high barrier to resistance and prevents the formation of the viral replication complex by blocking the interaction between two viral proteins (NS3 and NS4B), thus revealing a previously undescribed mechanism of antiviral action. JNJ-A07 has a favourable pharmacokinetic profile that results in outstanding efficacy against dengue virus infection in mouse infection models. Delaying start of treatment until peak viraemia results in a rapid and significant reduction in viral load. It represents a major advance in the field of dengue therapeutics as this is the first-ever specific antiviral drug treatment for the virus.

* Kartogenin (KGN) is a small, non-toxic, heterocyclic molecule, it has been known for effectively enhancing the chondrogenic differentiation of human bone marrow MSC (hBMSC), for exhibiting chondroprotective effects in vitro and for reducing cartilage degeneration. KGN interacts with the actin-binding protein filamin A, disrupting its balance with the transcription factor core-binding factor beta (CBFbeta), giving it the ability to enter the nucleus and interact with RUNX1 to form the CBFbeta-RUNX1 complex that activates the transcription of chondrogenesis-related proteins and enhances cartilage ECM synthesis. Kartogenin also inhibits prostate cancer cell growth through Smad2 activation and decreases androgen receptor nuclear localization.

* Leucine-LL dipeptide or dileucine boosts the metabolic processes that drive muscle growth 42% more than free leucine does. Dileucine ingestion elevated intact plasma

dileucine concentrations and was more effective than leucine in stimulating muscle protein turnover by increasing muscle protein synthesis rates in young males. The greater anabolic action of dileucine was not related to intramuscular metabolite concentrations or greater activation of downstream mTORC1 related-signaling, as determined by static snapshots of protein phosphorylation. Dileucine may prove a potential option for food-fortification in anabolic resistant populations (e.g., sarcopenia) given the anabolic potency of dileucine when compared with leucine consumed at the same dose (2 g).

* Lubiprostone is a medication used in the management of chronic idiopathic constipation, predominantly irritable bowel syndrome-associated constipation in women and opioid-induced constipation. It causes the intestines to produce a chloride-rich fluid secretion that softens the stool, increases motility, and promotes spontaneous bowel movements (SBM). In clinical trials, the most common adverse event was nausea (31%) . Other adverse events (≥5% of patients) included diarrhea (13%), headache (13%), abdominal distension (5%), abdominal pain (5%), flatulence (6%), sinusitis (5%), vomiting (5%), and fecal incontinence (1%). Contraindicated in known or suspected mechanical GI obstruction and known hypersensitivity to lubiprostone or any ingredient in the formulation. There is no current data on use in people with liver or kidney complications. The effects on pregnancy have not been studied in humans but testing in guinea pigs resulted in fetal loss. Lubiprostone is not approved for use in children. Lubiprostone is contraindicated in patients exhibiting chronic diarrhea, bowel obstruction, or diarrhea-predominant irritable bowel syndrome. Lubiprostone is a bicyclic fatty acid derived from prostaglandin E1 that acts by specifically activating ClC-2 chloride channels on the apical aspect of gastrointestinal epithelial cells, producing a chloride-rich fluid secretion. These secretions soften the stool, increase motility, and promote spontaneous bowel movements (SBM). Symptoms of constipation such as pain and bloating are usually improved within one week, and SBM may occur within one day. Unlike many laxative products, lubiprostone does not show signs of drug tolerance, chemical dependency, or altered serum electrolyte concentration. There was no rebound effect following withdrawal of treatment, but a gradual return to pre-treatment bowel movement frequency should be expected. Minimal distribution of the drug occurs beyond the immediate gastrointestinal tissues. Lubiprostone is rapidly metabolized by reduction/oxidation, mediated by carbonyl reductase. There is no metabolic involvement of the hepatic cytochrome P450 system. The measurable metabolite, M3, exists in very low levels in plasma and makes up less than 10% of the total administered dose. Data indicate that metabolism occurs locally in the stomach and jejunum. Lubiprostone has not been linked to serum enzyme elevations during treatment or to episodes of clinically apparent liver injury.

* Meclinertant (SR-48692) is a drug which acts as a selective, non-peptide antagonist at the neurotensin receptor NTS1, and was the first non-peptide antagonist developed for this receptor. Meclinertant is the most potent and selective non-peptide NT antagonist developed so far. SR-48692 promotes the emptying of the stomach and defecation. It is used in scientific research to explore the interaction between neurotensin and other neurotransmitters in the brain, and produces anxiolytic, anti-addictive and memory-

impairing effects in animal studies. Investigated for use/treatment in colorectal cancer, prostate cancer, schizophrenia and schizoaffective disorders, psychosis, depression, and lung cancer. This compound is orally active, crosses the blood brain barrier (BBB), and has a long-lasting action. It also displays a much higher affinity for NTS1 (IC50 = 5.6 nM) than for NTS2 (IC50 = 300 nM) and NTS3. SR48692 blocks the neurotensin proinflammatory action in colonic inflammation associated with Clostridium difficile pseudomembranous colitis. SR48692 effectively blocks also some of the physiological effects of neurotensin, such as the increase in potassium-evoked dopamine release in striatal slices, the turning behavior induced by application of neurotensin, or the hypolocomotion induced by i.c.v injections of neurotensin. SR48692 competitively antagonizes NTS-mediated effects, such as tumor promotion in various cancers. SR48692 is a potent and full competitive antagonist of neurotensin-induced Ca++ mobilization in the human carcinoma HT-29 cell line. Furthermore, it was shown to reduce the level of basal activity in constitutively active NTSR1 mutants, revealing inverse agonist properties.

* Motilin polypeptide is a 22-amino acid polypeptide hormone in the motilin family that, in humans, is encoded by the MLN gene. It is released into the general circulation in humans at about 100-min intervals during the inter-digestive state and is the most important factor in controlling the inter-digestive migrating contractions; and it also stimulates endogenous release of the endocrine pancreas. Based on amino acid sequence, motilin is unrelated to other hormones. Because of its ability to stimulate gastric activity, it was named "motilin". Apart from in humans, the motilin receptor has been identified in the gastrointestinal tracts of pigs, rats, cows, and cats, and in the central nervous system of rabbits. Control of motilin secretion is largely unknown, although some studies suggest that an alkaline pH in the duodenum stimulates its release. However, at low pH it inhibits gastric motor activity, whereas at high pH it has a stimulatory effect. The main function of motilin is to increase the migrating myoelectric complex component of gastrointestinal motility and stimulate the production of pepsin. Motilin is also called "housekeeper of the gut" because it improves peristalsis in the small intestine and clears out the gut to prepare for the next meal. A high level of motilin secreted between meals into the blood stimulates the contraction of the fundus and antrum and accelerates gastric emptying. It then contracts the gallbladder and increases the squeeze pressure of the lower esophageal sphincter. Other functions of motilin include increasing the release of pancreatic polypeptide and somatostatin.

* Nepidermin, also known as recombinant human epidermal growth factor (rhEGF), is a recombinant form of human epidermal growth factor (EGF) and a cicatrizant (a drug that promotes wound healing through formation of scar tissue). As a recombinant form of EGF, nepidermin is an agonist of the epidermal growth factor receptor (EGFR), and is the first EGFR agonist to be marketed. It is marketed as an ointment for the treatment of diabetic foot ulcers, wounds, and alopecia (hair loss) in Vietnam, the Philippines, Thailand, and China. As of 2017 it was in clinical trials in South Korea for the treatment of stomatitis (inflammation of the mouth or lips) and for reversal of skin side effects caused by erlotinib (an EGFR inhibitor).

* Neurotensin neuropeptide is a 13 amino acid neuropeptide that is implicated in the regulation of luteinizing hormone and prolactin release and has significant interaction with the dopaminergic system. Neurotensin was first isolated from extracts of bovine hypothalamus based on its ability to cause a visible vasodilation in the exposed cutaneous regions of anesthetized rats. Neurotensin is distributed throughout the central nervous system, with highest levels in the hypothalamus, amygdala and nucleus accumbens. It induces a variety of effects, including analgesia, hypothermia and increased locomotor activity. It is also involved in regulation of dopamine pathways. In the periphery, neurotensin is found in enteroendocrine cells of the small intestine, where it leads to secretion and smooth muscle contraction. Some of the physiologic effects of NT in the GI tract are related to motility. An infusion of NT mimics the consumption of a fat-rich meal (the most potent stimulator of NT release) in the following ways: NT decreases lower esophageal sphincter pressure, slows gastric emptying and intestinal transit while increasing colonic motility, and inhibits the migrating motor complex (MMC).

* P15-1 Peptide/Hyaluronan. TMMSRSHKTRSHHV may increase the capacity of bone-marrow-derived mesenchymal stem cells (BMSCs) to repair cartilage via the protection of these cells in an inflammatory environment and the stimulation of their attachment to an HA-containing matrix and chondrogenic differentiation. Since the avascular articular cartilage must deal with frictional forces, scar formation is unwanted; therefore the ability to ensure scarless healing is of paramount importance. P15-1 may act as an anti-inflammatory factor that may reduce inflammation in the osteoarthritic joint or injured joint. Based on these findings, it can be speculated that P15-1 by reducing the inflammatory injury environment may enhance the repair process of the injured tissue by mesenchymal stem cells (MSCs). P15-1 decreased the expression of catabolic markers, such as Cox-2 and IL-6, and the expression of matrix-degrading matrix metalloproteinases, MMP-3 and MMP-13 in human BMSCs cultured in an inflammatory environment (in the presence of IL-1beta). In addition, the peptide decreased the expression of the HA-degrading enzyme, Hyal2, and decreased the expression of the inflammatory receptors TRL2 and TLR4 in IL-1beta-treated human BMSCs. P15-1 may provide a novel compound that may help to maintain the anti-inflammatory properties of MSCs in an inflammatory environment during tissue repair or diseases and promote the attachment, settlement, and differentiation of MSCs to an hyaluronan HA-containing matrix at a repair site. P15-1 prevents staphyloccal wound infection, reduces wound fibrosis; modulates neutrophils, M1 macrophages and dermal fibroblasts. P15-1 significantly reduced wound macrophage number, fibroblast number, and blood vessel density compared to negative control peptides in rat wounds and promoted scarless wound healing. P15-1 blocks the receptor for hyaluronan mediated motility RHAMM-regulated focal adhesion kinase pathways in fibroblasts and attenuated fibrotic repair by blocking hyaluronan oligosaccharide signaling.

* Proglumide is a drug that inhibits gastrointestinal motility and reduces gastric secretions. It acts as a cholecystokinin antagonist, which blocks both the CCKA and CCKB subtypes. It was used mainly in the treatment of stomach ulcers.
An interesting side effect of proglumide is that it enhances the analgesia produced by opioid drugs, and can prevent or even reverse the development of tolerance to opioid

drugs. This can make it a useful adjuvant treatment to use alongside opioid drugs in the treatment of chronic pain conditions such as cancer, where opioid analgesics may be required for long periods and development of tolerance reduces clinical efficacy of these drugs. Proglumide has also been shown to act as a delta-opioid agonist, which may contribute to its analgesic effects. Proglumide also works as a placebo effect amplifier for pain conditions. When injected visibly to a subject, its analgesic effect is bigger than a similarly administered placebo. When injected secretly, it does not have any effect, whereas standard pain drugs have an effect, even if they are administered without the subject's awareness. The supposed mechanism is an enhancement of the neural pathways of expectation as a result of dopamine and endogenous opioids being suddenly released throughout numerous structures of the brain and spinal cord. The ventral tegmental area is the structure believed to mediate proglumides analgesic and euphoric effects, however dozens of areas with a wide range of physical and psychological functions are implicated in the mediation of the placebo effect (this accounts for proglumides ability to produce physically measurable effects on vital signs such as heart rate, blood pressure, respiration rate, and tidal volume which can not be accounted for by its clinically insignificant delta-opioid affinity.

* PY-60 is a robust and specific activator of YAP transcriptional activity that targets annexin A2 (ANXA2). PY-60 directly binds to ANXA2 and antagonizes its normal cellular function of repressing YAP activity. PY-60 results in an approximate doubling of epidermal thickness, a result derived from an increased number of keratinocytes per unit length of skin. This is a new approach for treating diabetic foot ulcers, which affect millions of people in the US and often lead to serious complications. By targeting a gene that controls tissue growth and regeneration, the scientists were able to boost cell division at the site of injury and repair chronic wounds quickly. At the core of the new approach is a gene known as YAP, which is known to control organ size and tissue regeneration. YAP is regulated via a pathway called Hippo--often a target of cancer drugs due to its ability to influence cell growth. Through their research, the scientists found a previously unknown player in the Hippo pathway--a protein that works with YAP to communicate cell density; when an organ or other tissue reaches a certain concentration, the cells will stop growing. But by targeting this protein with the new drug molecule, tissue cells bounce back into production mode. The healing process happens quickly and without producing negative side effects; in experiments, the outer skin layer doubled in a week.

* Pyrimidine is a heterocyclic aromatic organic compound containing two nitrogen atoms at positions 1 and 3 of the six- member ring. Pyrimidine posses wide spectrum of biological activities including anti-tubercular, anti-bacterial, anti-fungal, anti-viral, anti-inflammatory, anti-malarial activity, anti-cancer and anti-neoplastic activity, anti-hiv activity. Common indications of acute inflammation include swelling, redness, pain, immobility, and heat. Acute inflammation can be caused by certain conditions and diseases including acute bronchitis, abrasion or cut on the skin, achy throat from flu or cold, infected ingrown toenail, acute appendicitis, sinusitis, tonsillitis, dermatitis, infective meningitis, high-intensity exercise, and physical trauma. (DOI: 10.1039/d0ra10657g) Pyrimidine derivatives also play an important role in drug

development, either in concert with other compounds or on their own. They have been used in a wide variety of pharmaceuticals including general anesthetics, anti-epilepsy medication, anti-malaria medication, drugs for treating high blood pressure, and HIV medication.

* Risankizumab is a humanized monoclonal antibody targeting interleukin 23A (IL-23A). Risankizumab has been approved in the European Union, the United States, and Canada for the treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy. In Japan, it is approved for treating plaque psoriasis, generalized pustular psoriasis, erythrodermic psoriasis and psoriatic arthritis in adults who have an inadequate response to conventional therapies. Risankizumab was approved by the U.S. Food and Drug Administration (FDA) for treatment of moderate-to-severe plaque psoriasis in April 2019.

* Sephin1 hydrochloride selectively inhibits PPP1R15A/PP1c phosphatase complex, which in turn maintains an active Integrated Stress Response (ISR). The compound has been shown preclinically to cross the blood brain barrier, which is critical to targeting diseases of the central nervous system. Being able to cross this barrier and target CNS conditions and their core opens up new possibilities in the treatment of neurodegenerative and neuromuscular conditions. Sephin1 modulates eIF2alpha, the ISR's biomolecular switch. When this switch is turned on, by phosphorylation of eIF2alpha, cells are able to respond to protein imbalances to reduce harmful levels of defective proteins. So long as PPP1R15A/PP1c is inhibited, the biomolecular switch – the phosphorylated eIF2alpha – remains turned on, prolonging the natural benefit of the ISR and giving cells additional time to correct protein imbalances and repair or eliminate misfolded proteins. Preclinical research has repeatedly and consistently shown the ability of PPP1R15A inhibitors to prolong ISR activity in defective cells and prevent cytotoxicity. Further, preclinical and clinical research has shown promise in treating neuromuscular diseases, through remyelination in patients with Charcot-Marie-Tooth (CMT) and Multiple sclerosis (MS), and motor function improvement in Amyotrophic lateral sclerosis (ALS) patients. This includes demonstrating remyelination, which holds promise for treating neuromuscular diseases, through remyelination in people living with CMT and MS, and motor function improvement in people living with ALS.

* Telmisartan is a medication used to treat high blood pressure, heart failure, and diabetic kidney disease. It is a reasonable initial treatment for high blood pressure. Common side effects include upper respiratory tract infections, diarrhea, and back pain. Serious side effects may include kidney problems, low blood pressure, and angioedema. Use in pregnancy may harm the baby and use when breastfeeding is not recommended. Also it is contraindicated in bilateral renal artery stenosis in which it can cause kidney failure. It is an angiotensin II receptor antagonist and works by blocking the effects of angiotensin II. Due to its mechanism of action, telmisartan increases blood potassium levels. Combination with potassium preparations or potassium-sparing diuretics could cause hyperkalaemia (excessive potassium levels). Combination with NSAIDs, especially in patients with impaired kidney function, has a risk of causing (usually reversible) kidney failure.

* Vibegron is a beta3-adrenergic receptor agonist currently in clinical development for the treatment of patients with overactive bladder. Vibegron is a potent, selective beta-3 adrenergic receptor agonist that relaxes the detrusor smooth muscle of the bladder, thereby increasing bladder capacity. Vibegron was first approved in Japan in September 2018 for the treatment of overactive bladder, a condition associated with distressing symptoms of urge urinary incontinence, urgency, and urinary frequency, and reduced quality of life of patients. On December 23, 2020, vibegron was approved for the same indication in adults. Vibegron is the second beta-3 adrenergic agonist approved for the treatment of overactive bladder following [mirabegron], which was approved in 2012. Unlike mirabegron, vibegron is less likely to be associated with drug-drug interactions involving the CYP3A4, 2D6, or 2C9 enzymes. The most common side effects include headache, urinary tract infection, common cold, diarrhea, nausea, and upper respiratory tract infection. Vibegron treatment should be discontinued when the patient develops urinary retention. Indication is more precautious as well when other muscarinic antagonists are used that are not selective. In addition, discontinuation of treatment is suggested when digoxin concentrations are too high. Primary outcomes of different clinical trials showed there was an overall increase in efficacy. These outcomes concluded that there was a reduction in urgency to urinate, a decrease in micturitions and a decrease in average volume voided per micturition. There is also an improvement observed of the symptoms when Vibegron is administered over a longer period (52 weeks) concluding that it is effective and safe for longer use. In severe patients, increasing the dose was accompanied by similar beneficial effects when there was first a lack of these. Quality of life of the patients is improved, including a reduction of nocturia.

1.3.1.43 RT-MB-55

A-804598; AC1903; Acotiamide; Adenosine; Arctigenin; Artemisinin; Benfotiamine; Beta-Glucans; Bethanechol; Bis-T-23; Camicinal; Chlorogenic acid; Chromium Picolinate; Dihydroartemisinin; Esmolol; Fampridine; Finerenone; Glibenclamide; GRC-6211; Hyoscyamine; LM22B-10; Lutein; Magnesium gluconate; Magnesium glycinate; Omigapil; Polidocanol; Relenopride; Sotradecol; SR-7826-LIMKi3; Voglibose

* A-804598 is a selective P2X7 receptor antagonist, the purinergic P2X7 receptor has been implicated in several inflammatory conditions. Inflammatory conditions of the urinary bladder have been shown to be associated with urothelial damage and loss of function. The P2X7 receptor activation is known to induce apoptosis. In the presence of a high extracellular concentration of ATP, which is highly related to the pathophysiological condition of interstitial cystitis, the P2X7 receptor can stay activated for a longer time leading to increased intracellular calcium levels as well as increased cell permeability to larger molecules leading to downstream signaling resulting in apoptosis and cell death. A study

demonstrates the protective effect of the P2X7 receptor inhibition on the urothelium in a n ex-vivo acrolein model of bladder cystitis. The findings from this study provide evidenc e for the use of the P2X7 receptor antagonists for treatment of the bladder inflammation. (https://doi.org/10.3389/fphar.2021.682520)

* AC1903 is a small molecule specific and selective inhibitor of TRPC5 (transient recept or potential canonical channel 5). Progressive kidney diseases are often associated with scarring of the kidney's filtration unit, a condition called focal segmental glomerulosclero sis (FSGS). This scarring is due to loss of podocytes, cells critical for glomerular filtratio n, and leads to proteinuria and kidney failure. Chronic administration of AC1903 suppres sed severe proteinuria and prevented podocyte loss in a transgenic rat model of FSGS. AC1903 also provided therapeutic benefit in a rat model of hypertensive proteinuric kidn ey disease. These data indicate that TRPC5 activity drives disease and that TRPC5 inhi bitors may be valuable for the treatment of progressive kidney diseases.
(doi: 10.1126/science.aal4178) (https://doi.org/10.3390/cells10040869)

* Acotiamide is a prokinetic drug manufactured and approved in Japan for the treatment of postprandial fullness, upper abdominal bloating, and early satiation due to functional dyspepsia. It acts as an acetylcholinesterase inhibitor. Acotiamide enhances acetylcholi ne release in the enteric nervous system by antagonizing M1 and M2 muscarinic recept ors and also inhibiting acetylcholinesterase. It significantly enhances the gastric accom modation reflex and gastric emptying rate in functional dyspepsia FD patients.

* Adenosine is an organic compound that occurs widely in nature in the form of diverse derivatives. Adenosine is one of four nucleoside building blocks to DNA and RNA, which are essential for all life. Adenosine is also used as a medication. In individuals with supr aventricular tachycardia (SVT), adenosine is used to help identify and convert the rhyth m. In addition, atrial tachycardia can sometimes be terminated with adenosine. Because of the effects of adenosine on AV node-dependent SVTs, adenosine is considered a clas s V antiarrhythmic agent. The recommended dose may be increased in patients on theo phylline since methylxanthines prevent binding of adenosine at receptor sites. The dose is often decreased in patients on dipyridamole (Persantine) and diazepam (Valium) bec ause adenosine potentiates the effects of these drugs. The recommended dose is also r educed by half in patients presenting congestive heart failure, myocardial infarction, sho ck, hypoxia, and/or chronic liver disease or chronic kidney disease, and in elderly patien ts. Methylxanthines (e.g. caffeine found in coffee, theophylline found in tea, or theobromi ne found in chocolate) have a purine structure and bind to some of the same receptors as adenosine. Methylxanthines act as competitive antagonists of adenosine and can blu nt its pharmacological effects. Individuals taking large quantities of methylxanthines may require increased doses of adenosine. Common contraindications for adenosine include Asthma. Adenosine is an endogenous purine nucleoside that modulates many physiolog ical processes. Cellular signaling by adenosine occurs through four known adenosine re ceptor subtypes (A1, A2A, A2B, and A3). In regard to stress or injury, the function of ade nosine is primarily that of cytoprotection preventing tissue damage during instances of h ypoxia, ischemia, and seizure activity. Activation of A2A receptors produces a constellati on of responses that in general can be classified as anti-inflammatory. Enzymatic produ

ction of adenosine can be anti-inflammatory or immunosuppressive. Topical treatment of adenosine to foot wounds in diabetes mellitus has been shown in lab animals to drastic ally increase tissue repair and reconstruction. In general, adenosine has an inhibitory eff ect in the central nervous system (CNS). Caffeine's stimulatory effects are credited prim arily (although not entirely) to its capacity to block adenosine receptors, thereby reducin g the inhibitory tonus of adenosine in the CNS. Adenosine has been shown to promote t hickening of hair on people with thinning hair. A 2013 study compared topical adenosine with minoxidil in male androgenetic alopecia, finding it was as potent as minoxidil (in ov erall treatment outcomes) but with higher satisfaction rate with patients due to “faster pr evention of hair loss and appearance of the newly grown hairs”.

* Arctigenin is a phenylpropanoid dizbenzylbutyrolactone lignan, first identified in Arctiu m lappa L (A lappa), is a popular medicinal herb and health supplement frequently used for anti-influenza treatment in Asia, especially China, Korea and Japan. ATG and arctiin-containing plants are recorded as medical plants in their growing areas and are well-rec ognized for the treatment of diseases, such as rheumatic arthritis, inflammatory disease s, infection, and others. ATG has attracted the attention of researchers due to its promisi ng therapeutic effects on inflammation, infection, metabolic disorders, and central nervo us system dysfunctions. A number of chronic diseases, including atherosclerosis, cancer type II diabetes, and Alzheimer's disease, have a pathophysiologically important inflam matory component. ATG reduced the infiltration of leukocytes into local tissues, a typical hallmark of acute inflammation. This was observed in various colitis mouse models by t he decreased activity of myeloperoxidase (MPO), eosinophil peroxidase (EPO), and clu ster of differentiation 68 (CD68), indicators of neutrophils, eosinophils and macrophages, respectively. In addition, AR reduced brain water content and hematoma and accelerat ed wound closure in convection-enhanced delivery induced brain injury in mice through regulation of various inflammatory factors and numbers of MPO-positive cells. Arctigeni n could inhibit liver cancer growth by directly recruiting C/EBPalpha to the gankyrin pro moter. PPARalpha subsequently bound to C/EBPalpha, and both had a negative regulat ory effect on gankyrin expression. Arctigenin was found to have a beneficial effect on pa ncreatic cancer in a phase I clinical study. The use of arctigenin has been shown to be e ffective in a mouse model of Japanese encephalitis. Arctigenin (ATG), reduces p65 NF-κ B (also known as RelA)-mediated inflammation and Drebrin-1 (DBN1)-mediated podocy te injury by enhancing the activity of protein phosphatase 2 (PP2A) in podocytes, thereb y protecting kidney function.

* Artemisinin and its derivatives play a significant role in treating other diseases, apart fr om malaria. Artemisinin regulates inflammation and apoptosis, which, together with anti oxidant effects, supports an argument for the use of artemisinin in different pathologies. Artemisinin and its derivatives have great potential in the treatment of Type-2 Diabetes Mellitus T2DM, whether in the early stage or late stage of the disease. (https://doi.org/1 0.3389/fphar.2020.585487) Because artemisinin has consistently been considered safe and effective in clinical practice and was officially recommended by WHO in the 1980s, i t is likely among the less toxic traditional chinese herbal medicine TCHM treatments wit h hepatoprotective effects. This applies to artemisinin derivatives as well, with one study showing that an oral dose of 2.2–3.9 mg/kg/d ART (add-on oncological therapy) is safe

and well tolerated by subjects with metastatic breast cancer, without altering kidney function, liver function, or routine blood tests. As opposed to other TCHM treatments with unclear hepatoprotective mechanisms, artemisinin and its derivatives are known to protect the liver through antioxidant, anti-inflammatory, pro-apoptotic, and carcinostatic mechanisms. The structure of endoperoxide linkage and production of ROS is not only regarded as a vital feature for antimalarial treatment, but is also key to liver protection. (https://doi.org/10.1186/s13020-021-00489-0)

* Benfotiamine is a synthetic S-acyl derivative of thiamine (vitamin B1) that sold as a medication or dietary supplement to treat diabetic neuropathy. Benfotiamine is more bioavailable than thiamine salts, providing higher levels of thiamine in muscle, brain, liver, and kidney. Benfotiamine is dephosphorylated to S-benzoylthiamine by ecto-alkaline phosphatases present in the intestinal mucosa, and is then hydrolyzed to thiamine by thioesterases in the liver. Benfotiamine mainly acts on peripheral tissues through an increase in transketolase activity.Benfotiamine is a synthetic S-acyl Vitamin B1 analogue; its chemical name is S-benzoylthiamine O-monophosphate. Benfotiamine is a lipid derivative of thiamine vitamin. It has very low solubility in water or other aqueous solvents. Administration of benfotiamine may increase intracellular levels of thiamine diphosphate, a cofactor of transketolase, and based on metabolic theories of Alzheimer's disease, it has been studied in preclinical models of Alzheimer's disease.

* Beta-Glucans refers to a group of beta-D-glucose polysaccharides naturally occurring in the cell walls of cereals, bacteria, and fungi, with significantly differing physicochemical properties dependent on source. Typically, beta-glucans form a linear backbone with 1–3 beta-glycosidic bonds but vary with respect to molecular mass, solubility, viscosity, branching structure, and gelation properties, causing diverse physiological effects in animals. Indications Aggression (Phase 4); Aggressive Periodontitis (Phase 4); Atherosclerosis; Breast Neoplasms (Phase 2); Burns (Phase 1); Carcinoma, Non-Small-Cell Lung; Cardiovascular Diseases; Colitis (Phase 3); Colitis, Ulcerative (Phase 3); Common Cold; Diabetes Mellitus (Phase 2); Diabetes Mellitus, Type 2 (Phase 2); Diabetic Foot (Phase 3); Disease; Dyslipidemias; Fatty Liver; Foot Ulcer (Phase 3); Head and Neck Neoplasms (Phase 3); Hemorrhage (Phase 4); Hemorrhoids (Phase 4); Hyperglycemia; Hyperlipidemias (Phase 3); Hypertension; Immunologic Deficiency Syndromes; Insulin Resistance; Irritable Bowel Syndrome; Leg Ulcer (Phase 2); Leukemia (Phase 2); Leukemia, Lymphocytic, Chronic, B-Cell (Phase 2); Leukemia, Lymphoid (Phase 2); Liver Diseases; Lung Neoplasms (Phase 1); Lymphoma (Phase 2); Lymphoma, Non-Hodgkin (Phase 1); Lymphoproliferative Disorders (Phase 1); Metabolic Syndrome; Mucositis (Phase 3); Neuroblastoma (Phase 2); Non-alcoholic Fatty Liver Disease; Obesity, Abdominal; Overweight (Phase 3); Periodontitis (Phase 4); Prediabetic State; Stomatitis (Phase 3); Syndrome; Ulcer (Phase 3).

* Bethanechol is a parasympathomimetic choline carbamate that selectively stimulates muscarinic receptors without any effect on nicotinic receptors. Unlike acetylcholine, bethanechol is not hydrolyzed by cholinesterase and will therefore have a long duration of action. Bethanechol alleviates dry mouth and is sometimes given orally or

subcutaneously to treat urinary retention resulting from general anesthetic, diabetic neuropathy of the bladder, or a side effect of antidepressants; or to treat gastrointestinal lack of muscular tone. The muscarinic receptors in the bladder and gastrointestinal tract stimulate contraction of the bladder and expulsion of urine, and increased gastrointestinal motility, respectively. Bethanechol should be used to treat these disorders only after mechanical obstruction is ruled out as a possible cause. Its potential benefit in the treatment of cerebral palsy has been investigated. Atropine is given preoperatively to prevent voiding of the bowel/bladder during surgery, Bethanechol is then given postoperatively to revert this action. Use of bethanechol, as well as all other muscarinic receptor agonists, is contraindicated in patients with asthma, coronary insufficiency, peptic ulcers, intestinal obstruction and hyperthyroidism. The parasympathomimetic action of this drug will exacerbate the symptoms of these disorders.

* Bis-T-23 promotes actin-dependent dynamin oligomerization and thus increased actin polymerization in injured podocytes, was sufficient to improve renal health in diverse models of both transient kidney disease and CKD. In particular, administration of Bis-T-23 in these renal disease models restored the normal ultrastructure of podocyte foot processes, lowered proteinuria, lowered collagen IV deposits in the mesangial matrix, diminished mesangial matrix expansion and extended lifespan. These results further establish that alterations in the actin cytoskeleton of kidney podocytes is a common hallmark of CKD, while also underscoring the substantial regenerative potential of injured glomeruli and identifying the oligomerization cycle of dynamin as an attractive potential therapeutic target to treat CKD. Bis-T-23 was able to induce actin and vinculin rearrangement and recovery in these injured cells. This is the first experimental evidence that ameliorating alterations in actin cytoskeleton might be beneficial in humans with nephrotic diseases. Dysregulation of the actin cytoskeleton in podocytes represents a common pathway in the pathogenesis of proteinuria across a spectrum of chronic kidney diseases (CKD). The GTPase dynamin has been implicated in the maintenance of cellular architecture in podocytes through its direct interaction with actin. Furthermore, the propensity of dynamin to oligomerize into higher-order structures in an actin-dependent manner and to cross-link actin microfilaments into higher-order structures has been correlated with increased actin polymerization and global organization of the actin cytoskeleton in the cell.

* Camicinal is a prokinetic agent and motilin agonist for the treatment of gastroparesis. Gastroparesis, also called delayed gastric emptying, is a medical disorder consisting of weak muscular contractions (peristalsis) of the stomach, resulting in food and liquid remaining in the stomach for a prolonged period of time. Stomach contents thus exit more slowly into the duodenum of the digestive tract. This can result in irregular absorption of nutrients, inadequate nutrition, and poor glycemic control. Symptoms include nausea, vomiting, abdominal pain, feeling full soon after beginning to eat (early satiety), abdominal bloating, and heartburn. The most common known mechanism is autonomic neuropathy of the nerve which innervates the stomach: the vagus nerve. Uncontrolled diabetes mellitus is a major cause of this nerve damage; other causes include post-infectious and trauma to the vagus nerve.

* Chlorogenic acid (CGA) is the ester of caffeic acid and (−)-quinic acid, functioning as an intermediate in lignin biosynthesis. Despite the "chloro" of the name, chlorogenic acids contain no chlorine. The term "chlorogenic acids" refers to a related polyphenol family of esters, including hydroxycinnamic acids with quinic acid. Chlorogenic is an important and biologically active dietary polyphenol, playing several important and therapeutic roles such as antioxidant activity, antibacterial, hepatoprotective, cardioprotective, anti-inflammatory, antipyretic, neuroprotective, anti-obesity, antiviral, anti-microbial, anti-hypertension, free radicals scavenger and a central nervous system stimulator. Chlorogenic acid has been studied as a possible chemical sensitizer involved in respiratory allergy to certain plant materials. Taken as a dietary supplement or in coffee, chlorogenic acid slightly reduces blood pressure. Indications, Body Weight, Diabetes Mellitus, Diabetes Mellitus, Type 2 (Phase 3), Dyslipidemias, Fatty Liver (Phase 3), Glioblastoma (Phase 1), Glucose Intolerance (Phase 2), Lung Neoplasms (Phase 2), Metabolic Syndrome, Neoplasms (Phase 1), Non-alcoholic Fatty Liver Disease (Phase 3), Overweight, Renal Insufficiency, Renal Insufficiency, Chronic Syndrome, Weight Loss.

* Chromium(III) Picolinate (CrPic3) is a chemical compound sold as a nutritional supplement to treat type 2 diabetes and promote weight loss. This bright-red coordination compound is derived from chromium(III) and picolinic acid. Large quantities of chromium are needed for glucose utilization by insulin in normal health, but deficiency is extremely common and has been observed in people receiving 100% of their nutrient needs intravenously, i.e., total parenteral nutrition diets. Chromium has been identified as regulating insulin by increasing the sensitivity of the insulin receptor. As such, chromium(III) picolinate has been proposed as a treatment for type 2 diabetes, although its effectiveness remains controversial due to conflicting evidence from human trials.

* Dihydroartemisinin (DHA) is a derivative of Artemisinin and the active metabolite of all artemisinin compounds (artemisinin, artesunate, artemether, etc.) Artemisinin and its derivatives also play a significant role in treating other diseases, apart from malaria. Artemisinin regulates inflammation and apoptosis, which, together with antioxidant effects, supports an argument for the use of artemisinin in different pathologies. Artemisinin and its derivatives have great potential in the treatment of Type-2 Diabetes Mellitus T2DM, whether in the early stage or late stage of the disease. (https://doi.org/10.3389/fphar.2020.585487) Because artemisinin has consistently been considered safe and effective in clinical practice and was officially recommended by WHO in the 1980s, it is likely among the less toxic Traditional chinese herbal medicine TCHM treatments with hepatoprotective effects. This applies to artemisinin derivatives as well, with one study showing that an oral dose of 2.2–3.9 mg/kg/d ART (add-on oncological therapy) is safe and well tolerated by subjects with metastatic breast cancer, without altering kidney function, liver function, or routine blood tests. As opposed to other TCHM treatments with unclear hepatoprotective mechanisms, artemisinin and its derivatives are known to protect the liver through antioxidant, anti-inflammatory, pro-apoptotic, and carcinostatic mechanisms. The structure of endoperoxide linkage and production of ROS is not only regarded as a vital feature for antimalarial treatment, but

is also key to liver protection.
(https://doi.org/10.1186/s13020-021-00489-0)

* Esmolol is a beta 1 adrenergic receptor antagonist with rapid onset, a very short duration of action, and no significant intrinsic sympathomimetic or membrane stabilising activity at therapeutic dosages. It is a class II antiarrhythmic. Esmolol decreases the force and rate of heart contractions by blocking beta-adrenergic receptors of the sympathetic nervous system, which are found in the heart and other organs of the body. Esmolol prevents the action of two naturally occurring substances: epinephrine and norepinephrine. Used in medicine to terminate supraventricular tachycardia, episodic atrial fibrillation or flutter, arrhythmia during anaesthesia, to reduce HR and BP during and after cardiac surgery, and in early treatment of myocardial infarction. Esmolol is also used in blunting the hemodynamic response to laryngoscopy and intubation. It has applications in foot disorder therapies, skin disorder therapies and diabetic foot ulcers. Esmolol is a cardioselective beta-blocker used in parenteral forms in the treatment of arrhythmias and severe hypertension. Esmolol has not been linked to instances of clinically apparent drug induced liver injury. It has a rapid onset but short duration of action without causing significant intrinsic sympathomimetic or membrane stabilizing activities at recommended therapeutic doses. Esmolol re-triggers natural wound healing processes impaired due to diabetic condition.

* Fampridine is an organic compound, the molecule is one of the three isomeric amines of pyridine. It is used as a research tool in characterizing subtypes of the potassium channel. It has also been used as a drug, to manage some of the symptoms of multiple sclerosis, and is indicated for symptomatic improvement of walking in adults with several variations of the disease. It was undergoing Phase III clinical trials as of 2008, and the U.S. Food and Drug Administration (FDA) approved the compound on January 22, 2010. Fampridine is a potent convulsant and is used to generate seizures in animal models for the evaluation of antiseizure agents. 4-Aminopyridine (Fampridine) is also used in bird control bait. It causes convulsions and, infrequently, death, depending on dosage. Fampridine has been used clinically in Lambert-Eaton myasthenic syndrome and multiple sclerosis. It acts by blocking voltage-gated potassium channels, prolonging action potentials and thereby increasing neurotransmitter release at the neuromuscular junction. The drug has been shown to reverse saxitoxin and tetrodotoxin toxicity in tissue and animal experiments. In calcium entry blocker overdose in humans, 4-aminopyridine can increase the cytosolic Ca2+ concentration very efficiently independent of the calcium channels. Fampridine has been shown to improve visual function and motor skills and relieve fatigue in patients with multiple sclerosis (MS). In a case series, 1 out of 23 MS participants reported improvements in urinary and fecal incontinence. Two of the four participants in spinal cord injury showed improvements in the number of bowel movements. Neurogenic bowel dysfunction (NBD) is a common problem for people with spinal cord injury (SCI) and multiple sclerosis (MS), which seriously impacts quality of life. The major symptoms of NBD are fecal incontinence and constipation. Hyperreflexic bowel fecal incontinence occurs due to reduced or absent anorectal sensation and lack of voluntary control of the external anal sphincter muscle. Areflexic bowel, usually occurs with injuries at the sacral spinal cord or below and is

characterized by the loss of centrally mediated (spinal cord) peristalsis and loss of reflex activity, resulting in slow stool propulsion and impaired reflex stool evacuation. However, the effect of the drug is strongly established for walking capacity only. Common side effects include dizziness, nervousness and nausea, and the incidence of adverse effects was shown to be less than 5% in all studies. Spinal cord injury patients have also seen improvement with 4-AP therapy. These improvements include sensory, motor and pulmonary function, with a decrease in spasticity and pain. Fampridine has had limited clinical use, but has not been linked to serum enzyme elevations during treatment nor to instances of clinically apparent liver injury with jaundice.

* Finerenone is a medication used to reduce the risk of kidney function decline, kidney failure, cardiovascular death, non-fatal heart attacks, and hospitalization for heart failure in adults with chronic kidney disease associated with type 2 diabetes. Finerenone is a non-steroidal mineralocorticoid receptor antagonist (MRA). Common side effects include hyperkalemia (high levels of potassium), hypotension (low blood pressure), and hyponatremia (low levels of sodium). Finerenone has less relative affinity to other steroid hormone receptors than currently available aldosterone antagonists such as eplerenone and spironolactone, which should result in fewer adverse effects like gynaecomastia, impotence, and low libido. Finerenone blocks mineralocorticoid receptors, which makes it a potassium-sparing diuretic. Mineralocorticoid receptor inhibition is responsible for the desired action of the drugs, whereas inhibition of the other receptors potentially leads to side effects. In the Phase II ARTS-DN study, finerenone dose-dependently reduced urine albumin to creatinine ratio in patients with diabetic kidney disease. Based on these findings, finerenone is being studied in the large Phase III FIDELIO and FIGARO outcome studies designed to assess whether finerenone reduces risk of CKD progression and adverse cardiovascular events in patients with Chronic Kidney Disease and Type 2 Diabetes.

* Glibenclamide also known as glyburide, is a medication used to treat diabetes mellitus type 2. It is recommended that it be taken together with diet and exercise. It may be used with other antidiabetic medication. It is not recommended for use by itself in diabetes mellitus type 1. Common side effects include nausea and heartburn. Serious side effects may include angioedema and low blood sugar. It is generally not recommended during pregnancy but can be used during breastfeeding. It is in the sulfonylureas class of medications and works by increasing the release of insulin from the pancreas. It is not as good as either metformin or insulin in those who have gestational diabetes. The medication works by binding to and inhibiting the ATP-sensitive potassium channels (KATP) inhibitory regulatory subunit sulfonylurea receptor 1 (SUR1) in pancreatic beta cells. This inhibition causes cell membrane depolarization, opening voltage-dependent calcium channels. This results in an increase in intracellular calcium in the pancreatic beta cell and subsequent stimulation of insulin release. After a cerebral ischemic insult, the blood–brain barrier is broken and glibenclamide can reach the central nervous system. Glibenclamide has been shown to bind more efficiently to the ischemic hemisphere. Moreover, under ischemic conditions SUR1, the regulatory subunit of the KATP- and the NCCa-ATP-channels, is expressed in neurons, astrocytes, oligodendrocytes, endothelial cells and by reactive microglia. As per the research

papers, this sulphonyl urea drug also has extra hepatic effects. It works by inhibiting the enzyme Carnityl Acyl Transferase I (CAT-I) indirectly which is present in the mitochondria. This prevents the transport of long chain fatty acids into the mitochondria for beta-oxidation. This prevents hyperglycemia for which it is prescribed. Tolbutamine also has a similar effect. Glibenclamide (glyburide) is also a promising neuroprotective agent starting to be tested in spinal cord injury trials, where it showed efficacy in rodent models of ischemic and hemorrhagic stroke, traumatic brain injury, and spinal cord injury by mechanisms including reducing edema formation and secondary hemorrhage.

* GRC-6211 is a TRPV1 blocker that has been shown to reduce the frequency of reflex bladder contractions in rats. GRC-6211 counteracts the bladder hyperactivity and noxious input induced by cystitis. At high doses it suppresses normal bladder activity by a TRPV1 dependent mechanism. TRPV1 antagonists might be useful for cystitis. GRC-6211 acts as a potent and selective antagonist for the TRPV1 receptor. It has analgesic and antiinflammatory effects and reached Phase IIb human trials, but was ultimately discontinued from development as a medicine, though it continues to have applications in scientific research.

* Hyoscyamine is an anticholinergic indicated to treat functional gastrointestinal disorders, biliary and renal colic, and acute rhinitis. Hyoscyamine is a tropane alkaloid and the levo-isomer of atropine used for a wide variety of treatments and therapeutics due to its antimuscarinic properties. As a drug that is not FDA approved, hyscyamine has no official indications. Hysocyamine has been used to reduce gastric motility, reduce pancreatic pain and secretions, treat anticholinesterase toxicity, treat certain cases of partial heart block, to provide symptomatic relief of spasms caused by various lower abdominal and bladder disorders including peptic ulcers, irritable bowel syndrome, diverticulitis, pancreatitis, colic, and interstitial cystitis. It has also been used to relieve some heart problems, control some of the symptoms of Parkinson's disease, as well as for control of abnormal respiratory symptoms and "hyper-mucus secretions" in patients with lung disease. It is also useful in pain control for neuropathic pain, chronic pain and palliative care – "comfort care" – for those with intractable pain from treatment resistant, untreatable, and incurable diseases. and for symptomatic relief of biliary and renal colic, to facilitate intubation, and symptomatic relief of acute rhinitis. Side effects include dry mouth and throat, increased appetite leading to weight gain, eye pain, blurred vision, restlessness, dizziness, arrhythmia, flushing, and faintness. The euphoric and sexual effects are stronger than those of atropine but weaker than those of Hyoscine, as well as dicycloverine, orphenadrine, cyclobenzaprine, trihexyphenidyl, and ethanolamine antihistamines like phenyltoloxamine. Hyoscyamine is an antimuscarinic; i.e., an antagonist of muscarinic acetylcholine receptors. It blocks the action of acetylcholine at parasympathetic sites in sweat glands, salivary glands, stomach secretions, heart muscle, sinoatrial node, smooth muscle in the gastrointestinal tract, and the central nervous system. It increases cardiac output and heart rate, lowers blood pressure and dries secretions. It may antagonize serotonin. At comparable doses, hyoscyamine has 98 per cent of the anticholinergic power of atropine. The other major belladonna-derived drug hyoscine (known in the United States as Scopolamine) has 92 per cent of the antimuscarinic potency of atropine.

* LM22B-10 treatment improved hindlimb function and reduced the development of bladder overactivity and detrusor-sphincter dyssynergia DSD in chronic spinal cord contusion SCC mice that correlated with decreased spinal cord scar volume and secondary injuries. Targeting neurotrophin signalling pathways could hold significant potential as a treatment for neurogenic lower urinary tract LUT dysfunction. Spinal cord injury (SCI), besides resulting in paralysis, can induce lower urinary tract (LUT) dysfunctions that are also highly debilitating and increase morbidity in afflicted individuals. Neurogenic LUT dysfunction includes bladder overactivity, detrusor-sphincter dyssynergia (DSD), urinary retention, frequent urinary tract infections and potential damage to the upper urinary tract. Alterations in neurotrophin signalling has been shown to play a major role in the development of LUT dysfunction.

* Lutein is a xanthophyll and one of 600 known naturally occurring carotenoids. In the human retina, lutein is absorbed from blood specifically into the macula lutea – a small area of the retina responsible for three-color vision – although its precise role in the body is unknown. It filters out potentially phototoxic blue light and near-ultraviolet radiation from the macula. The protective effect is due in part, to the reactive oxygen species quenching ability of these carotenoids. Lutein is one of only two carotenoids that have been identified in the human lens, may be protective against age-related increases in lens density and cataract formation. Again, the possible protection afforded by lutein may be accounted for, in part, by its reactive oxygen species scavenging abilities.

* Magnesium gluconate dihydrate is a magnesium salt of gluconate. It demonstrates the highest oral bioavailability of magnesium salts and is used as a mineral supplement. Magnesium is ubiquitous in the human body, and is naturally present in many foods, added to other food products, available as a dietary supplement and used as an ingredient in some medicines (such as antacids and laxatives). Although magnesium is available in the form of sulphates, lactate, hydroxide, oxide and chloride, only magnesium gluconate is recommended for magnesium supplementation as it appears to be better absorbed and causes less diarrha. This drug has been studied in the prevention of pregnancy-induced hypertension, and has displayed promising results. In addition, it has been studied for its effects on premature uterine contractions. Magnesium gluconate is a mineral supplement which is used to prevent and treat low levels of magnesium. Magnesium is very important for the normal physiologic functioning of cells, nerves, muscles, bones, and the heart. Generally, a well-balanced diet provides the necessary amounts of magnesium for homeostasis. However, certain conditions causing chronic magnesium deficiency may decrease levels of magnesium. These conditions include treatment with diuretics, a poor diet, alcoholism, or other medical conditions (e.g., severe diarrhea/vomiting, stomach/intestinal absorption problems, poorly controlled diabetes).

* Magnesium glycinate is a form of the mineral magnesium that is bound to the amino acid glycine. Glycine increases the bio-availability of magnesium by increasing its absorption in your small intestine, enhancing the uptake of magnesium into your blood

stream. Magnesium glycinate is commonly used to correct a magnesium deficiency, particularly when you may have difficulty absorbing adequate amounts of magnesium due to illness, or if you lack the enzymes that naturally facilitate magnesium absorption and transport. Magnesium may interfere with the absorption of some heart medications, antibiotics, and anti-malarial drugs, which may potentially reduce their efficiency. Drugs used to treat osteoporosis, such as bisphosphonates, should be taken at least several hours apart from magnesium to ensure they won't interfere with one another. Magnesium should not be taken if you are using diuretics, as serious kidney and renal system complications may occur. Magnesium in your body helps maintain proper blood sugar levels by regulating the action of insulin, a hormone that lowers your blood sugar. Insulin in your bloodstream binds to specialized proteins on the surface of your cells, activating these proteins and triggering the uptake of glucose from your bloodstream. Increasing magnesium intake, through food or through supplements, might help maintain healthy magnesium levels in the body and help improve blood sugar control in type 2 diabetics.

* Omigapil has been proved to be safe and well-tolerated in children and adolescents with congenital muscular dystrophy in a Phase I clinical trial. The glyceraldehyde-3-phosphate dehydrogenase nitrosylation inhibitor CGP3466B (omigapil) abrogated Abeta1-42 -induced tau acetylation, spatial memory impairment, and locomotor dysfunction in mice at the dose of 2.5 mg/kg through intraperitoneal (i.p.) injection. Used for tauopathies in neurodegenerative diseases.

* Polidocanol is a local anaesthetic and antipruritic component of ointments and bath additives. It relieves itching caused by eczema and dry skin. It has also been used to treat varicose veins, hemangiomas, and vascular malformations. It is formed by the ethoxylation of dodecanol. Polidocanol is also used as a sclerosant, an irritant injected to treat varicose veins. Polidocanol causes fibrosis inside varicose veins, occluding the lumen of the vessel, and reducing the appearance of the varicosity. Varicose veins develop when the small valves inside the veins no longer work properly, allowing the blood to flow backwards and then pool in the vein.

* Relenopride is a benzamide derivative and a selective serotonin 5-HT4 receptor agonist prokinetic drug used to treat chronic idiopathic constipation. In patients with functional constipation, 10 and 20mg doses accelerated gastric emptying, on per-protocol analysis, and orocecal transit. No significant adverse events were reported.

* Sotradecol (Sodium tetradecyl sulfate). It is commonly used in the treatment of varicose and spider veins of the leg, during the procedure of sclerotherapy. Being a detergent, its action is on the lipid molecules in the cells of the vein wall, causing inflammatory destruction of the internal lining of the vein and thrombus formation eventually leading to sclerosis of the vein. It is occasionally used for the treatment of stabilisation of joints that regularly dislocate, particularly in patients with Ehlers-Danlos syndrome.

* SR-7826-LIMKi3, inhibit contraction of human detrusor strip, and cause actin filament

breakdown, as well as cell proliferation reduction in cultured human bladder smooth muscle cells (HBSMCs), paralleled by reduced cofilin phosphorylation. Silencing of LIMK1 and LIMK2 in HBSMCs resulted in breakdown of actin filaments and decreased cell proliferation. LIM kinases (LIMKs) promote smooth muscle contraction in the prostate and LIMKs may promote contraction and proliferation in the bladder smooth muscle, bladder expressions of LIMKs are elevated in OAB rat detrusor tissues. Overactive bladder (OAB) is the most bothersome symptom in lower urinary tract symptoms (LUTS). Current pharmacologic treatment aims to inhibit detrusor contraction; however, shows unsatisfied efficacy and high discontinuation rate. LIMK inhibitors could be a potential therapeutic strategy for overactive bladder -related lower urinary tract symptoms. (doi: 10.1016/j.apsb.2021.01.005)

* Voglibose is an alpha-glucosidase inhibitor used for lowering postprandial blood glucose levels in people with diabetes mellitus. Voglibose delays the absorption of glucose thereby reducing the risk of macrovascular complications. Voglibose is a research product of Takeda Pharmaceutical Company, Japan's largest pharmaceutical company. Vogilbose was discovered in 1981, and was first launched in Japan in 1994, under the trade name BASEN, to improve postprandial hyperglycemia in diabetes mellitus. Postprandial hyperglycemia (PPHG) is primarily due to first phase insulin secretion. Alpha glucosidase inhibitors delay glucose absorption at the intestine level and thereby prevent sudden surge of glucose after a meal. There are three major drugs which belong to this class, acarbose, miglitol and voglibose, of which voglibose is the newest.

1.3.1.44 RT-MB-56

https://archive.org/details/Resonant_Therapy-Molecular_Biology_56

3F1; Activated Charcoal; ADX71441; Alaproclate; Anakinra; Aviptadil; Baloxavir marboxil; BMS-986020; Candesartan; Carnitine; Ceftaroline fosamil; Ceftolozane-Tazobactam; Cilengitide; Colloidal Silver; Compound-44; CTIBD; Insulin; Montbretin A; Nemonoxacin; Nifedipine; Pexiganan; PIEZO2 Factor; Reldesemtiv; Salvigenin; Solabegron; Solifenacin; Tamsulosin; Tozinameran; Trichloroacetic acid; Turmeric-Mix

* 3F1 treatment effectively prevented dental caries by controlling S. mutans in a rat caries model without perturbing the oral microbiota. At 5 micromolars (μM)] , the small molecule annotated 3F1 dispersed 50% of the established S. mutans biofilm but did not disperse biofilms formed by the commensal species Streptococcus sanguinis or Streptococcus gordonii. 3F1 dispersed S. mutans biofilms independently of biofilm-related factors such as antigen I/II and glucosyltransferases. 3F1 was able to effectively reduce dental caries in vivo without affecting the overall oral microbiota shaped by the intake of dietary sugars, suggesting that the pathogenic biofilm-specific treatment is a viable strategy for disease prevention. Streptococcus mutans metabolizes sucrose to initiate biofilm formation on the tooth surface and consequently produces lactic acid to degrade the tooth’s en

amel. Persistence of S. mutans biofilms in the oral cavity can lead to tooth decay.

* Activated Charcoal also known as activated carbon, is a medication used to treat poisonings that occurred by mouth. To be effective it must be used within a short time of the poisoning occurring, typically an hour. It does not work for poisonings by cyanide, corrosive agents, iron, lithium, alcohols, or malathion. Other uses include inside hemoperfusion machines. Common side effects include vomiting, black stools, diarrhea, and constipation. The more serious side effect, pneumonitis, may result if aspirated into the lungs. Gastrointestinal obstruction and ileus are less common but serious adverse effects. Use in pregnancy and breastfeeding is safe. Activated charcoal works by adsorbing the toxin. While charcoal has been used since ancient times for poisonings, activated charcoal has been used since the 1900s. It is on the World Health Organization's List of Essential Medicines. Activated charcoal is used to treat many types of oral poisonings such as phenobarbital and carbamazepine. It is not effective for a number of poisonings including: strong acids or bases, iron, lithium, arsenic, methanol, ethanol or ethylene glycol. Although activated charcoal is the most commonly used agent for GI decontamination in poisoned patients, medical professionals use discretion when determining whether or not its use is indicated. In a study of acute poisonings from agricultural pesticides and yellow oleander seeds, the administration of activated carbon did not affect survival rates.

* ADX71441 is a novel, potent and selective GABAB positive allosteric modulator PAM. In rodent trials caused significant reductions in alcohol intake (up to 65% with the highest dose of 200mg/kg). The drug potently reduced motivation to drink and alcohol-seeking behaviours, suggesting inhibition of alcohol-induced dopamine response and therefore reduced addiction. ADX71441 also caused a significant reduction in alcohol-seeking caused by alcohol-predictive environments and exposure to a stress, suggesting therapeutic use in preventing alcohol use disorder relapse as more than 50% of patients relapse in only 3 months. Preclinical studies suggest the superiority of GABAB PAMs in terms of efficacy to side effects. ADX71441 is an experimental therapy with the potential to slow the progression of nerve damage in people who have Charcot-Marie-Tooth disease, or CMT. Some people with CMT have an extra copy of a gene that codes for peripheral myelin protein 22, or PMP22. PMP22 is necessary for the production of myelin, an insulating layer around nerve cells that promotes the transmission of nerve signals. Too much PMP22 gums up the works, however, ultimately causing the nerve damage associated with CMT. One strategy for slowing the damage is decreasing the amount of PMP22 in nerve cells. Gamma-aminobutyric acid, or GABA, inhibits nerve signal transmission. It does this by reducing the activity of nerve cells when it binds to its GABA receptor. Scientists think that the activation of GABA-B receptors reduces the PMP22 gene’s production of myelin protein. ADX71441 is designed to modify the activity of GABA-B receptors to reduce the protein’s production. ADX71441 reduced the signs of bladder overactivity in both models of OAB, suggesting that the GABAB PAM approach has potential for the pharmacological treatment of OAB. Overactive bladder (OAB) is a common, chronic and debilitating disorder characterized by urinary urgency often accompanied by incontinence (involuntary urine leakage), frequency (≥8 micturition in 24 h) and nocturia (≥1 awakening per night to void). The GABAB receptor agonist baclofen reduces urethral resistance and detrusor overactivity in patients with spasticity. However, baclofen's side effects limit its

use for the treatment of overactive bladder (OAB). ADX71441 showed efficacy in the marble burying and elevated plus maze tests relevant for anxiety-like supporting and expanding earlier evidence of the broad anxiolytic-like properties of the target. Acute ADX71441 reduced visceral pain in the acetic acid (AA) writhing test and also reduced chronic pain in the monosodium iodoacetate (MIA)-induced model of osteoarthritis, after acute and subchronic administration regimens.

* Alaproclate (A03), a known selective serotonin reuptake inhibitor, induced dose-response increases of neuroprotective SirT1 in N2a cells stably expressing full-length ApoE4 with an EC 50 of 2mM. Moreover, A03 increased SirT1 levels in ApoE4-transfected human A172 glioblastoma cells. In 5XFAD-ApoE4 AD model mice, subcutaneous administration of A03 (10 mg/kg/day) for 56 days increased SirT1 levels in the hippocampus and elicited cognitive improvement while inducing no observed toxicity. In addition, pharmacokinetic study shows that A03 is orally bioavailable and brainpenetrant. The SirT1 enhancing effects of A03 may decrease acetylated tau levels and abrogate tau pathology, which needs direct evidence in the future studies. Used for tauopathies in neurodegenerative diseases.

* Anakinra is a biopharmaceutical medication used to treat rheumatoid arthritis, cryopyrin-associated periodic syndromes, familial Mediterranean fever, and Still's disease. It is a recombinant and slightly modified version of the human interleukin 1 receptor antagonist protein. Anakinra is administered by subcutaneous injection. It is used as a second line treatment to manage symptoms of rheumatoid arthritis after treatment with a disease-modifying antirheumatic drug (DMARD) has failed. It can be used in combination with some DMARDs. It is used to treat anyone from infants to adults with a cryopyrin-associated periodic syndrome, including neonatal-onset multisystem inflammatory disease. It also appears to be effective in treating macrophage activation syndrome (MAS), a form of cytokine storm. It is used off label to treat Schnitzler's syndrome. It has been shown to help treat secondary hemophagocytic lymphohistiocytosis (HLH) especially in pediatric patients with other rheumatological disorders. It was not tested in pregnant women, but appeared to be safe in animal studies. It should not be used in people who have active infections or latent tuberculosis, who have low white blood cells counts, or who are taking TNF inhibitors. More than ten percent of people taking Anakinra have injection site reactions, headaches, and have increased levels of cholesterol in their blood. Between one and ten percent of people have severe infections, decreased white blood cells, or decreased platelets. It is unclear if taking Anakinra increases the risk of getting cancer; studies are complicated by the fact that people with rheumatoid arthritis are already at higher risk of getting cancer. Anakinra is associated with a low rate of serum enzyme elevations during therapy and with rare instances of clinically apparent, acute liver injury. It was approved in 2020, for the treatment of patients with deficiency of interleukin-1 receptor antagonist, a very rare genetic inflammatory condition resembling an infection throughout the body or a bone infection that happens in newborns during the first days of life.

* Aviptadil (RLF 100, DK 1000) is an injectable synthetic formulation of human

vasoactive intestinal peptide (VIP). VIP was discovered in 1970, and has been used to treat various inflammatory conditions, such as acute respiratory distress syndrome (ARDS), asthma and chronic obstructive pulmonary disease (COPD). Studies have found that aviptadil may be beneficial for severely ill patients with COVID-19 related ARDS. COVID-19-related death is primarily caused by Acute Respiratory Distress Syndrome (ARDS). The trigger for ARDS is widely attributed to a cytokine storm in the lungs, in which the virus causes release of inflammatory cytokines. As a result, alveolae of the lungs fill with fluid and become impermeable to oxygen, even in the setting of mechanical ventilation. SARS-CoV-2 is known to cause respiratory failure, which is the hallmark of Acute COVID-19. Undesirable effects: Gastrointestinal Disorders – Diarrhea, Vascular disorders – Hypotension, cutaneous flushing, facial flushing & Infusion related reactions.

* Baloxavir marboxil is an antiviral medication for treatment of influenza A and influenza B flu. It was approved for medical use both in Japan and in the United States in 2018, Baloxavir marboxil was developed as a prodrug strategy, with its metabolism releasing the active agent, baloxavir acid (BXA). BXA then functions as enzyme inhibitor, targeting the influenza virus' cap-dependent endonuclease activity, used in "cap snatching" by the virus' polymerase complex, a process essential to its life-cycle. The most common side effects of baloxavir marboxil include diarrhea, bronchitis, nausea, sinusitis and headache. Baloxavir marboxil is an influenza medication, an antiviral, for individuals who are twelve years of age or older, that have presented symptoms of this infection for no more than 48 hours. The efficacy of baloxavir marboxil administered after 48 hours has not been tested. Baloxavir marboxil is an influenza medication, an antiviral, for individuals who are twelve years of age or older, that have presented symptoms of this infection for no more than 48 hours. In November 2020, the FDA approved an updated indication to include post-exposure prevention of influenza (flu) for people twelve years of age and older after contact with an individual who has the flu. In October 2019, the FDA approved an updated indication for the treatment of acute, uncomplicated influenza in people twelve years of age and older at risk of influenza complications. Baloxavir marboxil should not be co-administered with dairy products, calcium-fortified beverages, or laxatives, antacids, or oral supplements containing calcium, iron, magnesium, selenium, aluminum or zinc.

* BMS-986020, also known as AM152 and AP-3152 free acid, is a potent and selective LPA1 antagonist. BMS-986020 is in Phase 2 clinical development for treating idiopathic pulmonary fibrosis. BMS-986020 selectively inhibits the LPA receptor, which is involved in binding of the signaling molecule lysophosphatidic acid, which in turn is involved in a host of diverse biological functions like cell proliferation, platelet aggregation, smooth muscle contraction, chemotaxis, and tumor cell invasion, among others. The lysophosphatidic acid receptor, LPA1, has been implicated as a therapeutic target for fibrotic disorders. Lysophospholipids (LPs), including lysophosphatidic acid (LPA), sphingosine 1-phospate (S1P), lysophosphatidylinositol (LPI), and lysophosphatidylserine (LysoPS), are bioactive lipids that transduce signals through their specific cell-surface G protein-coupled receptors, LPA1-6, S1P1-5, LPI1, and LysoPS1-3, respectively. These LPs and their receptors have been implicated in both

physiological and pathophysiological processes such as autoimmune diseases, neurodegenerative diseases, fibrosis, pain, cancer, inflammation, metabolic syndrome, bone formation, fertility, organismal development, and other effects on most organ systems.

* Candesartan is an angiotensin-receptor blocker (ARB) that may be used alone or with other agents to treat hypertension. It is administered orally as the prodrug, candesartan cilexetil, which is rapidly converted to its active metabolite, candesartan, during absorption in the gastrointestinal tract. Candesartan lowers blood pressure by antagonizing the renin-angiotensin-aldosterone system (RAAS); it competes with angiotensin II for binding to the type-1 angiotensin II receptor (AT1) subtype and prevents the blood pressure increasing effects of angiotensin II. Unlike angiotensin-converting enzyme (ACE) inhibitors, ARBs do not have the adverse effect of dry cough. Candesartan may be used to treat hypertension, isolated systolic hypertension, left ventricular hypertrophy and diabetic nephropathy. It may also be used as an alternative agent for the treatment of heart failure, systolic dysfunction, myocardial infarction and coronary artery disease. As with other drugs that inhibit the renin–angiotensin system, if candesartan is taken by pregnant women during the second or third trimester, it can cause injury and in some cases, death of the developing fetus. Symptomatic hypotension may occur in people who take candesartan and are volume-depleted or salt-depleted, as can also occur when diuretics are coadministered. Reduction in renal glomerular filtration rate may occur; people with renal artery stenosis may be at higher risk. Hyperkalemia may occur; people who are also taking spironolactone or eplerenone may be at higher risk. Anemia may occur, due to inhibition of the renin–angiotensin system. As with other angiotensin receptor blockers, candesartan can rarely cause severe liver injury. Candesartan, reduces methamphetamine (METH) use disorder, in conjunction with the counter-regulation of Dopamine 2 Receptor (D2R) and Angiotensin II receptor type 1 (AT1R.)

* Carnitine is a quaternary ammonium compound involved in metabolism in most mammals, plants, and some bacteria. In support of energy metabolism, carnitine transports long-chain fatty acids into mitochondria to be oxidized for energy production, and also participates in removing products of metabolism from cells. Given its key metabolic roles, carnitine is concentrated in tissues like skeletal and cardiac muscle that metabolize fatty acids as an energy source. Healthy individuals, including strict vegetarians, synthesize enough L-carnitine in vivo to not require supplementation. Carnitine exists as one of two stereoisomers (the two enantiomers d-carnitine (S-(+)-) and l-carnitine (R-(-)-)). Both are biologically active, but only l-carnitine naturally occurs in animals, and d-carnitine is toxic as it inhibits the activity of the l-form. At room temperature, pure carnitine is a white powder, and a water-soluble zwitterion with low toxicity. Derived from amino acids, carnitine was first extracted from meat extracts in 1905, leading to its name from Latin, "caro/carnis" or flesh.

* Ceftaroline fosamil is a cephalosporin antibiotic with anti-MRSA activity. Ceftaroline fosamil is a prodrug of ceftaroline. It is active against methicillin-resistant Staphylococcus aureus (MRSA) and other Gram-positive bacteria. It retains some

activity of later-generation cephalosporins having broad-spectrum activity against Gram-negative bacteria, but its effectiveness is relatively much weaker. It is currently being investigated for community-acquired pneumonia and complicated skin and skin structure infection. Uncomplicated SSSIs included "simple abscesses, impetiginous lesions, furuncles, and cellulitis." Complicated SSSIs included "infections either involving deeper soft tissue or requiring significant surgical intervention, such as infected ulcers, burns, and major abscesses or a significant underlying disease state that complicates the response to treatment." The FDA further noted that "superficial infections or abscesses in an anatomical site, such as the rectal area, where the risk of anaerobic or Gram-negative pathogen involvement is higher, [were also] considered complicated infections."The uncomplicated category (uSSSI) is most frequently caused by Staphylococcus aureus and Streptococcus pyogenes, whereas the complicated category (cSSSI) might also be caused by a number of other pathogens. The clinical studies indicated ceftaroline was well tolerated. The most common adverse reactions occurring in > 2% of subjects receiving ceftaroline in the pooled phase-III clinical trials were diarrhea, nausea, and rash. The warnings and precautions associated with ceftaroline include: Known serious hypersensitivity to ceftaroline or other members of the cephalosporin class. Anaphylaxis and anaphylactoid reactions. Clostridium difficile-associated diarrhea (CDAD) has been reported for nearly all antibacterial agents including ceftaroline, and may range in severity from mild diarrhea to fatal colitis. Prescribing ceftaroline in the absence of a proven or strongly suspected bacterial infection is unlikely to provide benefit to the patient and increases the risk of the development of drug-resistant bacteria. In the pooled phase-III CABP trials, 51/520 (9.8%) of subjects treated with ceftaroline compared to 24/534 (4.5%) of subjects treated with ceftriaxone seroconverted from a negative to a positive direct Coombs' test result. No clinical adverse reactions representing hemolytic anemia were reported in any treatment group. If anemia develops during or after treatment with ceftaroline, drug-induced hemolytic anemia should be considered. If drug-induced hemolytic anemia is suspected, discontinuation of ceftaroline should be considered and supportive care should be administered to the patient if clinically indicated. No clinical drug-drug interaction studies have been conducted with ceftaroline fosamil. In vitro studies in human liver microsomes indicated that neither ceftaroline fosamil nor ceftaroline inhibits the major cytochrome P450 isoenzymes. Therefore, neither ceftaroline fosamil nor ceftaroline is expected to inhibit or induce the clearance of drugs that are metabolized by these metabolic pathways in a clinically relevant manner. For pregnant or nursing mothers, ceftaroline fosamil should be used only if the potential benefit outweighs the potential risk to the fetus or child. Safety and effectiveness in pediatric children has not been studied. Because elderly people 65 years of age or older are more likely to have decreased renal function and ceftaroline is excreted primarily by the kidney, care should be taken in dose selection in this age group as in younger people with impaired renal function. Dosage adjustment is required in people with moderately (30 to ‰¤ 50 mL/min) or severely (< 30 mL/min) impaired renal function. The pharmacokinetics of ceftaroline in people with hepatic impairment have not been established. No adverse reactions occurred in greater than 5% of people receiving ceftaroline.

* Ceftolozane-Tazobactam is a combination antibiotic medication used for the treatment

of complicated urinary tract infections and complicated intra-abdominal infections in adults. Ceftolozane is a antibiotic, developed for the treatment of infections with gram-negative bacteria that are resistant to conventional antibiotics. It was studied for urinary tract infections, intra-abdominal infections and ventilator-associated bacterial pneumonia. The most common side effects include nausea (feeling sick), headache, constipation, diarrhea and fever. Ceftolozane is a type of antibiotic called a cephalosporin, which belongs to the wider group of antibiotics called beta-lactams. It works by interfering with the production of molecules that bacteria need to build their protective cell walls. This causes weakness in the bacterial cell walls which then become prone to collapse, ultimately leading to the death of the bacteria. Tazobactam blocks the action of bacterial enzymes called beta-lactamases. These enzymes enable bacteria to break down beta-lactam antibiotics like ceftolozane, making the bacteria resistant to the antibiotic's action. By blocking the action of these enzymes, tazobactam allows ceftolozane to act against bacteria that would otherwise be resistant to ceftolozane. Ceftolozane/tazobactam is indicated for the treatment of the following infections in adults caused by designated susceptible microorganisms: Complicated intra-abdominal infections; Acute pyelonephritis; Complicated urinary tract infections. Hospital-acquired bacterial pneumonia and Ventilator-associated bacterial pneumonia (HABP/VABP).

* Cilengitide (EMD 121974) is a molecule based on the cyclic peptide cyclo(-RGDfV-), which is selective for alphav integrins, which are important in angiogenesis (forming new blood vessels), and other aspects of tumor biology. Hence, it is under investigation for the treatment of glioblastoma, where it may act by inhibiting angiogenesis, and influencing tumor invasion and proliferation. The European Medicines Agency has granted cilengitide orphan drug status. Cilengitide seems to function by inhibiting the FAK/src/AKT pathway and inducing apoptosis in endothelial cells. Preclinical studies in mice of cilengitide were able to demonstrate efficacious tumor regression. In a rat xenograft model, cilengitide was able to potentiate the cytotoxic effects of radiation when cilengitide was administered prior to radiation therapy. When combined with radiation, inhibition of integrin expression by cilengitide synergistically improves the cytotoxic effects of ionizing radiation for glioblastoma. Phase II studies were able to demonstrate that cilengitide as a potential monotherapy in patients with recurrent glioblastoma with high intratumor drug levels when 2000 mg of cilengitide is given twice weekly. Cilengitide is well tolerated, in combination with radiation and temozolomide, at a dose of 2000 mg in patients with newly diagnosed glioblastoma, regardless of MGMT promoter status. In a phase I/IIa study, the addition of cilengitide to the standard of care for newly diagnosed glioblastoma (surgical resection followed by temozolomide and radiation therapy) improves progression-free survival and overall survival in patients with MGMT promoter methylation.

* Colloidal Silver. Silver(1+) is a silver cation, a monovalent inorganic cation, a monoatomic monocation and an elemental silver. The medical uses of silver include its use in wound dressings, creams, and as an antibiotic coating on medical devices. Wound dressings containing silver sulfadiazine or silver nanomaterials may be used to treat external infections. The limited evidence available shows that silver coatings on

endotracheal breathing tubes may reduce the incidence of ventilator-associated pneumonia. There is tentative evidence that using silver-alloy indwelling catheters for short-term catheterizing will reduce the risk of catheter-acquired urinary tract infections. Indicated for Dental Pulp Necrosis (Phase 4); Diabetic Foot (Phase 4); Foot Ulcer (Phase 4); Pain, Postoperative (Phase 4); Skin Ulcer; Ulcer (Phase 4.); Sinusitis (Phase 2) Hernia (Phase 1); Hernia, Abdominal (Phase 1); Hernia, Ventral (Phase 1); Incisional Hernia (Phase 1); Chronic Disease (Phase 1).

* Compound-44 is a tricyclic peptide PCSK9 inhibitor. Proprotein convertase subtilisin-like/kexin type 9 (PCSK9) is a key regulator of plasma LDL-cholesterol (LDL-C) and a clinically validated target for the treatment of hypercholesterolemia and coronary artery disease. This molecule represents the first report of highly potent and orally bioavailable macrocyclic peptide PCSK9 inhibitor with an overall favorable profile as a once-daily oral lipid-lowering agent. The clearance of the molecule has been shifted over time in the drug discovery campaign from predominantly hepatic to renal by reducing OATP 1B1 transporter activity.

* CTIBD or 4-(4-(4-chlorophenyl)-3-(trifluoromethyl)isoxazol-5-yl)benzene-1,3-diol and its derivatives are novel chemical activators of the bladder BKCa channel and potential candidates for OAB therapeutics. CTIBD directly activates the BKCa channel and relaxes urinary bladder smooth muscle of rats. In an acetic acid-induced overactive bladder (OAB) model, intraperitoneal injection of 20 mg/kg CTIBD effectively restored frequent voiding contraction and lowered voiding volume without affecting other bladder function parameters. CTIBD concentration-dependently reduced acetylcholine-induced contraction of urinary bladder smooth muscle strips. CTIBD altered the gating kinetics of the channel by dramatically slowing channel closing without effecting channel opening. When CTIBD was applied to the treated extracellular side of the channel, the conductance-voltage relationship of the channel shifted toward a negative value, and the maximum conductance increased in a concentration-dependent manner. The large-conductance calcium-activated potassium channel (BKCa channel) is expressed on various tissues and is involved in smooth muscle relaxation. The channel is highly expressed on urinary bladder smooth muscle cells and regulates the repolarization phase of the spontaneous action potentials that control muscle contraction.

* Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver. Insulin is a peptide hormone produced by beta cells of the pancreatic islets; it is considered to be the main anabolic hormone of the body. It regulates the metabolism of carbohydrates, fats and protein by promoting the absorption of glucose from the blood into liver, fat and skeletal muscle cells. In these tissues the absorbed glucose is converted into either glycogen via glycogenesis or fats (triglycerides) via lipogenesis, or, in the case of the liver, into both.[8] Glucose production and secretion by the liver is strongly inhibited by high concentrations of insulin in the blood. Circulating insulin also affects the synthesis of proteins in a wide variety of tissues. It is therefore an anabolic hormone, promoting the conversion of small molecules in the blood into large molecules inside the cells. Low insulin levels in the

blood have the opposite effect by promoting widespread catabolism, especially of reserve body fat. Beta cells are sensitive to blood sugar levels so that they secrete insulin into the blood in response to high level of glucose; and inhibit secretion of insulin when glucose levels are low. Insulin enhances glucose uptake and metabolism in the cells, thereby reducing blood sugar level. Their neighboring alpha cells, by taking their cues from the beta cells, secrete glucagon into the blood in the opposite manner: increased secretion when blood glucose is low, and decreased secretion when glucose concentrations are high. Glucagon increases blood glucose level by stimulating glycogenolysis and gluconeogenesis in the liver. The secretion of insulin and glucagon into the blood in response to the blood glucose concentration is the primary mechanism of glucose homeostasis. Decreased or absent insulin activity results in diabetes mellitus, a condition of high blood sugar level (hyperglycaemia). There are two types of the disease. In diabetes mellitus type 1, the beta cells are destroyed by an autoimmune reaction so that insulin can no longer be synthesized or be secreted into the blood. In diabetes mellitus type 2, the destruction of beta cells is less pronounced than in type 1, and is not due to an autoimmune process. Instead, there is an accumulation of amyloid in the pancreatic islets, which likely disrupts their anatomy and physiology. The pathogenesis of type 2 diabetes is not well understood but reduced population of islet beta-cells, reduced secretory function of islet beta-cells that survive, and peripheral tissue insulin resistance are known to be involved. Type 2 diabetes is characterized by increased glucagon secretion which is unaffected by, and unresponsive to the concentration of blood glucose. But insulin is still secreted into the blood in response to the blood glucose. As a result, glucose accumulates in the blood.

* Montbretin A is a new anti-diabetic compound derived from a garden flower approved by Health Canada for Phase 1 human trials. Montbretin A slows down the degradation of the starch component in food, but does not affect the simple sugars. Montbretin A (MbA) works by inhibiting the enzyme alpha-amylase. When MbA inhibits the alpha-amylase enzyme, starch doesn't break down immediately and instead travels down into the lower gut. Normally, the alpha-amylase enzyme breaks down starch from foods such as rice and bread into complex sugars called oligosaccharides. Oligosaccharides are then further degraded by alpha-glucosidase enzymes in the gut wall, releasing glucose into the bloodstream, which causes blood sugar levels to spike in Type 2 diabetics. Current drugs that target the same enzyme system usually inhibit the alpha-glucosidase enzyme, stopping the oligosaccharides or complex sugars from being broken down, and preventing the release of glucose. The downside of these drugs is that the oligosaccharides that are shunted down provide 'fast food' for the gut bacteria further down, and these gut bacteria produce a lot of gas as a side product…so the patient tends to suffer from diarrhea and flatulence. Since MbA prevents starch from being broken down into oligosaccharides, the full starch polymer will make its way into the lower gut. The bacteria down there can degrade that, although more slowly. Animal studies on diabetic rats showed that MbA controlled blood sugar levels efficiently.

* Nemonoxacin is a non-fluorinated quinolone antibiotic undergoing clinical trials. It has the same mechanism of action as fluouroquinolones; it inhibits DNA gyrase, preventing DNA synthesis, gene duplication, and cell division. The U.S. Food and Drug

Administration (FDA) has granted nemonoxacin qualified infectious disease product (QIDP) and fast track designations for community-acquired bacterial pneumonia (CAP) and acute bacterial skin and skin-structure infections (ABSSSI). Nemonoxacin has a broad spectrum of activity against Gram-positive, Gram-negative, and atypical pathogens, including activity against methicillin-resistant Staphylococcus aureus (MRSA) (MIC90 1 g/ml) and vancomycin-resistant pathogens. However, it was less active against Gram-negative pathogens such as Escherichia coli, Proteus mirabilis, and Pseudomonas aeruginosa, with MIC90 values of 32, 16, and 32 g/ml, respectively. The new drug also is effective against C.difficile isolates that are resistant to other quinolones, and is more potent than levofloxacin or moxifloxacin.

* Nifedipine is a calcium channel blocker medication used to manage angina, high blood pressure, Raynaud's phenomenon, and premature labor. It is one of the treatments of choice for Prinzmetal angina. It may be used to treat severe high blood pressure in pregnancy. Its use in preterm labor may allow more time for steroids to improve the baby's lung function and provide time for transfer of the mother to a well qualified medical facility before delivery. It is a calcium channel blocker of the dihydropyridine type. Nifedipine is taken by mouth and comes in fast- and slow-release formulations. Common side effects include lightheadedness, headache, feeling tired, leg swelling, cough, and shortness of breath. Serious side effects may include low blood pressure and heart failure. There is tentative evidence that its use in pregnancy is safe; however, it is not recommended during breastfeeding. The approved uses are for the long-term treatment of hypertension and angina pectoris. In hypertension, recent clinical guidelines generally favour diuretics and ACE inhibitors, although calcium channel antagonists, along with thiazide diuretics, are still favoured as primary treatment for patients over 55 and black patients. Nifedipine has been used frequently as a tocolytic (agent that delays premature labor). A Cochrane review has concluded that it has benefits over placebo or no treatment for prolongation of pregnancy. It also has benefits over beta-agonists and may also have some benefits over atosiban and magnesium sulfate, although atosiban results in fewer maternal adverse effects. No difference was found in the rate of deaths among babies around the time of birth, while data on longer-term outcomes is lacking. Raynaud's phenomenon is often treated with nifedipine. A 2005 meta-analysis showed modest benefits (33% decrease in attack severity, 2.8-5 reduction in absolute number of attacks per week); it does conclude that most included studies used low doses of nifedipine. Topical nifedipine has been shown to be as effective as topical nitrates for anal fissures. Nifedipine is also used in high-altitude medicine to treat high altitude pulmonary edema. Nifedipine is one of the main choices for the treatment of Prinzmetal angina due to its vasodilating effects on the coronary arteries. Other uses include painful spasms of the esophagus such as from cancer or tetanus. It is also used for the small subset of people with pulmonary hypertension.Finally, nifedipine can be used in the treatment of renal calculi, which are commonly referred to as kidney stones. Studies have indicated that it helps to relieve renal colic. However, alpha blockers (such as tamsulosin) have been described as being significantly better. Nifedipine treats chilblains by helping to dilate blood vessels and improve circulation. Side effects can include flushing of the face and neck, nausea, dizziness, and swelling in the hands or feet. Nifedipine rapidly lowers blood pressure,

and patients are commonly warned they may feel dizzy or faint after taking the first few doses. Tachycardia (fast heart rate) may occur as a reaction. Patients are warned not to consume anything containing grapefruit or grapefruit juice, as they raise blood nifedipine levels. There are several possible mechanisms, including the inhibition of CYP3A4-mediated metabolism. As calcium channel blocker, nifedipine has a risk of causing gingival hyperplasia. Nifedipine is a calcium channel blocker. Although nifedipine and other dihydropyridines are commonly regarded as specific to the L-type calcium channel, they also possess nonspecific activity towards other voltage-dependent calcium channels. Nifedipine has additionally been found to act as an antagonist of the mineralocorticoid receptor, or as an antimineralocorticoid.

* Pexiganan is a polypeptide antibiotic agent derivative of Magainin. Pexiganan is a microbicide and antiinfective agent with potent and broad-spectrum antimicrobial with low toxicity against mammalian cells. It is being developed as a topical therapy for infected foot ulcers in patients with diabetes. Pexiganan is a 22-amino-acid antimicrobial peptide derived from magainin peptides isolated from the skin of the African clawed frog. It demonstrates antimicrobial activity against a broad range of organisms, including gram-positive aerobes and anaerobes, such as staphylococcus, streptococcus, enterococcus, corynebacterium, pseudomonas, acinetobacter, strenotrophomonas, bacteroides, and other species. Phase III clinical studies proved pexiganan to be efficient in wound healing, with few reports of toxicity.

* PIEZO2 Factor or Piezo-type mechanosensitive ion channel component 2 is a protein that in humans is encoded by the PIEZO2 gene. The PIEZO2 protein has a role in rapidly adapting mechanically activated (MA) currents in somatosensory neurons. PIEZO2 is typically found in tissues that respond to physical touch, such as Merkel cells, and is thought to regulate light touch response. PIEZO2, may be responsible for the powerful urge to urinate that we normally feel several times a day. This gene helps at least two different types of cells in the body sense when our bladders are full and need to be emptied. Gain-of-function mutations in the mechanically activated ion channel PIEZO2 cause a subtype of Distal Arthrogryposis. Mice without PIEZO2 in their proprioceptive neurons show uncoordinated body movements, indicating that PIEZO2 plays a role in mammalian proprioception. PIEZO2 mutations link Gordon syndrome (distal arthrogryposis type 3), Marden-Walker syndrome and Arthrogryposis (Distal Arthrogryposis Type 5).

* Reldesemtiv (CK-2127107) is an activator of skeletal muscle troponin, a calcium-sensitive sarcomere protein. By slowing the rate of calcium release in skeletal muscles, it improves their contractility. Several trials realized in healthy volunteers against placebo have showed its good tolerance and its effectiveness on muscle strength; it is being studied as a potential treatment for diseases associated with fatigue or muscle weakness. Developed by Cytokinetics, reldesemtiv was evaluated between December 2015 and May 2018 in 18 centers in North America in 70 patients with type II, III and IV SMA, over 12 years-old. For two months, participants in this phase II, randomized, double-blind trial received orally either reldesemtiv twice daily at a dose of 150 mg (24 participants) or 450 mg (20 participants), or placebo (26 participants). The results,

published in February 2021, show: good tolerance to the two doses tested, a significant improvement in respiratory function (maximum expiratory pressure or MEP) in patients on reldesemtiv at both doses, compared to the placebo group, a significant increase in the walking distance covered in six minutes by the patients who received reldesemtiv 450 mg compared to the placebo group. The investigators of this trial suggest to evaluate this treatment, which does not affect the production of SNM like the drugs recently authorized in SMA, in a larger number of patients. Despite the recent approvals of edaravone for the treatment of amyotrophic lateral sclerosis (ALS) and nusinersen for the treatment of spinal muscle atrophy (SMA), therapeutic options remain limited and represent a significant medical need. The discovery of reldesemtiv, a second-generation fast skeletal muscle troponin activator (FSTA) that increases force production at submaximal stimulation frequencies, is reported. Property-based optimization of high throughput screening hit 1 led to compounds with improved free exposure and in vivo muscle activation potency compared to the first-generation FSTA, tirasemtiv. Reldesemtiv demonstrated increased muscle force generation in a phase 1 clinical trial and is currently being evaluated in clinical trials for the treatment of amyotrophic lateral sclerosis.

* Salvigenin is a natural polyphenolic compound, with neuroprotective effect. Salvigenin, a potent human monoamine oxidase-A -hMAO-A isoform inhibitor, has antitumor cytotoxic and immunomodulatory properties. Salvigenin has dose-dependent analgesic effect so that it can be useful in controlling of inflammations, acute and chronic pain. Salvigenin has been found to have cytotoxic effects on various forms of cancer cells, such as colon adenocarcinoma, breast adenocarcinoma and glioblastoma. Further salvigenin has beneficial potential in the medicine for the treatment of diabetes and protects cells against oxidative stress.

* Solabegron is a drug which acts as a selective agonist for the beta3 adrenergic receptor. It is being developed for the treatment of overactive bladder and irritable bowel syndrome. It has been shown to produce visceral analgesia by releasing somatostatin from adipocytes. Solabegron relaxes the bladder smooth muscle by stimulating beta3 adrenoceptors, a novel mechanism compared with older established drug treatments for overactive bladder syndrome such as the anticholinergic agents. Astellas Pharma has developed the first commercially available beta3 adrenergic receptor, mirabegron, which is now licensed in Japan and the U.S. exclusively for treatment of overactive bladder syndrome. A Phase II study of solabegron for overactive bladder (OAB) looked at 258 patients with moderate-to-severe incontinence experiencing an average of 4.5 wet episodes per day. Results demonstrated a statistically significant improvement with solabegron as compared with placebo, as measured by the percentage reduction of the number of wet episodes and the absolute number of daily voids. A Phase II study for irritable bowel syndrome (IBS) evaluated 102 patients with IBS. Solabegron demonstrated significant reduction in pain associated with the disorder and a trend for greater improvement in the quality of life, when compared with a placebo. Both Phase II studies indicated a tolerability profile for Solabegron that was similar to placebo. The OAB patients did not suffer from dry mouth, constipation, increase in heart rate or cognitive issues. This drug does not bind to acetylcholine receptors so side effects are

expected to be minor.

* Solifenacin is a medicine used to treat overactive bladder and neurogenic detrusor overactivity (NDO). It may help with incontinence, urinary frequency, and urinary urgency. Benefits appear similar to other medications in the class. Common side effects include dry mouth, constipation, and urinary tract infection. Severe side effects may include urinary retention, QT prolongation, hallucinations, glaucoma, and anaphylaxis. It is unclear if use is safe during pregnancy. It is of the antimuscarinic class and works by decreasing bladder contractions. It is used to treat overactive bladder. It may help with incontinence, urinary frequency, and urinary urgency. Benefits appear similar to other antimuscarinics such as oxybutynin, tolterodine, and darifenacin. It is also used to treat neurogenic detrusor overactivity (NDO), a form of bladder dysfunction related to neurological impairment, in children ages two years and older. NDO is a dysfunction of the bladder that results from disease or injury in the nervous system. With NDO, there is overactivity of the bladder wall muscle, which normally relaxes to allow storage of urine. The bladder wall muscle overactivity results in sporadic bladder muscle contraction, which increases pressure in the bladder and decreases the volume of urine the bladder can hold. If NDO is not treated, increased pressure in the bladder can put the upper urinary tract at risk of harm, including possible permanent damage to the kidneys. In addition, spontaneous bladder muscle contractions can lead to unexpected and frequent leakage of urine with symptoms of urinary urgency (immediate urge to urinate), frequency (urinating more often than normal) and incontinence (loss of bladder control). Solifenacin is contraindicated for people with urinary retention, gastric retention, uncontrolled or poorly controlled closed-angle glaucoma, severe liver disease (Child-Pugh class C)] and hemodialysis. Long QT syndrome is not a contraindication although solifenacin, like tolterodine and darifenacin, binds to hERG channels of the heart and may prolong the QT interval. This mechanism appears to be seldom clinically relevant. The most common side effects of solifenacin are dry mouth, constipation and urinary tract infection. As all anticholinergics, solifenacin may rarely cause hyperthermia due to decreased perspiration. Somnolence (sleepiness or drowsiness) has been reported. Severe allergic reactions, such as angioedema (swelling beneath the skin) and anaphylaxis, have been reported in people treated with solifenacin succinate and may be life-threatening. Solifenacin is metabolized in the liver by the cytochrome P450 enzyme CYP3A4. When administered concomitantly with drugs that inhibit CYP3A4, such as ketoconazole, the metabolism of solifenacin is impaired, leading to an increase in its concentration in the body and a reduction in its excretion. As stated above, solifenacin may also prolong the QT interval. Therefore, administering it concomitantly with drugs which also have this effect, such as moxifloxacin or pimozide, can theoretically increase the risk of arrhythmia. Solifenacin is a competitive cholinergic receptor antagonist, selective for the M3 receptor subtype. The binding of acetylcholine to these receptors, particularly M3, plays a critical role in the contraction of smooth muscle. By preventing the binding of acetylcholine to these receptors, solifenacin reduces smooth muscle tone in the bladder, allowing the bladder to retain larger volumes of urine and reducing the number of micturition, urgency and incontinence episodes. Because of a long elimination half life, a once-a-day dose can offer 24-hour control of the urinary bladder smooth muscle tone.

* Tamsulosin is a medication used to treat symptomatic benign prostatic hyperplasia (BPH) and chronic prostatitis and to help with the passage of kidney stones. The evidence for benefit with a kidney stone is better when the stone is larger. Common side effects include dizziness, headache, sleeplessness, nausea, blurry vision, and sexual problems. Other side effects may include feeling lightheaded with standing and angioedema. Tamsulosin is an alpha blocker and works by relaxing muscles in the prostate. Specifically it is an alpga1 adrenergic receptor blocker. Tamsulosin is primarily used for benign prostatic hyperplasia and to help with the passage of kidney stones. Tamsulosin, however, appears to be effective only for stones over 4 mm and less than 10 mm in size. Tamsulosin is also used as an add-on treatment for acute urinary retention. People may void more successfully after catheter removal if they are taking tamsulosin. People taking tamsulosin also are less likely to need re-catheterization. Tamsulosin does not decrease the overall size of the prostate in men with BPH, and is not recommended for prevention of prostate cancer.

* Tozinameran is an mRNA encoding full length of spike protein analog of SARS-CoV-2. Target severe acute respiratory syndrome coronavirus 2 spike glycoprotein. Coronavirus disease – COVID-19. Active immunization (SARS-CoV-2). The vaccination requires two primary series doses given three weeks apart. A third primary series dose may be administered at least 4 weeks after the second dose to individuals who are determined to have certain kinds of immunocompromise. A single booster dose of the vaccine may be administered at least 6 months after completion of a primary series with Tozinameran or with a different authorized COVID-19 vaccine.

* Trichloroacetic acid (TCA) is an analogue of acetic acid. It is a well-known caustic agent extensively used in dermatology, mainly in cosmetic peelings. It causes coagulative necrosis of cells through wide protein denaturation and resultant structural cell death. It is also used for ingrown toenails where TCA offers extra advantages, including coagulation and potent local anesthetic effects. TCA is a strong acid. It is widely recognized that skin contact of TCA has the potential to produce acid burns, and ingestion of TCA has the potential to damage tissues of the gastrointestinal tract or produce systemic acidosis, even though specific studies of these effects do not appear in the literature. TCA is relatively nontoxic to humans under circumstances of low exposures such as those encountered in chlorinated drinking water. In addition, the mode of tumor induction – peroxisomal proliferation – in animals is not relevant for humans.

* Turmeric-Mix. Turmeric, a plant in the ginger family, is native to Southeast Asia and is grown commercially in that region, primarily in India. Its rhizome (underground stem) is used as a culinary spice and traditional medicine. Historically, turmeric was used in Ayurveda and other traditional Indian medical systems, as well as Eastern Asian medical systems such as traditional Chinese medicine. In India, it was traditionally used for disorders of the skin, upper respiratory tract, joints, and digestive system. Today, turmeric is promoted as a dietary supplement for a variety of conditions, including arthritis, digestive disorders, respiratory infections, allergies, liver disease, depression,

high blood cholesterol, osteoarthritis pain, itching caused by chronic kidney disease, prediabetes, tuberculosis, Alzheimer's disease, cancer, inflammatory bowel diseases, and lowering the risk of a heart attack after bypass surgery. Turmeric is a common spice and a major ingredient in curry powder. Curcumin is a major component of turmeric, and the activities of turmeric are commonly attributed to curcuminoids (curcumin and closely related substances). Curcumin gives turmeric its yellow color. Turmeric dietary supplements are made from the dried rhizome and typically contain a mixture of curcuminoids. Turmeric is also made into a paste for skin conditions. Turmeric supplements may boost the immune system before Covid-19 vaccination. The recording plays the sound frequencies of Curcumin, Desmethoxycurcumin, Bisdemethoxycurcumin, Germacrone and Zingiberene.

1.3.1.45 RT-MB-57

https://archive.org/details/Resonant_Therapy-Molecular_Biology_57

Acetaminosalol; ACY-738; ALB Factor; Atosiban; Dalbavancin; Dicloxacillin; Diroximel fumarate; Doripenem; EGA; Eravacycline; Glycerol; Grape Seed Extract; Larazotide; Linzagolix; LR-10; Maralixibat; Meropenem; Mexiletine; MK-8719; Namodenoson; PXT3003; Ricolinostat; RWJ-58259; SRX246; Venglustat; VER-155008; Xenon-Nitrous Oxide-Oxygen; Xenon-Oxygen; ZY19489

* Acetaminosalol is an esterification product of salicylic acid and paracetamol. In a warm alkaline solution acetaminosalol is broken up into salicylic acid and paracetamol. It is decomposed in the intestines, even when given as an injection. It was used as a substitute for salicylic acid in acute rheumatism, and as an intestinal antiseptic. It was similarly effective and much safer than salol, another intestinal antiseptic commonly used at the time. Acetaminosalol is analgesic, anti-inflammatory and antipyretic.

* ACY-738 selectively inhibits histone deacetylase 6 HDAC6 with an IC 50 of 2 nM and efficiently crosses the blood-brain barrier (BBB). In FVB non-transgenic mice, subcutaneous injection of ACY-738 for 3 days (0.5 mg/kg) decreased p-tau species, as well as PHF in the brain and increased acetylation of tau on KXGS motifs. In primary neuronstransduced with human P301L tau-AAV, ACY-738 treatment (1mM, 24 h) inhibited HDAC6 activity and led to a significant reduction in tau levels and a striking decrease in phosphorylation at Ser-324. Used for tauopathies in neurodegenerative diseases.

* ALB Factor. Albumin is synthesized in the liver as preproalbumin, which has an N-terminal peptide that is removed before the nascent protein is released from the rough endoplasmic reticulum. The product, proalbumin, is in turn cleaved in the Golgi apparatus to produce the secreted albumin. Low albumin (hypoalbuminemia) may be caused by liver disease, nephrotic syndrome, burns, protein-losing enteropathy, malabsorption, malnutrition, late pregnancy, artefact, genetic variations and malignancy. High albumin (hyperalbuminemia) is almost always caused by dehydration. In some cases of retinol (Vitamin A)

deficiency, the albumin level can be elevated to high-normal values (e.g., 4.9 g/dL). This is because retinol causes cells to swell with water (this is also the reason too much Vitamin A is toxic). This swelling also likely occurs during treatment with 13-cis retinoic acid (isotretnoin), a pharmaceutical for treating severe acne, amongst other conditions. In lab experiments it has been shown that all-trans retinoic acid down regulates human albumin production. Hypoalbuminemia means low blood albumin levels. This can be caused by: Liver disease; cirrhosis of the liver is most common. Excess excretion by the kidneys (as in nephrotic syndrome). Excess loss in bowel (protein-losing enteropathy, e.g., Ménétrier's disease). Burns (plasma loss in the absence of skin barrier). Redistribution (hemodilution [as in pregnancy], increased vascular permeability or decreased lymphatic clearance). Acute disease states (referred to as a negative acute-phase protein). Malnutrition and wasting. Mutation causing analbuminemia (very rare). Anorexia nervosa (most common cause in adolescents). Hyperalbuminemia is an increased concentration of albumin in the blood. Typically, this condition is due to dehydration. Hyperalbuminemia has also been associated with high protein diets. Human albumin solution (HSA) is available for medical use (see Human Albumin Solution recording at https://archive.org/details/Resonant_Therapy-Molecular_Biology_54). In acoustic droplet vaporization (ADV), albumin is sometimes used as a surfactant. ADV has been proposed as a cancer treatment by means of occlusion therapy. Human serum albumin may be used to potentially reverse drug/chemical toxicity by binding to free drug/agent. Human albumin may also be used in treatment of decompensated cirrhosis. Human serum albumin has been used as a component of a frailty index. It has not been shown to give better results than other fluids when used simply to replace volume, but is frequently used in conditions where loss of albumin is a major problem, such as viral infection, inflammation and liver disease with ascites. It has been known for a long time that human blood proteins like hemoglobin and serum albumin may undergo a slow non-enzymatic glycation, mainly by formation of a Schiff base between epsilon-amino groups of lysine (and sometimes arginine) residues and glucose molecules in blood (Maillard reaction). This reaction can be inhibited in the presence of antioxidant agents. Although this reaction may happen normally, elevated glycoalbumin is observed in diabetes mellitus. Glycation has the potential to alter the biological structure and function of the serum albumin protein. Moreover, the glycation can result in the formation of Advanced Glycation End-Products (AGE), which result in abnormal biological effects. Accumulation of AGEs leads to tissue damage via alteration of the structures and functions of tissue proteins, stimulation of cellular responses, through receptors specific for AGE-proteins, and generation of reactive oxygen intermediates. AGEs also react with DNA, thus causing mutations and DNA transposition. Thermal processing of proteins and carbohydrates brings major changes in allergenicity. AGEs are antigenic and represent many of the important neoantigens found in cooked or stored foods. They also interfere with the normal product of nitric oxide in cells. In the healthy kidney, albumin's size and negative electric charge exclude it from excretion in the glomerulus. This is not always the case, as in some diseases including diabetic nephropathy, which can sometimes be a complication of uncontrolled or of longer term diabetes in which proteins can cross the glomerulus. The lost albumin can be detected by a simple urine test. Depending on the amount of albumin lost, a patient may have normal renal function, microalbuminuria, or albuminuria.

* Atosiban, is an inhibitor of the hormones oxytocin and vasopressin. It is used as an intr avenous medication as a labour repressant (tocolytic) to halt premature labor. The most commonly reported side effect is nausea. Atosiban is used to delay birth in adult women who are 24 to 33 weeks pregnant, when they show signs that they may give birth pre-ter m (prematurely). These signs include regular contractions lasting at least 30 seconds at a rate of at least four every 30 minutes, and dilation of the cervix (the neck of the womb) of 1 to 3 cm and an effacement (a measure of the thinness of the cervix) of 50% or mor e. In addition, the baby must have a normal heart rate. Atosiban is a nonapeptide, desa mino-oxytocin analogue, and a competitive vasopressin/oxytocin receptor antagonist (V OTra). Atosiban inhibits the oxytocin-mediated release of inositol trisphosphate from the myometrial cell membrane. As a result, reduced release of intracellular, stored calcium f rom the sarcoplasmic reticulum of myometrial cells and reduced influx of Ca2+ from the extracellular space through voltage-gated channels occur. In addition, atosiban suppres ses oxytocin-mediated release of PGE and PGF from the decidua. In human preterm la bour, atosiban, at the recommended dosage, antagonises uterine contractions and indu ces uterine quiescence. The onset of uterus relaxation following atosiban is rapid, uterin e contractions being significantly reduced within 10 minutes to achieve stable uterine qu iescence. Atosiban is useful in improving the pregnancy outcome of in vitro fertilization-e mbryo transfer (IVF-ET) in patients with repeated implantation failure. The pregnancy ra te improved from zero to 43.7%. First- and second-trimester bleeding was more prevale nt in Assisted Reproductive Technology ART than in spontaneous pregnancies. From 20 04 to 2010, 33 first-trimester pregnancies with vaginal bleeding after ART with evident ut erine contractions, when using atosiban and/or ritodrine, no preterm delivery occurred b efore 30 weeks. A 2014 systematic review by the Cochrane Collaboration showed that while atosiban had fewer side effects than alternative drugs (such as ritodrine), other be ta blockers, and calcium channel antagonists, it was no better than placebo in the major outcomes i.e. pregnancy prolongation or neonatal outcomes. The finding of an increase in infant deaths in one placebo-controlled trial warrants caution. Further research is reco mmended. A 2013 retrospective study comparing the efficacy and safety of atosiban an d nifedipine in the suppression of preterm labour concluded that atosiban and nifedipine are effective in delaying delivery for seven days or more in women presenting with prete rm labour. A total of 68.3% of women in the atosiban group remained undelivered at sev en days or more, compared with 64.7% in the nifedipine group. They have the same effi cacy and associated minor side effects. However, flushing, palpitation, and hypotension were significantly higher in the nifedipine group.

* Dalbavancin is a novel second-generation lipoglycopeptide antibiotic medication. It bel ongs to the same class as vancomycin, the most widely used and one of the few treatm ents available to patients infected with methicillin-resistant Staphylococcus aureus (MR SA). It possesses in vitro activity against a variety of Gram-positive pathogens including MRSA and methicillin-resistant Staphylococcus epidermidis (MRSE). Dalbavancin is an antibiotic used to treat acute bacterial skin and skin structure infections (ABSSSI) in adu lts caused by susceptible Gram-positive organisms, including methicillin-resistant Staph ylococcus aureus (MRSA). Because dalbavancin has demonstrated efficacy against MR SA and other microorganisms to treat serious or life-threatening infections, it was the firs t drug approved as a Qualified Infectious Disease Product under the Generating Antibiot

ic Incentives Now (GAIN) act, which is part of the FDA Safety and Innovation Act. Hyper sensitivity to dalbavancin can occur, causing issues such as skin reactions or anaphylax is. Caution is advised for patients with known hypersensitivity to other glycopeptides. Th ere is currently no data on cross-reactivity between dalbavancin and vancomycin. The most common adverse reactions encountered in Phase II and Phase III trials were naus ea (5.5%), headache (4.7%), and diarrhea (4.4%), as well as rash (2.7%) and itchiness (2.1%). Other less frequent but serious adverse reactions included hematologic disorder s, hepatotoxicity, Clostridium difficile colitis, bronchospasm, infusion-related reactions in cluding Red Man Syndrome, and anaphylactic shock. In trials, dalbavancin was associat ed with higher rates of hemorrhagic events compared to comparator groups and should be a precaution in patients undergoing surgery or taking anticoagulants. Patients on dal bavancin also had post-baseline alanine aminotransferase (ALT) levels that were 3 time s the upper normal limit, some even having elevations 10 times the upper normal limit; h owever, eight of the twelve dalbavancin-treated patients had comorbid conditions that c ould affect their ALT, compared to only one patient in the comparator group. There is no evidence of ototoxicity associated with dalbavancin.

* Dicloxacillin is a narrow-spectrum beta-lactam antibiotic of the penicillin class. It is use d to treat infections caused by susceptible (non-resistant) Gram-positive bacteria. It is a ctive against beta-lactamase-producing organisms such as Staphylococcus aureus, whi ch would otherwise be resistant to most penicillins. Dicloxacillin is used to treat mild-to-moderate staphylococcal infections. To decrease the development of resistance, dicloxa cillin is recommended to treat infections that are suspected or proven to be caused by b eta-lactamase-producing bacteria. Dicloxacillin is similar in pharmacokinetics, antibacter ial activity, and indications to flucloxacillin, and the two agents are considered interchan geable. It is believed to have lower incidence of severe hepatic adverse effects than fluc loxacillin, but a higher incidence of renal adverse effects. Dicloxacillin is used for the tre atment of infections caused by susceptible bacteria. Specific approved indications inclu de: Staphylococcal skin infections and cellulitis – including impetigo, otitis externa, folliculitis, boils, carbuncles, and mastitis. Pneumonia (adjunct). Osteomyelitis, septic arthritis, throat infections, streptococcus. Septicaemia. Empirical treatment for endocarditis. Surgical prophylaxis. Dicloxacillin is contraindicated in those with a previous history of allergy (hypersensitivity/anaphylactic reaction) to any penicillins. Common adverse drug reactions (ADRs) associated with the use of dicloxacillin include: diarrhea, nausea, rash, urticaria, pain and inflammation at injection site, superinfection (including candidiasis), allergy, and transient increases in liver enzymes and bilirubin. It should be used with caution and monitored in the elderly, particularly with intravenous administration, due to a risk of thrombophlebitis. Dicloxacillin can also lower the effectiveness of birth control pills and pass into breast milk. Dicloxacillin has potential interactions with following drugs: Warfarin, Methotrexate, Tetracycline.

* Diroximel fumarate is a medication used for the treatment of relapsing forms of multiple sclerosis (MS). Multiple Sclerosis (MS) is a chronic, debilitating neurological disease that can lead to profound cognitive and physical symptoms, severely affecting quality of life. It is the main cause of neurological disability not caused by trauma in the young adult population of both North America and Europe. Relapsing-remitting forms of

MS lead to neurological symptoms that resolve and recur periodically. More than 80% of patients suffering from this disease have relapsing-remitting MS. Diroximel fumarate is a new drug from the fumarate class formulated to treat various relapsing forms of MS. This drug is bioequivalent to [Dimethyl fumarate](initially manufactured in 2013), but is less likely to cause gastrointestinal side effects, owing to its unique chemical structure.

* Doripenem is an antibiotic drug in the carbapenem class. It is a beta-lactam antibiotic drug able to kill Pseudomonas aeruginosa. Doripenem can be used for bacterial infections such as: complex abdominal infections, pneumonia within the setting of a hospital, and complicated infections of the urinary tract including kidney infections with sepsis. The greater stability of doripenem in aqueous solution compared to earlier members of the carbapenem class allows it to be administered as an infusion over 4 hours or more, which may be advantageous in the treatment of certain difficult-to-treat infections. It may present a lower risk of inducing seizures than other carbapenems. Doripenem is a beta-lactam antibiotic agent belonging to the carbapenem group, with a broad spectrum of bacterial sensitivity including both gram-positive and gram-negative bacteria. In vivo, doripenem inhibits the synthesis of cell walls by attaching itself to penicillin-binding proteins, also known as PBPs. However it is not active against MRSA. It is stable against beta-lactamases including those with extended spectrum, but it is susceptible to the action of carbapenemases. Doripenem is also more active against Pseudomonas aeruginosa than other carbapenems. Seizure risk: carbapenems in general have been reported to cause seizure activity in some people. In addition, those who already have a seizure disorder may be at risk for further seizures if they are using valproic acid to control their seizures; doripenem has been found to decrease serum concentrations of valproic acid. Infection related: use of doripenem can lead to clostridium difficile infection. It has also been noted to increase mortality in people who have ventilator-associated bacterial pneumonia, and is no longer recommended as a treatment for this condition.

* EGA or 2-[(4-Bromophenyl)methylene]-N-(2,6-dimethylphenyl)-hydrazinecarboxamide is a bioactive small molecule that blocks the entry of anthrax lethal toxin by inhibiting trafficking pathways in acidified endosomes, without affecting endosome pH. EGA prevents the Tetanus neurotoxin-induced cleavage of VAMP-2 in cultured neurons. EGA has similar effect on Tetanus neurotoxin by Clostridium tetani and botulinum neurotoxins by Clostridium botulinum intoxication -botulism. EGA blocks trafficking of other toxins, including diphtheria toxin, but does not inhibit trafficking of ricin. The compound EGA attenuates lysosomal targeting and degradation of the EGF receptor, but does not block endosomal recycling of transferrin.

* Eravacycline is a synthetic halogenated tetracycline class antibiotic. It is closely related to tigecycline. It has a broad spectrum of activity including many multi-drug resistant strains of bacteria. Eravacycline has been granted fast track designation by the FDA. Eravacycline has shown broad spectrum of activity against a variety of Gram-positive and Gram-negative bacteria, including multi-drug resistant strains, such as methicillin-resistant Staphylococcus aureus (MRSA) and carbapenem-resistant Enterobacteriaceae. It is currently being formulated as for intravenous and oral

administration. Similar to other tetracycline derivatives, eravacylcine is poorly active against Pseudomonas aeruginosa with a MIC90 = 16 mcg/mL (range 0.06-64 mcg/mL). Eravacycline maintains in-vitro activity against Enterobacteriaceae carrying the mcr-1 gene responsible for polymyxin b/colistin resistance.

* Glycerol is a triol with a geroprotective role. Glycerin is a trihydroxyalcohol with localized osmotic diuretic and laxative effects. Glycerin elevates the blood plasma osmolality thereby extracting water from tissues into interstitial fluid and plasma. This agent also prevents water reabsorption in the proximal tubule in the kidney leading to an increase in water and sodium excretion and a reduction in blood volume. Administered rectally, glycerin exerts a hyperosmotic laxative effect by attracting water into the rectum, thereby relieving constipation.

* Grape Seed Extract is derived from the ground-up seeds of red wine grapes. Grape seeds are rich in antioxidants, including phenolic acids, anthocyanins, flavonoids, and oligomeric proanthocyanidin complexes (OPCs). In fact, GSE is one of the best-known sources of proanthocyanidins. GSE may help reduce blood pressure, particularly in young to middle-aged people and those who have excess weight. GSE has been shown to improve blood flow and reduce the risk of blood clotting, which may benefit those with circulatory problems. GSE is recommended for pancreatic health and Pancreatitis. GSE may help reduce the risk of heart disease by inhibiting the oxidation of LDL (bad) cholesterol and reducing oxidation to heart tissue during times of stress. Animal studies show promising results regarding GSE’s ability to help treat arthritic conditions and promote collagen health. However, human-based research is lacking. GSE shows potential to inhibit many of the degenerative characteristics of brain and cognitive decline. However, more human studies are needed. GSE may offer protection against damage from oxidative stress and inflammation, thus promoting kidney health. GSE may inhibit a variety of microbes and offer protection against antibiotic-resistant bacterial strains, foodborne bacterial illnesses, and fungal infections like candida. In lab studies, GSE has been shown to inhibit cancer in various human cell types. GSE also appears to reduce chemotherapy-induced toxicity in animal studies without negatively affecting treatment. More human-based research is needed. GSE appears to protect your liver against drug-induced toxicity and damage. However, more human studies are needed. GSE creams appear to increase growth factors in your skin. As such, they may aid wound healing and help reduce the signs of skin aging. Those who are pregnant or breastfeeding should avoid it, as there is insufficient data on its effects in these populations. GSE may lower blood pressure, thin your blood, and increase blood flow, so caution is advised for those taking blood-thinning or blood pressure medications. Furthermore, it may reduce iron absorption, as well as improve liver function and drug metabolism.

* Larazotide is a single-chain peptide of eight amino acids that acts as a tight junction regulator to restore intestinal barrier function. Larazotide is the only Phase 3 therapeutic in development for celiac disease, with data readouts expected in 2022. Larazotide is designed to mitigate the life-altering symptoms that people with celiac disease may experience when they ingest gluten. Specifically, larazotide prevents gluten breakdown

product, gliadin, from entering the systemic circulation through compromised tight junctions between intestinal cells that occur in celiac disease, and in turn propagating an inflammatory response in the gut. Larazotide is an adjunctive therapy in tandem with a gluten-free diet in adults with celiac disease to restore tight junctions between intestinal cells, mitigate gliadin "leakage," and thus minimize symptoms. Larazotide acetate (formerly named AT-1001 is an octapeptide derived from a cholera ZOT toxin, and contains amino acid sequences shared by the receptor binding-motif of zonulin. A substantial role of zonulin in many chronic and acute inflammatory diseases has been demonstrated in both in vivo and in vitro, indicating the possible efficacy of a Larazotide treatment. Larazotide’s mechanism of action and different diseases: celiac disease, type 1 diabetes, other autoimmune diseases, inflammatory bowel disease, Kawasaki disease, respiratory (infective and/or non-infective) diseases, and other. The most severe outcome of COVID-19 infection is the development of interstitial pneumonia causing acute lung injury (ALI) and/or acute respiratory distress syndrome (ARDS), both responsible for the infected patients' mortality. ALI and ARDS are characterized by a leakage of plasma components into the lungs, compromising their ability to expand and optimally engage in gas exchange with blood, resulting in respiratory failure. AT1001, besides its well-demonstrated effect in ameliorating mucosal permeability in ALI/ARDS, may also exert a direct anti-SARS-CoV-2 effect by blocking the Mpro. AT1001 has been used extensively in a variety of animal models of ALI demonstrating robust safety and efficacy. AT1001 may represent an innovative therapeutic option to multi-target both early COVID-19 upper airway infections (reducing interpersonal spreading) and distal airway infections responsible for the functional failure of lungs and other organs.

* Linzagolix is a gonadotropin-releasing hormone (GnRH or LHRH) receptor antagonist, with potential hormone production inhibitory activity. Upon oral administration of linzagolix, this agent competes with GnRH for receptor binding and inhibits GnRH receptor signaling in the anterior pituitary gland, thereby inhibiting the secretion and release of luteinizing hormone (LH) and follicle stimulating hormone (FSH). In males, the inhibition of LH secretion prevents the release of testosterone. As a result, this may relieve symptoms associated with hormonally dependent disease states such as hormone-dependent prostate cancer. In women, this prevents the production of estrogen by the ovaries and may relieve symptoms from sex-hormone dependent diseases, such as pain associated with endometriosis, heavy menstrual bleeding or uterine fibroids. Additional examples of estrogen-dependent diseases include adenomyosis and rectovaginal endometriosis, which are particularly severe endometrial growth disorders characterized by the invasion of endometrial tissue into the uterine myometrium and rectovaginal zones, respectively.

* LR-10 is more active against S. mutans [3.3 micromolars (μM)] than many peptide-bas ed agents without resistance selection, capable of killing many oral pathogens, and toler ant of physiological conditions. LR-10 also presented a faster killing rate than chlorhexid ine and erythromycin, and appeared to display selective activity against S. mutans withi n 10 s. S. mutans is usually encased in plaque biofilms. Biofilm inhibitory assays indicat ed that LR-10 had excellent inhibitory effect on the biofilm formation of S. mutans and bi ofilm-encased cells in vitro at low concentrations (6.5 μM). Consistent with most peptide

s, LR-10 kills S. mutans mainly by disrupting the cell membranes. Notably, both hemolyt ic activity assays and cytotoxicity tests indicated that LR-10 could keep biocompatible at the effective concentrations. Hence, LR-10 could be a good candidate for clinical treatm ent of dental caries.

* Maralixibat, an apical, sodium-dependent, bile acid transport inhibitor, prevents entero hepatic bile acid recirculation. Alagille syndrome is a rare genetic disease that often pre sents with severe cholestasis and pruritus. There are no approved drugs for manageme nt. Maralixibat was generally safe and well tolerated throughout. The most frequent adv erse events were gastrointestinal related. Most adverse events were self-limiting in natu re and mild-to-moderate in severity. In children with Alagille syndrome, maralixibat is, to our knowledge, the first agent to show durable and clinically meaningful improvements i n cholestasis. Maralixibat might represent a new treatment paradigm for chronic cholest asis in Alagille syndrome. (https://doi.org/10.1016/S0140-6736(21)01256-3)

* Meropenem, is an intravenous beta-lactam antibiotic used to treat a variety of bacterial infections. Some of these include meningitis, intra-abdominal infection, pneumonia, sep sis, and anthrax. Common side effects include nausea, diarrhea, constipation, headach e, rash. Serious side effects include Clostridium difficile infection, seizures, and allergic r eactions including anaphylaxis. Those who are allergic to other beta-lactam antibiotics a re more likely to be allergic to meropenem as well. Use in pregnancy appears to be safe. It is in the carbapenem family of medications. Meropenem usually results in bacterial d eath through blocking their ability to make a cell wall. It is more resistant to breakdown b y beta-lactamase producing bacteria. The spectrum of action includes many Gram-positi ve and Gram-negative bacteria (including Pseudomonas) and anaerobic bacteria. The o verall spectrum is similar to that of imipenem, although meropenem is more active again st Enterobacteriaceae and less active against Gram-positive bacteria. It works against e xtended-spectrum beta-lactamases, but may be more susceptible to metallo-beta-lacta mases. Meropenem is frequently given in the treatment of febrile neutropenia. This cond ition frequently occurs in patients with hematological malignancies and cancer patients r eceiving anticancer drugs that suppress bone marrow formation. It is approved for comp licated skin and skin structure infections, complicated intra-abdominal infections and ba cterial meningitis. The most common adverse effects are diarrhea (4.8%), nausea and v omiting (3.6%), injection-site inflammation (2.4%), headache (2.3%), rash (1.9%) and th rombophlebitis (0.9%). Many of these adverse effects were observed in severely ill indiv iduals already taking many medications including vancomycin. Meropenem has a reduc ed potential for seizures in comparison with imipenem. Several cases of severe hypokal emia have been reported. Meropenem, like other carbapenems, is a potent inducer of m ultidrug resistance in bacteria.

* Mexiletine is a medication used to treat abnormal heart rhythms. It is also being investi gated for use as a muscle relaxant in patients with Charcot-Marie-Tooth disease (CMT). For muscle contraction, the brain sends an electric signal to the muscles through so-call ed motor neurons. The transmission of the electric signals requires the opening and clo sing of sodium channels in the membrane (the outer layer of the cell) of the motor neuro n. When an electric signal stimulates a nerve fiber, sodium channels open, positively ch

arged sodium ions enter the cell, and the inner side of the membrane becomes positive. Once the signal has passed, sodium channels close again. When the electric signal rea ches the point where the motor neuron meets the muscle fiber, a neurotransmitter is rel eased by the nerve cell and binds to receptors on the muscle fiber. This again activates sodium channels in the muscle membrane, and the electric signal stimulates muscle co ntraction. A muscle cramp occurs when muscles contract suddenly and involuntarily. CM T patients experience frequent and severe muscle cramps. Mexiletine blocks sodium ch annels and consequently reduces the influx of sodium ions into the cell. It may decrease the signal intensity or frequency, promoting muscle relaxation. Mexiletine should not be used in patients with serious heart conditions. The medication may cause liver injury. As a result, in individuals with liver disease, mexiletine should be used with caution. Comm on side effects of mexiletine are heartburn, nausea, dizziness, and problems with coordi nation.

* MK-8719 is a highly potent and selective OGA inhibitor. Preclinical data confirmed that sub-chronic administration of MK-8719 significantly increased protein O-GlcNAcylation, reduced pathological tau accumulation, decreased inflammatory marker expression and attenuated brain weight loss and forebrain volume loss in Tg4510 mouse brain. The Pha se I study in 16 healthy volunteers shows that MK-8719 is safe and well tolerated at sin gle doses up to 1200 mg in subjects. Its efficacy was also assessed by measuring O-Gl cNAcylated protein levels in peripheral blood mononuclear cells, which increased in a d ose-dependent manner. In 2016, FDA granted orphan drug designation to MK-8719 for t he treatment of progressive supra-nuclear palsy (PSP), one of the neurodegenerative ta uopathies related to AD.

* Namodenoson is an orally bioavailable, synthetic, highly selective adenosine A3 recep tor (A3AR) agonist with potential antineoplastic activity. Namodenoson selectively binds to and activates the cell surface-expressed A3AR, deregulating Wnt and NF-kB signal tr ansduction pathways downstream, which may result in apoptosis of A3AR-expressing tu mor cells. A3AR, a G protein-coupled receptor, is highly expressed on the cell surfaces of various solid tumor cell types, including hepatocellular carcinoma (HCC) cells, and pl ays an important role in cellular proliferation. Namodenoson has been used in trials stud ying the treatment of Chronic Hepatitis C and Hepatocellular Carcinoma. Namodenoso n’s very impressive study data may result in a promising drug for the treatment of NAFL D/NASH due to the combination of good efficacy and favorable safety. Anti-Inflammator y effect – a significant decrease in the liver enzymes ALT and AST and significant improvement in the positive cytokine adiponectin was recorded in the Namodenoson 25 mg treated group. Reduced liver fat content - manifested by a significant reduction in % of liver fat volume assessed by MRI-PDFF and a decrease in the Controlled Attenuation Parameter (CAP – score ≥ 331) measured by FibroScan in the Namodenoson 25 mg group. Decrease in FIB-4 and FAST – non-invasive tests showed anti-fibrosis effect in Namodenoson 25 mg group. Decrease in body weight - a linear decrease in body weight was recorded in the 25 mg and 12.5 mg Namodenoson groups with a better effect in the higher dose. Safety - Namodenoson continued to have a safe profile and was very well tolerated with no drug emergent severe adverse effects and no hepatotoxicity. Elevation of IOP induces impairment and apoptotic death of retinal

ganglion cells RGCs, and A3AR agonists such as Namodenoson preserve RGCs from apoptosis induced by P2X7R activation (e.g., ATP or other nucleotides). Namodenoson has also shown proof of concept to potentially treat other cancers including colon, prostate, and melanoma.

* PXT3003 is an investigational therapy to treat Charcot-Marie-Tooth type 1A (CMT1A). Charcot-Marie-Tooth (CMT) disease is a group of inherited disorders that affect the peripheral nervous system, which controls movement and relays sensory information from the arms and legs to the brain. A number of genetic defects can lead to poor nerve function in CMT. CMT1A, the most common form of CMT, is caused by an extra copy of the PMP22 gene. The protein that this gene codes for, also called PMP22, forms part of the myelin sheath — a layer of protein and fatty substances that surrounds nerves and helps them efficiently fire electrical signals. Before the PMP22 protein can be incorporated into the myelin sheath, it is processed to become functional. The extra copy of the PMP22 gene causes too much PMP22 protein to be made, which disrupts proper formation of myelin in the peripheral nervous system (outside the brain and spinal cord), and leads to loss of nerve fibers and muscle shrinkage. PXT3003 contains a combination of three existing and approved treatments. Baclofen is a muscle relaxant used to treat spasticity, naltrexone is used to treat opiate and alcohol addiction, and sorbitol is a laxative used to treat constipation. The combination of the three treatments is intended to reduce the levels of PMP22, promote nerve fiber integrity, and improve myelin formation (myelination). In addition, sorbitol is thought to act as a “chaperone,” which increases the chances of the PMP22 protein being correctly processed and becoming functional. In a rat model of CMT1A, PXT3003 successfully reduced PMP22 gene activity and increased myelination. Studies in animals have also shown that all three components of PXT3003 are necessary for improvements in motor function and fewer muscle cells undergoing nerve-related shrinkage. PXT3003 may also have beneficial effects on other cellular targets, such as muscle cells and the junction between muscle and nerve. The FDA and the European Medicines Agency granted PXT3003 orphan drug designation in 2014. The FDA also granted the therapy its fast track designation in 2019. China’s National Medical Products Administration granted the treatment priority review in June 2018.

* Ricolinostat (ACY-1215) is an experimental therapy being developed by Regenacy Pharmaceuticals to treat diabetic and chemotherapy-induced peripheral neuropathy. The company also entered a partnership with the Charcot-Marie-Tooth Association (CMTA) in 2018 to advance the development of ricolinostat to possibly treat Charcot-Marie-Tooth (CMT) disease. CMT is characterized by peripheral neuropathy, or damage to the nerves that carry messages between the brain and spinal cord and the rest of the body. This damage leads to weakness, numbness, and pain in the hands, feet, arms, and legs. Nerve cells in the peripheral nervous system often have axons, or extensions, that cover long distances. Most cellular components are manufactured close to the body of the cell, near the nucleus. Proteins, as they are made, need to be transported from their manufacturing center near the nucleus to a cell’s far reaches. Because the axons of peripheral nerves are so long, this transport is especially challenging. Vesicles (a type of small “shipping” compartment) and proteins travel along a cellular “railway” made up

of tubulin proteins woven together like fibers to make a thick, more stable transit path. In at least some cases of CMT, the disease may be caused by the destabilization of this tubulin supply network. A particular chemical modification called acetylation changes the way tubulin folds, so that the fibers stick to each other instead of existing as individual subunits; the loss of the chemical modification makes the tubulin proteins unstable, and the network falls apart. Without the supply network, vesicles cannot get to the far reaches of a cell’s axon, and nerve cells cannot work properly. Ricolinostat is a small molecule that inhibits an enzyme called histone deacetylase 6 (HDAC6), which removes acetyl groups from proteins. By blocking this enzyme, the acetylation on tubulin remains and stabilizes the supply network in the nerve. If the supply network is stable, the neuropathy caused by CMT may ease or end altogether. Ricolinostat has been shown to be safe and well-tolerated in Phase 1 and Phase 2 clinical trials involving healthy volunteers. Ricolinostat is an orally bioavailable, specific inhibitor of histone deacetylase 6 (HDAC6) with potential antineoplastic activity. Ricolinostat selectively targets and binds to HDAC6, thereby disrupting the Hsp90 protein chaperone system through hyperacetylation of Hsp90 and preventing the subsequent aggresomal protein degradation. This leads to an accumulation of unfolded and misfolded ubiquitinated proteins and may eventually induce cancer cell apoptosis, and inhibition of cancer cell growth. HDAC6, a class II HDAC deacetylase located in the cytoplasm, appears to play a key role in the formation and activation of the aggresomes needed for degradation of misfolded proteins. Compared to non-selective HDAC inhibitor, ACY-1215 is able to reduce the toxic effects on normal, healthy cells. Ricolinostat is also under investigation for the treatment of Breast Carcinoma and Metastatic Breast Cancer.

* RWJ-58259 is a potent and selective inhibitor of PAR-1 identified as part of a synthetic chemistry program based upon a de novo design approach. RWJ-58259 inhibited thrombin-induced platelet aggregation in human platelets with an IC50 of 0.37 microM without inhibiting thrombin's proteolytic activity or aggregation induced by other agonists. RWJ-58259 was effective in a non-human primate model of thrombosis. Because human platelets have a PAR expression profile similar to the non-human primate, PAR-1 antagonism has the potential to be antithrombotic in humans. RWJ-58259 also inhibited thrombin-induced intracellular calcium signaling and proliferation in rat vascular smooth muscle cells. Perivascular application of RWJ-58259 in vivo significantly inhibited arterial injury-induced stenosis in a rat model of balloon angioplasty. These preclinical results suggest a potential clinical utility of RWJ-58259 for treatment of thrombotic disorders and vascular injury associated with acute coronary interventions and atherosclerosis. Given the potential role of PAR-1 in thrombin's actions in other cell types and disease states, RWJ-58259 provides a means for assessing additional clinical utilities of PAR-1 antagonism in disease conditions such as inflammation, cancer and neurodegeneration.

* SRX246, also known as API-246, is a small-molecule, centrally-active, highly-selective vasopressin V1A receptor antagonist which is under investigation for the treatment of affective and anger disorders. It is an azetidinone derivative, and was developed from LY-307174 as a lead compound. A phase II activity trial of the drug in the treatment of adults with intermittent explosive disorder is ongoing. It is also being studied for the

treatment of post-traumatic stress disorder.

* Venglustat is a glucosylceramide synthase (GCS) inhibitor, a brain-penetrant clinical candidate for GBA-mutant Parkinson's disease and other diseases where GBA-mutations are relevant. Though the molecule did not demonstrate efficacy within one year in early GBA-PD patients and was discontinued in this indication, it continues to be tested in various rare genetic diseases including Gaucher disease type 3, Fabry disease, GM2 gangliosidosis, and autosomal-dominant polycystic kidney disease, as its safety has already been demonstrated. A new generation of UGCG inhibitor, venglustat (GZ/SAR402671), could cross the BBB and is in trials for Gaucher, Fabry, and Tay-Sachs diseases. GD and GD-Parkinson mouse studies and cell models currently provide evidence that the related compound (GZ667161) reduces GC's level in the brain.

* VER-155008 (i.p. 10 mmol/kg/day, 18 days), was shown to significantly reduce amyloid plaques and PHF tau accumulation in 5 xFAD mice. Furthermore, VER-155008 penetrated into the brain after i.p. administration, suggesting that VER-155008 can act in the brain in situ. Used for tauopathies in neurodegenerative diseases.

* Xenon-Nitrous Oxide-Oxygen is a mixture which acts on at least one cerebral receptor so as to preventing or treat neurointoxication in a human. In particular the neurotoxic effects of drugs or other addictive substances. In pathologies linked to the neurotoxic effects of addictive drugs, such as amphetamines, it is recognized that dopaminergic neurotransmission of nigrostriatal and mesolimbic origin participates in the psycho-stimulating and neurotoxic effects of these drugs. The mixture acts on one or more cerebral receptors to reduce the release and/or the effects of dopamine, glutamate, serotonin, taurin, GABA, noradrenaline and/or any other neurotransmitter.

* Xenon-Oxygen therapy is a method of treating various neurological, cardiological and other diseases, based on the use of an inert gas - xenon. Possessing unique analgesic, anti-inflammatory, soothing properties, xenon is used in many medical fields, including rehabilitation treatment.was discovered to have unique biological properties, has a remarkable safety profile, has been extensively used in imaging and is approved in some jurisdictions for use in general anesthesia. It is a non-psychomimetic, non-habit forming, non-flammable, non-greenhouse gas with rapid bioavailability and rapid brain penetrance. Interaction of xenon atoms with aromatic amino-acid residues on NMDA receptors provides highly specific and controllable antagonism. In addition, it reduces excitatory neurotransmission by blocking AMPA, nACh (α4beta2), 5-HT3, plasma memb rane Ca2+ ATPase and increases inhibitory neurotransmission by stimulating GlyR1 an d TREK-1 potassium channel. It is also shown to reduce pro-inflammatory cytokines (tu mor necrosis factor α, interleukin 1beta), to increase pro-survival factors (bcl2), and gro wth factor production (BDNF, IGF).When used in the form of inhalation (mixed with oxyg en), a therapeutic effect quickly occurs. Xenon can be combined with many pharmacolo gical drugs, while inhalation can reduce the dose of medications prescribed to the patie nt. Thanks to xenon therapy, patients normalize sleep, reduce pain syndromes, increase working capacity and vitality. The therapeutic effect of xenon is as follows: Anesthetic eff

ect - in the presence of chronic pain, xenon inhalations can reduce the dose of analgesi cs. It stops attacks of panic attacks. Relieves an attack of migraine headaches. Improve s mood and provides emotional lift. Increases efficiency and improves overall well-being. It stabilizes blood circulation and improves the function of the brain and heart muscle. One and a half times reduces the time of withdrawal of withdrawal symptoms in alcoholi sm and drug addiction. Reduces the toxicity of drugs, reduces their dosage. Accelerates the healing process of wounds. Reduces the concentration of stress hormones in the bl ood. Eliminates spasm of capillaries. Natural antidepressant, which does not affect the p atient's emotional-volitional sphere, is not addictive, and the effect occurs immediately, y ou do not need to wait for some time, as for example when using other types of antidepr essants. The effect of xenon therapy: With sleep disorders, in almost all patients, after a course of xenon therapy, sleep normalizes; With xenon therapy in depressive states, the patient disappears feeling of anxiety and depression, improves mood; With migraines - t here is a decrease in pain; With chronic fatigue syndrome - increased performance and vitality; After operations and diseases, an early recovery of the body occurs; In the pres ence of chronic degenerative or inflammatory processes, the general condition of the bo dy improves; In chronic pain of various origins, patients note a significant decrease in th e intensity and frequency of pain; In sports medicine, during the training of athletes, xen on increases the stamina of the body and its physical capabilities, while not being dopin g; With a calming effect, xenon can save a person from fear of surgery or an unpleasant procedure. Direct contraindications are: Acute phase of myocardial infarction (up to 14 d ays), Acute and chronic severe (III) insufficiency, pneumothorax, Unstable angina (until t he process stabilizes), Severe circulatory failure, Congenital and acquired heart defects in the phase of decompensation of blood circulation, Acute myocarditis and pericarditis, hemorrhagic type of cerebrovascular accident, Severe respiratory failure, Epilepsy, Con vulsive syndrome, Acute infectious diseases, fever, Obstructive sleep apnea syndrome, with rare and severe form (for patients with suspected sleep apnea, computer monitorin g pulse oximetry is preliminarily performed), Schizophrenia.

* ZY19489 is a novel antimalarial compound active against all current clinical strains of P. falciparum and P. vivax, including drug-resistant strains. ZY19489 (MMV253), has rec eived Orphan Drug Designation from the USFDA. ZY19489 has demonstrated a long ha lf-life and potential for a single-dose cure for malaria. In a separate malaria challenge tri al, potent antimalarial activity has been demonstrated following single-dose oral adminis tration of ZY19489. ZY19489 is a potent, first in class molecule with tremendous potenti al as part of a new generation of treatments and is fully active against drug resistant stra ins of malaria which are increasingly a concern. Artemisinin resistance is seen as a mou nting challenge to the global fight against malaria. ZY19489 is being developed to provi de an effective alternative to the current front-line antimalarial drugs for the treatment of P. falciparum and P. vivax malaria, as artemisinin-based combination therapies (ACTs) a re under threat of resistance.

1.3.1.46 RT-MB-58

https://archive.org/details/Resonant_Therapy-Molecular_Biology_58

AG1; Apple Cider Vinegar-Mix; AVPR1A Factor; Azadirachtin; Cycloastragenol; Defensa mide; Eliapixant; Galectin-9; Gallium maltolate; Kaolin; Margolone-Margolonone; Mariba vir; Metronidazole; Nangibotide; Naronapride; Pandulatin A; Pandulatin A-Pinostrobin; P ectolinarigenin; Piclidenoson; Pinostrobin; Rabeximod; Regdanvimab; Relcovaptan; RG FP-966; Rimegepant; Sevoflurane; Sildenafil; SIRT6 Activators; Tianagliflozin; XEN901

* AG1 is a small molecule activator that has demonstrated effectiveness in treating G6P D deficiency in models. G6PD deficiency is a common enzymatic disorder that is inherit ed in an X-linked manner. Glucose-6-phosphate dehydrogenase (G6PD) deficiency is o ne of the commonest forms of enzymatic disorders affecting humans worldwide. Four-h undred million people across the globe are estimated to be affected, with the highest pr evalence being in those of African, Asian and Mediterranean descent. In the past it was noted that there was an increased prevalence of the disease in high-risk countries whic h often correlated to the demographics observed with malaria. However, in recent times due to significant globalization and the accompanying migration of individuals, there has been a considerable change in population demographics. Hence, in the majority of coun tries, there exists pockets of population groups that are affected by the disorder, causing an increase in prevalence of this disorder in countries where it would be considered rare in the past. In the United States, for instance, people of African-American descent are o bserved to be predominantly affected by the disorder. In recent years, the frequency of t he affected population is as high as about 10-14%.Unlike other enzymatic disorders, the majority of the population affected by the disease are asymptomatic, unless they inherit a severe mutant copy of the enzyme. Clinical features appear only after exposure to cer tain oxidative stressors which primarily include antimalarial drugs, infection and, fava be ans. A group of researchers, in 2019, looked at devising therapeutic measures for G6PD deficiency. They postulate that the use of small molecule activators of the enzyme can p romote the activity of the enzyme in deficient patients. G6PD deficiency was first identifi ed in the 1950s as a disorder that primarily affects the red blood cells, causing a myriad of symptoms including acute hemolytic anemia, neonatal jaundice and chronic nonspher ocytic hemolytic anemia. Currently, there is no effective treatment for the deficiency, rem oval of the trigger is frequently all that is required. In certain cases, blood transfusion an d haemodialysis may be necessary. Due to the observed increase in activity of enzyme by AG1, it can be considered in the treatment of G6PD deficiency. This drug can also be used in the prevention of complications that arise as a consequence of the deficiency. H owever, it was observed that AG1 was not able to activate the enzyme in certain kinds o f mutations. AG1 still is a novel class molecule that promotes activation in multiple patho genic mutants. (http://dx.doi.org/10.5195/ijms.2020.637)

* Apple Cider Vinegar-Mix plays the sound frequencies of acetic acid and polyphenolic c ompounds. The predominant phenolic compounds found in ACV include gallic acid, cate chin, epicatechin, chlorogenic acid, caffeic acid, and p-coumaric acid. Gallic acid, epicat echin and catechin have neuroprotective, anti-inflammatory and, immunomodulatory eff ects. Alongside ROS scavenging, ACV has anti-inflammatory potential; a study demonst rated the anti-inflammatory potential of ACV phenols on gastrointestinal cell inflammatio

n which involved downregulation of TNF and IL-6 cytokines. Overall, the effects of ACV i nclude enhanced muscle blood flow and glucose uptake in humans with impaired gluco se tolerance and hypertriglyceridemia, suggesting that vinegar may be considered bene ficial for improving insulin resistance and metabolic abnormalities. ACV exerts a cytotoxi c effect directly on pathogenic E. coli, S. aureus, and C. albicans. ACV can also decreas e induce inflammatory cytokine release during mononuclear leukocyte infection and incr ease the phagocytic function of monocytes. These effects are brought about by the mec hanisms which include alteration of microbial protein physiology, destruction of structura l pathogenic proteins and their metabolic enzymes. The presence of acetic acids in vine gar including ACV has been shown to inhibit the process of lipogenesis in the liver and i ncrease the amount of fecal bile acid excretion. Other mechanisms through which vineg ars are thought to modify lipid metabolism is through the inhibition of body fat accumulat ion by upregulating genes responsible for fatty acid oxidation enzymes in the liver. ACV can provide a unique functional effect on the body. Specifically, these include the manag ement of blood glucose levels, triglycerides, and cholesterol, promoting satiety, exerting a positive immune effect when in the body, antimicrobial effect when applied externally.

* AVPR1A Factor or vasopressin receptor 1A is one of the three major receptor types for vasopressin (AVPR1B and AVPR2 being the others), and is present throughout the brai n, as well as in the periphery in the liver, kidney, and vasculature. Clinically, the V1A rec eptor is related to vasoconstriction compared to the V1B receptor that is more related to ACTH release or the V2 receptor that is linked to the diuretic function of ADH. The activi ty / genetic variants of the AVPR1A gene might be related to narcissism and gentle beha vior. NatureNews has referred to AVPR1A as the "daring gene". The term "ruthlessness gene" has also been coined by Nature.com. A 2015 study found a correlation between A VPR1A expression and predisposition to extra-pair mating in women but not in men. Th ere are at least 3 types or versions of this gene that have been identified in human popu lation (called as polymorphism) . These gene variants differ in their lengths. The degree of greediness depends on the presence of one (or all) of these variants. For example, re searchers have shown that extremely selfish and greedy people have a shorter version of the ruthless gene (AVPR1a).

* Azadirachtin is a chemical compound belonging to the limonoid group, is a secondary metabolite present in neem seeds. It has a role as a hepatoprotective agent, insecticide, antimalarial.

* Cycloastragenol is a saponin comprising a group of oil glucosides naturally present in a number of plants. It is a potent telomerase activator in neuronal cells. A preliminary in vitro study on human CD4 and CD8 T cells found that cycloastragenol may moderately i ncrease telomerase activity and inhibit the onset of cellular senescence. Cycloastragen ol intake improved health span but not lifespan in normal mice. Toxicity testing is limited and safety for the human consumer has not been adequately demonstrated. TA-65 was shown to improve biological markers associated with human health span through the le ngthening of short telomeres and rescuing of old cells, although the significance of thes e findings in actual life expectancy is unknown. As disordered telomerase function is a f eature of almost all cancers, there is an unproven, but theoretical risk of oncogene-medi

ated cancer promotion through the use of telomerase activators.

* Defensamide promotes the generation of antimicrobial peptides (AMPs), an antibiotic element that exists in the body, thereby suppressing the germination of Staphylococcus inside the skin. Peptides strengthen a weakened skin defense system and, in particular, do not cause bacteria that are resistant to antibiotics.

* Eliapixant (BAY1817080), a P2X3 purinoreceptor antagonist, is intended to treat vario us disorders associated with hypersensitive nerve fibers, including endometriosis. The h ypothesis is that P2X3 receptor antagonism can inhibit cycles of pain causing neurogeni c inflammation, causing pain, etc. modifying the underlying disease in endometriotic lesi ons. Endometriosis is an area of significant unmet medical need but with a high bar for s afety. Eliapixant is highly potent and selective for P2X3 over other P2X subtypes in vitro, including P2X2/3. The molecule completed a phase I safety study and is in several ong oing phase II trials in different conditions including endometriosis (NCT04614246); other hypersensitive nerve fiber-associated disorders, including refractory or unexplained chro nic cough (RUCC); diabetic neuropathic pain (DNP) and overactive bladder (OAB). Elia pixant appears to significantly decrease cough frequency in patients with refractory chro nic cough.

* Galectin-9 is a protein is encoded by the LGALS9 gene. Galectin-9 in the blood could be responsible for the aggressive inflammatory response, known as cytokine storm, whi ch clinical evidence places as the main cause of death in patients with covid-19. In the p ast it had already been discovered that "galectin-9 levels increase in HIV infection and w ith some cancers", now scientists have found that in patients with covid-19 they were su bstantially higher. The team discovered that galectin-9 is responsible for instructing imm une cells to release pro-inflammatory cytokines rapidly in response to COVID-19 infectio n by binding to immune cells and forcing them to produce cytokines. Also, as tissues be come damaged as a result of inflammation, cells release more galectin-9, which activate s more immune cells and releases more cytokines in a vicious cycle. The resulting cytok ine storm damages tissues and organs, causes severe inflammation and can lead to de ath, explains the researcher. Even if patients survive the storm, the dysregulation of the immune system can have ongoing consequences, and could be associated with the con dition known as post-covid-19 syndrome or prolonged covid. Gal-9 is implicated in the r egulation of cellular proliferation and epithelial restitution after intestinal epithelial injury. The expression of galectin-9 has been detected on various hematological malignancies, such as CLL, MDS, Hodgkin and Non-Hodgkin lymphomas, AML or solid tumors, such a s lung cancer, breast cancer, and hepatocellular carcinoma. Galectin-9, through its cyto plasmic action in control of AMPK, may affect various health conditions impacted by AM PK, including metabolism, obesity, diabetes, cancer, immune responses, and may be a part of the mechanism of action of the widely-prescribed anti-diabetis drug metformin.

* Gallium maltolate is a novel oral agent in development for the potential treatment of ch ronic bacterial infections, bone disease and cancer. The compound is a potential therap eutic agent for cancer, infectious disease, and inflammatory disease. Gallium maltolate delivers gallium with higher oral bioavailability than that of gallium salts such as gallium

nitrate and gallium trichloride. In vitro studies have found gallium to be antiproliferative d ue primarily to its ability to mimic ferric iron (Fe3+). Ferric iron is essential for DNA synth esis, as it is present in the active site of the enzyme ribonucleotide reductase, which cat alyzes the conversion of ribonucleotides to the deoxyribonucleotides required for DNA. Gallium is taken up by the rapidly proliferating cells, but it is not functional for DNA synth esis, so the cells cannot reproduce and they ultimately die by apoptosis. Normally repro ducing cells take up little gallium (as is known from gallium scans), and gallium is not inc orporated into hemoglobin, accounting for the relatively low toxicity of gallium. Gallium (I II) ion shows anti-inflammatory activity in animal models of inflammatory disease. Orally administered gallium maltolate has demonstrated efficacy against two types of induced i nflammatory arthritis in rats. Experimental evidence suggests that the anti-inflammatory activity of gallium may be due, at least in part, to down-regulation of pro-inflammatory T-cells and inhibition of inflammatory cytokine secretion by macrophages. Because many i ron compounds are pro-inflammatory, the ability of gallium to act as a non-functional iro n mimic may contribute to its anti-inflammatory activity. Gallium maltolate has also been proposed for the treatment for primary liver cancer (hepatocellular carcinoma; HCC). In vitro experiments demonstrated efficacy against HCC cell lines, and encouraging clinica l results have been reported. Gallium compounds are active against infection-related bio films, particularly those caused by Pseudomonas aeruginosa. In related research, locall y administered gallium maltolate has shown efficacy against P. aeruginosa in a mouse b urn/infection model. The potential of this approach may be somewhat limited by the relat ively rapid appearance of gallium-resistant isolates. Oral gallium maltolate has been inv estigated as a treatment for Rhodococcus equi foal pneumonia, a common and often fat al disease of newborn horses. R. equi can also infect humans with AIDS or who are oth erwise immunocompromized. Topically applied gallium maltolate has been studied for u se in neuropathic pain (severe postherpetic neuralgia and trigeminal neuralgia). It has b een hypothesized that any effect on pain may be related to gallium's anti-inflammatory mechanisms, and possibly from its interactions with certain matrix metalloproteinases a nd substance P, whose activities are zinc-mediated and which have been implicated in t he etiology of pain.

* Kaolin or Montmorillonite Bentonite Clay is one of the most effective and powerful heal ing clays used to treat both internal and external maladies. Clinical studies repeatedly s how that clay may be an effective treatment for many medical issues. It is known to hav e antibacterial properties and is effective as a topical treatment for skin problems. Kaolin clay is also used to treat internal medical conditions in both humans and animals. Takin g the clay internally is contraindicated in some situations. It should not be used by those with a clinically diagnosed iron intolerance (a rare condition) without seeing a laborator y analysis of the clay used or blood sample monitoring. Use can cause a very temporary small spike in blood pressure. It should not be used internally with those who currently h ave high blood pressure, without proper supervision and other supportive treatment. Wh en used internally in conjunction with medications or herbal programs may lessen the ef fects of medications without careful administration (no less than 2 hours apart). It is not t o be taken internally concurrently with life-sustaining prescribed medications without ver y careful medical supervision. This clay appears to have antibacterial properties. Studie s confirm that E. coli and other bacterias die in the presence of medicinal clay. Montmori

llonite appears to significantly reduce the growth rate of deadly methacillin-resistant staphylococcus aureus bacteria, commonly known as MRSA. Other applications of this medicinal clay include taking it internally to soothe an upset stomach. It may also be helpful in the treatment of irritable bowel syndrome. In addition, the clay may absorb uric acid, as well as prevent cholesterol from being easily absorbed into the bloodstream from the intestine. Clay is used in chelation therapy to detoxify the body from poisonous heavy metals. Kaolin renders the harmful components inert and allows them to pass out naturally. Chelation therapy is sometimes reported as a good treatment for autism, but this claim does not have research to support it. Researchers have also studied the use of this type of clay on candidiasis and aflatoxicosis. When clay was taken internally, the Candida yeast causing the candidiasis was immobilized, suffocated, and eventually removed from the body.

* Margolone-Margolonone and isomargolonone are tri-cyclic diterpenoids isolated from neem stem bark. These compounds are active against Klebsiella, Staphylococcus and Serratia species which can inhibit bacterial growth and prevent wounds from getting secondarily infected.

* Maribavir is an antiviral medication that is used to treat post-transplant cytomegalovirus (CMV) infection/disease that does not respond (with or without genetic mutations that cause resistance) to available antiviral treatment for CMV. The most common side effects include taste disturbance, nausea, diarrhea, vomiting and fatigue. Maribavir is a cytomegalovirus pUL97 kinase inhibitor that works by preventing the activity of human cytomegalovirus enzyme pUL97, thus blocking virus replication. Maribavir is indicated to treat people twelve years of age and older and weighing at least 35 kilograms (77 lb) with post-transplant cytomegalovirus infection/disease that does not respond (with or without genetic mutations that cause resistance) to available antiviral treatment for cytomegalovirus. Maribavir may reduce the antiviral activity of ganciclovir and valganciclovir, so coadministration with these medications is not recommended. The U.S. Food and Drug Administration (FDA) granted the application for maribavir orphan drug, breakthrough therapy and priority review designations. CMV is a type of herpes virus that commonly causes infection in patients after a stem cell or organ transplant. CMV infection can lead to CMV disease and have a major negative impact on transplant recipients, including loss of the transplanted organ and death.

* Metronidazole is an antibiotic and antiprotozoal medication. It is used either alone or with other antibiotics to treat pelvic inflammatory disease, endocarditis, and bacterial vaginosis. It is effective for dracunculiasis, giardiasis, trichomoniasis, and amebiasis. Common side effects include nausea, a metallic taste, loss of appetite, and headaches. Occasionally seizures or allergies to the medication may occur. Some state that metronidazole should not be used in early pregnancy, while others state doses for trichomoniasis are safe. Metronidazole is generally considered compatible with breastfeeding. It is on the World Health Organization's List of Essential Medicines. Metronidazole is primarily used to treat: bacterial vaginosis, pelvic inflammatory disease (along with other antibacterials like ceftriaxone), pseudomembranous colitis, aspiration pneumonia, rosacea (topical), fungating wounds (topical), intra-abdominal infections, lung abscess, periodontitis, amoebia

sis, oral infections, giardiasis, trichomoniasis, and infections caused by susceptible ana erobic organisms such as Bacteroides, Fusobacterium, Clostridium, Peptostreptococcus, and Prevotella species. It is also often used to eradicate Helicobacter pylori along with other drugs and to prevent infection in people recovering from surgery. Common advers e drug reactions (≥1% of those treated with the drug) associated with systemic metronidazole therapy include: nausea, diarrhea, weight loss, abdominal pain, vomiting, headache, dizziness, and metallic taste in the mouth. Consuming alcohol while taking metronidazole has been suspected in case reports to cause a disulfiram-like reaction with effects that can include nausea, vomiting, flushing of the skin, tachycardia, and shortness of breath. Metronidazole is also generally thought to inhibit the liver metabolism of propylene glycol (found in some foods, medicines, and in many electronic cigarette e-liquids), thus propylene glycol may potentially have similar interaction effects with metronidazole. It also inhibits CYP2C9, so may interact with medications metabolised by these enzymes (e.g. lomitapide, warfarin).

* Nangibotide is an inhibitor of TREM-1, a receptor found on certain white blood cells. Activation of TREM-1 stimulates inflammation. Nangibotide is therefore being investigated as a treatment for the overwhelming inflammation typically seen in severe sepsis. Nangibotide, also referred as LR12, is an antagonist of triggering receptor expressed on myeloid cells (TREM)-1, and was derived from residues 94 to 105 of TREM-like transcript-1 (TLT-1). TREM-1 plays a crucial role in the onset of sepsis by amplifying the host immune response. TLT-1– and TLT-1–derived peptides therefore exhibit anti-inflammatory properties by dampening TREM-1 signalling. LR12 blocks TREM-1 by binding to the TREM-1 ligand and provides protective effects during sepsis such as inhibiting hyper-responsiveness, organ damage, and death, without causing deleterious effects. The protective effects of modulating TREM-1 signalling are also evident in other models of inflammation such as: pancreatitis; haemorrhagic shock; inflammatory bowel diseases and inflammatory arthritis. TREM-1 is a receptor found on neutrophils, macrophages and monocytes, key elements of the immune system. Activation of TREM-1 results in expression of NF-κB, which promotes systemic inflamm ation. Nangibotide inhibits TREM-1, thereby preventing the inflammatory activation. Abs ence of TREM-1 results in vastly reduced inflammation without impairing the ability to fig ht infection. Nangibotide has demonstrated safety in Phase 1 (healthy volunteers) and P hase 2 (sick patients with septic shock) studies. New pre-clinical studies with nangibotid e have demonstrated that the administration of nangibotide in murine models infected wi th SARS-CoV-2 was associated with a decrease in inflammatory mediators and an impr ovement of clinical signs, in particular respiratory function, and survival. Inotrem also co nfirmed in 3 different and independent cohorts that sTREM-1, a marker of the activation of the TREM-1 biological pathway, is associated with both severity and mortality in critic ally ill COVID-19 patients. TREM-1 pathway is an amplification loop of the immune resp onse that triggers an exuberant and hyperactivated immune state which is known to pla y a crucial role in the pathophysiology of septic shock and acute myocardial infarction. N angibotide is the formulation of the active ingredient LR12, which is a 12 amino-acid pep tide prepared by chemical synthesis. LR12 is a specific TREM-1 inhibitor, acting as a de coy receptor and interfering in the binding of TREM-1 and its ligand. In preclinical septic shock models, nangibotide was able to restore appropriate inflammatory response, vasc

ular function, and improved animals' survival post septic shock.

* Naronapride (free base), also known as ATI-7505, is a highly selective, high-affinity 5-HT(4) receptor agonist for gastrointestinal motility disorders. ATI-7505 accelerates overa ll colonic transit and tends to accelerate GE and AC emptying and loosen stool consiste ncy. A study found that the HT-5 4 receptor agonists were useful for treating a variety of diseases, such as gastroesophageal reflux disease, gastrointestinal disease, gastric mo tility disorder, non-ulcer dyspepsia, functional dyspepsia, irritable bowel syndrome, cons tipation, dyspepsia, esophagitis, gastroesophageal disease, nausea, postoperative intes tinal infarction, central nervous system disorders, Alzheimer's disease, cognitive disorde r, emesis, migraine, neurological disease, pain, cardiovascular disease, heart failure , ar rhythmias, intestinal pseudo-obstruction, gastroparesis, diabetes and apnea syndrome. Naronapride is a late-phase clinical stage drug candidate which possesses a unique co mbination of both serotonin 5HT4-receptor agonistic and dopamine D2-receptor antago nistic properties, both of which are clinically validated targets and work in both the upper and lower GI tract. Currently, the options to treat dysmotility disorders of the GI tract suc h as gastroparesis and other disorders such as IBS-c, GERD, and CIC, are limited.

* Pandulatin A boosts immunity strengthens defenses and nourishes the lungs.

* Pandulatin A-Pinostrobin can act to inhibit the growth of the virus that causes Covid-19. Both of these substances can reduce the number of infected cells from 100% to 0%.

* Pectolinarigenin can cure inflammatory diseases, it is an active anti-inflammatory and a dual inhibitor of cyclooxygenase-2 (COX-2) and 5-lipoxygenase (5-LOX). Pectolinarig enin promotes functional recovery and inhibits apoptosis following spinal cord injuries, w here Pectolinarigenin downregulated the activated caspase-3, caspase-9 and poly-AD P-ribose polymerase expression and reduced the Bax: Bcl2 ratio.

* Piclidenoson is an orally bioavailable, adenosine A3 receptor (A3AR) agonist with pote ntial anti-inflammatory activity. Upon administration, piclidenoson selectively targets, bin ds to and activates the cell surface-expressed A3AR, thereby activating transduction pat hways in which A3AR plays a key role. This inhibits nuclear factor-kappa B (NF-kB) sign aling and inhibits inflammatory cytokine production, such as tumor necrosis factor (TNF) and several interleukins. A3AR, a G protein-coupled receptor, plays a key role in many i nflammatory diseases, and in certain types of cancer. Piclidenoson is an anti-inflammat ory drug for rheumatoid arthritis patients. Its novel mechanism of action relies on antago nism of adenoside A3 receptors. Piclidenoson is supplied as an oral drug and has an ex cellent safety profile. It is also being considered for the treatment of other autoimmune-i nflammatory disorders, such as Crohn's disease, psorasis and dry eye syndrome. As an oral drug with an excellent safety profile in human clinical trials, Piclidenoson may offer a much needed, safe, and effective treatment for canine osteoarthritis. Investigated for u se/treatment in cancer/tumors (unspecified), eye disorders/infections, psoriasis and psor iatic disorders, and rheumatoid arthritis. By targeting the adenosine A3-receptor, Piclide noson may also be used to treat Crohn's disease, a serious gastrointestinal disorder.

* Pinostrobin is a flavonoid which can be found in many plants, and has anti-oxidant, ant i-inflammatory, anti-cancer and neuroprotective properties. Pinostrobin is a potent PCS K9 inhibitor and inhibits the catalytic activity of PCSK9. Pinostrobin is a promising agent for cholesterol regulation and lipid management.

* Rabeximod is a well-tolerated, orally available Phase 2 immunomodulator drug candid ate that selectively targets the inflammatory macrophage - the central orchestrator of th e inflammatory process. Rabeximod is currently being developed as a potential treatme nt of rheumatoid arthritis and moderate Covid-19, two diseases that are driven by harmf ul inflammatory processes. Rabeximod is indicated for RA and other autoimmune disea se and neuroinflammation. Rabeximod is differentiated from current therapies by suppre ssing a population of inflammatory cells central to the structural damage of the joints whi ch occurs in RA.

* Regdanvimab (CT-P59) is a human monoclonal antibody used for the treatment of CO VID-19. The most common side effects include infusion-related reactions, including aller gic reactions and anaphylaxis. Regdanvimab is a monoclonal antibody targeted against the SARS-CoV-2 spike protein used to treat patients with COVID-19 who are at risk of p rogressing to severe COVID-19. Regdanvimab (CT-P59) is a recombinant human IgG1 monoclonal antibody directed at the receptor binding domain (RBD) of the SARS-CoV-2 spike protein. It blocks the interaction between viral spike proteins and angiotensin-conv erting enzyme 2 (ACE2) that allows for viral entry into the cell, thereby inhibiting the viru s' ability to replicate. Trials investigating the use of regdanvimab as a therapeutic candid ate for the treatment of COVID-19 began in mid-2020. It received its first full approval in South Korea in September 2021, followed by the EU in November 2021. The EC grante d marketing authorisation for adults with COVID-19 who do not require supplemental ox ygen and who are at increased risk of progressing to severe COVID-19.

* Relcovaptan (SR-49059) is a non-peptide vasopressin receptor antagonist, selective f or the V1a subtype. It has shown positive initial results for the treatment of Raynaud's di sease and dysmenorrhoea, and as a tocolytic, although it is not yet approved for clinical use. A clinically safe and selective AVPR1A antagonist, relcovaptan, prevented castratio n-resistant prostate cancer CRPC emergence and decreased CRPC orthotopic and bon e metastatic growth in mouse models. Based on these preclinical findings, repurposing AVPR1A antagonists is a promising therapeutic approach for CRPC. Relcovaptan is a n on-peptide, orally active vasopressin V 1A / oxytocin antagonist. Its affinity towards vaso pressin V 1A receptors is higher as compared with oxytocin receptors. Since it can be a dministered orally it can be used in patients with dysmenorrhoea or for prophylactic / ma intenance treatment of pre-term labour sufferers. Relcovaptan was shown to decrease myometrial contractions in vitro as well as in vivo. In clinical study on pre-term labour pa tients, it significantly decreased uterine contractions as compared with placebo. Being p redominantly vasopressin V 1A antagonist, relcovaptan has recently been tested in ani mal models of congestive heart failure.

* RGFP-966 is a brain-penetrant and selective HDAC3 inhibitor. In HEK-293 cells overe xpressing APP with Swedish mutation (HEK/APPSW), RGFP-966 (10mM, 48 h) increas

ed histone H3 and H4 acetylation and decreased p-tau. In the 3xTg AD mouse model, r epeated administration of RGFP-966 (3 and 10 mg/kg) reversed pathological tau phosp horylation in the brain and improved spatial learning and memory. Furthermore, in prima ry neurons derived from iPSCs obtained from AD patients, RGFP-966 decreased tau ac etylation in patient 1 with no effect on tau phosphorylation, whereas it decreased tau hy perphosphorylation in patient 2 with no effect on tau acetylation. Larger follow-up studie s are required to elucidate this finding. Used for tauopathies in neurodegenerative disea ses.

* Rimegepant is a small molecule calcitonin gene-related peptide (CGRP) receptor anta gonist. Rimegepant is a medication for the acute treatment of migraine with or without a ura in adults and preventative treatment of episodic migraine in adults. Rimegepant can provide relief from migraine headache for up to 48 hours. It works by blocking CGRP re ceptors.

* Sevoflurane is one of the most commonly used volatile anesthetic agents, particularly f or outpatient anesthesia, across all ages, as well as in veterinary medicine. Sevoflurane has an excellent safety record, but is under review for potential hepatotoxicity, and may accelerate Alzheimer's. There were rare reports involving adults with symptoms similar t o halothane hepatotoxicity. Sevoflurane is the preferred agent for mask induction due to its lesser irritation to mucous membranes. Sepsis is one of the leading causes of mortali ty in intensive care units, and sedation in the intensive care unit during sepsis is usually performed intravenously. Although inhaled sevoflurane is reported to have anti-inflamma tory effects, its role in laboratory models is not well characterized. In two murine peritoni tis-induced sepsis models, sevoflurane reduced peritoneal lavage neutrophil counts by l ower adhesion molecule expression, reduced cytokines, and protein extravasation. The mechanism of these reported protective effects was due to the expression of hypoxia-in ducible factor 1alpha and adenosine A2B receptor in the intestine, liver, and lung.

* Sildenafil is a medication used to treat erectile dysfunction and pulmonary arterial hyp ertension. It is unclear if it is effective for treating sexual dysfunction in women. Commo n side effects include headaches, heartburn, and flushed skin. Caution is advised in tho se with cardiovascular disease. Rare but serious side effects include a prolonged erecti on (priaprism) that can lead to damage to the penis, vision problems, and hearing loss. Sildenafil should not be taken by people on nitrates such as nitroglycerin (glycerin trinitr ate), as this may result in a serious drop in blood pressure. Sildenafil should not be take n within four hours of taking an alpha one antagonist. Sildenafil acts by blocking phosph odiesterase 5 (PDE5), an enzyme that promotes breakdown of cGMP, which regulates b lood flow in the penis. It requires sexual arousal, however, to work. It also results in dilati on of the blood vessels in the lungs. Sildenafil and other PDE5 inhibitors are used off-la bel to alleviate vasospasm and treat severe ischemia and ulcers in fingers and toes for people with secondary Raynaud's phenomenon. Sildenafil reduced the likelihood of Alzh eimer's in people with coronary artery disease, hypertension, and type 2 diabetes, all of which are comorbidities significantly associated with risk of the disease. Care should be exercised by people who are also taking protease inhibitors for the treatment of HIV infe ction. Protease inhibitors inhibit the metabolism of sildenafil, effectively multiplying the pl

asma levels of sildenafil, increasing the incidence and severity of side effects. Those usi ng protease inhibitors are recommended to limit their use of sildenafil. Other drugs that i nterfere with the metabolism of sildenafil include erythromycin and cimetidine, both of w hich can also lead to prolonged plasma half-life levels. The use of sildenafil and an alph a1 blocker (typically prescribed for hypertension or for urologic conditions, such as beni gn prostatic hypertrophy) at the same time may lead to low blood pressure, but this effe ct does not occur if they are taken at least 4 hours apart. Sildenafil should not be used if sexual activity is inadvisable due to underlying cardiovascular risk factors.

* SIRT6 Activators. In the search for ways to effectively combat age-related human dise ase, the enzyme sirtuin 6 (Sirt6) has recently become a focus of biochemical research. A targeted activation of Sirt6 could prevent or mitigate such diseases, for example some types of cancer. MDL-800 and MDL-801 increased SIRT6 deacetylation activity, with EC 50 values of 10.3 ± 0.3 μ M and 5.7 ± 0.3 μ M, respectively, and both molecules dramatically enhanced SIRT6 deacetylation activity by more than 22-fold at 100 μ M.

* Tianagliflozin is a novel sodium/glucose cotransporter 2 (SGLT-2) inhibitor potentially for the treatment of type 2 diabetes.

* XEN901 is a potent, selective Nav1.6 sodium channel inhibitor for the treatment of epilepsy, including treatment resistant adult focal seizures and rare, pediatric forms of epilepsy, such as EIEE13, an early infantile epileptic encephalopathy associated with mutations in the SCN8A gene and gain-of-function in the Nav1.6 sodium channel. Non-selective sodium channel blockers, such as phenytoin, carbamazepine, lacosamide, and lamotrigine, have been the mainstay of treatment of patients with focal seizures for decades. However, these non-selective sodium channel blockers also inhibit other channels, leading to well recognized side effects associated with their use, limiting dose titration required to achieve maximal efficacy. XEN901 is the first highly selective blocker of Nav1.6, the most abundantly expressed sodium channel in the neuroexcitatory pathways in the central nervous system. XEN901 selective inhibition the Nav1.6 channel brings robust clinical efficacy along with an improved safety profile.

1.3.1.47 RT-MB-59

https://archive.org/details/Resonant_Therapy-Molecular_Biology_59

Augmentin; Aztreonam; Clematis Root-Mix; Cyclobenzaprine; Daridorexant; DeC-1.2 Pe ptide; Deoxygedunin; Diatomaceous Earth; Gut Health-Mix; Interstitial Cystitis-Mix1; Inte rstitial Cystitis-Mix2; Interstitial Cystitis-Mix3; Lugol Iodine; Lupeol; Maresin-1; Mepartrici n; Midodrine; Oxytetracyline; Prebiotics Mix; RG-7112-O-Vanillin; SAMe; Taurolidine; Te ndinopathy-Mix; Tixagevimab-Cilgavimab; Tolperisone; Urinary Bladder Mix1; Urinary Bl adder-Mix2; Urinary Bladder-Mix3; Velusetrag; Zetomipzomib

* Augmentin or amoxicillin/clavulanic acid, also known as co-amoxiclav or amox-clav, is an antibiotic medication used for the treatment of a number of bacterial infections. It is a

combination consisting of amoxicillin, a beta-lactam antibiotic, and potassium clavulanat e, a beta-lactamase inhibitor. It is specifically used for otitis media, streptococcal pharyn gitis, pneumonia, cellulitis, urinary tract infections, and animal bites. Common side effect s include diarrhea, vomiting, and allergic reactions. It also increases the risk of yeast inf ections, headaches, and blood clotting problems. It is not recommended in people with a history of a penicillin allergy. It is relatively safe for use during pregnancy. Amoxicillin/cl avulanic acid is widely used to treat or prevent many infections caused by susceptible b acteria, such as: urinary tract infections, respiratory tract infections, skin and soft tissue i nfections, sinus infections, tonsillitis, cat scratches, infections caused by the bacterial flo ra of the mouth, such as: dental infections, infected animal bites, infected human bites (i ncluding uncomplicated "clenched-fist" or "reverse-bite" injuries).

* Aztreonam is an antibiotic used primarily to treat infections caused by gram-negative b acteria such as Pseudomonas aeruginosa. This may include bone infections, endometrit is, intra abdominal infections, pneumonia, urinary tract infections, and sepsis. Common side effects when given by injection include pain at the site of injection, vomiting, and ra sh. Common side effects when inhaled include wheezing, cough, and vomiting. Serious side effects include Clostridium difficile infection and allergic reactions including anaphyl axis. Those who are allergic to other beta-lactam have a low rate of allergy to aztreona m. Use in pregnancy appears to be safe. It is in the monobactam family of medications. Aztreonam inhibits cell wall synthesis by blocking peptidoglycan crosslinking to cause b acterial death. Nebulized forms of aztreonam are used to treat infections that are compli cations of cystic fibrosis and are approved for such use in Europe and the US; they are also used off-label for non-CF bronchiectasis, ventilator-associated pneumonia, chronic obstructive pulmonary disease, mycobacterial disease, and to treat infections in people who have received lung transplants. Aztreonam has strong activity against susceptible Gram-negative bacteria, including Pseudomonas aeruginosa. It is resistant to some bet a-lactamases, but is inactivated by extended-spectrum beta-lactamases. It has no usefu l activity against Gram-positive bacteria or anaerobes. It is known to be effective against a wide range of bacteria including Citrobacter, Enterobacter, E. coli, Haemophilus, Klebs iella, Proteus, and Serratia species. Acinetobacter anitratus, Escherichia coli, Pseudom onas aeruginosa, and Proteus mirabilis are generally susceptible to aztreonam, while so me staphylococci, Staphylococcus aureus, Staphylococcus haemolyticus and Xanthom onas maltophilia are resistant to it. Furthermore, Aeromonas hydrophila, Citrobacter kos eri (Citrobacter diversus), Pantoea agglomerans (Enterobacter agglomerans), Haemoph ilus spp. and Streptococcus pyogenes have developed resistance to aztreonam to varyi ng degrees. Aztreonam is often used in people who are penicillin allergic or who cannot tolerate aminoglycosides.

* Clematis Root Mix (wei ling xian) acts on urinary bladder channel and migrating to 12 channels and collaterals. The mix has a strong action to eliminate wind-dampness, clea ring stasis in channels to relieve arthralgia. Used for rheumatic arthralgia, joint pain, nu mbness of extremities. Also used for dislodging and passing through the throat stuck fis hbones in the pharynx where it does eliminate the phlegm and softens stuck fish bones, thus eventually leaving to the stomach acids dissolve the fish bone. If a fish bone is swa llowed and it passes through the throat, that means it is small and can be digested. As t

he mix tends to cause inpairment to vital energy, it should not be used for long periods o f time. The recording plays the sound frequencies of anemonin, protoanemonin, prosap ogenin (CP11) and, aristolochic acid.

* Cyclobenzaprine is a centrally acting muscle relaxant closely related to the tricyclic ant idepressants. Despite its similarity to tricyclic antidepressants, there is little evidence tha t cyclobenzaprine causes liver injury. Cyclobenzaprine is a centrally acting skeletal mus cle relaxant with antidepressant activity. The exact mechanism of action of cyclobenzapr ine has not been fully determined, but this drug seems to primarily act at the brain stem to reduce tonic somatic motor activity, influencing both gamma and alpha motor neurons leading to a reduction in muscle spasms. Cyclobenzaprine is 5-Methylidene-5H-dibenzo [a,d]cycloheptene in which one of the hydrogens of the methylidene group is substituted by a 2-(dimethylamino)ethyl group. It has a role as a muscle relaxant, a tranquilizing dru g and an antidepressant. It derives from a hydride of a dibenzo[a,d]annulene. Common side effects include headache, feeling tired, dizziness, and dry mouth. Serious side effec ts may include an irregular heartbeat. Agitation is a common side effect observed, espe cially in the elderly. In general, the National Committee for Quality Assurance recommen ds avoiding the use of cyclobenzaprine in the elderly because of the potential for more s evere side effects. Dysphagia, a life-threatening side-effect, may rarely occur. Treatment protocols and support should follow the same as for any structurally related tricyclic, suc h as tricyclic antidepressants.There is no evidence of harm in pregnancy, but it has not been well studied in this population. It should not be used with a MAO inhibitor. Cyclobe nzaprine is used to treat such muscle spasms associated with acute, painful musculosk eletal conditions. It decreases pain in the first two weeks, peaking in the first few days, b ut has no proven benefit after two weeks. Since no benefit is proven beyond that, therap y should not be continued long-term. It is the best-studied muscle relaxer. It is not useful for spasticity due to neurologic conditions such as cerebral palsy. The sedative effects o f cyclobenzaprine are likely due to its antagonistic effect on histamine, serotonin, and m uscarinic receptors. These substances may interact with cyclobenzaprine: Central nervo us system depressants (e.g. alcohol, opioids, benzodiazepines, nonbenzodiazepines, p henothiazines, carbamates, barbiturates, major tranquilizers.) Monoamine oxidase inhibi tors taken within two weeks of cyclobenzaprine may result in serious, life-threatening sid e effects. Cyclobenzaprine may affect the medications used in surgical sedation and so me surgeons request that patients temporarily discontinue its use prior to surgery. Cyclo benzaprine is a 5-HT2 receptor antagonist; it relieves muscle spasm through action on t he central nervous system at the brain stem, rather than targeting the peripheral nervou s system or muscles themselves.

* Daridorexant is a medication used for the treatment of insomnia. The medication has a relatively short elimination half-life of 6 to 10 hours. As of April 2020, daridorexant has p assed its first phase III clinical trial for the treatment of insomnia. Daridorexant was appr oved for medical use in the United States in January 2022. Daridorexant, formerly know n as nemorexant, is a selective dual orexin receptor antagonist used to treat insomnia. I nsomnia is characterized by difficulties with sleep onset and/or sleep maintenance and i mpairment of daytime functioning. It chronically affects the person’s daily functioning an d long-term health effects, as insomnia is often associated with comorbidities such as h

ypertension, diabetes, and depression. Conventional treatments for insomnia include dr ugs targeting gamma-aminobutyric acid type-A (GABA-A), serotonin, histamine, or mela tonin receptors; however, undesirable side effects are frequently reported, such as next-morning residual sleepiness, motor incoordination, falls, memory and cognitive impairm ent. Novel drugs that target orexin receptors gained increasing attention after discoverin g the role of orexin signalling pathway in wakefulness and almorexant, an orexin recept or antagonist that improved sleep. Daridorexant was designed via an intensive drug disc overy program to improve the potency and maximize the duration of action while minimi zing next-morning residual activity. Daridorexant works on orexin receptors OX1R and OX2R to block the binding of orexins, which are wake-promoting neuropeptides and end ogenous ligands to these receptors. Daridorexant reduces overactive wakefulness: in th e investigational trials, daridorexant reportedly improved sleep and daytime functioning i n patients with insomnia.

* DeC-1.2 Peptde (CRRDRARHYRQRC) can specifically inhibit the ligand activation of TRPM8 but not the cold activation as measured in single-channel patch clamp recording s. The discoverer of TRPM8 and other temperature-sensing TRP channels won the Nob el Prize in Physiology or Medicine in 2021. TRPM8 is a non-selective cation channel hig hly expressed in nociceptive neurons. As this channel is activated at temperature lower t han 28 °C, it is a sensor for coolness in mammalians. Moreover, TRPM8 is a polymodal receptor also activated by chemical ligands such as menthol and icilin, as well as memb rane depolarization. DeC-1.2 abolishes cold allodynia in oxaliplatin treated mice without altering body temperature. The transient receptor potential melastatin 8 (TRPM8) ion ch annel is critically involved in the pathogenesis of oxaliplatin-induced cold allodynia. In th e mouse model of oxaliplatin-induced cold allodynia, the expression level of TRPM8 cha nnel in the nociceptive dorsal root ganglion (DRG) neurons is significantly elevated. Tho ugh there is no peptide toxin targeting TRPM8 channel identified from venomous animal s, many small molecules have been screened and developed as TRPM8 inhibitors. Mos t of these inhibitors non-discriminatively suppress all modes of TRPM8 activation, so the y often cause hypothermia and changes in acute cold sensation in patients and thus fail ures in clinical trials. To address such limitations in pan-mode inhibitors, one of the effec tive strategies is to develop modality-specific TRPM8 inhibitors such as DeC-1.2 Peptde that spares cold activation of this channel.
(https://doi.org/10.1002/advs.202101717)

* Deoxygedunin has been found to act as a potent, selective, small-molecule agonist of TrkB, the main receptor of brain-derived neurotrophic factor (BDNF). It produces TrkB-d ependent neurotrophic and neuroprotective effects in mice and enhances learning proce sses. In addition, deoxygedunin evokes rapid TrkB-dependent antidepressant-like effect s in the forced swim test, an animal model of depression, similarly to 7,8-dihydroxyflavo ne (7,8-DHF) and ketamine. Deoxygedunin has been found to activate HSF1 and induc e Hsp70, and was observed to possess neuroprotective effects in a model of Huntingto n's disease.

* Diatomaceous Earth (Silicon Dioxide or SiO2) is a type of powder made from the sedi ment of fossilized algae found in bodies of water. Because the cells of these algae were

high in a compound called silica, the dried sediment produced from these fossils are als o very high in silica. These deposits are found all over the world. Silicon dioxide helps to maintain healthy, strong bones, heal bone fractures, avoid bone deformities, and ward o ff the onset of osteoporosis. It also helps with peripheral neuropathy. These benefits are mostly attributed to its ability to allow the body to absorb more fully nutrients like calcium and vitamins. The US Food and Drug Administration has recognized silicon dioxide as s afe for human consumption and the European Food Safety Authority (EFSA) has, as we ll. In fact, the World Health Organization has recorded that the biggest danger caused b y silicon dioxide is a deficiency of the substance.

* Gut Health-Mix.
-Psyllium is mainly used as a dietary fiber to relieve symptoms of both constipation and mild diarrhea, and occasionally as a food thickener. Allergy to psyllium is common. Use of psyllium in the diet for three weeks or longer often lowers blood cholesterol levels in p eople with elevated cholesterol, and can lower blood glucose levels in people with type 2 diabetes. Use of psyllium for a month or longer may produce a small reduction in syst olic blood pressure.
-Inulin is a prebiotic fiber present in the roots and rhizomes of various plants. Inulin is a naturally indigestible and non-absorbable oligosaccharide with prebiotic and potential an ticancer activity. Inulin stimulates the growth of beneficial bacteria in the colon, including Bifidobacteria and Lactobacilli, thereby modulating the composition of microflora. This cr eates an environment that protects against pathogens, toxins and carcinogens, which c an cause inflammation and cancer. In addition, fermentation of inulin leads to an increas e in short-chain fatty acids and lactic acid production, thereby reducing colonic pH, whic h may further control pathogenic bacteria growth and may contribute to inulin's cancer p rotective properties. Inulin has demonstrated effectiveness in improving transit time, sto ol frequency, stool consistency, and hardness of stool. -Phenylalanine-butyramide–also known as FBA–is an innovative delivery system that helps increase butyrate in the bloodstream and has been shown in studies to be an effective anti-inflammatory agent. Butyrate is an important molecule for building gut health. Butyrate, is a primary short-chain fatty acids (SCFAs) that microbes produce when they contribute to the fermentation of non-digestible fibers and resistant starches. A number of research papers have supported its ability to aid in promoting satiety and blood sugar and blood lipid management, as well as their anti-inflammatory (especially regarding inflammatory bowel diseases), antioxidant, and even anti-cancer abilities.

* Interstitial Cystitis Mix features specific compounds such as proanthocyanidin, acemannan, asiatic acid, asiaticoside, madecassic acid (mp3-1) L-arginine, valeranone, didrovaltrate (mp3-2) quercetin, bromelain, papain (mp3-3). The goal is to alleviate and reverse the condition.

* Lugol Iodine, also known as aqueous iodine and strong iodine solution, is a solution of potassium iodide with iodine in water. It is a medication and disinfectant used for a number of purposes. Taken by mouth it is used to treat thyrotoxicosis until surgery can be carried out, protect the thyroid gland from radioactive iodine, and to treat iodine deficiency. As a disinfectant it may be applied to small wounds such as a needle stick

injury. A small amount may also be used for emergency disinfection of drinking water. Side effects may include allergic reactions, headache, vomiting, and inflammation of the whites of the eyes. Long term use may result in trouble sleeping and depression. It should not typically be used during pregnancy or breastfeeding. Lugol's iodine is a liquid made up of two parts potassium iodide for every one part elemental iodine in water.

* Lupeol is a pharmacologically active pentacyclic triterpenoid. It has several potential medicinal properties, like anticancer and anti-inflammatory activity. Lupeol has a complex pharmacology, displaying antiprotozoal, antimicrobial, antiinflammatory, antitumor and chemopreventive properties. Animal models suggest lupeol may act as an anti-inflammatory agent. A 1998 study found lupeol to decrease paw swelling in rats by 39%, compared to 35% for the standardized control compound indomethacin. One study has also found some activity as a Dipeptidyl peptidase-4 inhibitor and prolyl oligopeptidase inhibitor at high concentrations (in the millimolar range). It is an effective inhibitor in laboratory models of prostate and skin cancers. As an anti-inflammatory agent, lupeol functions primarily on the interleukin system. Lupeol decreases IL-4 (interleukin 4) production by T-helper type 2 cells. Lupeol has been found to have a contraceptive effect due to its inhibiting effect on the calcium channel of sperm (CatSper). Lupeol has also been shown to exert anti-angiogenic and anti-cancer effects via the downregulation of TNF-alpha and VEGFR-2. Lupeol demonstrated the most favorable docking affinity towards the main protease (MPRO) achieving scores of -70.03, interestingly the antiretroviral protease inhibitor drugs lopinavir and ritonavir, shown in some studies to be effective against COVID-19, achieved scores of only -50.25 and -68.58 kcal/mol, respectively.

* Maresin-1 alleviates cardiac injury and protects against cardiac dysfunction and may be beneficial in reducing sepsis-induced cardiac injury. Maresin 1 promotes nerve regeneration and alleviates neuropathic pain after nerve injury. Also, Maresin-1 (MaR1) a derivative of omega-3 docosahexaenoic acid (DHA) has been shown to prevent the inflammation of hepatocytes and increase the phagocytic activity of Kupffer cells. In addition to resolvins and protectins, the maresins are a structurally distinct family of compounds in the DHA metabolome. Maresins are biosynthesized by macrophages that are critically important in restoring tissue homeostasis after inflammation. Maresin 1 is a powerful regulator of resolution of inflammation, tissue regeneration and pain likewise, with effects upon many disease states including lung, vascular and metabolic diseases, and bacterial infections.

* Mepartricin is a macrolide polyene compound that is useful for urethra, prostate, and bladder function. It has been studied for use in treating chronic pelvic pain syndrome and benign prostatic hyperplasia. Mepartricin is estrogen reabsorption inhibitor that may interfere with the reabsorption of estrogens in the gut leading to increased fecal estrogen excretion. It reduces 17beta-estradiol concentration in enterohepatic circulation and decreases estrogen levels in the prostate. The effect of mepartricin on the reabsorption of estrogens was evaluated in studies in vitro and in vivo. Mepartricin significantly improves pelvic pain and quality of life compared with the results in placebo group after two months of treatment. Regarding to the theory that hormonal disorders

could promote prostatic inflammation, mepartricin, that can lower estrogen levels in prostate, is effective drug in the treatment of patients with chronic pelvic pain syndrome and is referred in 2015 World Journal Pharmacology Updates on therapies for chronic prostatitis/chronic pelvic pain syndrome.

* Midodrine is a vasopressor/antihypotensive agent. It is indicated for the treatment of symptomatic orthostatic hypotension. It can reduce dizziness and faints by about a third, but can be limited by troublesome goose bumps, skin itch, gastrointestinal discomfort, chills, elevated blood pressure while lying down, and urinary retention. A meta-analysis of clinical trials of midodrine or droxidopa in patients with low blood pressure when standing found that midodrine increased standing blood pressure more than droxidopa but that midodrine but not droxidopa increased the risk of high blood pressure when lying down. Small studies have also shown that midodrine can be used to prevent excessive drops in blood pressure in people requiring dialysis. Midodrine has been used in the complications of cirrhosis. It is also used with octreotide for hepatorenal syndrome; the proposed mechanism is constriction of splanchnic vessels and dilation of renal vasculature. Midodrine is contraindicated in patients with severe organic heart disease, acute kidney disease, urinary retention, pheochromocytoma or thyrotoxicosis. Midodrine should not be used in patients with persistent and excessive supine hypertension. Posible side effects include headache, feeling of pressure/fullness in the head, vasodilation/flushing face, scalp tingling, confusion/thinking abnormality, dry mouth, nervousness/anxiety and rash.

* Oxytetracycline, like other tetracyclines, is used to treat many infections, both common and rare. Its better absorption profile makes it preferable to tetracycline for moderately severe acne at a dosage of 250–500 mg four times a day for usually six to eight weeks at a time, but alternatives should be sought if no improvement occurs by three months. It is sometimes used to treat spirochaetal infections, clostridial wound infection and anthrax in patients sensitive to penicillin. Oxytetracycline is used to treat infections of the respiratory and urinary tracts, skin, ear, eye and gonorrhoea, although its use for such purposes has declined in recent years due to large increases in bacterial resistance to this class of drugs. The drug is particularly useful when penicillins and/or macrolides cannot be used due to allergy. It may be used to treat Legionnaire's disease as a substitute for a macrolide or quinolone. Oxytetracycline is especially valuable in treating nonspecific urethritis, Lyme disease, brucellosis, cholera, typhus, tularaemia. and infections caused by Chlamydia, Mycoplasma and Rickettsia. Doxycycline is now preferred to oxytetracycline for many of these indications because it has improved pharmacologic features. Side effects are mainly gastrointestinal and photosensitive allergic reactions common to the tetracycline antibiotics group. It can also damage calcium-rich organs, such as teeth and bones, although this is very rare. It sometimes causes nasal cavities to erode; quite commonly, the BNF suggests, because of this, tetracyclines should not be used to treat pregnant or lactating women and children under 12 except in certain conditions where it has been approved by a specialist because there are no obvious substitutes. Candidiasis (thrush) is not uncommon following treatment with broad-spectrum antibiotics.

* Prebiotics Mix. Neokestose as well as many other fructooligosaccharides belong to the prebiotics, i.e. to the substances that have a positive effect on the intestinal microbiome after consuming them in food. In particular, the consumption of neokestose mixed with other fructooligosaccharides increases the concentration of healthy probiotic bifidobacteria and decreases the concentration of the Clostridia, bacteria associated with inflammatory processes.
N-Acetyllactosamine (LacNAc) (also known as CD75) is a nitrogen-containing disaccharide. The N-acetyllactosamine is a component of many glycoproteins and functions as a carbohydrate antigen that is thought to play roles in normal cellular recognition as well as in malignant transformation and metastasis. It is also found in the structure of human milk oligosaccharides and has prebiotic effects. Levan is a naturally occurring fructan present in many plants and microorganism species. In the food industry, levan is incorporated due to its prebiotic effects, cholesterol lowering ability, and adhesion ability.

* RG-7112-O-Vanillin. RG-7112, is a synthetic drug that has been approved for safety by the US Food and Drug Administration and has been shown to remove senescent cells. The other, o-Vanillin, is a natural compound that has anti-inflammatory and anti-senescence properties. The results showed that both compounds were able to trigger changes to that helped new, healthy cells to grow and at the same time kill senescent cells. They also reduced the production of molecules linked to inflammation and pain. Further analyses revealed that the compounds were able to strengthen the fibrous matrix that surrounds and supports the spinal discs. Cherif et al. hope that this could form the basis for a new family of drugs for back pain to slow the degeneration of the discs and reduce pain. This may also have benefits for other similar degenerative diseases caused by cell senescence, such as arthritis.
(doi: 10.7554/eLife.54693)

* SAM-e is a molecule that is formed naturally in the body. It can also be made in the laboratory. SAMe is involved in the formation, activation, or breakdown of other chemicals in the body, including hormones, proteins, phospholipids, and certain drugs. SAMe has been available as a dietary supplement in the US since 1999, but it has been used as a prescription drug in Italy since 1979, in Spain since 1985, and in Germany since 1989. SAMe is used by for depression, anxiety, heart disease, fibromyalgia, abdominal pain, osteoarthritis, bursitis, tendonitis, chronic lower back pain, dementia, Alzheimer's disease, slowing the aging process, chronic fatigue syndrome (CFS), improving mental performance, liver disease, and Parkinson's disease. It is also used for attention deficit-hyperactivity disorder (ADHD), multiple sclerosis, spinal cord injury, seizures, migraine headache, lead poisoning, to break down a chemical in the body called bilirubin, or to help with disorders related to the buildup of a chemical called porphyrin or its precursors. Some women take SAMe for premenstrual syndrome (PMS) and a more severe form of PMS called premenstrual dysphoric disorder (PMDD). SAMe is used intravenously (by IV) for depression, osteoarthritis, AIDS-related nervous system disorders, fibromyalgia, liver disease, cirrhosis, and for a liver disorder that occurs in pregnant women called intrahepatic cholestasis. SAMe is injected as a shot for fibromyalgia, depression, and Alzheimer's disease. The body uses SAMe to make

certain chemicals in the body that play a role in pain, depression, liver disease, and other conditions. People who don't make enough SAMe naturally may be helped by taking SAMe as a supplement. It can sometimes cause gas, vomiting, diarrhea, constipation, dry mouth, headache, mild insomnia, anorexia, sweating, dizziness, and nervousness, especially at higher doses. It can also make some people with depression feel anxious. S-adenosyl-L-methioninate is a sulfonium betaine that is a conjugate base of S-adenosyl-L-methionine obtained by the deprotonation of the carboxy group. It has a role as a human metabolite. It derives from a L-methioninate. It is a conjugate base of a S-adenosyl-L-methionine. Taking SAM at the same time as some drugs may increase the risk of serotonin syndrome, a potentially dangerous condition caused by having too much serotonin. These drugs include dextromethorphan (Robitussin), meperidine (Demerol), pentazocine (Talwin), and tramadol (Ultram). SAM may also interact with antidepressant medications — including tryptophan and Hypericum perforatum (St. John’s wort) — increasing the potential for serotonin syndrome or other side effects, and may reduce the effectiveness of levodopa for Parkinson's disease. People who have bipolar disorder should not use SAM because it increases the risk of manic episodes.

* Taurolidine is an antimicrobial that is used to try to prevent infections in catheters. Side effects and the induction of bacterial resistance is uncommon. It is also being studied as a treatment for cancer. It is derived from the endogenous amino acid taurine. Taurolidine’s putative mechanism of action is based on a chemical reaction. During the metabolism of taurolidine to taurinamide and ultimately taurine and water, methylol groups are liberated that chemically react with the mureins in the bacterial cell wall and with the amino and hydroxyl groups of endotoxins and exotoxins. This results in denaturing of the complex polysaccharide and lipopolysaccharide components of the bacterial cell wall and of the endotoxin and in the inactivation of susceptible exotoxins. Catheter lock solution in home parenteral nutrition (HPN) or total parenteral nutrition (TPN): catheter-related blood stream infections (CRBSI) remains the most common serious complication associated with long-term parenteral nutrition. The use of taurolidine as a catheter lock solution shows a reduction of CRBSI. The overall quality of the evidence however is not strong enough to justify routine use. Catheter lock solution: Taurolidine decreases the adherence of bacteria and fungi to host cells by destructing the fimbriae and flagella and thus prevent the biofilm formation. Taurolidine is the active ingredient of antimicrobial catheter lock solutions for the prevention and treatment of catheter related bloodstream infections (CRBSIs) and is suitable for use in all catheter based vascular access devices. Bacterial resistance against taurolidine has never been observed in various studies. The use of a taurolidine lock solution may decrease the risk of catheter infection in children with cancer but the evidence is tentative. No systemic side effects have been identified. The safety of taurolidine has also been confirmed in clinical studies with long-term intravenous administration of high doses (up to 20 grams daily). In the body, taurolidine is metabolized rapidly via the metabolites taurultam and methylol taurinamide, which also have a bactericidal action, to taurine, an endogenous aminosulphonic acid, carbon dioxide and water. Therefore, no toxic effects are known or expected in the event of accidental injection. Taurolidine has a relatively low acute and subacute toxicity. Intravenous injection of 5 grams

taurolidine into humans over 0.5–2 hours produce only burning sensation while instilling, numbness, and erythema at the injection sites. For treatment of peritonitis, taurolidine was administered by peritoneal lavage, intraperitoneal instillation or intravenous infusion, or by a combination thereof. The total daily dose ranged widely from 0.5 to 50 g. The total cumulative dose ranged from 0.5 to 721 g. In those patients who received intravenous taurolidine, the daily intravenous dose was usually 15 to 30 g but several patients received up to 40 g/day. Total daily doses of up to 40 g and total cumulative doses exceeding 300 g were safe and well tolerated. Taurolidine and taurultam are quickly metabolized to taurinamide, taurine, carbon dioxide and water. Taurolidine exists in equilibrium with taurultam and N-methylol-taurultam in aqueous solution.
The half-life of the terminal elimination phase of taurultam is about 1.5 hours, and of the taurinamide metabolite about 6 hours. 25% of the taurolidine dose applied is renally eliminated as taurinamide and/or taurine. Taurolidine is highly active against the common infecting pathogens associated with peritonitis and catheter sepsis, this activity extends across a wide-spectrum of aerobic and anaerobic bacteria and fungi (with no diminution of effect in the presence of biological fluids, e.g. blood, serum, pus).

* Tendinopathy-Mix targets the inhibition of pro-inflammatory genes IL-12, IL-23, IL17A, IL-17F, IL17AF and TNF-alpha. The products used are Ustekinumab, (Crohn's disease, ulcerative colitis, plaque psoriasis and psoriatic arthritis) Bimekizumab (plaque psoriasis), and Certolizumab pegol (Crohn's disease, rheumatoid arthritis, psoriatic arthritis and ankylosing spondylitis.)

* Tixagevimab-Cilgavimab is a combination of two human monoclonal antibodies, tixagevimab (AZD8895) and cilgavimab (AZD1061) targeted against the surface spike protein of SARS-CoV-2 used to prevent COVID-19. On 8 December 2021, the U.S. Food and Drug Administration (FDA) granted emergency use authorization of this combination to prevent COVID-19 (before exposure) in people with weakened immunity or who cannot be fully vaccinated due to a history of severe reaction to coronavirus vaccines. The FDA issued an emergency use authorization (EUA) for AstraZeneca's Evusheld (tixagevimab co-packaged with cilgavimab and administered together) for the pre-exposure prophylaxis (prevention) of COVID-19 in certain people aged 12 years of age and older weighing at least 40 kilograms (88 lb). The product is only authorized for those individuals who are not currently infected with the SARS-CoV-2 virus and who have not recently been exposed to an individual infected with SARS-CoV-2.

* Tolperisone is a piperidine derivative centrally acting skeletal muscle relaxant used for the treatment of increased muscle tone associated with neurological diseases. It has been used since the 1960s. Tolperisone is indicated for use in the treatment of pathologically increased tone of the skeletal muscle caused by neurological diseases (damage of the pyramidal tract, multiple sclerosis, myelopathy, encephalomyelitis) and of spastic paralysis and other encephalopathies manifested with muscular dystonia. Other possible uses include: Spondylosis. Spondylarthrosis. Cervical and lumbar syndromes. Arthrosis of the large joints. Obliterating atherosclerosis of the extremity vessels. Diabetic angiopathy. Thromboangiitis obliterans. Raynaud's syndrome. Its precise mechanism is not completely understood, though it blocks sodium and calcium

channels. It possesses a high affinity for nervous system tissue, reaching highest concentrations in brain stem, spinal cord and peripheral nerves. Based on existing clinical data, Tolperisone is not sedating and does not interact with alcohol. Manufacturers report that tolperisone should not be used in patients with myasthenia gravis. Only limited data are available regarding the safety in children, youths, during pregnancy and breastfeeding. It is not known whether tolperisone is excreted into mother's milk. Adverse effects occur in fewer than 1% of patients and include muscle weakness, headache, arterial hypotension, nausea, vomiting, dyspepsia, and dry mouth. All effects are reversible. Allergic reactions occur in fewer than 0.1% of patient and include skin rash, hives, Quincke's edema, and in some cases anaphylactic shock. Tolperisone does not have a significant potential for interactions with other pharmaceutical drugs. It cannot be excluded that combination with other centrally acting muscle relaxants, benzodiazepines or nonsteroidal anti-inflammatory drugs (NSAIDs) may make a dose reduction necessary in some patients. Tolperisone is absorbed nearly completely from the gut and reaches its peak blood plasma concentration after 1.5 hours. It is extensively metabolised in the liver and kidneys. The substance is excreted via the kidneys in two phases; the first with a half-life of two hours, and the second with a half-life of 12 hours.

* Urinary Bladder Mix-1.
-A-type Cranberry proanthocyanidins can prevent bacteria from sticking to the bladder wall and cause infection there instead.
-Asiatic Acid reverses the inflammatory processes in Interstitial Cystitis and restores the functional properties of the lower urinary tract. Asiatic acid normalizes the cystometric parameters corresponding to detrusor overactivity DO and prevents the accompanying oxidative stress and increased urinary secretion of neurotrophins but it does not influence these parameters in healthy subjects. Asiatic acid prevents the changes in a range of biomarkers indicating a dysfunction of the urinary bladder associated with smooth muscle contractions, urothelial barrier, or transportation and release of transmitters.
-Peppermint oil for the treatment of pain and discomfort in Interstitial Cystitis / Bladder Pain Syndrome.
-Resolvin D2, a metabolite of the omega-3 fatty acid, docosahexaenoic acid (DHA) relieves pain and improves bladder function by activating GPR18 gene which contributes to the resolution of inflammatory responses as well as inflammation-based through Inhibition of TRPV.
-Shionone, a triterpenoid component derived from the herbal medicine Aster tataricus, has anti-inflammatory properties. Shionone reduces bladder inflammation and decreases pyroptosis in the SV-HUC1 urothelial cell line, by inhibiting the NLRP3–GSDMD pathway.

* Urinary Bladder Mix-2.
-ZM241385 is a high affinity antagonist ligand selective for the adenosine A2A receptor. ZM241385 significantly alleviated bladder overactivity and hyperalgesia in CYP-treated animals by reducing the sensitivity of TRPV1 in DRG neurons.
-Intravesical treatment with Vessilen (a formulation of 2% adelmidrol + 0.1% sodium

hyaluronate) was able to ameliorate CYP-induced bladder inflammation and pain by inhibiting nuclear factor-κB pathway, and inflammatory mediator levels as well as reduce d mechanical allodynia and nerve growth factor levels
-Chlorogenic acid, a phenolic compound widely found in fruits and vegetables, significan tly attenuated inflammation, by inhibiting the MAPK/NF-κB pathway and decreasing proi nflammatory mediators IL6, IL1beta, and TNFalpha in the bladder.

* Urinary Bladder Mix-3.
-Ajulemic acid, a mixed CB1/CB2 receptor agonist, inhibited CGRP release ex vivo in ca psaicin- and ATP-stimulated whole rat bladders.
-JWH015, a selective CB2 agonist, significantly reduced leukocyte infiltration and proinfl ammatory cytokines in bladder interstitium of CD1 mice.
-GP1a selective CB2 agonist decreased severity of edema in acrolein-induced cystitis, i nhibited mechanical sensitivity, and decreased bladder urinary frequency that may be m ediated by inhibition of ERK1/2 pathway.
-JWH-133, a selective CB2 agonist completely inhibited mechanical hyperalgesia in CY P-induced mice Interstitial Cystitis, as well as ameliorated bladder inflammation and oxi dative stress.
-Beta-Caryophyllene (BCP), which is present in cannabis activates CB2 in mice with LP S-induced Interstitial Cystitis. BCP reduced bladder inflammation and improved bladder capillary perfusion.
-Palmitoylethanolamide, an endogenous lipid chemically related to the endocannabinoid anandamide, which, in addition to PARalpha, activates CB1 and CB2, was found to be a ble to attenuate pain behavior, voids, and bladder gross damage in a CYP-induced Inter stitial Cystitis mice model.

* Velusetrag, previously known as TD-5108, is an experimental drug candidate for the tr eatment of gastric neuromuscular disorders including gastroparesis, and lower gastroint estinal motility disorders including chronic idiopathic constipation and irritable bowel syn drome. It is a potent, selective, high efficacy 5-HT4 receptor serotonin agonist. Velusetr ag demonstrates less selectivity for other serotonin receptors, such as 5-HT2 and 5-HT 3, to earlier generation 5-HT agonists like cisapride and tegaserod. Velusetrag showed accelerated intestinal and colonic transit after single dosing and accelerated gastric emp tying after multiple dosing in healthy volunteer subjects. In addition, velusetrag showed accelerated gastric emptying in patients with diabetic or idiopathic gastroparesis. The pr oportion of patients who experienced at least a 20% improvement is gastric emptying ra nged from 20% to 52% for velusetrag dosed patients and 5% for placebo patients. On D ecember 6, 2016 the U.S. Food and Drug Administration (FDA) has granted Fast Track designation to velusetrag for the treatment of symptoms associated with diabetic and idi opathic Gastroparesis.

* Zetomipzomib (KZR-616), is a novel, first-in-class, selective immunoproteasome inhibi tor with broad therapeutic potential across >15 autoimmune disease models. KZR-616 o ffers a novel approach to harmonizing the immune system via selective immunoproteas ome inhibition. KZR-616 is under investigation in clinical trial NCT04033926 (A Phase 2 Study of KZR-616 to Evaluate Safety and Efficacy in Patients With Active Polymyositis o

r Dermatomyositis.) Playing a critical role in the body's immune system, the immunopro teasome is abundantly expressed in immune cells and acts as a master regulator of mul tiple cellular functions. By selectively inhibiting the immunoproteasome, KZR-616 has th e potential to affect multiple drivers of immune-mediated diseases such as Lupus nephri tis, systemic Lupus erythematosus, polymyositis and dermatomyositis -both of these are idiopathic inflammatory myopathies. The safety and tolerability of KZR-616 is favorable and consistent with needs for a long-term therapy.

1.3.1.48 RT-MB-60

https://archive.org/details/Resonant_Therapy-Molecular_Biology_60

5-Nitroindirubin-3′-oxime; A-438079; Aceclidine; ANA-12l ATX-LPA-LPARs Inhibitors; BMP6 Factor; BMP9-Leptin Factors; Bocidelpar; Brimochol; C004019; CD2019; Coenzyme CoQ10; D-Pantothenic Acid; Duchenne Mix; E-64; Forskolin-RepSox; FTX-6058; Givinostat; Ifetroban; Losmapimod; MBL Factor; Morin; Myriocin; NEP1-40; Pamrevlumab; PRM-151; Rimeporide; THX-B; UNR844; Vamorolone

* 5-Nitroindirubin-3′-oxime. A treatment with this small molecule leads to inhibition of cyclin D1 and thus inhibition of proliferation. Skin cancers are the most common malignancies in the world. Among the most frequent skin cancer entities, squamous cell carcinoma (SCC) ranks second (~20%) after basal cell carcinoma (~77%). In early stages, a complete surgical removal of the affected tissue is carried out as standard therapy. Knowledge of characteristic molecular alterations in certain cancer entities, such as SCC, can help identify tumor-specific substances for targeted therapies. Most frequently, altered genes in SCC include TP53, NOTCH, EGFR, and CCND1. For example, the gene CCND1, which codes for cyclin D1 protein, is upregulated in nearly half of SCC cases and promotes proliferation of affected cells. As a component of Danggui Longhui Wan, a traditional Chinese medicine, indirubins are used to treat chronic diseases and have been shown to inhibit inflammatory reactions. Indirubins are pharmacologically relevant small molecules with proapoptotic and antiproliferative activity. (https://doi.org/10.3390/cancers13081770)

* A-438079 is a selective P2X7 purinoceptor antagonist in both human and rat with minimal activity at 75 different G-protein-coupled receptors, enzymes, transporters, and ion channels tested. A-438079 molecule, one of the most potent and selective antagonists that competitively blocks P2X7 receptor in vitro activation and produces anti-nociceptive effects in in vivo settings. In addition to nociception, A438079 has already been successfully used in in vivo models of hyperalgesia, epilepsy, Parkinson’s disease, salivary gland exocrinopathy, and Charcot-Marie-Tooth 1A disease.

* Aceclidine is a small molecule acetylcholinesterase receptor agonist that causes pupil contraction, or miosis, creating a pinhole effect that improves near vision. Studies have shown that aceclidine’s mechanism of action is differentiated from competing

therapeutic options due to its ability to create a pinhole pupil effect while avoiding myopic shift. It is crucial to minimize myopic shift as it can significantly impair distance vision for a majority of presbyopes. Aceclidine's unique MOA, in which miosis is decoupled from myopic shift, is expected to allow it to target the broadest patient population. In the phase 2 trial, the near vision improvement was due to aceclidine's ability to maintain a pinhole pupil sweet spot of 1.5 mm to 2 mm for 7 hours. There was no loss and a slight trend toward net gain in best corrected distance vision. In addition, aceclidine was well tolerated with most common side effect being mild discomfort on instillation and no serious adverse events. Aceclidine has been marketed in Europe but has not been used clinically in the United States. It is used in the treatment of open-angle glaucoma and is a parasympathomimetic agent.

* ANA-12 is a selective, small-molecule non-competitive antagonist of TrkB, the main receptor of brain-derived neurotrophic factor (BDNF). The compound crosses the blood-brain-barrier and exerts central TrkB blockade. It blocks the neurotrophic actions of BDNF without compromising neuron survival. ANA-12 produces rapid antidepressant- and anxiolytic-like effects in animal models, the former of which have been elucidated to be mediated by blockade of BDNF signaling in the nucleus accumbens. It has also been found to alleviate methamphetamine-induced depression-like behavior (including anhedonia), behavioral sensitization, and nucleus accumbens neuroplasticity changes with subchronic (14-day) administration in mice. ANA-12 blocks the cognitive-enhancing effects of environmental enrichment and calorie restriction in rodents, which are mediated by BDNF signaling through TrkB in the hippocampus. It also blocks hippocampal neurogenesis induced by physical exercise in rodents, and may block the cognitive-enhancing effects of exercise as well.

* ATX-LPA-LPARs Inhibitors. The ATX/LPA/LPARs axis could be part of an unexplored pro-fibrotic program in skeletal muscle pathologies causing muscular fibrosis such as DMD and Limb-girdle MD. Studies that modulate the function or the presence/absence of LPA receptors yielded the most promising results that suggest a role for the ATX/LPA/LPARs axis in fibrosis pathogenesis. There is increasing data suggesting that pharmacological blockage or genetic deletion of LPA receptors could prevent the development of induced fibrosis in different organs. The primary LPA receptors that appeared to be involved in fibrosis are LPA1 and LPA3. An increasing amount of evidence places LPA as a potent modulator of inflammation in different tissues such as lung, liver, cancer-related-organs, skeletal muscle such as in chronic injury of the rotator cuff muscles and, the heart in myocardial infarction. The recording plays the sound frequencies of PF-8380 (ATX inhibitor), Ki-16425 (LPA1 and LPA3 inhibitor), VPC-12259 (LPA1and LPA3 inhibitor) and, AM-095 (LPA1 inhibitor.)
-PF-8380 is a potent orally bioavailable inhibitor of autotaxin (ATX), the enzyme that synthesize lysophosphatidic acid (LPA) from lysophosphatidyl choline, and is an emerging target for treatment of inflammatory conditions, including cancer, arthritis and multiple sclerosis. PF-8380 blocks inflammation-induced LPA synthesis. PF-8380 works both in vitro and in vivo through direct inhibition of autotaxin. In human whole blood PF-8380 inhibited autotaxin with an IC50 of 101 nM.
-Ki-16425 is an antagonist of LPA1 and LPA3 receptors with moderate activity against

LPA2. Ki-16425 inhibition of LPA receptors 1 and 3 prevents the induction of CCN2 by TGF-β. Ki16425 also downregulates the SMAD 2/3 proteins.
-VPC-12249 reduces collagen deposition and prevents the induction of pro-fibrotic cytokines such as CCN2 and TGF-β in the lung.
-AM-095, an LPA1 inhibitor, causes motor skills improvement evaluated by grip strength, rotarod, and runtime.
(https://doi.org/10.1007/s12079-021-00610-w)

* BMP6 Factor deficiency in diabetics causes delay in bone fracture consolidation. The categories of bone fracture are the following: Closed or open fractures; complete fractures; displaced fractures; partial fractures; stress fractures. Some extra terms must also be added to describe partial, complete, open, and closed fractures. These terms include avulsion; comminuted; compression; impacted; oblique; spiral; transverse. Most often, bone fractures happen because the bone runs into a stronger force. Repetitive forces, such as running, can also fracture a bone (stress fractures). Another reason for fractures is osteoporosis, which weakens bones as you age. Internal fixation for nonunions should provide sufficient stability for fracture healing without excessive rigidity. The choice of internal fixation depends on the type of nonunion, the condition of the soft tissues and bone, the size and position of the bone fragments, and the size of the bony defect.

* BMP9-Leptin Factors when combined might improve fracture healing. The categories of bone fracture are the following: Closed or open fractures; complete fractures; displaced fractures; partial fractures; stress fractures. Some extra terms must also be added to describe partial, complete, open, and closed fractures. These terms include avulsion; comminuted; compression; impacted; oblique; spiral; transverse. Most often, bone fractures happen because the bone runs into a stronger force. Repetitive forces, such as running, can also fracture a bone (stress fractures). Another reason for fractures is osteoporosis, which weakens bones as you age. Internal fixation for nonunions should provide sufficient stability for fracture healing without excessive rigidity. The choice of internal fixation depends on the type of nonunion, the condition of the soft tissues and bone, the size and position of the bone fragments, and the size of the bony defect.

* Bocidelpar sulfate (ASP0367) is an orally administered small molecule that potently and selectively modulates peroxisome proliferator-activated receptor δ (PPARδ) to address mitochondrial dysfunction occurring in diseases including primary mitochondrial myopathy and Duchenne muscular dystrophy. The PPAR–δ pathway regulates mitochondria by turning on different genes in the cell. When the pathway is on, the mitochondria use fatty acids more often and more mitochondria are made. Using more fatty acids for energy results in increased energy production. Mitochondria are specialized structures within cells that supply chemical energy to power the activities of the cells, such as repairing muscle cells. Individuals with Duchenne lack efficient mitochondria in their cells. It is thought that by increasing or enhancing the mitochondria in muscle cells, the cellular functions of the muscle could be improved.

* Brimochol or Carbachol-Brimonidine tartrate is a miotic-based eye drop for presbyopia. Miotic agents like carbachol constrict the pupil to induce what’s called the “pinhole effec

t.” Similar to reducing the aperture of a camera, shrinking the pupil brings near images i nto clearer focus. Brimonidine dampens headache or brow ache, myopic shift, eye redn ess, or a loss of distance visual acuity reported by patients who take single-agent miotic s. Brimonidine inhibits the contraction of the ciliary muscle, which means patients end u p with a drug that gives them this meiosis, this pinhole effect, without the unwanted side effects. The effect could last at least eight hours. Carbachol is a parasympathomimetic t hat mimics the effect of acetylcholine on both the muscarinic and nicotinic receptors. Thi s drug is administered ocularly to induce miosis to reduce intraocular pressure in the tre atment of glaucoma. Carbachol is also used to stimulate micturition by contraction of det rusor muscle. This drug may cause hypotension, bradycardia, nausea, vomiting, bronch ospasm, and abdominal cramps. Carbachol is an ammonium salt and a carbamate ester It has a role as a nicotinic acetylcholine receptor agonist, a muscarinic agonist, a non-n arcotic analgesic, a cardiotonic drug and a miotic. Cholinergic, parasympathomimetic, u sed chiefly in large animals, especially for colic in the horse. (EPA, 1998). Brimonidine t artrate is the tartrate salt form of brimonidine, an imidazole derivative and a selective alp ha-2 adrenergic receptor agonist. Upon ocular administration, brimonidine tartrate acts on the blood vessels causing them to constrict which leads to a decrease in the producti on of aqueous humor. Brimonidine tartrate also enhances the outflow of aqueous humor. This drug is used in the treatment of glaucoma to reduce intraocular pressure. A quinox aline derivative and adrenergic alhpa-2 receptor agonist that is used to manage intraocu lar pressure associated with open-angle glaucoma and ocular hypertension.

* C004019 is a small molecule designed on the basis of Proteolysis Targeting Chimera (PROTAC) to selectively enhance ubiquitination and proteolysis of tau proteins. C00401 9 robustly promotes tau clearance in multiple tau-overexpressing cell models via ubiquiti nation-proteasome pathway. Furthermore, both intracerebral and subcutaneous adminis tration of C004019 could also remarkably reduce tau level in wild-type, human tau (hTa u) transgenic and 3xTg-AD mouse models with simultaneous amelioration of synaptic a nd cognitive functions.Increasing evidence suggests that intracellular accumulation of ta u plays a pivotal role in neurodegeneration and memory deficits in AD and the related n eurodegenerative disorders, collectively termed tauopathies. The chimera is composed of three parts including a tau binder, a linker and an E3 ligase recruiter or Vhl binder, in which the two functional parts respectively binds to tau proteins and E3 ligase to reach a selective and efficient ubiquitination and the subsequent proteasome-mediated proteol ysis of tau. In vitro and in vivo testing C004019 shows it efficiently induces clearance of tau proteins in both physiological and pathological conditions. Remarkably, even single-dose or infrequently (once per 6 days) subcutaneous administration of this molecule ach ieved a sustained tau reduction in the brain of hTau and 3xTg-AD transgenic mouse mo dels. Lowering tau can alleviate Aβ-induced neurotoxicity, and knockdown of tau does n ot elicit obvious abnormalities in mice. (https://www.thno.org/v11p5279.htm)

* CD2019 overcomes inhibition of axonal outgrowth via phosphoinositide 3-kinase signa lling in the injured adult spinal cord. After spinal cord injury in the adult mammal, axons do not normally regrow and this commonly leads to paralysis. Retinoic acid (RA) can sti mulate neurite outgrowth in vitro of both the embryonic central and peripheral nervous s ystem, via activation of the retinoic acid receptor (RAR) beta2. Spinal cord injuries (SCI

s) often result in permanent damage in the adult due to the very limited capacity of axon al regeneration. Intrinsic neuronal programs and the formation of a glial scar are the mai n obstacles. Activation of RARβ in the neuron inactivates phosphatase and tensin homol og and induces its transfer into the astrocytes in small vesicles, where it prevents scar f ormation.

* Coenzyme CoQ10 (ubiquinone) is present in all respiring eukaryotic cells, primarily in the mitochondria. It is a component of the electron transport chain and participates in ae robic cellular respiration, which generates energy in the form of ATP. Ninety-five percent of the human body's energy is generated this way. Organs with the highest energy requi rements—such as the heart, liver, and kidney—have the highest CoQ10 concentrations. n a 2017 meta-analysis of people with heart failure 30–100 mg/d of CoQ10 resulted in 31% lower mortality. Exercise capacity was also increased. The Canadian Headache Society guideline for migraine prophylaxis recommends, based on low-quality evidence, that CoQ10 be offered as a choice for prophylaxis. A 2018 meta-analysis concluded that there was preliminary evidence for oral CoQ10 reducing statin-associated muscle symptoms, including muscle pain, muscle weakness, muscle cramps and muscle tiredness. CoQ10 may reduce the effectiveness of chemo and radiation therapy, so most oncologists would recommend avoiding it during cancer treatment. A 1995 review study found that there is no clinical benefit to the use of CoQ10 in the treatment of periodontal disease. When applied topically in skincare products it demonstrates some ability to reduce oxidative stress in the skin, delay signs of intrinsic skin aging, reverse signs of extrinsic skin aging, assist in fading dyspigmentation, increase stability of certain sunscreen actives, increase the SPF of sunscreens, and afford some infrared protection to sunscreens. Much of the research on the skin benefits of ubiquinone show that it works synergistically with other topical antioxidants to improve the skin and cosmetic formulations. Coenzyme Q10 has potential to inhibit the effects of theophylline as well as the anticoagulant warfarin; coenzyme Q10 may interfere with warfarin's actions by interacting with cytochrome p450 enzymes thereby reducing the INR, a measure of blood clotting. The structure of coenzyme Q10 is very similar to that of vitamin K, which competes with and counteracts warfarin's anticoagulation effects. Coenzyme Q10 should be avoided in patients currently taking warfarin due to the increased risk of clotting.

* D-Pantothenic Acid (pantothenate, vitamin B5) is a water-soluble vitamin ubiquitously found in plants and animal tissues with antioxidant property. Vitamin B5 is a component of coenzyme A (CoA) and a part of the vitamin B2 complex. Vitamin B5 is a growth factor and is essential for various metabolic functions, including the metabolism of carbohydrates, proteins, and fatty acids. This vitamin is also involved in the synthesis of cholesterol, lipids, neurotransmitters, steroid hormones, and hemoglobin. Only the dextrorotatory (D) isomer of pantothenic acid possesses biological activity. while the levorotatory (L) form may antagonize the effects of the dextrorotatory isomer.

* Duchenne Mix for Duchenne muscular dystrophy (DMD) is,
-Ubiquinone (co-enzyme Q10), a key component of an energy pathway in the mitochondria, called the electron transport chain.

-Edasalonexent, a small molecule that inhibits a protein called NF-kappa B in the NF-kappa B pathway. This pathway is activated in people with Duchenne muscular dystrophy (DMD), resulting in muscle fiber breakdown and the inability to repair muscle injuries.
-Ezutromid upregulates the production of utrophin to substitute for the deficiency of dystrophin in people with DMD. Utrophin upregulation is an actively researched therapeutic approach for the treatment of DMD. Utrophin is similar to dystrophin, but is produced only during embryonic development. It is hypothesized that increased utrophin during adulthood can compensate for the lack of dystrophin in DMD patients.
-MNK-1411 is the synthetic equivalent of the adrenocorticotropic hormone. It is a synthetic melanocortin agonist — a substance that acts like another substance, stimulating an action — that acts on melanocortin receptors. It delays the progression of DMD by modulating immune system activity and reducing muscle inflammation.

* E-64 is a small molecule inhibitor exhibiting the activity against African swine fever virus protease pS273R. The pS273R protein of the African swine fever virus (ASFV) is a specific SUMO-1-like cysteine protease that plays an important role in its replication process. To inhibit virus replication and improve treatment options the 14th carbon atom of the cysteinase inhibitor E-64 could form one Csingle bondS covalent bond with the Cys 232 amino acid of the pS273R protease and seven additional hydrogen bonds to maintain a stable binding state. E-64 could effectively inhibit the enzyme activity center of the pS273R protease by preventing pS273R protease from lysing pp62, while promoting the upregulation of immune-related cytokines at the transcription level. Moreover, cell viability results revealed that 4 mmol/L E-64 was not cytotoxic. This is a novel strategy to potentially prevent ASFV infection in pigs by blocking the activity of pS273R protease with a small-molecule inhibitor. African swine fever (ASF) is a viral disease in swine that results in high mortality in domestic pigs and causes considerable economic losses. The disease only affects humans exceptionally. Currently, there is no effective vaccine or drugs available for treatment. E64 is an epoxy monocarboxylic acid, a dicarboxylic acid monoamide, a member of guanidines and a L-leucine derivative. It has a role as a protease inhibitor, an antimalarial and an antiparasitic agent. (https://doi.org/10.1016/j.bmc.2021.116055)

* Forskolin-RepSox is a combination of the root extract forskolin and the small molecule RepSox — that can efficiently create large numbers of muscle stem cells. This chemical cocktail enabled muscle stem cells in elderly mice to overcome their adverse environment and launch a robust repair response. The approach would fix the genetic defect that causes Duchenne or other genetic muscular dystrophies. Forskolin is a potent activator of the adenylate cyclase system and the biosynthesis of cyclic AMP. From the plant Coleus forskohlii. Has antihypertensive, positive inotropic, platelet aggregation inhibitory, and smooth muscle relaxant activities; also lowers intraocular pressure and promotes release of hormones from the pituitary gland. RepSox is a potent and selective inhibitor of the TGF-β type 1 receptor (TGFβRI)/ALK5 that exhibits cell permeability and specifically inhibits ALK5 autophosphorylation with IC50 of 4 nM. R epSox has also been shown to contribute to the reprogramming of mouse embryonic fib roblasts to iPSCs, in addition to the induction of human fibroblasts into neuronal cells for

research on Alzheimer's disease. It has also been used as a basal media component for culturing human pluripotent stem cells.

* FTX-6058 is an investigational, potent, and selective small molecule inhibitor of Embry onic Ectoderm Development EED designed to increase the expression of fetal hemoglo bin (HbF) with the potential to treat hemoglobinopathies, such as sickle cell disease and beta-thalassemia. Results from the MAD portion of the trial demonstrated proof of biolog y as evidenced by a dose proportional induction in HBG mRNA and accompanying incre ases in HbF-containing reticulocytes (F-reticulocytes). At 10mg, the highest dose studie d to date, the mean changes were 4.5-fold and 4.2-fold, respectively. The increases in F-reticulocytes indicate that the HBG mRNA increases observed with FTX-6058 treatme nt are translating to HbF protein production. SCD is caused by mutations in the gene th e encodes hemoglobin — the protein that carries oxygen in red blood cells. Current therapies are limited in efficacy, and new experimental gene therapies are only available to certain patients. FTX-6058 is designed to boost the production of fetal hemoglobin, improve oxygen transport, and alleviate disease symptoms. Higher doses of FTX-6058 effectively raised hemoglobin messenger RNA (mRNA) levels above those found at lower doses in healthy volunteers participating in a Phase 1 trial.

* Givinostat is a molecule being developed to treat Duchenne and Becker muscular dystrophies. It inhibits enzymes called histone deacetylases that turn off gene expression and can reduce a muscle's ability to regenerate. Givinostat is currently being evaluated in a Phase 3 trial in Duchenne patients and a Phase 2 trial in Becker. Givinostat inhibits class I and class II histone deacetylases (HDACs) and several pro-inflammatory cytokines. This reduces expression of tumour necrosis factor (TNF), interleukin 1α and β, and interleukin 6. It also has activity against cells expressing JAK2 (V617F), a mutated form of the janus kinase 2 (JAK2) enzyme that is implicated in the p athophysiology of many myeloproliferative diseases, including polycythaemia vera. In p atients with polycythaemia, the reduction of mutant JAK2 concentrations by givinostat is believed to slow down the abnormal growth of erythrocytes and ameliorate the symptom s of the disease. Givinostat or gavinostat (originally ITF2357) is a histone deacetylase in hibitor with potential anti-inflammatory, anti-angiogenic, and antineoplastic activities. Giv inostat has been granted orphan drug designation in the European Union for the treatm ent of systemic juvenile idiopathic arthritis, polycythaemia vera. and Duchenne muscular dystrophy. The U.S. Food and Drug Administration has granted givinostat orphan drug, f ast track, and rare pediatric disease designations for the treatment of DMD and BMD. A preclinical study produced early results suggesting the molecule might help with diastoli c dysfunction.

* Ifetroban is a potent and selective thromboxane receptor antagonist. It has been studi ed in animal models for the treatment of myocardial ischemia, hypertension, stroke, thro mbosis, cardiomyopathy, and for its effects on platelets. Ifetroban is being studied as a p otential anti-fibrotic medication in several diseases but is not approved for and has neve r been studied in DMD patients. Studies in animal models of DMD showed oral ifetroban can prevent the scarring in the heart associated with Duchenne and improve survival co mpared to placebo. Cardiac function is a concern in Duchenne, as the heart is a muscle

and is affected by the lack of dystrophin.

* Losmapimod is a potential treatment being for people with facioscapulohumeral muscu lar dystrophy (FSHD). FSHD is characterized by progressive weakness and wasting of muscles in the face, shoulders, and upper arms. Mutations in a specific region toward th e end of chromosome 4, called the D4Z4 region, are known to contribute to a form of FS HD called FSHD1. These mutations lead to hypomethylation of a gene in the D4Z4 regi on called DUX4, the production of which is thought to adversely influence the activity of other genes in muscle cells, resulting in FSHD symptoms. Mutations in the DUX4 gene account for more than 90% of all FSHD cases. They cause excessive gene expression or activity, which leads to muscle degeneration and fat infiltration. Mitogen-activated prot ein kinases (MAPKs) are proteins that are activated as a cellular response to external st ress, and have been shown to regulate the activity of the DUX4 gene. By inhibiting the a ctivity of MAPKs using small molecules such as MAPK inhibitors, the overactive DUX4 g ene can be controlled.
Losmapimod is a selective MAPK inhibitor that has been seen in early studies to reduce DUX4 gene activity in FSHD patient-derived myotubes (fused muscle cells). Losmapimo d does not affect the differentiation of myotubes or alter the production of other proteins in muscle cells. It is thought to inhibit the DUX4 gene and downstream pathways in a co ncentration-dependent manner in both FSHD1 and FSHD2.

* MBL Factor or mannose-binding lectin, also called mannan-binding lectin or mannan-b inding protein (MBP), is a lectin that is instrumental in innate immunity as an opsonin an d via the lectin pathway. MBL belongs to the class of collectins in the C-type lectin super family, whose function appears to be pattern recognition in the first line of defense in the pre-immune host. MBL recognizes carbohydrate patterns found on the surface of a larg e number of pathogenic micro-organisms, including bacteria, viruses, protozoa and fung i. Binding of MBL to a micro-organism results in activation of the lectin pathway of the co mplement system. Another important function of MBL is that this molecule binds senesc ent and apoptotic cells and enhances engulfment of whole, intact apoptotic cells, as well as cell debris by phagocytes. The complement system can be activated through three p athways: the classical pathway, the alternative pathway, and the lectin pathway. One wa y the most-recently discovered lectin pathway is activated is through mannose-binding l ectin protein. MBL binds to carbohydrates (to be specific, D-mannose and L-fucose resi dues) found on the surfaces of many pathogens. For example, MBL has been shown to bind to: yeasts such as Candida albicans; viruses such as HIV and influenza A; many b acteria, including Salmonella and Streptococci; parasites like Leishmania; SARS-CoV-2 (Covid-19).

* Morin, is a natural compound with pro-osteogenic effects. Morin has an important pro-osteogenic effect in vivo that might facilitate osteoblast development and the production of osteoblast-related marker genes and in vitro protein markers for osteoblasts. In terms of molecular biology, morin contributes to osteoblast development and Wnt pathway sti mulation through the activation and translocation of β-catenin nuclei. In short, morin can be a good bone substitute that can provide benefits for regenerating bone defect. The c ategories of bone fracture are the following: Closed or open fractures; complete fracture

s; displaced fractures; partial fractures; stress fractures. Some extra terms must also be added to describe partial, complete, open, and closed fractures. These terms include av ulsion; comminuted; compression; impacted; oblique; spiral; transverse. Most often, bon e fractures happen because the bone runs into a stronger force. Repetitive forces, such as running, can also fracture a bone (stress fractures). Another reason for fractures is o steoporosis, which weakens bones as you age. Internal fixation for nonunions should pr ovide sufficient stability for fracture healing without excessive rigidity. The choice of inter nal fixation depends on the type of nonunion, the condition of the soft tissues and bone, the size and position of the bone fragments, and the size of the bony defect.

* Myriocin, also known as antibiotic ISP-1 and thermozymocidin, is a non-proteinogenic amino acid derived from certain thermophilic fungi. Myriocin is a very potent inhibitor of serine palmitoyltransferase, the first step in sphingosine biosynthesis. Due to this proper ty, it is used in biochemical research as a tool for depleting cells of sphingolipids. Highe r-than-normal sphingolipids levels are implicated in disorders that include Alzheimer's di sease, cardiovascular disease, diabetes, and obesity, in which sphingolipids are reporte d to accumulate in skeletal muscle and contribute to insulin resistance. Sphingolipid pro duction is a potential therapy target for Duchenne muscular dystrophy DMD and combin ing blockers of sphingolipid production with glucocorticoids may be of more benefit than glucocorticoids alone.

* NEP1-40 is a Nogo-66 receptor antagonist peptide. Administration of NEP1-40 attenuated the reduction of MBP, and upregulated GAP-43 and MAP-2 expression. MBP, a major constituent of CNS myelin, has been used as a marker of post-ischemic white matter injury and repair. GAP-43 and MAP-2 are molecular indicators of axonal plasticity in the CNS. NEP1-40 ameliorated myelin damage and promoted regeneration by upregulating the expression of GAP-43 and MAP-2 related to neuronal and axonal plasticity, which may aid with the identification of a novel molecular mechanism of restriction in CNS regeneration mediated by Nogo-A after ischemia in rats. Administration of NEP1-40 attenuates neurological deficits following ischemic stroke. Nogo-A is a potent inhibitor of neurite growth involved in regenerative failure, and neutralization of Nogo-A may allow for the generation of nerve growth and enhance structural reorganization in regions surrounding the lesions. However, the underlying molecular mechanism remains to be elucidated. NEP1-40 overexpression enhanced the ability of NSCs differentiation into neurons and promoted axon regeneration by inhibiting the Nogo-A/NgR1 signaling pathway.

* Pamrevlumab (FG-3019) is a fully human antibody designed to bind to and block the activity of connective tissue growth factor (CTGF), a pro-inflammatory protein that promotes wound healing and fibrosis (scarring), and is found at abnormally high levels in the muscles of DMD patients. Progressive, abnormal muscle fibrosis is a hallmark of muscular dystrophies, contributing to muscle weakness and injury, including to cardiac muscle — a major complication of DMD. By blocking CTGF, the therapy, administered directly into the bloodstream, is expected to suppress muscle fibrosis, thereby preventing the decline in patients' motor, lung, and heart function, and possibly improving their status. The U.S. Food and Drug Administration has granted fast track

designation to pamrevlumab, an investigational treatment for Duchenne muscular dystrophy (DMD). FG-3019 is already in clinical trials for other diseases involving fibrosis, including pulmonary fibrosis and kidney fibrosis.

* PRM-151 is an intravenous formulation of recombinant human pentraxin-2 in development for idiopathic pulmonary fibrosis (IPF) and myelofibrosis. Pentraxin-2, also referred to as serum amyloid P, has been found to inhibit apoptosis, airway inflammation, pulmonary fibrocyte accumulation, and collagen deposition driven by transforming growth factor beta-1. Pentraxin-2 also promotes macrophages associated with increased expression of interleukin-10 and interferon gamma-induced protein-10, which both possess anti-fibrotic properties.

* Rimeporide is an investigational treatment for Duchenne MD. The muscle cells of Duchenne patients have an overload of calcium, which is thought to be caused by dysfunctional NHE-1. Over time, high calcium concentrations contribute to the muscle damage that is seen in patients. Rimeporide inhibits NHE-1, thereby correcting calcium levels in the cell. A Phase 1b trial has been completed. Rimeporide was designed as a treatment for chronic heart failure. It was tested in seven Phase I studies clinical trials in patients with congestive heart failure and some degree of renal insufficiency. Subsequently, the drug was licensed to EspeRare, a Swiss nonprofit organisation that aims at repositioning drugs for rare diseases. As of May 2015, the substance has demonstrated efficacy in several animal models of Duchenne muscular dystrophy. It has also been recently tested in young boys with Duchenne muscular Dystrophy aged 6 to 11 years.

* THX-B is a small-molecule specific antagonist of p75(NTR). THX-B, has shown to restore normal bladder weight and voiding function in type 1 diabetic mice. Most importantly, the anti-inflammatory potency of p75NTR antagonism was demonstrated in the brain of mice with severe sepsis, supporting a molecular interplay between the p75NTR and TLR4 signaling axes in innerved tissues. Data suggests that p75NTR and TLR4 signaling axes form together cell-specific interplays in the bladder, p75NTR dysregulates bladder morphology and voiding. dysfunction, especially by interplaying with TLR4 signaling in infection.
(https://escholarship.mcgill.ca/concern/theses/wd376260w)

* UNR844 is a presbyopia drop from Novartis which uses lipoic acid choline ester 1.5% (an antioxidant) to break apart the disulfide bonds that form between proteins within the lens, and by doing so, increasing the lens flexibility and elasticity. What is unique about this drop is that it may have the potential to restore natural accommodation instead of just creating a pinhole effect like the miotic drops. In phase 1 and 2 studies, UNR844 demonstrated good initial results. All patients showed a substantial improvement in near acuity by day 15. At the end of three months, 82% of patients had 20/40 or better near vision and 36% had 20/25 or better. Therefore, the drop will likely be used twice a day for 90 days to achieve maximal effects. After discontinuing the drop after 90 days, the drug’s effects lasted up to 7 months without further dosing.

* Vamorolone is a dissociative steroid. It works in a similar way to other corticosteroids by activating certain pathways within the cell and inhibiting others. For example, it inhibits the NF-kB pathway, which is linked to inflammation. It also binds to and helps stabilize the membranes around cells without causing transactivation. Transactivation is the increase of gene expression that glucocorticoid response elements (GRES) cause. It results in many of the side effects of corticosteroid treatment. The benefit of Vamorolone, however, is that it is thought to have significantly fewer side effects than existing steroids, which can be life changing in themselves. Prednisone side effects include diabetes, high blood pressure, osteoporosis, short stature and weight gain. Vamorolone also may help preserve heart function in DMD patients through the inhibition of mineralocorticoid receptors. It also binds to and helps stabilize the membranes around cells without causing transactivation. Vamorolone also may help preserve heart function in Duchenne patients. Due to safety concerns related to the interaction between the muscle clock and drug-activated molecules, they should be administered at the start of the light period (approximately 7 am) to promote muscle function. Increased endurance and improved muscle mass and muscle force were lost when dosing occurred in the dark period.

1.3.1.49 RT-MB-61

5-HMF; 8DSS Peptide; Ageing Skin Care; Caulophyllum Robustum Maxim; Cellulite Mix; Chemical Peel; Foot Care Mix; GH1504; Hai Feng Teng; He Shou Wu; Hu Gu; Huo Ma Ren; Hydrogen peroxide-Urea; Jin Yin Hua-Dan Zhu Ye; Luo Han Guo; Mitoxantrone; Narciclasine; Niu Bang Zi ; Nutritional Supplement.; Rehydration Therapy; Skin Lesions-Growths; SR12343; Suan Zao Ren; TLK16998; Zibotentan

* 5-HMF or 5-hydroxymethylfurfural from Rehmanniae Radix Praeparata (shu di huang) has positive pharmacological effects on cardiovascular and hematological disorders. For example, 5-HMF can increase hemoglobin’s oxygen affinity to support cardiac function during severe hypoxia and ameliorates blood deficiency syndrome (BDS). It also has sound biological effects, such as antioxidant activity and strengthening the resistance of sickle red blood cells to injury caused by hypoxia. is a natural medicine used in traditional Chinese medicine (TCM) since ancient times for the treatment of blood disorders.
Shu Di Huang Property: Sweet, slightly warm; kidney and liver meridians entered. Actions: Tonify blood, nourish yin of liver and kidney, supplement essence. Indications: A. Blood deficiency syndrome, especially for both essence (yin) and blood insufficiency. B. Deficiency of liver-kidney yin. Being with action of nourishing yin of liver and kidney, especially skilled in nourishing kidney yin, it is known as the key herb for treating syndrome of kidney yin deficiency. For soreness and limpness in lumbar and knees, tinnitus, deafness, red tongue with little coating due to liver and kidney yin deficiency, or bone-steaming, tidal fever, hot sensation in palms due to effulgent fire caused by yin deficiency. C. Syndrome of both essence and blood deficiency. It can nourish essence ancl blood. For sore

ness and limpness of lumbar and knees, early white of beard and hair, hypoevolutism of infants and children due to deficiency of both essence and bloode coating due to liver a nd kidney yin deficiency, or bone-steaming, tidal fever, hot sensation in palms due to eff ulgent fire caused by yin deficiency. It should be used with cautions for spleen and stom ach deficiency, loose stool due to fullness in abdomen and qi stagnation with excessive phlegm because it is greasy and will produce indigestion. RR is steamed to get Rehman niae Radix Praeparata, which has a tonic effect on blood; the content of 5-hydroxymeth ylfurfural (5-HMF) increases more than four times after steaming. (https://doi.org/10.33 89/fphar.2021.811331) (https://www.americandragon.com/Individualherbsupdate/Shu DiHuang.html)

* 8DSS Peptide can promote remineralization of initial enamel carious lesions induced i n vitro by pH cycling. Dentin phosphoprotein, which is secreted by odontoblasts and lies in the dentin mineralization front, is the most abundant noncollagenous protein existing i n the dentin extracellular matrix and has been employed as a nucleation template in for ming hydroxyapatite to initiate dentin mineralization. There is an aspartate- and serine-ri ch region within the dentin phosphoprotein sequence, consisting primarily of a large nu mber of repeats of the sequence aspartate-serine-serine (DSS). This region is known to be highly phosphorylated and highly flexible and is thought to bind with high affinity to c alcium phosphate compounds. Moreover, these small peptides can act as initiator and modulator in generating hydroxyapatite minerals by providing an optimal alignment of ca lcium ion binding sites. Of these multi-DSS peptides, the one containing eight DSS repe ats (8DSS peptide) is the most active in the mediation of biologically directed mineral de position, and it possesses the ability to promote mineral deposition. 8DSS peptide in a r at model of enamel caries in vivo prominently induced remineralization compared with c ontrol samples treated with distilled deionized water. 8DSS peptide enables the regressi on of enamel demineralization and boosts enamel remineralization in a rat model.
(https://doi.org/10.1177/2280800019827798)

* Ageing Skin Care
- Pal-KT - Palmitoyl-lysine-threonine (pal-KT) is one of the shortest peptides. When test ed with human skin equivalents, it was found to enhance differentiation of the epidermis, basement membrane zone,and dermal fibroblasts. Within dermal fibroblasts, pal-KT incr eased collagen I, collagen IV,and fibronectin.
- Retinyl propionate, a patented and less irritating form of retinol (a form of vitamin A) an d propionic acid (a liquid fatty acid). It has multiple effects on the skin. It's been studied f or effects on collagen synthesis and barrier protection.
- Niacinamide, a form of Vitamin B3, which improves moisture retention, fine lines and h yperpigmentation.
- Hexamidine, a chemical also used in diaper lining, helps lock in moisture; studies sho w it also helps to improve the pathways for lipids (fats) to travel through the skin layers, t hereby improving thickness.

* Caulophyllum Robustum Maxim (CRM). CRM is an extremely effective Chinese folk m edicine. C. robustum can dispel wind, remove obstruction in the meridians, promote blo od circulation, and stop the pain, and it has been used to induce childbirth, ease the pai

n of labor, rectify delayed or irregular menstruation, abnormal menstruation, alleviate he avy bleeding and pain during menstruation, treat external injuries and irregular, muscle pain, rheumatoid arthritis, postpartum bleeding pain, tonsillitis, etc. Its roots and rhizome s are the main medicinal parts. The compounds used in the recording were Caulosides (B, C, D, G, H) and Leonticin D. (https://doi.org/10.1155/2021/5580341)

* Cellulite Mix. Cellulite, popularly called orange peel skin, affects mostly women and is f ound in more than 80% of women of post-pubertal age, which can be treated either med ically or cosmetically to enhance the appearance of this issue. Natural ingredients are pr eferable in cosmetic treatment due to their safety image. Several studies have shown th at various natural components are clinically effective. These indicate that plants are a pa rticularly rich source of providing components for cellulite treatment. Many active ingredi ents from medicinal plants, primarily in the form of standardized botanical extracts, can act synergistically on various biological targets and improve unwanted signs and sympto ms. Compounds in parenthesis have the same molecular weight.
(https://doi.org/10.3390/ph14090842)

* Chemical Peel is Acetone, Salicylic acid, Glycolic acid, and Lactic acid.

* Da Cheng Qi Tang is a 4-ingredient Chinese Medicine formula with Rhubarb (Da Huan g) as a principal ingredient. In this case Da Cheng Qi Tang is used to fight patterns like Yang Excess or Full Yang, Heat in Yang brightness Organs or Yang Excess. From a We stern Medicine standpoint, such patterns can give rise to a range of conditions such as pancreatis, appendicitis or cholecystitis for instance.

- Da Huang , as best described in the classic Divine Husbandman's Classic of the Mater ia Medica, "breaks up abdominal masses, accumulations, lingering Fluids, and harbored food by flushing them from the Stomach and Intestines, pushing out the old so that the n ew [can enter], unblocking [the passages for] food and drink, regulating the Middle [Burn er so that it can again] transform food and the five Yin Organs are calmed".

- Mang Xiao has stool-softening properties that helps the key herb (Rhubarb) in its purg ative action. Together they moisten Dryness as they drain downward.

- In general Zhi Shi's main actions are as follows: "Regulates the flow of Qi in the Middle Burner and reduces Food Stagnation. Moves Qi downward and helps constipation. Red uces Stagnant Phlegm and lessens distention and pain. For prolapse of organs when us ed with the appropriate herbs." In the context of Da Cheng Qi Tang, it is used because it dissipates clumps and reduces focal distention.

- Hou Pu disseminates the Qi and relieves the sensation of fullness. Together with Imma ture bitter orange (Zhi Shi), the other assistant, they assists in the expulsion of stool by moving the Qi. Even though the root of the condition is Heat, the resultant clumping lead s to severe Qi Stagnation. Moving the Qi is thus an important aspect of the formula. (ht tps://www.americandragon.com/Herb%20Formulas%20copy/DaChengQiTang.html)

* Foot Care Mix. Is hydrating and repairing, especially indicated to control of dryness, fis sures and pruritus of healthy diabetic foot. The mix protects the skin barrier and reinforc es its defenses to maintain the skin moisturized and healthy. Used for dry skin condition s, dry skin, burns, chapped or cracked skin, psoriasis, fractures and other conditions in healthy yet rough, textured skin, diabetic foot. A keratolytic, emollient, humectant, and s kin protectant mix. The recording plays the sound frequencies of urea, allantoin, dimethi cone, propylene glycol, glycerin, and retinol. Urea is a keratolytic agent. Allantoin is use d as emollient due to its moisturizing and keratolytic effect. Dimethicone is also used as moisturizer to treat or prevent dry skin, rough, scaly, itchy skin and minor skin irritations. Humectants like propylene lycol and glycerin draw in moisture from their surrounding en vironment. Retinol is used in the treatment dry skin, skin rash, skin peeling, blemishes a nd wrinkles, sunburn, itching, rough skin, skin cracks, eczema, and dermatitis. Works by healing wounds and increases the re-establishments of the normal skin, prevents the w ater loss, provides soothing effect. Improves wound healing by supplying oxygen and nu trients, Emollients penetrates deep into the skin to moisturize and softens dry cracked fe et. It also works by forming an oily layer on top of the skin that traps and prevents loss o f water.

* GH1504 is a novel organosilicon anticancer compound which exhibited potent in vitro cytotoxicity in a broad spectrum of human cancer cells, including prostate cancer (PCa) cells refractory to androgen deprivation therapy (ADT) and chemotherapy. Molecular stu dies identified several potential targets of GH1504, most notably androgen receptor (A R), AR variant 7 (AR-v7) and survivin. Mechanistically, GH1504 may promote the protei n turnover of AR, AR-v7 and survivin, thereby inducing apoptosis in ADT-resistant and c hemoresistant PCa cells. Animal studies demonstrated that GH1504 effectively inhibited the in vivo growth of ADT-resistant CWR22Rv1 and chemoresistant C4-2B-TaxR xenogr afts in subcutaneous and intraosseous models. Besides, GH1504 effectively suppresse d the in vitro proliferation of multiple cancer cell lines. GH1504 demonstrated high poten cy against all NCI-60 cancer cell lines, with an average GI50 value of 0.968 μM and 0.9 73 μM, respectively. The NCI-60 cancer panel holds cell lines representing leukemia, m elanoma, non-small-cell lung carcinoma, and cancers of the brain, ovary, breast, colon, kidney, and prostate. (https://doi.org/10.1016/j.neo.2021.11.006)

* Hai Feng Teng or Kadsura Interior (Caulis) stems
Hai Feng Teng Property: Pungent, bitter, slightly warm; heart and kidney meridians ente red.
Actions: Dispel wind-cold and dampness, unblock the channels and collaterals to treat b i zheng (painful obstruction syndrome) manifesting as stiff joints, lower back pain (with c old), and muscle aches and spasms.
Indications: Damp arthralgia, traumatic injury, asthma, chronic cough.
Kadsura Interior (Caulis) stems are used in traditional Chinese medicine with the traditio nal efficacy of tonifying and invigorating the blood, therefore being favored to treat blood deficiency (BD) widely. Due to its exceptional medicinal properties, Kadsurae Caulis is tr aditionally applied to tonify and invigorate blood in the TCM system, particularly to treat blood deficiency (BD) syndrome. It significantly increases the levels of hematocrit (HCT), hemoglobin (HGB), and red blood cells (RBC) in BD mice. In addition, it significantly inc

reased the serum levels of interleukin 3 (IL-3), granulocyte–macrophage colony-stimulating factor (GM-CSF), and macrophage-stimulating factor (M-CSF) in BD mice ($P < 0.01$). BD syndrome is often accompanied by clinical symptoms of pallor, atrophy, weight loss, reduced function of important immune hematopoietic organs, comprising the spleen and the thymus. Modern medicine has shown that BD syndrome embraced a wide range of anemia, including aplastic anemia, hemorrhagic anemia, and hemolytic anemia. The reduces of red blood cells (RBC), hemoglobin (HGB), hematocrit (HCT) concentration, and immunological function are common symptoms of these disorders.
(https://www.americandragon.com/Individualherbsupdate/HaiFengTeng.html)

* He Shou Wu (Radix Polygoni Multiflori) or Fo-Ti
Property: Bitter, sweet and astringent, slightly warm; kidney and liver meridians entered.
Actions: Tonify blood, supplement essence, check malaria, relieve toxicity, moisten intestine.
Indications:
A. Blood and essence deficiency syndrome.
B. Chronic malaria It is very indicated for chronic malaria of both qi and blood deficiency type, because He Shou Wu can check malaria. Furthermore, it can tonify blood to improve deficiency. He Shou Wu is indicated for ulcers and tuberculosis, because it can relieve toxicity, dissipate nodulation, in addition, it also has action of relieving itching.
C. Ulcers and tuberculosis.
D. Constipation due to intestinal dryness. He Shou Wu can smooth stool through moistening intestines, and tonifying deficiency.
(https://www.americandragon.com/Individualherbsupdate/HeShouWu.html)

* Hu Gu, Os Tigris
Tiger Bone or Jintiange (JTG) capsule is an approved drug developed as a substitute for tiger bone composed of bionic TB powder, in which peptides and proteins are primarily enriched from other bone extracts.
Hu Gu Property: Acrid, salty, warm, liver and kidney entered.
Actions: Dispels wind-(dampness), controls pain and strengthens tendons, ligaments and bones, disperses wind-cold. Indications: Dispel wind and alleviate pain, strengthen bones and relieve convulsion. Wind-damp bi with atrophied and weak lower back and legs, joint stiffness, migratory pain, spasms of the legs and difficulty moving the joints. Wind-cold bi with paralysis, spasms, and cold pain in the bones. It is contraindicated in case of blood deficiency with excessive fire.
TB has been mainly understood and used in TCM to relieve osteoporosis, bone injury, rheumatoid arthritis (RA), and reverses changes in serum metabolic profile of collagen-induced arthritic (CIA). In RA and its associated bone deterioration in CIA rats, JTG was able to attenuate the paw swelling and improve the cancellous bone structure, enhance one mineral density (BMD), and restore bone metabolism homeostasis. Hu Gu (TB) is pungent, warm; liver and kidney meridians entered. Dispel wind and alleviate pain, strengthen bones and relieve convulsion. Limbs contracture, palpitation, epilepsy, rectocele, anal fistula, arthritis. The recording plays the frequency of nine bioactive peptides identified from JTG.
(https://doi.org/10.2147/JIR.S338107) (

https://www.americandragon.com/Individualherbsupdate/HuGu.html)

* Huo Ma Ren (Semen Cannabis)
Property: Sweet, mild; large intestine, spleen and stomach meridians entered.
Actions: Moisten intestines for relaxing bowels.
Indications: Constipation due to intestinal dryness. Because it is sweet, mild and moist in property, and rich in oil, it can moisten intestines for relaxing bowels, and has the combined effect of nourishing and tonifying as well. It is suitable for the old, puerpera, and the weak with insufficient blood and body fluid who suffer from constipation due to intestinal dryness. (
https://www.americandragon.com/Individualherbsupdate/HuoMaRen.html)

* Hydrogen peroxide-Urea is mainly used as a disinfecting and bleaching agent in cosmetics and pharmaceuticals. As a drug, this compound is used in some preparations for the whitening of teeth. It is also used to relieve minor inflammation of gums, oral mucosal surfaces and lips including canker sores and dental irritation, and to emulsify and disperse earwax. Carbamide peroxide is also suitable as a disinfectant, e.g. for germ reduction on contact lens surfaces or as an antiseptic for mouthwashes, ear drops or for superficial wounds and ulcers. It may cause eye irritation.

* Luo Han Guo (Fructus Momordicae)
Property: Sweet, cool; lung and spleen meridians entered.
Actions: Clear lung-heat and moisten the intestine.
Indications: Constipation due to blood deficiency, cough due to phlegm-fire, whooping cough. Main actions according to TCM: Lubricates and cools the Lungs. Treats Lung Yin Deficiency. Dissipates nodules and swollen glands. Lubricates the Intestines and relieves constipation. Primary conditions or symptoms for which monk fruits may be prescribed by TCM doctors: Pneumonitis, Dry cough, Swollen lymph nodes, Constipation, Sore throat.
(https://www.americandragon.com/Individualherbsupdate/LuoHanGuo.html)

* Mitoxantrone, a drug for the treatment of advanced breast cancer, showed potential in upregulating pro-longevity gene expression, it is included among the list of top 13 discovered longevity-promoting chemicals. Mitoxantrone in Australia is an anthracenedione antineoplastic agent and an analgesic.. Mitoxantrone intercalates into and crosslinks DNA, thereby disrupting DNA and RNA replication. This agent also binds to topoisomerase II, resulting in DNA strand breaks and inhibition of DNA repair. Mitoxantrone is less cardiotoxic compared to doxorubicin. Mitoxantrone is an antineoplastic antibiotic that is used in the treatment of acute leukemia, lymphoma, and prostate and breast cancer, but also for late stage, severe multiple sclerosis. Mitoxantrone therapy is often accompanied by mild to moderate elevations in serum aminotransferase levels, but in typical doses it rarely causes clinically apparent, acute liver injury. A study conducted among 42 women with breast cancer showed great potential in mitoxantrone as a treatment for advanced breast cancer with mild side effects compared to traditional treatments, such as chemotherapy.

* Narciclasine, an Amaryllidaceae alkaloid with potent antitumor and anti-inflammatory properties attenuates diet-induced obesity. Narciclasine showed potential in upregulating pro-longevity gene expression, it is included among the list of top 13 discovered longevity-promoting chemicals. Beneficial therapeutical actions have been reported particularly in brain tumor models. The translation elongation factor eEF1A, which does not only participate in protein biosynthesis but also in the regulation of the actin cytoskeleton, was discovered as new direct target. Moreover, narciclasine was found to trigger actin stress fiber formation via the activation of the small GTPase RhoA. In a screening about the broad cytotoxic activities of narciclasine in the NCI panel of 60 human tumor cell lines, the mean IC50 of narciclasine was 15.5 nM. The panel holds cell lines representing leukemia, melanoma, non-small-cell lung carcinoma, and cancers of the brain, ovary, breast, colon, kidney, and prostate. Interestingly it showed that melanoma cell lines were the most sensitive tumor cells to narciclasine. In 2007, Dumont et al. showed that narciclasine was cytotoxic to all investigated cancer cell lines (IC50: 30 nM), whereas much higher concentrations were need to interfere with the viability of fibroblasts (IC50: 7.5 μM). Ingrassia et al. confirmed this selectivity towards cancer cells (mean IC50: 38 nM) and reported that endothelial cells (HUVECs) are more sensitive than fibroblasts, since narciclasine inhibited the proliferation of endothelial cells with an IC50 of approx. 90 nM. This points towards a possible antiangiogenic action of the alkaloid. In fact, unpublished data from our group confirm this hypothesis. In 1999, Mikami et al. demonstrated that narciclasine effectively prevents paw swelling in a rat arthritis model. They also showed that narciclasine suppresses the production of TNF-α in LPS-activated murine macrophages. The authors ascribed this effect to the pr otein synthesis-blocking action of narciclasine. In 2011, the alkaloid was reported to inhi bit LPS-triggered NO production in a murine macrophage cell line (RAW264) as well as the generation of TNF-α in a human monocytic cell line (THP-1). One year later, Lubahn et al. provided evidence that narcistatin, a water-soluble cyclic phosphate prodrug of nar ciclasine, was able to reduce inflammation (by approx. 70 %) and joint destruction (by approx. 50 %) in rat adjuvant-induced arthritis after disease onset. Moreover, narcistatin also decreased the production of pro-inflammatory cytokines in different types of leukocytes. In 2015, our group characterized the anti-inflammatory effect of a narciclasine-containing extract of Haemanthus coccineus in two murine models of inflammation (dermal edema formation by arachidonic acid or croton oil and kidney injury caused by unilateral ureteral obstruction). The extract blocked the pro-inflammatory activation of leukocytes and endothelial cells. Interestingly, we could not detect any action on the activation cascade of the most prominent pro-inflammatory transcription factor NFκB, but found a strong inhibition on the NFκB-dependent gene tra nscription in endothelial cell. (https://doi.org/10.1055/s-0042-115034)

* Niu Bang Zi or Burdock Seeds (Fructus Arctii)
Niu bang zi
Property: Pungent, bitter, cold; lung and stomach meridians entered.
Actions: Disperse wind-heat, clear the toxic heat, relieve sore throat, promote eruption.
Indications:
A. Wind-heat exterior syndrome or warm diseases at the defense system. Niu Bang Zi h as the action of dispersing inferior to some herbs, but it is good at clearing the throat. So

it is usually used to treat the wind-heat exterior syndrome manifested as swollen and pai nful throat or coughing with phlegm. It is especially suitable for the warm diseases at def ense system, because it can both disperse the pathogen in the defense system, and cle ar the toxic heat.
B. Heat toxin syndromes such as swollen and painful throat, ulcer and carbuncle, mump s. This herb clears toxic heat without congealing, apart from treating warm diseases at t he defense system, it also has the good effects of clearing the throat and subduing infla mmation. The indications of this herb are heat toxin syndromes such as swollen and pai nful throat, ulcer and carbuncle, mumps. It also has the action of lubricating the intestine s, so it can open the bowels by clearing the toxic heat. It is suitable to the above mentio ned diseases with the obstructed stool due to accumulation of heat.
C. Unsmooth eruption of measles at the early stage. It can treat unsmooth eruption of m easles and can release the exterior wind-heat and clear the interior toxic heat. So it is th e good herb for letting eruption out skin. It is not suitable for deficiency-cold loose stool because of its cold property and the action of lubricating the intestines. (https://www.am ericandragon.com/Individualherbsupdate/NiuBangZi.html)
Compounds from burdoch seeds arctiin (main active component) and arctigenin could r egulate the abnormal metabolic pathways associated with the development of Silicosis, which involve pantothenate and CoA biosynthesis, cysteine and methionine metabolism, linoleic acid metabolism, and arginine and proline metabolism successively. Research in dicated that arctigenin has the function of antioxidation, anti-inflammation, antitumor, an d neuron-protective activities. Recent studies have shown that arctigenin can also suppr ess renal interstitial fibrosis, repress TGF-β-induced epithelial-mesenchymal transition (EMT) in human lung cancer cells, and attenuate PQ-induced EMT and pulmonary fibro sis. Furthermore, the analysis of metabolomics, together with network topological analys is in different phases of silicosis, revealed that urine myristic acid, serum 4-hydroxyproli ne, and L-arginine could be regarded as diagnosis biomarkers in the early phase and fo rmation of pulmonary fibrosis in the latter phases of silicosis. Arctiin and arctigenin could downregulate the increased levels of myristic acid in the early phase and serum 4-hydro xyproline in the latter phase of Silicosis.

* Nutritional Supplement. Whey and casein proteins, ursolic acid, free branch-chained a mino acids (valine, isoleucine and leucine) and vitamin D (cholecalciferol, ergocalciferol). May improve walking performance both during short and long distance due to increase d mitochondrial functioning.

* Rehydration Therapy is sodium chloride (NaCl), trisodium citrate dihydrate (C6H9Na3 O9), potassium chloride (KCl), anhydrous glucose (C6H12O6), zinc sulphate (O4SZn), and water. Oral rehydration therapy ORT (low-osmolar) is suitable for people who are n ot dehydrated and those who show signs and symptoms of mild to moderate dehydratio n.

* Skin Lesions-Growths
Grape Seed Extract, Ascorbic Acid (vitamin C), Vitamin E, NAC (N-AcetylCysteine), Gr ape Seed Oil, Alpha Lipoic Acid, Resveratrol, and CoQ10. Used to correct Actinic Kerato sis and other skin growths. Encourage normal skin growth. Sun-damage and age spots

reversion. Healthy looking skin as it restores, moisturizes, and protects -anti-viral, anti-bacterial, anti-yeast, anti-aging.
-Resveratrol and Grape Seed Extract help to stifle the growth of abnormal skin cells, and encourage an apoptosis (a dying off) of those cells.
-N-Acetyl Cysteine, an amino acid derivative, helps to block the development of abnormal cells. CoQ10 helps to restore proper cellular function.
-Vitamin C is antibacterial, antiviral, antioxidant, and promotes the growth of normal skin. Vitamin E is an antioxidant needed for healthy skin growth.
-Alpha Lipoic Acid helps to reduce fine lines and wrinkles and Grape Seed Oil helps the skin regain some of its elasticity.

* SR12343 is a novel small molecule that inhibits IKK/NF-κB activation by disrupting the association between IKKβ and NEMO. SR12343 reduced senescence-associated beta-galactosidase (SA-β-gal) activity in oxidative stress-induced senescent mouse embryonic fibroblasts as well as in etoposide-induced senescent human IMR90 cells. Chronic administration of SR12343 to the Ercc1−/Δ and Zmpste24−/− mouse models of accelerated aging reduced markers of cellular senescence and SASP and improved multiple parameters of aging. SR12343 also reduced markers of senescence and increased muscle fiber size in 2-year-old WT mice. Taken together, these results demonstrate that IKK/NF-κB signaling pathway represents a promising target for reducing markers of cellular senescence, extending healthspan and treating age-related diseases. (https://doi.org/10.1111/acel.13486)

* Suan Zao Ren (Semen Ziziphi Spinosae)
Property: Sweet, sour, neutral; heart, liver and gallbladder meridians entered.
Actions: Tonify heart and nourish liver, induce tranquilization, check sweating.
Indications:
A. syndrome of unsteadiness of heart-mind. It has actions of tonifying yin and blood of heart and liver, also inducing tranquilization, so it is the key herb for nourishing heart and tranquilization.
B. Hyperhidrosis due to deficiency. It can check sweating so it can be indicated for spontaneous sweating due to deficiency and night sweat.
(https://www.americandragon.com/Individualherbsupdate/SuanZaoRen.html)

* TLK16998, increases IR autophosphorylation in the presence of insulin and also enhances downstream signaling events, including phosphorylation of IRS-1 and GLUT4 translocation. In addition, this compound significantly lowers blood glucose levels in two animal models of type 2 diabetes. Small-molecule drugs that act by producing insulin-dependent activation of the IR tyrosine kinase domains are potentially attractive for the treatment of type 2 diabetes. Moreover, agents with insulin-dependent activity might offer unique advantages in the control of hyperglycemia by modulation of their effects as insulin levels change in response to physiological stimuli.Two metabolic defects that seem to be central to the pathology of type 2 diabetes are impaired insulin secretion and the reduced ability of insulin to act on the major insulin-sensitive tissues. The combination of these defects results in an inability of the body to maintain glucose homeostasis leading to hyperglycemia and other metabolic disturbances. The decreased responsiveness to insuli

n, termed “insulin resistance,” is due to a reduced ability of insulin to activate its signalin g pathways. Insulin acts by binding to the α-subunits of the hetero-tetrameric (α,α,β,β) in sulin receptor (IR) and inducing autophosphorylation of the β-subunits. This autophosph orylation is performed by the cytoplasmic kinase domain (CKD) regions of the β-subunit s. Autophosphorylation of the IR CKD occurs in its juxtamembrane, activation loop, and COOH-terminus subdomains. CKD autophosphorylation initiates a cascade of signaling events that begin with the recruitment of specific substrates, such as insulin receptor su bstrate 1 (IRS-1), and includes activation of second messenger systems, such as phosp hatidylinositol (PI) 3-kinase, and translocation of glucose transporters (GLUT4) to the ce ll surface. In insulin-resistant tissues or cells, deficiencies have been demonstrated in se veral steps in this pathway, including autophosphorylation of the IR in response to insuli n binding. (https://doi.org/10.2337/diabetes.50.4.824)

* Zibotentan (ZD4054) is an orally available selective antagonist of the endothelin-A (E T-A) receptor with potential antineoplastic activity. Zibotentan binds selectively to the E T-A receptor, thereby inhibiting endothelin-mediated mechanisms that promote tumor ce ll proliferation. It was designed and tested on castration-resistant prostate cancer patient s, it is also proven to prevent hypertension and maintains cerebral perfusion. ZD4054 al so inhibited blood vessel growth.The most common adverse events were ETA (ETA receptor antagonism) mechanism related, including peripheral oedema, headache, and nasal congestion/rhinitis. ZD4054 has been administered orally in healthy volunteers in single doses up to 240mg and multiple doses of up to 100mg daily for 14 days, ZD4054 was well absorbed and was cleared via metabolism and urinary excretion with zibotentan-related material predominantly excreted via the urine. Analysis of the Phase 3 study in metastatic resistant prostate cancer indicated an increased risk and reduced time to onset of pneumonia in the patient group exposed 10mg once daily. In healthy male volunteers. The reproductive toxicology package indicates a risk of fetal toxicity. The inclusion of women of child-bearing potential would need to be assessed for any proposal based on the risk-benefit and the use of appropriate highly effective contraception. Preclinical CNS and CV safety study findings indicate that patients with a previous history of epilepsy, other CNS adverse events, or neurologic symptoms or signs consistent with acute or evolving spinal cord compression or CNS metastases should be excluded as should patients with NYHA grade II heart failure. ZD4054 is largely renally cleared, so the dose in patients with moderate to severe renal impairment would have to be re-evaluated. Zibotentan showed potential in upregulating pro-longevity gene expression, it is included among the list of top 13 discovered longevity-promoting chemicals.

1.3.1.50 RT-MB-62

https://archive.org/details/Resonant_Therapy-Molecular_Biology_62

AS1, EDG-5506, GS-441524, Macrogol-Electrolytes, Melittin-Apamin, Metoclopramide, Motilitone, Periplocin-Oleandrin-Ginkgetin, Revaprazan, Simeticone, Sodium Phenylbut yrate-Taurursodiol, Sprifermin,Tegoprazan, THCP, Vancomycin-Metronidazole-Cefuroxi me

* AS1 or Analgesic Screen 1 (4-propan-2-yl-N-pyridin-4-ylbenzamide) is a novel small m olecule which reverses the negative hedonic valence of noxious stimuli. AS1 does not a ppear to act directly upon serotonin, dopamine, opioid, adrenergic, or acetylcholine rece ptors, nor some of their transporter proteins, is very intriguing and suggests that AS1 ma y be acting upon an unconventional molecular target. Additionally, despite its profound e ffect upon valence, AS1 itself is neither aversive nor attractive, only influencing behavior in the context of aversive stimuli. In this, AS1 is very unusual. To the best of our knowled ge, no other known drug behaves in such a manner. In zebrafish experiments, AS1 reve rses aversion to noxious stimuli across multiple sensory modalities, rendering even phy sically harmful environments attractive. Analgesic Screen 1 (AS1), surprisingly elicited a ttraction to noxious painful heat. AS1 was similarly able to reverse the negative hedonic valence of other painful (chemical) and non-painful (dark) aversive stimuli without being inherently rewarding. AS1 relieves an aversion-imposed “brake” on dopamine release, a nd this unique mechanism may provide valuable insight into the development of new val ence-targeting analgesic drugs, as well as medications for other valence-related neurolo gical conditions, such as anxiety and post-traumatic stress disorder (PTSD).

* EDG-5506 is an orally administered small molecule myosin modulator designed to prot ect susceptible muscle fibers from the damage that occurs as a result of everyday activit ies in people living with dystrophinopathies including Becker and Duchenne Muscular D ystrophy (BMD, DMD). EDG-5506 presents a novel mechanism of action designed to se lectively limit the exaggerated muscle damage caused by the absence or loss of functio nal dystrophin. EDG-5506 has a favorable safety/tolerability profile.

* GS-441524 is a nucleoside analogue antiviral drug. It is the main plasma metabolite of the antiviral prodrug remdesivir, and has a half-life of around 24 hours in human patients. Remdesivir and GS-441524 were both found to be effective in vitro against feline coron avirus strains responsible for feline infectious peritonitis (FIP), a lethal systemic disease affecting domestic cats. GS-441524 is either similar to or more potent than remdesivir a gainst SARS-CoV-2 in cell culture, with some researchers arguing that GS-441524 woul d be better than remdesivir for the treatment of COVID-19. Specific advantages cited inc lude lower kidney and hepatotoxicity, longer half-life and exposure.

* Macrogol-Electrolytes. In Macrogol 4000, the addition of electrolytes does not influenc e effectiveness nor improves tolerability or safety, since there is no loss of electrolytes w ith macrogol 4000 treatment. It is used for short-term relief of constipation as well as for long-term use in constipation of various causes, including in multiple sclerosis and Parki nson's disease patients (an often-overlooked non-motor symptom) as well as constipati on caused by pharmaceutical drugs such as opioids and anticholinergics. There is no lo ss of effectiveness with long-term use (no habituation), and neither relevant disturbance s in electrolytes nor relevant changes to the intestinal microbiome occur. Macrogol 4000 can also be used in specific patient groups such as breast-feeding women, those on a l ow-sodium diet and diabetics with fructose intolerance. Macrogol preparations are one o

f the first-line treatments for constipation in both, children and adults. A review has confir med the efficacy and tolerability of macrogol 4000 compared with lactulose and macrog ol preparations with added electrolytes. The osmotic laxative is a good recommendation on pharmacoeconomic grounds as well.

* Melittin-Apamin bee are the major components of Honeybee venom. Bee venom has p owerful anti-inflammatory properties. And may benefit the health of your skin and immun e system. It may also improve certain medical conditions like rheumatoid arthritis, chroni c pain, peripheral nerve injury, neurodegenerative diseases such as Parkinson's diseas e, Alzheimer's disease, multiple sclerosis, as well as neurite outgrowth and regeneration after cortical neuron injury and cancer.

* Metoclopramide is a medication used for stomach and esophageal problems. It is com monly used to treat and prevent nausea and vomiting, to help with emptying of the stom ach in people with delayed stomach emptying, and to help with gastroesophageal reflux disease. It is also used to treat migraine headaches.

* Motilitone (DA-9701) is a botanical drug consisting of Corydalis Tuber and Pharbitidis Semen. It has multiple mechanisms of action such as prokinetic effects, fundus relaxatio n, and visceral analgesia, which are mediated by dopamine D2 and several serotonin re ceptors involved in gastrointestinal (GI) functions. Symptoms of functional dyspepsia ma y include: Pain or burning in the stomach, bloating, excessive belching, or nausea after eating. An early feeling of fullness when eating. The feeling of fullness also is called sati ety. In clinical studies, DA-9701 has been found to be beneficial for improvement of Fun ctional dyspepsia (FD) symptoms and GI functions in FD patients, while showing better safety compared to that associated with conventional medicines.

* Periplocin-Oleandrin-Ginkgetin are three novel senolytics discovered by artificial intelli gence (AI). Testing on human cells revealed that all three, ginkgetin, periplocin and olea ndrin, were able to remove senescent cells without damaging healthy cells. Cellular sen escence is a stress response characterised by a permanent cell cycle arrest and a proin flammatory secretome. In addition to its tumour suppressor role, senescence is involved in ageing and promotes many disease processes such as cancer, type 2 diabetes, oste oarthritis, and SARS-CoV-2 infection.

* Revaprazan is a drug that reduces gastric acid secretion which is used for the treatme nt of gastritis. It acts as an acid pump antagonist (potassium-competitive acid blocker). Revaprazan is a proton pump inhibitor which reversibly inhibits H+, K+-ATPase and is c urrently an investigational drug for the management of gastric and duodenal ulceration a nd other acid-related diseases.

* Simeticone is an anti-foaming agent used to reduce bloating, discomfort or pain cause d by excessive gas. Simeticone is a non-systemic surfactant which decreases the surfa ce tension of gas bubbles in the GI tract. This allows gas bubbles to leave the GI tract a s flatulence or belching. Simeticone does not reduce or prevent the formation of gas.

* Sodium Phenylbutyrate and Taurursodiol is a combination medication for the treatment of amyotrophic lateral sclerosis (ALS) and Alzheimer's disease. It contains sodium phen ylbutyrate and ursodoxicoltaurine, two chemicals that act by blocking cell death pathway s and improving mitochondrial energy production. Sodium phenylbutyrate/ursodoxicolta urine acts by blocking cell death pathways in mitochondria and in the endoplasmic retic ulum. Sodium phenylbutyrate is a chemical chaperone that helps proteins maintain their normal conformation, preventing aggregation that may lead to cell death. Ursodoxicolta urine improves mitochondrial energy production.

* Sprifermin is a recombinant human fibroblast growth factor 18 (rhFGF18) analog, whic h is under development for the treatment of osteoarthritis. In trials, sprifermin was well t olerated with no severe adverse events associated with the treatment. A placebo control led, multi-center study demonstrated that sprifermin was able to promote statistically sig nificant improvement in cartilage thickness relative to control in a dose-dependent mann er.

* Tegoprazan, a novel potassium-competitive acid blocker (P-CAB), is a next-generation therapeutics developed for the treatment of acid-related gastrointestinal diseases such as gastroesophageal reflux disease (GERD) and peptic ulcers. Although proton pump in hibitors (PPIs) are the mainstay of therapy for GERD and its complications, they have s everal limitations, including incomplete symptom resolution. Potassium-competitive acid blockers (P-CABs) were developed to address the limitations of PPIs as well as the nee d for improved antisecretory effects. A highly selective inhibitor of the H+/K+-ATPase, te goprazan is also safe and effective for nocturnal acid breakthrough (NAB) and motility. T egoprazan’s strong and sustained effect is due to its ability to be slowly cleared from the gastric glands and exertion of effects independent of acid levels. It has also been obser ved to be efficacious independent of food intake.

* THCP or Delta-9-tetrahydrocannabiphoral, is a cannabinoid related closely to THC and found in very low concentrations in the cannabis plant. THCP is the strongest naturally o ccurring cannabinoid currently known. Like other cannabinoids, THCP interacts with the endocannabinoid system in the body, which can affect mood, pain perception, and other bodily functions. While research on THCP is still in its early stages, preliminary studies s uggest that it may have more potent anti-inflammatory, analgesic, and neuroprotective p roperties compared to other cannabinoids like THC and CBD.

* Vancomycin-Metronidazole-Cefuroxime is an antibiotic combination treatment for intra-abdominal infections in adults.

1.3.1.51 RT-MB-63

https://archive.org/details/Resonant_Therapy-Molecular_Biology_63

A485, Hi1a Peptide, Hydroxocobalamin, Hypoxen-Levocarnitine, Immunoglobulin Thera py, Intralipid-IV Fat Emulsion, Lipophilic Drug Poisoning, MaSAMP Peptide, MU1140, P henelzine, Pralidoxime, Protirelin, Snakebite Antivenom 95Mat5, ZCAN262, Zosurabalpi

n

* A485 is a small molecule — colloquially known as “prohiberin” — that inhibits proteins that modulate gene expression, triggering the release of neutrophils and other white blood cells from bone marrow. The researchers hope that the discovery could help human patients with neutropenia, or low white blood cell counts, which is common in those fighting infections and undergoing chemotherapy. A-485 is a potent and selective HAT inhibitor which exhibits potent activity in most multiple myeloma cell lines, and in a subset of acute myeloid leukaemia lines and non-Hodgkin’s lymphoma lines. A-485 induces a comparable decrease in H3K27Ac in all five prostate cancer cell lines. In tumour-bearing animals, dosing with A-485 for seven days induces a decrease in the mRNA levels of MYC and the AR-dependent gene SLC45A3 at three hours post-dosing, and (for MYC) a decrease in the protein level, indicating that A-485 inhibits p300-mediated transcriptional activity in vivo. Currently, the main treatment for low white blood cell counts is G-CSF, or granulocyte colony stimulating factor, which is produced by the body and can be administered as a drug. But it has a long-lasting effect, which can be harmful in some circumstances, limiting its wider clinical use. A485 is just as potent as G-CSF but less enduring, with white blood cell counts dropping back to normal by the 12-hour mark. A485 could help restore bone marrow function in patients with bone marrow failure -more likely to have infections due to diminished white blood cell counts. Myelodysplastic syndrome is a group of cancers in which blood cells in the bone marrow don’t properly develop, and chemotherapy-induced bacterial infections, some of which are potentially lethal.

* Hi1a Peptide or Pi-hexatoxin-Hi1a Peptide, blocks acid-sensing ion channels in the heart, so that death messages are blocked. As a result, cell death is reduced and heart cell survival increases. May be used to develop therapeutics to treat ischemic conditions like stroke, myocardial infarction, and transplants.

* Hydroxocobalamin, also known as vitamin B12a, is a vitamin found in food and used as a dietary supplement. As a supplement it is used to treat vitamin B12 deficiency including pernicious anemia. Other uses include treatment for cyanide poisoning, Leber's optic atrophy, and toxic amblyopia. Hydroxocobalamin is first line therapy for people with cyanide poisoning. Hydroxocobalamin converts cyanide to the much less toxic cyanocobalamin. Cyanocobalamin is renally cleared. The use of hydroxocobalamin became first line due to its low adverse risk profile, rapid onset of action, and ease of use in the prehospital setting.

* Hypoxen-Levocarnitine for pefornance enhancement. Hypoxen is under laboratory studies in Russia as a potential regulator of cell metabolism. It is purported to affect mitochondrial function, though this has not been proven in any high-quality, peer-reviewed publications. Intended uses,
- to improve performance in extreme and adverse conditions, accompanied by a lack of oxygen (highlands, the conditions of the Arctic, underwater work, etc.);
- mental and physical strain, camera work and other intense stress, accompanied by

chronic fatigue and fatigue;
- in the complex therapy of severe traumatic lesions, blood loss, extensive surgery, respiratory diseases (bronchial asthma, pneumonia, obstructive bronchitis);
- as part of the complex therapy of stable angina (prevention of angina attacks), arterial hypertension, chronic heart failure I and II functional class according to NYHA.
Levocarnitine or L-Carnitine is best known for its role in helping to ”shuttle” long-chain fatty acids into mitochondria to produce energy. In people with peripheral artery disease (PAD), L-carnitine can help reduce intermittent claudication (leg pain during exercise) and improve exercise capacity. However, in healthy people, supplementation with L-carnitine does not appear to improve exercise capacity or performance. L-carnitine may help reduce exercise-induced muscle soreness and muscle damage, particularly following resistance exercise.

* Immunoglobulin Therapy is a mixture of antibodies (normal human immunoglobulin or NHIG) to treat several health conditions. These conditions include primary immunodeficiency, immune thrombocytopenic purpura, chronic inflammatory demyelinating polyneuropathy, Kawasaki disease, certain cases of HIV/AIDS and measles, Guillain-Barré syndrome, and certain other infections when a more specific immunoglobulin is not available. The mix plays the sound frequencies -molecular mass-of, IGHE, IGHD, IGHM Membrane-bound -mIgM, IGHM Secreted -sIgM, IGHA1, IGHA2, IGHG1, IGHG2, IGHG3, IGHG4.

* Intralipid (I.V. Intravenous Fat Emulsion) is indicated as a source of calories and essential fatty acids for adult and pediatric patients requiring parenteral nutrition (PN) and as a source of essential fatty acids for prevention of essential fatty acid deficiency (EFAD).
Intralipid (a parenteral nutritional supplement approved worldwide) is also a relatively new, safe, and efficacious treatment modality for severe cardiovascular and neurological toxicity provoked by accidental and intentional poisoning with lipophilic drugs. This emerging intervention is already used successfully in dogs, cats, and other animals poisoned by ivermectin, moxidectin, permethrin, baclofen, lidocaine, and other lipophilic drugs i.e. bromethalin. Treated animals often exhibit prompt recovery with no reported acute adverse events nor long-term sequelae. Intralipid is, Phosphatidylethanolamine, Linoleic acid, Oleic acid, Palmitic acid, α-Linolenic acid, Stearic acid, Glycerin, Water

* Lipophilic drug poisoning in pets induces uncoupling in mitochondrial oxidative phosphorylation, which causes a decrease in adenosine triphosphate (ATP) synthesis. The decreased ATP inhibits the activity of the Na/K ATPase enzyme, thereby leading to a subsequent buildup of cerebral spinal fluid (CSF) and vacuolization of myelin. The excess CSF results in increased intracranial pressure, which in turn permanently damages neuronal axons. This damage to the central nervous system can cause paralysis, convulsions, and death. The recording plays the sound frequencies of, -Potassium-transporting ATPase alpha chain 2 AT12A which catalyzes the hydrolysis of ATP coupled with the exchange of H+ and K+ ions across the plasma membrane. It is also responsible for potassium absorption in various tissues

-Adenosine triphosphate (ATP) nucleotide which provides energy to drive and support many processes in living cells, such as muscle contraction, nerve impulse propagation, condensate dissolution, and chemical synthesis
-O2 oxygen used to maintain the proton motive force in oxidative phosphorylation of ATP

* MaSAMP Peptide is a stable antimicrobial peptide with dual functions of treating and preventing citrus Huanglongbing, citrus greening disease or yellow dragon disease. It is a novel class of stable antimicrobial peptides (SAMPs) from Australian finger lime and other HLB-tolerant citrus close relatives, which has dual functions of inhibiting CLas growth in HLB-positive trees and activating host immunity to prevent new infections of vector-transmitted phloem-limited bacterium Candidatus Liberibacter asiaticus (CLas). MaSAMP is very sensitive to human endopeptidase Pepsin, a major gastric enzyme produced by stomach chief cells. Thus, MaSAMP in Australian finger lime has already been consumed by humans for hundreds of years and can be easily digested. (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8017978/)

* MU1140 (Mutacin 1140) is a groundbreaking lantibiotic -lanthionine-containing antibiotics- produced by Streptotoccus mutans which acts via a novel mechanism of action that may limit the development of resistance. MU1140 demonstrated activity against all Gram-positive organisms tested, including oxacillin- and vancomycin-resistant Staphylococcus aureus and vancomycin-resistant Enterococcus faecalis (VREF). No activity was observed against Gram-negative bacteria or yeast. Time–kill studies revealed that MU1140 was rapidly bactericidal against Streptococcus pneumoniae and multidrug-resistant S. aureus, whilst it was bacteriostatic against VREF. It has been extensively characterised with regard to its physical and chemical properties and its role in promoting colonisation of the oral cavity by the producer strain.

* Phenelzine, a small L1 mimetic molecule and monoamine oxidase inhibitor commonly prescribed for its antidepressant effects, has been the subject of many adhesion analyses assessing the quality of cellular adhesion in the presence of varied cell types. Most inquiries into the adhesive properties of phenelzine have been centered around its effect on L1 adhesion molecules. Two studies by Ri et al. found that phenelzine is capable of stimulating functional recovery, remyelination, and neuronal survival in both larval zebrafish and young mice through upregulation of L1.1 protein levels.

* Pralidoxime is typically used in cases of organophosphate poisoning. Organophosphates such as sarin bind to the hydroxy component (the esteric site) of the active site of the acetylcholinesterase enzyme, thereby blocking its activity. Pralidoxime binds to the other half (the unblocked, anionic site) of the active site and then displaces the phosphate from the serine residue. The conjoined poison / antidote then unbinds from the site, and thus regenerates the fully functional enzyme. Some phosphate-acetylcholinesterase conjugates continue to react after the phosphate docks to the esteric site, evolving into a more recalcitrant state. This process is known as aging. Aged phosphate-acetylcholinesterase conjugate are resistant to antidotes such as pralidoxime. Pralidoxime is only effective in organophosphate toxicity. It has no

beneficial effects if the acetylcholinesterase enzyme is carbamylated, as occurs with neostigmine, pyridostigmine, or insecticides such as carbaryl.

* Protirelin is the pharmaceutical form of Thyrotropin-releasing hormone (TRH) a hypophysiotropic hormone produced by neurons in the hypothalamus that stimulates the release of thyroid-stimulating hormone (TSH) and prolactin from the anterior pituitary. TRH has been used clinically for the treatment of spinocerebellar degeneration and disturbance of consciousness in humans. TRH has anti-depressant and anti-suicidal properties, and in 2012 the U.S. Army awarded a research grant to develop a TRH nasal spray in order to prevent suicide amongst its ranks. TRH has been shown in mice to be an anti-aging agent with a broad spectrum of activities that, because of their actions, suggest that TRH has a fundamental role in the regulation of metabolic and hormonal functions.

* Snakebite Antivenom 95Mat5 is effective against the venom of elapids, a major medically relevant family of snakes that includes cobras, kraits, and mambas. 95Mat5, protects against purified α-bungarotoxin (B. multicinctus, krait), also completely neutralizes the neurotoxin-rich whole venoms of N. kaouthia (monocellate cobra) and D. polylepis (black mamba) and prolongs survival against O. hannah (king cobra). While 95Mat5 is effective against the venom of all elapids, it does not block the venom of vipers—the second group of venomous snakes. Tests on mice injected with toxins from the many-banded krait, Indian spitting cobra, black mamba and king cobra showed mice were not only protected from death, but also paralysis. 95Mat5 amino acid sequence is, GGTFSSYA YIPIFGTA IPLRWYESGPYESGV QSISSY DASSLQ QQSYSTP

* ZCAN262, a small molecule, both reduced multiple sclerosis (MS)-like symptoms and showed promise in repairing myelin in two different animal models. ZCAN262 has potent effects in restoring neurological function and myelination while reducing the immune response in experimental autoimmune encephalitis and cuprizone MS mouse models without affecting basal neurotransmission or learning and memory. MS is a degenerative neurological disease that has a broad cache of increasingly debilitating symptoms including coordination and cognition decline, muscle weakness, incontinence, depression and paralysis. While inhibition of the AMPA and NMDA glutamate receptors was able to restore neurological deficits in a rodent model, they have previously also come with serious side effects. This new compound demonstrated it could target sites to regulate AMPA function, delivering neuroprotection without otherwise impacting the central nervous system.

* Zosurabalpin id a novel antibiotic designed to address bacterial strains resistant to most existing antibiotics, particularly those causing severe infections with high mortality rates. Resistance is more common among so-called gram-negative bacteria, which have two membranes that are difficult for many antibiotics to pass through. One of them, Acinetobacter baumannii, is one of the great threats in hospitals. It was very common during the Covid-19 pandemic. Zosurabalpine overcomes the defenses that usually make this bacteria resistant, by applying a different mechanism. It blocks the molecule lipopolysaccharide from reaching the surface of the bacteria, where it’s

necessary to create the outer membrane of these microorganisms. The antibiotic achieves this by overcoming only one of the two membranes that gram-negative bacteria have. Without that outer membrane, A. baumannii is less likely to survive and it becomes vulnerable to other antibiotics, which could be combined with zosurabalpine to treat these types of infections.

1.3.2 Genetic Pathways

The sound frequencies in these recordings are engineered to acoustically map genetic pathways, using frequencies derived from either the molar mass or scalar octave reson ance of key molecular components.

This includes DNA sequences, RNA transcripts, and regulatory proteins, translating their biochemical interactions into harmonic patterns. By sonifying these elements, the record ings reflect the vibrational signatures of genetic expression, offering an auditory represe ntation of transcriptional activity and epigenetic modulation.

Hence, potentially enabling frequency-based modulation of cellular signaling. The data source is Malacards a website in progress.

1.3.2.1 RT-MB-26

https://archive.org/details/Resonant_Therapy-Molecular_Biology_26

Genetic Superpathways-Bone Deterioration, Genetic Superpathways-Bone Remodeling, Genetic Superpathways-Bone Structure, Genetic Superpathways-Chronic Venous Insufficiency, Genetic Superpathways-Compulsive Gambling, Genetic Superpathways-Joint Disorders, Genetic Superpathways-Limb Ischemia P1, Genetic Superpathways-Limb Ischemia P2, Genetic Superpathways-Personality Disorders, Genetics-Allergic Rhinitis, Genetics-Alopecia Androgenetic1, Genetics-Bone Resorption, Genetics-Cauda Equina Syndrome, Genetics-Cerebrospinal Fluid Leaks, Genetics-Dry Eye P1, Genetics-Dry Eye P2, Genetics-Femur Head Necrosis, Genetics-Foot Drop, Genetics-Intermittent Claudication, Genetics-Mite Infestation, Genetics-Munchausen By Proxy, Genetics-Peroneal Nerve Paralysis, Genetics-Polyradiculopathy, Genetics-Post-Thrombotic Syndrome, Genetics-Presbyopia, Genetics-Seborrheic Dermatitis, Genetics-Skin Conditions, Genetics-Skin Disease, Genetics-Wrinkles, Important Genes-Chronic Sinus Problems

* Allergic Rhinitis, also known as hay fever, is related to keratoconjunctivitis and atopy, and has symptoms including history of seasonal allergies, conjunctival hyperemia and rhinorrhea. An important gene associated with Allergic Rhinitis is IL13 (Interleukin 13), and among its related pathways are Cytokines and Inflammatory Response and OX40 Pathway. The drugs phenylpropanolamine hydrochloride and flunisolide have been mentioned in the context of this disorder. Affiliated tissues include testes, eye and skin,

and related mouse phenotypes are digestive/alimentary and hematopoietic system. A rhinitis that is an allergic inflammation and irritation of the nasal airways involving sneezing, runny nose, nasal congestion, itching and tearing of the eyes caused by exposure to an allergen such as pollen, dust, mold, animal dander and droppings of cockroaches or house dust mites. (http://www.malacards.org/card/allergic_rhinitis)

* Alopecia, Androgenetic, 1, also known as androgenetic alopecia, is related to prostate cancer and alopecia, androgenetic, 3, and has symptoms including alopecia An important gene associated with Alopecia, Androgenetic, 1 is AFA1 (Alopecia, Androgenetic), and among its related pathways are Nongenotropic Androgen signaling and Transcription_Role of VDR in regulation of genes involved in osteoporosis. Affiliated tissues include testes, prostate and skin, and related mouse phenotypes are endocrine/exocrine gland and muscle. Androgenetic alopecia is a common form of hair loss in both men and women. In men, this condition is also known as male-pattern baldness. Hair is lost in a well-defined pattern, beginning above both temples. Over time, the hairline recedes to form a characteristic "M" shape. Hair also thins at the crown (near the top of the head), often progressing to partial or complete baldness. Mutations in the AR gene have also been associated with androgenetic alopecia. (http://www.malacards.org/card/alopecia_androgenetic_1)

* Bone Deterioration Disease is related to degenerative disc disease and spinal stenosis. An important gene associated with Bone Deterioration Disease is IVD (Isovaleryl-CoA Dehydrogenase), and among its related pathways are Spinal Cord Injury and Cardiomyocyte Differentiation through BMP Receptors. Affiliated tissues include bone, bone and breast, and related mouse phenotypes are limbs/digits/tail and skeleton. A bone structure disease that results in change or damage of structure located in bone. The recording includes related genes and Superpathways. (http://www.malacards.org/card/bone_deterioration_disease)

* Bone Remodeling Disease is related to hyperostosis and bone resorption disease. An important gene associated with Bone Remodeling Disease is BGLAP (Bone Gamma-Carboxyglutamate Protein), and among its related pathways are Vitamin D synthesis and FGF signaling pathway. Affiliated tissues include bone, bone and prostate, and related mouse phenotypes are respiratory system and cardiovascular system. A bone disease that results in formation or resorption abnormalities located in bone. The recording includes Superpathways and related genes. (http://www.malacards.org/card/bone_remodeling_disease)

* Bone Resorption Disease is related to osteoporosis and osteitis fibrosa. An important gene associated with Bone Resorption Disease is BGLAP (Bone Gamma-Carboxyglutamate Protein). Affiliated tissues include bone, breast and prostate. A bone remodeling disease that results in an abnormal decrease of bone density or mass. (http://www.malacards.org/card/bone_resorption_disease)

* Bone Structure Disease is related to spondylolisthesis and scoliosis. An important gene associated with Bone Structure Disease is IVD (Isovaleryl-CoA Dehydrogenase),

and among its related pathways are Spinal Cord Injury and Protein digestion and absorption. Affiliated tissues include bone, bone marrow and prostate, and related mouse phenotypes are hearing/vestibular/ear and limbs/digits/tail. A bone disease that has material basis in an abnormality in the location or function of the skeletal structure. The recording includes Superpathways and related genes. (http://www.malacards.org/card/bone_structure_disease)

* Cauda Equina Syndrome, also known as polyradiculopathy, is related to cauda equina neoplasm and cauda equina intradural extramedullary astrocytoma, and has symptoms including edema of spinal cord, radicular pain and pain in spine. An important gene associated with Cauda Equina Syndrome is DPYSL3 (Dihydropyrimidinase Like 3), and among its related pathways are Calcineurin-regulated NFAT-dependent transcription in lymphocytes and BDNF signaling pathway. Affiliated tissues include spinal cord, b cells and bone, and related mouse phenotypes are hearing/vestibular/ear and limbs/digits/tail. A peripheral nervous system disease that involves an acute loss of function of the lumbar plexus, neurologic elements (nerve roots) of the spinal canal below the termination (conus) of the spinal cord. (http://www.malacards.org/card/cauda_equina_syndrome)

* Cerebrospinal Fluid Leak, also known as spinal cerebrospinal fluid leak, liquorrhea CSF, is related to spontaneous intracranial hypotension and intracranial hypotension, and has symptoms including neuromuscular manifestations, neurobehavioral manifestations and vertigo. An important gene associated with Cerebrospinal Fluid Leak is PTGDS (Prostaglandin D2 Synthase). Affiliated tissues include brain, pituitary and bone. (http://www.malacards.org/card/cerebrospinal_fluid_leak)

* Chronic Frontal Sinusitis is related to frontal sinusitis and sinusitis. An important gene associated with Chronic Frontal Sinusitis is RHNO1 (RAD9-HUS1-RAD1 Interacting Nuclear Orphan 1). Affiliated tissues include bone. A frontal sinusitis which lasts for 12 weeks or more. This causes steady headache, localized tenderness and intermittent, purulent nasal and postnasal drainage. Chronic Maxillary Sinusitis, also known as chronic antritis, is related to maxillary sinusitis and sinusitis. An important gene associated with Chronic Maxillary Sinusitis is MPO (Myeloperoxidase). Affiliated tissues include tonsil, testes and skin. Ethmoid Sinusitis, also known as ethmoidal sinusitis, is related to rhabdomyosarcoma and scotoma. An important gene associated with Ethmoid Sinusitis is MUC7 (Mucin 7, Secreted). Affiliated tissues include eye, prostate and brain. A sinusitis which involves infection of ethmoid sinuses that causes pain or pressure behind and between the eyes, tearing, and headache over the forehead. Chronic Sphenoidal Sinusitis, also known as sphenoidal sinus-chr., is related to sphenoid sinusitis and sinusitis. An important gene associated with Chronic Sphenoidal Sinusitis is GOLPH3 (Golgi Phosphoprotein 3).

* Chronic Venous Insufficiency is related to peripheral artery disease and venous insufficiency. An important gene associated with Chronic Venous Insufficiency is ITGA4 (Integrin Subunit Alpha 4), and among its related pathways are Dissolution of Fibrin Clot and African trypanosomiasis. Affiliated tissues include kidney, liver and endothelial, and

related mouse phenotypes are neoplasm and respiratory system. A medical condition in which the veins cannot pump enough blood back to the heart. The most common cause of CVI is superficial venous reflux. As functional venous valves are required to provide for efficient blood return from the lower extremities, this condition typically affects the legs. (http://www.malacards.org/card/chronic_venous_insufficiency)

* Compulsive Gambling, also known as pathological gambling, is related to antisocial personality disorder and cocaine dependence. It is an impulse control disorder that involves the uncontrollable impulse to gamble, irrespective of the interference the behaviour has on the individual's life. Many people enjoy gambling, whether it's betting on a horse or playing poker on the internet. Most people who gamble don't have a problem, but some lose control of their gambling. Signs of problem gambling include always thinking about gambling lying about gambling spending work or family time gambling feeling bad after you gamble, but not quitting gambling with money you need for other things. -Neurotransmitter Clearance In The Synaptic Cleft - MAOA, SLC6A3 - Nicotine Pathway (Dopaminergic Neuron), Pharmacodynamics - DRD2, DRD3, DRD4

* Dry Eye Syndrome, also known as dry eye syndromes, is related to Sjogren's syndrome and Kenny-Caffey syndrome, type 1, and has symptoms including dryness of eye, and dacryops. An important gene associated with Dry Eye Syndrome is AQP5 (Aquaporin 5), and among its related pathways are Malaria and Stabilization and expansion of the E-cadherin adherens junction. The drugs hydroxyethyl cellulose and sodium chloride granules have been mentioned in the context of this disorder. Affiliated tissues include eye, salivary gland and thyroid, and related mouse phenotypes are muscle and digestive/alimentary. Dry eye syndrome is the condition of having dry eyes. Dry eye occurs when either the eye does not produce enough tears or when the tears evaporate too quickly. Other associated symptoms include irritation, redness, discharge, and easily fatigued eyes. Blurred vision may also occur. The symptoms can range from mild and occasional to severe and continuous. Scarring of the cornea may occur in some cases. It affects 5-34% of people to some degree depending on the population looked at. Among older people it affects up to 70%. In China it affects about 17% of people. (http://www.malacards.org/card/dry_eye_syndrome)

* Femur head necrosis or Avascular Necrosis of the Femoral Head is related to legg-calve-perthes disease and familial avascular necrosis of the femoral head, and has symptoms including avascular necrosis of the capital femoral epiphysis An important gene associated with Avascular Necrosis of the Femoral Head is COL2A1 (Collagen Type II Alpha 1 Chain), and among its related pathways are Oxidative Stress and Detoxification of Reactive Oxygen Species. Affiliated tissues include bone, bone marrow and endothelial, and related mouse phenotypes are cardiovascular system and vision/eye. A disease characterized by mechanical failure of the subchondral bone, and degeneration of the hip joint. It usually leads to destruction of the hip joint in the third to fifth decade of life. The clinical manifestations, such as pain on exertion, a limping gait, and a discrepancy in leg length, cause considerable disability. (http://www.malacards.org/card/avascular_necrosis_of_the_femoral_head)

* Foot Drop is related to charcot-marie-tooth disease, type 1e and diffuse large b-cell lymphoma. An important gene associated with Foot Drop is ACTA1 (Actin, Alpha 1, Skeletal Muscle), and among its related pathways are Striated Muscle Contraction and Neural Crest Differentiation. Affiliated tissues include brain, bone and spinal cord, and related mouse phenotypes are behavior/neurological and muscle. Foot drop describes the inability to raise the front part of the foot due to weakness or paralysis of the muscles that lift the foot. Causes include: neurodegenerative disorders of the brain that cause muscular problems, such as multiple sclerosis, stroke, and cerebral palsy; motor neuron disorders such as polio, some forms of spinal muscular atrophy and amyotrophic lateral sclerosis (commonly known as Lou Gehrig disease); injury to the nerve roots, such as in spinal stenosis; peripheral nerve disorders such as Charcot-Marie-Tooth disease or acquired peripheral neuropathy; local compression or damage to the peroneal nerve as it passes across the fibular bone below the knee; and muscle disorders, such as muscular dystrophy or myositis. (http://www.malacards.org/card/foot_drop)

* Intermittent Claudication, also known as intermittent claudication nos, is related to peripheral artery disease and coronary artery disease, and has symptoms including asthenia, body temperature changes and cyanosis. An important gene associated with Intermittent Claudication is HTR2A (5-Hydroxytryptamine Receptor 2A), and among its related pathways are Complement and coagulation cascades and Formation of Fibrin Clot (Clotting Cascade). The drugs pentoxifylline and cilostazol have been mentioned in the context of this disorder. Affiliated tissues include endothelial, bone and testes, and related mouse phenotypes are digestive/alimentary and liver/biliary system. Intermittent claudication is a symptom that describes muscle pain (ache, cramp, numbness or sense of fatigue), classically in the calf muscle, which occurs during exercise, such as walking, and is relieved by a short period of rest. It is classically associated with early-stage peripheral artery disease, and can progress to critical limb ischemia unless treated or risk factors are modified. (http://www.malacards.org/card/intermittent_claudication)

* Joint Disorders, also known as arthropathy, is related to rheumatoid arthritis and panner disease, and has symptoms including arthralgia, back pain and metatarsalgia. An important gene associated with Joint Disorders is IL6 (Interleukin 6), and among its related pathways are Dissolution of Fibrin Clot and amb2 Integrin signaling. Affiliated tissues include bone, bone marrow and testes, and related mouse phenotypes are muscle and neoplasm. An arthropathy, a disease of a joint. A joint is where two or more bones come together, like the knee, hip, elbow, or shoulder. joints can be damaged by many types of injuries or diseases, including arthritis - inflammation of a joint. it causes pain, stiffness, and swelling. over time, the joint can become severely damaged. (http://www.malacards.org/card/joint_disorders)

* Limb Ischemia is related to gastric dilatation and coronary artery disease. An important gene associated with Limb Ischemia is VEGFA (Vascular Endothelial Growth Factor A), and among its related pathways are Cell adhesion_Plasmin signaling and Integrins in angiogenesis. Affiliated tissues include bone, bone marrow and heart, and related mouse phenotypes are respiratory system and neoplasm. A restriction in blood supply to

limbs, causing a shortage of oxygen and glucose needed for cellular metabolism (to keep tissue alive). (http://www.malacards.org/card/limb_ischemia)

* Mite Infestation, also known as mite infestations, is related to scabies and trombiculiasis. An important gene associated with Mite Infestation is CFTR (Cystic Fibrosis Transmembrane Conductance Regulator), and among its related pathways are Pancreatic secretion and Antiarrhythmic Pathway, Pharmacodynamics. Affiliated tissues include skin and t cells. A parasitic ectoparasitic infectious disease that involves infestation of mites belonging to the family Sarcoptidae, Trombiculidae and Demodicidae. (http://www.malacards.org/card/mite_infestation)

* Munchausen by Proxy, also known as munchausen by proxy syndrome, is related to factitious disorder and maturity-onset diabetes of the young, type 13. An important gene associated with Munchausen by Proxy is ABCC8 (ATP Binding Cassette Subfamily C Member 8), and among its related pathways are Potassium Channels and Integration of energy metabolism. Affiliated tissues include brain, and related mouse phenotype endocrine/exocrine gland. A factitious disorder that involves a care giver's deliberate exaggeration, fabrication, and/or induce physical, psychological, behavioral, and/or mental health problems in others. (http://www.malacards.org/card/munchausen_by_proxy)

* Peroneal Nerve Paralysis, also known as peroneal nerve palsy, is related to osteopetrosis and thrombotic thrombocytopenic purpura. An important gene associated with Peroneal Nerve Paralysis is TBXAS1 (Thromboxane A Synthase 1). A paralysis on common fibular nerve that affects patient’s ability to lift the foot at the ankle. Peroneal nerve paralysis usually leads to neuromuscular disorder, peroneal nerve injury, or foot drop. (http://www.malacards.org/card/peroneal_nerve_paralysis)

* Personality disorders are a group of mental illnesses. They involve long-term patterns of thoughts and behaviors that are unhealthy and inflexible. The behaviors cause serious problems with relationships and work. People with personality disorders have trouble dealing with everyday stresses and problems. they often have stormy relationships with other people. The cause of personality disorders is unknown. However, genes and childhood experiences may play a role. The symptoms of each personality disorder are different, they can mild or severe. People with personality disorders may have trouble realizing that they have a problem, to them, their thoughts are normal, and they often blame others for their problems. They may try to get help because of their problems with relationships and work. treatment usually includes talk therapy and sometimes medicine. -Biogenic Amine Synthesis - COMT, MAOA, TPH1 - Nicotine Pathway (Dopaminergic Neuron), Pharmacodynamics - DRD2, DRD3, DRD4

* Polyradiculopathy is related to cauda equina syndrome and polyradiculoneuropathy. An important gene associated with Polyradiculopathy is COL6A1 (Collagen Type VI Alpha 1 Chain), and among its related pathways are Heart Development and Degradation of the extracellular matrix. Affiliated tissues include cervix. Radiculopathy refers to a set of conditions in which one or more nerves are affected and do not work

properly (a neuropathy). The location of the injury is at the level of the nerve root (radix = "root"). This can result in pain (radicular pain), weakness, numbness, or difficulty controlling specific muscles. (http://www.malacards.org/card/polyradiculopathy)

* Post-Thrombotic Syndrome, also known as postphlebitic syndrome, is related to lymphedema and thrombophilia, and has symptoms including mahler sign An important gene associated with Post-Thrombotic Syndrome is F5 (Coagulation Factor V), and among its related pathways are Validated transcriptional targets of AP1 family members Fra1 and Fra2 and Immune response MIF-mediated glucocorticoid regulation. Affiliated tissues include skin, testes and bone, and related mouse phenotypes are integument and cardiovascular system. A venous insufficiency that is characterized by aching pain, heaviness, swelling, cramps, itching, or tingling in the affected limb and is a chronic complication of deep venous thrombosis. (http://www.malacards.org/card/post_thrombotic_syndrome)

* Presbyopia is related to refractive error and cycloplegia, and has symptoms including aniseikonia An important gene associated with Presbyopia is CRYAA (Crystallin Alpha A). Affiliated tissues include eye, testes and cortex, and related mouse phenotype vision/eye. A condition associated with aging of the eye that results in progressively worsening ability to focus clearly on close objects. Symptoms include a hard time reading small print, having to hold reading material farther away, headaches, and eyestrain. (http://www.malacards.org/card/presbyopia)

* Seborrheic Dermatitis, also known as seborrheic infantile dermatitis, is related to seborrhea-like dermatitis with psoriasiform elements and garret tripp syndrome, and has symptoms including pruritus, greasy hair and other and unspecified skin changes. An important gene associated with Seborrheic Dermatitis is BTD (Biotinidase), and among its related pathways is Innate Lymphoid Cell Differentiation Pathways. The drugs betamethasone benzoate and sulfacetamide have been mentioned in the context of this disorder. Affiliated tissues include skin, ovary and bone. A dermatitis that is an inflammatory skin condition resulting in flaky, white to yellowish scales on oily areas such as the scalp or inside the ear, which is caused due to a combination of an over production of skin oil and irritation from a yeast Malassezia furfur. The symptoms include itching, skin lesions and scales, redness, plaques and hair loss. (http://www.malacards.org/card/seborrheic_dermatitis)

* Skin Conditions, also known as dermatologic disorders, is related to epstein-barr virus hepatitis and crouzon syndrome with acanthosis nigricans, and has symptoms including mucous membrane eruption, exanthema and pruritus. An important gene associated with Skin Conditions is TNF (Tumor Necrosis Factor), and among its related pathways are Transcription_NF-kB signaling pathway and Cytokines and Inflammatory Response. The drugs gotu kola extract and menthol have been mentioned in the context of this disorder. Affiliated tissues include skin, breast and testes. Many conditions affect the human integumentary system—the organ system covering the entire surface of the body and composed of skin, hair, nails, and related muscle and glands. The major function of this system is as a barrier against the external environment. (

http://www.malacards.org/card/skin_conditions)

* Skin Disease, also known as skin diseases, genetic, is related to dyskeratosis congenita and neurotic excoriation, and has symptoms including mucous membrane eruption, exanthema and pruritus. An important gene associated with Skin Disease is COL17A1 (Collagen Type XVII Alpha 1 Chain), and among its related pathways are Alpha6-Beta4 Integrin Signaling Pathway and Cytoskeleton remodeling Neurofilaments. The drugs gotu kola extract and menthol have been mentioned in the context of this disorder. Affiliated tissues include skin, skin and breast, and related mouse phenotypes are craniofacial and integument. An integumentary system disease that is located in skin. (http://www.malacards.org/card/skin_disease)

* Wrinkles is related to macroepiphyseal dysplasia with osteoporosis, wrinkled skin, and aged appearance and wrinkly skin syndrome. An important gene associated with Wrinkles is ALDH18A1 (Aldehyde Dehydrogenase 18 Family Member A1), and among its related pathways are Signaling events mediated by TCPTP and Neural Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include skin, eye and bone. A wrinkle is a fold, ridge or crease in the skin or on fabric. Skin wrinkles typically appear as a result of aging processes such as glycation, habitual sleeping positions, loss of body mass, or temporarily, as the result of prolonged immersion in water. Age wrinkling in the skin is promoted by habitual facial expressions, aging, sun damage, smoking, poor hydration, and various other factors. (http://www.malacards.org/card/wrinkles)

1.3.2.2 RT-MB-27

https://archive.org/details/Resonant_Therapy-Molecular_Biology_27

Genetic Superpathways-Hypoxia, Genetic Superpathways-Lung Disease, Genetic Superpathways-Multiple System Atrophy, Genetic Superpathways-Muscle Hypertrophy, Genetic Superpathways-Nasal Cavity, Genetics-Back Pain, Genetics-Blood Protein Disease, Genetics-Bone Fracture, Genetics-Capillary Disease, Genetics-Dermatomycosis, Genetics-Dermatophytosis, Genetics-Eyelid Disease, Genetics-Femoral Neuropathy, Genetics-Hypersensitivity Vasculitis, Genetics-Median Neuropathy, Genetics-Miliaria Rubra, Genetics-Muscle Disorders, Genetics-Muscle Tissue Diseases, Genetics-Osteoporotic Fracture, Genetics-Peroneal Neuropathy, Genetics-Plexopathy, Genetics-Scoliosis, Genetics-Scoliosis Idiopathic, Genetics-Skin Atrophy, Genetics-Skin Tag, Genetics Spinal Disease, Genetics-Synovitis, Genetics-Tibial Neuropathy, Genetics-Tick Infestation, Genetics-Tick Paralysis

* Back Pain is related to spondylolisthesis and osteonecrosis. An important gene associated with Back Pain is THBS2 (Thrombospondin 2), and among its related pathways are Matrix Metalloproteinases and Protein digestion and absorption. Affiliated

tissues include spinal cord, bone and testes, and related mouse phenotype limbs/digits/tail. Acute or short-term low back pain generally lasts from a few days to a few weeks.
(http://www.malacards.org/card/back_pain)

* Blood Protein Disease, also known as blood protein disorders, is related to myiasis and marek disease. An important gene associated with Blood Protein Disease is SERPINC1 (Serpin Family C Member 1), and among its related pathways are Regulation of Insulin-like Growth Factor (IGF) transport and uptake by Insulin-like Growth Factor Binding Proteins (IGFBPs) and Syndecan-4-mediated signaling events. Affiliated tissues include bone, kidney and bone marrow, and related mouse phenotypes are liver/biliary system and cardiovascular system. Blood proteins, also termed plasma proteins or serum proteins, are proteins present in blood plasma. They serve many different functions, including transport of lipids, hormones, vitamins and minerals in the circulatory system and the regulation of acellular activity and functioning of the immune system. Other blood proteins act as enzymes, complement components, protease inhibitors or kinin precursors.
(http://www.malacards.org/card/blood_protein_disease)

* Bone Fracture is related to xanthomatosis and brain injury. An important gene associated with Bone Fracture is BGLAP (Bone Gamma-Carboxyglutamate Protein), and among its related pathways are Cytoskeleton remodeling_RalB regulation pathway and PI3K-Akt signaling pathway. Affiliated tissues include bone, breast and prostate, and related mouse phenotypes are muscle and cardiovascular system. A medical condition in which there is a damage in the continuity of the bone.
(http://www.malacards.org/card/bone_fracture)

* Capillary Disease, also known as disease of capillaries, is related to subacute lymphocytic thyroiditis and melanoacanthoma, and has symptoms including cardiovascular symptoms and vascular pain. An important gene associated with Capillary Disease is IL2 (Interleukin 2), and among its related pathways are IL-15 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Cytokines and Inflammatory Response. Affiliated tissues include the capillaries, heart and testes, and related mouse phenotypes are homeostasis/metabolism and immune system. A vascular disease that is located in the capillaries.
(http://www.malacards.org/card/capillary_disease)

* Dermatomycosis, also known as dermatomycoses, is related to superficial mycosis and lobomycosis. An important gene associated with Dermatomycosis is RPS3 (Ribosomal Protein S3), and among its related pathways is Amino sugar and nucleotide sugar metabolism. The drug povidone has been mentioned in the context of this disorder. Affiliated tissues include skin or of its appendages, skin and testes, and related mouse phenotype Increased shRNA abundance (Z-score > 2). A cutaneous mycosis that results in fungal infection located in skin or of its appendages, has material basis in Ascomycota fungi other than the dermatophytes.
(http://www.malacards.org/card/dermatomycosis)

* Dermatophytosis, also known as tinea, is related to deep dermatophytosis and tinea corporis, and has symptoms including exanthema and pruritus. An important gene associated with Dermatophytosis is CARD9 (Caspase Recruitment Domain Family Member 9), and among its related pathways are Cytokines and Inflammatory Response and NF-kappaB Signaling. Affiliated tissues include scalp, glabrous skin and nail. A cutaneous mycosis that results in fungal infection located in scalp, located in glabrous skin, or located in nail, has material basis in Ascomycota fungi that belong to a group called dermatophytes, which have the ability to utilize keratin as a nutrient source.
(http://www.malacards.org/card/dermatophytosis)

* Eyelid Disease, also known as eyelid diseases, is related to blepharochalasis and blepharitis, and has symptoms including pathergy reaction, glassy eye and eyelid skin dryness. An important gene associated with Eyelid Disease is FOXL2 (Forkhead Box L2). Affiliated tissues include the eyelid, eye and skin. An adnexa disease that is located in the eyelid.
(http://www.malacards.org/card/eyelid_disease)

* Femoral Neuropathy, also known as femoral nerve dysfunction, is related to neuropathy and glandular tularemia, and has symptoms including femoral neuralgia An important gene associated with Femoral Neuropathy is VLDLR (Very Low Density Lipoprotein Receptor), and among its related pathways is Platelet Aggregation Inhibitor Pathway, Pharmacodynamics. Affiliated tissues include skin, bone and brain. A mononeuropathy that is characterized by a loss of movement or sensation in parts of the legs due to damage to the femoral nerve.
(http://www.malacards.org/card/femoral_neuropathy)

* Hypersensitivity Vasculitis, also known as cutaneous small vessel vasculitis, is related to systemic lupus erythematosus and allergic cutaneous vasculitis, and has symptoms including cutis marmorata, urticaria and subcutaneous hemorrhage. An important gene associated with Hypersensitivity Vasculitis is CD79A (CD79a Molecule), and among its related pathways are Immune response Lectin induced complement pathway and Creation of C4 and C2 activators. Affiliated tissues include skin, neutrophil and testes, and related mouse phenotype immune system. An inflammation of small blood vessels (usually post-capillary venules in the dermis), characterized by palpable purpura.
(http://www.malacards.org/card/hypersensitivity_vasculitis)

* Hypoxia is related to methemoglobinemia and renal cell carcinoma, and has symptoms including anoxemia, cachexia and cyanosis. An important gene associated with Hypoxia is HIF1A (Hypoxia Inducible Factor 1 Alpha Subunit), and among its related pathways are Transcription Ligand-dependent activation of the ESR1/SP pathway and Notch-mediated HES/HEY network. Affiliated tissues include endothelial, lung and brain, and related mouse phenotypes are liver/biliary system and endocrine/exocrine gland. Hypoxia is a pathological condition in which the body as a whole (generalized hypoxia) or region of the body (tissue hypoxia) is deprived of adequate oxygen supply. Hypoxia contributes significantly to the pathophysiology of

major categories of human disease, including myocardial and cerebral ischemia, cancer, pulmonary hypertension, congenital heart disease and chronic obstructive pulmonary disease.
(http://www.malacards.org/card/hypoxia)

* Lung Disease, also known as lung diseases, is related to pulmonary hypertension and middle lobe syndrome, and has symptoms including coughing, coughing and dyspnea. An important gene associated with Lung Disease is SFTPC (Surfactant Protein C), and among its related pathways are RXR and RAR heterodimerization with other nuclear receptor and NF-kappa B signaling pathway. Affiliated tissues include lung, testes and heart, and related mouse phenotypes are neoplasm and hematopoietic system. A lower respiratory tract disease in which the function of the lungs is adversely affected by narrowing or blockage of the airways resulting in poor air flow, a loss of elasticity in the lungs that produces a decrease in the total volume of air that the lungs are able to hold, and clotting, scarring, or inflammation of the blood vessels that affect the ability of the lungs to take up oxygen and to release carbon dioxide.
(http://www.malacards.org/card/lung_disease)

* Median Neuropathy is related to carpal tunnel syndrome, familial and neuropathy, and has symptoms including median nerve neuralgia An important gene associated with Median Neuropathy is LMNA (Lamin A/C). Affiliated tissues include breast, skin and testes.
(http://www.malacards.org/card/median_neuropathy)

* Miliaria Rubra, also known as miliaria crystallina, is related to anhidrosis and miliaria, and has symptoms including exanthema, night sweats and cold sweat. An important gene associated with Miliaria Rubra is TSPAN7 (Tetraspanin 7). Affiliated tissues include skin and eye, and related mouse phenotype integument. A common ailment in hot and humid conditions, such as in the tropics and during the summer season.
(http://www.malacards.org/card/miliaria_rubra)

* Multiple System Atrophy, also known as shy-drager syndrome, is related to essential tremor and pick disease, and has symptoms including cognitive impairment, urinary urgency and urinary incontinence. An important gene associated with Multiple System Atrophy is COQ2 (Coenzyme Q2, Polyprenyltransferase), and among its related pathways are Biogenic Amine Synthesis and Monoamine Transport. Affiliated tissues include brain, testes and bone, and related mouse phenotypes are taste/olfaction and no phenotypic analysis. A progressive neurodegenerative disorder characterized by symptoms of autonomic nervous system failure such as fainting spells and bladder control problems, combined with motor control symptoms such as tremor, rigidity, and loss of muscle coordination. MSA affects both men and women primarily in their 50s.
(http://www.malacards.org/card/multiple_system_atrophy)

* Muscle Disorders, also known as myopathy, is related to myopathy, vacuolar, with casq1 aggregates and miyoshi muscular dystrophy 1, and has symptoms including back pain, dystonia and muscle cramp. An important gene associated with Muscle Disorders

is RYR1 (Ryanodine Receptor 1), and among its related pathways are Smooth Muscle Contraction and ECM-receptor interaction. Affiliated tissues include heart, brain and skeletal muscle, and related mouse phenotype muscle.
(http://www.malacards.org/card/muscle_disorders)

* Muscle Hypertrophy, also known as hypertrophy, is related to myostatin-related muscle hypertrophy and adenoid hypertrophy, and has symptoms including skeletal muscle hypertrophy, cachexia and cyanosis. An important gene associated with Muscle Hypertrophy is MSTN (Myostatin), and among its related pathways are LKB1 signaling events and EGFR Transactivation by Gastrin. Affiliated tissues include prostate, heart and skeletal muscle, and related mouse phenotypes are Decreased viability with paclitaxel and adipose tissue. Muscle hypertrophy involves an increase in size of skeletal muscle through a growth in size of its component cells.
(http://www.malacards.org/card/muscle_hypertrophy)

* Muscle Tissue Diseases is related to myotonia congenita, dominant and cerebellar agenesis. An important gene associated with Muscle Tissue Disease is DMD (Dystrophin), and among its related pathways are Muscular Dystrophies and Dystrophin-Glycoprotein Complex and Non-integrin membrane-ECM interactions. Affiliated tissues include heart, brain and skeletal muscle, and related mouse phenotypes are no phenotypic analysis and cellular.
(http://www.malacards.org/card/muscle_tissue_disease)

* Nasal Cavity Disease, also known as disorder of nasal cavity, is related to cytoplasmic body myopathy and chronic pulmonary heart disease, and has symptoms including purulent rhinitis An important gene associated with Nasal Cavity Disease is RNASE3 (Ribonuclease A Family Member 3), and among its related pathways are IL-9 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Hematopoietic cell lineage. Affiliated tissues include heart, bone and lung, and related mouse phenotypes are Increased transferrin (TF) endocytosis and digestive/alimentary.
(http://www.malacards.org/card/nasal_cavity_disease)

* Osteoporotic Fracture, also known as osteoporotic fractures, is related to bone mineral density qtl18, osteoporosis and osteoporosis. An important gene associated with Osteoporotic Fracture is COL1A1 (Collagen Type I Alpha 1 Chain). Affiliated tissues include bone, bone marrow and prostate.
(http://www.malacards.org/card/osteoporotic_fracture)

* Peroneal Neuropathy, also known as peroneal neuropathies, is related to neuropathy and hereditary orotic aciduria without megaloblastic anaemia. An important gene associated with Peroneal Neuropathy is LITAF (Lipopolysaccharide Induced TNF Factor), and among its related pathways are Dendritic Cells Developmental Lineage Pathway and Hematopoietic cell lineage. Affiliated tissues include endothelial, liver and bone.
(http://www.malacards.org/card/peroneal_neuropathy)

* Plexopathy is related to radiation induced brachial plexopathy and sacral plexopathy. An important gene associated with Plexopathy is PMP22 (Peripheral Myelin Protein 22), and among its related pathways are SIDS Susceptibility Pathways and Neuroscience. Affiliated tissues include bone, myeloid and lung, and related mouse phenotypes are muscle and behavior/neurological. A disorder affecting a network of nerves, blood vessels, or lymph vessels.
(http://www.malacards.org/card/plexopathy)

* Scoliosis is related to osteogenesis imperfecta, type iv and gaze palsy, horizontal, with progressive scoliosis. An important gene associated with Scoliosis is ROBO3 (Roundabout Guidance Receptor 3), and among its related pathways are VEGFR3 signaling in lymphatic endothelium and Cell adhesion_ECM remodeling. Affiliated tissues include bone, testes and skin, and related mouse phenotypes are respiratory system and craniofacial. A bone structure disease characterized by an appreciable lateral deviation in the normally straight vertical line of the spine.
(http://www.malacards.org/card/scoliosis)

* Scoliosis Idiopathic, is related to adolescent idiopathic scoliosis and scoliosis, isolated 3. An important gene associated with Idiopathic Scoliosis is MTNR1B (Melatonin Receptor 1B), and among its related pathways are Apoptosis and survival_Anti-apoptotic action of nuclear ESR1 and ESR2 and Plasma membrane estrogen receptor signaling. Affiliated tissues include bone, brain and testes, and related mouse phenotypes are adipose tissue and limbs/digits/tail. A scoliosis with no known cause, idiopathic scoliosis is the most common spinal deformity in the world. Like other forms of scoliosis, idiopathic scoliosis affects the curvature of the spine.
(http://www.malacards.org/card/idiopathic_scoliosis)

* Skin Atrophy, also known as atrophic condition of skin, is related to atrophoderma vermiculata and atrophoderma of pierini and pasini, and has symptoms including stellate pseudoscar and paroxysmal hematoma of the finger. An important gene associated with Skin Atrophy is FERMT1 (Fermitin Family Member 1), and among its related pathways are Bladder cancer and Cell adhesion_Cell-matrix glycoconjugates. Affiliated tissues include skin, testes and bone, and related mouse phenotypes are muscle and digestive/alimentary.
(http://www.malacards.org/card/skin_atrophy)

* Skin Tag, also known as fibroepithelial polyp of skin, is related to fibroepithelial polyp of the anus and fibroepithelial polyp of urethra, and has symptoms including macule and leser-trÃ©lat sign. An important gene associated with Skin Tag is PTCH1 (Patched 1). Affiliated tissues include skin, testes and t cells, and related mouse phenotypes are embryo and skeleton. A small benign tumor that forms primarily in areas where the skin forms creases, such as the neck, armpit, and groin. They may also occur on the face, usually on the eyelids.
(http://www.malacards.org/card/skin_tag)

* Spinal Disease, also known as spinal disorder, is related to sacral agenesis with

vertebral anomalies and cutaneous leishmaniasis, and has symptoms including back pain, sciatica and other back symptoms. An important gene associated with Spinal Disease is SMN1 (Survival Of Motor Neuron 1, Telomeric), and among its related pathways are Transcription_Role of VDR in regulation of genes involved in osteoporosis and IL6-mediated signaling events. Affiliated tissues include spinal cord, bone and brain. Spinal disease (also known as a dorsopathy) refers to a condition impairing the backbone. These include various diseases of the back or spine, such as kyphosis. Dorsalgia refers to those conditions causing back pain. An example is scoliosis. Some other spinal diseases include Spinal Muscular Atrophy, Ankylosing Spondylitis, Lumbar Spinal Stenosis, Spina Bifida, Spinal tumors, Osteoporosis and Cauda Equina Syndrome.
(http://www.malacards.org/card/spinal_disease)

* Synovitis is related to pigmented villonodular synovitis and villonodular synovitis, and has symptoms including arthralgia and metatarsalgia. An important gene associated with Synovitis is TNF (Tumor Necrosis Factor). Affiliated tissues include synovial membrane, bone and t cells. A connective tissue disease that results in inflammation located in synovial membrane that lines a synovial joint which causes pain and swelling.
(http://www.malacards.org/card/synovitis)

* Tibial Neuropathy, also known as posterior tibial neuropathy, is related to infertility and lactic acidosis. An important gene associated with Tibial Neuropathy is CRYGB (Crystallin Gamma B). Affiliated tissues include endothelial and skin, and related mouse phenotype hearing/vestibular/ear.
(http://www.malacards.org/card/tibial_neuropathy)

* Tick Infestation, also known as tick infestations, is related to tick paralysis and spotted fever. An important gene associated with Tick Infestation is ITGA11 (Integrin Subunit Alpha 11), and among its related pathways is Folate biosynthesis. Affiliated tissues include testes, salivary gland and skin, and related mouse phenotype Decreased focal adhesion (FA) area, decreased FA length, decreased FA mean intensity, increased number of small and round FAs, increased FA abundance. A parasitic ectoparasitic infectious disease that involves parasitic infestation of blood feeding ticks of the families Ixodidae and Argasidae on animals and humans. Ticks are vectors of a number diseases, including Lyme disease, Q fever, Colorado tick fever, tularemia, tick-borne relapsing fever, babesiosis, ehrlichiosis and tick-borne meningoencephalitis, as well as anaplasmosis in cattle and canine jaundice.
(http://www.malacards.org/card/tick_infestation)

* Tick Paralysis is related to poliomyelitis and gonococcal endophthalmia. An important gene associated with Tick Paralysis is TNNI3 (Troponin I3, Cardiac Type). Affiliated tissues include salivary gland, testes and lung. A tick infestation that is characterized by an acute, ascending, flaccid motor paralysis, which is caused by the introduction of a neurotoxin into humans during attachment and feeding by the females of several tick species such as Dermacentor andersoni, Dermacentor variabilis, Amblyomma americanum, Amblyomma maculatum, Ixodes scapularis, Ixodes pacificus, Ixodes

holocyclus, Rhipicephalus sanguineus and Otobius megnini. The symptoms include local inflammation, edema and hemorrhage.
(http://www.malacards.org/card/tick_paralysis)

1.3.2.3 RT-MB-28

https://archive.org/details/Resonant_Therapy-Molecular_Biology_28

Genetic Superpathways-Alzheimer Disease; Genetic Superpathways-Amnestic Disorder; Genetic-Superpathways-Ankylosis; Genetic Superpathways-Connective Tissue Disease; Genetic Superpathways-Chronic Conjunctivitis; Genetic Superpathways-Dementia; Genetic Superpathways-Neuroma; Genetic Superpathways-Osteoarthritis; Genetic Superpathways-Syncope; Genetics-Arthropathy; Genetics-Chondromalacia Patella; Genetics-Delayed Sleep Phase; Genetics-Fainting; Genetics-Hydrarthrosis; Genetics-Intermittent Hydrarthrosis; Genetics-Mental Health Disease; Genetics-Miliaria; Genetics-Nasopharyngeal Disease; Genetics-Neuromuscular Disease; Genetics-Parkinson Disease 1; Genetics-Patellofemoral Pain Syndrome; Genetics-Plica; Genetics-Radial Neuropathy; Genetics-Reactive Arthritis; Genetics-Sciatic Nerve Lesion; Genetics-Sciatic Neuropathy; Genetics-Shoulder Impingement; Genetics-Tendinitis; Genetics-Thoracic Outlet; Genetics-Ulnar Neuropathy;

* Alzheimer Disease, also known as alzheimer's disease, is related to alzheimer disease-4 and parkinson disease 1, and has symptoms including sleeplessness, sleeplessness and equilibration disorder. An important gene associated with Alzheimer Disease is APP (Amyloid Beta Precursor Protein), and among its related pathways are Neuroscience and Alzheimers Disease Pathway. The drugs dl-alpha tocopheryl acetate and tocopherol acetate have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and cortex, and related mouse phenotypes are mortality/aging and immune system. A neurodegenerative disorder characterized by progressive dementia, loss of cognitive abilities, and deposition of fibrillar amyloid proteins as intraneuronal neurofibrillary tangles, extracellular amyloid plaques and vascular amyloid deposits.
(http://www.malacards.org/card/alzheimer_disease)

* Amnestic Disorder, also known as amnesia, is related to transient global amnesia and retrograde amnesia, and has symptoms including other amnesia, memory loss and forgetful. An important gene associated with Amnestic Disorder is CHAT (Choline O-Acetyltransferase), and among its related pathways are Biogenic Amine Synthesis and Acetylcholine Synthesis. Affiliated tissues include brain, testes and breast, and related mouse phenotypes are Increased transferrin (TF) endocytosis and adipose tissue. A cognitive disorder where the memory is disturbed or lost and involves the loss of memories previously established, loss of the ability to create new memories, or loss of the ability to learn new information.

(http://www.malacards.org/card/amnestic_disorder)

* Ankylosis is related to fibrodysplasia ossificans progressiva and auriculocondylar syndrome 1, and has symptoms including joint symptom, hyperextension and joint stiffness. An important gene associated with Ankylosis is ANKH (ANKH Inorganic Pyrophosphate Transport Regulator), and among its related pathways are Cardiomyocyte Differentiation through BMP Receptors and Selective Serotonin Reuptake Inhibitor Pathway, Pharmacodynamics. Affiliated tissues include bone, endothelial and t cells, and related mouse phenotypes are Decreased IL-13 protein expression and digestive/alimentary. An arthropathy where there is a stiffness of a joint, the result of injury or disease.
(http://www.malacards.org/card/ankylosis)

* Arthropathy also known as joint ankylosis of the pelvic region and thigh is related to rheumatoid arthritis and camptodactyly-arthropathy-coxa vara-pericarditis syndrome and has symptoms including arthralgia back pain and metatarsalgia. An important gene associated with Arthropathy is PRG4 (Proteoglycan 4) and among its related pathways are Osteoclast Signaling and Osteoblast Signaling. Affiliated tissues include joint bone and testes and related mouse phenotypes are muscle and liver/biliary system. A bone inflammation disease that is located in joint.
(http://www.malacards.org/card/arthropathy)

* Patella, Chondromalacia of, also known as chondromalacia patellae, is related to chondromalacia and brain stem angioblastoma, and has symptoms including abnormality of the patella An important gene associated with Patella, Chondromalacia of is EGR3 (Early Growth Response 3), and among its related pathways are ECM-receptor interaction and ECM proteoglycans. Affiliated tissues include bone, and related mouse phenotypes are Increased Nanog expression and Increased gamma-H2AX phosphorylation. An inflammation of the underside of the patella and softening of the cartilage.
(http://www.malacards.org/card/patella_chondromalacia_of)

* Chronic Conjunctivitis, also known as chronic conjunctivitis, unspecified, is related to asthma and simple chronic conjunctivitis. An important gene associated with Chronic Conjunctivitis is FCER2 (Fc Fragment Of IgE Receptor II), and among its related pathways are Inflammatory Response Pathway and IL12 signaling mediated by STAT4. Affiliated tissues include eye, thyroid and bone, and related mouse phenotypes are digestive/alimentary and hematopoietic system.
(http://www.malacards.org/card/chronic_conjunctivitis)

* Connective Tissue Disease, also known as connective tissue diseases, is related to lipodermatosclerosis and rheumatoid arthritis, and has symptoms including sciatica, muscle cramp and back pain. An important gene associated with Connective Tissue Disease is FBN1 (Fibrillin 1), and among its related pathways are Legionellosis and Pertussis. Affiliated tissues include bone, skin and lung, and related mouse phenotypes are renal/urinary system and embryo. A musculoskeletal system disease that affects

tissues such as skin, tendons, and cartilage. The recording plays only the pathways, other related genes are not included.
(http://www.malacards.org/card/connective_tissue_disease)

* Delayed Sleep Phase Syndrome, also known as delayed sleep phase syndrome, susceptibility to, is related to dsp-related ectodermal dysplasia/skin fragility syndrome and arrhythmogenic right ventricular dysplasia 1, and has symptoms including sleep disturbances and disruption of 24 hour sleep wake cycle, unspecified. An important gene associated with Delayed Sleep Phase Syndrome is AANAT (Aralkylamine N-Acetyltransferase), and among its related pathways are Circadian rhythm pathway and Metabolic States and Circadian Oscillators. Affiliated tissues include liver, testes and brain. A circadian rhythm sleep disorder characterized by sleep-onset insomnia and difficulty in awakening at the desired time. Patients with DSPS have chronic difficulty in adjusting their sleep-onset and wake-up times to occupational, school, and social activities.
(http://www.malacards.org/card/delayed_sleep_phase_syndrome)

* Dementia, also known as presenile dementia, is related to dementia, frontotemporal and mast syndrome, and has symptoms including back pain, headache and pain. An important gene associated with Dementia is MAPT (Microtubule Associated Protein Tau), and among its related pathways are Notch Pathway and p75(NTR)-mediated signaling. The drugs prochlorperazine maleate and prochlorperazine have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and cortex, and related mouse phenotypes are limbs/digits/tail and muscle. A cognitive disorder resulting from a loss of brain function affecting memory, thinking, language, judgement and behavior.
(http://www.malacards.org/card/dementia)

* Fainting is related to myocardial infarction and syncope. An important gene associated with Fainting is KCNH2 (Potassium Voltage-Gated Channel Subfamily H Member 2), and among its related pathways are Formation of Fibrin Clot (Clotting Cascade) and Complement and coagulation cascades. Affiliated tissues include brain, skin and heart, and related mouse phenotype homeostasis/metabolism. A temporary loss of consciousness.
(http://www.malacards.org/card/fainting)

* Hydrarthrosis is related to intermittent hydrarthrosis and gestational diabetes, and has symptoms including arthralgia, metatarsalgia and joint swelling. An important gene associated with Hydrarthrosis is MEFV (MEFV, Pyrin Innate Immunity Regulator), and among its related pathways are Aquaporin-mediated transport and SIDS Susceptibility Pathways. Affiliated tissues include bone, and related mouse phenotypes are hematopoietic system and homeostasis/metabolism. An effusion of watery liquid into the cavity of a joint.
(http://www.malacards.org/card/hydrarthrosis)

* Intermittent Hydrarthrosis, also known as intermittent joint effusion, is related to

hydrarthrosis and synovitis. An important gene associated with Intermittent Hydrarthrosis is MEFV (MEFV, Pyrin Innate Immunity Regulator). Affiliated tissues include bone. a chronic condition of unknown cause characterized by recurring, temporary episodes of fluid accumulation in the knee. While the knee is mainly involved, occasionally other joints such as the elbow or ankle can additionally be affected.
(http://www.malacards.org/card/intermittent_hydrarthrosis)

* Disease of Mental Health, also known as mental disorders, is related to schizophrenia and sexual disorder, and has symptoms including symptoms, sluggishness and shaking inside. An important gene associated with Disease of Mental Health is IER3IP1 (Immediate Early Response 3 Interacting Protein 1), and among its related pathways are Neurotransmitter Clearance In The Synaptic Cleft and GPCRs, Other. Affiliated tissues include brain, testes and heart, and related mouse phenotypes are muscle and digestive/alimentary. A disease that involves a psychological or behavioral pattern generally associated with subjective distress or disability that occurs in an individual, and which are not a part of normal development or culture.
(http://www.malacards.org/card/disease_of_mental_health)

* Miliaria is related to anhidrosis and miliaria rubra, and has symptoms including exanthema, night sweats and cold sweat. An important gene associated with Miliaria is TSPAN7 (Tetraspanin 7), and among its related pathways are Malaria and Hematopoietic Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include skin and eye, and related mouse phenotypes are digestive/alimentary and respiratory system. Also called heat rash or prickly heat.
(http://www.malacards.org/card/miliaria)

* Nasopharyngeal Disease, also known as nasopharyngeal diseases, is related to nasopharyngitis and allergic hypersensitivity disease, and has symptoms including myoclonus, palatal An important gene associated with Nasopharyngeal Disease is PSMB9 (Proteasome Subunit Beta 9). Affiliated tissues include lung, testes and colon.
(http://www.malacards.org/card/nasopharyngeal_disease)

* Neuroma is related to multiple mucosal neuroma and multiple endocrine neoplasia iib. An important gene associated with Neuroma is ANK3 (Ankyrin 3), and among its related pathways are Spinal Cord Injury and Angiogenesis (CST). Affiliated tissues include brain, bone and skin, and related mouse phenotypes are Increased proliferation and muscle. A nervous system benign neoplasm that is characterized as a nerve tissue tumor.
(http://www.malacards.org/card/neuroma)

* Neuromuscular Disease, also known as neuromuscular diseases, is related to hypertonia and central core disease, and has symptoms including athetosis, back pain and headache. An important gene associated with Neuromuscular Disease is TRPV4 (Transient Receptor Potential Cation Channel Subfamily V Member 4), and among its related pathways are Muscular Dystrophies and Dystrophin-Glycoprotein Complex and Agrin Interactions at Neuromuscular Junction. Affiliated tissues include spinal cord,

bone and testes, and related mouse phenotypes are limbs/digits/tail and hearing/vestibular/ear. A neuropathy that affect the nerves that control the voluntary muscles.
(http://www.malacards.org/card/neuromuscular_disease)

* Osteoarthritis, also known as degenerative joint disease, is related to rheumatoid arthritis and spondylolisthesis, and has symptoms including arthralgia, back pain and metatarsalgia. An important gene associated with Osteoarthritis is COL2A1 (Collagen Type II Alpha 1 Chain), and among its related pathways are IL-9 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Syndecan-1-mediated signaling events. The drugs chondroitin sulfates and diclofenac have been mentioned in the context of this disorder. Affiliated tissues include joint, bone and bone marrow, and related mouse phenotypes are limbs/digits/tail and immune system. An arthritis that has material basis in worn out cartilage located in joint.
(http://www.malacards.org/card/osteoarthritis)

* Parkinson Disease 1, also known as autosomal dominant parkinson disease 1, is related to kufor-rakeb syndrome and parkinson disease, late-onset, and has symptoms including urinary urgency, dysarthria and mental deterioration. An important gene associated with Parkinson Disease 1 is SNCA (Synuclein Alpha), and among its related pathways are Proteolysis_Putative ubiquitin pathway and Alpha-synuclein signaling. Affiliated tissues include brain, subthalamic nucleus and cortex, and related mouse phenotypes are taste/olfaction and cellular. A complex neurodegenerative disorder characterized by bradykinesia, resting tremor, muscular rigidity and postural instability. Additional features are characteristic postural abnormalities, dysautonomia, dystonic cramps, and dementia.
(http://www.malacards.org/card/parkinson_disease_1)

* Patellofemoral Pain Syndrome is related to glandular tularemia and hypotropia, and has symptoms including arthralgia, metatarsalgia and joint laxity. An important gene associated with Patellofemoral Pain Syndrome is PRF1 (Perforin 1), and among its related pathways are Estrogen signaling pathway and Downstream signaling in naive CD8+ T cells. Affiliated tissues include bone and testes, and related mouse phenotypes are hematopoietic system and immune system. A syndrome characterized by knee pain ranging from severe to mild discomfort seemingly originating from the contact of the posterior surface of the patella (back of the kneecap) with the femur (thigh bone).
(http://www.malacards.org/card/patellofemoral_pain_syndrome)

* Plica Syndrome is related to acrorenal syndrome and malignant type ab thymoma, and has symptoms including arthralgia, joint swelling and joint stiffness. An important gene associated with Plica Syndrome is ELN (Elastin), and among its related pathways is Hematopoietic Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include bone and testes. A condition which occurs when a plica (an extension of the protective synovial capsule of the knee) becomes irritated, enlarged, or inflamed.
(http://www.malacards.org/card/plica_syndrome)

* Radial Neuropathy is related to radial nerve lesion and neuropathy. An important gene associated with Radial Neuropathy is PC (Pyruvate Carboxylase), and among its related pathways are Fc gamma R-mediated phagocytosis and Neural Stem Cell Differentiation Pathways and Lineage-specific Markers. Related mouse phenotype Decreased shRNA abundance (Z-score < -2). A type of mononeuropathy which results from acute trauma to the radial nerve that extends the length of the arm.
(http://www.malacards.org/card/radial_neuropathy)

* Reactive Arthritis, also known as reiter syndrome, is related to hepatitis b and systemic lupus erythematosus, and has symptoms including abnormality of the oral cavity, abnormality of the urethra and hyperkeratosis. An important gene associated with Reactive Arthritis is HLA-B (Major Histocompatibility Complex, Class I, B), and among its related pathways are IL-15 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Legionellosis. Affiliated tissues include t cells, heart and endothelial, and related mouse phenotypes are neoplasm and no phenotypic analysis. An arthritis that is an autoimmune disease which develops due to an infection located elsewhere in the body.
(http://www.malacards.org/card/reactive_arthritis)

* Sciatic Nerve Lesion, also known as lesion of sciatic nerve, nos, is related to pseudoainhum and neonatal respiratory failure. An important gene associated with Lesion of Sciatic Nerve is NGF (Nerve Growth Factor), and among its related pathways are Guidance Cues and Growth Cone Motility and BDNF signaling pathway. Affiliated tissues include testes, and related mouse phenotypes are muscle and cardiovascular system.
(http://www.malacards.org/card/lesion_of_sciatic_nerve)

* Sciatic Neuropathy is related to neuropathy and goiter, and has symptoms including sciatica An important gene associated with Sciatic Neuropathy is PMP22 (Peripheral Myelin Protein 22), and among its related pathways are Trk receptor signaling mediated by PI3K and PLC-gamma and Inflammatory Response Pathway. Affiliated tissues include spinal cord, thalamus and b cells, and related mouse phenotypes are muscle and no phenotypic analysis. Compression of or damage to the sciatic nerve.
(http://www.malacards.org/card/sciatic_neuropathy)

* Shoulder Impingement Syndrome, also known as impingement syndrome of shoulder region, is related to necrotizing ulcerative gingivitis and neurilemmoma of the fifth cranial nerve, and has symptoms including arthralgia and metatarsalgia. An important gene associated with Shoulder Impingement Syndrome is SKIL (SKI Like Proto-Oncogene), and among its related pathways are Osteoclast Signaling and G-protein signaling_H-RAS regulation pathway. Affiliated tissues include testes, bone and spinal cord, and related mouse phenotypes are Decreased viability and liver/biliary system.
(http://www.malacards.org/card/shoulder_impingement_syndrome)

* Syncope is related to jervell and lange-nielsen syndrome and atrial fibrillation, familial,

3. An important gene associated with Syncope is SLC6A2 (Solute Carrier Family 6 Member 2), and among its related pathways are Antiarrhythmic Pathway, Pharmacodynamics and SIDS Susceptibility Pathways. Affiliated tissues include testes, brain and heart, and related mouse phenotype muscle. A temporary loss of consciousness due to the sudden decline of blood flow to the brain. Syncope is commonly called fainting or passing out.
(http://www.malacards.org/card/syncope)

* Tendinitis, also known as tendinopathy, is related to xanthomatosis and calcific tendinitis, and has symptoms including back pain, muscle cramp and sciatica. An important gene associated with Tendinitis is G6PC (Glucose-6-Phosphatase Catalytic Subunit), and among its related pathways are Osteoclast Signaling and ECM proteoglycans. Affiliated tissues include bone, testes and hypothalamus. A tendon injury that involves larger-scale acute injuries accompanied by inflammation.
(http://www.malacards.org/card/tendinitis)

* Thoracic Outlet Syndrome, also known as tos, is related to neurogenic thoracic outlet syndrome and venous thoracic outlet syndrome, and has symptoms including paresthesia, abnormality of the ribs and edema. An important gene associated with Thoracic Outlet Syndrome is HHAT (Hedgehog Acyltransferase). Affiliated tissues include testes, lung and ovary, and related mouse phenotypes are Increased number of mitotic cells and Increased number of cells in monopolar arrest with EMD534085 (a Kinesin-5 inhibitor). Thoracic outlet syndrome refers to the many signs and symptoms caused from compression of the group of nerves and blood vessels in the area just above the first rib and behind the clavicle.
(http://www.malacards.org/card/thoracic_outlet_syndrome)

* Ulnar Neuropathy, also known as ulnar neuropathies, is related to neuropathy and chronic salpingitis. An important gene associated with Ulnar Neuropathy is ARHGEF10 (Rho Guanine Nucleotide Exchange Factor 10), and among its related pathways are Pyruvate metabolism and Citric Acid (TCA) cycle and Signaling by Retinoic Acid. Affiliated tissues include testes, kidney and spinal cord.
(http://www.malacards.org/card/ulnar_neuropathy)

1.3.2.4 RT-MB-29

Genetic Superpathways-Acquired Metabolic Disease; Genetic Superpathways-Hypercholesterolemia; Genetic Superpathways-Immune System Disease; Genetic Superpathways-Iron Deficiency Anemia; Genetic Superpathways-Nervous System Disease; Genetic Superpathways-Nicotine Dependence; Genetic Superpathways-Nose Disease; Genetic Superpathways-Parkinson Disease Late Onset; Genetics-Auditory System Disease; Genetics-Autonomic Neuropathy; Genetics-Basal Ganglia Disease; Genetics-Blepharochalasis; Genetics-Cartilage Disease; Genetics-Collagen Disease;

Genetics-Cutis Laxa; Genetics-Eye Disease; Genetics-Hair Disease; Genetics-Hypothalamic Disease; Genetics-Keratosis; Genetics-Mitochondrial Complex I Deficiency; Genetics-Motor Peripheral Neuropathy; Genetics-Muscular Atrophy; Genetics-Peripheral Vertigo; Genetics-Pigmentation Disease; Genetics-Reflex Sympathetic Dystrophy; Genetics-Salivary Gland Disease; Genetics-Sebaceous Gland Disease; Genetics-Sensory Peripheral Neuropathy; Genetics-Sweat Gland Disease; Genetics-Tremor

* Acquired Metabolic Disease is related to hypotelorism cleft palate hypospadias and scleredema adultorum. An important gene associated with Acquired Metabolic Disease is INS (Insulin), and among its related pathways are Signaling events mediated by PTP1B and Aldosterone-regulated sodium reabsorption. Affiliated tissues include bone, liver and heart, and related mouse phenotypes are neoplasm and renal/urinary system. A disease of metabolism that has material basis in enzyme deficiency or accumulation of enzymes or toxins which interfere with normal function due to an endocrine organ disease, organ malfunction, inadequate intake, dietary deficiency, or malabsorption.
(http://www.malacards.org/card/acquired_metabolic_disease)

* Auditory System Disease, also known as ear diseases, is related to deafness, autosomal dominant 3a and deafness, autosomal recessive 4, with enlarged vestibular aqueduct, and has symptoms including diplacusis, bilateral, diplacusis, left ear and diplacusis, right ear. An important gene associated with Auditory System Disease is GJB2 (Gap Junction Protein Beta 2), and among its related pathways is Gap junction trafficking. The drugs sulfacetamide and sulfacetamide sodium have been mentioned in the context of this disorder. Affiliated tissues include brain, eye and testes, and related mouse phenotypes are behavior/neurological and hearing/vestibular/ear.
(http://www.malacards.org/card/auditory_system_disease)

* Autonomic Neuropathy is related to neuropathy, hereditary sensory and autonomic, type v and lupus erythematosus. An important gene associated with Autonomic Neuropathy is NGF (Nerve Growth Factor), and among its related pathways is Activation of TRKA receptors. Affiliated tissues include heart, testes and spinal cord, and related mouse phenotypes are integument and muscle. A form of polyneuropathy that affects the non-voluntary, non-sensory nervous system (i.e., the autonomic nervous system).
(http://www.malacards.org/card/autonomic_neuropathy)

* Basal Ganglia Disease, also known as basal ganglia diseases, is related to biotin-thiamine-responsive basal ganglia disease and dandy-walker malformation with intellectual disability, basal ganglia disease and seizures. An important gene associated with Basal Ganglia Disease is SLC19A3 (Solute Carrier Family 19 Member 3), and among its related pathways is Vitamin digestion and absorption. Affiliated tissues include brain, subthalamic nucleus and testes, and related mouse phenotypes are adipose tissue and immune system. A group of physical dysfunctions that occur when

the group of nuclei in the brain known as the basal ganglia fail to properly suppress unwanted movements or to properly prime upper motor neuron circuits to initiate motor function.
(http://www.malacards.org/card/basal_ganglia_disease)

* Blepharochalasis is related to blepharochalasis and double lip and amyoplasia mandibulofacial dysostosis, and has symptoms including eyelash injury, lacrimal punctum enlarged and eyelid skin dryness. An important gene associated with Blepharochalasis is GSN (Gelsolin), and among its related pathways are Osteopontin-mediated events and Cell adhesion_ECM remodeling. Affiliated tissues include skin, eye and neutrophil, and related mouse phenotypes are homeostasis/metabolism and hematopoietic system. An eyelid disease that is characterized by exacerbations and remissions of eyelid edema, which results in a stretching and subsequent atrophy of the eyelid tissue, leading to the formation of redundant folds over the lid margins.
(http://www.malacards.org/card/blepharochalasis)

* Cartilage Disease, also known as cartilage diseases, is related to congenital short femur and cryptophthalmos, unilateral or bilateral, isolated, and has symptoms including back pain, muscle cramp and sciatica. An important gene associated with Cartilage Disease is COL10A1 (Collagen Type X Alpha 1 Chain), and among its related pathways are ECM proteoglycans and Endochondral Ossification. The drugs chondroitin sulfates and chondroitin sodium have been mentioned in the context of this disorder. Affiliated tissues include bone, skin and bone marrow, and related mouse phenotype immune system.
(http://www.malacards.org/card/cartilage_disease)

* Collagen Disease, also known as collagen diseases, is related to diffuse scleroderma and disseminated eosinophilic collagen disease. An important gene associated with Collagen Disease is COL1A1 (Collagen Type I Alpha 1 Chain), and among its related pathways are Inflammatory Response Pathway and Binding and Uptake of Ligands by Scavenger Receptors. The drugs prednisolone pwdr and prednisone pwdr have been mentioned in the context of this disorder. Affiliated tissues include skin, liver and endothelial, and related mouse phenotypes are cardiovascular system and respiratory system. Diseases associated with defects in collagen, which is a component of the connective tissue.
(http://www.malacards.com/card/collagen_disease)

* Cutis Laxa, also known as generalized elastolysis, is related to cutis laxa, autosomal dominant 2 and cutis laxa, ad, and has symptoms including cutis laxa, patent ductus arteriosus and hernia of the abdominal wall. An important gene associated with Cutis Laxa is FBLN5 (Fibulin 5), and among its related pathways are Arginine and proline metabolism and Amino acid synthesis and interconversion (transamination). Affiliated tissues include skin, heart and lung, and related mouse phenotypes are integument and muscle. A skin disease characterized by skin that is loose, hanging, wrinkled and lacking in elasticity; it can also affect connective tissue in other parts of the body, including the heart, blood vessels, joints, intestines and lungs.

(http://www.malacards.org/card/cutis_laxa)

* Eye Disease, also known as disorder of eye, is related to macular degeneration, age-related, 1 and hypothyroidism, and has symptoms including unspecified visual loss, glassy eye and ocular pain, bilateral. An important gene associated with Eye Disease is CACNA1F (Calcium Voltage-Gated Channel Subunit Alpha1 F), and among its related pathways are African trypanosomiasis and IL-10 Pathway. The drugs prednisone and prednisone pwdr have been mentioned in the context of this disorder. Affiliated tissues include the eye, eye and thyroid, and related mouse phenotypes are pigmentation and hematopoietic system. An eye and adnexa disease that is located in the eye.
(http://www.malacards.org/card/eye_disease)

* Hair Disease, also known as hair diseases, is related to menkes disease and monilethrix, and has symptoms including skin manifestations, pruritus and exanthema. An important gene associated with Hair Disease is KRT86 (Keratin 86), and among its related pathways is Platinum Pathway, Pharmacokinetics/Pharmacodynamics. Affiliated tissues include hair, ovary and skin, and related mouse phenotypes are pigmentation and muscle. Hair diseases are disorders primarily associated with the follicles of the hair.
(http://www.malacards.org/card/hair_disease)

* Hypercholesterolemia, Familial, also known as familial hypercholesterolemia, is related to hypercholesterolemia, familial, autosomal recessive and hyperlipidemia, familial combined, and has symptoms including corneal arcus, xanthelasma and hypercholesterolemia. An important gene associated with Hypercholesterolemia, Familial is LDLR (Low Density Lipoprotein Receptor), and among its related pathways are SREBF and miR33 in cholesterol and lipid homeostasis and Folate Metabolism. The drugs ezetimibe and atorvastatin have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and liver, and related mouse phenotypes are Increased LDL uptake and Decreased free cholesterol. A condition characterized by very high levels of cholesterol in the blood.
(http://www.malacards.org/card/hypercholesterolemia_familial)

* Hypothalamic Disease, also known as hypothalamic diseases, is related to rapid-onset childhood obesity-hypothalamic dysfunction-hypoventilation-autonomic dysregulation syndrome and anophthalmia cleft lip palate hypothalamic disorder. An important gene associated with Hypothalamic Disease is CRH (Corticotropin Releasing Hormone), and among its related pathways are Growth hormone receptor signaling and Corticotropin-releasing hormone. Affiliated tissues include pituitary, brain and testes, and related mouse phenotypes are endocrine/exocrine gland and immune system. A condition in which the hypothalamus is not working properly.
(http://www.malacards.org/card/sensory_peripheral_neuropathy)

* Immune System Disease, also known as immune system and disorders, is related to primary immunodeficiency disease and c3 deficiency, and has symptoms including pathological conditions, signs and symptoms and pathergy reaction. An important gene

associated with Immune System Disease is CCR5 (C-C Motif Chemokine Receptor 5 (Gene/Pseudogene)), and among its related pathways are Defective GALNT12 causes colorectal cancer 1 (CRCS1) and Nef-mediates down modulation of cell surface receptors by recruiting them to clathrin adapters. Affiliated tissues include the immune system, testes and t cells, and related mouse phenotypes are digestive/alimentary and cellular. A disease of anatomical entity that is located in the immune system.
(http://www.malacards.org/card/immune_system_disease)

* Iron Deficiency Anemia is related to atherosclerosis and neuropathy. An important gene associated with Iron Deficiency Anemia is TMPRSS6 (Transmembrane Protease, Serine 6), and among its related pathways are HIF-1-alpha transcription factor network and Ferroptosis. The drugs ferrous sulfate and ferrous sulfate,dried have been mentioned in the context of this disorder. Affiliated tissues include kidney, heart and small intestine, and related mouse phenotypes are hematopoietic system and liver/biliary system. An anemia caused by a lack of iron.
(http://www.malacards.org/card/iron_deficiency_anemia)

* Keratosis, also known as actinic keratosis, is related to keratosis palmoplantaris striata iii and ulerythema ophryogenesis, and has symptoms including exanthema, pruritus and skin manifestations. An important gene associated with Keratosis is MBTPS2 (Membrane Bound Transcription Factor Peptidase, Site 2), and among its related pathways are Central carbon metabolism in cancer and Bladder cancer. The drugs diclofenac potassium and fluorouracil have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and kidney, and related mouse phenotypes are neoplasm and no phenotypic analysis. A growth of keratin on the skin or on mucous membranes.
(http://www.malacards.org/card/keratosis)

* Mitochondrial Complex I Deficiency, also known as nadh:q(1) oxidoreductase deficiency, is related to mitochondrial complex i deficiency due to acad9 deficiency and fatal infantile hypertrophic cardiomyopathy due to mitochondrial complex i deficiency, and has symptoms including ataxia, ataxia and lethargy. An important gene associated with Mitochondrial Complex I Deficiency is NDUFV1 (NADH:Ubiquinone Oxidoreductase Core Subunit V1), and among its related pathways are Metformin Pathway, Pharmacodynamics and GABAergic synapse. Affiliated tissues include liver, skeletal muscle and temporal lobe, and related mouse phenotypes are Decreased shRNA abundance and Decreased shRNA abundance (Z-score < -2). The most common enzymatic defect of the oxidative phosphorylation disorders. It causes a wide range of clinical disorders, ranging from lethal neonatal disease to adult-onset neurodegenerative disorders. Phenotypes include macrocephaly with progressive leukodystrophy, nonspecific encephalopathy, hypertrophic cardiomyopathy, myopathy, liver disease, Leigh syndrome, Leber hereditary optic neuropathy, and some forms of Parkinson disease.
(http://www.malacards.com/card/mitochondrial_complex_i_deficiency)

* Motor Peripheral Neuropathy, also known as peripheral motor neuropathy, is related to

hereditary motor and sensory neuropathy via and charcot-marie-tooth disease, type 2a1, and has symptoms including neurologic symptoms An important gene associated with Motor Peripheral Neuropathy is PMP22 (Peripheral Myelin Protein 22), and among its related pathways is Neural Crest Differentiation. Related mouse phenotypes are muscle and cellular.
(http://www.malacards.org/card/motor_peripheral_neuropathy)

* Muscular Atrophy, also known as muscle wasting, is related to spinal muscular atrophy-4 and spinal muscular atrophy-3, and has symptoms including muscular fasciculation, muscle cramp and spasm. An important gene associated with Muscular Atrophy is SMN1 (Survival Of Motor Neuron 1, Telomeric). Affiliated tissues include skeletal muscle, testes and spinal cord, and related mouse phenotype muscle. A decrease in the mass of the muscle; it can be a partial or complete wasting away of muscle, and is most commonly experienced when persons suffer temporary disabling circumstances.
(http://www.malacards.org/card/muscular_atrophy)

* Nervous System Disease, also known as nervous system diseases, is related to multiple sclerosis, disease progression, modifier of and hypothyroidism, and has symptoms including aphonia, ataxia and athetosis. An important gene associated with Nervous System Disease is MOG (Myelin Oligodendrocyte Glycoprotein), and among its related pathways are Legionellosis and IL-10 Pathway. Affiliated tissues include the central nervous system or, brain and spinal cord, and related mouse phenotypes are muscle and respiratory system. A disease of anatomical entity that is located in the central nervous system or located in the peripheral nervous system.
(http://www.malacards.org/card/nervous_system_disease)

* Nicotine Dependence, Protection Against, also known as nicotine dependence, is related to schizophrenia and cocaine dependence, and has symptoms including hangover from alcohol An important gene associated with Nicotine Dependence, Protection Against is GABBR2 (Gamma-Aminobutyric Acid Type B Receptor Subunit 2), and among its related pathways are Nicotine Activity on Chromaffin Cells and noradrenaline and adrenaline degradation. Affiliated tissues include lung, brain and testes, and related mouse phenotypes are integument and homeostasis/metabolism.
(http://www.malacards.org/card/nicotine_dependence_protection_against)

* Nose Disease, also known as disorder of the nose, is related to marasmus and dahlberg borer newcomer syndrome, and has symptoms including dyspnea and rhinorrhea. An important gene associated with Nose Disease is RNASE3 (Ribonuclease A Family Member 3), and among its related pathways are IL-9 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Calcineurin-regulated NFAT-dependent transcription in lymphocytes. Affiliated tissues include bone, and related mouse phenotypes are Increased transferrin (TF) endocytosis and digestive/alimentary.
(http://www.malacards.org/card/nose_disease)

* Parkinson Disease, Late-Onset, also known as parkinson disease, is related to parkinson disease 1 and parkinson disease 6, early onset, and has symptoms including hallucinations, dysautonomia and urinary urgency. An important gene associated with Parkinson Disease, Late-Onset is GBA (Glucosylceramidase Beta), and among its related pathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Parkinsons Disease Pathway. The drugs biperiden and carbidopa have been mentioned in the context of this disorder. Affiliated tissues include brain, subthalamic nucleus and testes, and related mouse phenotypes are behavior/neurological and homeostasis/metabolism. A complex neurodegenerative disorder characterized by bradykinesia, resting tremor, muscular rigidity and postural instability. Additional features are characteristic postural abnormalities, dysautonomia, dystonic cramps, and dementia.
(http://www.malacards.org/card/parkinson_disease_late_onset)

* Peripheral Vertigo, also known as vertigo, peripheral, is related to acute infection of pinna and med13l syndrome, and has symptoms including vertigo An important gene associated with Peripheral Vertigo is CRP (C-Reactive Protein), and among its related pathways are Complement and coagulation cascades and Formation of Fibrin Clot (Clotting Cascade). Affiliated tissues include neutrophil, and related mouse phenotypes are homeostasis/metabolism and mortality/aging. A problem with the inner ear, which controls balance.
(http://www.malacards.org/card/peripheral_vertigo)

* Pigmentation Disease, also known as pigmentation disorders, is related to hypomelanosis of ito and dyschromatosis symmetrica hereditaria, and has symptoms including exanthema, pruritus and polydipsia. An important gene associated with Pigmentation Disease is TYR (Tyrosinase), and among its related pathways are Estrogen metabolism and Constitutive Androstane Receptor Pathway. Affiliated tissues include skin, and related mouse phenotypes are limbs/digits/tail and integument. Disturbances of human skin color, either loss or reduction, which may be related to loss of melanocytes or the inability of melanocytes to produce melanin or transport melanosomes correctly.
(http://www.malacards.com/card/pigmentation_disease)

* Reflex Sympathetic Dystrophy, also known as algodystrophy, is related to complex regional pain syndrome and algoneurodystrophy, and has symptoms including back pain, headache and neuralgia. An important gene associated with Reflex Sympathetic Dystrophy is CALCA (Calcitonin Related Polypeptide Alpha), and among its related pathways are Endothelin Pathways and Adipocytokine signaling pathway. The drug ethanol has been mentioned in the context of this disorder. Affiliated tissues include skin, bone and spinal cord. A complex of symptoms that may develop after trauma, disease or "spontaneously" and has obligatory pain and at least three of the four following symptoms: 1. Difference in skin color relative to the other limb. 2. Diffuse edema. 3. Difference in skin temperature relative to the other limb. 4. Limited active range of motion.
(http://www.malacards.org/card/reflex_sympathetic_dystrophy)

* Salivary Gland Disease, also known as salivary gland diseases, is related to igg4-related disease and jaw cancer, and has symptoms including halitosis, oral manifestations and snoring. An important gene associated with Salivary Gland Disease is CDSN (Corneodesmosin), and among its related pathways are Immunoregulatory interactions between a Lymphoid and a non-Lymphoid cell and Cell adhesion molecules (CAMs). Affiliated tissues include salivary gland and lymph node, and related mouse phenotypes are hematopoietic system and immune system. A disorder affecting the salivary glands.
(http://www.malacards.com/card/salivary_gland_disease)

* Sebaceous Gland Disease, also known as sebaceous gland diseases, is related to acne and scleroperikeratitis, and has symptoms including exanthema, pruritus and skin manifestations. An important gene associated with Sebaceous Gland Disease is SHBG (Sex Hormone Binding Globulin), and among its related pathways are A-beta Pathways: Plaque Formation and APP Metabolism and Bacterial infections in CF airways. Affiliated tissues include the sebaceous gl, skin and testes. A skin disease that is located in the sebaceous gland.
(http://www.malacards.org/card/sebaceous_gland_disease)

* Sensory Peripheral Neuropathy, also known as sensory neuropathy, is related to hereditary motor and sensory neuropathy via and hereditary motor and sensory neuropathy v, and has symptoms including hyperesthesia, sciatica and dysesthesia. An important gene associated with Sensory Peripheral Neuropathy is PMP22 (Peripheral Myelin Protein 22), and among its related pathways are Neural Crest Differentiation and Guidance Cues and Growth Cone Motility. Affiliated tissues include spinal cord, testes and brain, and related mouse phenotypes are Increased shRNA abundance (Z-score > 2) and reproductive system. A neuropathy that involves damage to nerves of the peripheral nervous system.
(http://www.malacards.org/card/sensory_peripheral_neuropathy)

* Sweat Gland Disease, also known as sweat gland diseases, is related to gall bladder carcinoma in situ and lung occult small cell carcinoma, and has symptoms including exanthema, pruritus and increased sweating. An important gene associated with Sweat Gland Disease is NTRK1 (Neurotrophic Receptor Tyrosine Kinase 1), and among its related pathways are Activation of TRKA receptors and 14-3-3 and Regulation of BAD Activity. Affiliated tissues include skin, and related mouse phenotypes are integument and vision/eye.
(http://www.malacards.com/card/sweat_gland_disease)

* Tremor is related to essential tremor and parkinson disease 6, early onset. An important gene associated with Tremor is DRD3 (Dopamine Receptor D3), and among its related pathways are Alpha-synuclein signaling and Parkinsons Disease Pathway. Affiliated tissues include brain, eye and tongue, and related mouse phenotypes are integument and cardiovascular system. An unintentional, rhythmic, muscle movement involving to-and-fro movements of one or more parts of the body. Most tremors occur in

the hands, although they can also affect the arms, head, face, voice, trunk, and legs. (http://www.malacards.org/card/tremor)

1.3.2.5 RT-MB-30

https://archive.org/details/Resonant_Therapy-Molecular_Biology_30

Genetic Superpathways-Abdominal Obesity Metabolic Syndrome; Genetic Superpathways-Aromatase Deficiency; Genetic Superpathways-Cerebral Hypoxia; Genetic Superpathways-Corticiobasal Degeneration; Genetic Superpathways-Dementia Frontotemporal; Genetic Superpathways-Gastrointestinal Disease; Genetic Superpathways-Glucose Metabolism Disease; Genetic Superpathways-Growth Hormone Deficiency; Genetic Superpathways-Leber Optic Atrophy; Genetic Superpathways-Metabolic Acidosis; Genetic Superpathways-Mineral Metabolism Disease; Genetic Superpathways-Mouth Disease; Genetic Superpathways-Paranasal Sinus Disease; Genetic Superpathways-Periodontal Disease; Genetic Superpathways-Peripheral Vascular Disease; Genetic Superpathways-Postmenopausal Atrophic Vaginitis; Genetic Superpathways-Protein Energy Malnutrition; Genetic Superpathways-Pulpitis; Genetic Superpathways-Upper Respiratory Tract Disease; Genetic Superpathways-Vasculitis; Genetics-Brachial Plexus Lesion; Genetics-Brain Ischemia; Genetics-Chronic Pain; Genetics-Coenzyme Q10 Deficiency; Genetics-Dental Caries; Genetics-Dentin Sensitivity; Genetics-Lactose Intolerance; Genetics-Nonsyndromic Deafness; Genetics-Root Caries; Vatiquinone

* Abdominal Obesity-Metabolic Syndrome, also known as abdominal obesity metabolic syndrome, is related to abdominal obesity-metabolic syndrome 3 and abdominal obesity-metabolic syndrome 1, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Abdominal Obesity-Metabolic Syndrome is DYRK1B (Dual Specificity Tyrosine Phosphorylation Regulated Kinase 1B), and among its related pathways are Signaling events mediated by PTP1B and Cori Cycle. Related mouse phenotypes are Decreased viability and hematopoietic system. A condition characterized by clustering of certain factors that increase an individual's susceptibility to cardiovascular diseases, stroke, and diabetes. These factors include abdominal obesity, atherogenic dyslipidemia, hypertension, insulin resistance, and a prothrombotic and proinflammatory state. (http://www.malacards.org/card/abdominal_obesity_metabolic_syndrome)

* Aromatase Deficiency, also known as congenital estrogen deficiency, is related to estrogen resistance and her2-receptor positive breast cancer, and has symptoms including hyperlipidemia, osteoporosis and cryptorchidism. An important gene associated with Aromatase Deficiency is CYP19A1 (Cytochrome P450 Family 19 Subfamily A Member 1), and among its related pathways/superpathways are Prolactin Signaling Pathway and TRP channels. The drugs Anastrozole and Vitamin D have been

mentioned in the context of this disorder. Affiliated tissues include breast, bone and ovary, and related phenotypes are Decreased viability and cellular. Aromatase deficiency is a condition characterized by reduced levels of the female sex hormone estrogen and increased levels of the male sex hormone testosterone. (http://www.malacards.org/card/aromatase_deficiency)

* Brachial Plexus Lesion, also known as brachial plexus injuries, is related to aneurysm and non-recovering obstetric brachial plexus lesion. An important gene associated with Brachial Plexus Lesion is SERPINI2 (Serpin Family I Member 2), and among its related pathways are G-protein signaling M-RAS regulation pathway and Guidance Cues and Growth Cone Motility. Affiliated tissues include skin and spinal cord, and related mouse phenotypes are behavior/neurological and growth/size/body region. A brachial plexus neuropathy characterized by an abnormality, usually caused by disease or trauma, located in the brachial plexus. (http://www.malacards.org/card/brachial_plexus_lesion)

* Brain Ischemia is related to ischemia and neuronitis. An important gene associated with Brain Ischemia is KCNB1 (Potassium Voltage-Gated Channel Subfamily B Member 1), and among its related pathways are Endothelin Pathways and Melatonin metabolism and effects. The drugs etomidate and pentoxifylline have been mentioned in the context of this disorder. Affiliated tissues include brain, cortex and endothelial. A condition in which there is insufficient blood flow to the brain to meet metabolic demand. (http://www.malacards.org/card/brain_ischemia)

* Cerebral Hypoxia, also known as brain hypoxia, is related to hypoxia and anoxia. An important gene associated with Cerebral Hypoxia is FOS (Fos Proto-Oncogene, AP-1 Transcription Factor Subunit), and among its related pathways are PDGFR-alpha signaling pathway and Signal transduction by L1. Affiliated tissues include brain, endothelial and monocytes, and related mouse phenotypes are Decreased viability with paclitaxel and neoplasm. A condition in which there is a decrease of oxygen supply to the brain even though there is adequate blood flow. (http://www.malacards.org/card/cerebral_hypoxia)

* Chronic Pain, also known as pain - chronic, is related to cervicitis and chronic pain requiring intraspinal analgesia. An important gene associated with Chronic Pain is PTGS2 (Prostaglandin-Endoperoxide Synthase 2), and among its related pathways are Celecoxib Pathway, Pharmacodynamics and Photodynamic therapy-induced NF-kB survival signaling. Affiliated tissues include spinal cord, brain and testes, and related mouse phenotypes are integument and endocrine/exocrine gland. A pain that lasts a long time. (http://www.malacards.org/card/chronic_pain)

* Coenzyme Q10 Deficiency Disease, also known as coenzyme q10 deficiency, is related to coenzyme q10 deficiency, primary, 4 and coenzyme q10 deficiency, primary, 1, and has symptoms including cataract, hyperextensible skin and intellectual disability. An important gene associated with Coenzyme Q10 Deficiency Disease is COQ2 (Coenzyme Q2, Polyprenyltransferase), and among its related pathways/superpathways are Metabolism and Ubiquinol biosynthesis. The drugs Menthol and Simvastatin have

been mentioned in the context of this disorder. Affiliated tissues include kidney, brain and skin, and related phenotype is adipose tissue. A mitochondrial metabolism disease that is characterized by a deficiency of CoQ10 resulting from reduced biosynthesis. (http://www.malacards.org/card/coenzyme_q10_deficiency_disease)

* Corticobasal Degeneration, also known as corticobasal syndrome, is related to pick disease and progressive supranuclear palsy-corticobasal syndrome. An important gene associated with Corticobasal Degeneration is MAPT (Microtubule Associated Protein Tau), and among its related pathways/superpathways are NFAT and Cardiac Hypertrophy and Development Slit-Robo signaling. The drugs Iodine and cadexomer iodine have been mentioned in the context of this disorder. Affiliated tissues include cortex, brain and tongue, and related phenotypes are Decreased viability with paclitaxel and behavior/neurological. A progressive neurological disorder characterized by nerve cell loss and atrophy (shrinkage) of multiple areas of the brain including the cerebral cortex and the basal ganglia. (http://www.malacards.org/card/corticobasal_degeneration)

* Dementia, Frontotemporal, also known as frontotemporal dementia, is related to pick disease and frontotemporal dementia and/or amyotrophic lateral sclerosis 2, and has symptoms including personality changes, irritability and parkinsonism. An important gene associated with Dementia, Frontotemporal is PSEN1 (Presenilin 1), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Neuroscience. The drugs Dopamine and Memantine have been mentioned in the context of this disorder. Affiliated tissues include brain, temporal lobe and amygdala, and related phenotypes are behavior/neurological and cellular. A basal ganglia disease characterized by progressive neuronal loss predominantly involving the frontal and/or temporal lobes of the brain resulting in a gradual and progressive decline in behavior or language. (http://www.malacards.org/card/dementia_frontotemporal)

* Dental Caries, also known as dental caries extending into pulp, is related to dentin caries and root caries, and has symptoms including halitosis and snoring. An important gene associated with Dental Caries is CD79A (CD79a Molecule), and among its related pathways is Salivary secretion. The drug aluminum chloride has been mentioned in the context of this disorder. Affiliated tissues include colon, salivary gland and testes, and related mouse phenotypes are Decreased viability and Increased gamma-H2AX phosphorylation. (http://www.malacards.org/card/dental_caries)

* Dentin Sensitivity, also known as sensitive dentin, is related to periodontitis and cervicitis, and has symptoms including toothache An important gene associated with Dentin Sensitivity is DSPP (Dentin Sialophosphoprotein), and among its related pathways are Hepatic ABC Transporters and Potassium Channels. Affiliated tissues include testes, and related mouse phenotypes are hearing/vestibular/ear and taste/olfaction. A dental pain which is sharp in character and of short duration, arising from exposed dentin surfaces in response to stimuli, typically thermal, evaporative, tactile, osmotic, chemical or electrical; and which cannot be ascribed to any other dental

disease. (http://www.malacards.org/card/dentin_sensitivity)

* Gastrointestinal System Disease, also known as gastrointestinal diseases, is related to lymphocytic gastritis and celiac disease, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Gastrointestinal System Disease is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways are Secretion of Hydrochloric Acid in Parietal Cells and Gastric acid production. The drugs sacrosidase and belladonna extract, usp have been mentioned in the context of this disorder. Affiliated tissues include the gastrointestinal tract, liver and small intestine, and related mouse phenotypes are digestive/alimentary and homeostasis/metabolism. A disease involving the gastrointestinal tract, namely the esophagus, stomach, small intestine, large intestine and rectum, and the accessory organs of digestion, the liver, gallbladder, and pancreas. (http://www.malacards.org/card/gastrointestinal_system_disease)

* Glucose Metabolism Disease, also known as glucose metabolism disorders, is related to diabetes mellitus, insulin-dependent and hemolytic anemia due to triosephosphate isomerase deficiency. An important gene associated with Glucose Metabolism Disease is INS (Insulin), and among its related pathways are Differentiation of white and brown adipocyte and Signaling events mediated by PTP1B. Related mouse phenotypes are adipose tissue and liver/biliary system. A pathological condition in which the blood glucose cannot be maintained within the normal range, such as in Hypoglicemia and Hyperglicemia. (http://www.malacards.org/card/glucose_metabolism_disease)

* Growth Hormone Deficiency, also known as isolated somatotropin deficiency, is related to growth hormone insensitivity, partial and isolated growth hormone deficiency. An important gene associated with Growth Hormone Deficiency is GH1 (Growth Hormone 1), and among its related pathways/superpathways are G-Beta Gamma Signaling and Peptide hormone metabolism. The drugs Clonidine and Estradiol have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and pituitary, and related phenotypes are endocrine/exocrine gland and adipose tissue. A medical condition, caused by problems arising in the pituitary gland, in which the body does not produce enough growth hormone (GH). (http://www.malacards.org/card/growth_hormone_deficiency)

* Lactose Intolerance, also known as lm - lactose malabsorption, is related to congenital sucrase-isomaltase deficiency with starch and lactose intolerance and lactase persistence/nonpersistence, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Lactose Intolerance is LCT (Lactase), and among its related pathways are Carbohydrate digestion and absorption and Digestion of dietary carbohydrate. Affiliated tissues include testes, small intestine and kidney. An impaired ability to digest lactose, a sugar found in milk and other dairy products. (http://www.malacards.org/card/lactose_intolerance)

* Leber Optic Atrophy, also known as leber hereditary optic neuropathy, is related to loiasis and leber hereditary optic neuropathy with dystonia, and has symptoms including

optic atrophy, ataxia and peripheral neuropathy. An important gene associated with Leber Optic Atrophy is MT-ND6 (Mitochondrially Encoded NADH:Ubiquinone Oxidoreductase Core Subunit 6), and among its related pathways/superpathways are Metabolism and Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. The drugs Idebenone and Antioxidants have been mentioned in the context of this disorder. Affiliated tissues include eye. A maternally inherited disease resulting in acute or subacute loss of central vision, due to optic nerve dysfunction. (http://www.malacards.org/card/leber_optic_atrophy)

* Metabolic Acidosis is related to glutathione synthetase deficiency and renal tubular acidosis. An important gene associated with Metabolic Acidosis is ALB (Albumin), and among its related pathways are Pancreatic secretion and Biotin metabolism. Affiliated tissues include kidney, bone and heart, and related mouse phenotypes are renal/urinary system and homeostasis/metabolism. A condition that occurs when the body produces excessive quantities of acid or when the kidneys are not removing enough acid from the body. If unchecked, metabolic acidosis leads to acidemia -low blood pH- due to increased production of hydrogen ions by the body or the inability of the body to form bicarbonate in the kidney. Its causes are diverse, and its consequences can be serious, including coma and death. (http://www.malacards.org/card/metabolic_acidosis)

* Mineral Metabolism Disease, also known as disorder of mineral metabolism, is related to toxicodendron dermatitis and stickler syndrome. An important gene associated with Mineral Metabolism Disease is CASR (Calcium Sensing Receptor), and among its related pathways are Osteoblast Signaling and Development_Hedgehog and PTH signaling pathways in bone and cartilage development. Related mouse phenotypes are limbs/digits/tail and digestive/alimentary. An acquired metabolic disease that is characterized by abnormal mineral metabolism. (http://www.malacards.org/card/mineral_metabolism_disease)

* Mouth Disease, also known as mouth diseases, is related to hepatitis and burns, and has symptoms including coughing, halitosis and oral manifestations. An important gene associated with Mouth Disease is IL6 (Interleukin 6), and among its related pathways are Glucocorticoid receptor regulatory network and IL-10 Pathway. The drugs lidocaine hydrochloride and lidocaine pwdr have been mentioned in the context of this disorder. Affiliated tissues include the mouth, tongue and testes, and related mouse phenotypes are hematopoietic system and skeleton. A gastrointestinal system disease that is located in the mouth. (http://www.malacards.org/card/mouth_disease)

* Nonsyndromic Deafness, also known as nonsyndromic hearing loss, is related to autosomal dominant nonsyndromic deafness 20 and autosomal dominant nonsyndromic deafness 66. An important gene associated with Nonsyndromic Deafness is GJB2 (Gap Junction Protein Beta 2), and among its related pathways is Gap junction trafficking. Related mouse phenotypes are behavior/neurological and hearing/vestibular/ear. Nonsyndromic hearing loss is a partial or total loss of hearing that is not associated with other signs and symptoms. (http://www.malacards.org/card/nonsyndromic_deafness)

* Paranasal Sinus Disease, also known as paranasal sinus diseases, is related to myoglobinuria recurrent and dahlberg borer newcomer syndrome. An important gene associated with Paranasal Sinus Disease is IL5 (Interleukin 5), and among its related pathways are Inflammatory Response Pathway and IL4-mediated signaling events. Affiliated tissues include eye, bone and t cells, and related mouse phenotypes are craniofacial and neoplasm. (http://www.malacards.org/card/paranasal_sinus_disease)

* Periodontal Disease, also known as periodontal diseases, is related to tuberculosis and peripheral vascular disease, and has symptoms including halitosis, snoring and tenderness of gums. An important gene associated with Periodontal Disease is IL1B (Interleukin 1 Beta), and among its related pathways are Interleukin-1 processing and Dendritic Cells Developmental Lineage Pathway. The drugs chlorhexidine gluconate and chlorhexidine have been mentioned in the context of this disorder. Affiliated tissues include bone, neutrophil and t cells, and related mouse phenotypes are limbs/digits/tail and renal/urinary system. A set of inflammatory diseases affecting the tissues surrounding the teeth. (http://www.malacards.org/card/periodontal_disease)

* Peripheral Vascular Disease, also known as arterial occlusive disease, is related to artery disease and limb ischemia, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Peripheral Vascular Disease is VWF (Von Willebrand Factor), and among its related pathways are Dissolution of Fibrin Clot and Malaria. The drugs streptokinase and papaverine hydrochloride have been mentioned in the context of this disorder. Affiliated tissues include bone, heart and endothelial, and related mouse phenotypes are Decreased free cholesterol and neoplasm. A vascular disease that is characterized by obstruction of larger arteries not within the coronary, aortic arch vasculature, or brain. (http://www.malacards.com/card/peripheral_vascular_disease)

* Postmenopausal Atrophic Vaginitis, also known as atrophic vaginitis, is related to comedo carcinoma and deafness, autosomal dominant 8/12. An important gene associated with Postmenopausal Atrophic Vaginitis is PRLR (Prolactin Receptor), and among its related pathways/superpathways are Prolactin Signaling Pathway and TGF-beta Signaling Pathways. The drugs Hyaluronic acid and Apricot have been mentioned in the context of this disorder. Related phenotypes are behavior/neurological and adipose tissue. An inflammation of the vagina (and the outer urinary tract) due to the thinning and shrinking of the tissues, as well as decreased lubrication. These symptoms are due to a lack of the reproductive hormone estrogen. (http://www.malacards.org/card/postmenopausal_atrophic_vaginitis)

* Protein-Energy Malnutrition, also known as pem, is related to hypervitaminosis a and malaria, and has symptoms including cachexia and emaciation. An important gene associated with Protein-Energy Malnutrition is ALB (Albumin), and among its related pathways/superpathways are Sudden Infant Death Syndrome (SIDS) Susceptibility Pathways and Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers. The drugs Morphine and Naproxen have been

mentioned in the context of this disorder. Affiliated tissues include liver, prostate and brain, and related phenotypes are homeostasis/metabolism and hematopoietic system. A form of malnutrition which is defined as a range of pathological conditions arising from coincident lack of protein and/or energy in varying proportions. (http://www.malacards.org/card/protein_energy_malnutrition)

* Pulpitis is related to periapical periodontitis and intussusception. An important gene associated with Pulpitis is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways are EBV LMP1 signaling and LDL Oxidation in Atherogenesis. Affiliated tissues include trigeminal ganglion, testes and bone, and related mouse phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and adipose tissue. Inflammation of dental pulp tissue. (http://www.malacards.org/card/pulpitis)

* Root Caries, also known as dental caries of root surface, is related to periodontitis and viral meningitis. An important gene associated with Root Caries is DSPP (Dentin Sialophosphoprotein), and among its related pathways are BRCA1 Pathway and Transcription Ligand-dependent activation of the ESR1/SP pathway. Affiliated tissues include bone, and related mouse phenotypes are liver/biliary system and neoplasm. (http://www.malacards.org/card/root_caries)

* Upper Respiratory Tract Disease is related to tuberculosis and adenoiditis. An important gene associated with Upper Respiratory Tract Disease is RNASE3 (Ribonuclease A Family Member 3), and among its related pathways are IL-9 Signaling Pathways and their Primary Biological Effects in Different Immune Cell Types and Glucocorticoid receptor regulatory network. Affiliated tissues include testes and brain, and related mouse phenotypes are digestive/alimentary and hematopoietic system. A respiratory system disease which involves the upper respiratory tract. (http://www.malacards.org/card/upper_respiratory_tract_disease)

* Vasculitis, also known as autoimmune vasculitis, is related to uveitis and rheumatoid arthritis, and has symptoms including angina pectoris, angina pectoris and chest pain. An important gene associated with Vasculitis is MPO (Myeloperoxidase), and among its related pathways are C-MYB transcription factor network and Thromboxane A2 receptor signaling. The drug pentoxifylline has been mentioned in the context of this disorder. Affiliated tissues include neutrophil, endothelial and lung, and related mouse phenotypes are cellular and homeostasis/metabolism. A vascular disease that is characterized by inflammation of the blood vessels. (http://www.malacards.org/card/vasculitis)

* Vatiquinone is a drug that is based on vitamin E. It is a potent cellular protectant against oxidative stress and aging. Vatiquinone reverses visual loss due to retinal ganglion degeneration. It also increase Glutathione which plays a central role in cellular redox balance and antioxidant defense systems. Tests have shown that it can help improve the function of cells with mitochondrial problems. It may be able to treat people with genetic disorders that affect metabolism and mitochondria. Vatiquinone has been

investigated for the treatment and prevention of Retinopathy, Rett Syndrome, Genetic Disease, Noise-induced Hearing Loss, and Methylmalonic Aciduria and Homocystinuria,Cblc Type.

Genetic Superpathways-Autoimmune Disease Of Blood; Genetic Superpathways-Autonomic Nervous System Disease; Genetic Superpathways-Candidiasis; Genetic Superpathways-Cardiovascular Disease Risk Factor; Genetic Superpathways-Cerebrovascular Disease; Genetic Superpathways-Chronic Fatigue Syndrome; Genetic Superpathways-Colon Adenoma; Genetic Superpathways-Colonic Disease; Genetic Superpathways-Dementia Lewy Body; Genetic Superpathways-Esophageal Disease; Genetic Superpathways-Heart Disease; Genetic Superpathways-Hypertriglyceridemia; Genetic Superpathways-Influenza; Genetic Superpathways-Liver Disease; Genetic Superpathways-Ovarian Disease; Genetic Superpathways-Pancreas Disease; Genetic Superpathways-Pituitary Gland Disease; Genetic Superpathways-Psychotic Disorder; Genetic Superpathways-Pulmonary Hypertension; Genetic Superpathways-Spondyloarthropathy; Genetic Superpathways-Stomach Disease; Genetic Superpathways-Thyroid Gland Disease; Genetic Superpathways-Toxic Encephalopathy; Genetic Superpathways-Vascular Dementia; Genetic Superpathways-Vascular Disease; Genetics-Cerebellar Disease; Genetics-Disorders Of Intracellular Cobalamin Metabolism; Genetics-Pure Autonomic Failure; Genetics-Rectal Disease; Genetics-Subacute Delirium;

* Autoimmune Disease of Blood is related to alcoholic neuropathy and calloso- genital dysplasia. An important gene associated with Autoimmune Disease of Blood is CD40LG (CD40 Ligand), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Phospholipase-C Pathway. The drugs Rivaroxaban and Adalimumab have been mentioned in the context of this disorder. Affiliated tissues include testes, t cells and pancreas, and related phenotypes are Dynamic nuclei (hole, folded or small irregular) and hematopoietic system. A hypersensitivity reaction type II disease that causes the immune system to produce antibodies or T cells against cells and/or tissues in the blood. (http://www.malacards.org/card/autoimmune_disease_of_blood)

* Autonomic Nervous System Disease, also known as autonomic nervous system disorders, is related to central hypoventilation syndrome, congenital and pandas, and has symptoms including back pain, constipation and diarrhea. An important gene associated with Autonomic Nervous System Disease is DRD4 (Dopamine Receptor D4), and among its related pathways/superpathways are Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers and Sudden Infant

Death Syndrome (SIDS) Susceptibility Pathways. The drugs Benzocaine and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include heart, lung and eye, and related phenotypes are behavior/neurological and normal. (http://www.malacards.org/card/autonomic_nervous_system_disease)

* Candidiasis, also known as systemic candidiasis, is related to esophageal candidiasis and churg-strauss syndrome. An important gene associated with Candidiasis is AIRE (Autoimmune Regulator), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Fluconazole and Miconazole have been mentioned in the context of this disorder. Affiliated tissues include brain, heart and skin, and related phenotypes are hematopoietic system and homeostasis/metabolism. An opportunistic mycosis that involves fungal infection of the mouth, throat, skin, scalp, vagina, fingers, nails, bronchi, lungs, heart and brain by Candida species, of which Candida albicans is the most common. Systemic Candida infections are usually confined to severely immunocompromised persons. (http://www.malacards.org/card/candidiasis)

* Cardiovascular Disease Risk Factor), also known as hyperlipoproteinemia type iii risk factor, is related to ischemic heart disease and arthritis. An important gene associated with Cardiovascular Disease Risk Factor) is AGTR1 (Angiotensin II Receptor Type 1), and among its related pathways/superpathways are Peptide hormone metabolism and AGE-RAGE signaling pathway in diabetic complications. Affiliated tissues include heart, endothelial and ovary, and related phenotypes are cardiovascular system and growth/size/body region. A condition characterized by increased total cholesterol and triglyceride levels, and decreased HDL levels. (http://www.malacards.org/card/cardiovascular_disease_risk_factor_)

* Cerebellar Disease, also known as cerebellar diseases, is related to cerebellar hypoplasia and mental retardation with or without quadrupedal locomotion 1 and leukodystrophy, adult-onset, autosomal dominant, and has symptoms including ataxia, back pain and cerebellar ataxia. An important gene associated with Cerebellar Disease is CACNA1A (Calcium Voltage-Gated Channel Subunit Alpha1 A), and among its related pathways/superpathways are Myometrial Relaxation and Contraction Pathways and Dopamine-DARPP32 Feedback onto cAMP Pathway. The drugs Clonidine and Estradiol have been mentioned in the context of this disorder. Affiliated tissues include cerebellum, brain and eye, and related phenotypes are behavior/neurological and nervous system. The cerebellum is the area of the brain that controls coordination and balance. problems with the cerebellum include cancer genetic disorders ataxias - failure of muscle control in the arms and legs that result in movement disorders degeneration. (http://www.malacards.org/card/cerebellar_disease)

* Cerebrovascular Disease, also known as cerebrovascular disorders, is related to ischemic heart disease and arthritis, and has symptoms including headache, transient ischemic attacks, stereotypic symptoms and angina pectoris. An important gene associated with Cerebrovascular Disease is NOTCH3 (Notch 3), and among its related pathways/superpathways are Metabolism of water-soluble vitamins and cofactors and

Binding and Uptake of Ligands by Scavenger Receptors. The drugs Rivastigmine and Amiloride have been mentioned in the context of this disorder. Affiliated tissues include brain, heart and testes, and related phenotypes are Decreased free cholesterol and Increased LDL uptake. An artery disease that is characterized by dysfunction of the blood vessels supplying the brain. (http://www.malacards.org/card/cerebrovascular_disease)

* Chronic Fatigue Syndrome, also known as myalgic encephalomyelitis, is related to personality disorder and ulcerative colitis, and has symptoms including back pain, fatigue and fever. An important gene associated with Chronic Fatigue Syndrome is RNASEL (Ribonuclease L), and among its related pathways/superpathways are Cytokine Signaling in Immune system and PAK Pathway. The drugs Dopamine and Sodium oxybate have been mentioned in the context of this disorder. Affiliated tissues include lymph node, testes and prostate, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and behavior/neurological. A syndrome that involves prolonged and severe tiredness or weariness that is unrelated to exertion, is not relieved by rest and for a minimum of six months and is not directly caused by other conditions. (http://www.malacards.org/card/chronic_fatigue_syndrome)

* Colon Adenoma, also known as adenomatous polyp of colon, is related to colorectal cancer and familial adenomatous polyposis 4. An important gene associated with Colon Adenoma is GSTT2 (Glutathione S-Transferase Theta 2 (Gene/Pseudogene)), and among its related pathways/superpathways are Nanog in Mammalian ESC Pluripotency and Development HGF signaling pathway. The drugs Erythromycin and Adjuvants, Anesthesia have been mentioned in the context of this disorder. Affiliated tissues include colon, testes and eye, and related phenotypes are Increased cell death HMECs cells and cardiovascular system. A colonic benign neoplasm that has material basis in epithelial tissue with glandular origin. (http://www.malacards.org/card/colon_adenoma)

* Colonic Disease, also known as colonic diseases, is related to functional colonic disease and fallopian tube clear cell adenocarcinoma, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Colonic Disease is NOD2 (Nucleotide Binding Oligomerization Domain Containing 2), and among its related pathways/superpathways are Cytokine Signaling in Immune system and Prolactin Signaling Pathway. The drugs Bisacodyl and Benzocaine have been mentioned in the context of this disorder. Affiliated tissues include colon, liver and testes, and related phenotypes are Increased shRNA abundance (Z-score > 2) and behavior/neurological. (http://www.malacards.org/card/colonic_disease)

* Dementia, Lewy Body, also known as lewy body dementia, is related to parkinson disease, late-onset and parkinson disease 1, and has symptoms including delusions, parkinsonism and dementia. An important gene associated with Dementia, Lewy Body is SNCA (Synuclein Alpha), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Circadian entrainment. The drugs Armodafinil and Modafinil have been mentioned in the context of this disorder. Affiliated tissues

include brain, eye and testes, and related phenotypes are homeostasis/metabolism and behavior/neurological. A neurodegenerative disorder characterized by mental impairment leading to dementia, parkinsonism, fluctuating cognitive function, visual hallucinations, falls, syncopal episodes, and sensitivity to neuroleptic medication. (http://www.malacards.org/card/dementia_lewy_body)

* Disorders of Intracellular Cobalamin Metabolism An important gene associated with Disorders of Intracellular Cobalamin Metabolism is MTRR (5- Methyltetrahydrofolate-Homocysteine Methyltransferase Reductase). (http://www.malacards.org/card/disorders_of_intracellular_cobalamin_metabolism)

* Esophageal Disease, also known as esophageal diseases, is related to lymphoma and deep angioma, and has symptoms including abdominal pain, constipation and coughing. An important gene associated with Esophageal Disease is ATP4A (ATPase H+/K+ Transporting Alpha Subunit), and among its related pathways/superpathways are Interleukin-4 and 13 signaling and Glucocorticoid receptor regulatory network. The drugs Octreotide and Somatostatin have been mentioned in the context of this disorder. Affiliated tissues include lung, testes and lymph node, and related phenotypes are digestive/alimentary and homeostasis/metabolism. A gastrointestinal system disease that is located in the esophagus. (http://www.malacards.org/card/esophageal_disease)

* Heart Disease, also known as congenital heart disease, is related to jervell and lange-nielsen syndrome and sick sinus syndrome 1, and has symptoms including hypoplastic left heart, angina pectoris and chest pain. An important gene associated with Heart Disease is GATA4 (GATA Binding Protein 4), and among its related pathways/superpathways are Vascular smooth muscle contraction and Human Embryonic Stem Cell Pluripotency. The drugs Ranolazine and Iloprost have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and testes, and related phenotypes are cardiovascular system and growth/size/body region. A cardiovascular system disease that involves the heart. (http://www.malacards.org/card/heart_disease)

* Hypertriglyceridemia, also known as hypertriglyceridemia, familial, is related to hyperlipoproteinemia type iv and lipodystrophy, familial partial, type 2, and has symptoms including precocious atherosclerosis, abnormal glucose tolerance and atheroeruptive xanthoma. An important gene associated with Hypertriglyceridemia is LIPI (Lipase I), and among its related pathways/superpathways are Metabolism and Regulation of lipid metabolism by Peroxisome proliferator-activated receptor alpha (PPARalpha). The drugs Metformin and Saxagliptin have been mentioned in the context of this disorder. Affiliated tissues include liver, heart and endothelial, and related phenotypes are Decreased free cholesterol and Increased LDL uptake. Hypertriglyceridemia denotes high blood levels of triglycerides. (http://www.malacards.org/card/hypertriglyceridemia)

* Influenza, also known as flu, is related to hepatitis c virus and avian influenza, and has symptoms including coughing, fever and pruritus. An important gene associated with

Influenza is IVNS1ABP (Influenza Virus NS1A Binding Protein), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Tequin and Oseltamivir have been mentioned in the context of this disorder. Affiliated tissues include testes, lung and t cells, and related phenotypes are Decreased influenza A H1N1 (A/Hamburg /04/2009) virus numbers and Decreased influenza A H1N1 (A/WSN/33) virus numbers. A viral infectious disease that results_in infection, located in respiratory tract, has material basis in Influenzavirus A, B, or C, which are transmitted_by droplet spread of oronasal secretions during coughing, sneezing, or talking from an infected person. It is a highly contagious disease that affects birds and mammals and has symptoms chills, fever, sore throat, runny nose, muscle pains, severe headache, cough, and weakness. (http://www.malacards.org/card/influenza)

* Liver Disease, also known as liver diseases, is related to alpha 1-antitrypsin deficiency and congenital dyserythropoietic anemia, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Liver Disease is SERPINA1 (Serpin Family A Member 1), and among its related pathways/superpathways are Metabolism and Adipogenesis. The drugs Amlodipine and Perindopril have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and kidney, and related phenotypes are homeostasis/metabolism and growth/size/body region. A type of damage to or disease of the liver. (http://www.malacards.org/card/liver_disease)

* Ovarian Disease, also known as ovarian dysfunction, is related to endometriosis and ovarian hyperstimulation syndrome, and has symptoms including pelvic pain and mittelschmerz. An important gene associated with Ovarian Disease is GNRH1 (Gonadotropin Releasing Hormone 1), and among its related pathways/superpathways are Prolactin Signaling Pathway and Peptide hormone metabolism. The drugs Metformin and Ganirelix have been mentioned in the context of this disorder. Affiliated tissues include ovary, testes and lung, and related phenotypes are endocrine/exocrine gland and homeostasis/metabolism. Endocrine disorders or disorders of the reproductive system. (http://www.malacards.org/card/ovarian_disease)

* Pancreas Disease, also known as abnormality of the pancreas, is related to endocrine pancreas disease and functioning pituitary adenoma, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Pancreas Disease is INS (Insulin), and among its related pathways/superpathways are Peptide ligand-binding receptors and G alpha (s) signalling events. The drugs Pancrelipase and Secretin have been mentioned in the context of this disorder. Affiliated tissues include pancreas, lung and liver, and related phenotypes are homeostasis/metabolism and adipose tissue. An endocrine system disease that is located in the pancreas. (http://www.malacards.org/card/pancreas_disease)

* Pituitary Gland Disease, also known as pituitary dysfunction, is related to retinal dystrophy, early-onset, and pituitary dysfunction and microphthalmia, syndromic 5, and has symptoms including back pain, headache and pain. An important gene associated

with Pituitary Gland Disease is IGF1 (Insulin Like Growth Factor 1), and among its related pathways/superpathways are Peptide ligand-binding receptors and p70S6K Signaling. The drugs Menthol and Hydrocortisone have been mentioned in the context of this disorder. Affiliated tissues include pituitary, brain and testes, and related phenotypes are endocrine/exocrine gland and growth/size/body region. An endocrine system disease that is located in the pituitary gland. (http://www.malacards.org/card/pituitary_gland_disease)

* Psychotic Disorder, also known as psychotic disorders, is related to schizophrenia 9 and schizophrenia, and has symptoms including alexithymia, decreased libido and increased libido. An important gene associated with Psychotic Disorder is DISC1 (Disrupted In Schizophrenia 1), and among its related pathways/superpathways are Neuroscience and Circadian rythm related genes. The drugs Aripiprazole and Asenapine have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and heart, and related phenotypes are Decreased shRNA abundance (Z-score < -2) and behavior/neurological. A cognitive disorder that involves abnormal thinking and perceptions resulting in a disconnection with reality. (http://www.malacards.org/card/psychotic_disorder)

* Pulmonary Hypertension, also known as primary pulmonary hypertension, is related to pulmonary venoocclusive disease 1 and antiphospholipid syndrome, and has symptoms including angina pectoris, chest pain and coughing. An important gene associated with Pulmonary Hypertension is BMPR2 (Bone Morphogenetic Protein Receptor Type 2), and among its related pathways/superpathways are Vascular smooth muscle contraction and Human Embryonic Stem Cell Pluripotency. The drugs Adcirca and Adempas have been mentioned in the context of this disorder. Affiliated tissues include Lung, heart and lung, and related phenotypes are cardiovascular system and behavior/neurological. A chronic pulmonary heart disease characterized by an increase of blood pressure in the pulmonary artery, pulmonary vein, or pulmonary capillaries, among others, has symptoms shortness of breath, dizziness, fainting, leg swelling. (http://www.malacards.org/card/pulmonary_hypertension)

* Pure Autonomic Failure, also known as idiopathic orthostatic hypotension, is related to adenocarcinoma and pleurisy. An important gene associated with Pure Autonomic Failure is DBH (Dopamine Beta-Hydroxylase), and among its related pathways/superpathways are Activated PKN1 stimulates transcription of AR (androgen receptor) regulated genes KLK2 and KLK3 and Circadian entrainment. The drugs Midodrine and Droxidopa have been mentioned in the context of this disorder. Affiliated tissues include heart, brain and spinal cord, and related phenotypes are behavior/neurological and homeostasis/metabolism. A generalized autonomic failure without central nervous system (brain or spinal cord) involvement. the autonomic nervous system is the part of the body that controls involuntary actions, such as the widening or narrowing of the blood vessels. failure of this system can cause a variety of symptoms. the most common symptom of pure autonomic failure is orthostatic hypotension. other symptoms may include decreased sweating, heat intolerance, inability to empty the bladder, erectile dysfunction, incontinence or constipation, and

pupil changes. (http://www.malacards.org/card/pure_autonomic_failure)

* Rectal Disease, also known as rectal diseases, is related to proctitis and scalp dermatosis, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Rectal Disease is KIDINS220 (Kinase D Interacting Substrate 220), and among its related pathways/superpathways is MSP- RON Signaling. The drugs Aspirin and Iron have been mentioned in the context of this disorder. Affiliated tissues include liver, colon and testes. (http://www.malacards.org/card/rectal_disease)

* Spondyloarthropathy, also known as spondylarthropathies, is related to spondyloarthropathy 1 and ulcerative colitis, and has symptoms including sciatica An important gene associated with Spondyloarthropathy is HLA-B (Major Histocompatibility Complex, Class I, B), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Adalimumab and Pamidronate have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and t cells, and related phenotypes are Increased shRNA abundance (Z-score > 2) and homeostasis/metabolism. Any joint disease of the vertebral column. (http://www.malacards.org/card/spondyloarthropathy)

* Stomach Disease, also known as stomach diseases, is related to non-hypoproteinemic hypertrophic gastropathy and functional gastric disease, and has symptoms including abdominal pain, constipation and diarrhea. An important gene associated with Stomach Disease is DDX21 (DExD-Box Helicase 21), and among its related pathways/superpathways are Peptide ligand-binding receptors and Salivary secretion. The drugs Epinephrine and Racepinephrine have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and lung, and related phenotypes are digestive/alimentary and homeostasis/metabolism. A gastrointestinal system disease that is located in the stomach. (http://www.malacards.org/card/stomach_disease)

* Subacute Delirium, also known as delirium, is related to reye syndrome and insomnia, fatal familial, and has symptoms including ataxia, back pain and headache. An important gene associated with Subacute Delirium is APOH (Apolipoprotein H). The drug Hypnotics and Sedatives has been mentioned in the context of this disorder. (http://www.malacards.org/card/subacute_delirium)

* Thyroid Gland Disease, also known as thyroid diseases, is related to autoimmune thyroid disease 3 and igg4-related thyroid disease. An important gene associated with Thyroid Gland Disease is TG (Thyroglobulin), and among its related pathways/superpathways are Peptide ligand-binding receptors and Allograft rejection. The drugs Bimatoprost and Latanoprost have been mentioned in the context of this disorder. Affiliated tissues include thyroid, eye and heart, and related phenotypes are endocrine/exocrine gland and growth/size/body region. An endocrine system disease that is located in the thyroid. (http://www.malacards.org/card/thyroid_gland_disease)

* Toxic Encephalopathy, also known as neurotoxicity syndromes, is related to neuroblastoma and alzheimer disease. An important gene associated with Toxic Encephalopathy is HMOX1 (Heme Oxygenase 1), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Circadian entrainment. The drugs Oxaliplatin and Aripiprazole have been mentioned in the context of this disorder. Affiliated tissues include brain, skin and testes, and related phenotypes are Decreased caspase 3/7 activity and behavior/neurological. A nervous system disease that results from exposure to neurotoxicants and is characterized by an altered mental status, memory loss, and visual problems. (http://www.malacards.org/card/toxic_encephalopathy)

* Vascular Dementia, also known as dementia, vascular, is related to dementia and binswanger's disease. An important gene associated with Vascular Dementia is APOE (Apolipoprotein E), and among its related pathways/superpathways are Neuroscience and Alzheimers Disease Pathway. The drugs Citalopram and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and cortex, and related phenotypes are homeostasis/metabolism and behavior/neurological. A dementia that involves impairments in cognitive function caused by problems in blood vessels that feed the brain. (http://www.malacards.org/card/vascular_dementia)

* Vascular Disease, also known as vascular diseases, is related to adams-oliver syndrome 5 and capillary hemangioma, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Vascular Disease is MTHFR (Methylenetetrahydrofolate Reductase), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Glucose / Energy Metabolism. The drugs Ethanol and Heparin have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and kidney, and related phenotypes are cardiovascular system and homeostasis/metabolism. A cardiovascular system disease that primarily affects the blood vessels which includes the arteries, veins and capillaries that carry blood to and from the heart. (http://www.malacards.org/card/vascular_disease)

Genetic_Superpathways-Aggressive Periodontitis; Genetic Superpathways-Allergic Conjunctivitis; Genetic_Superpathways-Allergic Hypersensitivity; Genetic Superpathways-Arteriolosclerosis; Genetic Superpathways-Atherosclerosis; Genetic_Superpathways-Atopy; Genetic Superpathways-Blepharoconjunctivitis; Genetic Superpathways-Common Cold; Genetic Superpathways-Demyelinating Disease; Genetic_Superpathways-Dermatitis; Genetic Superpathways-Hyperglycemia; Genetic Superpathways-Intestinal Disease; Genetic Superpathways-Lymph Node Disease; Genetic_Superpathways-Movement Disease; Genetic Superpathways-Multiple

Sclerosis Disease Progression Modifier Of; Genetic Superpathways-Narcissistic Personality Disorder; Genetic Superpathways-Neuromuscular Junction Disease; Genetic Superpathways-Obesity; Genetic Superpathways-Palmoplantar Keratosis; Genetic Superpathways-Paranoid Schizophrenia; Genetic Superpathways-Pulmonary Emphysema; Genetic Superpathways-Root Resorption; Genetic Superpathways-Spondyloarthropathy 1; Genetic Superpathways-Tendinopathy; Genetic Superpathways-Tendinosis; Genetic Superpathways-Tooth Resorption; Genetic Superpathways-Withdrawal Disorder; Genetics-Androgenic Alopecia; Genetics-Radioulnar Synostosis; Genetics-Telogen Effluvium

* Aggressive Periodontitis, also known as periodontitis, juvenile, is related to rheumatoid arthritis and susceptibility to localized juvenile periodontitis. An important gene associated with Aggressive Periodontitis is IL1B (Interleukin 1 Beta), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Estradiol and Ethinyl Estradiol have been mentioned in the context of this disorder. Affiliated tissues include bone, neutrophil and monocytes, and related phenotypes are hematopoietic system and homeostasis/metabolism. A periodontitis that is characterized by rapid attachment loss and bone destruction in the presence of little local factors such as dental plaque and dental calculus resulting in inflammation and a loss of periodontium.
(http://www.malacards.org/card/aggressive_periodontitis)

* Allergic Conjunctivitis, also known as conjunctivitis, allergic, is related to lymphoma and asthma. An important gene associated with Allergic Conjunctivitis is RNASE3 (Ribonuclease A Family Member 3), and among its related pathways/superpathways are Innate Immune System and TGF-Beta Pathway. The drugs Alcaftadine and Ephedrine have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and skin, and related phenotypes are hematopoietic system and homeostasis/metabolism. A chronic conjunctivitis that is an inflammation of the conjunctiva involing red, itchy, and watery eyes a resulting from an exposure to an allergen or an irritant.
(http://www.malacards.org/card/allergic_conjunctivitis)

* Allergic Hypersensitivity Disease, also known as hypersensitivity, is related to neonatal jaundice and asthma, and has symptoms including coughing, exanthema and pruritus. An important gene associated with Allergic Hypersensitivity Disease is IL5 (Interleukin 5), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Alcaftadine and Histamine have been mentioned in the context of this disorder. Affiliated tissues include testes, skin and eye, and related phenotypes are hematopoietic system and immune system. An immune system disease that is an exaggerated immune response to allergens, such as insect venom, dust mites, pollen, pet dander, drugs or some foods.
(http://www.malacards.org/card/allergic_hypersensitivity_disease)

* Androgenic Alopecia, also known as androgenetic alopecia, is related to alopecia, androgenetic, 1 and ulceroglandular tularemia. An important gene associated with Androgenic Alopecia is SHBG (Sex Hormone Binding Globulin), and among its related pathways/superpathways are Transcription Androgen Receptor nuclear signaling and Coregulation of Androgen receptor activity. The drugs Finasteride and Minoxidil have been mentioned in the context of this disorder. Affiliated tissues include testes, prostate and bone. A hair loss that primarily affects the top and front of the scalp. In males the hair loss often presents as a receding hairline while in females it typically presents as a thinning of the hair.
(http://www.malacards.org/card/androgenic_alopecia)

* Arteriolosclerosis is related to chronic mucocutaneous candidiasis and partial circumpapillary choroid dystrophy. An important gene associated with Arteriolosclerosis is C3 (Complement C3), and among its related pathways/superpathways is Mesenchymal Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include brain, kidney and heart, and related phenotypes are hematopoietic system and immune system. A form of cardiovascular disease involving hardening and loss of elasticity of arterioles or small arteries and is most often associated with hypertension and diabetes mellitus.
(http://www.malacards.org/card/arteriolosclerosis)

* Atherosclerosis, also known as arteriosclerosis, is related to arthritis and angina pectoris, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Atherosclerosis is SELE (Selectin E), and among its related pathways/superpathways are Blood-Brain Barrier and Immune Cell Transmigration: VCAM-1/CD106 Signaling Pathways and Lipoprotein metabolism. The drugs Olmesartan and Aspirin have been mentioned in the context of this disorder. Affiliated tissues include Endothelium and Heart, and related phenotypes are Decreased free cholesterol and cardiovascular system. A disease in which the inside of an artery narrows due to the build up of plaque.
(http://www.malacards.org/card/atherosclerosis)

* Atopy, also known as hypersensitivity, immediate, is related to churg-strauss syndrome and cow milk allergy, and has symptoms including asthma, eczema and increased ige level. An important gene associated with Atopy is IL4R (Interleukin 4 Receptor), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Montelukast and Petrolatum have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and lung, and related phenotypes are hematopoietic system and digestive/alimentary. A condition characterized by predisposition to develop hypersensitivity reactions. Atopic individuals can develop eczema, allergic rhinitis and allergic asthma.
(http://www.malacards.org/card/atopy)

* Blepharoconjunctivitis is related to angular blepharoconjunctivitis and contact blepharoconjunctivitis. An important gene associated with Blepharoconjunctivitis is IL4 (Interleukin 4), and among its related pathways/superpathways are Allograft rejection

and Matrix Metalloproteinases. The drugs Loteprednol and Tobramycin have been mentioned in the context of this disorder. Affiliated tissues include eye, t cells and testes. A blepharitis that is characterized by the dual combination of conjunctivitis with blepharitis.
(http://www.malacards.org/card/blepharoconjunctivitis)

* Common Cold, also known as acute nasopharyngitis [common cold], is related to myocardial infarction and asthma, and has symptoms including coughing, fever and pruritus. An important gene associated with Common Cold is CCL11 (C-C Motif Chemokine Ligand 11), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Montelukast and Ethanol have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and bone, and related phenotypes are hematopoietic system and homeostasis/metabolism. An upper respiratory tract disease which involves inflammation of the mucous membranes of the nose, throat, eyes, and eustachian tubes with watery then purulent discharge. This is an acute contagious disease caused by rhinoviruses, human parainfluenza viruses, human respiratory syncytial virus, influenza viruses, adenoviruses, enteroviruses, or metapneumovirus.
(http://www.malacards.org/card/common_cold)

* Demyelinating Disease, also known as demyelinating diseases, is related to tumefactive multiple sclerosis and charcot-marie-tooth disease. An important gene associated with Demyelinating Disease is MBP (Myelin Basic Protein), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Natalizumab and Mitoxantrone have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and bone, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and hematopoietic system. A demyelinating disease is any disease of the nervous system in which the myelin sheath of neurons is damaged. This damage impairs the conduction of signals in the affected nerves. In turn, the reduction in conduction ability causes deficiency in sensation, movement, cognition, or other functions depending on which nerves are involved.
(http://www.malacards.org/card/demyelinating_disease)

* Dermatitis, also known as eczema, is related to asthma and exogenous ochronosis, and has symptoms including exanthema and pruritus. An important gene associated with Dermatitis is FLG (Filaggrin), and among its related pathways/superpathways are Cytokine Signaling in Immune system and IL-17 Family Signaling Pathways. The drugs Montelukast and Petrolatum have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and breast, and related phenotypes are Increased shRNA abundance (Z-score > 2) and immune system. A skin disease characterized by itchy, erythematous, vesicular, weeping and crusting patches of skin.
(http://www.malacards.org/card/dermatitis)

* Hyperglycemia is related to diabetes mellitus, permanent neonatal and diabetes mellitus, transient neonatal, 3, and has symptoms including cachexia, cyanosis and dyspnea. An important gene associated with Hyperglycemia is INS (Insulin), and among

its related pathways/superpathways are Developmental Biology and AMP-activated Protein Kinase (AMPK) Signaling. The drugs Glipizide and Metformin have been mentioned in the context of this disorder. Affiliated tissues include endothelial, heart and testes, and related phenotypes are homeostasis/metabolism and growth/size/body region. Hyperglycemia, or high blood sugar is a condition in which an excessive amount of glucose circulates in the blood plasma.
(http://www.malacards.org/card/common_hyperglycemia)

* Intestinal Disease, also known as intestinal diseases, is related to short bowel syndrome and cyclosporiasis, and has symptoms including anal or rectal pain, constipation and diarrhea. An important gene associated with Intestinal Disease is TP53 (Tumor Protein P53), and among its related pathways/superpathways are Akt Signaling and Toll-Like receptor Signaling Pathways. The drugs Infliximab and Benzocaine have been mentioned in the context of this disorder. Affiliated tissues include colon, liver and testes, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and homeostasis/metabolism. A gastrointestinal system disease that is located in the intestine.
(http://www.malacards.org/card/intestinal_disease)

* Lymph Node Disease, also known as disorder of lymph node, is related to supranuclear ocular palsy and kleptomania, and has symptoms including axillary lymph node pain, inguinal lymph node pain and inguinal lymph node tenderness. An important gene associated with Lymph Node Disease is MMP3 (Matrix Metallopeptidase 3), and among its related pathways/superpathways are T cell receptor signaling pathway and IL-17 Family Signaling Pathways. The drugs Azithromycin and Prednisone have been mentioned in the context of this disorder. Affiliated tissues include lymph node, breast and prostate, and related phenotypes are homeostasis/metabolism and endocrine/exocrine gland. Lymphadenopathy or adenopathy is disease of the lymph nodes, in which they are abnormal in size, number, or consistency. Lymphadenopathy of an inflammatory type (the most common type) is lymphadenitis, producing swollen or enlarged lymph nodes.
(http://www.malacards.org/card/lymph_node_disease)

* Movement Disease, also known as movement disorders, is related to cervical dystonia and stereotypic movement disorder, and has symptoms including ataxia, athetosis and back pain. An important gene associated with Movement Disease is TOR1A (Torsin Family 1 Member A), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Chks in Checkpoint Regulation. The drugs Donepezil and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, eye and heart, and related phenotypes are behavior/neurological and cellular. Clinical syndromes with either an excess of movement or a paucity of voluntary and involuntary movements, unrelated to weakness or spasticity.
(http://www.malacards.org/card/movement_disease)

* Multiple Sclerosis, Disease Progression, Modifier of, also known as multiple sclerosis,

is related to progressive relapsing multiple sclerosis and dysphagia, and has symptoms including spasticity, diplopia and emotional lability. An important gene associated with Multiple Sclerosis, Disease Progression, Modifier of is HLA-DRB1 (Major Histocompatibility Complex, Class II, DR Beta 1), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. Affiliated tissues include Neural Tube and Limb, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and hematopoietic system. A demyelinating disease that involves damage to the fatty myelin sheaths around the axons of the brain and spinal cord resulting in demyelination and scarring.
(http://www.malacards.org/card/multiple_sclerosis_disease_progression_modifier_of)

* Narcissistic Personality Disorder is related to personality disorder and glycoproteinosis. An important gene associated with Narcissistic Personality Disorder is SMPD1 (Sphingomyelin Phosphodiesterase 1), and among its related pathways/superpathways are Prolactin Signaling Pathway and Salmonella infection (KEGG). The drug Silicon has been mentioned in the context of this disorder. Affiliated tissues include brain, and related phenotype is growth/size/body region. A personality disorder that involves an excessive preoccupation with issues of personal adequacy, power, prestige and vanity.
(http://www.malacards.org/card/narcissistic_personality_disorder)

* Neuromuscular Junction Disease, also known as neuromuscular junction diseases, is related to lambert-eaton myasthenic syndrome and congenital myasthenic syndrome. An important gene associated with Neuromuscular Junction Disease is MUSK (Muscle Associated Receptor Tyrosine Kinase), and among its related pathways/superpathways are Transmission across Chemical Synapses and ECM proteoglycans. The drugs Azathioprine and Benzocaine have been mentioned in the context of this disorder. Affiliated tissues include testes and thymus, and related phenotypes are mortality/aging and behavior/neurological. A neuromuscular disease that is characterized by the disfunction of conduction through the neuromuscular junction.
(http://www.malacards.org/card/neuromuscular_junction_disease)

* Obesity, also known as obesity, autosomal dominant, is related to obesity susceptibility, enpp1-related and obesity susceptibility, ghrl-related, and has symptoms including hypertriglyceridemia, hyperinsulinemia and hypertension. An important gene associated with Obesity is MC4R (Melanocortin 4 Receptor), and among its related pathways/superpathways are DAG and IP3 signaling and Circadian rythm related genes. The drugs Dexmedetomidine and Acetaminophen have been mentioned in the context of this disorder. Affiliated tissues include liver, ovary and heart, and related phenotypes are adipose tissue and growth/size/body region. A condition characterized by an increase of body weight beyond the limitation of skeletal and physical requirements, as the result of excessive accumulation of body fat.
(http://www.malacards.org/card/obesity)

* Palmoplantar Keratosis, also known as palmoplantar keratoderma, is related to keratoderma, palmoplantar, with deafness and palmoplantar keratoderma,

epidermolytic. An important gene associated with Palmoplantar Keratosis is CTSC (Cathepsin C), and among its related pathways/superpathways are Developmental Biology and Keratinization. The drugs Etanercept and Analgesics have been mentioned in the context of this disorder. Affiliated tissues include skin, and related phenotype is integument. A keratosis characterized by abnormal thickening of the palms and the soles.
(http://www.malacards.org/card/palmoplantar_keratosis)

* Paranoid Schizophrenia, also known as chronic paranoid schizophrenia, is related to ulcerative colitis and personality disorder. An important gene associated with Paranoid Schizophrenia is COMT (Catechol-O-Methyltransferase), and among its related pathways/superpathways are Amphetamine addiction and Serotonergic synapse. The drugs Dopamine and Risperidone have been mentioned in the context of this disorder. Affiliated tissues include testes, brain and eye, and related phenotypes are behavior/neurological and nervous system. A schizophrenia that involves delusions or auditory hallucinations of persecution or being plotted against without thought disorder, disorganized behavior, or affective flattening.
(http://www.malacards.org/card/paranoid_schizophrenia)

* Pulmonary Emphysema is related to berry aneurysm, cirrhosis, pulmonary emphysema, and cerebral calcification and alpha 1-antitrypsin deficiency, and has symptoms including coughing, hemoptysis and snoring. An important gene associated with Pulmonary Emphysema is SERPINA1 (Serpin Family A Member 1), and among its related pathways/superpathways are Innate Immune System and Integrin Pathway. The drugs Simvastatin and Doxycycline have been mentioned in the context of this disorder. Affiliated tissues include lung, bone and liver, and related phenotypes are homeostasis/metabolism and hematopoietic system. A long-term, progressive disease of the lungs that primarily causes shortness of breath due to over-inflation of the alveoli (air sacs in the lung). In people with emphysema, the lung tissue involved in exchange of gases (oxygen and carbon dioxide) is impaired or destroyed.
(http://www.malacards.org/card/pulmonary_emphysema)

* Radioulnar Synostosis, also known as congenital radioulnar synostosis, is related to radioulnar synostosis with amegakaryocytic thrombocytopenia 2 and radioulnar synostosis with amegakaryocytic thrombocytopenia 1, and has symptoms including limited elbow extension and dislocated radial head. An important gene associated with Radioulnar Synostosis is MECOM (MDS1 And EVI1 Complex Locus), and among its related pathways/superpathways are MAPK signaling pathway and Pathways in cancer. Affiliated tissues include bone, bone marrow and brain, and related phenotypes are Condensed cis-Golgi and cellular. Congenital radioulnar synostosis is rare. Post-traumatic cases are most likely to develop following surgery for a forearm fracture, this is more common with high-energy injuries where the bones are broken into many pieces (comminuted). It can also develop following soft tissue injury to the forearm where there is haematoma formation.
(http://www.malacards.org/card/radioulnar_synostosis)

* Root Resorption is related to singleton-merten syndrome 1 and prothrombin thrombophilia. An important gene associated with Root Resorption is TNFSF11 (TNF Superfamily Member 11), and among its related pathways/superpathways are Cytokine Signaling in Immune system and Development Endothelin-1/EDNRA signaling. The drugs Mitogens and Chlorhexidine have been mentioned in the context of this disorder. Affiliated tissues include bone and thyroid, and related phenotypes are hematopoietic system and homeostasis/metabolism. A process by which all or part of a tooth structure is lost due to activation of the body's innate capacity to remove mineralized tissue, as mediated via cells such as osteoclasts.
(http://www.malacards.org/card/root_resorption)

* Spondyloarthropathy 1, also known as ankylosing spondylitis, is related to osteochondrosis and uveitis, and has symptoms including kyphosis, back pain and arrhythmia. An important gene associated with Spondyloarthropathy 1 is HLA-B (Major Histocompatibility Complex, Class I, B), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Etanercept and Methotrexate have been mentioned in the context of this disorder. Affiliated tissues include Placenta and Umbilical Cord, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and hematopoietic system. Ankylosing spondylitis is a form of ongoing joint inflammation (chronic inflammatory arthritis) that primarily affects the spine. This condition is characterized by back pain and stiffness that typically appear in adolescence or early adulthood. Over time, back movement gradually becomes limited as the bones of the spine (vertebrae) fuse together.
(http://www.malacards.org/card/spondyloarthropathy_1)

* Telogen Effluvium is related to alopecia and alopecia areata. An important gene associated with Telogen Effluvium is LIPH (Lipase H), and among its related pathways/superpathways are Cell adhesion molecules (CAMs) and Presenilin-Mediated Signaling. The drugs Adjuvants, Immunologic and Ammonium trichloro(dioxoethylene-O,O'-)tellurate have been mentioned in the context of this disorder. Affiliated tissues include skin, thyroid and spinal cord. A scalp disorder characterized by the thinning or shedding of hair resulting from the early entry of hair in the telogen phase (the resting phase of the hair follicle).
(http://www.malacards.org/card/telogen_effluvium)

* Tendinopathy is related to tendinitis and tendinosis, and has symptoms including muscle cramp, muscle rigidity and muscle spasticity. An important gene associated with Tendinopathy is ENPP1 (Ectonucleotide Pyrophosphatase/Phosphodiesterase 1), and among its related pathways/superpathways are Integrin Pathway and Degradation of the extracellular matrix. The drugs Lidocaine and Polidocanol have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, bone and whole blood, and related phenotype is homeostasis/metabolism. A disease of a tendon.
(http://www.malacards.org/card/tendinopathy)

* Tendinosis is related to tendinitis and colobomatous microphthalmia. An important gene associated with Tendinosis is CHAT (Choline O-Acetyltransferase), and among its

related pathways/superpathways are PAK Pathway and Degradation of the extracellular matrix. The drugs Menthol and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include skin, whole blood and bone, and related phenotypes are homeostasis/metabolism and behavior/neurological. A damage to a tendon at a cellular level (the suffix "osis" implies a pathology of chronic degeneration without inflammation).
(http://www.malacards.org/card/tendinosis)

* Tooth Resorption is related to internal hordeolum and cortical blindness, and has symptoms including toothache An important gene associated with Tooth Resorption is DSPP (Dentin Sialophosphoprotein), and among its related pathways/superpathways are Degradation of the extracellular matrix and RANK Signaling in Osteoclasts. The drugs sodium fluoride and Denosumab have been mentioned in the context of this disorder. Affiliated tissues include bone and myeloid, and related phenotypes are craniofacial and hematopoietic system. A process by which all or part of a tooth structure is lost due to activation of the body's innate capacity to remove mineralized tissue, as mediated via cells such as osteoclasts.
(http://www.malacards.org/card/tooth_resorption)

* Withdrawal Disorder, also known as substance withdrawal syndrome, is related to barbiturate dependence and hole retinal cyst, and has symptoms including seizures, drug withdrawal symptoms and withdrawal symptoms. An important gene associated with Withdrawal Disorder is KLK3 (Kallikrein Related Peptidase 3), and among its related pathways/superpathways are Peptide ligand-binding receptors and G alpha (s) signalling events. The drugs Everolimus and Miconazole have been mentioned in the context of this disorder. Affiliated tissues include lung, kidney and prostate, and related phenotypes are behavior/neurological and homeostasis/metabolism. A substance-related disorder that occurs upon the abrupt discontinuation/separation or a decrease in dosage of the intake of medications, recreational drugs, and alcohol.
(http://www.malacards.org/card/withdrawal_disorder)

* Acromegaly, also known as growth hormone excess, is related to functioning pituitary adenoma and pituitary adenoma, prolactin-secreting, and has symptoms including macroglossia, acne and broad jaw. An important gene associated with Acromegaly is AIP (Aryl Hydrocarbon Receptor Interacting Protein), and among its related pathways/superpathways are TGF-Beta Pathway and Peptide ligand-binding receptors. The drugs Octreotide and lanreotide have been mentioned in the context of this disorder. Affiliated tissues include pituitary, bone and testes, and related phenotypes are homeostasis/metabolism and endocrine/exocrine gland. A disease of metabolism that has material basis in excessive growth hormone production which results_in enlargement located in limb.
(http://www.malacards.org/card/acromegaly)

* Aging is related to werner syndrome and atypical werner syndrome. An important gene associated with Aging is LMNA (Lamin A/C), and among its related pathways/superpathways are Endometrial cancer and TNFR1 Pathway. The drugs Acetylcholine and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, bone and heart, and related phenotypes are Decreased viability and Decreased viability. Biological aging is the gradual deterioration of function.
(http://www.malacards.org/card/aging)

* Alexithymia is related to antisocial personality disorder and personality disorder. An important gene associated with Alexithymia is ANKK1 (Ankyrin Repeat And Kinase Domain Containing 1), and among its related pathways/superpathways are cAMP signaling pathway and Selective Serotonin Reuptake Inhibitor Pathway, Pharmacodynamics. The drugs Sertraline and Serotonin have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and breast, and related phenotype is Weakly decreased NFAT1-GFP nuclear translocation. A personality construct characterized by the subclinical inability to identify and describe emotions in the self. The core characteristics of alexithymia are marked dysfunction in emotional awareness, social attachment, and interpersonal relating. Furthermore, people with alexithymia have difficulty in distinguishing and appreciating the emotions of others, which is thought to lead to unempathic and ineffective emotional responding. Alexithymia occurs in approximately 10% of the population and can occur with a number of psychiatric conditions.
(http://www.malacards.org/card/alexithymia)

* Alveolar Periostitis, also known as dry socket, is related to ampulla of vater adenosquamous carcinoma and ectopic cushing syndrome, and has symptoms including oral manifestations An important gene associated with Alveolar Periostitis is SLC9C1 (Solute Carrier Family 9 Member C1), and among its related pathways/superpathways are Hepatitis C and Hepatocellular Carcinoma and Notch-mediated HES/HEY network. The drugs Chlorhexidine and Anti-Infective Agents have been mentioned in the context of this disorder. Related phenotype is liver/biliary system. An inflammation of the alveolar bone (i.e., the alveolar process of the maxilla or mandible). Classically, this occurs as a postoperative complication of tooth extraction. (http://www.malacards.org/card/alveolar_periostitis)

* Antisocial Personality Disorder, also known as psychopathic personality disorder, is related to personality disorder and heroin dependence. An important gene associated with Antisocial Personality Disorder is MAOA (Monoamine Oxidase A), and among its related pathways/superpathways are Transmission across Chemical Synapses and Circadian entrainment. The drugs Naratriptan and Sumatriptan have been mentioned in the context of this disorder. Affiliated tissues include cortex, prefrontal cortex and brain, and related phenotypes are behavior/neurological and homeostasis/metabolism. A personality disorder characterized by a long term pattern of disregard for, or violation of, the rights of others. An impoverished moral sense or conscience is often apparent, as well as a history of crime, legal problems, or impulsive and aggressive behavior. (http://www.malacards.org/card/antisocial_personality_disorder)

* Apnea, Obstructive Sleep, also known as obstructive sleep apnea, is related to kawasaki disease and body mass index quantitative trait locus 11, and has symptoms including snoring, excessive daytime somnolence and anosmia. An important gene associated with Apnea, Obstructive Sleep is AHDC1 (AT-Hook DNA Binding Motif Containing 1), and among its related pathways/superpathways are Common Cytokine Receptor Gamma-Chain Family Signaling Pathways and Selenium Micronutrient Network. The drugs Guanfacine and Hydrochlorothiazide have been mentioned in the context of this disorder. Affiliated tissues include heart, testes and endothelial, and related phenotypes are cardiovascular system and behavior/neurological. A sleep apnea that is characterized by repeated collapse and obstruction of the upper airway during sleep, which results in reduced airflow (hypopnea) or complete airflow cessation (apnea), oxygen desaturation, and arousals from sleep. (http://www.malacards.org/card/apnea_obstructive_sleep)

* Attention Deficit-Hyperactivity Disorder, also known as attention deficit hyperactivity disorder, is related to gilles de la tourette syndrome and conduct disorder, and has symptoms including attention deficit hyperactivity disorder, hyperactivity and sleeplessness. An important gene associated with Attention Deficit-Hyperactivity Disorder is DRD4 (Dopamine Receptor D4), and among its related pathways/superpathways are Dopaminergic synapse and Serotonergic synapse. The drugs Dopamine and Methylphenidate have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and thyroid, and related phenotypes are behavior/neurological and nervous system. A mental disorder in which children are

especially inattentive, impulsive or hyperactive.
(http://www.malacards.org/card/attention_deficit_hyperactivity_disorder_2)

* Bone Inflammation Disease, also known as osteitis, is related to osteomyelitis and arthropathy. An important gene associated with Bone Inflammation Disease is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways/superpathways are Innate Immune System and Akt Signaling. Affiliated tissues include bone and bone, and related phenotypes are homeostasis/metabolism and cellular. A bone disease that results_in inflammation of the located in bone.
(http://www.malacards.org/card/bone_inflammation_disease)

* Calcific Tendinitis is related to tendinitis and episodic pain syndrome, familial, 1. An important gene associated with Calcific Tendinitis is SPP1 (Secreted Phosphoprotein 1), and among its related pathways/superpathways are Toll-like receptor signaling pathway and Lysosome. The drugs Triamcinolone and Epinephrine have been mentioned in the context of this disorder. Affiliated tissues include bone, pituitary and hypothalamus, and related phenotypes are hematopoietic system and immune system. A disorder characterized by deposits of hydroxyapatite (a crystalline calcium phosphate) in any tendon of the body.
(http://www.malacards.org/card/calcific_tendinitis)

* Dental Abscess is related to osteopetrosis, autosomal dominant 2 and osteopetrosis, autosomal dominant 1. An important gene associated with Dental Abscess is PHEX (Phosphate Regulating Endopeptidase Homolog, X-Linked), and among its related pathways/superpathways is Neuroscience. The drugs Amoxicillin and Clindamycin have been mentioned in the context of this disorder. Affiliated tissues include lung. A tooth disease characterized by a localized collection of pus associated with a tooth.
(http://www.malacards.org/card/dental_abscess)

* Dental Pulp Disease, also known as dental pulp diseases, is related to insensitivity to pain, congenital and cutaneous porphyria, and has symptoms including toothache An important gene associated with Dental Pulp Disease is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways/superpathways are Bacterial infections in CF airways and Immune response IFN alpha/beta signaling pathway. The drugs Epinephrine and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include testes, bone and eye.
(http://www.malacards.org/card/dental_pulp_disease)

* Frozen Shoulder, also known as bursitis, is related to olecranon bursitis and bursitis, and has symptoms including bursal tenderness, bursal pain and myalgia. An important gene associated with Frozen Shoulder is ASIC3 (Acid Sensing Ion Channel Subunit 3), and among its related pathways/superpathways are Ion channel transport and Development Endothelin-1/EDNRA signaling. The drugs Prednisolone and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include testes, bone and endothelial, and related phenotypes are behavior/neurological and nervous

system. A painful and disabling disorder of unclear cause in which the shoulder capsule, the connective tissue surrounding the glenohumeral joint of the shoulder, becomes inflamed and stiff, greatly restricting motion and causing chronic pain.
(http://www.malacards.org/card/frozen_shoulder)

* Impotence, also known as erectile dysfunction, is related to vasculogenic impotence and gynecomastia, and has symptoms including unable to perform sex, inability to maintain erection and equilibration disorder. An important gene associated with Impotence is NOS1 (Nitric Oxide Synthase 1), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Relaxin signaling pathway. The drugs Methyltestosterone and Testosterone have been mentioned in the context of this disorder. Affiliated tissues include prostate, spinal cord and bone, and related phenotype is reproductive system. A common type of male sexual dysfunction. It is when a man has trouble getting or keeping an erection. ED becomes more common as you get older. But it's not a natural part of aging.
(http://www.malacards.org/card/impotence)

* Keratosis, Seborrheic, Somatic, also known as seborrheic keratosis, is related to vulvar seborrheic keratosis and inflamed seborrheic keratosis, and has symptoms including verrucae An important gene associated with Keratosis, Seborrheic, Somatic is PIK3CA (Phosphatidylinositol-4,5-Bisphosphate 3-Kinase Catalytic Subunit Alpha), and among its related pathways/superpathways are Developmental Biology and Development HGF signaling pathway. Affiliated tissues include skin, and related phenotypes are Decreased shRNA abundance (Z-score < -2) and growth/size/body region. A benign (non cancerous) tumor found on the skin. seborrheic keratoses are the most common benign tumor in older individuals. they usually appear as multiple small, flat or raised growths that range in color from white to black and are commonly found on the face, neck, chest, shoulders, and hands.
(http://www.malacards.org/card/keratosis_seborrheic_somatic)

* Morbid Obesity, also known as obesity, morbid, is related to body mass index quantitative trait locus 14 and body mass index quantitative trait locus 9, and has symptoms including obesity, metabolically benign An important gene associated with Morbid Obesity is PPARG (Peroxisome Proliferator Activated Receptor Gamma), and among its related pathways/superpathways are Peptide ligand-binding receptors and Glucose / Energy Metabolism. The drugs Dexmedetomidine and Hydroxocobalamin have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and bone, and related phenotypes are adipose tissue and homeostasis/metabolism. A clinically severe obesity.
(http://www.malacards.org/card/morbid_obesity)

* Necrotizing Ulcerative Gingivitis, also known as acute necrotizing ulcerative gingivitis, is related to gingivitis and hypogonadotropic hypogonadism 16 with or without anosmia. An important gene associated with Necrotizing Ulcerative Gingivitis is GUSB (Glucuronidase Beta), and among its related pathways/superpathways are Staphylococcus aureus infection and B Cell Development Pathways. The drugs Folic

Acid and Micronutrients have been mentioned in the context of this disorder. Affiliated tissues include bone, and related phenotypes are hematopoietic system and immune system. Also known as trench mouth, is a common, non-contagious infection of the gums with sudden onset. The main features are painful, bleeding gums, and ulceration of inter-dental papillae (the sections of gum between adjacent teeth).
(http://www.malacards.org/card/necrotizing_ulcerative_gingivitis)

* Neuritis, also known as peripheral neuritis, is related to optic neuritis and neuromyelitis optica, and has symptoms including sciatica and neuralgia. An important gene associated with Neuritis is PMP2 (Peripheral Myelin Protein 2), and among its related pathways/superpathways are Cytokine Signaling in Immune system and PAK Pathway. The drugs Methylprednisolone and Prednisolone have been mentioned in the context of this disorder. Affiliated tissues include eye, brain and t cells, and related phenotypes are hematopoietic system and behavior/neurological. Neuritis is inflammation of a nerve or the general inflammation of the peripheral nervous system.
(http://www.malacards.org/card/neuritis)

* Obesity-Hypoventilation Syndrome, also known as obesity hypoventilation syndrome, is related to sleep apnea and apnea, obstructive sleep, and has symptoms including cyanosis, excessive daytime somnolence and obesity. An important gene associated with Obesity-Hypoventilation Syndrome is LEP (Leptin), and among its related pathways/superpathways are Common Cytokine Receptor Gamma-Chain Family Signaling Pathways and Circadian rythm related genes. The drugs Acetazolamide and Anticonvulsants have been mentioned in the context of this disorder. Affiliated tissues include heart and endothelial, and related phenotypes are adipose tissue and liver/biliary system. A breathing disorder that affects some obese people. In OHS, poor breathing results in too much carbon dioxide (hypoventilation) and too little oxygen in the blood (hypoxemia).OHS sometimes is called Pickwickian syndrome.
(http://www.malacards.org/card/obesity_hypoventilation_syndrome)

* Overnutrition is related to nutritional deficiency disease and body mass index quantitative trait locus 14. An important gene associated with Overnutrition is LEP (Leptin), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Common Cytokine Receptor Gamma-Chain Family Signaling Pathways. The drugs Aspirin and Moxonidine have been mentioned in the context of this disorder. Affiliated tissues include liver, brain and heart, and related phenotypes are homeostasis/metabolism and adipose tissue. A form of malnutrition in which the intake of nutrients is oversupplied. The amount of nutrients exceeds the amount required for normal growth, development, and metabolism.
(http://www.malacards.org/card/overnutrition)

* Peptic Ulcer Disease, also known as peptic ulcer, is related to active peptic ulcer disease and peptic ulcer perforation, and has symptoms including gastrointestinal gas, signs and symptoms, digestive and nausea and vomiting. An important gene associated with Peptic Ulcer Disease is HRH2 (Histamine Receptor H2), and among its related

pathways/superpathways are Antiulcer drugs and Cytokine Signaling in Immune system. The drugs Aspirin and Pantoprazole have been mentioned in the context of this disorder. Affiliated tissues include testes, small intestine and kidney, and related phenotypes are digestive/alimentary and endocrine/exocrine gland. A break in the lining of the stomach, first part of the small intestine or occasionally the lower esophagus.
(http://www.malacards.org/card/peptic_ulcer_disease)

* Periodontitis, Chronic, also known as chronic periodontitis, is related to chronic apical periodontitis and periodontitis, and has symptoms including gingivitis and periodontitis. An important gene associated with Periodontitis, Chronic is MMP8 (Matrix Metallopeptidase 8), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs sodium fluoride and Epinephrine have been mentioned in the context of this disorder. Affiliated tissues include bone, ovary and liver, and related phenotypes are immune system and neoplasm. This is the most frequently occurring form of periodontitis and is characterized by slowly progressing alveolar bone destruction and attachment loss. Although chronic periodontitis is most prevalent in adults and has a slow progression, it can occur in children and adolescents and may have periods of rapid progression.
(http://www.malacards.org/card/periodontitis_chronic)

* Pituitary Adenoma, Growth Hormone-Secreting, also known as growth hormone secreting pituitary adenoma, is related to pituitary adenoma, acth-secreting and usher syndrome, type 1f, and has symptoms including coarse facial features, frontal bossing and hypertrophic cardiomyopathy. An important gene associated with Pituitary Adenoma, Growth Hormone-Secreting is AIP (Aryl Hydrocarbon Receptor Interacting Protein), and among its related pathways/superpathways are PI3K-Akt signaling pathway and G-protein signaling_RhoA regulation pathway. The drugs Octreotide and Hormones have been mentioned in the context of this disorder. Affiliated tissues include pituitary and thyroid. A benign pituitary gland tumor that leads to the production of too much growth hormone, resulting in acromegaly.
(http://www.malacards.org/card/pituitary_adenoma_growth_hormone_secreting)

* Prediabetes Syndrome, also known as prediabetic state, is related to nonalcoholic steatohepatitis and fatty liver disease. An important gene associated with Prediabetes Syndrome is INS (Insulin), and among its related pathways/superpathways are Glucose / Energy Metabolism and AMP-activated Protein Kinase (AMPK) Signaling. The drugs Ethanol and Heparin have been mentioned in the context of this disorder. Affiliated tissues include testes, heart and kidney, and related phenotypes are homeostasis/metabolism and growth/size/body region. The precursor stage before diabetes mellitus in which not all of the symptoms required to diagnose diabetes are present, but blood sugar is abnormally high.
(http://www.malacards.org/card/prediabetes_syndrome)

* Rhinosporidiosis, also known as infection by rhinosporidium seeberi, is related to laryngitis and chronic rhinitis. An important gene associated with Rhinosporidiosis is DCXR (Dicarbonyl And L-Xylulose Reductase), and among its related

pathways/superpathways are NF-kappaB Signaling and Hematopoietic Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include eye, skin and trachea. A parasitic Ichthyosporea infectious disease that is a chronic granulomatous infection of the mucous membranes caused by the parasite Rhinosporidium seeberi, which manifests as vascular friable polyps that arise from the nasal mucosa or external structures of the eye.
(http://www.malacards.org/card/rhinosporidiosis)

* Sinusitis is related to common cold and cystic fibrosis, and has symptoms including equilibration disorder, vertigo/dizziness and sore throat. An important gene associated with Sinusitis is IL4R (Interleukin 4 Receptor), and among its related pathways/superpathways are PEDF Induced Signaling and Akt Signaling. The drugs Augmentin and Avelox I.V. have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and skin, and related phenotypes are digestive/alimentary and immune system. An inflammation of the sinuses resulting in symptoms. Common symptoms include thick nasal mucus, a plugged nose, and pain in the face. Other signs and symptoms may include fever, headaches, poor sense of smell, sore throat, and cough.
(http://www.malacards.org/card/sinusitis)

* Social Phobia, also known as phobic anxiety disorder, is related to phobic disorder and agoraphobia. An important gene associated with Social Phobia is MAOA (Monoamine Oxidase A), and among its related pathways/superpathways are Sudden Infant Death Syndrome (SIDS) Susceptibility Pathways and Serotonergic synapse. The drugs Norepinephrine and Citalopram have been mentioned in the context of this disorder. Affiliated tissues include brain, amygdala and testes, and related phenotypes are behavior/neurological and endocrine/exocrine gland. A phobic disorder that involves social anxiety occurring only in specific public or social situations, interactions with others or being evaluated or scrutinized by other people.
(http://www.malacards.org/card/social_phobia)

* Specific Bursitis Often of Occupational Origin, also known as specific bursitides often of occupational origin, is related to cervical adenitis and byssinosis. An important gene associated with Specific Bursitis Often of Occupational Origin is SERPINI2 (Serpin Family I Member 2), and among its related pathways/superpathways are Hematopoietic Stem Cell Differentiation Pathways and Lineage-specific Markers and Dendritic Cells Developmental Lineage Pathway. Affiliated tissues include bone.
(http://www.malacards.org/card/specific_bursitis_often_of_occupational_origin)

* Tooth Erosion, also known as generalized erosions, is related to congenital erosive and vesicular dermatosis and diaphragmatic eventration. An important gene associated with Tooth Erosion is GPI (Glucose-6-Phosphate Isomerase), and among its related pathways/superpathways are BRCA1 Pathway and Transcription Ligand-dependent activation of the ESR1/SP pathway. The drugs sodium fluoride and Anti-Infective Agents have been mentioned in the context of this disorder. Affiliated tissues include testes, bone and heart. Acid erosion, also known as dental erosion, is a type of tooth wear. It is

defined as the irreversible loss of tooth structure due to chemical dissolution by acids not of bacterial origin.
(http://www.malacards.org/card/tooth_erosion)

* Vasomotor Rhinitis, also known as rhinitis, vasomotor, is related to asthma and rhinitis. An important gene associated with Vasomotor Rhinitis is VIP (Vasoactive Intestinal Peptide), and among its related pathways/superpathways are IgA-Producing B Cells in the Intestine and Malaria. The drugs Azelastine and Histamine have been mentioned in the context of this disorder. Affiliated tissues include heart. A rhinitis which involves a hypersensitive reaction to various potentially irritating stimuli such as changes in weather, temperature, or barometric pressure, chemical irritants such as smoke, ozone, pollution, perfumes, and aerosol sprays, psychological stress and emotional shocks, medications, alcohol, and spicy food.
(http://www.malacards.org/card/vasomotor_rhinitis)

1.3.2.9 RT-MB-34

https://archive.org/details/Resonant_Therapy-Molecular_Biology_34

Genetic Superpathways-Adult Onset Myasthenia Gravis; Genetic Superpathways-Amyotrophic Lateral Sclerosis1; Genetic Superpathways-Burning Mouth Syndrome; Genetic Superpathways-Burns; Genetic Superpathways-Carbuncle; Genetic Superpathways-Cardiac Arrest; Genetic Superpathways-Central Nervous System Disease; Genetic Superpathways-Cerebellar Disease; Genetic Superpathways-Constipation; Genetic Superpathways-Hair Morphology1; Genetic Superpathways-Hemorrhage Intracerebral; Genetic Superpathways-Hypertension Essential; Genetic Superpathways-Hypotonia; Genetic Superpathways-Hypotrichosis; Genetic Superpathways-Lentigines; Genetic Superpathways-Motor Neuron Disease; Genetic Superpathways-Myocardial Infarction; Genetic Superpathways-Myopathy; Genetic Superpathways-Oral Candidiasis; Genetic Superpathways-Peripheral Artery Disease; Genetic Superpathways-Peripheral Nervous System Disease; Genetic Superpathways-Pollen Allergy; Genetic Superpathways-Post Traumatic Stress Disorder; Genetic Superpathways-Prostatic Hyperplasia Benign; Genetic Superpathways-Psychosexual Disorder; Genetic Superpathways-Pulmonary Fibrosis Idiopathic; Genetic Superpathways-Sleep Disorder; Genetic Superpathways-Stroke Ischemic; Genetic Superpathways-Tetanus Disease; Genetic Superpathways-Trigeminal Neuralgia

* Adult-Onset Myasthenia Gravis, also known as adult-onset autoimmune myasthenia gravis, is related to myasthenia gravis and myasthenia gravis congenital. An important gene associated with Adult-Onset Myasthenia Gravis is TNFRSF11A (TNF Receptor Superfamily Member 11a), and among its related pathways/superpathways are NF-kappaB Signaling and ICos-ICosL Pathway in T-Helper Cell. Related phenotypes are Increased number of mitotic cells and endocrine/exocrine gland. A long-term

neuromuscular disease that leads to varying degrees of skeletal muscle weakness. The most commonly affected muscles are those of the eyes, face, and swallowing.
(https://www.malacards.org/card/adult_onset_myasthenia_gravis)

* Amyotrophic Lateral Sclerosis 1, also known as amyotrophic lateral sclerosis, is related to frontotemporal dementia and/or amyotrophic lateral sclerosis 1 and motor neuron disease, and has symptoms including back pain, headache and pain. An important gene associated with Amyotrophic Lateral Sclerosis 1 is SOD1 (Superoxide Dismutase 1), and among its related pathways/superpathways are Amyotrophic lateral sclerosis (ALS) and Neuroscience. The drugs Riluzole and Mexiletine have been mentioned in the context of this disorder. Affiliated tissues include Bone and Limb, and related phenotypes are emotional lability and depressivity. A motor neuron disease that is characterized by muscle spasticity, rapidly progressive weakness due to muscle atrophy, difficulty in speaking, swallowing, and breathing.
(https://www.malacards.org/card/amyotrophic_lateral_sclerosis_1)

* Burning Mouth Syndrome, also known as stomatodynia, is related to trigeminal neuralgia and autonomic nervous system disease, and has symptoms including oral manifestations An important gene associated with Burning Mouth Syndrome is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways/superpathways are PI3K-Akt signaling pathway and Regulation of IFNA signaling. The drugs Clonazepam and GABA Agents have been mentioned in the context of this disorder. Affiliated tissues include tongue, testes and brain, and related phenotypes are behavior/neurological and cardiovascular system. Burning mouth syndrome is characterized by long-lasting burning sensations of the mouth. The pain may affect the tongue, gums, lips, palate, throat, or the entire mouth.
(https://www.malacards.org/card/burning_mouth_syndrome)

* Burns is related to glossitis and vulvar vestibulitis syndrome. An important gene associated with Burns is TTR (Transthyretin), and among its related pathways/superpathways are Aldosterone synthesis and secretion and MAPK signaling pathway. The drugs silver nitrate and Bacitracin have been mentioned in the context of this disorder. Affiliated tissues include Umbilical Cord, skin and eye, and related phenotypes are Increased cell death in breast cancer cell lines (MCF10A, MDA-MB-435) and hematopoietic system. A burn is damage to your body's tissues caused by heat, chemicals, electricity, sunlight, or radiation. Scalds from hot liquids and steam, building fires and flammable liquids and gases are the most common causes of burns. Another kind is an inhalation injury, caused by breathing smoke.
(https://www.malacards.org/card/burns)

* Carbuncle, also known as carbuncle and furuncle of any part of face except eye, is related to lung cancer and griscelli syndrome, type 1. An important gene associated with Carbuncle is SPAG1 (Sperm Associated Antigen 1), and among its related pathways/superpathways are Apoptotic Pathways in Synovial Fibroblasts and ERK Signaling. The drugs Iodine and Povidone have been mentioned in the context of this disorder. Affiliated tissues include eye, skin and kidney, and related phenotypes are

Decreased substrate adherent cell growth and Decreased substrate adherent cell growth. A painful circumscribed inflammation of the subcutaneous tissue, resulting in suppuration and sloughing, and having a tendency to spread somewhat like a boil, but more serious in its effects.
(https://www.malacards.org/card/carbuncle)

* Cardiac Arrest, also known as cardiopulmonary arrest, is related to arrhythmogenic right ventricular cardiomyopathy and ventricular fibrillation, paroxysmal familial, 1, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Cardiac Arrest is PLN (Phospholamban), and among its related pathways/superpathways are Aldosterone synthesis and secretion and Cardiac conduction. The drugs Clonazepam and Valproic Acid have been mentioned in the context of this disorder. Affiliated tissues include heart, brain and breast, and related phenotypes are behavior/neurological and cardiovascular system. A sudden loss of blood flow resulting from the failure of the heart to effectively pump.
(https://www.malacards.org/card/cardiac_arrest)

* Central Nervous System Disease, also known as central nervous system diseases, is related to meningitis and nervous system disease, and has symptoms including headache, hemiplegia and hyperexplexia. An important gene associated with Central Nervous System Disease is HAR1A (Highly Accelerated Region 1A Dysfunction Pattern:), and among its related pathways/superpathways are Tuberculosis and Bacterial infections in CF airways. The drugs Ritonavir and Propofol have been mentioned in the context of this disorder. Affiliated tissues include brain, spinal cord and testes, and related phenotypes are cellular and homeostasis/metabolism. A nervous system disease that affects either the spinal cord (myelopathy) or brain (encephalopathy) of the central nervous system.
(https://www.malacards.org/card/central_nervous_system_disease)

* Cerebellar Disease, also known as cerebellar diseases, is related to spinocerebellar ataxia 1 and spinocerebellar ataxia 2, and has symptoms including ataxia, back pain and cerebellar ataxia. An important gene associated with Cerebellar Disease is CACNA1A (Calcium Voltage-Gated Channel Subunit Alpha1 A), and among its related pathways/superpathways are Myometrial Relaxation and Contraction Pathways and Dopamine-DARPP32 Feedback onto cAMP Pathway. The drugs Clonidine and Estradiol have been mentioned in the context of this disorder. Affiliated tissues include cerebellum, brain and liver, and related phenotypes are behavior/neurological and nervous system. Damage to the cerebellum often causes motor-related symptoms, the details of which depend on the part of the cerebellum involved and how it is damaged.
(https://www.malacards.org/card/cerebellar_disease)

* Constipation is related to hypoganglionosis and hirschsprung disease 1. An important gene associated with Constipation is RET (Ret Proto-Oncogene), and among its related pathways/superpathways are Signaling by GPCR and Peptide ligand-binding receptors. The drugs Naloxone and Oxycodone have been mentioned in the context of this disorder. Affiliated tissues include lung, colon and breast, and related phenotypes are

Decreased viability and Decreased viability. A bowel dysfunction that is characterized by infrequent or difficult evacuation of feces.
(https://www.malacards.org/card/constipation)

* Hair Morphology 1, also known as hair morphology 1, hair thickness, is related to hypohidrotic ectodermal dysplasia autosomal recessive. An important gene associated with Hair Morphology 1 is EDAR (Ectodysplasin A Receptor), and among its related pathways/superpathways is Cytokine Signaling in Immune system. Related phenotypes are Decreased shRNA abundance (Z-score < -2) and Decreased shRNA abundance (Z-score < -2).
(https://www.malacards.org/card/hair_morphology_1)

* Hemorrhage, Intracerebral, also known as hemorrhage, intracerebral, susceptibility to, is related to cerebral hemorrhage and cerebral amyloid angiopathy, cst3-related, and has symptoms including angina pectoris, back pain and chest pain. An important gene associated with Hemorrhage, Intracerebral is COL4A1 (Collagen Type IV Alpha 1 Chain), and among its related pathways/superpathways are Neuroscience and Binding and Uptake of Ligands by Scavenger Receptors. The drugs Ticlopidine and Clopidogrel have been mentioned in the context of this disorder. Affiliated tissues include brain, cortex and eye, and related phenotypes are cardiovascular system and growth/size/body region. A stroke is a medical emergency. There are two types - ischemic and hemorrhagic. Hemorrhagic stroke is the less common type. It happens when a blood vessel breaks and bleeds into the brain.
(https://www.malacards.org/card/hemorrhage_intracerebral)

* Hypertension, Essential, also known as essential hypertension, is related to arteries, anomalies of and coronary artery anomaly, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Hypertension, Essential is PTGIS (Prostaglandin I2 Synthase), and among its related pathways/superpathways are AGE-RAGE signaling pathway in diabetic complications and Corticotropin-releasing hormone signaling pathway. The drugs Adcirca and Adempas have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and kidney, and related phenotypes are elevated systolic blood pressure and elevated diastolic blood pressure. A hypertension with no known cause. It is the most common type of hypertension (high blood pressure).
(https://www.malacards.org/card/hypertension_essential)

* Hypotonia is related to hypotonia-speech impairment-severe cognitive delay syndrome and hypotonia, infantile, with psychomotor retardation. An important gene associated with Hypotonia is NALCN (Sodium Leak Channel, Non-Selective), and among its related pathways/superpathways are Post-translational modification- synthesis of GPI-anchored proteins and Glycosylphosphatidylinositol (GPI)-anchor biosynthesis. The drugs Naproxen and Quinine have been mentioned in the context of this disorder. Affiliated tissues include brain, spinal cord and skeletal muscle. Hypotonia is a medical term used to describe decreased muscle tone. Normally, even when relaxed, muscles have a very small amount of contraction that gives them a springy feel and provides some

resistance to passive movement. It is not the same as muscle weakness, although the two conditions can co-exist.
(https://www.malacards.org/card/hypotonia)

* Hypotrichosis is related to hypotrichosis 6 and hypotrichosis 7. An important gene associated with Hypotrichosis is MUHH2 (Hypotrichosis, Hereditary, Marie Unna Type, 2), and among its related pathways/superpathways are Developmental Biology and Keratinization. The drugs Minoxidil and Clobetasol have been mentioned in the context of this disorder. Affiliated tissues include skin, brain and testes, and related phenotype is integument. A hair disease that is characterized by sparse hair on the scalp resulting from abnormal hair follicle development and has_material_basis in mutations in proteins involved in hair growth, division or proliferation of cells within hair follicles.
(https://www.malacards.org/card/hypotrichosis)

* Lentigines, also known as lentigo, is related to noonan syndrome with multiple lentigines and melanocytic nevus syndrome, congenital. An important gene associated with Lentigines is PTPN11 (Protein Tyrosine Phosphatase, Non-Receptor Type 11), and among its related pathways/superpathways are Sertoli-Sertoli Cell Junction Dynamics and Common Cytokine Receptor Gamma-Chain Family Signaling Pathways. The drugs Aminolevulinic acid and Imiquimod have been mentioned in the context of this disorder. Affiliated tissues include skin, pancreas and lymph node, and related phenotypes are nystagmus and abnormality of the skin. A small pigmented spot on the skin with a clearly defined edge, surrounded by normal-appearing skin.
(https://www.malacards.org/card/lentigines)

* Motor Neuron Disease, also known as motor neuron diseases, is related to progressive muscular atrophy and frontotemporal dementia and/or amyotrophic lateral sclerosis 1, and has symptoms including ataxia, muscular fasciculation and hemiplegia. An important gene associated with Motor Neuron Disease is TARDBP (TAR DNA Binding Protein), and among its related pathways/superpathways are Neuroscience and Cytoskeleton remodeling Neurofilaments. The drugs Riluzole and Mexiletine have been mentioned in the context of this disorder. Affiliated tissues include Neural Tube and Neural Tube, and related phenotypes are behavior/neurological and cellular. A group of progressive neurological disorders that destroy cells that control essential muscle activity such as speaking, walking, breathing, and swallowing.
(https://www.malacards.org/card/motor_neuron_disease)

* Myocardial Infarction, also known as heart attack, is related to coronary heart disease 1 and atherosclerosis susceptibility, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Myocardial Infarction is MIAT (Myocardial Infarction Associated Transcript), and among its related pathways/superpathways are Photodynamic therapy-induced NFE2L2 (NRF2) survival signaling and Transcriptional activation by NRF2. The drugs Etanercept and Abciximab have been mentioned in the context of this disorder. Affiliated tissues include Bone and Limb, and related phenotypes are cardiovascular system and homeostasis/metabolism. A heart attack occurs when blood flow decreases or stops to a part of the heart, causing

damage to the heart muscle.
(https://www.malacards.org/card/myocardial_infarction)

* Myopathy, also known as muscular diseases, is related to myopathy, congenital and centronuclear myopathy, and has symptoms including back pain, leg cramps and muscle cramp. An important gene associated with Myopathy is RYR1 (Ryanodine Receptor 1), and among its related pathways/superpathways are Integrin Pathway and Cardiac conduction. The drugs Lidocaine and Hyaluronic acid have been mentioned in the context of this disorder. Affiliated tissues include skeletal muscle, testes and bone, and related phenotypes are behavior/neurological and growth/size/body region. A muscular disease in which the muscle fibers do not function resulting in muscular weakness.
(https://www.malacards.org/card/myopathy)

* Oral Candidiasis, also known as thrush, is related to candidiasis and severe combined immunodeficiency, and has symptoms including oral manifestations An important gene associated with Oral Candidiasis is DEFB4A (Defensin Beta 4A), and among its related pathways/superpathways are Innate Immune System and Defensins. The drugs Fluticasone and Fluconazole have been mentioned in the context of this disorder. Affiliated tissues include tongue, skin and kidney. A candidiasis that involves fungal infection of the mucous membrane of the mouth by Candida species, which is characterized by thick white or cream-colored deposits on inflamed mucosal membranes.
(https://www.malacards.org/card/oral_candidiasis)

* Peripheral Artery Disease, also known as peripheral arterial diseases, is related to critical limb ischemia and peripheral vascular disease, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Peripheral Artery Disease is CDKN2B-AS1, and among its related pathways/superpathways are Innate Immune System and Blood-Brain Barrier and Immune Cell Transmigration: VCAM-1/CD106 Signaling Pathways. The drugs Aspirin and Clopidogrel have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and bone, and related phenotypes are Decreased free cholesterol and cardiovascular system. A narrowing of the arteries other than those that supply the heart or the brain.
(https://www.malacards.org/card/peripheral_artery_disease)

* Peripheral Nervous System Disease, also known as peripheral neuropathy, is related to motor peripheral neuropathy and sensory peripheral neuropathy, and has symptoms including back pain, headache and neuralgia. An important gene associated with Peripheral Nervous System Disease is IARS2 (Isoleucyl-TRNA Synthetase 2, Mitochondrial), and among its related pathways/superpathways are Neuroscience and Guidance Cues and Growth Cone Motility. The drugs Naproxen and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, lung and brain, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A nervous system disease that affects the peripheral nervous system.

(https://www.malacards.org/card/peripheral_nervous_system_disease)

* Pollen Allergy, also known as hay fever, is related to esophagitis, eosinophilic, 1 and rhinitis, and has symptoms including coughing, snoring and tinnitus. An important gene associated with Pollen Allergy is CD164 (CD164 Molecule), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Cetirizine and Histamine have been mentioned in the context of this disorder. Affiliated tissues include eye, skin and testes, and related phenotypes are hematopoietic system and immune system. A respiratory allergy triggered by pollen.
(https://www.malacards.org/card/pollen_allergy)

* Post-Traumatic Stress Disorder, also known as stress disorders, post-traumatic, is related to traumatic brain injury and brain injury, and has symptoms including nervousness An important gene associated with Post-Traumatic Stress Disorder is LINC01090, and among its related pathways/superpathways are Circadian entrainment and Amphetamine addiction. The drugs Diazepam and Tramadol have been mentioned in the context of this disorder. Affiliated tissues include brain, heart and eye, and related phenotypes are homeostasis/metabolism and behavior/neurological. An anxiety disorder which results from a traumatic experience that results in psychological trauma.
(https://www.malacards.org/card/post_traumatic_stress_disorder)

* Prostatic Hyperplasia, Benign, also known as benign prostatic hyperplasia, is related to prostatic adenoma and prostatic hypertrophy, and has symptoms including prostatism An important gene associated with Prostatic Hyperplasia, Benign is KLK3 (Kallikrein Related Peptidase 3), and among its related pathways/superpathways are Endometrial cancer and Pathways in cancer. The drugs Bupivacaine and Doxazosin have been mentioned in the context of this disorder. Affiliated tissues include prostate, testes and kidney, and related phenotype is benign prostatic hyperplasia. Also called prostate enlargement, is a noncancerous increase in size of the prostate.
(https://www.malacards.org/card/prostatic_hyperplasia_benign)

* Psychosexual Disorder, also known as psychosexual disorders, is related to rumination disorder and functional gastric disease, and has symptoms including genital pain An important gene associated with Psychosexual Disorder is PDE5A (Phosphodiesterase 5A), and among its related pathways/superpathways are Calcium signaling pathway and Sudden Infant Death Syndrome (SIDS) Susceptibility Pathways. The drugs Apremilast and Analgesics have been mentioned in the context of this disorder. Affiliated tissues include spinal cord. A sexual problem that is psychological, rather than physiological in origin.
(https://www.malacards.org/card/psychosexual_disorder)

* Pulmonary Fibrosis, Idiopathic, also known as idiopathic pulmonary fibrosis, is related to acute interstitial pneumonia and idiopathic interstitial pneumonia, and has symptoms including dyspnea on exertion and dry cough. An important gene associated with Pulmonary Fibrosis, Idiopathic is SFTPA2 (Surfactant Protein A2), and among its related pathways/superpathways are Metabolism of proteins and Rheumatoid arthritis. The

drugs Esbriet and Ofev have been mentioned in the context of this disorder. Affiliated tissues include Placenta and Adipose, and related phenotypes are gastroesophageal reflux and pulmonary fibrosis. A condition in which tissues in the lungs become thick and stiff, or scarred, over time. The lungs then lose their ability to move oxygen to the brain and other parts of the body. Common symptoms include shortness of breath and a dry, hacking cough.
(https://www.malacards.org/card/pulmonary_fibrosis_idiopathic)

* Sleep Disorder, also known as non-organic sleep disorder, is related to advanced sleep phase syndrome and sleep apnea, and has symptoms including back pain, cachexia and cyanosis. An important gene associated with Sleep Disorder is HCRT (Hypocretin Neuropeptide Precursor), and among its related pathways/superpathways are Circadian rythm related genes and Circadian rhythm. The drugs Lansoprazole and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include heart, brain and testes, and related phenotypes are behavior/neurological and muscle. A sleep disorder, or somnipathy, is a medical disorder of the sleep patterns of a person or animal.
(https://www.malacards.org/card/sleep_disorder)

* Stroke, Ischemic, also known as cerebral infarction, is related to neonatal stroke and sneddon syndrome, and has symptoms including angina pectoris, back pain and chest pain. An important gene associated with Stroke, Ischemic is F2 (Coagulation Factor II, Thrombin), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Folate Metabolism. The drugs Angiotensin II and Valsartan have been mentioned in the context of this disorder. Affiliated tissues include Bone and Umbilical Cord, and related phenotypes are stroke and homeostasis/metabolism. A stroke is a medical emergency. Strokes happen when blood flow to your brain stops. Within minutes, brain cells begin to die. There are two kinds of stroke. The more common kind, called ischemic stroke, is caused by a blood clot that blocks or plugs a blood vessel in the brain. The other kind, called hemorrhagic stroke, is caused by a blood vessel that breaks and bleeds into the brain.
(https://www.malacards.org/card/stroke_ischemic)

* Tetanus, also known as lockjaw, is related to diphtheria and poliomyelitis, and has symptoms including fever and pruritus. An important gene associated with Tetanus is VAMP7 (Vesicle Associated Membrane Protein 7), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Iron and Natalizumab have been mentioned in the context of this disorder. Affiliated tissues include testes, t cells and brain, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A primary bacterial infectious disease that results in prolonged contraction of skeletal muscle fibers, has material basis in Clostridium tetani, which produces tetanospasmin, a neurotoxin, which is carried to the brain and spinal cord, where it binds irreversibly to receptors inhibiting neurotransmission. Damaged upper motor neurons cannot control reflex responses to afferent sensory stimuli.
(https://www.malacards.org/card/tetanus)

* Trigeminal Neuralgia, also known as tic douloureux, is related to burning mouth syndrome and postpartum depression, and has symptoms including back pain, facial pain and headache. An important gene associated with Trigeminal Neuralgia is SCN9A (Sodium Voltage-Gated Channel Alpha Subunit 9), and among its related pathways/superpathways are L1CAM interactions and Phase 0 - rapid depolarisation. The drugs Bupivacaine and Dexamethasone have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and skin, and related phenotypes are abnormality of the nervous system and trigeminal neuralgia. A chronic pain condition that causes extreme, sporadic, sudden burning or shock-like face pain.
(https://www.malacards.org/card/trigeminal_neuralgia)

1.3.2.10 RT-MB-35

https://archive.org/details/Resonant_Therapy-Molecular_Biology_35

Genetic Superpathways-Acoustic Neuroma; Genetic Superpathways-Acute Mountain Sickness; Genetic Superpathways-Arteries Anomalies Of; Genetic Superpathways-Autoimmune Disease Of Skin And Connective Tissue; Genetic Superpathways-Bronchitis; Genetic Superpathways-Chronic Inflammatory Demyelinating Polyradiculoneuropathy; Genetic Superpathways-Chronic Inflammatory Demyelinating Polyneuropathy; Genetic Superpathways-Chronic Tic Disorder; Genetic Superpathways-Demyelinating Polyneuropathy; Genetic Superpathways-Diarrhea; Genetic Superpathways-Empty Sella Syndrome; Genetic Superpathways-Hemarthrosis; Genetic Superpathways-Hypoglycemic Coma; Genetic Superpathways-Limb Girdle Muscular Dystrophy; Genetic Superpathways-Lipodermatosclerosis; Genetic Superpathways-Mast Cell Activation Syndrome; Genetic Superpathways-Metal Allergy; Genetic Superpathways-Methemoglobinemia; Genetic Superpathways-Neuromuscular Disease; Genetic Superpathways-Periostitis; Genetic Superpathways-Prostate Cancer; Genetic Superpathways-Radiculopathy; Genetic Superpathways-Retinal Degeneration; Genetic Superpathways-Retinal Detachment; Genetic Superpathways-Shoulder Impingement Syndrome; Genetic Superpathways-Spinal Stenosis; Genetic Superpathways-Spondylolisthesis; Genetic Superpathways-Spondylosis; Genetic Superpathways-Synovial Chondromatosis; Genetic Superpathways-Ulceratve Stomatitis

* Acoustic Neuroma, also known as vestibular schwannoma, is related to neuroma and facial paralysis, and has symptoms including back pain, coughing and headache. An important gene associated with Acoustic Neuroma is NF2 (Neurofibromin 2), and among its related pathways/superpathways are DNA Double-Strand Break Repair and Transcription-Coupled Nucleotide Excision Repair (TC-NER). The drugs Anti-Bacterial Agents and Anti-Infective Agents have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and bone, and related phenotypes are Synthetic

lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). A benign tumor that develops on the nerve that connects the ear to the brain.
(https://www.malacards.org/card/acoustic_neuroma)

* Acute Mountain Sickness, also known as high altitude pulmonary edema, is related to chronic mountain sickness and pulmonary edema, and has symptoms including apnea, cheyne-stokes respiration and coughing. An important gene associated with Acute Mountain Sickness is ACE (Angiotensin I Converting Enzyme), and among its related pathways/superpathways are Cellular Senescence (REACTOME) and Pathways in cancer. The drugs Acetazolamide and Ibuprofen have been mentioned in the context of this disorder. Affiliated tissues include lung, endothelial and heart, and related phenotypes are cardiovascular system and behavior/neurological. The negative health effect of high altitude, caused by rapid exposure to low amounts of oxygen at high elevation.
(https://www.malacards.org/card/acute_mountain_sickness)

* Arteries, Anomalies of, also known as artery disease, is related to peripheral artery disease and renal artery disease. An important gene associated with Arteries, Anomalies of is TRPV1 (Transient Receptor Potential Cation Channel Subfamily V Member 1), and among its related pathways/superpathways are Vesicle-mediated transport and Lipoprotein metabolism. The drugs Everolimus and Miconazole have been mentioned in the context of this disorder. Affiliated tissues include an artery, heart and endothelial, and related phenotypes are abnormality of the cardiovascular system and Decreased free cholesterol. A vascular disease that is located in an artery.
(https://www.malacards.org/card/arteries_anomalies_of)

* Autoimmune Disease of Skin and Connective Tissue is related to bullous skin disease and bullous pemphigoid. An important gene associated with Autoimmune Disease of Skin and Connective Tissue is COL17A1 (Collagen Type XVII Alpha 1 Chain), and among its related pathways/superpathways are Degradation of the extracellular matrix and Cell junction organization. Affiliated tissues include skin and t cells, and related phenotype is integument. A hypersensitivity reaction type II disease that is the abnormal functioning of the immune system that causes the immune system to produce antibodies or T cells against cells and/or tissues in the skin and connective tissue.
(https://www.malacards.org/card/autoimmune_disease_of_skin_and_connective_tissue)

* Bronchitis, also known as chronic bronchitis, is related to bronchial disease and sinusitis, and has symptoms including cough, shortness of breath and low fever. An important gene associated with Bronchitis is ELANE (Elastase, Neutrophil Expressed), and among its related pathways/superpathways are Innate Immune System and Allograft rejection. The drugs Augmentin and Avelox I.V. have been mentioned in the context of this disorder. Affiliated tissues include lung, testes and skin, and related phenotypes are hematopoietic system and immune system. A bronchial disease that is an inflammation of the bronchial tubes.
(https://www.malacards.org/card/bronchitis)

* Chronic Inflammatory Demyelinating Polyradiculoneuropathy, also known as polyradiculoneuropathy, chronic inflammatory demyelinating, is related to hereditary neuropathy with liability to pressure palsy and neuropathy, hereditary, with liability to pressure palsies. An important gene associated with Chronic Inflammatory Demyelinating Polyradiculoneuropathy is MPZ (Myelin Protein Zero), and among its related pathways/superpathways are TGF-Beta Pathway and Allograft rejection. The drugs Rho(D) Immune Globulin and gamma-Globulins have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, t cells and skin, and related phenotypes are cellular and homeostasis/metabolism. An autoimmune disorder, in which the myelin sheaths (the fatty covering on the fibers that insulate and protect the body's nerves) are attacked by the bodies immune system.
(
https://www.malacards.org/card/chronic_inflammatory_demyelinating_polyradiculoneuropathy)

* Chronic Inflammatory Demyelinating Polyneuropathy, also known as chronic inflammatory demyelinating polyradiculoneuropathy, is related to demyelinating polyneuropathy and chronic inflammatory demyelinating polyradiculoneuropathy. An important gene associated with Chronic Inflammatory Demyelinating Polyneuropathy is HP (Haptoglobin), and among its related pathways/superpathways are Cell adhesion molecules (CAMs) and L1CAM interactions. The drugs Antibodies and gamma-Globulins have been mentioned in the context of this disorder. Affiliated tissues include t cells, bone and skin, and related phenotypes are areflexia and unsteady gait. A neurological disorder that causes progressive weakness and impaired sensory function in the legs and arms.
(
https://www.malacards.org/card/chronic_inflammatory_demyelinating_polyneuropathy)

* Chronic Tic Disorder, also known as chronic motor or vocal tic disorder, is related to tic disorder and cytokine deficiency, and has symptoms including symptoms and recurrent muscle twitches (symptom). An important gene associated with Chronic Tic Disorder is DRD4 (Dopamine Receptor D4), and among its related pathways/superpathways are Regulation of IFNA signaling and Immune response Fc epsilon RI pathway. The drugs Aripiprazole and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, colon and b cells, and related phenotype is homeostasis/metabolism. A tic disorder that is characterized by single or multiple motor or phonic tics, but not both, which are present for more than a year.
(https://www.malacards.org/card/chronic_tic_disorder)

* Demyelinating Polyneuropathy, also known as peripheral demyelinating neuropathy, is related to chronic inflammatory demyelinating polyneuropathy and guillain-barre syndrome. An important gene associated with Demyelinating Polyneuropathy is PMP22 (Peripheral Myelin Protein 22), and among its related pathways/superpathways are Neuroscience and L1CAM interactions. The drugs Rho(D) Immune Globulin and gamma-Globulins have been mentioned in the context of this disorder. Affiliated tissues

include t cells, spinal cord and b cells, and related phenotypes are behavior/neurological and homeostasis/metabolism. A type of polyneuropathy in which almost solely the peripheral nerve myelin is affected.
(https://www.malacards.org/card/demyelinating_polyneuropathy)

* Diarrhea, also known as diarrhea of presumed infectious origin, is related to diarrhea 8, secretory sodium, congenital and inflammatory diarrhea. An important gene associated with Diarrhea is WNT2B (Wnt Family Member 2B), and among its related pathways/superpathways is Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers. The drugs Ceftriaxone and Carboprost Tromethamine have been mentioned in the context of this disorder. Affiliated tissues include lung, breast and colon, and related phenotypes are digestive/alimentary and homeostasis/metabolism. A gastrointestinal system disease described as the condition of having frequent loose or liquid bowel movements.
(https://www.malacards.org/card/diarrhea)

* Empty Sella Syndrome, also known as empty sella turcica, is related to diabetes insipidus and galactorrhea. An important gene associated with Empty Sella Syndrome is PRL (Prolactin), and among its related pathways/superpathways are TGF-Beta Pathway and Peptide ligand-binding receptors. The drugs Hormone Antagonists and Hormones have been mentioned in the context of this disorder. Affiliated tissues include pituitary, brain and testes, and related phenotypes are endocrine/exocrine gland and neoplasm. A condition that involves the sella turcica, a bony structure at the base of the brain that protects the pituitary gland.
(https://www.malacards.org/card/empty_sella_syndrome)

* Hemarthrosis, also known as hemarthrosis involving pelvic region and thigh, is related to afibrinogenemia, congenital and factor x deficiency, and has symptoms including arthralgia, hemoptysis and metatarsalgia. An important gene associated with Hemarthrosis is F8 (Coagulation Factor VIII), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Collagen chain trimerization. The drugs Bevacizumab and Hyaluronic acid have been mentioned in the context of this disorder. Affiliated tissues include bone, b cells and monocytes, and related phenotypes are cardiovascular system and homeostasis/metabolism. Hemarthrosis is a bleeding into joint spaces.
(https://www.malacards.org/card/hemarthrosis)

* Hypoglycemic Coma is related to hemangiopericytoma, malignant and acyl-coa dehydrogenase, medium-chain, deficiency of. An important gene associated with Hypoglycemic Coma is INS (Insulin), and among its related pathways/superpathways are TGF-Beta Pathway and PI3K-Akt signaling pathway. The drugs Etanercept and Everolimus have been mentioned in the context of this disorder. Affiliated tissues include brain, kidney and liver, and related phenotypes are muscle and reproductive system. A severe consequence of low blood sugar levels.
(https://www.malacards.org/card/hypoglycemic_coma)

* Limb-Girdle Muscular Dystrophy, also known as lgmd, is related to autosomal recessive limb-girdle muscular dystrophy type 2e and autosomal dominant limb-girdle muscular dystrophy type 1g. An important gene associated with Limb-Girdle Muscular Dystrophy is LMNA (Lamin A/C), and among its related pathways/superpathways are Other types of O-glycan biosynthesis and Mannose type O-glycan biosynthesis. The drugs Lisinopril and Coenzyme Q10 have been mentioned in the context of this disorder. Affiliated tissues include skeletal muscle, heart and testes, and related phenotypes are Decreased viability and Decreased viability. A group of disorders which affect the voluntary muscles around the hips and shoulders.
(https://www.malacards.org/card/limb_girdle_muscular_dystrophy)

* Lipodermatosclerosis, also known as hypodermitis sclerodermaformis, is related to varicose veins and chronic venous insufficiency. An important gene associated with Lipodermatosclerosis is SERPINB2 (Serpin Family B Member 2), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Regulation of lipid metabolism Insulin signaling-generic cascades. The drugs Warfarin and Rivaroxaban have been mentioned in the context of this disorder. Affiliated tissues include skin, t cells and liver, and related phenotypes are cardiovascular system and growth/size/body region. Lipodermatosclerosis refers to changes in the skin of the lower legs. It is a form of panniculitis (inflammation of the layer of fat under the skin). Signs and symptoms include pain, hardening of skin, change in skin color (redness), swelling, and a tapering of the legs above the ankles. The exact underlying cause is unknown; however, it appears to be associated with venous insufficiency and/or obesity.
(https://www.malacards.org/card/lipodermatosclerosis)

* Mast Cell Activation Syndrome, also known as mcas, is related to monoclonal mast cell activation syndrome and nguyen syndrome. An important gene associated with Mast Cell Activation Syndrome is CHIT1 (Chitinase 1). The drugs Protein Kinase Inhibitors and Imatinib Mesylate have been mentioned in the context of this disorder. Affiliated tissues include skin, brain and heart. An immunological condition in which mast cells mistakenly release too many chemical mediators, resulting in several chronic symptoms involving the skin, gastrointestinal tract, heart, respiratory, and neurologic systems.
(https://www.malacards.org/card/mast_cell_activation_syndrome)

* Metal Allergy is related to limbic encephalitis with lgi1 antibodies and focal epithelial hyperplasia. An important gene associated with Metal Allergy is HLA-DQB1 (Major Histocompatibility Complex, Class II, DQ Beta 1), and among its related pathways/superpathways are TCR Signaling (Qiagen) and Allograft rejection. The drugs Anti-Bacterial Agents and Antibiotics, Antitubercular have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and eye. A hypersensitivity reaction type I disease triggered by a metal.
(https://www.malacards.org/card/metal_allergy)

* Methemoglobinemia is related to hereditary methemoglobinemia and acquired methemoglobinemia, and has symptoms including cyanosis An important gene

associated with Methemoglobinemia is CYB5R3 (Cytochrome B5 Reductase 3), and among its related pathways/superpathways are Amino sugar and nucleotide sugar metabolism and Metabolism. The drugs Lidocaine and Propofol have been mentioned in the context of this disorder. Affiliated tissues include lung, heart and kidney. A condition caused by elevated levels of methemoglobin in the blood.
(https://www.malacards.org/card/methemoglobinemia)

* Neuromuscular Disease, also known as neuromuscular diseases, is related to central core disease of muscle and spinal muscular atrophy, type ii, and has symptoms including athetosis, back pain and headache. An important gene associated with Neuromuscular Disease is TRPV4 (Transient Receptor Potential Cation Channel Subfamily V Member 4), and among its related pathways/superpathways are Cardiac conduction and Agrin Interactions at Neuromuscular Junction. The drugs Zinc and Naproxen have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, testes and brain, and related phenotypes are behavior/neurological and homeostasis/metabolism. A neuropathy that affect the nerves that control the voluntary muscles.
(https://www.malacards.org/card/neuromuscular_disease)

* Periostitis is related to periodontal disease and rheumatoid arthritis. An important gene associated with Periostitis is IL1RN (Interleukin 1 Receptor Antagonist), and among its related pathways/superpathways are Cytokine Signaling in Immune system and Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers. Affiliated tissues include bone, lung and endothelial. A medical condition caused by inflammation of the periosteum, a layer of connective tissue that surrounds bone.
(https://www.malacards.org/card/periostitis)

* Prostate cancer: A malignancy originating in tissues of the prostate. Most prostate cancers are adenocarcinomas that develop in the acini of the prostatic ducts. Other rare histopathologic types of prostate cancer that occur in approximately 5% of patients include small cell carcinoma, mucinous carcinoma, prostatic ductal carcinoma, transitional cell carcinoma, squamous cell carcinoma, basal cell carcinoma, adenoid cystic carcinoma (basaloid), signet-ring cell carcinoma and neuroendocrine carcinoma. A male reproductive organ cancer that is located in the prostate.
(https://www.malacards.org/card/prostate_cancer)

* Radiculopathy, also known as nerve root disorder, is related to meningitis and lymphadenitis, and has symptoms including neuralgia An important gene associated with Radiculopathy is IL6 (Interleukin 6), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Dexamethasone and Acetaminophen have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and spinal cord, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). A disorder of spinal nerve roots.
(https://www.malacards.org/card/radiculopathy)

* Retinal Degeneration, also known as degeneration of retina, is related to peripheral retinal degeneration and enhanced s-cone syndrome. An important gene associated with Retinal Degeneration is RPE65 (RPE65, Retinoid Isomerohydrolase), and among its related pathways/superpathways are Metabolism of fat-soluble vitamins and Visual Cycle in Retinal Rods. The drugs Lidocaine and Dorzolamide have been mentioned in the context of this disorder. Affiliated tissues include eye, retina and endothelial, and related phenotypes are nervous system and pigmentation. A retinal disease that is characterized by deterioration of the retina caused by the progressive and eventual death of the cells of the retina.
(https://www.malacards.org/card/retinal_degeneration)

* Retinal Detachment is related to persistent hyperplastic primary vitreous, autosomal recessive and persistent hyperplastic primary vitreous. An important gene associated with Retinal Detachment is RHO (Rhodopsin), and among its related pathways/superpathways are ERK Signaling and PI3K-Akt signaling pathway. The drugs Lidocaine and Ketorolac have been mentioned in the context of this disorder. Affiliated tissues include eye, retina and brain, and related phenotypes are retinal detachment and cardiovascular system. A disorder of the eye in which the retina separates from the layer underneath.
(https://www.malacards.org/card/retinal_detachment)

* Shoulder Impingement Syndrome, also known as impingement syndrome of shoulder region, is related to hemophilic arthropathy and pseudopapilledema, and has symptoms including arthralgia and metatarsalgia. An important gene associated with Shoulder Impingement Syndrome is SKIL (SKI Like Proto-Oncogene), and among its related pathways/superpathways are PI3K-Akt signaling pathway and Pathways in cancer. The drugs Lidocaine and Triamcinolone have been mentioned in the context of this disorder. Affiliated tissues include testes, spinal cord and bone, and related phenotypes are Decreased viability and Decreased viability. A syndrome which occurs when the tendons of the rotator cuff muscles become irritated and inflamed as they pass through the subacromial space, the passage beneath the acromion. This can result in pain, weakness and loss of movement at the shoulder.
(https://www.malacards.org/card/shoulder_impingement_syndrome)

* Spinal Stenosis, also known as spinal stenosis of lumbar region, is related to back pain and spondylolisthesis, and has symptoms including neck pain, torticollis and back pain. An important gene associated with Spinal Stenosis is CALCA (Calcitonin Related Polypeptide Alpha), and among its related pathways/superpathways are ERK Signaling and Integrin Pathway. The drugs Betamethasone and Dexamethasone have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, bone and spinal cord, and related phenotypes are Increased gamma-H2AX phosphorylation and hearing/vestibular/ear. A bone deterioration disease that has material basis in bony spurs, disc degeneration, or thickened ligaments which results in narrowing located in spinal cord.
(https://www.malacards.org/card/spinal_stenosis)

* Spondylolisthesis is related to spondylolysis and spinal stenosis, and has symptoms including back pain An important gene associated with Spondylolisthesis is BMP7 (Bone Morphogenetic Protein 7), and among its related pathways/superpathways are GPCR Pathway and p70S6K Signaling. The drugs Menthol and Ketamine have been mentioned in the context of this disorder. Affiliated tissues include set of vertebrae, bone and bone marrow, and related phenotypes are spondylolysis and spondylolisthesis at l5-s1. A bone structure disease that has material basis in displacement located in set of vertebrae.
(https://www.malacards.org/card/spondylolisthesis)

* Spondylosis, also known as spondylogenic compression of thoracic spinal cord, is related to head injury and osteoporosis. An important gene associated with Spondylosis is HTRA1 (HtrA Serine Peptidase 1), and among its related pathways/superpathways are Parathyroid hormone synthesis, secretion and action and Development_Hedgehog and PTH signaling pathways in bone and cartilage development. The drugs Dexamethasone and Pregabalin have been mentioned in the context of this disorder. Affiliated tissues include vertebral column, spinal cord and bone, and related phenotypes are growth/size/body region and cardiovascular system. A bone structure disease that involves degeneration between vertebra located in vertebral column.
(https://www.malacards.org/card/spondylosis)

* Synovial Chondromatosis, also known as synovial osteochondromatosis, is related to osteochondroma and osteoporosis, and has symptoms including arthralgia and metatarsalgia. An important gene associated with Synovial Chondromatosis is NOG (Noggin), and among its related pathways/superpathways are ERK Signaling and GPCR Pathway. Affiliated tissues include bone and endothelial, and related phenotypes are cellular and cardiovascular system. Synovial chondromatosis is a type of non-cancerous tumor that arises in the lining of a joint. The knee is most commonly affected, however it can affect any joint. The tumors begin as small nodules of cartilage.
(https://www.malacards.org/card/synovial_chondromatosis)

* Ulcerative Stomatitis, also known as minor oral aphthous ulceration, is related to nail disorder, nonsyndromic congenital, 1 and chronic interstitial cystitis, and has symptoms including halitosis and snoring. An important gene associated with Ulcerative Stomatitis is TP63 (Tumor Protein P63), and among its related pathways/superpathways are Direct p53 effectors and Activation of BH3-only proteins. The drugs Infliximab and Gastrointestinal Agents have been mentioned in the context of this disorder. Affiliated tissues include heart, liver and skin, and related phenotypes are homeostasis/metabolism and immune system. An infectious disease of the mouth characterized by swollen spongy gums, ulcers, and loose teeth.
(https://www.malacards.org/card/ulcerative_stomatitis)

1.3.2.11 RT-MB-36

https://archive.org/details/Resonant_Therapy-Molecular_Biology_36

Genetic Superpathways-Alcohol Dependence; Genetic Superpathways-Alcoholic Hepatitis; Genetic Superpathways-Alcoholic Liver Cirrhosis; Genetic Superpathways-Arthritis; Genetic Superpathways-Articulation Disorder; Genetic Superpathways-Buerger Disease; Genetic Superpathways-Commensal Bacteria Infectious Disease; Genetic Superpathways-Conjunctivochalasis; Genetic Superpathways-Degenerative Disc Disease; Genetic Superpathways-Dystonia; Genetic Superpathways-Fasciitis; Genetic Superpathways-Fatty Liver Disease; Genetic Superpathways-Fibrous Histiocytoma; Genetic Superpathways-Gait Apraxia; Genetic Superpathways-Ichthyosis Vulgaris; Genetic Superpathways-Intervertebral Disc Disease; Genetic Superpathways-Portal Hypertension; Genetic Superpathways-Portal Vein Thrombosis; Genetic Superpathways-Post-Thrombotic Syndrome; Genetic Superpathways-Primary Bacterial Infectious Disease; Genetic Superpathways-Pulmonary Embolism; Genetic Superpathways-Scapuloperoneal Myopathy; Genetic Superpathways-Telangiectasis; Genetic Superpathways-Thrombophlebitis; Genetic Superpathways-Thrombosis; Genetic Superpathways-Tooth Size; Genetic Superpathways-Varicose Veins; Genetic Superpathways-Viral Infectious Disease; Genetic Superpathways-Whiplash; Genetic Superpathways-Writing Disorder

* Alcohol Dependence, also known as aerodigestive tract cancer, squamous cell, alcohol-related, protection against, is related to alcohol abuse and psychotic disorder. An important gene associated with Alcohol Dependence is ADH1B (Alcohol Dehydrogenase 1B (Class I), Beta Polypeptide), and among its related pathways/superpathways are Alcoholism and Peptide ligand-binding receptors. The drugs Ethanol and Gabapentin have been mentioned in the context of this disorder. Affiliated tissues include brain, liver and testes, and related phenotypes are abnormality of the nervous system and alcoholism. A previous psychiatric diagnosis in which an individual is physically or psychologically dependent upon alcohol.
(https://www.malacards.org/card/alcohol_dependence)

* Alcoholic Hepatitis, also known as acute alcoholic liver disease, is related to hepatitis and hepatitis a. An important gene associated with Alcoholic Hepatitis is F2 (Coagulation Factor II, Thrombin), and among its related pathways/superpathways are TGF-Beta Pathway and Cytokine Signaling in Immune system. The drugs Ethanol and Metformin have been mentioned in the context of this disorder. Affiliated tissues include liver, brain and neutrophil, and related phenotypes are homeostasis/metabolism and liver/biliary system. Hepatitis (inflammation of the liver) due to excessive intake of alcohol. It is usually found in association with fatty liver, an early stage of alcoholic liver disease, and may contribute to the progression of fibrosis, leading to cirrhosis.
(https://www.malacards.org/card/alcoholic_hepatitis)

* Alcoholic Liver Cirrhosis, also known as portal cirrhosis, is related to antipyrine metabolism and peritonitis, and has symptoms including icterus An important gene

associated with Alcoholic Liver Cirrhosis is ADH1B (Alcohol Dehydrogenase 1B (Class I), Beta Polypeptide), and among its related pathways/superpathways are Metabolism and Cytochrome P450 - arranged by substrate type. The drugs Angiotensin II and Losartan have been mentioned in the context of this disorder. Affiliated tissues include Liver, liver and skin, and related phenotype is homeostasis/metabolism. A condition in which the liver does not function properly due to long-term damage. This damage is characterized by the replacement of normal liver tissue by scar tissue.
(https://www.malacards.org/card/alcoholic_liver_cirrhosis)

* Arthritis, also known as inflammatory joint disease, is related to juvenile rheumatoid arthritis and rheumatoid arthritis, systemic juvenile, and has symptoms including arthralgia, back pain and metatarsalgia. An important gene associated with Arthritis is TNF (Tumor Necrosis Factor), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Rayos and Methotrexate have been mentioned in the context of this disorder. Affiliated tissues include joint, skin over the joint and bone, and related phenotypes are Decreased Tat-dependent HIV-LTR-beta-galactosidase protein expression and homeostasis/metabolism. A bone inflammation disease that involves a response to irritation or injury, characterized by joint pain, swelling, stiffness located in joint and/or redness located in skin over the joint.
(https://www.malacards.org/card/arthritis)

* Articulation Disorder, also known as articulation disorders, is related to childhood apraxia of speech and stuttering. An important gene associated with Articulation Disorder is GNPTG (N-Acetylglucosamine-1-Phosphate Transferase Subunit Gamma), and among its related pathways/superpathways is Lysosome. Affiliated tissues include brain and tongue, and related phenotype is behavior/neurological. A speech disorder that involves mispronouncing speech sounds by omitting, distorting, substituting, or adding sounds which can make speech difficult to understand.
(https://www.malacards.org/card/articulation_disorder)

* Buerger Disease, also known as thromboangiitis obliterans, is related to peripheral vascular disease and arteries, anomalies of. An important gene associated with Buerger Disease is APOH (Apolipoprotein H), and among its related pathways/superpathways are Integrin Pathway and Response to elevated platelet cytosolic Ca2+. The drugs Citric Acid and Anesthetics have been mentioned in the context of this disorder. Affiliated tissues include Adipose and Adipose, and related phenotypes are hyperhidrosis and arthralgia. A recurring progressive inflammation and thrombosis (clotting) of small and medium arteries and veins of the hands and feet. It is strongly associated with use of tobacco products, primarily from smoking, but is also associated with smokeless tobacco.
(https://www.malacards.org/card/buerger_disease)

* Commensal Bacterial Infectious Disease is related to inclusion conjunctivitis and pertussis. An important gene associated with Commensal Bacterial Infectious Disease is DPT (Dermatopontin), and among its related pathways/superpathways are Allograft rejection and NF-KappaB Family Pathway. A bacterial infectious disease that results in

infection by bacteria which are part of the normal human flora when one or more of the defense mechanisms designed to restrict them from the usually sterile internal tissues are breached by accident, by intent (surgery), or by an underlying metabolic or an infectious disorder.
(https://www.malacards.org/card/commensal_bacterial_infectious_disease)

* Conjunctivochalasis is related to superior limbic keratoconjunctivitis and pulmonary emphysema. An important gene associated with Conjunctivochalasis is MMP3 (Matrix Metallopeptidase 3), and among its related pathways/superpathways are Innate Immune System and GPCR Pathway. The drugs Hyaluronic acid and Ephedrine have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and thyroid, and related phenotypes are hematopoietic system and homeostasis/metabolism. A common eye surface condition characterized by the presence of excess folds of the conjunctiva located between the globe of the eye and the eyelid margin. Symptoms range from dry eye, epiphora, and irritation, to localized pain, foreign body sensation, subconjunctival hemorrhage, and ulceration.
(https://www.malacards.org/card/conjunctivochalasis)

* Degenerative Disc Disease, also known as intervertebral disc degeneration, is related to intervertebral disc disease and spondylolisthesis, and has symptoms including sciatica An important gene associated with Degenerative Disc Disease is LINC01562, and among its related pathways/superpathways are Degradation of the extracellular matrix and ECM proteoglycans. The drugs Dopamine and Norepinephrine have been mentioned in the context of this disorder. Affiliated tissues include Cartilage and Cartilage, and related phenotype is limbs/digits/tail. A bone deterioration disease that has material basis in gradual dehydration and tears located in intervertebral disc.
(https://www.malacards.org/card/degenerative_disc_disease)

* Dystonia, also known as dystonic disease, is related to dystonia 3, torsion, x-linked and dystonia 12, and has symptoms including back pain, headache and muscle cramp. An important gene associated with Dystonia is TOR1A (Torsin Family 1 Member A), and among its related pathways/superpathways are Nicotine Pathway (Dopaminergic Neuron), Pharmacodynamics and Folate biosynthesis. The drugs Menthol and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, globus pallidus and cerebellum, and related phenotypes are behavior/neurological and muscle. Dystonia is a movement disorder that causes involuntary contractions of the muscles. These contractions result in twisting and repetitive movements. Sometimes they are painful. Dystonia can affect just one muscle, a group of muscles or all muscles. Symptoms can include tremors, voice problems or a dragging foot.
(https://www.malacards.org/card/dystonia)

* Fasciitis is related to ischemic fasciitis and pseudosarcomatous fibromatosis. An important gene associated with Fasciitis is USP6 (Ubiquitin Specific Peptidase 6), and among its related pathways/superpathways are ERK Signaling and Cytokine Signaling in Immune system. The drugs Lidocaine and Menthol have been mentioned in the

context of this disorder. Affiliated tissues include skin, breast and bone, and related phenotype is cardiovascular system. An inflammation of the fascia, which is the connective tissue surrounding muscles, blood vessels and nerves.
(https://www.malacards.org/card/fasciitis)

* Fatty Liver Disease, also known as fatty liver, is related to nonalcoholic steatohepatitis and hepatitis. An important gene associated with Fatty Liver Disease is MALAT1, and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Regulation of lipid metabolism by Peroxisome proliferator-activated receptor alpha (PPARalpha). The drugs Zinc and Pioglitazone have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and heart, and related phenotypes are homeostasis/metabolism and adipose tissue. Alcoholic fatty liver disease is the earliest stage of alcohol-related liver disease. The next stages are alcoholic hepatitis and cirrhosis. Fatty liver disease is a condition in which fat builds up in the liver.
(https://www.malacards.org/card/fatty_liver_disease)

* Fibrous Histiocytoma, also known as histiocytoma, benign fibrous, is related to myxofibrosarcoma and malignant fibroxanthoma. An important gene associated with Fibrous Histiocytoma is ATF1 (Activating Transcription Factor 1), and among its related pathways/superpathways are Transcriptional misregulation in cancer and Striated Muscle Contraction. The drugs Doxorubicin and Mechlorethamine have been mentioned in the context of this disorder. Affiliated tissues include bone, skin and lung. Benign fibrous histiocytomas, also called dermatofibromas, are benign skin growths. Hard solitary slow-growing papules (rounded bumps) that may appear in a variety of colours, usually brownish to tan; they are often elevated or pedunculated.
(https://www.malacards.org/card/fibrous_histiocytoma)

* Gait Apraxia is related to dementia and alzheimer disease, and has symptoms including waddling gait, gait ataxia and gait dyspraxia. An important gene associated with Gait Apraxia is GRN (Granulin Precursor), and among its related pathways/superpathways are Neuroscience and A-beta Signaling Pathways. The drugs Vitamin D and Ergocalciferol have been mentioned in the context of this disorder. Affiliated tissues include brain and bone, and related phenotypes are nervous system and no phenotypic analysis. It is characterised by an inability to initiate the process of walking, despite the power and coordination of the legs being normal when tested in the seated or lying position. The gait is broad-based with short steps with a tendency to fall backwards.
(https://www.malacards.org/card/gait_apraxia)

* Ichthyosis Vulgaris, also known as ichthyosis simplex, is related to keratosis and lichen planus, and has symptoms including trichorrhexis invaginata An important gene associated with Ichthyosis Vulgaris is FLG (Filaggrin), and among its related pathways/superpathways are Developmental Biology and Keratinization. Affiliated tissues include skin and testes, and related phenotypes are eczematoid dermatitis and asthma. A skin disorder causing dry, scaly skin.

(https://www.malacards.org/card/ichthyosis_vulgaris)

* Intervertebral Disc Disease, also known as intervertebral disc degeneration, is related to degenerative disc disease and spondylosis, and has symptoms including sciatica An important gene associated with Intervertebral Disc Disease is COL9A3 (Collagen Type IX Alpha 3 Chain), and among its related pathways/superpathways are Collagen chain trimerization and Degradation of the extracellular matrix. The drugs Mepivacaine and Peripheral Nervous System Agents have been mentioned in the context of this disorder. Affiliated tissues include bone, spinal cord and bone marrow, and related phenotypes are cardiovascular system and integument. A common musculo-skeletal disorder caused by degeneration of intervertebral disks of the lumbar spine. It results in low-back pain and unilateral leg pain.
(https://www.malacards.org/card/intervertebral_disc_disease)

* Portal Hypertension, also known as hypertension, portal, is related to esophageal varix and congenital hepatic fibrosis, and has symptoms including signs and symptoms, digestive An important gene associated with Portal Hypertension is DGUOK (Deoxyguanosine Kinase), and among its related pathways/superpathways are Signaling by GPCR and PEDF Induced Signaling. The drugs Spironolactone and Simvastatin have been mentioned in the context of this disorder. Affiliated tissues include liver, spleen and endothelial, and related phenotypes are homeostasis/metabolism and growth/size/body region. Portal hypertensioni s abnormally high blood pressure in branches of the portal vein, the large vein that brings blood from the intestine to the liver. Portal hypertension itself does not cause symptoms, but complications from the condition can lead to an enlarged abdomen, abdominal discomfort, confusion, drowsiness and internal bleeding. Cirrhosis (a form of chronic liver failure) is the most common cause of portal hypertension.
(https://www.malacards.org/card/portal_hypertension)

* Portal Vein Thrombosis is related to liver cirrhosis and hypersplenism. An important gene associated with Portal Vein Thrombosis is F2 (Coagulation Factor II, Thrombin), and among its related pathways/superpathways are Collagen chain trimerization and Response to elevated platelet cytosolic Ca2+. The drugs Benzocaine and Nadroparin have been mentioned in the context of this disorder. Affiliated tissues include liver, spleen and pancreatic islet, and related phenotypes are homeostasis/metabolism and integument. A form of venous thrombosis affecting the hepatic portal vein, which can lead to portal hypertension and reduction in the blood supply to the liver.
(https://www.malacards.org/card/portal_vein_thrombosis)

* Post-Thrombotic Syndrome (update to RT-MB 26 item) , also known as postphlebitic syndrome, is related to chronic venous insufficiency and thrombosis. An important gene associated with Post-Thrombotic Syndrome is F5 (Coagulation Factor V), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Toll-like Receptor Signaling Pathway. The drugs Dalteparin and Enoxaparin have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and bone, and related phenotypes are cardiovascular system and hematopoietic system. A venous

insufficiency that is characterized by aching pain, heaviness, swelling, cramps, itching, or tingling in the affected limb and is a chronic complication of deep venous thrombosis.
(https://www.malacards.org/card/post_thrombotic_syndrome)

* Primary Bacterial Infectious Disease is related to trench fever and syphilis. An important gene associated with Primary Bacterial Infectious Disease is TLR9 (Toll Like Receptor 9), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. Related phenotypes are cellular and growth/size/body region. A bacterial infectious disease that results in infection by bacteria as a result of their presence or activity within the normal, healthy host, and their intrinsic virulence is, in part, a necessary consequence of their need to reproduce and spread.
(https://www.malacards.org/card/primary_bacterial_infectious_disease)

* Pulmonary Embolism, also known as pulmonary artery embolism, is related to chronic thromboembolic pulmonary hypertension and respiratory failure, and has symptoms including coughing, hemoptysis and snoring. An important gene associated with Pulmonary Embolism is PLAT (Plasminogen Activator, Tissue Type), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Collagen chain trimerization. The drugs Lidocaine and Clopidogrel have been mentioned in the context of this disorder. Affiliated tissues include lung, heart and brain, and related phenotypes are homeostasis/metabolism and cardiovascular system. An artery disease characterized by a blockage of the main artery of the lung or one of its branches by a substance that has travelled from elsewhere in the body, e.g. a blood clot.
(https://www.malacards.org/card/pulmonary_embolism)

* Scapuloperoneal Myopathy is related to scapuloperoneal myopathy, myh7-related and scapuloperoneal myopathy, x-linked dominant. An important gene associated with Scapuloperoneal Myopathy is FHL1 (Four And A Half LIM Domains 1), and among its related pathways/superpathways are Cardiac muscle contraction and Tight junction. Related phenotype is muscle. A muscular dystrophy which begins at the lower legs and affects the shoulder region earlier and more severely than distal arm.
(https://www.malacards.org/card/scapuloperoneal_myopathy)

* Telangiectasis, also known as telangiectasia, is related to pulmonary arteriovenous malformation and hereditary hemorrhagic telangiectasia. An important gene associated with Telangiectasis is ACVRL1 (Activin A Receptor Like Type 1), and among its related pathways/superpathways are ERK Signaling and PAK Pathway. The drugs Clonidine and Estradiol have been mentioned in the context of this disorder. Affiliated tissues include skin, eye and liver, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). Telangiectasias, also known as spider veins, are small dilated blood vessels near the surface of the skin or mucous membranes, measuring between 0.5 and 1 millimeter in diameter.
(https://www.malacards.org/card/telangiectasis)

* Thrombophlebitis, also known as phlebitis and thrombophlebitis of superficial vessels of lower extremities, is related to lemierre's syndrome and mesenteric vascular occlusion. An important gene associated with Thrombophlebitis is SERPINC1 (Serpin Family C Member 1), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Collagen chain trimerization. The drugs Dalteparin and Heparin have been mentioned in the context of this disorder. Affiliated tissues include lung, bone and heart, and related phenotypes are homeostasis/metabolism and mortality/aging. A phlebitis (inflammation of a vein) related to a thrombus (blood clot).
(https://www.malacards.org/card/thrombophlebitis)

* Thrombosis, also known as thrombosis of blood vessel, is related to lateral sinus thrombosis and sagittal sinus thrombosis. An important gene associated with Thrombosis is F2 (Coagulation Factor II, Thrombin), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Collagen chain trimerization. The drugs Dalteparin and Heparin have been mentioned in the context of this disorder. Affiliated tissues include liver, heart and testes, and related phenotypes are homeostasis/metabolism and cardiovascular system. A vascular disease caused by the formation of a blood clot inside a blood vessel, obstructing the flow of blood through the circulatory system.
(https://www.malacards.org/card/thrombosis)

* Tooth Size is related to cleft lip and cleft lip/palate. An important gene associated with Tooth Size is PAX9 (Paired Box 9), and among its related pathways/superpathways are Pathways in cancer and Mesodermal Commitment Pathway. The drugs Benzocaine and Metformin have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and kidney, and related phenotypes are abnormality of the dentition and Synthetic lethal with vaccinia virus (VACV) infection. There are dental growth-promoting factors on both the X and the Y chromosomes. ...the promoting effect of the Y chromosome on tooth growth seems more effective than that of the X chromosome. Short roots, irrespective of root resorption, have been documented as a 'familial trait'.
(https://www.malacards.org/card/tooth_size)

* Varicose Veins, also known as venous ectasia, is related to chronic venous insufficiency and budd-chiari syndrome, and has symptoms including angina pectoris, chest pain and edema. An important gene associated with Varicose Veins is F2 (Coagulation Factor II, Thrombin), and among its related pathways/superpathways are Integrin Pathway and Cytokine Signaling in Immune system. The drugs Propranolol and Carvedilol have been mentioned in the context of this disorder. Affiliated tissues include liver, skin and testes, and related phenotypes are varicose veins and Reduced mammosphere formation. A vein disease that is characterized by swollen, twisted veins visible just under the surface of the skin.
(https://www.malacards.org/card/varicose_veins)

* Viral Infectious Disease, also known as arbovirus infections, is related to chronic active epstein-barr virus infection and hepatitis c virus, and has symptoms including fever, pruritus and pathological conditions, signs and symptoms. An important gene

associated with Viral Infectious Disease is TLR9 (Toll Like Receptor 9), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Zinc and Maraviroc have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and t cells, and related phenotypes are cellular and hematopoietic system. A disease by infectious agent that results in infection, has material basis in Viruses.
(https://www.malacards.org/card/viral_infectious_disease)

* Whiplash is related to cervicitis and avoidant personality disorder. An important gene associated with Whiplash is CCL5 (C-C Motif Chemokine Ligand 5), and among its related pathways/superpathways are PEDF Induced Signaling and TGF-Beta Pathway. The drugs Central Nervous System Depressants and Anesthetics have been mentioned in the context of this disorder. Affiliated tissues include testes, eye and spinal cord. A soft tissue injury to the neck-is also called neck sprain or neck strain.
(https://www.malacards.org/card/whiplash)

* Writing Disorder is related to dysgraphia and agraphia, and has symptoms including aprosodia An important gene associated with Writing Disorder is DCDC2 (Doublecortin Domain Containing 2). The drugs Olive and Omega 3 Fatty Acid have been mentioned in the context of this disorder. Affiliated tissues include testes, and related phenotypes are behavior/neurological and cellular. A learning disability that involves impaired written language ability such as impairments in handwriting, spelling, organization of ideas, and composition.
(https://www.malacards.org/card/writing_disorder)

1.3.2.12 RT-MB-37

https://archive.org/details/Resonant_Therapy-Molecular_Biology_37

Genetic Superpathways-Alpha-1 Antitrypsin Deficiency; Genetic Superpathways-Amphetamine Abuse; Genetic Superpathways-Blepharitis; Genetic Superpathways-Chronic Follicular Conjunctivitis; Genetic Superpathways-Chronic Ulcer Of Skin; Genetic Superpathways-Chronic Venous Leg Ulcers; Genetic Superpathways-Conversion Disorder; Genetic Superpathways-Denture Stomatitis; Genetic Superpathways-Distichiasis; Genetic Superpathways-Epidermoid Cysts; Genetic Superpathways-Facial Paralysis; Genetic Superpathways-Hemosiderosis; Genetic Superpathways-Intermittent Explosive Disorder; Genetic Superpathways-Irritant Dermatitis; Genetic Superpathways-Learning Disability; Genetic Superpathways-Leukostasis; Genetic Superpathways-Macular Degeneration Age Related1; Genetic Superpathways-Macular Holes; Genetic Superpathways-Muscle Hypertrophy; Genetic Superpathways-Nail Disease; Genetic Superpathways-Neurogenic Arthropathy; Genetic Superpathways-Ocular Dominance; Genetic Superpathways-Paronychia; Genetic Superpathways-Parotitis; Genetic Superpathways-Pertussis; Genetic Superpathways-Photokeratitis; Genetic Superpathways-Pulmonary Disease Chronic Obstructive; Genetic Superpathways-Streptococcal Toxic Shock Syndrome; Genetic Superpathways-

Substance Abuse; Genetic Superpathways-Substance Dependence

* Alpha-1-Antitrypsin Deficiency, also known as alpha 1-antitrypsin deficiency, is related to liver disease and pulmonary emphysema, and has symptoms including hemoptysis, snoring and coughing. An important gene associated with Alpha-1-Antitrypsin Deficiency is SERPINA1 (Serpin Family A Member 1), and among its related pathways/superpathways are Complement and coagulation cascades and Lung fibrosis. The drugs Serine and HIV Protease Inhibitors have been mentioned in the context of this disorder. Affiliated tissues include Liver, liver and lung, and related phenotypes are hepatomegaly and emphysema. A genetic disorder that may result in lung disease or liver disease. Onset of lung problems is typically between 20 and 50 years old. This may result in shortness of breath, wheezing, or an increased risk of lung infections. Complications may include COPD, cirrhosis, neonatal jaundice, or panniculitis.
(https://en.wikipedia.org/wiki/Alpha_1-antitrypsin_deficiency)

* Amphetamine Abuse, also known as amphetamine-related disorders, is related to myocardial infarction and acute myocardial infarction. An important gene associated with Amphetamine Abuse is SLC6A3 (Solute Carrier Family 6 Member 3), and among its related pathways/superpathways are Circadian entrainment and Phospholipase D signaling pathway. The drugs Dopamine and Amphetamine have been mentioned in the context of this disorder. Affiliated tissues include brain and colon, and related phenotypes are behavior/neurological and cellular. A substance abuse that involves the recurring use of amphetamines despite negative consequences.
(https://www.malacards.org/card/amphetamine_abuse)

* Blepharitis is related to blepharoconjunctivitis and keratosis follicularis spinulosa decalvans, x-linked, and has symptoms including erythema of the eyelids An important gene associated with Blepharitis is MMP9 (Matrix Metallopeptidase 9), and among its related pathways/superpathways are Protein processing in endoplasmic reticulum and Microglia Activation During Neuroinflammation: Microglia Polarization. The drugs Acitretin and Hyaluronic acid have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and skin. An eyelid disease that is characterized by often chronic inflammation of the eyelid, generally the part where eyelashes grow.
(https://www.malacards.org/card/blepharitis)

* Chronic Follicular Conjunctivitis is related to chlamydia and conjunctivitis. An important gene associated with Chronic Follicular Conjunctivitis is IL1A (Interleukin 1 Alpha), and among its related pathways/superpathways are IL-1 Family Signaling Pathways and Necroptosis. Affiliated tissues include eye, lung and brain, and related phenotypes are Decreased Tat-dependent HIV-LTR-beta-galactosidase protein expression and neoplasm. A type of conjunctivitis characterized by pinkish round bodies in the retrotarsal fold.
(https://www.malacards.org/card/chronic_follicular_conjunctivitis)

* Chronic Ulcer of Skin, also known as chronic wounds, is related to decubitus ulcer and pyoderma gangrenosum. An important gene associated with Chronic Ulcer of Skin is FGF2 (Fibroblast Growth Factor 2), and among its related pathways/superpathways are Pathways in cancer and Degradation of the extracellular matrix. The drugs Coal tar and Alginic acid have been mentioned in the context of this disorder. Affiliated tissues include skin, bone and testes, and related phenotypes are homeostasis/metabolism and neoplasm. A sore on the skin or a mucous membrane, accompanied by the disintegration of tissue.
(https://www.malacards.org/card/chronic_ulcer_of_skin)

* Chronic Venous Leg Ulcers is related to chronic venous insufficiency and venous insufficiency. An important gene associated with Chronic Venous Leg Ulcers is TIMP1 (TIMP Metallopeptidase Inhibitor 1), and among its related pathways/superpathways are Apoptotic Pathways in Synovial Fibroblasts and ERK Signaling. The drugs Laxatives and Carboxymethylcellulose Sodium have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and bone, and related phenotypes are Reduced mammosphere formation and Decreased Salmonella-containing vacuole maturation. Wounds that are thought to occur due to improper functioning of venous valves, usually of the legs (hence leg ulcers). They are the major occurrence of chronic wounds, occurring in 70% to 90% of leg ulcer cases.
(https://www.malacards.org/card/chronic_venous_leg_ulcers)

* Conversion Disorder, also known as hysterical neurosis, conversion type, is related to frontonasal dysplasia 1 and psychogenic movement, and has symptoms including waxy flexibility An important gene associated with Conversion Disorder is COMT (Catechol-O-Methyltransferase), and among its related pathways/superpathways is Biogenic Amine Synthesis. The drugs Ranibizumab and Triamcinolone have been mentioned in the context of this disorder. Affiliated tissues include testes, brain and cortex, and related phenotypes are endocrine/exocrine gland and respiratory system. A somatoform disorder that involves numbness, blindness, paralysis or fits without a neurological cause.
(https://www.malacards.org/card/conversion_disorder)

* Denture Stomatitis, also known as stomatitis, denture, is related to stomatitis and diabetes mellitus. An important gene associated with Denture Stomatitis is CXCL8 (C-X-C Motif Chemokine Ligand 8), and among its related pathways/superpathways are IL-17 Family Signaling Pathways and Immune response IFN gamma signaling pathway. The drugs Nystatin and Miconazole have been mentioned in the context of this disorder. Affiliated tissues include colon, neutrophil and monocytes. A common condition where mild inflammation and redness of the oral mucous membrane occurs beneath a denture.
(https://www.malacards.org/card/denture_stomatitis)

* Distichiasis, also known as eyelashes, two rows of, is related to lymphedema-distichiasis syndrome and blepharocheilodontic syndrome 1. An important gene associated with Distichiasis is FOXC2 (Forkhead Box C2), and among its related

pathways/superpathways are Adherens junction and FGF signaling pathway. Affiliated tissues include eye and heart, and related phenotypes are distichiasis and digestive/alimentary. A distichia is an eyelash that arises from an abnormal spot on the eyelid.
(https://www.malacards.org/card/distichiasis)

* Epidermoid Cysts, also known as epidermoid cyst, is related to pilomatrixoma and basal cell carcinoma. An important gene associated with Epidermoid Cysts is KRT17 (Keratin 17), and among its related pathways/superpathways are Keratinization and Ca, cAMP and Lipid Signaling. The drugs Tranylcypromine and Thrombin have been mentioned in the context of this disorder. Affiliated tissues include spleen, testis and skin, and related phenotypes are abnormality of the skin and epidermoid cyst. An epidermoid cyst or epidermal inclusion cyst is a benign cyst usually found on the skin.
(https://www.malacards.org/card/epidermoid_cysts)

* Facial Paralysis, also known as facial palsy, is related to bell's palsy and camurati-engelmann disease, and has symptoms including seizures, muscle weakness and tremor. An important gene associated with Facial Paralysis is TUBB3 (Tubulin Beta 3 Class III), and among its related pathways/superpathways is N-cadherin signaling events. The drugs Prednisolone phosphate and Prednisolone have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and eye, and related phenotypes are cellular and nervous system. A common problem that involves the paralysis of any structures innervated by the facial nerve.
(https://www.malacards.org/card/facial_paralysis)

* Hemosiderosis, also known as haemosiderosis, is related to aceruloplasminemia and atransferrinemia. An important gene associated with Hemosiderosis is CP (Ceruloplasmin), and among its related pathways/superpathways are Transport of glucose and other sugars, bile salts and organic acids, metal ions and amine compounds and Insulin receptor recycling. The drugs Iron and Deferasirox have been mentioned in the context of this disorder. Affiliated tissues include liver, heart and bone, and related phenotypes are hematopoietic system and liver/biliary system. An iron metabolism disease that has material basis in an accumulation of hemosiderin, an iron-storage complex, resulting in iron overload.
(https://www.malacards.org/card/hemosiderosis)

* Intermittent Explosive Disorder, also known as explosive personality disorder, is related to personality disorder and disease of mental health. An important gene associated with Intermittent Explosive Disorder is SLC6A4 (Solute Carrier Family 6 Member 4), and among its related pathways/superpathways are Peptide ligand-binding receptors and G alpha (s) signalling events. The drugs Guanfacine and Naratriptan have been mentioned in the context of this disorder. Affiliated tissues include amygdala, brain and heart, and related phenotypes are homeostasis/metabolism and nervous system. An impulse control disorder that involves the episodic inability to control violent impulses with a disproportionate degree of aggressiveness.
(https://www.malacards.org/card/intermittent_explosive_disorder)

* Irritant Dermatitis, also known as dermatitis, irritant, is related to skin conditions and erysipelas. An important gene associated with Irritant Dermatitis is IL1A (Interleukin 1 Alpha), and among its related pathways/superpathways are Allograft rejection and Keratinization. The drugs Glycerol and Tacrolimus have been mentioned in the context of this disorder. Affiliated tissues include skin, lung and liver. A form of contact dermatitis that can be divided into forms caused by chemical irritants and those caused by physical irritants.
(https://www.malacards.org/card/irritant_dermatitis)

* Learning Disability, also known as learning disabilities, is related to speech and communication disorders and specific developmental disorder. An important gene associated with Learning Disability is FIBP (FGF1 Intracellular Binding Protein), and among its related pathways/superpathways is Neuroscience. The drugs Dopamine and Methylphenidate have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and heart, and related phenotypes are Decreased CDKN1A mRNA expression and Decreased CDKN1A mRNA expression. A specific developmental disorder that involves difficulty in scholastic skills such as reading, writing, spelling, reasoning, recalling and/or organizing information resulting from the brain's inability to receive and process information.
(https://www.malacards.org/card/learning_disability)

* Leukostasis is related to ischemia and granulocytopenia. An important gene associated with Leukostasis is ICAM1 (Intercellular Adhesion Molecule 1), and among its related pathways/superpathways are Human cytomegalovirus infection and fMLP Pathway. Affiliated tissues include myeloid, bone and endothelial, and related phenotypes are cardiovascular system and cellular. It is characterized by an extremely elevated blast cell count and symptoms of decreased tissue perfusion. Leukostasis is associated with people who suffer from bone and blood disorders and is very common among people suffering from acute myeloid leukemia or chronic myeloid leukemia. Leukostasis is a pathlogic diagnosis that inhibits efficient flow to the microvasculature of the body.
(https://www.malacards.org/card/leukostasis)

* Macular Degeneration, Age-Related, 1, also known as macular degeneration, is related to stargardt macular degeneration and central serous chorioretinopathy, and has symptoms including vision loss, tremor and angina pectoris. An important gene associated with Macular Degeneration, Age-Related, 1 is HMCN1 (Hemicentin 1), and among its related pathways/superpathways are Creation of C4 and C2 activators and Immune response Lectin induced complement pathway. Affiliated tissues include Eye and Eye, and related phenotypes are progressive visual loss and macular degeneration. A retinal degeneration characterized by gradual deterioration of light-sensing cells in the tissues at the back of the eye and has symptom vision loss.
(https://www.malacards.org/card/macular_degeneration_age_related_1)

* Macular Holes, also known as macular hole, is related to microvascular complications

of diabetes 5 and vitreous detachment. An important gene associated with Macular Holes is TGFB2 (Transforming Growth Factor Beta 2), and among its related pathways/superpathways are Human cytomegalovirus infection and Immune response IFN gamma signaling pathway. The drugs Ranibizumab and Verteporfin have been mentioned in the context of this disorder. Affiliated tissues include eye, retina and endothelial, and related phenotype is immune system. A macular hole is a small break in the macula, located in the center of the eye's light-sensitive tissue called the retina.
(https://www.malacards.org/card/macular_holes)

* Muscle Hypertrophy (update to RT-MB 27 item), also known as hypertrophy, is related to sleep apnea and aortic valve disease 2, and has symptoms including seizures, fever and dyspnea. An important gene associated with Muscle Hypertrophy is MSTN (Myostatin), and among its related pathways/superpathways are NFAT and Cardiac Hypertrophy and AMP-activated Protein Kinase (AMPK) Signaling. The drugs Acetylcholine and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include skeletal muscle, heart and smooth muscle, and related phenotypes are skeletal muscle hypertrophy and Decreased viability with paclitaxel. Muscle hypertrophy involves an increase in size of skeletal muscle through a growth in size of its component cells.
(https://www.malacards.org/card/muscle_hypertrophy)

* Nail Disease, also known as nail diseases, is related to paronychia and tooth agenesis, selective, 4, and has symptoms including pruritus, exanthema and clubbing of nail. An important gene associated with Nail Disease is FZD6 (Frizzled Class Receptor 6), and among its related pathways/superpathways are Akt Signaling and Cytokine Signaling in Immune system. The drugs Chlorhexidine and Phenol have been mentioned in the context of this disorder. Affiliated tissues include skin, lung and kidney, and related phenotypes are hematopoietic system and digestive/alimentary. A nail disease or onychosis is a disease or deformity of the nail.
(https://www.malacards.org/card/nail_disease)

* Neurogenic Arthropathy, also known as arthropathy associated with neurological disorder, is related to sensory peripheral neuropathy and neuropathy, hereditary sensory and autonomic, type v, and has symptoms including arthralgia and metatarsalgia. An important gene associated with Neurogenic Arthropathy is SPTLC1 (Serine Palmitoyltransferase Long Chain Base Subunit 1), and among its related pathways/superpathways are Apoptosis and survival Anti-apoptotic TNFs/NF-kB/Bcl-2 pathway and p75(NTR)-mediated signaling. The drugs Hyaluronic acid and Adjuvants, Immunologic have been mentioned in the context of this disorder. Affiliated tissues include bone and heart. A severe degenerative disease related to nerve lesions that develops when the sensory mechanisms of joints are impaired.
(https://www.malacards.org/card/neurogenic_arthropathy)

* Ocular Dominance is related to fetal alcohol spectrum disorder and depression. An important gene associated with Ocular Dominance is GRIN1 (Glutamate Ionotropic Receptor NMDA Type Subunit 1), and among its related pathways/superpathways are

PEDF Induced Signaling and CREB Pathway. The drugs Anesthetics and Phenylephrine have been mentioned in the context of this disorder. Affiliated tissues include cortex, eye and retina, and related phenotypes are Decreased caspase 3/7 activity and Reduced mammosphere formation. The tendency to prefer visual input from one eye to the other, somewhat analogous to the laterality of right- or left-handedness; however, the side of the dominant eye and the dominant hand do not always match.
(https://www.malacards.org/card/ocular_dominance)

* Paronychia, also known as paronychia inflammation, is related to aggressive digital papillary adenocarcinoma and adenocarcinoma. An important gene associated with Paronychia is EGFR (Epidermal Growth Factor Receptor), and among its related pathways/superpathways are ERK Signaling and HIV Life Cycle. The drugs Fluorouracil and Cetuximab have been mentioned in the context of this disorder. Affiliated tissues include skin, lung and colon, and related phenotypes are Decreased viability and Decreased viability. A nail disease that is an often-tender bacterial or fungal infection of the hand or foot where the nail and skin meet at the side or the base of a finger or toenail.
(https://www.malacards.org/card/paronychia)

* Parotitis is related to meningoencephalitis and appendicitis. An important gene associated with Parotitis is SPINK1 (Serine Peptidase Inhibitor, Kazal Type 1), and among its related pathways/superpathways are AGE/RAGE pathway and LPA receptor mediated events. The drugs Isoniazid and Pyrazinamide have been mentioned in the context of this disorder. Affiliated tissues include salivary gland, thyroid and brain, and related phenotypes are hematopoietic system and homeostasis/metabolism. The inflammation of one or both parotid glands, the major salivary glands located on either side of the face, in humans.
(https://www.malacards.org/card/parotitis)

* Pertussis, also known as whooping cough, is related to neutrophil migration and pneumonia, and has symptoms including fever, pruritus and snoring. An important gene associated with Pertussis is TLR4 (Toll Like Receptor 4), and among its related pathways/superpathways are Innate Immune System and Apoptotic Pathways in Synovial Fibroblasts. The drugs Montelukast and Edetic Acid have been mentioned in the context of this disorder. Affiliated tissues include testes, t cells and neutrophil, and related phenotypes are homeostasis/metabolism and hematopoietic system. Whooping cough is an infectious bacterial disease that causes uncontrollable coughing.
(https://www.malacards.org/card/pertussis)

* Photokeratitis is related to interdigitating dendritic cell sarcoma and diabetic foot ulcers. An important gene associated with Photokeratitis is TCF12 (Transcription Factor 12), and among its related pathways/superpathways are Innate Immune System and Nanog in Mammalian ESC Pluripotency. Affiliated tissues include eye, skin and brain, and related phenotypes are hematopoietic system and immune system. Photokeratitis or ultraviolet keratitis is a painful eye condition caused by exposure of insufficiently protected eyes to the ultraviolet (UV) rays from either natural (e.g. intense sunlight) or

artificial (e.g. the electric arc during welding).
(https://www.malacards.org/card/photokeratitis)

* Pulmonary Disease, Chronic Obstructive, also known as chronic obstructive pulmonary disease, is related to respiratory failure and alpha-1-antitrypsin deficiency, and has symptoms including tremor, fever and angina pectoris. An important gene associated with Pulmonary Disease, Chronic Obstructive is LINC00229 (Long Intergenic Non-Protein Coding RNA 229), and among its related pathways/superpathways are Matrix Metalloproteinases and Rheumatoid arthritis. The drugs Advair and Anoro Ellipta have been mentioned in the context of this disorder. Affiliated tissues include lung, testes and heart, and related phenotype is chronic obstructive pulmonary disease. A common, complex disorder defined by irreversible airflow obstruction due to chronic bronchitis, emphysema, and/or small airways disease.
(https://www.malacards.org/card/pulmonary_disease_chronic_obstructive)

* Streptococcal Toxic-Shock Syndrome, also known as streptococcal toxic shock syndrome, is related to fasciitis and peritonitis. An important gene associated with Streptococcal Toxic-Shock Syndrome is IL6 (Interleukin 6), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. Affiliated tissues include heart, eye and monocytes. Streptococcal toxic shock syndrome begins with flu-like symptoms (fever, chills, and muscle aches). Pain is common, usually in an extremity, sometimes in the abdomen or chest. The condition progresses to confusion and coma. Blood pressure drops, kidneys malfunction, and soft tissues may be infected.
(https://www.malacards.org/card/streptococcal_toxic_shock_syndrome)

* Substance Abuse, also known as substance-related disorders, is related to eating disorder and cocaine abuse, and has symptoms including symptoms An important gene associated with Substance Abuse is MIAT (Myocardial Infarction Associated Transcript), and among its related pathways/superpathways are Peptide ligand-binding receptors and Circadian entrainment. The drugs Amphetamine and Buprenorphine have been mentioned in the context of this disorder. Affiliated tissues include testes, brain and cortex, and related phenotypes are behavior/neurological and homeostasis/metabolism. A substance-related disorder that involves a maladaptive pattern of substance use leading to significant impairment in functioning.
(https://www.malacards.org/card/substance_abuse)

* Substance Dependence is related to drug dependence and depression. An important gene associated with Substance Dependence is OPRM1 (Opioid Receptor Mu 1), and among its related pathways/superpathways are Signaling by GPCR and Transmission across Chemical Synapses. The drugs Dopamine and Ethanol have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and cortex, and related phenotypes are Decreased viability and Decreased viability. A substance-related disorder that involves the continued use of alcohol or other drugs despite problems related to use of the substance.
(https://www.malacards.org/card/substance_dependence)

1.3.2.13 RT-MB-38

https://archive.org/details/Resonant_Therapy-Molecular_Biology_38

EGLEPG Peptide; Endogenous Amylin-Insulin Peptides; Genetic Superpathways-Acute Insulin Response; Genetic Superpathways-Aging1; Genetic Superpathways-Aging2; Genetic Superpathways-Background Diabetic Retinopathy; Genetic Superpathways-Buruli Ulcer; Genetic Superpathways-Cellulitis; Genetic Superpathways-Contact Dermatitis; Genetic Superpathways-Diabetes Mellitus; Genetic Superpathways-Diabetes Mellitus Ketosis Prone; Genetic Superpathways-Diabetes Mellitus Noninsulin Dependent; Genetic Superpathways-Diabetic Angiopathy; Genetic Superpathways-Diabetic Autonomic Neuropathy; Genetic Superpathways-Diabetic Cataract; Genetic Superpathways-Diabetic Encephalopathy; Genetic Superpathways-Diabetic Foot Ulcers; Genetic Superpathways-Diabetic Macular Edema; Genetic Superpathways-Diabetic Neuropathy; Genetic Superpathways-Diabetic Polyneuropathy; Genetic Superpathways-Hyperinsulinism; Genetic Superpathways-Intracranial Aneurysm; Genetic Superpathways-Limbal Stem Cell Deficiency; Genetic Superpathways-Microvascular Complications Of Diabetes1; Genetic Superpathways-Microvascular Complications Of Diabetes3; Genetic Superpathways-Microvascular Complications Of Diabetes5; Genetic Superpathways-Muscular Dystrophy; Genetic Superpathways-Necrotizing Fasciitis; Genetic Superpathways-Osteomyelitis; IDR-1018 Peptide

* EGLEPG peptide (EGLEPG) corresponds to a broadly bioactive xGxxPG consensus sequence first identified in elastin degradation products. Peptides matching this motif not only regulate MMP and TIMP expression in endothelial cells, dermal fibroblasts, and macrophages, but also stimulate migratory, proliferative, and morphogenic behaviors in these cells, as well as in keratinocytes. In vivo, xGxxPG peptides stimulate angiogenesis. This reports suggests multiple mechanisms through which xGxxPG-containing peptides may regulate tissue repair, including protease/inhibitor modulation and progenitor cell chemotaxis in a large animal model of diabetic wounds.

* Endogenous Amylin-Insulin peptides. Insulin is a peptide hormone produced by beta cells of the pancreatic islets. It regulates the metabolism of carbohydrates, fats and protein by promoting the absorption of carbohydrates, especially glucose from the blood into liver, fat and skeletal muscle cells. Amylin, is also a peptide hormone. It is cosecreted with insulin from the pancreatic Beta cells. Amylin plays a role in glycemic regulation by slowing gastric emptying and promoting satiety, thereby preventing spikes in blood glucose levels after meals. In those who have lost a significant number of Beta cells, such as people with type 1 diabetes and those with long-time type 2 diabetes, amylin production is also likewise reduced. People with type 1 and 2 diabetes will benefit listening to this recording during meals to help manage blood sugar levels after the meal itself.

* Acute Insulin Response, also known as air, is related to apnea, obstructive sleep and hyperinsulinism. An important gene associated with Acute Insulin Response is AIR (Acute Insulin Response (2)), and among its related pathways/superpathways are Aldosterone synthesis and secretion and Glucose / Energy Metabolism. The drugs Liraglutide and Zinc have been mentioned in the context of this disorder. Affiliated tissues include lung, testes and liver, and related phenotypes are Increased cell death in breast cancer cell lines (MCF10A, MDA-MB-435) and Reduced mammosphere formation. Impaired insulin secretion, in response to a glucose challenge.
(https://www.malacards.org/card/acute_insulin_response)

* Aging (update to RT-MB-33 items) is related to huntington disease and atypical werner syndrome. An important gene associated with Aging is BCYRN1 (Brain Cytoplasmic RNA 1), and among its related pathways/superpathways are Cellular Senescence (REACTOME) and Endometrial cancer. The drugs Acetylcholine and Metformin have been mentioned in the context of this disorder. Affiliated tissues include brain, skin and heart, and related phenotypes are Decreased viability and Decreased viability. Senescence or biological aging.
(https://www.malacards.org/card/aging)

* Background Diabetic Retinopathy, also known as non proliferative diabetic retinopathy, is related to microvascular complications of diabetes 1 and severe nonproliferative diabetic retinopathy. An important gene associated with Background Diabetic Retinopathy is TLR9 (Toll Like Receptor 9), and among its related pathways/superpathways are Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers and Malaria. The drugs Ranibizumab and Bevacizumab have been mentioned in the context of this disorder. Affiliated tissues include eye, endothelial and testes, and related phenotype is digestive/alimentary. A medical condition in which damage occurs to the retina due to diabetes mellitus.
(https://www.malacards.org/card/background_diabetic_retinopathy)

* Buruli Ulcer, also known as buruli ulcer, susceptibility to, is related to bacterial infectious disease and hemorrhagic fever, and has symptoms including nodule An important gene associated with Buruli Ulcer is SLC11A1 (Solute Carrier Family 11 Member 1), and among its related pathways/superpathways are Innate Immune System and Immune response NFAT in immune response. The drugs Rifampicin and Streptomycin have been mentioned in the context of this disorder. Affiliated tissues include skin, bone and t cells, and related phenotypes are digestive/alimentary and endocrine/exocrine gland. An infectious disease caused by Mycobacterium ulcerans.
(https://www.malacards.org/card/buruli_ulcer)

* Cellulitis is related to wells syndrome and scleritis, and has symptoms including fever, pruritus and exanthema. An important gene associated with Cellulitis is TNF (Tumor Necrosis Factor), and among its related pathways/superpathways are Innate Immune System and Developmental Biology. The drugs Lincomycin and Clindamycin have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and

breast, and related phenotypes are cellular and growth/size/body region. A bacterial infection involving the inner layers of the skin.
(https://www.malacards.org/card/cellulitis)

* Contact Dermatitis, also known as contact dermatitis/eczema, is related to palladium allergic contact dermatitis and nickel allergic contact dermatitis, and has symptoms including pruritus and exanthema. An important gene associated with Contact Dermatitis is FLG (Filaggrin), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Bacitracin and Bronopol have been mentioned in the context of this disorder. Affiliated tissues include testes, skin and t cells, and related phenotypes are hematopoietic system and cellular. A type of inflammation of the skin.
(https://www.malacards.org/card/contact_dermatitis)

* Diabetes Mellitus, also known as diabetes, is related to diabetes mellitus, permanent neonatal and diabetes mellitus, transient neonatal, 1, and has symptoms including tremor, angina pectoris and equilibration disorder. An important gene associated with Diabetes Mellitus is KCNJ11 (Potassium Voltage-Gated Channel Subfamily J Member 11), and among its related pathways/superpathways are MicroRNAs in cancer and Parkinsons Disease Pathway. The drugs Linagliptin and Metformin have been mentioned in the context of this disorder. Affiliated tissues include endothelial, heart and kidney. A group of metabolic disorders characterized by high blood sugar levels over a prolonged period.
(https://www.malacards.org/card/diabetes_mellitus)

* Diabetes mellitus, ketosis-prone: An atypical form of diabetes mellitus characterized by an acute initial presentation with severe hyperglycemia and ketosis, as seen in classic type 1 diabetes, but after initiation of insulin therapy, prolonged remission is often possible with cessation of insulin therapy and maintenance of appropriate metabolic control. Metabolic studies show a markedly blunted insulin secretory response to glucose, partially reversible with the improvement of blood glucose control. Variable levels of insulin resistance are observed, especially in obese patients. Pancreatic beta-cell autoimmunity is a rare finding. An intermediate form of diabetes that has some characteristics of type 1 and some of type 2 diabetes.
(https://www.malacards.org/card/diabetes_mellitus_ketosis_prone)

* Diabetes Mellitus, Noninsulin-Dependent, also known as type 2 diabetes mellitus, is related to maturity-onset diabetes of the young, type 1 and maturity-onset diabetes of the young, type 13, and has symptoms including tremor, angina pectoris and equilibration disorder. An important gene associated with Diabetes Mellitus, Noninsulin-Dependent is IRS1 (Insulin Receptor Substrate 1), and among its related pathways/superpathways are Cell cycle and p53 signaling pathway. The drugs Linagliptin and Metformin have been mentioned in the context of this disorder. Affiliated tissues include Pancreas and Adipose, and related phenotypes are type ii diabetes mellitus and insulin resistance. A diabetes mellitus that involves high blood glucose resulting from cells fail to use insulin properly.

(https://www.malacards.org/card/diabetes_mellitus_noninsulin_dependent)

* Diabetic Angiopathy, also known as diabetic angiopathies, is related to vasculitis and vascular disease. An important gene associated with Diabetic Angiopathy is IGFBP7 (Insulin Like Growth Factor Binding Protein 7), and among its related pathways/superpathways are Innate Immune System and Selenium Micronutrient Network. The drugs Saxagliptin and Bevacizumab have been mentioned in the context of this disorder. Affiliated tissues include bone, endothelial and heart, and related phenotypes are Increased cell death in breast cancer cell lines (MCF10A, MDA-MB-435) and cellular. A form of angiopathy -disease of the blood vessels- associated with diabetic complications.
(https://www.malacards.org/card/diabetic_angiopathy)

* Diabetic Autonomic Neuropathy, also known as diabetic neuropathies, is related to diabetic neuropathy and microvascular complications of diabetes 1, and has symptoms including sciatica and neuralgia. An important gene associated with Diabetic Autonomic Neuropathy is AKR1B1 (Aldo-Keto Reductase Family 1 Member B), and among its related pathways/superpathways are PI3K-Akt signaling pathway and p75(NTR)-mediated signaling. The drugs Quinapril and Donepezil have been mentioned in the context of this disorder. Affiliated tissues include heart, testes and bone, and related phenotype is vision/eye. A wide spectrum of manifestations affecting many different organ systems, including the cardiovascular, gastrointestinal, genitourinary, pupillary, sudomotor, and neuroendocrine systems.
(https://www.malacards.org/card/diabetic_autonomic_neuropathy)

* Diabetic Cataract, also known as cataract - diabetic, is related to microvascular complications of diabetes 5 and turner syndrome. An important gene associated with Diabetic Cataract is AKR1B1 (Aldo-Keto Reductase Family 1 Member B), and among its related pathways/superpathways is Celecoxib Pathway, Pharmacodynamics. The drugs Ketorolac and Ketorolac Tromethamine have been mentioned in the context of this disorder. Affiliated tissues include eye, heart and endothelial, and related phenotype is neoplasm. A sight-related complication of diabetes that can cause misting or blurring of vision.
(https://www.malacards.org/card/diabetic_cataract)

* Diabetic Encephalopathy is related to encephalopathy and pigmentation disease. An important gene associated with Diabetic Encephalopathy is CREB1 (CAMP Responsive Element Binding Protein 1), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Sterol Regulatory Element-Binding Proteins (SREBP) signalling. Affiliated tissues include brain, kidney and cortex, and related phenotypes are behavior/neurological and homeostasis/metabolism. A brain disease that is characterized by functional impairment of cognition, cerebral signal conduction, neurotransmission and synaptic plasticity, and underlying structural pathology associated with diabetes.
(https://www.malacards.org/card/diabetic_encephalopathy)

* Diabetic Foot Ulcers, also known as diabetic foot ulcer, is related to peripheral artery disease and arteries, anomalies of, and has symptoms including seizures, tremor and angina pectoris. An important gene associated with Diabetic Foot Ulcers is PDGFB (Platelet Derived Growth Factor Subunit B), and among its related pathways/superpathways are Akt Signaling and Cytokine Signaling in Immune system. The drugs Saxagliptin and Clindamycin have been mentioned in the context of this disorder. Affiliated tissues include Bone, skin and bone, and related phenotypes are renal/urinary system and respiratory system. A disturbance of the wound healing process.
(https://www.malacards.org/card/diabetic_foot_ulcers)

* Diabetic Macular Edema is related to macular retinal edema and retinal vein occlusion. An important gene associated with Diabetic Macular Edema is VEGFA (Vascular Endothelial Growth Factor A), and among its related pathways/superpathways are Innate Immune System and TGF-Beta Pathway. The drugs Ranibizumab and Bevacizumab have been mentioned in the context of this disorder. Affiliated tissues include eye, endothelial and retina, and related phenotypes are cardiovascular system and hematopoietic system. An accumulation of fluid in the macula—part of the retina that controls our most detailed vision abilities—due to leaking blood vessels. In order to develop DME, you must first have diabetic retinopathy.
(https://www.malacards.org/card/diabetic_macular_edema)

* Diabetic Neuropathy, also known as diabetic neuropathies, is related to microvascular complications of diabetes 1 and diabetic autonomic neuropathy, and has symptoms including sciatica and neuralgia. An important gene associated with Diabetic Neuropathy is ACE (Angiotensin I Converting Enzyme), and among its related pathways/superpathways are AGE-RAGE signaling pathway in diabetic complications and PEDF Induced Signaling. The drugs Pregabalin and Isosorbide Dinitrate have been mentioned in the context of this disorder. Affiliated tissues include testes, spinal cord and skin, and related phenotypes are behavior/neurological and growth/size/body region. Nerve damaging disorders associated with diabetes mellitus.
(https://www.malacards.org/card/diabetic_neuropathy)

* Diabetic Polyneuropathy, also known as diabetes mellitus with polyneuropathy, is related to diabetes mellitus and neuropathy. An important gene associated with Diabetic Polyneuropathy is AKR1B1 (Aldo-Keto Reductase Family 1 Member B), and among its related pathways/superpathways are Neural Stem Cell Differentiation Pathways and Lineage-specific Markers and Microglia Activation During Neuroinflammation: Steady-State Microglia. The drugs Pregabalin and Cilostazol have been mentioned in the context of this disorder. Affiliated tissues include spinal cord, testes and skin, and related phenotypes are cardiovascular system and behavior/neurological. A peripheral nerve dysfunction. There are three main alterations involved in the pathologic changes of DPN: inflammation, oxidative stress, and mitochondrial dysfunction.
(https://www.malacards.org/card/diabetic_polyneuropathy)

* Hyperinsulinism, also known as hyperinsulinemia, is related to hyperinsulinemic hypoglycemia, familial, 6 and alstrom syndrome. An important gene associated with Hyperinsulinism is HNF4A (Hepatocyte Nuclear Factor 4 Alpha), and among its related pathways/superpathways are Regulation of lipid metabolism Insulin signaling-generic cascades and Aldosterone synthesis and secretion. The drugs Somatostatin and Octreotide have been mentioned in the context of this disorder. Affiliated tissues include ovary, endothelial and liver, and related phenotypes are Reduced mammosphere formation and growth/size/body region. An above normal level of insulin in the blood of a person.
(https://www.malacards.org/card/hyperinsulinism)

* Intracranial Aneurysm, also known as brain aneurysm, is related to cerebral aneurysms and arteriovenous malformations of the brain, and has symptoms including seizures, tremor and angina pectoris. An important gene associated with Intracranial Aneurysm is CDKN2B-AS1 (CDKN2B Antisense RNA 1), and among its related pathways/superpathways are Integrin Pathway and Phospholipase-C Pathway. The drugs tannic acid and Sevoflurane have been mentioned in the context of this disorder. Affiliated tissues include brain, eye and testes, and related phenotypes are cardiovascular system and homeostasis/metabolism. An abnormal bulge or "ballooning" in the wall of an artery in the brain.
(https://www.malacards.org/card/intracranial_aneurysm)

* Limbal Stem Cell Deficiency is related to corneal disease and keratopathy. An important gene associated with Limbal Stem Cell Deficiency is KRT3 (Keratin 3), and among its related pathways/superpathways are Cytoskeletal Signaling and CLEC7A (Dectin-1) signaling. The drugs Ophthalmic Solutions and Pharmaceutical Solutions have been mentioned in the context of this disorder. Affiliated tissues include Eye, eye and bone, and related phenotypes are immune system and digestive/alimentary. LSCD is characterized by a loss or deficiency of stem cells which are vital for re-population of the corneal epithelium. Corneal transparency is essential for vision, and thus the outer protective stratified corneal epithelium is under constant, rapid renewal with vigorous repair mechanisms.
(https://www.malacards.org/card/limbal_stem_cell_deficiency)

* Microvascular Complications of Diabetes 1, also known as proliferative diabetic retinopathy, is related to background diabetic retinopathy and vitreoretinopathy, neovascular inflammatory, and has symptoms including sciatica and neuralgia. An important gene associated with Microvascular Complications of Diabetes 1 is VEGFA (Vascular Endothelial Growth Factor A), and among its related pathways/superpathways are TGF-Beta Pathway and Akt Signaling. Affiliated tissues include eye, endothelial and kidney, and related phenotypes are cardiovascular system and digestive/alimentary. Pathological conditions that develop in numerous tissues and organs as a consequence of diabetes mellitus.
(https://www.malacards.org/card/microvascular_complications_of_diabetes_1)

* Microvascular Complications of Diabetes 3, also known as diabetic nephropathy, is

related to microvascular complications of diabetes 5 and hyperglycemia. An important gene associated with Microvascular Complications of Diabetes 3 is ACE (Angiotensin I Converting Enzyme), and among its related pathways/superpathways are AGE-RAGE signaling pathway in diabetic complications and Renin-angiotensin system. Affiliated tissues include Kidney, kidney and endothelial, and related phenotype is renal/urinary system. Pathological conditions that develop in numerous tissues and organs as a consequence of diabetes mellitus.
(https://www.malacards.org/card/microvascular_complications_of_diabetes_3)

* Microvascular Complications of Diabetes 5, also known as diabetic retinopathy, is related to severe nonproliferative diabetic retinopathy and background diabetic retinopathy. An important gene associated with Microvascular Complications of Diabetes 5 is PON1 (Paraoxonase 1), and among its related pathways/superpathways are AGE-RAGE signaling pathway in diabetic complications and HIF-1 signaling pathway. Affiliated tissues include Eye and Eye, and related phenotypes are cardiovascular system and homeostasis/metabolism. Pathological conditions that develop in numerous tissues and organs as a consequence of diabetes mellitus.
(https://www.malacards.org/card/microvascular_complications_of_diabetes_5)

* Muscular Dystrophy, also known as muscular dystrophies, is related to muscular dystrophy, becker type and muscular dystrophy-dystroglycanopathy , type a, 4, and has symptoms including myoclonus, back pain and torticollis. An important gene associated with Muscular Dystrophy is DMD (Dystrophin), and among its related pathways/superpathways are Allograft rejection and Dilated cardiomyopathy (DCM). The drugs Carvedilol and Ramipril have been mentioned in the context of this disorder. Affiliated tissues include skeletal muscle, heart and brain, and related phenotypes are Decreased viability and Decreased viability. A myopathy is characterized by progressive skeletal muscle weakness degeneration.
(https://www.malacards.org/card/muscular_dystrophy)

* Necrotizing Fasciitis, also known as fasciitis, necrotizing, is related to fasciitis and noma, and has symptoms including generalized muscle weakness and spasm. An important gene associated with Necrotizing Fasciitis is CD46 (CD46 Molecule), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Vancomycin and Tobramycin have been mentioned in the context of this disorder. Affiliated tissues include skin, breast and liver, and related phenotype is cardiovascular system. Commonly known as flesh-eating disease, is an infection that results in the death of parts of the body's soft tissue.
(https://www.malacards.org/card/necrotizing_fasciitis)

* Osteomyelitis is related to chronic recurrent multifocal osteomyelitis and mycobacterium fortuitum, and has symptoms including bone pain and pain in limb. An important gene associated with Osteomyelitis is IL1RN (Interleukin 1 Receptor Antagonist), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs leucovorin and Trimethoprim have been mentioned in the context of this disorder. Affiliated tissues include bone, testes

and bone marrow, and related phenotypes are homeostasis/metabolism and hematopoietic system. A bone inflammation disease that has material basis in infection located in bone or located in bone marrow.
(https://www.malacards.org/card/osteomyelitis)

* IDR-1018 is a small cationic synthetic peptide (VRLIVAVRIWRR-NH2) that has been developed based on bactenecin, a peptide antibiotic isolated from bovine neutrophil granules. This peptide has numerous biological activities that target both eukaryotic and bacterial cells. By targeting the eukaryotic host it acts as a modulator of the immune system, affecting macrophage polarization and reducing levels of lipopolysaccharide-induced cytokine production. By targeting both Gram-negative (e.g. Pseudomonas aeruginosa and Escherichia coli) and Gram-positive (e.g. Staphylococcus aureus) bacteria 1018 acts as a potent antibacterial: it kills bacteria, disperses biofilms and inhibits bacterial swarming. Potential practical applications of 1018 range from neuroprotection and wound healing to potentiation of antimalarial, antiviral and antibacterial compounds.

1.3.2.14 RT-MB-39

https://archive.org/details/Resonant_Therapy-Molecular_Biology_39

Genetic Superpathways-Adrenal Gland Disease; Genetic Superpathways-Amyloidosis; Genetic Superpathways-Asthenopia; Genetic Superpathways-Atrial Fibrillation; Genetic Superpathways-Carbohydrate Metabolic Disorder; Genetic Superpathways-Common Wart; Genetic Superpathways-Congestive Heart Failure; Genetic Superpathways-Diabetes Mellitus Insulin Dependent; Genetic Superpathways-Drug Dependence; Genetic Superpathways-Dumping Syndrome; Genetic Superpathways-Dysphagia; Genetic Superpathways-Endocrine Pancreas Disease; Genetic Superpathways-Endogenous Depression; Genetic Superpathways-Fibromyalgia; Genetic Superpathways-Folliculitis; Genetic Superpathways-Glucose Intolerance; Genetic Superpathways-Hyperinsulinemic Hypoglycemia; Genetic Superpathways-Hypoglycemia; Genetic Superpathways-Infertility; Genetic Superpathways-Inner Ear Disease; Genetic Superpathways-Insulinoma; Genetic Superpathways-Lipid Metabolism Disorder; Genetic Superpathways-Measles; Genetic Superpathways-Migraine With Aura; Genetic Superpathways-Migraine Without Aura;Genetic Superpathways-Nonalcoholic Steatohepatitis; Genetic Superpathways-Otosclerosis; Genetic Superpathways-Temporal Arteritis; Genetic Superpathways-Tympanic Membrane Disease; Genetic Superpathways-Tympanosclerosis

* Adrenal Gland Disease, also known as adrenal gland diseases, is related to adrenal insufficiency, congenital, with 46,xy sex reversal, partial or complete and corticosteroid-binding globulin deficiency. An important gene associated with Adrenal Gland Disease is POMC (Proopiomelanocortin), and among its related pathways/superpathways are Myometrial Relaxation and Contraction Pathways and Aldosterone synthesis and secretion. The drugs Hydrocortisone acetate and Hydrocortisone have been mentioned in the context of this disorder. Affiliated tissues include adrenal gland, testes and pituitary, and related phenotypes are Decreased shRNA abundance (Z-score < -2) and Decreased shRNA abundance (Z-score < -2). An endocrine system disease that is located in the adrenal gland.
(https://www.malacards.org/card/adrenal_gland_disease)

* Amyloidosis, also known as amyloid disease, is related to amyloidosis, hereditary, transthyretin-related and al amyloidosis. An important gene associated with Amyloidosis is TTR (Transthyretin), and among its related pathways/superpathways are Innate Immune System and Activated PKN1 stimulates transcription of AR (androgen receptor) regulated genes KLK2 and KLK3. The drugs Simvastatin and Pramlintide have been mentioned in the context of this disorder. Affiliated tissues include brain, heart and liver, and related phenotypes are facial palsy and corneal dystrophy. A group of diseases in which abnormal proteins, known as amyloid fibrils, build up in tissue.
(https://www.malacards.org/card/amyloidosis)

* Asthenopia, also known as accommodative strain, is related to suppression amblyopia and xerophthalmia, and has symptoms including eye manifestations and visual discomfort. An important gene associated with Asthenopia is NCBP1 (Nuclear Cap Binding Protein Subunit 1), and among its related pathways/superpathways is Neuroscience. The drugs Loteprednol and Methylprednisolone hemisuccinate have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and heart, and related phenotypes are behavior/neurological and nervous system. Eye strain, also known as asthenopia, is an eye condition that manifests through nonspecific symptoms such as fatigue, pain in or around the eyes, blurred vision, headache, and occasional double vision. Symptoms often occur after reading, computer work, or other close activities that involve tedious visual tasks.
(https://www.malacards.org/card/asthenopia)

* Atrial Fibrillation, also known as fibrillation, atrial, is related to familial atrial fibrillation and congestive heart failure, and has symptoms including angina pectoris, edema and chest pain. An important gene associated with Atrial Fibrillation is KCNQ1 (Potassium Voltage-Gated Channel Subfamily Q Member 1), and among its related pathways/superpathways are Vascular smooth muscle contraction and Adrenergic signaling in cardiomyocytes. The drugs Atorvastatin and Amiodarone have been mentioned in the context of this disorder. Affiliated tissues include heart, kidney and testes, and related phenotypes are no effect and cardiovascular system. A heart conduction disease that is characterized by uncoordinated electrical activity in the heart's upper chambers (the atria), which causes the heartbeat to become fast and

irregular and has symptoms palpitations, weakness, fatigue, lightheadedness, dizziness, confusion, shortness of breath and chest pain.
(https://www.malacards.org/card/atrial_fibrillation)

* Carbohydrate Metabolic Disorder, also known as carbohydrate metabolism, inborn errors, is related to galactosemia and glycogen storage disease v. An important gene associated with Carbohydrate Metabolic Disorder is INS (Insulin), and among its related pathways/superpathways are Metabolism and Glycosaminoglycan metabolism. The drugs Cyclophosphamide and Primaquine have been mentioned in the context of this disorder. Affiliated tissues include testes, kidney and bone, and related phenotypes are no effect and homeostasis/metabolism. An inherited metabolic disorder that affect the catabolism and anabolism of carbohydrates.
(https://www.malacards.org/card/carbohydrate_metabolic_disorder)

* Common Wart is related to measles and mycobacterium abscessus, and has symptoms including raised wart. An important gene associated with Common Wart is CLEC7A (C-Type Lectin Domain Containing 7A), and among its related pathways/superpathways are Innate Immune System and Activated TLR4 signalling. The drugs Miconazole and Salicylic acid have been mentioned in the context of this disorder. Affiliated tissues include skin, skin and kidney, and related phenotypes are hematopoietic system and immune system. A viral infectious disease that results in infection located in skin, has material basis in human papillomavirus (types 2 and 4). This infection has symptom raised wart with roughened surface, most common on hands, but can grow anywhere on the body.
(https://www.malacards.org/card/common_wart)

* Congestive Heart Failure, also known as heart failure, is related to pulmonary edema and orthostatic intolerance, and has symptoms including tremor, angina pectoris and edema. An important gene associated with Congestive Heart Failure is MIR21 (MicroRNA 21), and among its related pathways/superpathways are MicroRNAs in cancer and Dilated cardiomyopathy (DCM). The drugs Sodium Citrate and Furosemide have been mentioned in the context of this disorder. Affiliated tissues include Adipose and Lateral Plate Mesoderm, and related phenotype is muscle. A heart disease that is characterized by any structural or functional cardiac disorder that impairs the ability of the heart to fill with or pump a sufficient amount of blood throughout the body.
(https://www.malacards.org/card/congestive_heart_failure)

* Diabetes Mellitus, Insulin-Dependent, also known as type 1 diabetes mellitus, is related to diabetes mellitus, insulin-dependent, 23 and type 1 diabetes mellitus 2, and has symptoms including polydipsia and polyuria. An important gene associated with Diabetes Mellitus, Insulin-Dependent is HNF1A (HNF1 Homeobox A), and among its related pathways/superpathways are Type I diabetes mellitus and T cell receptor signaling pathway. The drugs Zinc and Saxagliptin have been mentioned in the context of this disorder. Affiliated tissues include Bone and Pancreas, and related phenotypes are diabetes mellitus and polydipsia. A diabetes mellitus that results from the body's failure to produce insulin and has material basis in autoimmune destruction of insulin-

producing beta cells of the pancreas.
(https://www.malacards.org/card/diabetes_mellitus_insulin_dependent)

* Drug Dependence is related to polysubstance abuse and hallucinogen dependence. An important gene associated with Drug Dependence is OPRM1 (Opioid Receptor Mu 1), and among its related pathways/superpathways are Signaling by GPCR and Peptide ligand-binding receptors. The drugs Buprenorphine and Naloxone have been mentioned in the context of this disorder. Affiliated tissues include brain, breast and myeloid, and related phenotypes are behavior/neurological and homeostasis/metabolism. A substance dependence that involves the continued use of drugs despite problems related to use of the substance.
(https://www.malacards.org/card/drug_dependence)

* Dumping Syndrome, also known as dumping, is related to hyperinsulinemic hypoglycemia and duodenal ulcer, and has symptoms including constipation, pain, postoperative and postoperative nausea and vomiting. An important gene associated with Dumping Syndrome is SST (Somatostatin), and among its related pathways/superpathways are Signaling by GPCR and Aldosterone synthesis and secretion. The drugs Somatostatin and lanreotide have been mentioned in the context of this disorder. Affiliated tissues include small intestine, testes and lung. Dumping syndrome occurs when food, especially sugar, moves too quickly from the stomach to the duodenum—the first part of the small intestine—in the upper gastrointestinal (GI) tract. This condition is also called rapid gastric emptying.
(https://www.malacards.org/card/dumping_syndrome)

* Dysphagia, also known as deglutition disorders, is related to leigh syndrome and muscular disease, and has symptoms including seizures, nausea and vomiting and constipation. An important gene associated with Dysphagia is ARID1B (AT-Rich Interaction Domain 1B). The drugs Methylene blue and Fluorouracil have been mentioned in the context of this disorder. Affiliated tissues include lung, testes and tongue, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). Dysphagia is difficulty in swallowing.
(https://www.malacards.org/card/dysphagia)

* Endocrine Pancreas Disease, also known as disorder of endocrine pancreas, is related to mixed cell adenoma and secondary adrenal insufficiency. An important gene associated with Endocrine Pancreas Disease is INS (Insulin), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Developmental Biology. The drugs Pancrelipase and Melatonin have been mentioned in the context of this disorder. Affiliated tissues include pancreas, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A glucose homeostasis disorder.
(https://www.malacards.org/card/endocrine_pancreas_disease)

* Endogenous Depression, also known as unipolar depression, is related to atypical

depressive disorder and postpartum depression, and has symptoms including depressed - symptom An important gene associated with Endogenous Depression is MAOA (Monoamine Oxidase A), and among its related pathways/superpathways are Signaling by GPCR and Peptide ligand-binding receptors. The drugs Citalopram and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and heart, and related phenotypes are behavior/neurological and homeostasis/metabolism. A mental depression that is characterized by a dysregulation of the endogenous opioid system and not of the monaminergic system.
(https://www.malacards.org/card/endogenous_depression)

* Fibromyalgia, also known as fibromyalgia-fibromyositis syndrome, is related to depression and sexual disorder, and has symptoms including muscle weakness, fatigue and myoclonus. An important gene associated with Fibromyalgia is GRIN2D (Glutamate Ionotropic Receptor NMDA Type Subunit 2D), and among its related pathways/superpathways are Peptide ligand-binding receptors and Circadian rythm related genes. The drugs Etoricoxib and Ethanol have been mentioned in the context of this disorder. Affiliated tissues include brain, skin and testes, and related phenotypes are behavior/neurological and endocrine/exocrine gland. A common condition characterized by long-lasting (chronic) pain affecting many areas of the body. The pain is associated with tenderness that occurs with touch or pressure on the muscles, joints, or skin. Some affected individuals also report numbness, tingling, or a burning sensation (paresthesia) in the arms and legs.
(https://www.malacards.org/card/fibromyalgia)

* Folliculitis is related to eosinophilic pustular folliculitis and dermatitis, and has symptoms including exanthema An important gene associated with Folliculitis is CCL11 (C-C Motif Chemokine Ligand 11), and among its related pathways/superpathways are Innate Immune System and TGF-Beta Pathway. The drugs Lidocaine and Ketoconazole have been mentioned in the context of this disorder. Affiliated tissues include skin, bone and neutrophil, and related phenotypes are digestive/alimentary and immune system. Folliculitis is the infection and inflammation of one or more hair follicles.
(https://www.malacards.org/card/folliculitis)

* Glucose Intolerance, also known as impaired glucose tolerance, is related to abdominal obesity-metabolic syndrome 1 and coronary heart disease 1. An important gene associated with Glucose Intolerance is MT-TL1 (Mitochondrially Encoded TRNA-Leu (UUA/G) 1), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Regulation of lipid metabolism Insulin signaling-generic cascades. The drugs Metformin and Saxagliptin have been mentioned in the context of this disorder. Affiliated tissues include ovary, testes and liver, and related phenotypes are adipose tissue and endocrine/exocrine gland. A group of metabolic conditions that result in higher than normal blood glucose levels.
(https://www.malacards.org/card/glucose_intolerance)

* Hyperinsulinemic Hypoglycemia, also known as islet cell hyperplasia, is related to

hyperinsulinemic hypoglycemia, familial, 3 and hyperinsulinemic hypoglycemia, familial, 7. An important gene associated with Hyperinsulinemic Hypoglycemia is KCNJ11 (Potassium Voltage-Gated Channel Subfamily J Member 11), and among its related pathways/superpathways are Aldosterone synthesis and secretion and MAPK signaling pathway. The drugs Somatostatin and Octreotide have been mentioned in the context of this disorder. Affiliated tissues include pancreas, pancreatic islet and brain, and related phenotypes are growth/size/body region and endocrine/exocrine gland. A carbohydrate metabolic disorder that involves low blood glucose resulting from an excess of insulin.
(https://www.malacards.org/card/hyperinsulinemic_hypoglycemia)

* Hypoglycemia, also known as hypoglycaemia, is related to hyperinsulinemic hypoglycemia, familial, 3 and hyperinsulinemic hypoglycemia, familial, 6, and has symptoms including sugar craving An important gene associated with Hypoglycemia is G6PC (Glucose-6-Phosphatase Catalytic Subunit), and among its related pathways/superpathways are Metabolism and Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins.. The drugs Pramlintide and Diazoxide have been mentioned in the context of this disorder. Affiliated tissues include pancreas, brain and testes, and related phenotypes are no effect and shRNA abundance <= 50%. Hypoglycemia, also known as low blood sugar, is when blood sugar decreases to below normal levels.
(https://www.malacards.org/card/hypoglycemia)

* Infertility is related to male infertility and catsper-related male infertility, and has symptoms including pelvic pain An important gene associated with Infertility is NPHP4 (Nephrocystin 4), and among its related pathways/superpathways are G alpha (s) signalling events and Fertilization. The drugs Sodium Citrate and Metformin have been mentioned in the context of this disorder. Affiliated tissues include ovary, testes and skin, and related phenotypes are cellular and endocrine/exocrine gland. Infertility means not being able to become pregnant after a year of trying.
(https://www.malacards.org/card/infertility)

* Inner Ear Disease, also known as labyrinthine dysfunction, is related to autoimmune inner ear disease and superior semicircular canal dehiscence, and has symptoms including vertigo and earache. An important gene associated with Inner Ear Disease is TNF (Tumor Necrosis Factor), and among its related pathways/superpathways are PI3K-Akt signaling pathway and Gap junction trafficking. The drugs Histamine and Dimenhydrinate have been mentioned in the context of this disorder. Affiliated tissues include testes, bone and brain, and related phenotypes are homeostasis/metabolism and hearing/vestibular/ear. A disease located in the inner ear.
(https://www.malacards.org/card/inner_ear_disease)

* Insulinoma, also known as islet cell adenoma, is related to insulinomatosis and diabetes mellitus and multiple endocrine neoplasia, type i. An important gene associated with Insulinoma is MEN1 (Menin 1), and among its related pathways/superpathways are Aldosterone synthesis and secretion and Glucose / Energy Metabolism. The drugs Pancrelipase and Sunitinib have been mentioned in the

context of this disorder. Affiliated tissues include Pancreas, pancreas and liver, and related phenotypes are hyperhidrosis and seizures. An insulinoma is a tumor of the pancreas that is derived from beta cells and secretes insulin.
(https://www.malacards.org/card/insulinoma)

* Lipid Metabolism Disorder, also known as dyslipidemia, is related to fatty liver disease, nonalcoholic 1 and abdominal obesity-metabolic syndrome 1. An important gene associated with Lipid Metabolism Disorder is FADS1 (Fatty Acid Desaturase 1), and among its related pathways/superpathways are Metabolism and Regulation of lipid metabolism by Peroxisome proliferator-activated receptor alpha (PPARalpha). The drugs Simvastatin and Atorvastatin have been mentioned in the context of this disorder. Affiliated tissues include heart, liver and endothelial, and related phenotypes are Decreased free cholesterol and Increased LDL uptake. An inherited metabolic disorder that involves the creation and degradation of lipids.
(https://www.malacards.org/card/lipid_metabolism_disorder)

* Measles, also known as rubeola, is related to rubella and mumps, and has symptoms including fever, conjunctivitis and cough. An important gene associated with Measles is CD46 (CD46 Molecule), and among its related pathways/superpathways are Innate Immune System and TGF-Beta Pathway. The drugs Sodium Citrate and Vitamin A have been mentioned in the context of this disorder. Affiliated tissues include brain, eye and testes, and related phenotypes are hematopoietic system and cellular. A highly contagious infectious disease caused by the measles virus.
(https://www.malacards.org/card/measles)

* Migraine with Aura, also known as migraine with typical aura, is related to familial hemiplegic migraine and headache, and has symptoms including headache An important gene associated with Migraine with Aura is FLNA (Filamin A), and among its related pathways/superpathways are cAMP signaling pathway and Calcium signaling pathway. The drugs Levomilnacipran and Norepinephrine have been mentioned in the context of this disorder. Affiliated tissues include brain, endothelial and cortex, and related phenotypes are Decreased shRNA abundance (Z-score < -2) and Decreased shRNA abundance (Z-score < -2). A migraine characterized by migraine headache which is preceded or accompanied by a transient focal neurological phenomenon.
(https://www.malacards.org/card/migraine_with_aura)

* Migraine Without Aura, also known as common migraine, is related to migraine with aura and migraine with or without aura 1. An important gene associated with Migraine Without Aura is MGR4 (Migraine, Susceptibility To, 4), and among its related pathways/superpathways are Circadian entrainment and Long-term potentiation. The drugs Norepinephrine and Levomilnacipran have been mentioned in the context of this disorder. Affiliated tissues include brain, pituitary and bone, and related phenotypes are behavior/neurological and integument. A migraine that is characterized by migraine headaches that are not accompanied by an aura.
(https://www.malacards.org/card/migraine_without_aura)

* Nonalcoholic Steatohepatitis, also known as non-alcoholic steatohepatitis, is related to nonalcoholic fatty liver disease and hepatitis. An important gene associated with Nonalcoholic Steatohepatitis is SQSTM1 (Sequestosome 1), and among its related pathways/superpathways are Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins. and Common Cytokine Receptor Gamma-Chain Family Signaling Pathways. The drugs Ezetimibe and Metformin have been mentioned in the context of this disorder. Affiliated tissues include liver, testes and kidney, and related phenotypes are behavior/neurological and homeostasis/metabolism. An excessive fat build-up in the liver due to causes other than alcohol use.
(https://www.malacards.org/card/nonalcoholic_steatohepatitis)

* Otosclerosis is related to bone fracture and ankylosis, and has symptoms including earache An important gene associated with Otosclerosis is OTSC5 (Otosclerosis 5), and among its related pathways/superpathways are Degradation of the extracellular matrix and Human Embryonic Stem Cell Pluripotency. The drugs Acetylcysteine and Antioxidants have been mentioned in the context of this disorder. Affiliated tissues include bone, testes and skin, and related phenotypes are cardiovascular system and craniofacial. An otitis interna characterized by an abnormal bone growth in the middle ear.
(https://www.malacards.org/card/otosclerosis)

* Temporal Arteritis, also known as polymyalgia rheumatica, is related to miliary tuberculosis and aortitis, and has symptoms including muscle weakness, angina pectoris and edema. An important gene associated with Temporal Arteritis is CRP (C-Reactive Protein), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Prednisone and Anti-Inflammatory Agents have been mentioned in the context of this disorder. Affiliated tissues include testes, tongue and skin, and related phenotypes are joint stiffness and fever. A disorder that causes inflammation of your arteries, usually in the scalp, neck, and arms. It narrows the arteries, which keeps blood from flowing well.
(https://www.malacards.org/card/temporal_arteritis)

* Tympanic Membrane Disease, also known as disorder of tympanic membrane, is related to myringitis bullosa hemorrhagica and tympanosclerosis, and has symptoms including tinnitus, earache and paracousis. An important gene associated with Tympanic Membrane Disease is BCAT2 (Branched Chain Amino Acid Transaminase 2), and among its related pathways/superpathways are PI3K-Akt signaling pathway and ECM-receptor interaction. Related phenotypes are mortality/aging and embryo. A disease located in the tympanic membrane.
(https://www.malacards.org/card/tympanic_membrane_disease)

* Tympanosclerosis is related to deafness, progressive, with stapes fixation and otitis media. An important gene associated with Tympanosclerosis is COL2A1 (Collagen Type II Alpha 1 Chain), and among its related pathways/superpathways are ERK Signaling and Integrin Pathway. Affiliated tissues include bone, and related phenotypes are

cardiovascular system and cellular. A condition caused by hyalinization and subsequent calcification of subepithelial connective tissue of TM and middle ear, sometimes resulting in a detrimental effect to hearing.
(https://www.malacards.org/card/tympanosclerosis)

1.3.2.15 RT-MB-40

https://archive.org/details/Resonant_Therapy-Molecular_Biology_40

Genetic Superpathways-Allergic Contact Dermatitis; Genetic Superpathways-Alopecia Areata; Genetic Superpathways-Angiolipoma; Genetic Superpathways-Appendicitis; Genetic Superpathways-Bacterial Infectious Disease; Genetic Superpathways-Carpal Tunnel Syndrome; Genetic Superpathways-Charcot Marie Tooth Disease; Genetic Superpathways-Conjunctivitis; Genetic Superpathways-Cutaneous T-Cell Lymphoma; Genetic Superpathways-Diffuse Cutaneous Systemic Sclerosis; Genetic Superpathways-Diffuse Scleroderma; Genetic Superpathways-Glucose Metabolism Disease; Genetic Superpathways-Henoch-Schoenlein Purpura; Genetic Superpathways-Hypertrophic Cardiomyopathy; Genetic Superpathways-Infiltrating Angiolipoma; Genetic Superpathways-Infiltrating Lipoma; Genetic Superpathways-Localized Scleroderma; Genetic Superpathways-Miliaria; Genetic Superpathways-Mitochondrial Disorders; Genetic Superpathways-Mycosis Fungoides; Genetic Superpathways-Oppositional Defiant Disorder; Genetic Superpathways-Paronychia; Genetic Superpathways-Peptic Ulcer Perforation; Genetic Superpathways-Peritonitis; Genetic Superpathways-Polysubstance Abuse; Genetic Superpathways-Primary Systemic Mycosis; Genetic Superpathways-Respiratory Allergy; Genetic Superpathways-Scorpion Envenomation; Genetic Superpathways-Systemic Scleroderma; Genetic Superpathways-T Cell Deficiency

* Allergic Contact Dermatitis, also known as dermatitis, allergic contact, is related to 1,4-phenylenediamine allergic contact dermatitis and nickel allergic contact dermatitis. An important gene associated with Allergic Contact Dermatitis is IL31 (Interleukin 31), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Parthenolide and Hydrocortisone acetate have been mentioned in the context of this disorder. Affiliated tissues include testes, skin and t cells, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). A contact dermititis that is an allergic skin reaction to foreign chemical or substances leading to red, itchy, weepy reaction where the skin has come into contact with a substance that the immune system recognizes as foreign.
(https://www.malacards.org/card/allergic_contact_dermatitis)

* Alopecia Areata, also known as alopecia circumscripta, is related to aplastic anemia and vitiligo-associated multiple autoimmune disease susceptibility 1, and has symptoms including pruritus and exanthema. An important gene associated with Alopecia Areata is

TRPS1 (Transcriptional Repressor GATA Binding 1), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Clobetasol and Acitretin have been mentioned in the context of this disorder. Affiliated tissues include lung, breast and t cells, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). An autoimmune disease in which the immune system mistakenly attacks the hair follicles.
(https://www.malacards.org/card/alopecia_areata)

* Angiolipoma is related to liposarcoma and neurilemmoma. An important gene associated with Angiolipoma is ACTC1 (Actin Alpha Cardiac Muscle 1), and among its related pathways/superpathways are Cardiac conduction and Interleukin-4 and 13 signaling. The drugs Sirolimus and Miconazole have been mentioned in the context of this disorder. Affiliated tissues include breast, colon and spinal cord, and related phenotype is Reduced mammosphere formation. A lipoma that is a painful subcutaneous nodule, having all other features of a typical lipoma.
(https://www.malacards.org/card/angiolipoma)

* Appendicitis, also known as acute appendicitis, is related to diverticulitis and endometriosis, and has symptoms including fever, vomiting and pain. An important gene associated with Appendicitis is CRP (C-Reactive Protein), and among its related pathways/superpathways are Innate Immune System and Cytokine Signaling in Immune system. The drugs Ertapenem and Dexmedetomidine have been mentioned in the context of this disorder. Affiliated tissues include appendix, colon and testes, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A gastrointestinal system infectious disease that involves inflammation and infection of the appendix caused by the blockage of the lumen with a small, hard piece of stool, a foreign body or worms.
(https://www.malacards.org/card/appendicitis)

* Bacterial Infectious Disease, also known as bacterial infections, is related to commensal bacterial infectious disease and primary bacterial infectious disease. An important gene associated with Bacterial Infectious Disease is TNF (Tumor Necrosis Factor), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Ertapenem and Meropenem have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and colon, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). A disease by infectious agent that results in infection, has material basis in Bacteria.
(https://www.malacards.org/card/bacterial_infectious_disease)

* Carpal Tunnel Syndrome, also known as carpal tunnel syndrome, familial, is related to peripheral nervous system disease and epicondylitis, and has symptoms including seizures, tremor and back pain. An important gene associated with Carpal Tunnel Syndrome is TTR (Transthyretin), and among its related pathways/superpathways are Cytokine Signaling in Immune system and Human cytomegalovirus infection. The drugs

Prednisolone phosphate and Lidocaine have been mentioned in the context of this disorder. Affiliated tissues include testes, bone and thyroid, and related phenotypes are peripheral neuropathy and constrictive median neuropathy. A disorder caused by disturbances in nerve function (neuropathy), leading to pain and numbness or tingling (paresthesia) primarily in the wrist and hand.
(https://www.malacards.org/card/carpal_tunnel_syndrome)

* Charcot-Marie-Tooth Disease, also known as hereditary motor and sensory neuropathy, is related to charcot-marie-tooth disease, demyelinating, type 1a and charcot-marie-tooth disease and deafness, and has symptoms including seizures, tremor and back pain. An important gene associated with Charcot-Marie-Tooth Disease is MPZ (Myelin Protein Zero), and among its related pathways/superpathways are Aminoacyl-tRNA biosynthesis and COPI-independent Golgi-to-ER retrograde traffic. The drugs Lidocaine and Prednisolone phosphate have been mentioned in the context of this disorder. Affiliated tissues include Peripheral Nervous System, brain and spinal cord, and related phenotypes are behavior/neurological and cardiovascular system. A neuromuscular disease that is characterized by a slowly progressive degeneration of the muscles of the foot, lower leg, hand and forearm.
(https://www.malacards.org/card/charcot_marie_tooth_disease)

* Conjunctivitis, also known as madras eye, is related to giant papillary conjunctivitis and papillary conjunctivitis, and has symptoms including bloodshot eye, conjunctival congestion and redness of eye. An important gene associated with Conjunctivitis is PLG (Plasminogen), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Oralair and Bepotastine have been mentioned in the context of this disorder. Affiliated tissues include eye, testes and skin, and related phenotypes are hematopoietic system and immune system. A conjunctival disease characterized by an inflammation of the conjunctiva, the outermost layer of the eye and the inner surface of the eyelids.
(https://www.malacards.org/card/conjunctivitis)

* Cutaneous T Cell Lymphoma, also known as cutaneous t-cell lymphoma, is related to sezary's disease and adult t-cell leukemia. An important gene associated with Cutaneous T Cell Lymphoma is CTAGE1 (Cutaneous T Cell Lymphoma-Associated Antigen 1), and among its related pathways/superpathways are PEDF Induced Signaling and Akt Signaling. The drugs Bexarotene and Methoxsalen have been mentioned in the context of this disorder. Affiliated tissues include t cells, skin and bone, and related phenotypes are hematopoietic system and immune system. A group of disorders characterized by an abnormal accumulation of cancerous T-cells (a type of white blood cells) in the skin resulting in an itchy, red rash that can thicken or form a tumor.
(https://www.malacards.org/card/cutaneous_t_cell_lymphoma)

* Diffuse Cutaneous Systemic Sclerosis, also known as progressive cutaneous systemic scleroderma, is related to limited scleroderma and systemic scleroderma. An important gene associated with Diffuse Cutaneous Systemic Sclerosis is IRF5 (Interferon

Regulatory Factor 5), and among its related pathways/superpathways are Innate Immune System and NF-kappaB Signaling. The drugs Acetylcysteine and Iloprost have been mentioned in the context of this disorder. Affiliated tissues include skin, lung and kidney, and related phenotypes are gastroesophageal reflux and dyspnea. A subtype of systemic scleroderma (systemic sclerosis) characterized by skin hardening (fibrosis) and problems in many organs of the body.
(https://www.malacards.org/card/diffuse_cutaneous_systemic_sclerosis)

* Diffuse Scleroderma, also known as systemic sclerosis, diffuse, is related to scleroderma, familial progressive and limited scleroderma, and has symptoms including pruritus, exanthema and hidebound skin. An important gene associated with Diffuse Scleroderma is TGFB1 (Transforming Growth Factor Beta 1), and among its related pathways/superpathways are Development Angiotensin activation of ERK and NF-kappaB Signaling. The drugs Bosentan and Sodium Citrate have been mentioned in the context of this disorder. Affiliated tissues include lung, skin and bone. A chronic autoimmune condition that is a subtype of systemic scleroderma where patients may have extensive skin fibrosis on the arms, legs, and trunk and a high risk of developing internal organ damage.
(https://www.malacards.org/card/diffuse_scleroderma)

* Glucose Metabolism Disease (update), also known as glucose metabolism disorders, is related to diabetes mellitus and uremia. An important gene associated with Glucose Metabolism Disease is PINK1-AS (PINK1 Antisense RNA), and among its related pathways/superpathways are Metabolism of proteins and Aldosterone synthesis and secretion. The drugs Zinc and Pramlintide have been mentioned in the context of this disorder. Affiliated tissues include heart, endothelial and kidney, and related phenotypes are homeostasis/metabolism and growth/size/body region. Pathological conditions in which the blood glucose cannot be maintained within the normal range, such as in Hypoglycemia and Hyperglycemia.
(https://www.malacards.org/card/glucose_metabolism_disease)

* Henoch-Schoenlein Purpura, also known as henoch-schonlein purpura, is related to amebiasis and arteries, anomalies of. An important gene associated with Henoch-Schoenlein Purpura is VCAM1 (Vascular Cell Adhesion Molecule 1), and among its related pathways/superpathways are Innate Immune System and Selenium Micronutrient Network. The drugs Prednisone and Prednisolone phosphate have been mentioned in the context of this disorder. Affiliated tissues include skin, kidney and testes, and related phenotypes are nausea and vomiting and arthralgia. A hypersensitivity vasculitis that is characterized by purpura (purplish plaques), arthralgia, gastrointestinal upset, and/or glomerulonephritis, and may be related to increased immune response following an infection.
(https://www.malacards.org/card/henoch_schoenlein_purpura)

* Hypertrophic Cardiomyopathy, also known as cardiomyopathy, hypertrophic, familial, is related to cardiomyopathy, familial hypertrophic, 1 and cardiomyopathy, familial hypertrophic, 6. An important gene associated with Hypertrophic Cardiomyopathy is

TNNI3 (Troponin I3, Cardiac Type), and among its related pathways/superpathways are Hypertrophic cardiomyopathy (HCM) and Aldosterone synthesis and secretion. The drugs Spironolactone and Ranolazine have been mentioned in the context of this disorder. Affiliated tissues include heart, testes and brain, and related phenotypes are Increased shRNA abundance and cardiovascular system. A condition in which a portion of the heart becomes thickened without an obvious cause. This results in the heart being less able to pump blood effectively. Symptoms vary from none to feeling tired, leg swelling, and shortness of breath. It may also result in chest pain or fainting. Complications include heart failure, an irregular heartbeat, and sudden cardiac death.
(https://www.malacards.org/card/hypertrophic_cardiomyopathy)

* Infiltrating Angiolipoma, also known as angiolipoma, infiltrating, is related to angiolipoma and ring chromosome 7. An important gene associated with Infiltrating Angiolipoma is VEGFC (Vascular Endothelial Growth Factor C), and among its related pathways/superpathways are GPCR Pathway and Cellular Senescence (REACTOME). Affiliated tissues include bone, lung and liver, and related phenotypes are cardiovascular system and immune system. A large intramuscular vessel haemangioma in which muscle mass gets replaced by fat tissue.
(https://www.malacards.org/card/infiltrating_angiolipoma)

* Infiltrating Lipoma, also known as intramuscular lipoma, is related to lipomatosis, multiple and pleomorphic lipoma. An important gene associated with Infiltrating Lipoma is NFIB (Nuclear Factor I B). Affiliated tissues include tongue, colon and spinal cord, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A variant of lipoma that infiltrates adjacent tissues and tends to recur after excision.
(https://www.malacards.org/card/infiltrating_lipoma)

* Localized Scleroderma, also known as morphea, is related to fasciitis and keloids, and has symptoms including pruritus and exanthema. An important gene associated with Localized Scleroderma is MMP1 (Matrix Metallopeptidase 1), and among its related pathways/superpathways are Cytokine Signaling in Immune system and PAK Pathway. The drugs Lidocaine and Vaccines have been mentioned in the context of this disorder. Affiliated tissues include skin, lung and breast, and related phenotypes are hyperpigmentation of the skin and hypopigmentation of the skin. A form of scleroderma that involves isolated patches of hardened skin on the face, hands, and feet, or anywhere else on the body, with no internal organ involvement.
(https://www.malacards.org/card/localized_scleroderma)

* Miliaria (update), also known as eccrine miliaria, is related to miliaria rubra and fox-fordyce disease, and has symptoms including exanthema An important gene associated with Miliaria is TSPAN7 (Tetraspanin 7), and among its related pathways/superpathways are Response to elevated platelet cytosolic Ca2+ and Hematopoietic Stem Cell Differentiation Pathways and Lineage-specific Markers. The drugs Vaccines and Immunologic Factors have been mentioned in the context of this disorder. Affiliated tissues include skin, eye and liver, and related phenotypes are digestive/alimentary and

hematopoietic system. Also called "sweat rash", is a skin disease marked by small and itchy rashes due to sweat trapped under the skin by clogged sweat gland ducts. Miliaria is a common ailment in hot and humid conditions, such as in the tropics and during the summer season.
(https://www.malacards.org/card/miliaria)

* Mitochondrial Disorders, also known as mitochondrial diseases, is related to myoclonic epilepsy associated with ragged-red fibers and chronic progressive external ophthalmoplegia, and has symptoms including muscle weakness, myalgia and muscle cramp. An important gene associated with Mitochondrial Disorders is DGUOK (Deoxyguanosine Kinase), and among its related pathways/superpathways are Metabolism and Respiratory electron transport, ATP synthesis by chemiosmotic coupling, and heat production by uncoupling proteins.. The drugs Bupropion and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include liver, kidney and brain, and related phenotypes are Increased shRNA abundance (Z-score > 2) and Increased shRNA abundance (Z-score > 2). A group of disorders caused by dysfunctional mitochondria, the organelles that generate energy for the cell. Mitochondria are found in every cell of the human body except red blood cells, and convert the energy of food molecules into the ATP that powers most cell functions.
(https://www.malacards.org/card/mitochondrial_disorders)

* Mycosis Fungoides, also known as mycosis fungoides lymphoma, is related to cutaneous t cell lymphoma and sezary's disease. An important gene associated with Mycosis Fungoides is CD28 (CD28 Molecule), and among its related pathways/superpathways are Innate Immune System and ERK Signaling. The drugs Arzerra and Bromfenac have been mentioned in the context of this disorder. Affiliated tissues include t cells, skin and bone, and related phenotypes are pruritus and dry skin. A disease in which T-celllymphocytes (a type of white blood cell) become malignant (cancerous) and affect the skin. This condition is one of the most common types of T-cell lymphoma.
(https://www.malacards.org/card/mycosis_fungoides)

* Oppositional Defiant Disorder is related to depression and anxiety, and has symptoms including photophobia, restlessness and personality changes. An important gene associated with Oppositional Defiant Disorder is DRD4 (Dopamine Receptor D4), and among its related pathways/superpathways are Circadian entrainment and Transmission across Chemical Synapses. The drugs Risperidone and Dopamine have been mentioned in the context of this disorder. Affiliated tissues include brain, testes and eye, and related phenotypes are behavior/neurological and homeostasis/metabolism. A specific developmental disorder that is characterized by a pattern of angry mood, defiant behavior and vindictiveness in children and adolescents.
(https://www.malacards.org/card/oppositional_defiant_disorder)

* Paronychia (update), also known as paronychia inflammation, is related to candidal paronychia and neuropathy, hereditary sensory and autonomic, type iia. An important gene associated with Paronychia is EGFR (Epidermal Growth Factor Receptor), and

among its related pathways/superpathways are ERK Signaling and Akt Signaling. The drugs Irinotecan and Phylloquinone have been mentioned in the context of this disorder. Affiliated tissues include skin, bone and testes, and related phenotypes are Decreased viability and Decreased viability. A nail disease characterized by often-tender bacterial or fungal hand infection or foot infection due to either bacteria or fungus (Candida albicans) where the nail and skin meet at the side or the base of a finger or toe nail.
(https://www.malacards.org/card/paronychia)

* Peptic Ulcer Perforation, also known as perforated peptic ulcer, is related to peptic ulcer disease and diclofenac allergy. An important gene associated with Peptic Ulcer Perforation is ATP12A (ATPase H+/K+ Transporting Non-Gastric Alpha2 Subunit), and among its related pathways/superpathways are L1CAM interactions and Salivary secretion. The drugs Clopidogrel and Aspirin have been mentioned in the context of this disorder. Affiliated tissues include testes, colon and neutrophil, and related phenotypes are Decreased caspase 3/7 activity and digestive/alimentary. Penetration of a Peptic Ulcer through the wall of duodenum or stomach allowing the leakage of luminal contents into the peritoneal cavity.
(https://www.malacards.org/card/peptic_ulcer_perforation)

* Peritonitis, also known as retractile mesenteritis, is related to primary peritoneal carcinoma and tuberculous peritonitis. An important gene associated with Peritonitis is TMEM67 (Transmembrane Protein 67), and among its related pathways/superpathways are Innate Immune System and TGF-Beta Pathway. The drugs Ertapenem and Mupirocin have been mentioned in the context of this disorder. Affiliated tissues include colon, kidney and neutrophil, and related phenotypes are Synthetic lethal with MLN4924 (a NAE inhibitor) and Synthetic lethal with MLN4924 (a NAE inhibitor). Peritonitis is inflammation of the peritoneum, the lining of the inner wall of the abdomen and cover of the abdominal organs.
(https://www.malacards.org/card/peritonitis)

* Polysubstance Abuse, also known as polysubstance abuse, susceptibility to, is related to substance dependence and pathological gambling. An important gene associated with Polysubstance Abuse is FAAH (Fatty Acid Amide Hydrolase), and among its related pathways/superpathways are Circadian entrainment and Monoamine GPCRs. The drugs Cocaine and Peripheral Nervous System Agents have been mentioned in the context of this disorder. Affiliated tissues include brain, heart and b cells, and related phenotypes are behavior/neurological and homeostasis/metabolism. A patterned use of more than one drug in which the user consumes the substance in amounts or with methods which are harmful.
(https://www.malacards.org/card/polysubstance_abuse)

* Primary Systemic Mycosis is related to sporotrichosis and coccidioidomycosis. An important gene associated with Primary Systemic Mycosis is CLEC7A (C-Type Lectin Domain Containing 7A), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. Affiliated tissues include t cells, skin and bone, and related phenotypes are Increased shRNA abundance (Z-score > 2) and

Increased shRNA abundance (Z-score > 2). A systemic mycosis that results in infection located in human body, has material basis in Fungi, which can overcome the physiological and cellular defences of the normal human host. The primary deep pathogens usually gain access to the host via the respiratory tract.
(https://www.malacards.org/card/primary_systemic_mycosis)

* Respiratory Allergy, also known as airway allergy, is related to pollen allergy and sinusitis. An important gene associated with Respiratory Allergy is IL5 (Interleukin 5), and among its related pathways/superpathways are Innate Immune System and PEDF Induced Signaling. The drugs Fluticasone and Hydrocortisone have been mentioned in the context of this disorder. Affiliated tissues include testes, skin and t cells, and related phenotypes are hematopoietic system and homeostasis/metabolism. A hypersensitivity reaction type I disease located in the respiratory tract.
(https://www.malacards.org/card/respiratory_allergy)

* Scorpion Envenomation is related to cardiogenic shock and acute respiratory distress syndrome. An important gene associated with Scorpion Envenomation is IL6 (Interleukin 6), and among its related pathways/superpathways are Cytokine Signaling in Immune system and PAK Pathway. The drugs Prazosin and Midazolam have been mentioned in the context of this disorder. Affiliated tissues include heart, brain and bone. A wide range of clinical manifestations that are mostly attributed to the activation of the autonomic nervous system by scorpion venom toxins.
(https://www.malacards.org/card/scorpion_envenomation)

* Systemic Scleroderma, also known as scleroderma, is related to diffuse cutaneous systemic sclerosis and crest syndrome, and has symptoms including pruritus, exanthema and hidebound skin. An important gene associated with Systemic Scleroderma is TSIX (TSIX Transcript, XIST Antisense RNA), and among its related pathways/superpathways are Cell adhesion molecules (CAMs) and Photodynamic therapy-induced NF-kB survival signaling. The drugs Bosentan and Sodium Citrate have been mentioned in the context of this disorder. Affiliated tissues include skin, testes and endothelial, and related phenotypes are muscle weakness and nausea and vomiting. A rheumatic disease and collagen disease that involves the abnormal growth of connective tissue, which supports the skin and internal organs.
(https://www.malacards.org/card/systemic_scleroderma)

* T Cell Deficiency, also known as t lymphocyte immunodeficiency, is related to immunodeficiency, x-linked, with magnesium defect, epstein-barr virus infection, and neoplasia and immune defect due to absence of thymus. An important gene associated with T Cell Deficiency is CD247 (CD247 Molecule), and among its related pathways/superpathways are Allograft rejection and Immune response NFAT in immune response. The drugs Fludarabine and Busulfan have been mentioned in the context of this disorder. Affiliated tissues include t cells, b cells and thymus, and related phenotypes are cellular and hematopoietic system. A deficiency of T cells, caused by decreased function of individual T cells, it causes an immunodeficiency of cell-mediated immunity. T cells normal function is to help with the human body's immunity, they are

one of the two primary types of lymphocytes (the other being B cells).
(https://www.malacards.org/card/t_cell_deficiency)

1.3.3 Tradicional Chinese Medicine

These recordings integrate Traditional Chinese Medicine (TCM) herbs through a unique audio-alchemical process. For each herb, the molecular weights of its bioactive compou nds are compiled into a singular, non-redundant sum.

This cumulative value is then converted into a corresponding frequency in Hertz (Hz), re flecting the herb's biochemical signature in sonic form.

The individual Hz values of all herbs required for a specific TCM formula are then harmo nically combined, creating a composite frequency blend.

This blend is algorithmically woven into a musical composition, where the therapeutic pr operties of the herbs are expressed through structured sound.

The resulting fusion bridges ancient herbal wisdom with modern computational music, o ffering an immersive, frequency-based representation of TCM's healing principles.

1.3.3.1 RT-TCM

Traditional Chinese Medicine

Ba Wei Di Huang Wan, Bi Yu San, Bu Wang San, Da Huang Mu Dan (Pi) Tang, Shi Wei San, Si Miao Yong An Tang, Si Ni Tang, Xiang Bin, Yi Yi Ren Tang

Recordings Updated in May 2025

* BA WEI DI HUANG WAN - 八味地黄丸 - Eight-Ingredient Formula With Rehmannia

ACTIONS - Warms and Tonifies Kidney Yang.

SYNDROMES - Kidney Yang Deficiency. Leg Qi. Tan Yin. Xiao Ke. Jin Ye Stasis. Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency.

CLINICAL MANIFESTATIONS - Aversion to Cold. Watery stools with undigested food.

Lower back pain. Weakness of the lower extremities. A cold sensation in the lower half of the body. Tenseness in the lower abdomen. Pain and cramps in the lower abdomen. Panting and irritability to the point of having difficulty lying down. Will breathe most comfortably while leaning against something. Nocturia. May be numbness in the lower abdomen. Urinary difficulty with edema or Spasmodic pain in the lower abdomen. Excessive urination. If severe, may be incontinence of urine. May have persistent diarrhea. Dizziness. Vertigo. Dysuria. May have flushed face (Yang floating upward). Thirst with frequent, copious urination (Xiao Ke). Fatigue (severe). May have severe perspiration (Yang floating upward). Constipation. Lassitude. Pale face. Edema of the face and feet. Severe edema of the legs (may prevent walking). Maybe cough. Maybe asthma.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency with dry mouth and throat and a red tongue with no coat. Use with caution for those with gastrointestinal weakness. Contraindicated for those with marked ascites. Contraindicated for those with frequent diarrhea. Contraindicated for those with facial flushing with fever. Contraindicated during pregnancy. This formula may be effective in treating side effects and adverse reactions, including dizziness, weight gain, perspiration and emotional disturbances associated with long-term prednisone use.

NOTES - Jin Gui Shen Qi Wan uses Ram. Cinnamomi Gui Zhi. Ba Wei Di Huang Wan uses Cx Cinnamomi Rou Gui.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Yin and Blood and tonifies the Kidneys. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Rou Gui, for Kidney Yang Deficiency.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops Excess perspiration. With Shan Yao, tonifies the Liver and benefits the Spleen.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Zi - Tonifies the Ming Men, dispels Cold, eliminates Dampness and tonifies Kidney Yang. With Gui Zhi, assists Yang and enhances water metabolism. With Shu Di Huang and Rou Gui, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and sore back and legs, impotence, and urinary frequency.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens Yang and Ming Men Fire, disperses deep Cold, warms the channels, unblocks the channels and vessels, alleviates pain, leads the Fire back to its source and assists the generation of Qi and Blood. With Fu Zi, powerfully tonifies Kidney Yang, for Kidney Yang Deficiency with lower back pain and weakness in the legs and knees and Deficiency of Ming Men Fire

with impotence or infertility.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination, strengthens the Spleen and drains Dampness, enabling Gui Zhi to warm the Bladder.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Gui Zhi, warms and transforms the Fluids, unblocks Yang and promotes urination.

-Mu Dan Pi - Clears Heat and Deficiency Fire, cools and harmonizes the Blood, invigorates the Blood and dispels Blood Stasis.

TREATS
Chronic glomerulonephritis. Chronic interstitial nephritis. Chronic diffuse nephritis. Chronic urethritis. Diabetes mellitus. Diabetes insipidus. Primary hyperaldosteronism. Hypothyroidism. Neurasthenia. Arthritis. Beriberi. Chronic bronchial asthma. Chronic bronchitis. COPD. Urinary retention. Climacteric syndrome. Epstein Barr Virus. Chronic Functional Immuno-Deficiency Syndrome (CFIDS). Spermatorrhea. Pyelitis. Pyelonephritis. Albuminuria. Prostate cancer. Addison’s Disease. Cystitis. Neuralgia. Postpartum dysuria. Nephroatrophy. Urinary incontinence. Cataract. Keratosis. Keratitis. Numbness of the legs. Infertility. Benign prostatic hypertrophy. Postpartum urinary retention. Vitreous opacity. Meniere’s disease. Neurogenic tinnitus. Periodontal disease. Dysmenorrhea. Gynecomastia. Vesicle calculus. Anuria. Nocturia. Coronary artery disease. Lumbago. Irregular menstruation. Metrorrhagia. Panarthralgia. Nephrotic syndrome. Hyperglycemia. Alopecia. Proteinuria. Arteriosclerosis. Dysentery. Dizziness. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Polyuria. Hematuria. Hay fever. Addison’s disease. Constipation. Dermatitis. Somnolence. Tinnitus. Low back pain. Anorexia. Fatigue. Facial and ankle edema. Nausea/Vomiting. Epistaxis. Oral leukoplakia. Dyspnea. Gingivitis. Dysuria during pregnancy. Rheumatoid arthritis. Sjogren's syndrome. Prematurely gray hair. Vaginal discharge. Macular degeneration. Emphysema. Asthma. Bronchitis. Chronic rhinitis. Chronic tonsillitis. Post-surgical urinary incontinence. Urinary retention from spinal cord injuries. Renal tuberculosis. Perimenopausal syndrome. Leg Qi. Menopause syndrome. Nephrosclerosis. Nephrotuberculosis. Cystolithiasis. Cystic tuberculosis. Senile cystoatrophy. Prostamegaly. Cerebral hemorrhage. Arteriosclerosis. Hypotension. Forgetfulness. Hypertension. Nephrolithiasis. Urolithiasis. Impotence. Amenorrhea. Inappropriate erection. Premature ejaculation. Sciatica. Deformed vertebrae. Glaucoma. Eczema. Tinea. Senile itching. Urticaria. Thirst. Rectoptosis. Fever in the head and extremities. Chronic gonorrhea. Poor vision. Senile dementia. Vegetative nerve disturbance. Paralysis of the detrusor muscle. Recurrent aphthous ulcers. Proteinuria. Endocrine disorders. Arteriostenosis. Prostatitis. Scanty menstruation. Obesity. Premenstrual syndrome. Hashimoto's thyroiditis. Stroke. Headache. Hyperaldosteronism. Optic atrophy. Vertigo. Atrophy (Wei) Syndrome. Spontaneous perspiration. Hysterical paralysis. Periodic paralysis. Facial paralysis.

Acute infectious multiple neuritis. Stomach cancer. Oliguria with edema. Chronic renal failure. AIDS/HIV. Cor pulmonare. Amyotrophic lateral sclerosis (ALS). Narcolepsy. Diarrhea. Knee pain. Chronic pancreatitis. Weakness. Yawning. Chronic enteritis. Enuresis. Palpitations. Rectal prolapse. Metrorrhagia. Periodontitis. Edema during pregnancy. Upper back pain. Neck pain and stiffness. Systemic lupus erythematosus. Vaginitis. Sore throat.

* BI YU SAN - 碧玉散 - Jasper Formula

ACTIONS - Clears Heat. Relieves toxicity. Promotes urination. Eliminates Summerheat. Tonifies Qi. Cools the Blood. Arrests convulsion.

SYNDROMES - Summerheat and Dampness with Liver and Gallbladder Heat. Urinary Bladder Damp-Heat.

CLINICAL MANIFESTATIONS - Red eyes. Sore throat. Mouth, tongue and lip ulcerations. Urinary difficulty. Diarrhea. Papules. Sores. Prickly Heat. Ocular pain. Dark urine. Chest pain. Hemoptysis. Epistaxis. Hematemesis. Oliguria with dark urine. Scanty urine. Swelling of the throat. Fever. Thirst. Irritability. Nausea. Vomiting. Lassitude due to Summerheat.

HERBS AND ACTIONS

-Hua Shi - Promotes urination, drains Heat from the Urinary Bladder, releases Summeheat and resolves Dampness. With Gan Cao, for Summerheat causing painful urinary dysfunction, thirst, irritability, and fever.

-Gan Cao - Clears Heat and relieves Fire toxicity.

-Qing Dai - Clears Heat, resolves Fire toxicity, cools the Blood, disperses Stagnation, reduces swelling, drains Liver Fire and dispels Summerheat.

TREATS

Pertussis. Infantile diarrhea. Urethritis. Urinary tract infection. Gastroenteritis. Cystitis. Nephrolithiasis. Epistaxis. Hematemesis. Pharyngitis. Epilepsy. Mumps. Aphthae. Urolithiasis. Allergies. Stomach flu. Heat stroke. Blepharitis. Conjunctivitis. Stomatitis. Epidemic eruption. Red eyes.

* BU WANG SAN - 不忘散 - Powder For Memory Loss

ACTIONS - Calms the Spirit. Sedates the Heart. Expels Phlegm. Opens the Orifices. Strengthens the Spleen. Tonifies Qi.

SYNDROMES - Forgetfulness due to aging.

CLINICAL MANIFESTATIONS - Forgetfulness. Constipation. Excess thirst. Dry mouth and/or throat. Dry skin. Chronic cough (usually dry). Night sweats. Fatigue.

HERBS AND ACTIONS

-Yuan Zhi - Calms the Spirit, sedates the Heart, clears the channel joining the Heart and Kidneys, expels Phlegm and opens the Orifices. With Ren Shen, Fu Ling and Shi Chang Pu, for forgetfulness.

-Ren Shen - Powerfully tonifies Yuan Qi, tonifies Spleen, Lung, Heart and Stomach Qi and calms the Spirit.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. Quiets the Heart, calms the Spirit and soothes the nerves.

-Shi Chan Pu - Opens the Orifices, vaporizes Phlegm, removes filth, calms the Spirit and disperses Wind. With Yuan Zhi, for forgetfulness, tinnitus and impaired hearing. With Ren Shen, Fu Ling and Yuan Zhi, for forgetfulness and dulled senses.

TREATS - Forgetfulness.

* DA HUANG MU DAN (PI) TANG - 大黄牡丹皮湯 - Rhubarb And Moutan Formula

ACTIONS - Drains Heat. Breaks up Blood Stasis. Invigorates the Blood. Disperses nodules. Reduces swelling.

SYNDROMES - Early Stage Intestinal Abscess. Heat and Blood Stagnation.

CLINICAL MANIFESTATIONS - Lower abdominal distention and pain (usually on right). Pain increases on pressure with rebound tenderness. Guarding of the abdominal musculature. Groin pain resembling urinary dysfunction without urinary difficulty. Groin pain relieved by flexing hip and knee. Groin pain intensified by extending hip. Perspiration. Irregular or intermittent fever followed by chills and perspiration. May be mass in lower right quadrant of abdomen. Aversion to Cold. Hard lumps.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with necrotic appendicitis. Contraindicated for those with appendicitis with peritonitis. Contraindicated for infants with appendicitis. Contraindicated for those with appendicitis due to parasites. Contraindicated during Pregnancy. Use extreme caution in the weak and elderly.

NOTES - Before pus is formed, the pain is severe with localized hardness and Heat. When fully formed, the Heat and pain diminish, the tissues are more relaxed and the

pulse is tight.

HERBS AND ACTIONS

-Da Huang - Drains Heat and breaks up Blood Stasis.

-Mang Xiao - Purges, softens hardness, eliminates stagnation, clears Heat and moistens Dryness. With Da Huang, for constipation due to Stomach and Intestinal Heat.

-Mu Dan Pi - Cools Blood, clears Heat and eliminates masses due to Blood Stasis. With Da Huang, for unsuppurated abdominal abscess with pain, constipation and low grade fever.

-Tao Ren - Breaks up Blood Stasis, invigorates Blood, moistens Intestines and unblocks bowels. With Da Huang, for severe abdominal infection. With Da Huang and Mang Xiao, for Intestinal Abscess with pain and swelling.

-Dong Gua Ren - Expels pus, eliminates Heat and reduces abscesses, especially in the Intestines. With Da Huang and Mu Dan Pi, for Intestinal Abscess.

TREATS

Acute uncomplicated appendicitis. Mesenteric lymphadenitis. Ruptured appendicitis with peritonitis. Chronic appendicitis. Lochioschesis. Pelvic inflammatory disease. Infection after vasectomy. Adnexitis. Periproctitis. Colitis. Proctitis. Hemorrhoids. Perimetritis. Diverticulitis. Renal abscess. Pulmonary abscess. Pyelonephritis. Conjunctivitis. Abdominal or lower extremity folliculitis. Primary dysmenorrhea. Amenorrhea. Chronic prostatitis. Rectal prolapse. Urolithiasis. Prostatic hypertrophy. Anorexia. Salpingitis. Enuresis. Puerperal fever. Periappendicular abscess. Vaginal discharge. Acute cholecystitis. Testitis. Peritonitis. Pyelitis. Cystitis. Eczema. Ulcerative enteritis. Gonorrhea. Leukorrhea. Ureteraliths. Iliac fossa abscess. Subdermal abscess. Hepatic abscess. Bacterial dysentery. Mastitis. Osteomyelitis. Blocked uterine tubes. Cerebral thrombosis. Benign prostatic hypertrophy. Suppurative tonsillitis. Colitis. Incarcerated internal hemorrhoids. Abdominal pain. Nausea/Vomiting. Constipation. Diarrhea. Intestinal obstruction. Trichomonas. Ulcerative colitis. Vaginitis. Lower abdominal masses.

* SHI WEI SAN - 石韦散 - Pyrrosia Formula

ACTIONS - Promotes urination. Eliminates urinary calculi.

SYNDROMES - Urinary Bladder Damp-Heat. Stone Lin. Urinary calculi.

CLINICAL MANIFESTATIONS - Burning urinary pain. Frequent urination. Urgent urination. Yellowish red, turbid urine. Small stones in the urine. Sudden discontinuation

of urination. Subtle pain in the lower abdomen and low back.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy.

HERBS AND ACTIONS

-Shi Wei - Clears Damp-Heat, unblocks Lin, clears stones and stops bleeding. With Qu Mai and Hua Shi, for painful urination due to Damp-Heat in the Lower Jiao. With Qu Mai, Hua Shi and Dong Kui Zi, for hematuria. With Pu Huang, for Blood Lin with stabbing pain. With Che Qian Zi and Qu Mai, for Heat Lin.

-Mu Tong - Promotes urination. With Dong Kui Zi, for urinary frequency, pain and difficulty. With Che Qian Zi, for Lin Syndrome and Heart Fire Transferring to the Small Intestine channel causing edema and painful urinary dysfunction.

-Che Qian Zi - Promotes urination and clears Heat. With Dong Kui Zi, for urinary calculi. With Mu Tong and Huan Shi, for Lin Syndrome.

-Qu Mai - Promotes urination, drains Damp-Heat from Urinary Bladder, unblocks Lin and breaks up Blood Stasis. With Che Qian Zi and Huan Shi, for Heat dysuria (Re Lin) with burning and pain during urination.

-Dong Kui Zi - Promotes urination and unblocks Lin. With Mu Tong, for Damp-Heat in the Lower Jiao and pediatric Lin.

-Hua Shi - Promotes urination, drains Heat from Urinary Bladder, expels Damp-Heat through the urine and aids movement of gravel and stones. With Dong Kui Zi, for Damp-Heat in the Lower Jiao causing urinary discomfort and dysfunction. With Gan Cao, for Summerheat causing painful urinary dysfunction, thirst, irritability, and fever. With Mu Tong, for Heat Lin.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Urolithiasis. Cystitis. Urethritis. Gallstones. Glaucoma with ciliary congestion. Hemophilia. Low back pain. Urinary tract infection. Acute nephritis. Prostatitis. All kinds of calculi. Hematuria. Oliguria. Polyuria. Enuresis. Strangury.

* SI MIAO YONG AN TANG - 四妙勇安湯 - Four-valient Formula For Well Being. Formula of Four Wonderful Herbs for Quick Restoration of Health. Formula for Thromboangitis with Four Effective Ingredients.

ACTIONS - Clears Heat. Resolves toxicity. Nourishes Yin. Invigorates the Blood.

Alleviates pain.

SYNDROMES - Fire Toxin leading to Blood Stasis in the sinews and Blood vessels.

CLINICAL MANIFESTATIONS - Ulcerated sores that do not heal on a limb that is dark red. Slightly swollen and warm to the touch. There may me a rotten smell to the lesion. Gangrene of the extremities, especially the fingers and toes with purulent abscess. Extreme pain. Local inflammation and swelling. There may be copious discharge of pus from the ulcers. A burning sensation. Fever. Thirst.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Cold, Qi Deficiency or Blood Deficiency. Avoid scratching the affected area while taking this formula.

NOTES - This condition may be attributed to long standing Kidney Deficiency, Wind-Cold-Damp Bi, overindulgence in rich, greasy or spicy foods or improper use of Yang Tonics. More than one factor is usually involved.

HERBS AND ACTIONS

-Jin Yin Hua - Clears Heat and relieves toxicity. With Gan Cao, for toxic swellings and sores. With Gan Cao and Xuan Shen, for sloughing ulcers from Heat toxicity. With Dang Gui, reduces obstruction and toxicity for swollen, painful sores and necrosis of surrounding tissue.

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin, drains Fire and relieves toxicity. With Jin Yin Hua and Gan Cao, for boils, carbuncles and furuncles.

-Dang Gui - Nourishes, invigorates and harmonizes Blood, reduces swelling, expels pus, generates flesh and alleviates pain.

-Gan Cao - Clears Heat, relieves Fire toxicity, alleviates pain and moderates and harmonizes the properties of other herbs. With Jin Yin Hua, for Damp rashes or acne.

TREATS

Acute thrombotic phlebitis. Thromboangitis obliterans. Iliofemoral vein thrombosis. Chronic hepatitis. Viral hepatitis. Sciatica. Carpal tunnel syndrome. Erysipelas. Radio-dermatitis. Thrombophlebitis. Sloughing ulcer. Gangrene. Arterosclerotic gangrene. Chronic gastritis. Benign prostatic hypertrophy. Gout. Varicose veins of the lower limbs. Vascular Bi. Cirrhosis of the Liver. Erythema nodosum.

* SI NI TANG - 四逆湯 - Frigid Extremities Formula. Formula to Treat Cold Limbs. Aconite, Ginger and Licorice Combination.

ACTIONS - Rescues Yang. Warms the Middle Jiao. Disperses Internal Cold. Stops diarrhea.

SYNDROMES - Heart Yang Deficiency Exhaustion: Yang Xu Jue Ni. Kidney Yang Deficiency with Internal Cold. Shao Yin Cold. Yang Ming Han. Excess use of diaphoretics in Tai Yang Stage leading to loss of Yang.

CLINICAL MANIFESTATIONS - Extremely cold extremities. Aversion to Cold. Sleeping with knees drawn up. Lethargy with a constant desire to sleep. Vomiting. Diarrhea with undigested food. Abdominal pain and Cold. Lack of thirst. Coma. Indigestion. Edema. Pale face. Superficial fever. Red face. Cyanosis of the lips and nails. Sepsis.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with True Heat with False Cold (C.M.: cold extremities, thirst with a desire for cold drinks, dark urine. Stop this formula immediately once the hands and feet have warmed up.

HERBS AND ACTIONS

-Fu Zi - Warms the Kidney and Heart Yang, stimulates exhausted Yang, warms the Ming Men Fire and the entire body by traveling through all twelve channels. With Gan Jiang, strengthens the Kidney and Spleen Yang,warms the Spleen and Kidneys, disperses Cold and treats overabundance of Yin fluids due to Deficiency Cold, Devastated Yang and debilitated Spleen and Kidney Yang with incessant diarrhea. With Gan Jiang and Zhi Gan Cao strengthens the actions of fortifying Qi and benefiting the Yang for Cold extremities and diarrhea with undigested food due to Collapse of the Spleen and Kidney Yang.

-Gan Jiang - Warms the Middle Jiao and Lungs, transforms thin mucus, expels Cold, rescues Yang, warms the channels (unblocks the pulse) and stops bleeding. With Zhi Fu Zi, for Cold-Damp Bi. With Zhi Gan Cao, for epigastric pain and vomiting due to Spleen and Stomach Deficiency Cold and detoxifies Zhi Fu Zi.

-Gan Cao - Tonifies Qi, strengthens the Spleen and moderates the drying properties of the formula.

TREATS

Acute myocardial infarction. Cardiac insufficiency. Hypopituitarism. Vomiting and diarrhea due to acute and chronic gastroenteritis. Hypothyroidism. Cerebrovascular insufficiency. Acute gastroenteritis. Cirrhosis of the Liver. Chronic prostatitis. Intoxication. Arthritis. Influenza. Constipation. Abdominal pain. Palpitations. Fatigue. Chronic nephritis. Congestive Heart failure. Perspiration on the extremities. Dyspnea. Painful obstruction. Adrenal insufficiency. Edema. Intractable arthritis. Cholera. Jaundice. Intestinal Heat. Shock. Chronic colitis. Functional uterine bleeding. Recurrent aphthous ulcers. Gastroptosis. Common cold. Cough. Nausea/Vomiting. Diarrhea.

Anorexia. Weakness. Chronic renal failure. Spontaneous perspiration. Indigestion. Dysmenorrhea.

* XIANG BIN - 香槟 - Recovery of Gastrointestinal Function

Qi deficiency and Qi stagnation, in Chinese medicine.

Accelerate the recovery of bowel function. Promotes the production of body fluids and has a tranquilizing effect.

Ginseng oligopeptides (GOP), small-molecular oligopeptides isolated from ginseng, have been proven to have anti-fatigue effects. A. catechu L. (Binlang) has the function in Chinese medicine of promoting the circulation of Qi, and there is evidence that, one of its components, arecoline, affects gastrointestinal motility by direct binding to M receptors. P. persica Batsch (Taoren) has the function in Chinese medicine of improving blood circulation and relaxing the bowels and there is evidence that its extract can lower blood viscosity. L. aggregata Kosterm (Wuyao) has the function in Chinese medicine of promoting Qi circulation to relieve pain and one of its components. Total alkaloids have anti-inflammatory and analgesic effects. F. amomi (Sharen) has the functions in Chinese medicine of removing dampness to restore the normal function of the stomach, while its water extract has a role in promoting gastrointestinal peristalsis. This combination of herbs is used in some chinese hospitals to speed up recovery of gasrtrointestinal surgery patients.

XBP is a compound of Panax ginseng (Renshen), Areca catechu L. (Binlang), Prunus persica Batsch (Taoren), Lindera aggregata Kosterm (Wuyao), and Fructus amomi (Sharen).

* YI YI REN TANG - 薏苡仁湯 - Coicis Formula

ACTIONS - Dispels Wind and Dampness. Benefits Qi. Invigorates Blood circulation. Reduces swelling. Moistens dry Blood. Tonifies Blood. Warms the Channels. Relieves spasms. Relieves muscular tension.

SYNDROMES - Wind-Cold Damp Bi with Dampness Predominant. Wind-Damp Bi with Blood Deficiency. Atrophy disorder (Wei Syndrome) due to Damp-Heat.

CLINICAL MANIFESTATIONS - Numbness and pain of the extremities. Joint swelling and pain, especially hands and feet. Heaviness of joints. Numbness of the joints. Stiffness of the joints. Fever. Heaviness of the body. Coldness of the body. Dizziness. Likes pressure. Fatigue. Pale complexion. Preference for warmth. Swelling, pain, numbness and stiffness of the joints. Skin cornification.

NOTES - This formula is commonly used for Bi Syndrome that does not respond to

treatment or was improperly treated at the acute stage and is becoming chronic.

HERBS AND ACTIONS

-Ma Huang - Releases the Exterior, disperses Cold, promotes urination and reduces edema. With Gui Zhi -For Wind-Cold excess conditions with fever and chills but no sweat and Wind-Cold-Damp Bi.

-Gui Zhi - Releases external Wind-Cold from the muscle layer. harmonizes the Ying and Wei, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang and transforms the Qi and warms and facilitates the flow of Blood through the vessels. With Bai Shao -For external Wind-Cold with disharmony between the Ying and Wei, with spontaneous sweating.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Zhi Gan Cao -moderates spasms and relieves abdominal pain.

-Bai Shao - Alleviates pain, nourishes Blood, astringes Yin and adjusts the Ying and Wei. With Dang Gui Nourishes Yin and Blood.

-Cang Zhu with Hei Zhi Ma - Strongly dries Dampness, tonifies the Spleen, expels Wind-Dampness, clears Dampness from the Lower Jiao and releases the Exterior, Nourishes and fortifies Liver and Kidney Yin, nourishes Jing and Blood and extinguishes Wind.

-Bai Zhu - Tonifies the Spleen and augments Qi, dries Dampness and promotes water metabolism, stabilizes the Exterior and stops sweating.

-Yi Yi Ren - Promotes urination, leaches out Dampness, strengthens the Spleen, clears Heat, expels pus, expels Wind-Dampness and soothes numbness. With Ma Huang, Gui Zhi and Cang Zhu, for Wind-Damp Bi.

-Gan Cao - Alleviates pain and moderates and harmonizes the properties of other herbs.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold and reduces the toxicity of other herbs. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis. With Ma Huang, strongly creates sweating to treat all externally contracted Wind-Cold disorders.

TREATS

Arthritis. Rheumatism. Apoplexy. Arthralgia. Chronic fever with swelling of the extremities. Polyrheumatism. Genital warts. Painful obstruction. Rheumatoid arthritis. Mucoid arthritis. Tubercular arthritis. Muscular rheumatism. Beriberi. Nephritis. Pulmonary edema. Numbness. AIDS/HIV. Fatigue. Toe pain. Hip pain. Atrophy (Wei)

Syndrome. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Pleurisy Paresthesia. Weakness. Low back pain. Gout.

Recordings Updated in May 2025

* DA XIAN XIONG TANG - 大陷胸汤 - Major Formula For Pathogens Stuck In The Chest

ACTIONS - Drains Heat. Purges Water Accumulation.

SYNDROMES - Heat and Water Accumulation in the chest.

CLINICAL MANIFESTATIONS - Fullness and hardness of the epigastrium and/or abdomen. Lower abdominal pain. Severe pain that becomes unbearable with the slightest pressure. Tidal fever at dusk. Shortness of breath. Severe constipation. Thirst. Irritability. Restlessness.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only for acute diseases. Use only long enough to achieve results. Contraindicated during pregnancy. Contraindicated for weak patients.

HERBS AND ACTIONS

-Gan Sui - Drains water downward and eliminates congested Fluids and thin mucus.

-Da Huang - Drains Heat, purges accumulations, transforms Dampness and promotes urination. With Gan Sui, for accumulation of pathogenic Heat and Fluids in the chest and upper abdomen. With Mang Xiao, eliminates obstruction in the Intestines for severe constipation with passage of liquid but no solid stool.

-Mang Xiao - Purges accumulations, guides out Stagnation, softens hardness, moistens Dryness, clears Heat and drains Fire.

TREATS

Acute pancreatitis. Acute cholecystitis. Acute obstructive cholangitis. Adhesive ileus. Paralytic ileus. Acute peritonitis. Acute Intestinal obstruction. Acute upper gastrointestinal perforations. Acute exudative pleurisy. Severe pneumonia. Pericardial effusions. Pediatric meningitis. Psychiatric disorders. Severe constipation.

* DANG GUI SI NI TANG - 當歸四逆湯 - Dang Gui Formula For Frigid Extremities

ACTIONS - Warms the Channels. Disperses Cold. Nourishes the Blood. Unblocks the Blood vessels.

SYNDROMES - Cold in the Channels due to Blood Deficiency. Jue Yin Cold.

CLINICAL MANIFESTATIONS - Long standing cold hands and feet that are cold to the touch and feel cold to the patient. Maybe lumbago and leg pain. Abdominal pain and distention. Midline pain. Uterine pain. Chills. Diarrhea. Menstrual abdominal pain. Maybe chest pain. Increased sweating, particularly of the feet. Increased salivation. Long standing cold hands and feet that are cold to the touch and feel cold to the patient. Maybe lumbago and leg pain. Abdominal pain and distention. Midline pain. Uterine pain. Chills. Diarrhea. Menstrual abdominal pain. Maybe chest pain. Increased sweating, particularly of the feet. Increased salivation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency with Empty Fire. Use with caution during Spring and Summer or in warm climates.

HERBS AND ACTIONS

-Dang Gui - Tonifies Blood, regulates menstruation, invigorates and harmonizes Blood and disperses Cold. With Bai Shao, regulates and harmonizes Qi and Blood. With Bai Shao, Gui Zhi and Xi Xin, for Blood and Yang Deficiencies with cold extremities, back and/or buttocks. With Zhi Gan Cao, moderates spasms and relieves abdominal pain.

-Bai Shao - Nourishes Blood, regulates menstruation and adjusts the Ying and Wei. With Zhi Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews, treats abdominal pain due to disharmony between the Liver and Stomach, epigastric, hypochondriac or flank pain and muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency.
With Gui Zhi, harmonizes Ying and Wei in Tai Yang Zhong Feng. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Da Zao, for Wind-Cold with Deficiency and

perspiration.

-Gui Zhi - Releases the exterior, adjusts the Ying and Wei, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang and transforms the Qi, warms and facilitates the flow of Yang Qi in the chest and warms and facilitates the flow of Blood through the vessels. With Bai Shao, warms and tonifies the Middle Jiao. With Zhi Gan Cao, for palpitations and shortness of breath due to injured Yang of the chest.

-Xi Xin - Releases Exterior Wind and Cold, disperses Internal Cold, warms the Lungs and alleviates pain.

-Zhi Gan Cao - Alleviates pain and moderates and harmonizes the properties of other herbs.

-Da Zao - Nourishes Blood and moderates and harmonizes the harsh properties of other herbs.

-Mu Tong - Promotes urination and unblocks blood vessels. With Dang Gui, promotes circulation of Blood and stops pain.

TREATS

Raynaud's disease. Rheumatoid arthritis. Fibromyalgia. Sciatica. Peptic ulcer. Chronic urticaria. Frostbite. Thromboangitis obliterans (Buerger's disease). Vascular headaches. Impotence. Scleroderma. Basilar artery insufficiency. Hypertensive headache. Gingivitis. Lumbago. Lower back sprains. Cholecystitis. Pain from cancers. Idiopathic thrombocytopenic purpura. Perimenstrual edema. Postoperative adhesions. Peripheral neuropathy. Benign prostatic hypertrophy. Amenorrhea. Allergic rhinitis. Athetosis. Acrocyanosis. Abdominal pain. Infertility. Chronic gastritis. Abdominal fullness and distention. Vaginal discharge. Arthralgia. Gout. Erythema multiforme. Hip pain. Migraine. Anemia. Arthritis. Hernia due to Cold. Beriberi. Nephritis. Intestinal colic. Ephidrosis during fever. Calluses and corns. Varicocele. Takayasu's arteritis. Coronary artery insufficiency. Traumatic headache. Trigeminal neuralgia. Periarthritis of the shoulders. Pelvic inflammatory disease. Meniere's disease. Prostatitis. Tenosynovitis. Early stage upper respiratory tract infections. Frozen shoulder. Hypertrophic myelitis. Endometriosis. Psoriasis. Benzene poisoning. Dysmenorrhea. Chilblain. Postpartum pain. Stomach cancer. Abdominal Cold. Diarrhea. Peripheral neuritis. Wrist and hand pain. Thrombophlebitis. Ear pain.

* ER LONG ZUO CI WAN - 耳聋左慈片 - Formula For Deafness That Is Kind To The Left (Kidney)

ACTIONS - Nourishes Kidney and Liver Yin. Benefits the Ears. Clears Deficiency Heat. Calms the Liver. Subdues Liver Yang.

SYNDROMES - Hearing difficulty due to Kidney and Liver Yin Deficiency with Yang Rising.

CLINICAL MANIFESTATIONS - Tinnitus. Continuous cicada-like tinnitus that is worse at night. Deafness. Vertigo. Dizziness. Irritability. Insomnia. Blurred vision. Red eyes. Dry mouth and throat.

NOTES - This formula is widely used for hearing loss due to old age.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Jing and Blood, fills the Marrow and nourishes Liver and Kidney Yin. With Shan Yan and Ze Xie, for Ascendant Fire due to exhaustion of Kidney Yin.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiency of the Liver and Kidneys. With Shu Di Huang, Shan Yao, Ze Xie, Fu Ling and Mu Dan Pi, for Kidney and Liver Yin Deficiency.

-Shan Yao - Tonifies Kidney Yin and astringes Jing. With Shu Di Huang and Shan Zhu Yu, for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency.

-Fu Ling - Strengthens the Spleen and harmonizes the Middle Jiao Promotes urination and leaches out Dampness. With Zi Xie, facilitates the removal of water and leaches out Dampness.

-Mu Dan Pi - Clears Heat, cools, invigorates and harmonizes the Blood and clears Deficiency and Liver Fire. With Ze Xie, Fu Ling and Shan Zhu Yu, for spermatorrhea due to Kidney Yin Deficiency with Heat.

-Ze Xie - Promotes urination, leaches out Dampness and drains Kidney Fire. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

-Ci Shi - Benefits Yin, nourishes the Kidneys, augments the Liver, improves hearing and vision and calms the Spirit.

-Shi Chang Pu - Transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen, promotes the movement of Qi, promotes Blood flow and reduces swelling.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing and stops diarrhea and spermatorrhea. With Shu Di Huang, Shan Yao and Shan Zhu Yu, for Lung and Kidney Deficiency with cough and wheezing.

TREATS

Tinnitus. Deafness. Diabetes. Hypertension. Meniere's disease. Dizziness. Vertigo. Chronic labrynthitis.

* HUANG LIAN JIE DU TANG - 黃連解毒湯 - Coptis Formula To Relieve Toxicity

ACTIONS - Clears Heat. Drains Fire. Relieves toxicity from all three Jiaos. Relieves inflammation. Stops bleeding. Purges Damp-Heat. Purges the Gallbladder.

SYNDROMES - Obstruction of the Three Jiaos by Fire Toxin which pervades both the Exterior and Interior. Gu Syndrome. Lung Heat.

CLINICAL MANIFESTATIONS - High fever. Irritability. Fidgeting. Dry mouth. Dry throat. Incoherent speech. Insomnia. Dark urine. Deep-rooted boils. Maculae. Carbuncles. Hematemesis. Hemoptysis. Palpitations. Furuncles. Tinnitus. Purpura. Red face. Rashes. Deep-rooted boils. Red eyes. Itchy skin. Fidgeting. Dry lips. Delirium. Dysentery with fever. Jaundice. Epistaxis. Hematuria. Cloudy mind. Diarrhea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only for Excess patients with strong constitutions. Do not use long term (it can injure Yin). Contraindicated for those with Stomach Yin Deficiency with a red tongue and no coat.

NOTES - This formula has been shown to have a marked effect in preventing iatrogenic mucositis such as stomatitis and gastrointestinal mucosal injury when treating leukemia patients with cytotoxic drugs. This formula may be effective in treating aspirin-and ethanol-induced gastric lesions.

HERBS AND ACTIONS

-Huang Lian - Clears Heat, drains Dampness, drains Fire and relieves toxicity. With Huang Qin, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease and for explosive diarrhea and dysentery with burning pain in the anus or fitted, filthy stools and abdominal pain. With Huang Qin and Zhi Zi, for high fever, irritability, dry mouth and throat, and dark urine due to Fire toxin in the three burners.

-Huang Qin - Clears Heat, resolves Fire toxins, invigorates the Blood, reduces swellings, promotes urination and reduces edema. With Zhi Zi, powerfully clears and drains lurking Heat from the Lungs with fever, fullness in the chest, cough with yellow sputum and epistaxis or hematemesis to treat Damp-Heat and jaundice, sores due to Heat toxin and irregular vaginal bleeding due to Liver Fire.

-Huang Bai - Drains Damp-Heat, especially from the Lower Jiao, drains Deficiency Fire, drains Fire and relieves toxicity. With Zhi Zi, for Lower Jiao Damp-Heat leading to hot, painful urinary dysfunction.

-Zhi Zi - Clears Heat, reduces Fire, drains Damp-Heat, cools Blood and relieves toxicity.

TREATS

Septicemia. Toxic bacillary dysentery. Pneumonia. Urinary tract infection. Encephalitis. Purulent skin lesions. Emotional instability. Fevers. Hemoptysis. Epistaxis. Hematuria. Blood diseases. Palpitations. Insomnia. Neurasthenia. Hysteria. Urticaria. Acute icteric jaundice. Acute cholecystitis. Periodontitis. Hypertension. Cerebrovascular accident. Otitis media. Nephritis. Prophylactic treatment against post-surgical infection. Herpes zoster. Post-surgical cataract. Candidiasis. Chronic fatigue syndrome. Acute eczema. Chalazion. Hordeolum. Chronic dacrystitis. Jaundice. Gu syndrome. Behcet's disease. Dermatitis. Depression. Glossitis. Schizophrenia. Anxiety. Tinnitus. Acute glomerulonephritis. Chronic pancreatitis. Purpura. Fatigue. Acute pyelonephritis. Herpes simplex. Bad breath. Thrush. Gonorrhea. Red eyes. Pruritis. Pyemia. Carbuncles. Deep-rooted boils. Cerebral bleeding. Hypertension. Influenza. Epidemic cerebrospinal meningitis. Pyogenic skin infection. Acute infectious hepatitis. Acute gastroenteritis. Acute enteritis. Menopausal syndrome. Neurosis. Stomatitis. Toothache. Nervous gastritis. Cellulitis. Acute pelvic inflammatory disease. Gingivitis. Vaginitis. Erysipelas. Sequelae of stroke. Post-ischemic brain injury. Acne. Impetigo herpetiformis. Eczema of the anus. Giardiasis. Leaky gut syndrome. Prostatitis. Vestibulitis. Cataracts. Blepharitis. Eyelid edema. Irritable bowel syndrome. AIDS/HIV. Furuncles and boils. Constipation. Anxiety neurosis. Panic disorder. Post-febrile disease. Bi-polar disorder. Diarrhea. Prostatitis. Acute pancreatitis. Peptic ulcer. Allergic purpura. Hematemesis. Drug-induced dermatitis. Liver cancer. Indigestion. Ear pain.

* HUO XUE HUA YU ER HAO ZHEN JI - 活血化瘀二号赈济 - Invigorate The Blood And Break Up Stasis #2

ACTIONS - Nourishes and Invigorates the Blood.

SYNDROMES - Blood Stagnation

CLINICAL MANIFESTATIONS - Fever. Fatigue. Weight loss. Muscle and joint pain. Loss of appetite. Nerve problems, such as numbness or weakness.

HERBS AND ACTIONS

-Dan Shen - Invigorates, nourishes and cools the Blood, dispels Blood Stasis, clears Heat and calms the Spirit.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi.

-Bai Shao - Nourishes the Blood.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

TREATS - Vasculitis.

* JIA WEI SHEN QI WAN - 加味腎氣丸 - Augmented Kidney Qi Formula

ACTIONS - Warms and Tonifies the Kidney Yang. Assists Qi in transforming water. Promotes urination. Reduces edema.

SYNDROMES - Kidney Yang Deficiency with overflow of water.

CLINICAL MANIFESTATIONS - Aversion to Cold. Cold extremities. Scanty urination. Edema of the legs. Abdominal distention. Lower back soreness and pain. Severe pitting edema. Fatigue. Sensory numbness. Urinary difficulties.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency Fire. Contraindicated for those with Excess Fire with damaged Body Fluids. Contraindicated for those with Exterior symptoms.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Yin and Blood and tonifies the Kidneys. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu and Shao Yao, for dizziness, weak and sore back, impotence, spermatorrhea, night sweats, due to Kidney and Liver Yin Deficiency. With Shan Zhu Yu, Mu Dan Pi, Fu Ling and Ze Xie, for Liver and Kidney Yin Deficiency.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops Excess perspiration. With Shan Yao, tonifies the Liver and benefits the Spleen.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Zi - Tonifies the Ming Men, dispels Cold, eliminates Dampness and tonifies Kidney Yang. With Rou Gui, leads Fire back to its source for Kidney Yin Deficiency with Fire. Blazing Up-ward combined with Yin tonics. With Rou Gui and Shu Di Huang, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and sore back and legs, impotence, and urinary frequency. With Shu Di Huang and Rou Gui, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and

sore back and legs, impotence, and urinary frequency. With Fu Ling, for lower body edema and dysuria.

-Gui Zhi - Warms and tonifies Kidney Yang and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Mu Dan Pi, helps move Blood to facilitate the flow to the Kidneys. With Zhi Fu Zi, for chills, backache and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination, strengthens the Spleen and drains Dampness, enabling Gui Zhi to warm the Bladder.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Gui Zhi, warms and transforms the Fluids, unblocks Yang and promotes urination.

-Mu Dan Pi - Clears Heat, Deficiency Fire, cools and harmonizes the Blood, invigorates the Blood and dispels Blood Stasis. With Ze Xie, Mu Dan Pi and Shan Zhu Yu, for spermatorrhea due to Kidney Yin Deficiency with Heat.

-Chuan Niu Xi - Tonifies the Kidneys and Liver, strengthens the tendons and bones, invigorates the Blood, dispels Blood Stasis, expels Wind, drains Dampness, promotes urination and treats dysuria.

-Che Qian Zi - Promotes urination, clears Damp-Heat, clears the Lungs, expels Phlegm, stops cough, clears Liver Heat and clears the eyes. With Ze Xie, for Lin Syndrome, edema and distention. With Jiu Chuan Niu Xi, for Kidney deficiency edema.

TREATS

Diabetes mellitus. Diabetic neuropathy. Chronic nephritis. Dysuria. Nephrotic syndrome. Hashimoto's thyroiditis. Edema. Oliguria. Infertility. Prostatic hypertrophy. Osteoporosis. Goiter. Fatigue.

* QING XIN LIAN ZI YIN - 清心蓮子飲 - Lotus Semen Combination

ACTIONS - Clears Heart Fire. Disperses Damp-Heat. Benefits Qi and Yin. Promotes urination. Treats Milky Lin (chyluria).

SYNDROMES - Heart Fire with Kidney Yin Deficiency and Damp-Heat Attacking Downward. Heart Fire with Qi and Yin Deficiency and Damp-Heat in the Lower Jiao.

CLINICAL MANIFESTATIONS - Restlessness. Irritability. Thirst. Nocturnal emission. Insomnia. Dream disturbed sleep. Lack of spirit. Fatigue. Low back pain. Tinnitus.

Dysuria. Depression. Turbid urine. Abnormal uterine bleeding. Polyuria. Enuresis. Seminal emission. Leukorrhea. Blood tinged leukorrhea. Anorexia. Dry mouth. Dry Tongue. Five Sole Heat. Fever. Physical and mental overexertion.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Lin Syndrome or leukorrhea due to Damp-Heat in the Liver and Gallbladder.

HERBS AND ACTIONS

-Mai Dong - Nourishes Stomach Yin, generates fluids, eliminates irritability and promotes urination.

-Che Qian Zi - Promotes urination and clears Heat.

-Di Gu Pi - Cools the Blood, drains Yin Deficiency Fire, drains Floating Fire in the Kidney channel and clears and Drains Heat in the Lung. With Huang Qin, for Blood Deficiency, Steaming Bone Disorder, or other recurrent afternoon fevers.

-Ren Shen - Tonifies Yuan Qi, Spleen and Stomach Qi, Lung Qi and Heart Qi. calms the Spirit, generates Body Fluids and stops thirst.
With Huang Qi, for Lung Qi Deficiency.

-Lian Zi - Tonifies the Spleen and Kidneys, astringes Jing, nourishes the Heart and calms the Spirit.

-Huang Qin - Clears Lung Heat, dries Dampness, drains Fire and detoxifies.

-Huang Qi - Strengthens the Spleen, tonifies Qi, generates Body Fluids, tonifies the Lungs (aids circulation of moisture downward from the face. promotes urination, reduces edema and expels toxins. With Ren Shen, for Qi Deficiency with general debility, anorexia and spontaneous sweat.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and Harmonizes the Middle Jiao. With Che Qian Zi, for Lin Syndrome, especially Milky Lin.

-Gan Cao - Tonifies the Spleen Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the properties of other herbs.

TREATS

Chronic cystitis. Chronic nephritis. Diabetes. Leukorrhea. Pyelonephritis. Pyelitis. Urine looks like rice water (milky). Nocturnal emission. Spermatorrhea. Urinary tract infection. Tuberculosis of the Kidney. Prostatitis. Chyluria. Benign prostatic hypertrophy. Nephrolithiasis. Hyperglycemia. Tinnitus. Anorexia. Nephrotic syndrome. Strangury. Spleen, Lung and Kidney disorders due to excessive alcohol consumption. Enuresis.

Diabetic neuropathy. Renal calculi. Chronic gonorrhea. Impotence. Urinary retention. Stomatitis. Hyperthyroidism. Acute glomerulonephritis. Urinary tract inflammation. Urolithiasis. Yeast infection. Depression. Low back pain. Fatigue. Insomnia. Spermatorrhea. Vaginitis

* SHAO YAO GAN CAO TANG - 芍藥甘草湯 - Peony And Licorice Combination

ACTIONS - Softens the Liver. Nourishes the Blood. Nourishes Yin. Moderates painful spasms. Relieves pain. Harmonizes the Middle Jiao. Replenishes Body Fluids.

SYNDROMES - Pain in the calves with Blood Deficiency or injury to fluids. Cramps in the hands and abdominal pain that improves with pressure. Insufficiency of Yin and Yang. Disharmony between the Liver and Spleen.

CLINICAL MANIFESTATIONS - Abdominal pain. Irritability. Slight chills. Spasms of the calf muscles. Cramps in the hands. Weak legs. Hypertonicity of the extremities characterized by difficult flexion and extension. Wheezing. Coughing. Hiccup. Constipation. Vomiting. Diarrhea. Sciatic pain. Severe and painful muscle spasms in the Stomach, bronchi, Gallbladder and uterus. Intestines. Shoulder pain. Pain in the head, body or limbs due to arterial spasms characterized by a severe pulling pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with hypertension. This formula may be effective in treating schizophrenia patients with neuroleptic-induced hyperprolactinemia. This formula has been shown to decrease paclitaxel-induced myalgia/arthralgia. This formula has been shown to be effective in treating menopausal symptoms induced by gonadotropin-releasing hormone agonists without a negative effect on serum estradiol levels.

HERBS AND ACTIONS

-Bai Shao - Nourishes the Blood, preserves Yin, softens the Liver and alleviates pain. With Zhi Gan Cao for abdominal pain due to disharmony between the Liver and Stomach and muscle spasms, especially in the calf, due to Blood Deficiency.

-Gan Cao - Tonifies and augments the Qi of the Middle Jiao, especially that of the Spleen.

TREATS

Intercostal neuralgia. Sciatica. Trigeminal neuralgia. Post-herpetic neuralgia. Chronic pelvic inflammatory disease. Primary dysmenorrhea. Muscular rheumatism. Chronic pancreatitis. Dysuria. Bronchial asthma. Spasmodic cough. Hemorrhoid pain. Bladder pain. Fibromyalgia. Cramping calf muscles. Priapism. Post stroke contractures. Acute lumbar strain. Biliary colic. Gastric spasm. Chronic gastritis. Peptic ulcers. Pertussis. End-stage hepatic carcinoma. Rheumatoid arthritis. Cervical spine syndrome. Disc

disease. Recalcitrant hiccups. Bruxism. Parkinson's disease. Atrial fibrillation. Enuresis. Allergic purpura. Bronchiectasis. Infertility. Impotence from increased prolactin levels. Chronic hepatitis. Acute mastitis. Habitual constipation. Coronary artery disease. Intestinal cramps. Systremma. Perimenopause with uterine leiomyoma. Hyperosteogeny. Abdominal pain. Purpura. Cervical spondylosis. Ulcerative colitis. Calf spasm. Toothache. Beriberi. Palsy in legs. Noctiphobia. Lumbago. Frozen shoulder. Hernia pain. Nephrolithiasis pain. Cholelithiasis pain. Muscle spasms in waist and back. Intestinal cramps. Pain and discomfort from spasms of the skeletal muscles, ligaments and related tissues. Vaginismus. Laryngeal spasm. Periarthritis of the shoulder. Spinal osteophytes. Renal colic. Intestinal adhesions. Atrophic gastritis. Colitis. Chronic colitis. Threatened miscarriage. Heel pain. Necrosis of the femoral head. Neuralgia. Diabetic neuropathy. Restless leg syndrome. Facial tics. Essential tremors. Night terrors. Thrombocytopenic purpura. Upper gastrointestinal bleeding. Recurrent epistaxis. Hypertestosteronemia. Myasthenia gravis. Diabetes. Bacillary dysentery. Anal fissures. Convulsions. Frozen shoulder. Drug induced menopause. Urolithiasis pain. Weakness. Indigestion

* TAO HONG SI WU TANG - 桃红四物汤 - Four Substances Formula With Safflower And Peach Pit

ACTIONS - Tonifies and invigorates the Blood. Regulates Blood circulation. Breaks up Blood Stagnation. Regulates menstruation. Alleviates pain.

SYNDROMES - Concurrent Blood Deficiency and Blood Stagnation. Blood Stagnation due to Blood Deficiency. Atrophy disorder (Wei Syndrome) due to Blood Stagnation.

CLINICAL MANIFESTATIONS - Copious bleeding of dark purple blood. The blood is sticky during menstruation. May or may not have clots. Menstrual cycle is shortened (early menstruation). Palpitations. Dizziness. Blurred vision. Pale, lusterless complexion. Pale nails. Abdominal pain. Irregular menstruation with little flow. Fixed lower abdominal pain. Dry skin. Vertigo. Tinnitus. Pale lips. May be amenorrhea. Insomnia. Menstruation may also be accompanied by distention and pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution for those with digestive weakness. Use with caution for those with anemia with coldness. Discontinue use once the desired effects have been achieved to avoid profuse bleeding. Contraindicated during pregnancy. Use with caution for those with menstrual disorders with underlying Qi and Blood Deficiency.

HERBS AND ACTIONS

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold, alleviates pain and treats headaches. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses, and amenorrhea and Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis.

-Dang Gui - Tonifies Blood, regulates menses, activates and harmonizes Blood, disperses Cold, reduces swelling, expels pus, generates flesh and alleviates pain. With Bai Shao, regulates and harmonizes Qi and Blood. With Bai Shao, Shu Di Huang and Chuan Xiong, for menstrual irregularity, amenorrhea, and dysmenorrhea due to Blood Deficiency or Stasis. With Tao Ren and Hong Hua, for amenorrhea, pain, swelling and other symptoms associated with Blood Stasis.

-Bai Shao - Nourishes Blood, regulates menstruation, astringes Yin, calms Liver Yang and alleviates pain. With Dang Gui, nourishes Yin and Blood.

-Shu Di Huang - Tonifies Blood and nourishes Yin, Jing and Blood. With Dang Gui and Bai Shao, for dizziness, palpitations, insomnia, and menstrual dysfunction due to Blood Deficiency.

-Tao Ren - Dispels Blood Stasis and activates Blood circulation. With Hong Hua, for dysmenorrhea and amenorrhea with abdominal pain, clotting and scanty flow and rheumatoid arthritis due to Blood Stasis. With Hong Hua, Chi Shao and Dang Gui, for trauma with pain.

-Hong Hua - Activates the Blood, regulates menstruation, dispels Blood Stasis and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

TREATS

Irregular menstruation with distention and pain. Anemia. Endometriosis. Threatened miscarriage. Postpartum weakness. Dysmenorrhea. Infertility. Cerebral infarction. Hypertension. Diabetic neuropathy. Migraine. Post-herpetic neuralgia. Optic nerve atrophy. Cataract. Urticaria. Eczema. Acne. Rosacea. Obesity. Herpes zoster. Chronic rhinitis. Insomnia. Coronary artery disease. Dizziness. Diabetes. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Trigeminal neuralgia. Emphysema. COPD. Senile dementia. Abdominal pain. Weakness. Herniated lumbar disc. Low back pain. Gout. Dry skin. Premenstrual breast distention. Cirrhosis of the Liver. Menorrhagia. Early menstruation. Chloasma. Measles. Psoriasis. Erythema. Nodusium. Dermatosclerosis. Keloid. Chronic pelvic inflammatory disease. Sequelae of stroke. Hyperlipidemia. Headache. Bone fractures. Allergic rhinitis. Optic neuritis. Glaucoma. Itching. Skin Bi. Amenorrhea. Scleroderma. Prolonged menstruation. Premature ovarian failure, prevention. Premature ovarian failure. Flat warts. Vertigo. Atrophy (Wei) Syndrome. Acute infectious multiple neuritis. Hysterical paralysis. Periodic paralysis. Facial paralysis. Stomach cancer. Asthmatic bronchitis. Bronchial asthma. AIDS/HIV. Dermatitis. Tinnitus. Hemorrhoids. Palpitations. Scanty menstruation. Late menstruation. Postpartum anemia. Wrist and hand pain. Fibrocystic breast disease. Anicteric viral hepatitis. Coronary Heart disease. Sore throat.

Recordings Updated in May 2025

* BAI HE GU JIN TANG - 百合固金湯 - Lily Bulb Formula To Preserve The Metal

ACTIONS - Nourishes Yin. Moistens the Lungs. Transforms Phlegm. Stops Cough. Clears Heat. Nourishes the Blood,

SYNDROMES - Lung Yin Deficiency. Lung and Kidney Yin Deficiency with Fire Flaring.

CLINICAL MANIFESTATIONS - Cough with blood streaked sputum. Wheezing. Dry, sore throat. Five sole Heat. Afternoon fever. Low grade fever. Malar flush. Irritability. Insomnia. Shortness of breath. Nocturnal emission. Steaming bones. Vivid dreaming. Fatigue. Tinnitus. Dizziness. Dyspnea. Dysphoria. Hoarseness. Night sweats. Maybe hemoptysis. Restlessness. Decreased urination.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with cough due to Excess conditions. Use caution or those with Spleen Deficiency. Use caution or those with Food Stagnation.

HERBS AND ACTIONS

-Bai He - Moistens and nourishes the Lungs and clears Heat. With Shu Di Huang, for palpitations, irritability, insomnia, and dark, scanty urine due to lingering Heat. With Di Huang and Shu Di Huang, nourishes and moistens the Lungs and Kidneys. With Di Huang, Shu Di Huang and Xuan Shen, for cough with Blood-streaked sputum, hot palms and soles and night sweats from Lung and Kidney Yin Deficiency. With Mai Dong, Xuan Shen and Chuan Bei Mu, for chronic dry cough and sore throat due to Lung Yin Deficiency.

-Di Huang - Tonifies the Kidneys, nourishes Yin, generates fluids, increases saliva, cools the Blood and stops bleeding. With Xuan Shen, for dry throat, irritability, a red tongue and a thready, rapid pulse due to Yin Deficiency with Fire Flaring. With Xuan Shen and Mai Dong, for dry throat, irritability, a red tongue, and a fast thready pulse due

to Devastated Yin with Blazing Fire, excessive thirst, irritability, and a scarlet tongue due to Ying Stage Heat, swelling of the throat and lymph nodes and constipation due to Excess Heat with Yin Deficiency. With Bai Shao, for Blood Deficiency Heat.

-Shu Di Huang - Tonifies Liver and Kidney Yin. With Di Huang, treats Yin Deficiency with Fire Flaring.

-Mai Dong - Moistens the Lungs, stops cough and nourishes Yin especially of the Upper Jiao. With Xuan Shen, nourishes Yin and clears Heat. With Xuan Shen, Jie Geng and Gan Cao, for itchy, dry throat, thirst and a nonproductive cough due to Lung Yin Deficiency. With Di Huang, for hematemesis or epistaxis due to Yin Deficiency with Excess Heat.

-Xuan Shen - Clears Heat, cools the Blood and nourishes Yin. With Bai He, for Yin Deficiency with Lung Dryness and a dry cough. With Jie Geng and Gan Cao, for a sore throat with Dryness and pain.

-Chuan Bei Mu - Moistens the Lungs, transforms Phlegm, stops cough and clears Heat. With Xuan Shen, clears Heat.

-Jie Geng - Moves Lung Qi, expels Phlegm and stops cough especially with Chuan Bei Mu. With Gan Cao, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat.

-Dang Gui - Nourishes and invigorates the Blood. With Bai Shao, nourishes Yin Blood and protects the Lungs against Liver attack. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Bai Shao - Nourishes Blood and astringes Yin. With Dang Gui, Shu Di Huang and Mai Dong, for tinnitus, dizziness, blurred vision, numbness of the extremities, and muscle spasms due to Liver Yin Deficiency.

-Gan Cao - Moistens the Lungs, clears Heat, stops cough and moderates and harmonizes the harsh properties of other herbs. With Jie Geng, benefits the throat.

TREATS

Bronchial spasm. Chronic bronchitis. Upper respiratory tract infection. Emphysema. Goiter. Gastroptosis. Eclampsia. Hangover. Tracheitis. Gastrointestinal neurosis. Late menstruation. Obesity. Amenorrhea. Glaucoma. Acne. Common cold. Dizziness. Hiccups. Vaginal discharge. Chronic obstructive pulmonary disease. Numbness. Pertussis. Nausea/Vomiting. Tinnitus. Otitis externa. Cervical spondylosis. Anorexia. Fatigue. Psychosis. Morning sickness. Globus hystericus. Dyspnea. Constipation. Otorrhea. Ear pain. Facial edema. Apoplexy. Chronic gastritis. Pneumonia. Vernal conjunctivitis. Asthma. Meniere's disease. Peptic ulcer. Bronchitis. Gastritis. Seizures.

Scanty menstruation. Childhood eczema. Headache. Infertility. Influenza. Cough. Vertigo. Diabetes mellitus. Stomach cancer. Trigeminal neuralgia. Paresthesia. AIDS/HIV. Breast cancer. Otitis media. Deafness. Chronic pancreatitis. Palpitations. Hyperlipoproteinemia. Chronic gastroenteritis. Indigestion. Bronchiectasis. Acid reflux. Low back pain. Sore throat.

* ER CHEN TANG - 二陈汤 - Formula Of Two Old Drugs. Citrus And Pinellia Combination

ACTIONS - Dries Dampness. Transforms Phlegm. Regulates Qi. Harmonizes the Middle Jiao.

SYNDROMES - Phlegm-Damp Obstructs the Lungs. Spleen-Damp Disturbs the Lungs. Damp-Phlegm Retention (Shi Tan). Internal Phlegm-Damp with Qi Deficiency. Wind-Phlegm (Feng Tan).

CLINICAL MANIFESTATIONS - Cough with copious, dilute, white frothy or lumpy sputum. Chest and epigastric congestion. Palpitations. Headache. Pain and full feeling in chest. Dyspnea - worse lying down. Asthma. Throat rattle. Maybe anorexia. Lassitude. Nausea/vomiting. Dizziness/vertigo. Shortness of breath. Wheezing. Acute attack of panting with high pitched sound and rapid exhalation. Facial edema. Weak extremities.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Lung Yin Deficiency cough.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, expels Phlegm, descends Stomach Qi and reduces distention. With Chen Pi, for Spleen Qi Deficiency or Phlegm-Damp Obstruction manifesting as productive cough and a stuffy chest.

-Chen Pi - Revives the Spleen, activates Middle Jiao Qi, dries Dampness and transforms Phlegm. With Ban Xia, for viscous sputum and a stuffy chest due to Phlegm-Damp Obstruction.

-Fu Ling - Strengthens the Spleen, transforms Phlegm and drains Dampness from the Middle Jiao. With Chen Pi, Ban Xia and Sheng Jiang, for congested Fluids in the Stomach causing distention, nausea and vomiting.

-Sheng Jiang - Transforms Phlegm. With Ban Xia, for nausea.

-Gan Cao - Tonifies the Spleen, resolves Phlegm and moderates and harmonizes the properties of other herbs.

TREATS

Bronchial spasm. Chronic bronchitis. Upper respiratory tract infection. Emphysema. Goiter. Gastroptosis. Eclampsia. Hangover. Tracheitis. Gastrointestinal neurosis. Late menstruation. Obesity. Amenorrhea. Glaucoma. Acne. Common cold. Dizziness. Hiccups. Vaginal discharge. Chronic obstructive pulmonary disease. Numbness. Pertussis. Nausea/Vomiting. Tinnitus. Otitis externa. Cervical spondylosis. Anorexia. Fatigue. Psychosis. Morning sickness. Globus hystericus. Dyspnea. Constipation. Otorrhea. Ear pain. Facial edema. Apoplexy. Chronic gastritis. Pneumonia. Vernal conjunctivitis. Asthma. Meniere's disease. Peptic ulcer. Bronchitis. Gastritis. Seizures. Scanty menstruation. Childhood eczema. Headache. Infertility. Influenza. Cough. Vertigo. Diabetes mellitus. Stomach cancer. Trigeminal neuralgia. Paresthesia. AIDS/HIV. Breast cancer. Otitis media. Deafness. Chronic pancreatitis. Palpitations. Hyperlipoproteinemia. Chronic gastroenteritis. Indigestion. Bronchiectasis. Acid reflux. Low back pain. Sore throat.

* FU ZI TANG - 附子汤 - Aconite Accessory Root Formula

ACTIONS - Dispels Cold. Warms the channels. Assists Yang. Dispels Dampness. Relieves pain.

SYNDROMES - Yang Deficiency with Internal Cold-Dampness. Tai Yang Shang Han. Yang Ming Han

CLINICAL MANIFESTATIONS - Aching bones and joints. Muscle ache. Whole body pain. Aversion to Cold, especially at the back. Cold limbs. Lower abdominal pain and Cold. Abdomen feels chilled. Maybe fever. No thirst.

HERBS AND ACTIONS

-Fu Zi - Disperses Cold and Dampness, warms the channels and stops pain. With Ren Shen, for severe Deficiency of Source Qi and Collapse of Yang with cold extremities, sweating, weak breathing, dizziness and an extremely pale complexion. With Bai Zhu, for Wind-Damp Bi. With Bai Zhu and Fu Ling, for Kidney and Spleen Yang Deficiency with retention of pathogenic water with abdominal pain, which is worse with Cold, urinary difficulty, and deep aching and heaviness in the extremities. With Fu Ling, for lower body edema and dysuria.

-Bai Zhu - Tonifies the Spleen and augments Qi Dries Dampness and promotes water metabolism.

-Ren Shen - Powerfully tonifies Qi.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Ren Shen and Bai Zhu, for a weak and deficient Spleen with fatigue, anorexia and loose

stools.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain.

TREATS

Painful obstruction. Arthralgia. Arthritis. Trigeminal neuralgia. Bell's palsy. Cervical spine disease. Ankylosing spondylitis. Essential tremor. Cirrhosis of the Liver. Chronic bronchitis. Uterine prolapse. Erectile dysfunction. Common cold. Rheumatism. Peritonitis. Stomatitis. Abdominal pain. Monoplegia. Dermatitis. Whole body pain. Abdominal distention and pain during pregnancy. Migraine. Cluster headache. Piriformis syndrome. Periarthritis of the shoulder. Lumbar disc disease. Chronic nephritis. Nephrotic syndrome. Cardiac disease. Congestive Heart failure. Stroke. Influenza. Neuralgia. Edema. Ascites. Facial paralysis. Eczema. Urticaria. Maybe fever. No thirst.

* HUANG QI GUI ZHI WU WU TANG - 黃耆桂枝五物湯 - Astragalus And Cinnamon Twig Five-substance Formula

ACTIONS - Tonifies Qi and Blood. Warms and harmonizes the channels and collaterals. Harmonizes the Ying and Wei. Unblocks painful obstruction. Warms the Middle Jiao. Dispels Cold. Alleviates pain. Harmonizes Yin and Yang.

SYNDROMES - Bi syndrome of the Blood. Blood Stagnation due to a Mild Attack of Wind-Cold with Qi Deficiency. Consumptive diseases due to Yin and Yang Deficiency.

CLINICAL MANIFESTATIONS - Relatively superficial numbness without pain. Paresthesia and numbness of the skin and flesh. Paresthesia of the shoulders. Neck and shoulder stiffness and pain. Abdominal pain alleviated by warmth and pressure. Pale complexion. Hemiplegia. Stiff tongue. Flaccidity if the extremities. Migratory pain. Pain, weakness, tightness or spasms of the extremities. Spontaneous sweating. Shortness of breath. Aphasia. Excess salivation. Aversion to Wind.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, Tonifies Wei Qi, stabilizes the exterior, raises the Yang Qi of the Spleen and Stomach and relieves numbness and pain. With Gui Zhi, for Qi and Blood Deficiencies and Ying and Wei Deficiencies with numbness and painful obstruction of the musculature.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels, assists the Heart Yang and warms and facilitates the flow of Yang Qi in the chest. With Bai Shao, for External Wind-Cold with disharmony between the Ying and

Wei (Tai Yang Zhong Feng), with spontaneous sweating, fever and chills warms and tonifies the Middle Jiao.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind and alleviates pain. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration. With Huang Qi, Gui Zhi, Sheng Jiang and Da Zao, for Bi syndrome.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, adjusts the Ying and Wei for treatment of Tai Yang Zhong Feng.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Middle, normalizes the flow of Qi at the center and reduces the toxicity of other herbs. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis. With Da Zao, for External Wind-Cold.

TREATS

Raynaud's disease. Polyneuritis. Diabetic neuropathy. Scleroderma. Dermatomyositis. Bell's palsy. Common perineal neuropathy. Cervical spondylosis. Sequelae of stroke. Facial tics. Urinary retention. Nephritis. Pneumonia. Synovitis of the knees. Hemiplegia. Facial paralysis. Frostbite. Poliomyelitis. Muscular dystrophy. Arthritis (migratory) with numbness. Neurosis. Paresthesia. Abdominal pain. Lateral epicondylitis. Neck pain and stiffness. Takayasu's arteritis. Thromboangitis obliterans. Ulcers of the lower extremities. Bed sores. Urticaria. Idiopathic thrombocytopenic purpura. Sciatica. Rheumatoid arthritis. Restless leg syndrome. Postpartum problems. Chronic prostatitis. Obesity. Coronary artery disease. Peripheral neuritis. Muscular paralysis. Beriberi. Cerebral accidents. Guillain-Barre disease. Arthralgia. Monoplegia. Numbness. Periarthritis of the shoulder. Aphasia. Peripheral neuropathy. Painful obstruction.

* LIU JUN ZI TANG - 六君子湯 - Six Gentlemen Formula

ACTIONS - Tonifies Qi. Strengthens the Spleen and Stomach. Transforms Phlegm. Dries Dampness. Stops vomiting. Circulates Qi. Harmonizes the Middle Jiao.

SYNDROMES - Stomach Qi Deficiency. Spleen and Stomach Qi Deficiency with Phlegm-Damp Retention. Atrophy disorder (Wei Syndrome) due to Spleen and Stomach Qi Deficiency.

CLINICAL MANIFESTATIONS - Nausea. Vomiting. Distention of chest and epigastrium. Coughing up copious, thin, white sputum. Dyspnea. Sallow complexion. Anorexia. Rolled lips. Pale lips. Stiff tongue. Tired limbs. Heavy limbs. Abdominal and epigastric distention after meals. Maybe bleeding. Stifling sensation in the chest and epigastrium. Acid regurgitation. Shortness of breath. Loose stools or diarrhea. Lethargy. Thin

muscles. Fatigue. Does not like to speak. Weak, soft voice. Maybe enuresis. Maybe borborygmus. Maybe cold extremities. Maybe abundant clear urine. Muscle weakness in arms and legs. Weak abdomen.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution for those with a high fever, Yin Deficiency Heat, Qi Stagnation, Body Fluid Deficiency, irritability, thirst or constipation.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi and strengthens Spleen and Stomach. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu and Fu Ling, for Spleen and Stomach Qi Deficiency.

-Bai Zhu - Strengthens the Spleen and dries Dampness.

-Fu Ling - Dries Dampness, strengthens the Spleen and moderates the drying nature of Gan Cao. With Ban Xia, stops nausea and vomiting. With Ban Xia and Chen Pi, for nausea, vomiting and anorexia due to congested Fluids.

-Gan Cao - Harmonizes, warms and strengthens the Middle Jiao and moderates the draining properties of Fu Ling.

-Chen Pi - Circulates Qi, dries Dampness, tonifies the Spleen and adjusts the Middle. With Bai Zhu, for manifestations of Damp-Obstruction due to Spleen Deficiency.

-Ban Xia - Dries Dampness, resolves Phlegm, harmonizes the Stomach and stops vomiting. With Chen Pi, for Stomach Qi disharmony with epigastric and abdominal distention or pain.

-Gan Jiang - Warms the Middle.

-Da Zao - Harmonizes Ying and Wei.

TREATS

Indigestion. Chronic gastritis. Gastric or duodenal ulcer. Chronic gastroenteritis. Gastroptosis. Malnutrition - weight loss. Anemia. Obesity. Amenorrhea. Cough. Abdominal pain. Nausea. Vomiting. Chronic bronchitis. Pain in Liver cancer. Depression. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Hay fever. Chronic Kidney failure. Asthma. COPD. AIDS/HIV. Abdominal fullness and distention. Neurasthenia. Otitis media. Meniere's disease. Chronic hepatitis. Hypotension. Weakness. Leukorrhea. Lung cancer. Urinary tract infection. Constipation. Otorrhea. Ear pain. Deafness. Atrophy (Wei) Syndrome. Toxemia during pregnancy. Gastric cancer. Chronic peritonitis. Rickets. Nervous

exhaustion. Gastralgia. Acid reflux. Acne. Irritable bowel syndrome. Diarrhea. Morning sickness. Stomatitis. Supportive treatment during chemotherapy. Stress. Enteritis. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Polyuria. Emphysema. Hay fever. Menopause. Nausea/Vomiting. Diarrhea. Tinnitus. Otitis externa. Vertigo. Anorexia. Fatigue. Yawning. Spontaneous perspiration. Osteoarthritis. Dyspnea. Edema during pregnancy. Cough during pregnancy. Chemotherapy for breast cancer. Coughing and asthma associated with AIDS/HIV

* SHENG MAI SAN - 生脈散 - Generate The Pulse Formula

ACTIONS - Augments Qi. Generates Fluids. Clears Heat. Preserves Yin. Stops Excess perspiration.

SYNDROMES - Lung and Kidney Qi Deficiency. Heart and Lung Qi Deficiency. Lung Qi and Yin Deficiency. Atrophy disorder (Wei Syndrome) due to Lung Heat with Fluid Deficiency.

CLINICAL MANIFESTATIONS - Chronic cough with sparse sputum. Sputum difficult to expectorate. Shortness of breath. Spontaneous perspiration. Dry mouth and tongue. Dry skin. Palpitations with a stifling sensation in chest. Fatigue. Irritability. Thirst. Dry throat. Insomnia. Listless speech.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use extreme caution with high fever. Use extreme caution for unresolved external cough. Do not use in initial stage flu in summer with mild conditions. Do not use if Fluids are not yet injured.

HERBS AND ACTIONS

-Ren Shen - Tonifies Heart, Spleen and Lung Qi and generates Fluids. With Mai Dong, strongly generates Fluids. With Wu Wei Zi, rescues Qi and Yin. With Mai Dong and Wu Wei Zi, for Qi and Yin Deficiency.

-Mai Dong - Nourishes Yin, moistens the Lungs, generates Fluids, stops cough, clears Heat from the Heart and eliminates irritability.

-Wu Wei Zi - Astringes Lung Qi, generates Fluids, tonifies Qi and nourishes Kidney Yin.

TREATS

Acute collapse. Chronic bronchitis. Pulmonary tuberculosis. Supraventricular arrhythmias. Rheumatic Heart disease. Post-bypass debility. Hemorrhagic shock (IV drip). Cardiogenic shock (IV drip). Neurasthenia. Palpitations. Hyperthyroidism. Insomnia. Arrhythmia. Myocarditis. Cerebral infarction. Leukopenia. Diabetes mellitus. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute

myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. Myasthenia gravis. The sequelae of poliomyelitis. Hay fever. COPD. AIDS/HIV. Low-grade fever. Neurasthenia. Neurosis. Stroke. Cholecystitis. Edema. Vaginal discharge. Dyspnea. Dry skin. Urinary incontinence. Sick sinus syndrome. Spontaneous perspiration and night sweats associated with AIDS/HIV. Atrophy (Wei) Syndrome. Coronary Heart disease. Angina pectoris. Thermoplegia. Cor pulmonare. Cardiac failure. Myocardial infarction. Heat stroke. Asthma. Coma. Cardiac arrhythmia. Morning sickness. Congestive Heart failure. Viral myocarditis. Hypotension. Alzheimer's disease. Chronic cough. Emphysema. Common cold. Infertility. Uterine fibroids. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Asthma. Systemic lupus erythematosus. Anxiety neurosis. Menopause syndrome. Panic attacks. Cholelithiasis. Fatigue. Epistaxis. Spontaneous perspiration. Sjogren's Syndrome. Metrorrhagia. Rheumatic fever. Prematurely gray hair.

* SI JUN ZI TANG - 四君子汤 - Four Gentlemen Formula. Four Major Herb Combination

ACTIONS - Tonifies Qi. Strengthens the Spleen and Stomach.

SYNDROMES - Spleen Qi Deficiency. Heart Qi Deficiency. Lung and Spleen Qi Deficiency. Heart and Lung Qi Deficiency. Gu Syndrome.

CLINICAL MANIFESTATIONS - Pale face. Sallow complexion. Anorexia. Rolled lips. Pale lips. Stiff tongue. Tired limbs. Heavy limbs. Abdominal and epigastric distention after meals. Maybe bleeding. Maybe nausea and vomiting. Maybe acid regurgitation. Shortness of breath. Loose stools or diarrhea. Fatigue. Lethargy. Thin muscles. Low, soft voice. Does not like to speak. Muscle weakness in arms and legs. Maybe enuresis. Weak abdomen. Maybe borborygmus. Epigastric or abdominal pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Excess Syndromes with high fever, irritability, thirst and constipation. Contraindicated for those with Deficiency Heat, high fever or a combination of irritability, thirst and constipation unless modified.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi and strengthens the Spleen and Stomach. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Gan Cao and Fu Ling, for Spleen and Stomach Qi Deficiency.

-Bai Zhu - Strengthens the Spleen, augments Qi and dries Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Fu Ling - Dries Dampness, strengthens the Spleen and moderates the drying nature of Gan Cao. With Ren Shen and Bai Zhu, for weak and deficient Spleen with fatigue,

anorexia and loose stools.

-Gan Cao - Harmonizes, warms and strengthens the Middle Jiao and moderates the draining properties of Fu Ling. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency and palpitations due to Heart Qi Deficiency. With Ren Shen, Bai Zhu and Fu Ling, strengthens the Spleen and augments Qi.

TREATS

Neurasthenia. Chronic gastritis. Peptic ulcer. Irritable bowel syndrome. Diabetes mellitus. Periodic paralysis. Chronic hepatitis. Recurrent nosebleeds. Adjunctive therapy in conjunction with chemotherapy or radiation therapy in cancer patients. Uterine fibroids. Chronic Fatigue Immune Deficiency Syndrome (CFIDS). Colitis. Menstrual bleeding. COPD. Cardiac arrhythmia. Acid reflux. Childhood eczema. Arteriosclerosis. Stroke. Blepharitis. Gastralgia. Chronic dysentery. Common cold. Emphysema. Thromboangitis obliterans. AIDS/HIV. Chronic tonsillitis. Diarrhea. Neurosis. Intestinal tuberculosis. Cholelithiasis. Chronic pancreatitis. Hypotension. Weakness. Yawning. Chronic nephritis. Spontaneous perspiration. Dyspnea. Puerperal fever. Chemotherapy for breast cancer. Chronic bacillary dysentery. Leukopenia. Candidiasis. Uterine fibroids. Reduces recovery time after gastric surgery. Gastroptosis. Malnutrition. Anemia. Monoplegia. Fever of unknown origin. Sequelae of infections, especially in children. Coronary artery disease. Chronic bronchitis. Premenstrual syndrome. Chronic tonsillitis. Leaky gut syndrome. Giardiasis. Palpitations. Chronic laryngitis. Hyperglycemia. Obesity. Headache. Hordeolum. Acne. Cough. Stomach cancer. Asthma. Periarthritis of the shoulder. Gu syndrome. Fibrocystic breast disease. Abdominal fullness and distention. Abdominal pain. Gastric neurosis. Peritoneal tuberculosis. Cholecystitis. Anorexia. Hypothyroidism. Fatigue. Edema. Congestive Heart failure. Menorrhagia. Indigestion. Pharyngitis. Sjogren's Syndrome. Vaginal discharge. Ulcerative colitis. Foot pain.

* SI WU TANG - 四物汤 - Four Substances Formula. Tangkuei Four Combination

ACTIONS - Nourishes the Blood. Regulates the Liver. Improves Blood circulation. Regulates menstruation.

SYNDROMES - Liver Blood Deficiency. Liver Wind Stirring Internally: Liver Blood Deficiency Generates Wind. Liver Blood Stagnation due to Blood Deficiency. Insufficiency of the Chong and Ren channels.

CLINICAL MANIFESTATIONS - Dizziness. Blurred vision. Pale, lusterless complexion. Pale nails. Pale lips. Generalized muscle tension. Tremors and tics. Irregular menstruation with little flow. Amenorrhea. Periumbilical pain. Lower abdominal pain. Vertigo. Tinnitus. Blurred vision. Insomnia. Spotting of pale Blood. Postpartum uterine bleeding. Dry hair. Maybe Five Sole Heat. Delayed menstruation. Palpitations. Dizziness. Dry skin. Maybe leukorrhea. Maybe fever. Firm, painful abdomen. Sporadic

fever and chills. Menorrhagia. Hard abdominal masses with recurrent pain. Unstable fetus with bleeding. Chills and fever.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with acute, severe blood loss. Contraindicated for those with severe weakness or labored breathing. Modify for those with constitutional Spleen Yang Deficiency. Contraindicated for those with dehydration. Use with caution for those with Spleen and Stomach Deficiency due to the Stagnating nature of Shu Di Huang. Contraindicated for those with Blood or Qi collapse. Use with caution during pregnancy. This formula has shown the ability to reduce recovery time in penicillin induced dermatitis. This formula has shown the ability to reduce scopolamine-induced spatial cognitive deficits.

HERBS AND ACTIONS

-Shu Di Huang - Strengthens the Liver and Kidneys and nourishes the Yin of the Blood. With Bai Shao, strongly nourishes Liver Blood.

-Bai Shao - Nourishes Blood, preserves Yin, calms Liver Yang and alleviates pain. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision and dysmenorrhea due to Blood Deficiency or Blood Stasis.

-Dang Gui - Nourishes and invigorates the Blood, regulates Liver and Kidneys, regulates menses and alleviates pain. With Shu Di Huang, Bai Shao and Chuan Xiong, for menstrual irregularity, amenorrhea and dysmenorrhea due to Blood Deficiency or Stasis.

-Chuan Xiong - Invigorates Blood, moves Qi, releases Stagnation and alleviates pain. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses and amenorrhea.

TREATS

Primary dysmenorrhea. Irregular menstruation. Anemia. Threatened miscarriage. Postpartum weakness. Postpartum anemia. Insufficient lactation. Urticaria. Abnormal vaginal discharge. Ectopic pregnancy. Infertility. Vascular headache. Insomnia. Lumbago. Periarthritis of the shoulder. Dermatitis. Rosacea. Panarthralgia. Cataracts. Amenorrhea. Late menstruation. Optic atrophy. Vertigo. Paresthesia. Parkinson' disease. Addison's disease. Fever. Chronic laryngitis. Tinnitus. Neurasthenia. Hypotension. Lochiorrhea. Postpartum abdominal pain. Dry skin. Unilateral pain. Dry hair. Neurogenic headache. Headache due to trauma. Uterine bleeding. Postpartum clots or bleeding. Fetal restlessness. Lochioschesis. Menorrhagia. Psoriasis. Menstrual pain. Scanty menstruation. Breech presentation. Endometriosis. Pelvic inflammatory disease. Chronic nephritis. Sciatica. Itching. Allergic rhinitis. Eczema. Abdominal masses. Calf spasm. Gastralgia. Dizziness. Vaginal discharge. Numbness. AIDS/HIV. Constipation. Chronic fatigue syndrome. Chronic tonsillitis. Neurosis. Palpitations. Fatigue. Puerperal fever. Early menstruation. Systemic lupus erythematosus. Vaginitis.

Dandruff.

* XUE BI JING (XBJ) injection - 血必净注射液

Xuebijing (XBJ), a traditional Chinese medicine compound injection, activates blood circulation to dissipate blood stasis, eliminating pathogenic heat from the blood and degrading toxins.

Xuebijing injection (XBJ) is one of the therapeutic drugs recommended in the practice guidelines published by the Chinese Health Commission for the treatment of COVID-19. XBJ consists of Chi Shao, Chuan Xiong, Dan Shen, Hong Hua, and Dang Gui.

Clinically, XBJ is mainly used for the treatment of sepsis, infection-induced systemic inflammatory response syndrome (SIRS), and multiple organ dysfunction syndrome (MODS).

The injection has been included in the treatment guidelines for a number of viral infectious diseases in China, and recommended as a treatment for sepsis and septic shock. In Severe Community Acquired Pneumonia, XBJ injection has been shown to significantly improve the primary endpoint statistics of the pneumonia severity index and secondary clinical outcomes such as mortality, mechanical ventilation time, and duration.

Recordings Updated in May 2025

* BA ZHEN TANG - 八珍湯 - Eight Treasures Formula. Dang Gui and Ginseng Eight Combination. Eight Jewel Formula. Formula of Eight Treasure Ingredients. Eight Precious Ingredients Formula. Women's Precious Formula

ACTIONS - Tonifies and augments Qi and Blood.

SYNDROMES - Qi and Blood Deficiency. Liver and Spleen Deficiency.

CLINICAL MANIFESTATIONS - Pallid or sallow complexion. Palpitations with anxiety that may be continuous. Reduced appetite. Shortness of breath. Laconic speech. Easily fatigued extremities. Light-headedness and/or vertigo. Dizziness. Anorexia. Thirst. Course, dry skin. Headache. Blurred vision. Lassitude. Severe chills and fever. Under weight. Midline pain in women. Lower abdominal pain. Lower abdominal distention. Lumbago in women. Severe chills and fever. Irregular menstruation. Weight loss. Abscesses that neither suppurate nor improve. Continuous spotting from uterine bleeding. Weakness of the limbs. Itching.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Heat or Excess conditions.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi and strengthens the Spleen and Stomach. With Shu Di Huang, for severe Qi and Blood Deficiency due to loss of blood and Qi and Yin Deficiency. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency with Dampness, anorexia, diarrhea, vomiting, abdominal distention and fatigue. With Shu Di Huang, Bai Zhu, Fu Ling and Bai Shao, for Qi and Blood Deficiency.

-Bai Zhu - Tonifies the Spleen, augments Qi and dries Dampness. With Shu Di Huang and Bai Shao, for restless fetus due to Blood Deficiency, often with palpitations. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency. With Fu Ling and Sheng Jiang, for edema with Kidney Yang Deficiency. With Shu Di Huang, Dang Gui and Bai Shao, for unstable pregnancy with Blood Deficiency.

-Fu Ling - Dries Dampness and strengthens the Spleen. With Ren Shen and Bai Zhu, for weak and deficient Spleen with fatigue, anorexia and loose stools.

-Gan Cao - Augments Qi, warms and strengthens the Middle Jiao and moderates and harmonizes the harsh properties of other herbs. With Ren Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency.

-Shu Di Huang - Strengthens the Liver and Kidneys, and nourishes the Yin of the Blood. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Bai Shao, Dang Gui and Chuan Xiong, for anemia. With Ren Shen, Bai Zhu, Fu Ling, Dang Gui and Bai Shao, for anemia with fatigue and weakness.

-Bai Shao - Tonifies Blood and preserves Yin. With Shu Di Huang, strongly tonifies Liver Blood. With Shu Di Huang and Dang Gui, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Dang Gui, nourishes Yin and

Blood.

-Dang Gui - Tonifies and invigorates the Blood, moistens the Intestines and regulates the relationship between the Liver and Kidneys. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Bai Shao, Shu Di Huang and Chuan Xiong, for menstrual irregularity, amenorrhea, and dysmenorrhea due to Blood Deficiency or Blood Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Bai Shao and Fu Ling, for diarrhea during pregnancy with mild abdominal pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. With Ren Shen, Bai Zhu, Shu Di Huang and Bai Shao, for general menstrual disorders with fatigue and weakness due to Qi and Blood Deficiency.

-Chuan Xiong - Invigorates the Blood, activates Qi, releases constraint and alleviates pain. With Dang Gui, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses, and amenorrhea. With Dang Gui, Shu Di Huang and Bai Shao, for headache from Blood Deficiency.

-Sheng Jiang - Regulates the Spleen and Stomach. With Da Zao, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen, harmonizes the Ying and Wei, Nourishes the Blood, prevents injury from harsh Blood movers and assists the movement of Qi.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs. With Ren Shen, Bai Shao and Fu Ling, for weakness and lassitude due to Spleen and Stomach Deficiency. With Sheng Jiang, enhances the effects of other Qi and Blood tonifying herbs by facilitating their digestion and absorption.

TREATS

Circulatory problems. Malnutrition. Metrorrhagia. Chronic hepatitis. Non-healing ulcers. Thrombocytopenic purpura. Atrophic gastritis. Peripheral neuritis. Coronary artery disease. Weakness during convalescence. Lumbago in women. Breech presentation. Chronic abscesses. Degeneration of the circulatory and digestive organs. Scanty menstruation. Amenorrhea. Eczema. Headache. Alopecia. Dizziness. Red vaginal discharge. Esophageal cancer. Blurred vision. Lower abdominal pain. Numbness. Anxiety. Fever. Dermatitis. Deafness. Forgetfulness. Fatigue. Hypoglycemia. Meniere's disease. Night sweats. Puerperal fever. Dyspnea. Gingivitis. Abdominal pain during pregnancy. Insufficient lactation. Irritability during pregnancy. Eclampsia. Gout. Cervical cancer. Temporomandibular joint syndrome (TMJ). AIDS/HIV/ARC. Hip pain. Prematurely gray hair. Weight loss. Chronic diseases. Aplastic anemia. Habitual miscarriage. Nervous ulcers. Sheehan's disease. Orbital optic neuritis. Corneal ulcer. Recovery from chronic illness. Post-surgical recovery. Prevention of miscarriage. Neurasthenia. All kinds of chronic diseases. Metrorrhagia during pregnancy. Irregular

menstruation. Dysmenorrhea. Infertility. Breast discharge. Excessive tearing when exposed to Wind. Vertigo. Uterine myoma. Stomach cancer. Parkinson's disease. Anorexia. Paresthesia. Hyperthyroidism. Multiple sclerosis. Behcet's disease. Tinnitus. Palpitations. Hypotension. Dysphagia. Interstitial cystitis. Spontaneous perspiration. Lung cancer. Strangury. Periodontitis. Constipation. Vaginal bleeding during pregnancy. Postpartum constipation. Stiff neck. Dry skin. Heel pain. Chemotherapy for breast cancer. Cirrhosis of the Liver. Leukopenia. Foot pain. Abdominal masses associated with AIDS/HIV.

* BAN XIA HOU PO TANG - 半夏厚朴汤 - Pinellia And Magnolia Bark Formula

ACTIONS - Activates Qi. Descends Rebellious Qi. Eliminates Phlegm. Dissipates clumps. Relieves Stagnation.

SYNDROMES - Liver Qi Stagnation: Phlegm and Qi Stagnant and Blocked (Plum-Pit Qi Stagnation). Qi Stasis with Phlegm Retention.

CLINICAL MANIFESTATIONS - A feeling of obstruction in throat as if a slice of roast meat were stuck there which cannot be coughed up nor swallowed down. This sensation becomes more prominent during emotional upset and subsides when relaxed. Distention and pain in the sides or flanks. Suffocating sensation in the chest. Tendency to sigh. Melancholy. Depression. Hypochondriac pain. Coughing with profuse phlegm. Vomiting. Difficulty swallowing. A delicate constitution. A tendency towards fatigue. Palpitations. Abdominal distention. Muscular and skin flaccidity. Fear. Edema. Asthma. Insomnia. A stifling sensation in the chest and hypochondrium. Irritability. Inappropriate anger. Women: Irregular menses. Dysmenorrhea. Breast distention and pain before and during menses.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with chest pain due to Lung Yin Deficiency with red cheeks, a bitter taste in the mouth and a red tongue with a scanty coating. Contraindicated for those with Heat due to Qi Stagnation. Do not use long term.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, stops vomiting, descends rebellious Qi and harmonizes the Stomach. With Hou Pu, for Phlegm-induced cough, vomiting, and epigastric and abdominal distention, Phlegm-Dampness with Qi Stagnation with a sensation of fullness in the chest with coughing and wheezing, nausea, vomiting and a sensation of distention in the hypochondrium and Plum-pit Qi Stagnation. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools, treats Phlegm, thin mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia. With Sheng Jiang, for vomiting due to Cold, thin mucus. With Hou Pu, Zi Su Ye and Fu Ling, for Plum-pit Qi Stagnation.

- Hou Pu - Moves Qi, resolves Stagnation, descends rebellious Qi, dries Dampness, transforms Phlegm eliminates stuffiness and aids in dissipating clumps. With Zhi Ban Xia and Fu Ling, for Phlegm Obstructing the Qi, leading to coughing, vomiting or a sense of something stuck in the throat.

-Fu Ling - Promotes urination, drains Dampness, Strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm.

-Sheng Jiang - Warms the Middle, stops vomiting, warms the Lungs and stops coughing. With Zhi Ban Xia, harmonizes the Stomach and stops vomiting and coughing.

-Zi Su Ye - Promotes the movement of Spleen and Stomach Qi (Harmonizes the Middle Jiao, relieves intestinal gas), improves Lung function and expands the chest (relieves Cold induced wheezing). With Zhi Ban Xia and Hou Pu, for Spleen and Stomach Qi Stagnation with accumulation of Phlegm.

TREATS

Globus hystericus. Depression syndrome. Hysteria. Functional gastrointestinal disorders. Recurrent neurotic esophageal constriction. Chronic laryngitis. Tracheitis. Neurosis. Throat blockage. Ascites. Emotional instability. Neurogenic vomiting. Psychosis. Perimenopausal syndrome. Laryngitis. Edema of the vocal cords. Hyperthyroidism. Indigestion. Emphysema. Meniere's disease. Pharyngeal paresthesia. Sleep apnea. Hypopnea. Panic disorder. Gastroatonia. Amenorrhea. Irregular menstruation. Uterine myoma. Dysmenorrhea. Nausea/Vomiting. Otitis media. Schizophrenia. Chronic fatigue syndrome. Vertigo. Stuffiness in the chest. Stress-related breathing problems. Neurasthenia. Dysphagia. Fatigue. Menopause syndrome. Breast distention. Gastrointestinal neurosis. Nervous exhaustion. Chronic bronchitis. Hoarseness due to the common cold. Asthma. Whooping cough. Toxemia during pregnancy. Blood vessel disorders. Edema. Esophageal spasms. Gastric relaxation. Chronic gastritis. Irritable bowel syndrome. Epilepsy. Parkinson's disease. Acute tonsillitis. Chronic tonsillitis. Goiter. Cervical spine syndrome. Morning sickness. Vertebrobasilar insufficiency. Swallowing disorder in aspiration pneumonia. Stress. Enteritis. Gastroptosis. Insomnia. Cough. COPD. Bi-polar disorder. Peptic ulcer. Anxiety. Anxiety neurosis. Dizziness. Palpitations. Borborygmus. Abdominal fullness and distention. Esophageal cancer. Reflux esophagitis. Pharyngitis.

* DANG GUI YU ZHU TANG - 当帰瘀逐湯 - Dang Gui Dispel Stasis Formula

ACTIONS - Enriches Yin. Nourishes Blood. Clears Heat. Regulates menstruation.

SYNDROMES - Kidney and Liver Yin Deficiency Heat. Blood Dryness. Heat Accumulation in the Stomach and Intestines.

CLINICAL MANIFESTATIONS - Low back, knees and legs painful and weak. Foot pain. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five-Sole-Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Dry skin. Deafness. Steaming bones. Tidal fevers. Loose teeth. Dripping urine. Scanty menstruation. Delayed menstruation. Thirst. Dry constipation. Dry tongue. Numbness and weakness at the waist and knees. Heel pain. Dry mouth. Blurred vision. Hemoptysis. Asthma. Hot flashes. Nocturnal emissions. Urinary incontinence. Spontaneous and nocturnal emissions. Night sweats.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis, regulates the menses, moistens the Intestines and unblocks the bowels. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Bai Shao - Nourishes the Blood and regulates menstruation. With Gan Cao,regulates the relationship between the Liver and Spleen and nourishes the sinews. With Dang Gui, nourishes Yin and Blood.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat and cools the Blood. With Chuan Xiong and Dang Gui, for Blood-Stasis induced gynecological disorders such as immobile abdominal masses and amenorrhea with abdominal pain. With Bai Shao, for spasms and cramping pain associated with Blood Deficiency and Blood Stagnation. With Da Huang, for chronic accumulation in the abdomen, blockage of urine, constipation, Qi rushing upward to the Heart, abdominal distention and rebellious damage from food and drink.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses, and amenorrhea. With Di Huang, Dang Gui and Bai Shao, for headache due to Blood Deficiency.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Bai Shao, for Blood Deficiency Heat.

-Da Huang - Drains Heat, purges accumulations, clears Heat, transforms Dampness, promotes urination, invigorates the Blood and dispels Blood Stasis. With Dang Gui, for Blood Stasis. With Di Huang, for parched, dry stools with damaged Yin.

-Mang Xiao - Purges accumulations, guides out Stagnation, softens hardness, moistens Dryness, clears Heat and drains Fire. With Da Huang, for constipation due to Heat in the Stomach and Intestines. With Da Huang and Gan Cao, for moderate constipation due to accumulation of Excess Heat.

-Gan Cao - Moderates spasms, alleviates pain, clears Heat and moderates and harmonizes the harsh properties of other herbs.

TREATS

Amenorrhea. Night sweats. Toothache. Dry skin. Heel pain. Hot flashes. Nocturnal emissions. Constipation. Urinary incontinence. Foot pain.

* GE GEN TANG - 葛根湯 - Kudzu Formula - Pueraria Combination

ACTIONS - Releases Wind-Cold in the exterior and muscle layer. Generates Fluids. Relieves muscle-ache of the neck.

SYNDROMES - Tai Yang Shang Han with stiff neck and upper back. Transitional stage between acute and chronic rhinitis or sinusitis. Initial stage Wind-Cold Bi.

CLINICAL MANIFESTATIONS - Chills and fever. Anhidrosis. Neck pain. Stiff and rigid neck, shoulders and upper back. Intolerance of Wind. Dislike of Cold. Inflammation. Diarrhea. Muscle spasms. Mucosal swelling. Nasal congestion. Sensitivity to dust. Headache. Wind-Cold Bi (few joints affected, inflammation intense but short lived, changes over days or weeks)

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Lin Syndrome. Contraindicated for those with Yin Deficiency bleeding. Contraindicated for those with bacterial infections (Heat). Contraindicated for those with skin infections. Contraindicated for those with Wind-Heat. Contraindicated for those with a weak pulse. Contraindicated for those with debility. Contraindicated for those with copious urination. Use caution for those with hypertension. Avoid profuse perspiration. Use only for short periods of time.

HERBS AND ACTIONS

-Ge Gen - Releases Exterior conditions and releases the muscles, especially of the neck and upper back by bringing fluids to the area, relieves Heat and generates fluids. With Ma Huang, Gui Zhi and Bai Shao, for Wind-Cold with stiffness and tension in the upper back and neck.

-Ma Huang - Strongly releases the exterior, disperses Cold, moves Lung Qi and stops wheezing. With Gui Zhi for Wind-Cold excess conditions with fever and chills but no sweat and Wind-Cold-Damp Bi.

-Gui Zhi - Releases the exterior, warms the channels and collaterals to relieve pain, warms and facilitates the flow of Yang Qi in the chest, warms and facilitates the flow of Blood through the vessels, adjusts the Ying and Wei and releases the muscle layer. With Ge Gen, releases the exterior and relieves the muscle layer. With Bai Shao, for

External Wind-Cold with disharmony between the Ying and Wei (Tai Yang Zhong Feng), with spontaneous sweating, fever and chills.

-Bai Shao - Adjusts the Ying and Wei and preserves Yin by preventing excessive diaphoresis. With Gan Cao, relieves muscle spasms and therefore helps relieve neck and back stiffness. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration.

-Sheng Jiang - Releases the exterior, disperses Cold, warms the middle, stops vomiting, stops cough and reduces the toxicity of other herbs. With Da Zao, protects the Ying and harmonizes and protects the Stomach. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and Anhidrosis. With Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens. with Ma Huang, strongly creates sweating to treat all externally contracted Wind-Cold disorders, especially those in which Wind-Cold has constrained Lung Qi with cough and wheezing and the failure of Lung Qi to descend causing nausea and vomiting.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, protects the Ying and harmonizes and protects the Stomach.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Common cold. Upper respiratory tract infection. Influenza. Stomach flu. Acute cervical myositis. Tendinitis of shoulder. Bursitis of shoulder. Shoulder pain. Allergic rhinitis. Early-stage poliomyelitis. Early-stage encephalitis. Chronic pediatric diarrhea. Neck pain and stiffness. Frozen shoulder. Pneumonia. Bronchitis. "40 years wrists". "50 years shoulders". Neuralgia. Eczema. Torticollis. Lumbar disc disease. Trigeminal neuralgia. Hypertension. Gingivitis. Iritis. Bacillary dysentery. Soft tissue injuries. Bell's palsy. Scleroderma. Sinusitis. Painful obstruction. Psoriasis. Constipation alternating with diarrhea. Anorexia. Chronic rhinitis. Cervical osteoarthritis. Cirrhosis of the Liver with gynecomastia. Urticaria. Rubella. Furuncles. Boils. Keratitis. Hordeolum. Conjunctivitis. Trachoma. Otitis media. Stuffy nose. Otitis externa. Meningitis. Lymphadenitis. Mastitis. Scarlet fever. Tonsillitis. Rheumatoid arthritis. Lumbago. Cervical spine disease. Periarthritis of the shoulder. Lumbar strain. Cerebral vascular insufficiency. Cerebrovascular disease. Acute enteritis. Fever. Facial paralysis. Tension headache. Painful gynecomastia in Liver cirrhosis. Aqueous flare after complicated cataract surgery. Headache. Gastritis. Diarrhea. Cervical spondylosis. Arthralgia. Gynecomastia. Eclampsia.

* GUI SHAO DI HUANG TANG - 归芍地黄汤 - Angelica, Peony And Rehmannia Formula

ACTIONS - Nourishes the Liver and Kidneys. Tonifies Yin and Blood. Clears Deficiency

Heat.

SYNDROMES - Kidney and Liver Yin and Blood Deficiency.

CLINICAL MANIFESTATIONS - Low back, knees and legs painful and weak. Foot pain. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five-Sole-Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Dry skin. Deafness. Steaming bones. Delayed closing or unclosed fontanel in infants. Tidal fevers. Loose teeth. Dripping urine. Thirst. Dry tongue. Numbness and weakness at the waist and knees. Heel pain. Dry mouth. Dry throat. Blurred vision. Urinary incontinence. Spontaneous and nocturnal emissions. Night sweats.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen Deficiency type diarrhea and indigestion with a white greasy tongue coat. Use caution in areas where diseases are predominantly caused by Dampness. Contraindicated for those with Yang Deficiency.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, regulates the menses, disperses Cold and stops pain due to Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Bai Shao and Fu Ling, for diarrhea during pregnancy with mild abdominal pain.

-Bai Shao - Nourishes the Blood, regulates menstruation, softens the Liver and relieves pain. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis.

-Shu Di Huang - Tonifies the Kidneys and nourishes Jing, Yin and Blood. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating .

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Jing and Yin and stops perspiration. With Shan Yao, tonifies the Liver and Spleen. With Shu Di Huang and Shan Yao, for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and astringes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Mu Dan Pi - Clears Heat, cools the Blood clears and Deficiency Fire.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

TREATS

Dysmenorrhea. Flat warts. Tinnitus. Low back pain. Weakness. Spermatorrhea. Dry skin. Heel pain. Infertility. Parkinson's disease. Deafness. Knee pain. Nocturnal emissions. Toothache. Urinary incontinence. Foot pain.

* GUI ZHI SHAO YAO ZHI MU TANG - 桂枝芍藥知母湯 - Cinnamon Twig, Peony And Anemarrhena Formula

ACTIONS - Unblocks Yang Qi. Promotes the movement of Qi. Dispels Wind. Eliminates Dampness. Clears Heat. Unblocks the channels and collaterals. Stops pain.

SYNDROMES - Recurrent Wind-Cold-Damp Bi. Wind-Damp Bi with formation of Heat. Wind-Phlegm-Dampness with formation of Heat.

CLINICAL MANIFESTATIONS - Swollen painful joints (especially lower limbs). Joints are warm to the touch (may be burning and swollen). The pain is worse at night. Reduced range of motion. Chills. Anhidrosis. Weight loss. Shortness of breath. Muscular atrophy. Difficulty walking and moving. Thirst. Hemiplegia. Rigidity of the limbs. Headache. Dizziness. Vertigo. Nausea. Vomiting. Edema. Emaciation. Swollen feet. Numbness of the extremities. Paralysis. Fatigue.

HERBS AND ACTIONS

-Gui Zhi - Releases the Exterior, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang, transforms Qi and releases the muscle layer. With Ma Huang, for Wind-Cold-Damp Bi. With Bai Shao,for External Wind-Cold with disharmony between the Ying and Wei, with spontaneous sweating. With Fu Zi, for chills and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi and backache due to Wind-Cold Damp Bi.

-Ma Huang - Releases the Exterior, disperses Cold, promotes urination and reduces edema.

-Fu Zi - Disperses Cold, warms the channels, warms the Spleen and dispels Dampness. With Bai Zhu, for Wind-Damp Bi.

-Zhi Mu - Nourishes Yin, moistens Dryness, generates Fluids and ameliorates the

dryness of tonifying or warming herbs.

-Bai Shao - Nourishes Blood, astringes Yin and alleviates pain.

-Bai Zhu - Tonifies the Spleen, tonifies Qi, dries Dampness and stabilizes the exterior.

-Fang Feng - Releases the exterior, expels External Wind-Cold and Heat, expels Wind-Cold-Dampness and alleviates pain.

-Sheng Jiang - Strengthens the spreading and mobilizing actions of the other herbs. With Gan Cao, harmonizes and regulates the Spleen and Stomach.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Rheumatoid arthritis. Connective tissue disorders. Gouty arthritis. Severe migratory arthralgia. Chronic arthritis. Periarthritis of the shoulder. Deep vein thrombosis. Cor pulmonare. Osteoarthritis. Sequelae of cerebrovascular accident. Edema. Arthralgia. Gout. General pain. Hyperpnea. Numbness. Paresthesia. Muscular atrophy in the lower limbs. Psoriasis. Sciatica. Erythema nodosum. Sequelae of cerebrovasculitis with hemiplegia. Low back pain. Paralysis. Painful obstruction.

* GUI ZHI TANG - 桂枝湯 - Cinnamon Twig Formula

ACTIONS - Releases Wind-Cold from the muscle layer. Regulates and harmonizes the Ying and Wei.

SYNDROMES - Wind-Cold attacking the Exterior with deficiency of Ying and Wei. Tai Yang Zhong Feng.

CLINICAL MANIFESTATIONS - Fever and chills unrelieved by sweating. Headache. Spontaneous perspiration. Decreased body resistance. Aversion to Wind. Nasal congestion. No thirst. Dry heaves. Stiff neck.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Exterior Cold with Interior Heat. Contraindicated for those with Tai Yang Shang Han. Contraindicated for those who drink alcohol frequently. Use caution during the summer or spells of hot weather.

NOTES - Porridge should be consumed with this formula to strengthen the Interior.

HERBS AND ACTIONS

-Gui Zhi - Releases the exterior, adjusts the Ying and Wei, warms the channels and

collaterals to relieve pain, disperses Cold, unblocks Yang, transforms Qi and releases the muscle layer.
With Bai Shao, harmonizes the Ying and Wei and warms and tonifies the Middle Jiao.

-Bai Shao - Astringes the Yin and adjusts the Ying and Wei.

-Sheng Jiang - Helps release the exterior, treats nausea and vomiting. strengthens the spreading and mobilizing actions of the other herbs and adjusts the Ying and Wei. With Gan Cao, harmonizes and regulates the Spleen and Stomach. With Da Zao, regulates disharmony between the Ying and Wei. and benefits the Middle Qi.

-Da Zao - Helps Bai Shao regulate the Ying and Wei. With Gan Cao, tonifies and harmonizes the Middle Jiao.

-Gan Cao - Resolves Phlegm, stops cough, clears Heat and moderates and harmonizes the harsh properties of the other herbs.

TREATS

Common cold. Fever. Upper respiratory tract infection. Influenza. Puerperal fever. Allergic rhinitis. Angioedema. Cerebrovascular spasm. Eczema. Bronchial asthma. Testicular pain. Appendicitis. Allergic purpura. Enuresis in children. Headache. Cough. Uterine fibroids. Bronchitis. Hemilateral sweating. Urticaria. Morning sickness. Frostbite. Tinea. Neuralgia. Abdominal pain due to chills. Eclampsia. Neurasthenia. Atrioventricular blockage. Hernia. Sciatica. Itching. Hyperactivity disorder. Psoriasis. Endometriosis. Gastritis. Pneumonia. Spontaneous perspiration. Unilateral pain.

* QI JU DI HUANG WAN - 杞菊地黄丸 - Lycium Fruit, Chrysanthemum And Rehmannia Formula

ACTIONS - Enriches Yin. Nourishes the essence of the Liver and Kidneys. Brightens eyes. Enriches Blood. Increases phagocytic activity. Increases lymphatic transformation. Increases production of immunoglobins. Protects against platelet damage by radiation. Protects against Liver damage by chemicals.

SYNDROMES - Liver (Yin and) Blood Deficiencies. Liver and Kidney Yin Deficiencies (Liver Yin Deficiency is the prominent factor). Liver and Kidney Yin Deficiency with Liver Yang Rising. Liver and Kidney Yin Deficiencies with eye diseases.

CLINICAL MANIFESTATIONS - Dry eyes. Diminished visual acuity. Photophobia. Tearing when exposed to Wind. Painful eyes. Blurred vision. Lower back pain. Weakness of the lower back, knees and extremities. Spontaneous and nocturnal emissions. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five Sole Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder / Xiao Ke. Decreased libido. Maybe constipation. Dizziness. Muscular weakness. Dry skin.

Deafness. Steaming bones. Tidal fevers. Loose teeth. Dripping urine. Thirst. Dry tongue. Numbness and weakness at the waist and knees. Urinary incontinence. Heel pain. Knee pain. Night sweats.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen Deficiency type diarrhea and indigestion with a white greasy tongue coat. Contraindicated for those with Yang Deficiency.

HERBS AND ACTIONS

-Gou Qi Zi - Nourishes and tonifies the liver and Kidneys, brightens eyes and enriches Yin. With Ju Hua, for Liver and Kidney Deficiencies with Jing and Blood unable to rise and nourish the eyes with tinnitus, headache, and visual impairment and Liver Yang Rising or Liver Wind Stirring Internally. With Shu Di Huang, for Liver and Kidney Deficiency.

-Ju Hua - Clears the Liver and eyes, calms the Liver and extinguishes Wind.

-Shu Di Huang - Nourishes Yin and Blood and tonifies the Kidneys. With Shan Yao and Shan Zhu Yu, for dizziness, weak and sore back, impotence, spermatorrhea, night sweats, due to Kidney and Liver Yin Deficiency. With Shan Yao and Ze Xie, for ascendant Fire due to exhaustion of Kidney Yin. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes essence and stops excessive perspiration. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Yao, tonifies the Liver and benefits the Spleen. With Shu Di Huang, Shan Yao and Gou Qi Zi, for True Yin Deficiency.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Mu Dan Pi - Clears Heat and clears Deficiency Fire. With Ju Hua, for dizziness and red, swollen eyes due to ascending Liver Fire.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

TREATS

Diabetes. Glaucoma. Ophthalmalgia. Hyperemia. Loss of muscle power in the feet. Dry mouth. Neurasthenia. Pulmonary tuberculosis. Chronic nephritis. Hyperthyroidism. Chronic glomerulonephritis. Chronic urinary tract infection. Hypertension. Failure to thrive. Functional uterine bleeding. Optic neuritis. Optic nerve atrophy. Central retinitis. Retrobulbar neuritis. Photophobia. Blurred vision. General visual disturbance. Menopause. Cataract. Premenstrual syndrome. Coronary Heart disease. Obesity. Knee pain. Headache. Chronic ocular disorders. Blepharitis. Dizziness. Meniere's disease. Oliguria. Hyperglycemia. Numbness. AIDS/HIV. Constipation. Tinnitus. Deafness. Forgetfulness. Weakness. Hoarseness. Flaccid paralysis. Night sweats. Ascites. Toothache. Dry skin. Urinary incontinence. Unilateral pain. Red, swollen eyes. Nephroatrophy. Senility. Impotence. Spermatorrhea. Esophageal cancer. Chronic asthma. Bronchitis. COPD. Side effects of steroids. Allergic disorders. Bronchiaesthenia. Urticaria. Chronic hepatitis. Nocturnal emissions. Irregular menstruation. Addison’s disease. Congestive Heart failure. Sore throat. Retarded growth in children. Vitreous opacity. Photosensitivity. Redness, swelling and pain of the eyes. Chronic glaucoma. Excessive tearing when exposed to Wind. Tourette syndrome. Atherosclerosis. Stroke. Retinitis pigmentosa. Insomnia. Conjunctivitis. Cough. Vertigo. Kidney Failure. Hematuria. Paresthesia. Anemia. Fever. Neurosis. Low back pain. Hypotension. Amenorrhea. Hyperlipoproteinemia. Palpitations. Macular degeneration. Premenstrual tension. Hemiplegia. Sjogren's Syndrome. Dysmenorrhea. Heel pain. Eye pain. Poor vision associated with AIDS/HIV.

* YI QI CONG MING TANG - 益氣聰明湯 - Ginseng, Astragalus And Pueriara

ACTIONS - Strengthens and raises the Qi of the Middle Jiao. Improves visual and aural acuity.

SYNDROMES - Long-term Middle Jiao Qi Deficiency with visual and aural disturbances.

CLINICAL MANIFESTATIONS - Pterygium. Tinnitus. Hearing loss. Diminished visual and aural acuity. Blurred vision. Abdominal pain. Dizziness. Light headedness. Anorexia. Spontaneous sweating. Chronic diarrhea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not use if eye and ear disorders are due to Excess. Avoid exposure to smoke and fire and refrain from eating sour, cold, raw, oily or greasy foods while taking this formula.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen and raises the Yang Qi of the Spleen and Stomach. With Ren Shen, for Qi Deficiency with general debility, anorexia, and spontaneous sweat. With Sheng Ma, raises Yang Qi of the Spleen, allowing turbid Yin to descend and be eliminated, treating chronic diarrhea, a dragging sensation in the

abdomen, fatigue, shortness of breath, uterine bleeding and prolapses.

-Ren Shen - Tonifies Spleen and Stomach Qi.

-Gan Cao - Tonifies the Spleen and augments Qi. With Ren Shen, relieves palpitations and anxiety. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency.

-Sheng Ma - Raises Yang and lifts Sunken Qi.

-Ge Gen - Raises Spleen Yang and stops diarrhea.

-Man Jing Zi - Disperses Wind, clears Heat and clears and benefits head and eyes. With Ren Shen and Huang Qi, for eye disease, tinnitus, dizziness, and deafness due to deficiency. With Bai Shao, soothes the Liver.

-Bai Shao - Nourishes Blood and astringes Yin. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach, muscle spasms, especially in the calf, due to Blood Deficiency and regulates the relationship between the Liver and Spleen and nourish sinews. With Huang Qi and Ren Shen, astringes sweating from Deficiency.

-Huang Bai - Cools Upper Jiao Blood Heat, invigorates the Blood and disperses Stasis.

TREATS

Pterygium. Tinnitus. Hearing loss. Presbycusis. Age related hearing loss. Obstructive visual disturbances. Chronic visual disturbances. Cognitive dysfunction. Hypoacusis. Dizziness. Forgetfulness. Cerebral thrombosis. Cerebral arteriosclerosis. Cataract. Vertigo. Otitis media. Colitis. Tic douloureux. Optic atrophy. Anorexia. Ulcerative colitis.

Bu Gan Tang, Gu Ben Wan, Guan Xin Er Hao, Gui Zhi Jia Fu Zi Tang, Lian Po Yin, Ma Huang Fu Zi Xi Xin Tang, Si Miao Wan, Xiao Chai Hu Tang, Yi Qi Huo Xue Tong Luo

Recordings Updated in May 2025

* BU GAN TANG - 補肝汤 - Tonify The Liver Formula

ACTIONS - Tonifies and Regulates Blood. Nourishes Liver Yin.

SYNDROMES - Liver Wind Stirring Internally: Liver Blood Deficiency Generates Wind. Liver Yin and Blood Deficiency.

CLINICAL MANIFESTATIONS - Headache. Dizziness. Tinnitus. Dry eyes. Photophobia. Blurred vision. Irritability. Numbness. Bad temper. Muscle twitches. Malar flush. Fatigue.

HERBS AND ACTIONS

-Dang Gui - Nourishes, invigorates and harmonizes the Blood. With Bai Shao, regulates and harmonizes Blood. With Bai Shao, Shu Di Huang and Chuan Xiong, for menstrual irregularity, amenorrhea and dysmenorrhea due to Blood Deficiency or Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood and promotes Qi movement. With Dang Gui, for Blood Deficiency causing menstrual problems.

-Bai Shao - Nourishes the Blood, regulates the menses, calms Liver Yang and preserves Yin. With Gan Cao, for muscle spasms, especially in the calf, due to Blood Deficiency.

-Shu Di Huang - Nourishes Blood and nourishes Liver and Kidney Yin. With Dang Gui and Bai Shao, for dizziness, insomnia, palpitations and menstrual dysfunction due to Blood Deficiency.

-Suan Zao Ren - Nourishes Heart Yin, augments Liver Blood, calms the Shen and astringes perspiration.

-Mu Gua - Increases Qi and Blood circulation, unblocks the channels and harmonizes the Stomach With Dang Gui and Bai Shao, for muscle spasms due to Blood Deficiency.

-Gan Cao - Tonifies Qi, moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Dang Gui, moderates spasms.

TREATS

Photophobia. Anemia. Headache. Amenorrhea. Late menstruation. Dizziness. Paresthesia. Parkinson' disease. Tinnitus. Neurasthenia. Weakness. Scanty menstruation. Dandruff. Muscle spasms. Malaise. Dry eyes. Chronic fatigue syndrome. Insomnia. Vertigo. Numbness. AIDS/HIV. Neurosis. Hypotension. Fatigue. Unilateral pain

* GU BEN WAN - 固本丸 - Formula To Strengthen The Body. Replenish the Root Formula

ACTIONS - Enriches Yin. Moistens Dryness.

SYNDROMES - Dryness. Lung Yin Deficiency. Stomach Yin Deficiency. Lung Dryness.

CLINICAL MANIFESTATIONS - Forgetfulness. Constipation. Excess thirst. Dry mouth and/or throat. Dry skin. Chronic cough (usually dry). Night sweats. Fatigue.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Discontinue use during the early stages of acute infection or illness, such as cold or flu. Do not use for Stagnation of Phlegm or Dampness. Use with caution in Spleen deficient patients with a tendency toward loose stools, diarrhea, poor appetite or chronic digestive weakness.

HERBS AND ACTIONS

-Tian Dong - Nourishes Kidney Yin, clears Lung Heat, sedates Fire, moistens the Lungs, nourishes the Kidneys, generates fluids and resolves Phlegm.

-Mai Dong - Moistens the Lungs, nourishes Yin, stops coughing, nourishes Stomach Yin, generates Fluids and moistens the Intestines. With Tian Dong, for Lung and Kidney Yin Deficiency with consumptive coughing and occasional hemoptysis. With Di Huang, for hematemesis or epistaxis due to Yin Deficiency with Excess Heat.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin, generates fluids and cools Heart Fire. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, tonifies the Lungs, nourishes the Blood and promotes the generation of Body Fluids.

-Hua Shi - Promotes urination and drains Heat from the Urinary Bladder.

TREATS

Forgetfulness. Cough. Diabetes. Night sweats. Nephritis. Constipation. Hyperthyroidism. Dry skin.

* GUAN XIN ER HAO - 冠心二号 - Recipe #2 For Coronary Heart Disease

ACTIONS - Invigorates the Blood. Promotes the movement of Qi. Dispels Blood Stasis.

Relieves pain. Clears Heat. Cools the Blood.

SYNDROMES - Blood Stagnation.

CLINICAL MANIFESTATIONS - Palpitations. Stabbing pain in the anterior region over the Heart. Suffocating sensation in chest or oppressed sensation in the sternum. Maybe drawing pain down internal aspect of arm or back (especially the left arm). Pain (in chest and/or arm) tends to be severe and intermittent. In severe cases: Cold limbs. Cyanosis of lips and nails.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with menorrhagia. Contraindicated for those with Blood Deficiency without Stasis. Contraindicated during pregnancy.

NOTES - Modern research has shown that this formula has remarkable effects in dilating the coronary artery, increasing the volume of Blood flow of the coronary artery, raising the hypoxia tolerance of the cardiac muscle, inhibiting thrombosis, promoting the activity of the fibrinolytic system, inhibiting platelet aggregation and promoting the restoration of necrotic cardiac muscle.

HERBS AND ACTIONS

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat and soothes irritability.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat and cools the Blood.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

-Jiang Xiang - Disperses Blood Stasis, stops bleeding, invigorates the Blood, promotes the movement of Qi and alleviates pain. With Dan Shen, for Angina pectoris .

TREATS

Chronic obstructive cerebral vascular disease. Angina pectoris. Cerebral thrombosis. Palpitations. Acute myocardial infarction. Myocardial ischemia. Cerebral embolism. Stroke. Coronary Heart disease.

* GUI ZHI JIA FU ZI TANG - 桂枝加附子湯 - Cinnamon Twig And Prepared Aconite

ACTIONS - Expels Wind-Cold. Harmonizes the Ying and Wei. Restores Yang. Disperses Cold. Stops perspiration.

SYNDROMES - Complication of Tai Yang Zhong Feng. Wind-Cold Invasion with underlying Yang Deficiency. Wind-Cold-Damp-Bi.

CLINICAL MANIFESTATIONS - Chills. Mild fever. Aversion to Wind. Continuous perspiration (like leaking water). Difficult urination. Muscle spasms. Difficulty with flexing and extending the legs. Cold limbs. Chest pain referring to the back. A feeling of oppression over the chest. Stiff extremities. Painful urination. Generalized aches and pains. Difficulty rotating the trunk. Headache. Fatigue. Somnolence.

HERBS AND ACTIONS

-Gui Zhi - Releases the exterior, adjusts the Ying and Wei, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang, transforms Qi and releases the muscle layer. With Bai Shao, harmonizes the Ying and Wei and warms and tonifies the Middle Jiao. With Fu Zi, for backache due to Wind-Cold Damp Bi and chills, painful extremities and difficulty in rotating the trunk due to Yang Deficiency with Wind-Cold-Damp Bi.

-Bai Shao - Alleviates pain, nourishes the Blood, astringes Yin and adjusts the Ying and Wei. With Gui Zhi. harmonizes the Ying and Wei in Tai Yang Zhong Feng. With Gan Cao, for muscle spasms, especially in the calf, due to Blood Deficiency.

-Sheng Jiang - Helps release the exterior, treats nausea and vomiting, disperses Cold, strengthens the spreading and mobilizing actions of the other herbs and adjusts the Ying and Wei. With Zhi Gan Cao, harmonizes and regulates the Spleen and Stomach. With Da Zao, regulates disharmony between the Ying and Wei. and benefits the Middle Qi. With Da Zao and Gui Zhi, benefits the Middle Qi, regulates the Ying and Wei, warms the channels and circulates Qi and Blood.

-Da Zao - Strengthens the Spleen, tonifies Qi, nourishes the Blood and moderates and harmonizes the harsh properties of the other herbs. With Gan Cao, tonifies the Middle Jiao and harmonizes.

-Gan Cao - Alleviates pain and moderates and harmonizes the harsh properties of the other herbs.

-Fu Zi - Disperses Cold-Dampness, warms the channels and reduces pain.

TREATS

Ephidrosis. Muscle spasms of the extremities. Neuralgia. Dysuria. Common cold. Influenza. Mild fever. Bronchitis. Continuous perspiration. Painfull obstruction.

Rheumatoid arthritis. Arthralgia. Sciatica. Motor paralysis. Rheumatic arthritis. Chest pain due to Wind-Phlegm. Pneumonia. Fatigue. Abdominal pain.

* LIAN PO YIN - 蓮朴飲- Coptis And Magnolia Bark Formula

ACTIONS - Clears Heat. Transforms Dampness. Regulates Qi. Harmonizes the Middle Jiao.

SYNDROMES - Damp-Heat in the Middle Jiao. Sudden Turmoil Disorder. Phlegm-Fire. Summerheat and Dampness.

CLINICAL MANIFESTATIONS - Simultaneous vomiting and diarrhea. Focal distention in the chest and epigastrium. A stifling sensation in the chest and epigastrium. Irritability. Acid regurgitation. Anorexia. Restlessness. Fatigue. Abdominal pain. A bitter taste in the mouth. Dark, scanty, possibly reddish urine.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only for Damp-Heat type sudden turmoil disorder. Contraindicated for those with Cold-Dampness.

HERBS AND ACTIONS

-Huang Lian - Cools Stomach Fire and Heat, alleviates nausea and descends rebellious Qi.

-Hou Po - Harmonizes the Stomach with a strong ability to promote the flow of Qi to treat rebellious Qi causing wheezing and nausea. With Huang Lian, for acute diarrhea associated with sudden turmoil disorder from Damp-Heat.

-Zhi Zi - Reduces rebellious Stomach Qi while clearing Heat agitation. With Dan Dou Chi, for insomnia and irritability from Deficiency due to Heat lingering in the chest.

-Dan Dou Chi - Reduces Food Stagnation and harmonizes the Middle Jiao.

-Shi Chang Pu - Transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen and promotes the movement of Qi. With Huang Lian and Hou Po, for sudden turmoil disorder from smoldering Damp-Heat.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, stops vomiting and harmonizes the Stomach. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach. With Hou Po, for Phlegm-induced cough, vomiting, and epigastric and abdominal distention.

-Lu Gen - Clears Stomach Heat, regulates Stomach Qi, relieves thirst, relieves food poisoning and stops vomiting. With Zhi Zi, for irritability.

TREATS

Bacterial dysentery. Acute gastroenteritis. Typhoid. Paratyphoid. Peptic ulcers. Infectious hepatitis. Chronic hepatitis. Salmonella food poisoning. Acute gastritis. Abdominal fullness and distention. Parasites. Fever. Myalgic encephalomyelitis. Abdominal pain. Anorexia. Night sweats. Asthma. Superficial gastritis. Gastritis. Duodenal ulcer. Stomach influenza. Acid reflux. Viral enteritis. Cholecystitis. Oliguria. Nausea/Vomiting. Chronic fatigue syndrome. Epstein-Barr virus syndrome. Diarrhea. Chronic colitis. Fatigue. Sweating from the hands and feet.

* MA HUANG FU ZI XI XIN TANG - 麻黃細辛附子湯 - Ephedra, Prepared Aconite And Asarum

ACTIONS - Disperses Wind-Cold. Replenishes Yang.

SYNDROMES - Wind Cold with Underlying Yang Deficiency. Tai Yang - Shao Yin. Headache due to Deficiency Cold. Kidney coughing (characterized by pain penetrating to the back).

CLINICAL MANIFESTATIONS - Sensation of extreme Cold. Severe chills. Chills are not relieved by clothing or covers. Slight fever. Anhidrosis. Exhaustion. Almost constant desire to sleep. Pale face. Cold extremities. Cold feet. Severe aversion to Cold. Headache. Shortness of breath. Fatigue. Joint pain. Edema. Cough. Pain penetrating to the back. Toothache. Sore throat. Raspy voice. Edema due to Wei Qi Stagnation. Weak extremities. Chronic wheezing. Severe pain and obstructed feeling over the throat.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only with mild Yang Deficiency. Do not use for those without Yang Deficiency. Contraindicated during pregnancy and while nursing. Contraindicated for those with Heat Excess and/or Dryness. Contraindicated for those with Yin Deficiency. This formula has successfully treated elderly patients with fever caused by bacterial infection of unknown origin who failed to respond to ofloxacin. This formula is a possible alternative treatment for fever that does not respond to antibiotics more at least three days.

HERBS AND ACTIONS

-Ma Huang - Strong diaphoretic, relieves the Exterior and dispels External Cold. With Fu Zi, for Wind-Cold Bi.

-Fu Zi - Stimulates Yang, warms the Interior and warms the channels. With Xi Xin, disperses Cold and stops pain for Cold damage both Internal and External with aversion to Cold, headache and generalized body aches with aching joints and Wind-Damp-Cold Bi with spasms of the joints and intolerable pain. With Ma Huang and Xi Xin, for Wind-Cold Attack with preexisting Yang Deficiency.

-Xi Xin - Releases Exterior Wind and Cold, disperses Wind-Cold and Internal Cold, alleviates pain, assists Ma Huang to release the Exterior, helps Fu Zi disperse Cold and focuses the actions of the formula on the Shao Yin. With Ma Huang, alleviates Wind-Cold-Damp Bi pain.

TREATS

Acute laryngitis. Chronic laryngitis. Kidney coughing. Skin disorders. Fibromyalgia. Connective tissue disorders. Sick sinus syndrome. Allergic rhinitis. Measles. Pneumonia. Trigeminal neuralgia. Bronchitis. Headache. Rhinitis. Sudden dysphonia. Emphysema complicated by infection. Acute exacerbation of chronic nephritis. Fatigue. Hypothyroidism. Acute exacerbation of chronic prostatitis. Acute exacerbation of prostatic hypertrophy. Impotence. Arthralgia. Toothache. Rheumatoid arthritis. Alopecia. Common cold in weak and elderly patients. Bronchial asthma. Influenza. Allergies. Arthritis. Blood vessel and nerve disorders. Chronic bronchitis. Pertussis. Viral pneumonia. Rheumatic arthritis. Facial paralysis. Sciatica. Sinusitis. Chronic pharyngitis. Chronic obstructive pulmonary disease. Skin Bi. Edema. Nephrotic syndrome. Acute exacerbation of chronic glomerulonephritis. Urticaria. Dyspnea. Peripheral neuropathy.

* SI MIAO WAN - 四妙丸 - Four Marvel Formula

ACTIONS - Eliminates Heat. Resolves Dampness.

SYNDROMES - Damp-Heat in the Lower Jiao. Atrophy disorder (Wei syndrome).

CLINICAL MANIFESTATIONS - Pain in low back and knees. Weakness or atrophy of lower extremities. Scanty yellow urine. Red, hot, swollen and painful feet or knees. Edema in lower legs. Eczema. Painful and swollen feet. Pain and swelling of the joints. Leukorrhea (thick, yellow and foul-smelling). Sores on lower extremities due to Damp. Severe numbness and weakness in lower extremities.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Modify for Lung Heat or Liver and Kidney Deficiency.

HERBS AND ACTIONS

-Huang Bai - Drains Damp-Heat, especially from the Lower Jiao and drains Kidney Fire.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, and clears Dampness from the Lower Jiao. With Huang Bai, for pain, swelling, and weakness of the lower extremities or skin lesions due to Wind-Dampness.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, clears Damp-Heat in the Lower

Jiao and regulates water metabolism.

-Yi Yi Ren - Promotes urination, leaches out Dampness, strengthens the Spleen, expels Wind-Dampness and clears Damp-Heat. With Huang Bai, Cang Zhu and Niu Xi, for Damp-Heat pouring downward leading to atrophy and weakness of the lower extremities.

TREATS

Urinary tract infection. Vaginitis. Cervicitis. Beriberi. Rheumatoid arthritis. Gouty arthritis. Osteoarthritis. Purulent otitis media. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Knee pain. Edema. Sciatica. Polymyositis/Dermatomyositis. Heel pain. Rheumatic fever. Vaginal discharge. Gonococcal arthritis. Low back pain. Tinea pedis. Eczema. Gonorrhea. Fibromyalgia. Prolonged menstruation. Atrophy (Wei) Syndrome. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Acute infectious multiple neuritis. Weakness. Impotence. Herniated lumbar disc. Peripheral neuropathy. Gout. Cervical polyps. Menorrhagia.

* XIAO CHAI HU TANG - 小柴胡汤 - Minor Bupleurum Formula

ACTIONS - Harmonizes and releases Shao Yang Stage disorders. Relieves the Liver. Harmonizes the Liver and Spleen.

SYNDROMES - Shao Yang Stage disorders. Gu Syndrome. Liver Qi Stagnation with Spleen Dampness. Heat in the Liver, Gallbladder, Stomach and/or Lungs.

CLINICAL MANIFESTATIONS - Alternating chills and fever. Dry throat. Bitter or sour taste in the mouth. Dizziness. Sensation of fullness in the chest and hypochondrium. Irritability. Heartburn. Chest distention. Difficulty taking deep breaths. Hardness beneath the Heart. Hypochondriac pain with pressure. Stress. Being downcast with no desire to eat. Anorexia. Vertigo. May be palpitations. Dysphoria. Retching. Abdominal pain. Stomach ache. Reduced appetite. Subcostal bloating. Depression. Amenorrhea. Tendency to diarrhea. Nervousness. Nausea. Vomiting. May be urinary dysfunction. Restlessness. Sometimes fatigue. Headaches (side of head). Rib pain. Achiness. Ear infection. Hearing difficulty. Red eyes. Stiff shoulders. Throat pain. Hip pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Excess above and deficiency below. Contraindicated for those with Liver Fire. Contraindicated for those with bleeding gums. Use with caution for those with Liver Yang Rising. Use with caution for those with hypertension. Use with caution for those with hematemesis due to Yin Deficiency. Use with caution for those with Yin and/or Blood Deficiency. Acute Pneumonitis maybe associated with interferon in combination with this formula. Concurrent use of this formula and Interleukin 2 may have a

synergistic anti-tumor effect against murine renal cell carcinoma. Concurrent use of this formula and antiviral drugs such as zidovudine (AZT), lamivudine (3TC), or AZT plus 3TC may have a synergistic antiviral effect. Concurrent use of this formula and 5-fluorouracil (5-FU) may have a synergistic in treating of cancer. This formula has a beneficial effect in preventing and/or treating damage induced by drugs such as halothane, danazol, D-galactosamine, and carbon tetrachloride.

HERBS AND ACTIONS

-Chai Hu - Resolves Shao Yang disorders, reduces fever, spreads Liver Qi and relieves Stagnation. With Huang Qin, for Heat in the Shao Yang with alternating chills and fever, and nausea and for restoring normal function of the Liver and Gallbladder. With Huang Qin, Ban Xia and Ren Shen, for Shao Yang Heat. With Huang Qin, Ban Xia, Ren Shen and Gan Cao, for weak patients.

-Huang Qin - Clears Lung Heat, drains Fire and calms ascending Liver Yang.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, harmonizes the Stomach and stops vomiting. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting. With Sheng Jiang, for vomiting due to Cold, Thin Mucus.

-Sheng Jiang - Releases the exterior, disperses Cold, stops vomiting, stops cough and reduces the toxicity of other herbs. With Da Zao, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen. With Ban Xia, for vomiting and productive cough due to Phlegm-Dampness.

-Ren Shen - Tonifies Yuan, Spleen, Stomach, Lung and Heart Qi.

-Gan Cao - Resolves Phlegm, stops cough, clears Heat. and moderates and harmonizes the properties of other herbs. With Ren Shen, relieves palpitations and anxiety. With Sheng Jiang, enhances the effects of other Qi and Blood tonifying herbs by facilitating their digestion and absorption.

-Da Zao - Strengthens the Spleen, tonifies Qi and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, enhances effects of other Qi and Blood tonifying herbs by facilitating their digestion and absorption.

TREATS

Upper respiratory tract infection. Influenza. Acute bronchitis. Chronic bronchitis. Bronchial asthma. Cough. Laryngitis. Fever. Pulmonary tuberculosis. Epidemic parotitis. Jaundice. Malaria. Chronic hepatitis. Viral hepatitis. Hepatic fibrosis. Postpartum fever. Acute pyelonephritis. Cholecystitis. Lymphadenitis. Intercostal neuralgia. Weak digestion. Chronic hepatitis. Gastroptosis. Ulcer. General weakness. Prolonged cold/flu. Common cold with lingering fever. Acute pancreatitis. Conjunctivitis. Perimenstrual

fevers. Premenstrual syndrome. Angina pectoris. Hepatocellular carcinoma. Nephritis. Acute parotitis. Measles. Meniere's disease. Depression. Dysmenorrhea. Morning sickness. Candidiasis. Amenorrhea. Infertility. Endometriosis. Dizziness. Tracheitis. Croup. Gu syndrome. Nausea/Vomiting. Otitis media. Abdominal pain. Stress. Chronic sinusitis. Herpes genitalia. Hyperthyroidism. Hypoglycemia. Asthmatic bronchitis. Night sweats. Myalgic encephalomyelitis. Temporomandibular joint syndrome (TMJ). Red eyes. Vegetative neurosis. AIDS/HIV. Irritable bowel syndrome. Allergic rhinitis. Postpartum infection. Reflux esophagitis. Fever in cancer. Hepatic carcinoma. Pneumonia. Pleuritis. Pleurisy. Cholelithiasis. Gastritis. Antral gastritis. Indigestion. Sour Stomach. Acute tonsillitis. Chronic tonsillitis. Stomatitis. Suppurative otitis media. Mumps. Neck stiffness. Epilepsy. Seizures. Pyelitis. Puerperal fever. Stuttering. Impotence in young men. Neurosis. Alopecia. Mental instability in children. Biliary tract infection. Typhoid fever. Migraine headache. Periaural eczema. Mastitis. Chronic renal insufficiency. Chronic fatigue syndrome. Leaky gut syndrome. Giardiasis. Chronic peptic ulcers. Headache. Acne. Uterine fibroids. Vertigo. Acute laryngitis. Periarthritis of the shoulder. Constipation in the elderly. Morning sickness. Meniere's disease. Schizophrenia. Low back pain. Anorexia. Fatigue. Hoarseness. Interstitial cystitis. Palpitations. Oral leukoplakia. Indigestion. Hip pain. Thyroid cancer.

* YI QI HUO XUE TONG LUO - Diabetic Peripheral Neuropathy Formula (YQHXTLF)

Boost the Qi, Quicken the Blood and Free the Flow of the Network Vessels.

YQHXTLF is an in-hospital preparation for the prevention and control of diabetic peripheral neuropathy at Anhui Provincial Hospital of Traditional Chinese Medicine. It consists of 7 Chinese herbal medicines: Astragalus (Huangqi), Radix Angelicae Sinensis (Danggui), Radix et Rhizoma Dioscoreae (Dihuang), Radix et Rhizoma Yanhusuo (Yanhusuo), Radix et Rhizoma Puerariae (Gegen), Radix et Rhizoma Chrysanthemum (Jixueteng), and Radix et Rhizoma Weilingensis (Weilingxian). The combination of all the herbs in this formula can treat both the symptoms and the root cause of pain by treating Qi and blood together, which can benefit Qi and invigorate blood, as well as promote circulation and relieve pain. Preliminary clinical studies have shown that this formula can alleviate abnormal skin sensation, numbness, and tingling in the limbs and improve motor nerve conduction speed and sensory nerve conduction speed in DPN patients. Basic research found that this formula can reduce islet cell damage in db/db mice, improve blood flow in the sciatic nerve area, and promote the repair and regeneration of damaged nerves, and the mechanism of action may be related to the improvement of diabetic inflammatory lesions and inhibition of excessive activation of the MAPK signaling pathway. However, due to the multicomponent and multitarget nature of the Chinese medicine formula, the exact mechanism of action of the formula is still unclear.

Gu Zhi Zeng Sheng Wan, Huo Luo Xiao Ling Dan, Interstitial Cystitis #2, Juan Bi Tang #1, Ma Huang Jia Zhu Tang, Ma Xing Yi Gan Tang, Wu Tou Tang, Xiao Yao San, Zi Yun Gao

Recordings Updated in May 2025

* GU ZHI ZENG SHENG WAN - 骨窒增生囊 - Osteophyte Formula

ACTIONS - Warms Yang. Tonifies the Blood. Disperses Cold. Eliminates Stagnation.

SYNDROMES - Blood and Yang Deficiency with Cold.

CLINICAL MANIFESTATIONS - Localized painful swellings without a head that bleed into the surrounding tissues and do not affect the color or texture of the skin. The swellings are not hot to the touch. No thirst. Swollen and painful joints. Wasting of the muscles of the thigh and calf.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood Nourishes Liver and Kidney Yin.

-Lu Xian Cao - Dispels Wind-Dampness, strengthens the sinews and bones and invigorates Blood circulation. With Yin Yang Huo, Gui Sui Bu and Ji Xue Teng, for bone spurs.

-Gu Sui Bu - Tonifies Kidney Yang, strengthens the sinews and bones and invigorates the Blood.

-Rou Cong Rong - Tonifies the Kidneys and strengthens Yang.

-Ji Xue Teng - Invigorates and tonifies the Blood, activates the channels and relaxes the sinews.

-Yin Yang Huo - Dispels Wind-Cold-Dampness, warms and unblocks the flow of Yang Qi and strengthens the sinews and bones.

-Lai Fu Zi - Reduces Food Stagnation, transforms accumulation, promotes digestion, eliminates distention, descends Qi and reduces Phlegm.

TREATS

Bone spurs.

* HUO LUO XIAO LING DAN - 活絡效靈丹 - Fantastically Effective Formula To Invigorate The Channels. Salvia and Boswellia Formula

ACTIONS - Invigorates the Blood. Dispels Blood Stasis. Unblocks the collaterals. Alleviates pain.

SYNDROMES - Pain due to Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - Heart pain. Headache. Stomach pain. Abdominal pain. Back pain. Leg pain. Arm pain. Bruising and swelling due to traumatic injury. Rheumatic pain. Fixed abdominal masses. Internal or external ulcerations. Dark or echymosis spots. Scrofula.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy. Contraindicated for those without Blood Stasis.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Dan Shen and Mo Yao, for pain due to Blood Stasis in the extremities.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, nourishes the Blood and calms the Spirit. With Dang Gui, for irregular menstruation and retained lochia from Blood Stasis due to trauma. With Ru Xiang, for Blood Stasis causing swelling and pain.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, invigorates the channels, reduces swelling, generates flesh and alleviates pain. With Mo Yao, for traumatic injury pain, Blood Stasis obstructing the channels with epigastric, flank abdominal and joint pain, abdominal pain during menstruation, Wind-Cold-Damp Bi with numbness throughout the body and unresponsive extremities and chronic, ulcerated and non-healing sores.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, reduces swelling, generates flesh, promotes healing and alleviates pain.

TREATS

Bi Syndrome. Angina pectoris. Cerebral thrombosis. Post-concussion syndrome. Sciatica. Traumatic injury. Heel pain. Coronary artery disease. Thromboangitis obliterans. Hysteromyoma. Abdominal pain. Low back pain. Neck pain and stiffness.

Restless leg syndrome. Pelvic inflammatory disease. Ectopic pregnancy. Arthritis. Carbuncles. Furuncles. Ischemic stroke. Cerebrovascular accident. Cervical spondylosis. Gastralgia. Abdominal masses. Irregular menstruation.

* INTERSTITIAL CYSTITIS #2 Formula

ACTIONS - Tonifies Kidney Yang. Nourishes Kidney Yin. Clears Heat.

SYNDROMES - Kidney Qi Deficiency.

CLINICAL MANIFESTATIONS - Frequent urination. Copious amounts of clear urine. Incontinence of urine. Enuresis. Dizziness. Restlessness. Either a tendency towards being too hot of too cold. Diarrhea or. Constipation. Shortness of breath. Asthma. Cold limbs. Weak back and knees. Amenorrhea. Abortion or miscarriage. Thirst.

HERBS AND ACTIONS

-Zhi Zi - Clears Heat, reduces Fire, drains Damp-Heat, cools the Blood, relieves toxicity reduces swelling and invigorates the Blood. With Da Huang, for constipation.

-Da Huang - Drains Heat, purges accumulations, transforms Dampness, promotes urination, invigorates the Blood and dispels Blood Stasis.

-Shu Di Huang - Nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu and Shan Yao, for dizziness, a weak and sore back, impotence, spermatorrhea and night sweats, due to Kidney and Liver Yin Deficiency.

-Shan Yao - Tonifies Kidney Yin and astringes Jing. With Shan Zhu Yu and Tu Si Zi, for leukorrhea due to Spleen and Kidney Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine, benefits the marrow and tonifies the Kidneys and Liver.

-Xian Mao - Tonifies the Kidneys, strengthens Yang, expels Cold and eliminates Dampness.

-Ba Ji Tian - Tonifies the Kidneys and strengthens Yang.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin, moistens Dryness, generates Fluids and clears Deficiency Fire.

TREATS

Interstitial cystitis.

* JUAN BI TANG #1 - 蠲痺湯一 号 - Remove Painful Obstruction Formula #1. Notopterygium and Turmeric Combination

ACTIONS - Tonifies and harmonizes the Ying and Wei. Tonifies Qi. Nourishes Blood. Dispels Wind. Eliminates Dampness.

SYNDROMES - Wind-Cold-Damp Bi with Qi and Blood Deficiency with Wind or Dampness predominant. Wind-Cold-Damp Bi with disharmony of the Ying and Wei.

CLINICAL MANIFESTATIONS - A generalized sensation of heaviness. Neck, shoulder, elbow and upper back stiffness. Numbness of the extremities. Difficulty moving. Wandering joint pain, especially in the neck, shoulder, upper back and elbow. Upper back spasms. Immobility of the joints. Wandering joint pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Wind-Damp-Heat Bi.

NOTES - This formula is especially useful for the upper body.

HERBS AND ACTIONS

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction (Bi), alleviates pain, increases joint mobility and guides Qi to the Tai Yang and DU channels. With Fang Feng, for pain due to External Wind-Dampness. With Fang Feng and Jiang Huang, for Wind-Cold-Damp Bi. With Fang Feng, Dang Gui, Gan Cao and Jiang Huang, for muscle aches and joint pain due to Wind-Cold-Dampness.

-Jiang Huang - Expels Wind,invigorates Blood, promotes the movement of Qi and opens the channels and collaterals to alleviate pain. With Qiang Huo, Fang Feng and Dang Gui, for Wind-Damp Bi, especially of the shoulder.

-Dang Gui - Nourishes Blood, invigorates and harmonizes Blood, disperses Cold and stops pain. With Huang Qi, for Qi and Blood Deficiency. With Bai Shao, regulates and harmonizes Qi and Blood.

-Huang Qi - Tonifies Qi and Blood, tonifies Wei Qi, stabilizes the exterior and relieves numbness and pain. With Qiang Huo and Jiang Huang, for Wind-Damp painful

obstruction of the shoulder.

-Bai Shao - Nourishes the Blood and adjusts the Ying and Wei. With Gan Cao, for muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency. With Dang Gui, nourishes Yin and Blood.

-Fang Feng - Releases the exterior, expels Wind-Dampness and alleviates pain. With Qiang Huo and Dang Gui, for Wind-Cold-Damp Bi.

-Gan Cao - Moderates and harmonizes the harsh properties of the other herbs and prevents injury to normal Qi.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, for External Wind-Cold.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, adjusts the Ying and Wei and normalizes the flow of Qi at the center. With Da Zao, protects the Stomach Qi and reduces irritation of the gastrointestinal tract by other herbs.

TREATS

Periarthritis of the shoulder. Osteoarthritis. Bursitis. Tennis elbow. Neck pain and stiffness. Upper back pain. Rheumatoid arthritis. Gouty arthritis. Frozen shoulder. Lumbago. Arthralgia.

* MA HUANG JIA ZHU TANG - 麻黄加术汤 - Ephedra Formula Plus Atractylodes

ACTIONS - Disperses Wind-Cold. Induces diaphoresis. Dispels Dampness.

SYNDROMES - Wind-Cold Invasion with Damp Accumulation (best for patients with pre-existing Dampness).

CLINICAL MANIFESTATIONS - Itching or tickling in the throat. Wheezing. Sneezing. Gasping. Cough with expectoration of thin, watery or frothy white sputum. General body aches. No thirst. Dyspnea. Headache. Body aches. A sensation of heaviness. Chills with low grade fever. Maybe asthma. Intolerance of Cold. Anhidrosis. Blocked and/or runny nose with watery nasal discharge. Chest discomfort. Neck stiffness. Irritability.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Lin Syndrome. Contraindicated for those with Yin Deficiency bleeding. Contraindicated for those with bacterial infections (Heat). Contraindicated for those with skin infections. Contraindicated for those with Wind-Heat. Contraindicated for those with a weak pulse. Contraindicated for those with debility. Contraindicated for those with copious urination. Use caution for those with hypertension. Avoid profuse perspiration.

Use only for short periods of time. This formula may reduce the adverse effects of interferon in hepatitis C patients.

HERBS AND ACTIONS

-Ma Huang - Strongly promotes diaphoresis, relieves the Exterior, disperses Lung Qi, promotes urination and expels Cold. With Gui Zhi, for Wind-Cold Excess with fever, chills and anhidrosis and Wind-Cold-Damp Bi. With Xing Ren, for cough and wheezing due to Wind-Cold Attacks the Lungs.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness, promotes water metabolism, stabilizes the exterior and stops sweating.

-Gui Zhi - Promotes diaphoresis, warms the channels, disperses Cold, releases the exterior, assists the Yang, adjusts the Ying and Wei, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels and releases the muscle layer. With Gan Cao, for palpitations and shortness of breath due to injured Yang of the chest.

-Xing Ren - Disperses Lung Qi, resolves Phlegm and stops cough and wheezing. With Ma Huang and Gan Cao, for cough with profuse sputum, nasal obstruction and a hoarse voice.

-Gan Cao - Tonifies Qi, resolves Phlegm, stops cough and moderates and harmonizes the harsh properties of other herbs. With Ma Huang and Xing Ren, for Wind-Cold Attacks the Lungs with coughing and/ or wheezing.

TREATS

Bronchial asthma. Common cold. Rheumatoid arthritis (inflammation intense but short lived). Rhinitis. Acute glomerulonephritis. Infantile enuresis. Painful menstruation. Abdominal masses. Pharyngitis. Early stages of mastitis. Lumbar strain. Periarthritis of the shoulder. Raynaud's disease. Trigeminal neuralgia. Sinusitis. Asthma. Chronic obstructive pulmonary disease (COPD). Pericardial effusions. Urticaria. Nephritis. Benign prostatic hypertrophy (BPH). Phlebitis. Peripheral neuropathy. Fever. Edema. Dyspnea. Acute nephritis. Upper respiratory tract infection. Influenza. Acute bronchitis. Chronic bronchitis. Lobar pneumonia. Allergies. Sinusitis. Wind-Cold nosebleeds. Difficult labor. Pelvic inflammatory disease. Otitis media. Traumatic arthropathy. Cervical spine disease. Ankylosing spondylitis. Sciatica. Migraine. Scleroderma. Hay fever. Eczema. Chilblains. Pyelonephritis. Ascites. Solar dermatitis. Enuresis. Painful obstruction. Gasping. Arthralgia. Unilateral pain.

* MA XING YI GAN TANG - 麻杏苡甘湯 - Ephedra, Apricot Kernel, Coicis and Licorice Formula

ACTIONS - Releases the Exterior. Dispels Wind-Dampness. Resolves Phlegm.

SYNDROMES - Externally contracted Wind-Dampness.

CLINICAL MANIFESTATIONS - Mild generalized body aches. Slight aversion to Wind. Chronic respiratory complaints. Fever that worsens in the afternoon. Dry skin.

HERBS AND ACTIONS

-Ma Huang - Induces sweating, releases the exterior, disseminates and facilitates Lung Qi, calms wheezing, stops coughing, promotes urination and reduces edema. With Xing Ren, for Wind-Cold cough and wheezing.

-Xing Ren - Stops cough and calms wheezing.

-Yi Yi Ren - Promotes urination, leaches out Dampness, strengthens the Spleen and expels Wind-Dampness. With Ma Huang, Xing Ren and Gan Cao, for generalized body aches due to Wind-Dampness.

-Gan Cao - Moderates and harmonizes the properties of other herbs. With Ma Huang and Xing Ren, for coughing or wheezing due to Wind-Cold Attacking the Lungs.

TREATS

Rheumatic arthritis. Rheumatism. Neuralgia. Muscle pain. Keratosis palmaris. Keratosis plantaris. Warts. Eczema. Arthritis. Headache. Paralysis. Calluses. Corns. Sudamina. Frostbite. Dandruff. Asthma. Hemiplegia. Edema. Genital warts. Arthralgia. Painfull obstruction.

* WU TOU TANG - 烏頭湯 - Aconite Formula

ACTIONS - Disperses Cold. Reinforces Yang. Replenishes Qi and Blood. Stops pain. Warms the channels. Disperses Wind.

SYNDROMES - Wind-Cold-Damp Bi - Cold Predominant. Long-term Wind-Cold Dampness invades the channels. Cold Bi in patients with Qi Deficiency.

CLINICAL MANIFESTATIONS - Severe difficulty in flexion and extension. Severe pain. Cold hands and feet. Aversion to Cold. Fatigue. Loose Stools. Severe pain and coldness of muscles and joints. Severely restricted motion of joints. Cold extremities. Whole body pain, especially in the hands and feet. Anorexia. Heavy feeling in muscles. Catches cold easily. No thirst.

HERBS AND ACTIONS

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the Channels and stops pain. With Ma Huang and Bai Shao, for generalized joint pain with restrictions in range of motion.

-Ma Huang - Releases the exterior, induces sweating, promotes urination and disperses Cold. With Chuan Wu, for Wind-Cold Bi.

-Bai Shao - Alleviates pain and nourishes Blood. With Gan Cao, for muscle spasms especially in the calf, due to Blood Deficiency.

-Huang Qi - Strengthens the Spleen, tonifies Qi, tonifies Wei Qi, stabilizes the Exterior and nourishes Blood.

-Gan Cao - Tonifies the Spleen, tonifies Qi, alleviates pain and moderates and harmonizes the properties of the other herbs.

TREATS

Osteoarthritis. Panarthralgia. Painful obstruction. Scapulohumeral periarthritis. Neck pain and stiffness. Shoulder pain. Whole body pain. Leg Qi. Arthralgia. Carpal tunnel syndrome. Brachial plexus neuritis. Upper back pain. Low back pain. Hip pain.

* XIAO YAO SAN - 逍遥散 - Rambling Powder - Bupleurum And Tangkuei Formula. Relaxed Wanderer

ACTIONS - Pacifies the Liver. Spreads Liver Qi. Strengthens the Spleen. Nourishes the Blood. Harmonizes the Liver and Spleen.

SYNDROMES - Liver Qi Stagnation Invades Stomach. Liver Qi Stagnation Invades the Spleen (Liver and Spleen Disharmony). Liver Qi Stagnation with Blood Deficiency. Qi and Blood Stagnation. Blood Deficiency with fatigue. Disharmony between the Ying and Wei with Phlegm, cough, tidal fever and wasting of limbs which may lead to Bone Steaming. Gu Syndrome.

CLINICAL MANIFESTATIONS - Hypochondriac pain. Headache. Vertigo. Bitter taste in the mouth. Dizziness. Frequent sighing. Epigastric pain and distention. Flatulence. Dry mouth and throat. Fatigue. Anorexia. Alternating chills and fever. Irregular menstruation. Breast distention. Lassitude. Insomnia. Shoulder and back pain. Rib pain. Anxiety. Tightness or fullness in the chest. Cold extremities. Pain in the arms and legs. Heaviness of the head. Night sweats. Bloating and pain at the umbilicus and abdomen. Diarrhea alternating with constipation. Five sole heat. Palpitations. Malar flush. Depression. Irritability. Increased desire to sleep.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution during pregnancy. Use with caution for those with Qi Stagnation with underlying Liver and

Kidney Yin Deficiency.

HERBS AND ACTIONS

-Chai Hu - Relieves Liver Qi Stagnation, pacifies the Liver, relieves the Shao Yang and reduces fever. With Bo He, for depression, a stifling sensation in the chest and irregular menstruation due to Liver Blood Deficiency with Stagnation.

-Dang Gui - Nourishes the Blood, regulates menses and invigorates and harmonizes the Blood.
With Bai Shao, nourishes Blood and eases anxiety due to Liver Stagnation.

-Bai Shao - Calms Liver Yang, alleviates pain, nourishes Blood and regulates menstruation.
With Chai Hu, for flank pain due to Liver Qi Stagnation.

-Bai Zhu - Tonifies the Spleen and tonifies Qi. With Fu Ling, strengthens the Spleen and resolves Dampness.

-Fu Ling - Strengthens the Spleen and harmonizes the Middle Jiao.

-Gan Cao - Tonifies Spleen Qi, stops pain and harmonizes the other herbs. With Bai Shao, moderates spasmodic abdominal pain.

-Bo He - Relieves Liver Qi Stagnation, disperses stagnant Heat and enhances Chai Hu's ability to relieve the Liver. With Bai Shao and Chai Hu, for chest and flank distention due to Liver Qi Stagnation.

-Sheng Jiang - Harmonizes, prevents rebellious Qi and normalizes the flow of Qi at the center.

-Zhi Shi - Enhances Chai Hu's function of dispersing the Liver.

TREATS

Chronic hepatitis. Viral hepatitis. Depression. Hysteria. Pleurisy. Acute tonsillitis. Chronic tonsillitis. Chronic gastritis. Peptic ulcer. Anemia. Functional uterine bleeding. Menopausal syndrome. Pelvic inflammatory disease. Fibrocystic breasts. Neurasthenia. Optic nerve atrophy. Central retinitis. Glaucoma. Acute retrobulbar neuritis. Stress. Meniere's disease. Candidiasis. Chronic Fatigue Immune Deficiency Syndrome (CFIDS). Cortical blindness. Prostatitis. Acid reflux. Breast lumps. Mastitis. Breast cancer. Gastralgia. Enteritis. Stomach cancer. Hypoglycemia. Chronic bronchitis. Chronic cough. Vomiting. Fever. Constipation. Anxiety neurosis. Tinnitus. Deafness. Anorexia. Bi-Polar disorder. Fatigue. Hyperlipoproteinemia. Edema during pregnancy. Hernia. Colitis. Hiccup. Morning sickness. Paralysis. Liver cancer. Shoulder pain. Low back pain. Fetal restlessness. Neck pain and stiffness. Irregular menstruation.

Temporomandibular joint syndrome (TMJ). Ulcerative colitis. Sore throat. Stress incontinence. Irritability. Nervousness in women. Affective psychosis. Vaginal discharge. Delayed menstruation. Irregular menstruation. Insomnia. Breast distention. Epstein Barr. Premenstrual syndrome (from ovulation to 1st day). Premenstrual syndrome with breast distention. Hyperthyroidism. Hepatitis C. Leaky gut syndrome. Giardiasis. Tuberculosis. Late menstruation. Scanty menstruation. Dysmenorrhea. Perimenopause syndrome. Premenstrual tension. Breast tenderness. Headache. Infertility. Irritable bowel syndrome. Dysentery. Vertigo. Dizziness. Polyuria. AIDS/HIV. Pertussis. Asthma. Nausea. Gu syndrome. Systemic lupus erythematosis. Anxiety. Hysteria. Schizophrenia. Stress-related breathing problems. Impotence. Hypertension. Palpitations. Abdominal pain. Abdominal pain during pregnancy. Dysphagia. Hoarseness. Migraine headache. Hiatus hernia. Obesity. Indigestion. Piriformis syndrome. Post-concussion syndrome. Upper and middle back pain. Early menstruation. Amenorrhea. Cervical cancer. Cirrhosis of the Liver.

* ZI YUN GAO - 紫雲膏 - Lithospermum Formula

ACTIONS - Clears Heat. Cools the Blood. Invigorates Blood circulation. Relieves Fire toxins. Clears Damp-Heat from the skin. Reduces swelling. Expels pus. Generates flesh A. Alleviates pain. Inhibits the growth of cancer cells.

SYNDROMES - Toxic Heat of the skin.

CLINICAL MANIFESTATIONS - Dry skin. Wrinkles. Ulceration of the skin. Skin abnormalities.

HERBS AND ACTIONS

-Zi Cao - Clears Heat, cools the Blood, invigorates Blood circulation, relieves Fire toxins, clears Damp-Heat from the skin and inhibits the growth of cancer cells.

-Dang Gui - Reduces swelling, expels pus, generates flesh and alleviates pain

-Ma You - .Moistens Dryness. Promotes bowel movement. Neutralizes toxins.

TREATS

Eczema. Tinea. Calluses. Corns. Acne. Frostbite. Prickly Heat. Body odor. Alopecia. Traumatic injury. Burns. Hemorrhoids. Rectal prolapse. Ulerations. Radiotherapy for breast cancer.

Recordings Updated in May 2025

* BAN XIA BAI ZHU TIAN MA TANG - 半夏白朮天麻湯 - Pinellia, Atractylodes Macrocephalae And Gastrodia Formula

ACTIONS - Strengthens the Spleen. Dispels Dampness. Transforms Phlegm. Soothes the Liver. Extinguishes Wind.

SYNDROMES - Wind-Phlegm (Feng Tan). Shi Tan (Damp-Phlegm).

CLINICAL MANIFESTATIONS - Dizziness. Vertigo (possibly severe). Headaches (may be recurrent). A stifling sensation in the chest. Nausea. Vomiting. Copious sputum. Spots before the eyes. Heaviness of the head. Lockjaw. Sinus congestion. Cold feet. Fatigue. Abdominal distention. Weakness of hands and feet. May be edema. Sudden loss of consciousness. Excess salivation. Compulsive sleeping after eating.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with vertigo not caused by Wind-Phlegm, e.g. Liver Yang Rising or Blood Deficiency. Contraindicated for those with Kidney and Liver Yin Deficiencies.

HERBS AND ACTIONS

-Ban Xia - Transforms Phlegm, dries Dampness, descends Rebellious Qi and treats nausea and vomiting. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools. With Tian Ma, Bai Zhu and Fu Ling, for Phlegm-Dampness rising upward and combining with uprising Internal Wind with symptoms of headache, dizziness, focal distention, a stifling sensation in the chest and diaphragm, a greasy white tongue and wiry and slippery pulse.

-Tian Ma - Extinguishes Wind, subdues Rising Liver Yang, alleviates pain, disperses Wind-Damp Bi and effectively treats headache, dizziness and vertigo. With Ban Xia, Bai Zhu and Chen Pi, for headaches and dizziness from Wind-Phlegm. With Ban Xia, Bai Zhu and Fu Ling, for a heavy feeling and a congested headache.

-Bai Zhu - Strengthens the Spleen, dries Dampness and reinforces Ban Xia and Tian Ma in treating Phlegm. With Tian Ma and Fu Ling, for Phlegm due to Spleen Dampness with Internal Liver Wind. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiencies. With Ban Xia, Tian Ma, Fu Ling and Chen Pi, for dizziness and vertigo due to accumulation of Phlegm and Liver Wind.

-Chen Pi - Regulates Qi and transforms Phlegm. With Sheng Jiang, for vomiting and hiccups due to Disharmony of the Stomach Qi and Cold-Dampness Obstructing the Middle with nausea and hiccup. With Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Bai Zhu, for anorexia and other symptoms of Damp-Obstruction due to Spleen Deficiency. With Ban Xia and Fu Ling, for cough due to accumulation of Dampness and Phlegm.

-Fu Ling - Leaches out Dampness, strengthens the Spleen and assists in Transforming Phlegm. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention and anorexia due to congested fluids. With Ban Xia, Chen Pi and Sheng Jiang, for congested fluids in the Stomach causing nausea and vomiting. With Bai Zhu and Tian Ma, for Phlegm accumulation with vertigo.

-Gan Cao - Tonifies the Spleen and augments Qi, resolves Phlegm, and moderates and harmonizes the harsh properties of other herbs.

-Sheng Jiang - Warms the Middle, stops vomiting, warms the Lungs, stops cough and reduces the toxicity of other herbs. With Da Zao, harmonizes the Spleen and Stomach. With Ban Xia, for vomiting due to many causes including Stomach Cold and productive cough due to Phlegm-Dampness.

-Da Zao - Tonifies the Spleen and Stomach and augments Qi and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, prevents Phlegm accumulation.

TREATS

Meniere's disease. Hypertension due to gastrointestinal weakness. Tubercular meningitis. Benign positional vertigo. Neurotic vertigo. Recurrent headaches. Tension headache. Gastroatonia. Facial paralysis. Epilepsy. Aural vertigo. Chronic gastroenteritis. Cerebrovascular accident. Alzheimer's disease. Asthma. Numbness. Periarthritis of the shoulder. Abdominal fullness and distention. Otitis media. Fatigue. Hiccups. Palpitations. Aphasia. Seizures and epilepsy during pregnancy. Painful obstruction. Ear pain. Arteriosclerosis. Compulsive sleeping after eating. Weakness of the hands and feet. Headache and vertigo due to hypotension. Gastroptosis. Sinusitis. Water poisoning. Migraine. Cerebellitis. Stroke. Food allergy. Cerebral arteriosclerosis. Vestibular neuritis. Dizziness. Vertigo. Paresthesia. Parkinson's disease. Nausea/Vomiting. Tinnitus. Otitis externa. Deafness. Edema. One-sided perspiration.

Irritability during pregnancy. Otorrhea. Unilateral pain. Sore throat.

* CHAI HU SHU GAN TANG - 柴胡疏肝汤 - Bupleurum FormulaTo Spread The Liver. Formula to Disperse Vital Energy in the Liver

ACTIONS - Spreads Liver Qi. Promotes Qi circulation. Harmonizes the Blood. Alleviates pain.

SYNDROMES - Liver Qi Stagnation. Liver Qi Stagnation: Liver Qi Invades the Stomach.

CLINICAL MANIFESTATIONS - Hypochondriac pain and distention. Alternating fever and chills. Depression. Easily angered. Chest fullness. Bitter taste in mouth. Fidgeting. Abdominal pain and cramps. Breast distention and pain. Irritability. Dysmenorrhea. Irregular menstruation. Amenorrhea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not use without modification for those with Yin Deficient Heat.

HERBS AND ACTIONS

-Chen Pi - Regulates Qi, adjusts the middle, improves the transportive function of the Spleen, relieves the diaphragm and descends Qi.

-Chai Hu - Resolves Shao Yang, spreads Liver Qi and relieves Stagnation. With Bai Shao, for vertigo, dizziness, rib pain and menstrual irregularity due to Liver Qi Stagnation. With Xiang Fu and Bai Shao, for pain and distention in the chest and flanks.

-Chuan Xiong - Invigorates Blood, promotes Qi movement, moves Qi upward and alleviates headache pain. With Xiang Fu, for Qi Stagnation combined with Blood Stasis.

-Zhi Ke - Moves Qi, disperses Heat and reduces distention and pressure.

-Bai Shao - Nourishes the Blood, regulates menses, sedates Liver Yang, alleviates pain, preserves the Yin and adjusts the Ying and Wei. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach.

-Gan Cao - Tonifies the Spleen, augments Qi and harmonizes.

-Xiang Fu - Regulates Liver Qi, regulates menstruation, alleviates pain and relieves depression. With Chai Hu, for Qi Stagnation and menstrual irregularity.

TREATS

Hypertension. Dysmenorrhea. Gastralgia. Mania. Cholecystitis. Breast hyperplasia. Chronic hepatitis. Viral hepatitis. Atrophic gastritis. Insomnia. Depression. Orchitis. Late

menstruation. Infertility. Acid reflux. Breast tenderness. Coronary Heart disease. Dysentery. Abdominal pain. Stomach cancer. Bi-polar disorder. Pertussis. Chronic cough. Alternating chills and fever. Schizophrenia. Stress. Abdominal fullness and distention. Diverticulitis. Amenorrhea. Tension headache. Hiatus hernia. Herpes zoster. Interstitial cystitis. Morning sickness. Liver cancer. Gastroptosis. Raynaud's disease. Breast distention. Chronic gastritis. Premenstrual syndrome. Premenstrual breast distention. Gastritis. Irregular menstruation. Fibrocystic breast disease. Pleurisy. Mastitis. Cholelithiasis. Peptic ulcer. Emotional stress. Male sexual dysfunction. Prostatic hypertrophy. Obesity. Tourette syndrome. Hyperthyroidism. Breast cancer. Irritable bowel syndrome. Hiccups. Trigeminal neuralgia. Chronic bronchitis. Chronic tonsillitis. Constipation. Lupus erythematosus. Neurosis. Chronic pancreatitis. Hemafecia. Intestinal abscess. Enuresis. Hernia. Colitis. Impotence. Low back pain. Gastroenteritis. Ascites. Indigestion. Neck and shoulder stiffness. Stress incontinence. Cirrhosis of the Liver.

* FU FANG ZHEN ZHU TIAO ZHI (FTZ) Formula

Fu Fang Zhen Zhu Tiao Zhi formula (FTZ) is a patented Chinese medicinal decoction used to relieve hyperlipidemia, atherosclerosis and other symptoms associated with metabolic disorders in clinics. FTZ has significant curative effect for hyperglycemia and hyperlipidemia. Because of the complexity of the chemical constituents of Chinese herbal formulas, the holistic pharmacological mechanism of FTZ acting on type 2 diabetes mellitus (T2DM) and nonalcoholic fatty liver disease (NAFLD) remains unclear. Herbs - Nu Zhen Zi. Bai Zhu. Dan Shen. Huang Lian. San Qi. Du Zhong. Da Ji. Fo Shou.

* GE GEN JIA BAN XIA TANG - 葛根加半夏汤 - Kudzu Formula Plus Pinellia

ACTIONS - Releases Wind-Cold in the Exterior and muscle layer. Generates Fluids. Relieves muscle-ache of the neck. Stops vomiting.

SYNDROMES - Simultaneous Tai Yang - Yang Ming stage. Tai Yang stage with vomiting but no diarrhea.

CLINICAL MANIFESTATIONS - Chills and fever. Anhidrosis. Stiff and rigid neck, shoulders and upper back. Intolerance of Wind. Dislike of Cold. Inflammation. Vomiting. Muscle spasms. Mucosal swelling. Nasal congestion. Sensitivity to dust. Headache. Wind-Cold Bi (few joints affected, intense but short lived, changes over days or weeks). Inflammation.

HERBS AND ACTIONS

-Ge Gen - Releases the exterior, and releases the muscle layer (especially of the upper back and neck) by bringing fluids to the area. With Ma Huang, Gui Zhi and Bai Shao, for

Wind-Cold with stiffness and tension in the upper back and neck.

-Ma Huang - Strongly releases the exterior, disperses Cold, moves Lung Qi and stops wheezing. With Gui Zhi for Wind-Cold excess conditions with fever and chills but no sweat and Wind-Cold-Damp Bi.

-Gui Zhi - Releases the Exterior, warms the channels and collaterals to relieve pain, warms and facilitates the flow of Yang Qi in the chest, warms and facilitates the flow of Blood through the vessels and releases the muscle layer. With Ge Gen, releases the exterior and relieves the muscle layer. With Bai Shao, warms and tonifies the Middle Jiao for External Wind-Cold with disharmony between the Ying and Wei, with spontaneous sweating, fever and chills.

-Bai Shao - Adjusts the Ying and Wei, preserves Yin by preventing excessive diaphoresis. With Gan Cao, relieves muscle spasms and therefore helps relieve neck and back stiffness. With Gui Zhi, Sheng Jiang and Gan Cao, for Wind-Cold with Deficiency and perspiration.

-Sheng Jiang - Releases the Exterior, disperses Cold, warms the Middle, stops vomiting, stops cough and reduces the toxicity of other herbs. With Ban Xia, for vomiting due to many causes including Stomach Cold. With Gui Zhi, warms and dispels thin mucus in the Stomach with nausea, hiccup, Stomach pain, acid reflux or vomiting of clear fluid. With Ma Huang, strongly creates sweating to treat all externally contracted Wind-Cold disorders, especially those in which Wind-Cold has constrained Lung Qi with cough and wheezing and the failure of Lung Qi to descend causing nausea and vomiting.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, protects the Ying and harmonizes and protects the Stomach.

-Gan Cao - Moderates and harmonizes the properties of other herbs.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, harmonizes the Stomach. and stops vomiting.

TREATS

Common cold. Upper respiratory tract infection. Influenza. Stomach flu. Acute cervical myositis. Stiff shoulders. Tendinitis of shoulder. Bursitis of shoulder. Urticaria. Allergic rhinitis. Early-stage poliomyelitis. Early-stage encephalitis. Chronic pediatric diarrhea. Stiff neck. Frozen shoulder. Pneumonia. Bronchitis. "40 years wrists". "50 years shoulders". Neuralgia. Gastritis. Painfull obstruction. Nausea/Vomiting. Eczema. Rubella. Furuncles. Boils. Keratitis. Hordeolum. Conjunctivitis. Trachoma. Otitis media. Stuffy nose. Otitis externa. Meningitis. Lymphadenitis. Mastitis. Scarlet fever. Tonsillitis. Arthritis. Lumbago. Fever. Stiff upper back.

* HUANG QIN TANG - 黄芩湯 - Scutellaria Formula. Scute and Licorice Combination

ACTIONS - Clears Heat. Alleviates dysenteric disorders. Stops diarrhea. Harmonizes the Middle Jiao. Stops pain.

SYNDROMES - Damp-Heat Dysentery.

CLINICAL MANIFESTATIONS - Fever. A bitter taste in the mouth. Abdominal pain. Diarrhea. Headache. Dysentery. Abdominal spasms.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with initial stages of diarrhea or dysentery with pronounced Exterior symptoms. Contraindicated for those with dysentery due to Cold, Dampness or Deficiency. Avoid foods that are spicy, oily or greasy while using this formula.

HERBS AND ACTIONS

-Huang Qin - Clears Heat and dries Dampness.

-Bai Shao - Astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach and epigastric, hypochondriac or flank pain. With Huang Qin, for dysenteric disorders with abdominal pain due to Heat entering the Interior.

-Gan Cao - Moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Bai Shao and Huang Qin, for abdominal pain and dysenteric diarrhea from Damp-Heat.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi and moderates and harmonizes the harsh properties of other herbs.

TREATS

Amoebic and bacillary dysentery. Acute colitis. Pelvic inflammatory disease. Indigestion. Appendicitis. Bleeding due to menoplania. Abdominal pain. Spontaneous perspiration. Acute enteritis. Tenesmus. Diarrhea. Common Cold. Adnexitis. Fever. Abdominal spasms.

* JI MING SAN - 鸡鸣散 - Formula To Use At Cockscrow

ACTIONS - Promotes the movement of Qi. Descends turbidity. Disseminates Cold. Transforms Dampness.

SYNDROMES - "Leg Qi" due to Cold Dampness in the legs and feet. "Leg Qi" due to

Wind-Dampness.

CLINICAL MANIFESTATIONS - Swelling of the feet and calves. Heavy, weak feet and calves. Difficulty walking. Numbness, cold and/or pain in the the feet and calves. Spasms and up-rushing that reaches the chest (running piglet). Aversion to Cold. Severe: A stifling sensation in the chest. An overwhelming sense of nausea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not use for "leg Qi" due to Dryness or Damp-Heat without significant modification. Contraindicated during pregnancy.

NOTES - This formula is most effective when used early in the morning.

HERBS AND ACTIONS

-Bing Lang - Regulates Qi, reduces accumulations, drains downward, unblocks the bowels, promotes urination and relieves nausea.

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation, unblocks the channels, harmonizes the Stomach, nourishes the Liver and transforms Dampness. With Wu Zhu Yu and Bing Lang, for Damp-Cold abdominal pain and diarrhea. With Wu Zhu Yu, disperses Cold, transforms Dampness, invigorates the channels and alleviates pain to treat the pain of "leg Qi" due to Cold-Dampness in the Lower Jiao preventing the smooth flow of Qi and Blood and "Leg Qi" entering the abdomen leading to intolerable stifling encumbrance with abdominal distention and fullness. With Wu Zhu Yu, Bing Lang and Zi Su ye, for "leg Qi" with swelling and pain in the lower extremities.

-Wu Zhu Yu - Warms the Middle Jiao, disperses Cold, promotes the movement of Qi, relieves Stagnation in the Liver channel, alleviates pain, descends rebellious Qi, stops vomiting, warms the Spleen, stops diarrhea and expels Damp-Cold. With Mu Gua and Bing Lang, for Damp-Cold Leg Qi. With Shen Jiang, for vertex migraine headaches.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and descends Qi.

-Zi Su Ye - Releases the Exterior, disperses Cold, promotes the movement of Spleen and Stomach Qi, harmonizes the Middle Jiao, relieves intestinal gas, improves Lung function, expands the chest and relieves Cold induced wheezing. With Jie Geng, for common colds with nasal congestion and productive cough. With Sheng Jiang, for Wind-Cold with chills, fever, headache, nasal congestion and anhidrosis.

-Jie Geng - Opens the Lungs, spreads Lung Qi, expels Phlegm and opens and raises Lung Qi, directing the effects of other herbs to the upper body.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Middle, stops vomiting, warms the Lungs and stops coughing. With Chen Pi, for Cold-

Dampness Obstructing the Middle with nausea and hiccup.

TREATS

Beriberi. Filariasis. Edema. Restless leg syndrome.

* JIAO TAI WAN - 交泰丸 - Grand Communication Formula

ACTIONS - Re-establishes communication between the Heart and Kidneys.

SYNDROMES - Heart and Kidney Deficiency (Disharmony Between the Heart and Kidneys).

CLINICAL MANIFESTATIONS - Irritability. Restlessness. Severe, continuous palpitations. Nocturnal emissions (especially with sexual dreams). Night sweats. Coolness of the lower limbs. Great difficulty falling asleep.

HERBS AND ACTIONS

-Huang Lian - Drains Fire, relieves toxicity, drains Dampness and clears Heart Fire. With Rou Gui, for insomnia with disturbing dreams, palpitations which are worse at night and irritability due to lack of communication between the Heart and Kidneys.

-Rou Gui - Warms the Kidneys, Spleen and Heart and strengthens the Yang and Ming Men Fire Disperses deep Cold, warms the channels, unblocks the channels and vessels and alleviates pain. With Huang Lian, for irritability, restlessness, coolness of the lower limbs and difficulty falling asleep due to Disharmony between the Heart and Kidneys.

TREATS

Insomnia. Palpitations. Dizziness. Anemia. Tinnitus. Low back pain. Congestive Heart failure. Nocturnal emissions. Spermatorrhea. Amenorrhea. Senility. Constipation. Neurosis. Forgetfulness. Night sweats.

* JIN GUI SHEN QI WAN - 金匱腎氣丸 - Kidney Qi Formula From The Golden Cabinet. Formula for Restoring the Vital Energy and Function of the Kidney

ACTIONS - Warms and Tonifies Kidney Yang.

SYNDROMES - Kidney Yang Deficiency. Leg Qi. Tan Yin. Xiao Ke. Jin Ye Stasis. Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency.

CLINICAL MANIFESTATIONS - Aversion to Cold. Watery stools with undigested food. Lower back pain. Weakness of the lower extremities. A cold sensation in the lower half

of the body. Tenseness in the lower abdomen. Pain and cramps in the lower abdomen. Panting and irritability to the point of having difficulty lying down. Will breathe most comfortably while leaning against something. Nocturia. May be numbness in the lower abdomen. Urinary difficulty with edema or Spasmodic pain in the lower abdomen. Excessive urination. If severe, may be incontinence of urine. May have persistent diarrhea. Dizziness. Vertigo. Dysuria. May have flushed face (Yang floating upward). Thirst with frequent, copious urination (Xiao Ke). Fatigue (severe). May have severe perspiration (Yang floating upward). Constipation. Lassitude. Pale face. Edema of the face and feet. Severe edema of the legs (may prevent walking). Maybe cough. Maybe asthma.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency with dry mouth and throat and a red tongue with no coat. Use with caution for those with gastrointestinal weakness. Contraindicated for those with marked ascites. Contraindicated for those with frequent diarrhea. Contraindicated for those with facial flushing with fever. Contraindicated during pregnancy. This formula may be effective in treating side effects and adverse reactions, including dizziness, weight gain, perspiration and emotional disturbances associated with long-term prednisone use.

NOTES - Jin Gui Shen Qi Wan uses Ram. Cinnamomi Gui Zhi. Ba Wei Di Huang Wan uses Cx Cinnamomi Rou Gui.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Yin and Blood and tonifies the Kidneys. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Rou Gui, for Kidney Yang Deficiency.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops Excess perspiration. With Shan Yao, tonifies the Liver and benefits the Spleen.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Zi - Tonifies the Ming Men, dispels Cold, eliminates Dampness and tonifies Kidney Yang. With Gui Zhi, assists Yang and enhances water metabolism. With Shu Di Huang and Rou Gui, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and sore back and legs, impotence, and urinary frequency.

-Gui Zhi - Warms and tonifies Kidney Yang and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Mu Dan Pi, helps move Blood to facilitate the flow to the Kidneys. With Fu Zi, for chills, backache and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu

Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination, strengthens the Spleen and drains Dampness, enabling Gui Zhi to warm the Bladder.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Gui Zhi, warms and transforms the Fluids, unblocks Yang and promotes urination.

-Mu Dan Pi - Clears Heat and Deficiency Fire, cools and harmonizes the Blood, invigorates the Blood and dispels Blood Stasis.

TREATS

Chronic glomerulonephritis. Chronic interstitial nephritis. Chronic diffuse nephritis. Chronic urethritis. Diabetes mellitus. Diabetes insipidus. Primary hyperaldosteronism. Hypothyroidism. Neurasthenia. Arthritis. Beriberi. Chronic bronchial asthma. Chronic bronchitis. COPD. Urinary retention. Climacteric syndrome. Epstein Barr Virus. Somnolence. Tinnitus. Low back pain. Anorexia. Fatigue. Facial and ankle edema. Nausea/Vomiting. Epistaxis. Oral leukoplakia. Dyspnea. Gingivitis. Dysuria during pregnancy. Rheumatoid arthritis. Sjogren's syndrome. Prematurely gray hair. Vaginal discharge. Macular degeneration. Emphysema. Asthma. Bronchitis. Chronic rhinitis. Chronic tonsillitis. Post-surgical urinary incontinence. Urinary retention from spinal cord injuries. Renal tuberculosis. Perimenopausal syndrome. Leg Qi. Menopause syndrome. Nephrosclerosis. Nephrotuberculosis. Cystolithiasis. Cystic tuberculosis. Senile cystoatrophy. Prostamegaly. Cerebral hemorrhage. Arteriosclerosis. Hypotension. Forgetfulness. Hypertension. Nephrolithiasis. Urolithiasis. Impotence. Amenorrhea. Inappropriate erection. Premature ejaculation. Sciatica. Deformed vertebrae. Glaucoma. Eczema. Tinea. Senile itching. Urticaria. Thirst. Rectoptosis. Fever in the head and extremities. Chronic gonorrhea. Poor vision. Senile dementia. Vegetative nerve disturbance. Paralysis of the detrusor muscle. Recurrent aphthous ulcers. Proteinuria. Endocrine disorders. Arteriostenosis. Prostatitis. Scanty menstruation. Obesity. Premenstrual syndrome. Hashimoto's thyroiditis. Stroke. Headache. Hyperaldosteronism. Optic atrophy. Vertigo. Atrophy (Wei) Syndrome. Spontaneous perspiration. Hysterical paralysis. Periodic paralysis. Facial paralysis. Acute infectious multiple neuritis. Stomach cancer. Oliguria with edema. Chronic renal failure. AIDS/HIV. Cor pulmonare. Amyotrophic lateral sclerosis (ALS). Narcolepsy.

Diarrhea. Knee pain. Chronic pancreatitis. Weakness. Yawning. Chronic enteritis. Enuresis. Palpitations. Rectal prolapse. Metrorrhagia. Periodontitis. Edema during pregnancy. Upper back pain. Neck pain and stiffness. Systemic lupus erythematosus. Vaginitis. Sore throat.

* SHAO YAO TANG - 芍藥湯 - Peony Combination

ACTIONS - Regulates and Harmonizes Qi and Blood. Clears Heat. Dries Dampness. Relieves toxicity. Relieves pain.

SYNDROMES - Damp-Heat In Colon (Dysentery). Gu Syndrome.

CLINICAL MANIFESTATIONS - Abdominal pain. Tenesmus. Difficulty with defecation. Diarrhea with pus and blood (equal amounts). Purulent stools. Maybe borborygmus. Burning sensation around the anus. Dark, scanty urine. Oliguria with reddish urine.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with chronic dysenteric disorders from Deficiency Cold. Contraindicated for those with External/Biao conditions.

HERBS AND ACTIONS

-Bai Shao - Nourishes Blood, regulates menstruation, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind, softens the Liver and alleviates pain. With Gan Cao regulates the relationship between the Liver and Spleen and nourishes sinews, for abdominal pain due to disharmony between the Liver and Stomach, epigastric, hypochondriac or flank pain and muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency. With Huang Qin, for dysenteric disorders with abdominal pain due to Heat entering the Interior. With Huang Qin and Huang Lian, for Damp-Heat dysenteric disorders. With Dang Gui, nourishes Yin and Blood.

-Huang Qin - Clears Heat toxin from the Intestines, dries Dampness, drains Fire, detoxifies and calms ascending Liver Yang. With Bai Shao, for Damp-Heat dysentery with fever and tenesmus. With Huang Lian, drains pathogenic Heat from the upper and middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease, toothache and explosive diarrhea and dysentery with burning pain in the anus or fitted, filthy stools and abdominal pain. With Da Huang, for constipation.

-Dang Gui - Nourishes and invigorates Blood, moistens the Intestines, unblocks the bowels and alleviates pain. With Bai Shao, regulates and harmonizes Qi and Blood for Blood Deficiency Heat. With Gan Cao, moderates spasms and relieves abdominal pain.

-Bing Lang - Moves Qi, eliminates stasis, drains and unblocks bowels, promotes urination and stops nausea. With Bai Shao, Mu Xiang and Huang Lian, for Damp-Heat

dysenteric disorders with tenesmus.

-Huang Lian - Resolves toxic Heat in the Intestines, drains Stomach Fire and dries Dampness. With Huang Qin, clears and drains and assists Da Huang in clearing Heat through the stool. With Huang Qin and Da Huang, for hematemesis and rectal bleeding due to Blood Heat. With Mu Xiang, for Heat type dysentery. With Rou Gui, for insomnia with disturbing dreams, palpitations which are worse at night and irritability due to lack of communication between the Heart and Kidneys. With Mu Xiang and Bing Lang, for hot dysenteric disorders with Qi Stagnation and Damp-Heat in the Middle Jiao with intense tenesmus.

-Da Huang - Drains Heat through the stool, drains Fire, drains Heat from the Blood, invigorates the Blood and dispels Blood Stasis and reduces Fire toxicity. With Huang Lian, for fullness and distention due to Heat accumulation. With Huang Lian and Huang Qin, for hematemesis, or epistaxis due to Blood Heat and whole body Damp-Heat. With Dang Gui, for Blood Stasis. With Rou Gui, for chronic constipation.

-Mu Xiang - Moves Qi, eliminates stasis, adjusts and regulates stagnant Qi in the Intestines, dispels Damp-Heat and harmonizes the Liver and Spleen. With Bing Lang, for Qi Stagnation in the Stomach and Intestines due to Food Stagnation with abdominal distention, and fullness and distention, anorexia, aversion to the smell of food, nausea without the ability to vomit and an uncomfortable urge to defecate which is often unsuccessful and relieves tenesmus and the passage of mucus in dysenteric disorders. With Bing Lang and Da Huang, for epigastric and abdominal fullness, distention, and pain with constipation, or red and white dysenteric diarrhea due to Stagnation in the Stomach and Intestines transforming into Damp-Heat. With Huang Lian, for dysentery and diarrhea, with tenesmus and abdominal distention and pain. With Bai Shao, for diarrhea with profuse pus and Blood.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Bai Shao and Huang Qin, for abdominal pain and dysenteric diarrhea from Damp-Heat. With Bai Shao, Huang Qin, Huang Lian, Da Huang and Bing Lang, for diarrhea, dysentery, and abdominal pain caused by Damp-Heat.

-Rou Gui - Assists the generation and circulation of Qi and Blood and prevents the Cold, bitter properties of the other herbs from injuring the Yang. With Da Huang, invigorates the Blood. With Huang Lian, for irritability, restlessness, coolness of the lower limbs and difficulty falling asleep due to Disharmony between the Heart and Kidneys and chronic dysentery.

TREATS

Candidiasis. Giardiasis. Dysentery. Acute enteritis. Acute colitis. Gastralgia. Oliguria. Nausea/Vomiting. Diarrhea. Diverticulitis. Crohn's disease. Anorexia. Diverticulitis. Gastroenteritis. Urinary tract infection. Ulcerative colitis. Allergic colitis. Leaky gut

syndrome. Chronic fatigue syndrome. Irritable bowel syndrome. Abdominal pain. Hematuria. Gu syndrome. Diverticulosis. Intestinal polyps. Colon cancer. Hemafecia. Fatigue. Profuse perspiration.

Bu Zhong Yi Qi Tang, Cang Er Zi San, Chai Hu Gui Zhi Tang, Er Xian Tang, Jia Wei Xiao Yao San, Liu Wei Di Huang Wan, Xiang Sha Liu Jun Zi Tang, Yin Qiao San, Yu Ping Feng San

Recordings Updated in May 2025

* BU ZHONG YI QI TANG - 补中益气汤 - Tonify The Middle And Augment The Qi Formula - Ginseng And Astragalus Combination. Formula for Reinforcing the Center and Replenishing Qi. Interior Nourishing and Qi Increasing Formula. Middle-Reinforcing and Qi-Benefiting Formula

ACTIONS - Tonifies Middle Jiao Qi. Benefits Qi. Regulates Qi. Raises Sunken Yang. Lifts prolapsed organs.

SYNDROMES - Central Qi Sinking. Spleen Not Governing Blood. Spleen and Lung Qi Deficiency: Yin Fire due to Spleen and Lung Qi Deficiency. Gu Syndrome. Atrophy disorder (Wei Syndrome) due to Spleen and Stomach Qi Deficiency.

CLINICAL MANIFESTATIONS - Aversion to Cold. Bleeding. Borborygmus. Bloating. Catches cold easily. Chronic low grade fever. Clouded vision. Cold extremities. Constipation. Deafness. Depression. Desire for warm beverages. Diarrhea or dysentery, may be chronic. Dizziness. Drooping upper eyelids. Dry itching nose. Dry lungs. Dyspnea. Dysuria. Edema with prolapse. Enuresis. Epilepsy. Eye fatigue after extended use. Eye sores. Fatigue. Fecal incontinence. Fever without Cold which alternates between low and high. Fever with vexation. Frequent bowel movements. Frequent urination. Fever or Heat in the flesh in cool or cold weather. Genital sores. Goiter. Headache. Hemafecia. Hematemesis. Hematuria. Hemorrhoids. Hiccup. Hoarseness. Incessant thirst. Intermittent dull abdominal pain, better with warmth and pressure. Intermittent fever (worse on exertion). Laconic speech. Leukorrhea. Limbs may become emaciated. Lingering, dull tooth pain. Loose and watery stools or diarrhea. Loss of

voice. Maybe chronic weak cough. Maybe cloudy urine. Maybe cold body. Maybe cough. Maybe low back pain due to Dampness. Maybe scabs on the nasal mucosa. Menstrual flooding or spotting. Narrow visual field. Nasal congestion. Nausea and vomiting. Night blindness. Night sweats. Obstinate sores on the tongue with the opening of the sore falling downward. Obstructed urination. Oral sores. Painful urination. Pale complexion. Premature ejaculation. Prolapse of any organ. Prolonged runny nose may be malodorous. Protracted, soft, tender, numb tongue. Runny nose with clear, watery discharge may be precipitated by Cold or allergen. Sagging and distention of the lower abdomen. Sallow complexion. Seizures. Sensitivity of back to Cold and Wind. Shiny, pale complexion. Shortness of breath. Slight thirst with desire for warm drinks. Soft voice. Somnolence. Spontaneous perspiration. Suppuration. Susceptibility to Wind and Cold. Tendency to curl up. Terminal dribbling. Thirst with a desire for warm drinks. Tidal fever which is worse on exertion. Tinnitus. Urinary obstruction. Urinary incontinence. Vaginal itching. Vertigo. Visual disturbances. Warmness of the body. Waxy, pale complexion. Weak eyelids. Weakness of the extremities.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency or Interior Heat.

HERBS AND ACTIONS

-Huang Qi - Strongly tonifies Qi, strengthens the Spleen and raises Spleen Yang. With Ren Shen, for Qi Deficiency with general debility, anorexia and spontaneous perspiration. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools.

-Ren Shen - Strongly tonifies Qi, reinforces Yang and harmonizes the Middle Jiao. With Bai Zhu and Gan Cao, assists Huang Qi in strengthening Qi.

-Bai Zhu - Strengthens the Spleen and dries Dampness.

-Gan Cao - Tonifies the Spleen and harmonizes.

-Dang Gui - Tonifies the Qi of the Blood and invigorates and harmonizes the Blood. With Huang Qi, Ren Shen, Bai Zhu and Gan Cao, augments Qi by Invigorating Blood.

-Chen Pi - Regulates Qi, tonifies the Spleen, assists raising Qi, aids digestion of tonics and prevents bloating which may accompany Qi tonics.

-Sheng Ma - Raises Yang, raises sunken Qi and guides other herbs upwards. With Chai Hu and Huang Qi, raises Sunken Yang.

-Chai Hu - Raises Yang Qi and relieves Stagnation.

-Sheng Jiang - (Variation of the formula.) With Da Zao, harmonizes and protects the Spleen and Stomach.

-Da Zao - (Variation of the formula)

TREATS

Abdominal distention. Abdominal pain. Abdominal pain during pregnancy. Acid reflux. Acute infectious multiple neuritis. Aftermath of severe illness. AIDS/HIV. Allergic rhinitis. Alzheimer's disease. Anal pain. Allergic rhinitis due to Wei Qi Deficiency with Phlegm Damp. Amenorrhea. Anal prolapse. Anemia. Anorexia. Aphthous ulcers. Aplastic anemia. Arrhythmias. Asthma. Atrophy (Wei) Syndrome. Behcet's Syndrome. Benign Prostatic Hypertrophy. Bi Syndrome due to Qi and Blood Deficiency. Bladder cancer. Bladder prolapse. Bleeding hemorrhoids. Borborygmus. Breast discharge. Candidiasis. Cataract. Cerebral arterial sclerosis. Childhood eczema. Chronic bronchitis. Chronic diarrhea. Chronic dysentery. Chronic Fatigue Immune Deficiency Syndrome (CFIDS). Chronic gastritis. Chronic gastroenteritis. Chronic gonorrhea. Chronic hepatitis. Chronic laryngitis. Chronic nephritis. Chronic pharyngitis. Chronic weakness. Chyluria. Clouded vision. Colitis. Common cold. Complications from transurethral resection of the prostate. Constipation. Constipation with anal prolapse. Corneal ulcers. Cough. Crohn's disease. Deafness. Depression. Diarrhea. Diverticulitis. Dizziness. Drooping of upper eyelids. Dysentery. Dyspnea. Early menstruation. Eczema. Edema during pregnancy. Emaciation. Emaciation with ptosis or prolapse. Endometriosis. Enuresis. Ephidrosis. Epistaxis. Epstein Barr. Excessive lactation. Eye pain. Eyelid edema. Facial pain. Facial paralysis. Fatigue. Fecal incontinence. Fever. Fever of unknown origin. First or second degree uterine prolapse. Food allergies. Forgetfulness. Frequent urination during pregnancy. Functional Uterine Bleeding. Gastroptosis. Gastritis. Giardiasis. Gradual paralysis. Gu syndrome. Guillain-Barre disease. Hashimoto's thyroiditis. Hay fever. Headache. Hemafecia with relatively mild bleeding. Hematemesis. Hematuria. Hemorrhage. Hemorrhoids. Hepatocellular carcinoma. Hepatoma. Hernia. Hiatus hernia. Hiccups. Hoarseness. Hydrocele. Hypertension. Hypoglycemia. Hypomenorrhea. Hypotension. Hysterical paralysis. Immunity compromised. Impetigo. Impotence. Increases longevity. Infertility. Insufficient lactation. Interstitial cystitis. Irregular menstruation. Irritable bowel syndrome. Leaky gut syndrome. Lethargy. Leukemia. Leukopenia. Leukorrhea. Limb paresthesia. Lin Syndrome due to Qi Deficiency (Lao Lin). Lochiorrhea. Lochioschesis. Loss of voice. Low back pain. Low-grade fever after exertion. Lower limb pain. Male infertility. Meniere's Disease due to Qi and Blood Deficiency with Central Qi Sinking and Yang Deficiency. Menorrhagia. Metrorrhagia. Middle back pain. Monoplegia. Multiple sclerosis. Muscular dystrophy, progressive. Myasthenia gravis. Myelitis, acute (inflammation of the spinal cord). Narcolepsy. Nausea/Vomiting. Neck pain. Nephritis. Nephroptosis. Neurasthenia. Night blindness. Night sweats. Numbness. Obesity. Optic atrophy. Oral ulcers. Otitis media. Pain during copulation. Pain during defecation. Painful obstruction. Palpitations. Paralytic strabismus. Paresthesia. Periodic paralysis. Pernicious anemia. Persistent malaria. Polyneuritis. Polyuria. Polyuria during pregnancy. Postpartum anuria. Postpartum illnesses. Postpartum lochioschesis. Postpartum urinary disorder. Postpartum urinary incontinence. Postpartum uterine bleeding. Progressive myodystrophy. Prolonged menstruation. Prostate cancer. Prostatitis. Pulmonary

tuberculosis. Raynaud's disease. Rectal prolapse. Recurrent miscarriages. Retinitis pigmentosa. Rheumatic fever. Rhinitis. Sciatica. Seizures. Septicemia. Side effects of radiation treatments. Sinusitis. Somnolence. Spontaneous perspiration. Stomach cancer. Strangury. Stress incontinence. Summer weight loss. Tenesmus. Thrombocytopenic purpura. Thrush associated with AIDS/HIV. Tibial ulcers. Tidal hectic fever. Tinnitus. Temporomandibular joint syndrome (TMJ with more swelling than pain). Ulcer. Ulcerative colitis. Umbilical palpitations. Urinary incontinence. Urinary pain. Uterine bleeding. Uterine prolapse. Vaginal bleeding during pregnancy. Vaginal discharge. Vaginal pain. Vaginal prolapse. Vaginitis. Varicose veins. Vertigo. Weakness and debility after a severe illness. Whole body pain.

* CANG ER ZI SAN - 蒼耳子散 - Xanthium Formula

ACTIONS - Disperses Wind. Alleviates pain. Unblocks the nose.

SYNDROMES - Wind-Cold with interior Heat in the muscles. Profuse nasal discharge due to Wind-Heat Attacking the head.

CLINICAL MANIFESTATIONS - Copious, purulent, foul nasal discharge. Nasal obstruction. Dizziness. Frontal or temporal headache. Fever. Intolerance of Cold. Muscle ache. Blood-shot eyes. Dry nose. Bitter taste in mouth. Insomnia.

HERBS AND ACTIONS

-Cang Er Zi - Disperses Wind, dispels Dampness and opens the nasal passages. With Xin Yi, unblocks the nasal passages and treats headache and profuse nasal discharge.

-Xin Yi - Expels Wind-Cold and unblocks the nasal passages.

-Bai Zhi - Releases the exterior, disperses Cold, opens the nasal orifices, disperses Wind-Dampness, alleviates pain and headache, reduces swelling and expels pus. With Cang Er Zi and Xin Yi, for headache due to nasal congestion with thick putrid discharge.

-Bo He - Disperses Wind-Heat, clears the head and eyes and benefits the throat.

TREATS

Rhinorrhea. Nasal suppuration. Acute or chronic rhinitis. Nasal congestion. Fever. Acute or chronic sinusitis. Allergic rhinitis. Accessory nasal sinuses. Headache.

* CHAI HU GUI ZHI TANG - 柴胡桂枝湯 - Bupleurum And Cinnamon Twig Formula

ACTIONS - Releases the Exterior and muscle layer. Harmonizes and releases the Shao-Yang. Harmonizes the Liver, Spleen and Intestines. Dispels Water Accumulation.

SYNDROMES - Shao-Yang stage disorders where the exterior has not been completely released (Tai Yang - Shao Yang). Epigastric pain due to Liver and Spleen disharmony.

CLINICAL MANIFESTATIONS - Joint pain with a crackling sensation. Epigastric pain. Fatigue. Gastrointestinal weakness. Headache. Heaviness in the head. Fever. Moderately severe chills. Distension beneath the Heart. Periumbilical or lower abdominal pain. Tenseness around the pubic bone. Subcostal pain. Epigastric fullness. Nausea. Mild vomiting. Mild thoraco-costal discomfort. Costal distress. Tension in the rectus abdominus. Chest distension. Abdominal pain. Abdominal distension. Constipation. Irritability. Insomnia. Repeated loss of spinal alignment due to muscular tension.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Concurrent administration with anticonvulsants, such as benzodiazepines has been found to have a synergistic effect in the treatment of epilepsy. Concurrent administration with pentobarbitol was associated with shortened pentobarbitol induced sleeping time in mice.

HERBS AND ACTIONS

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain, assists the Heart Yang and warms and facilitates the flow of Yang Qi in the chest, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels, warms the Middle and directs Turbid Yin downward. With Bai Shao for External Wind-Cold with disharmony between the Ying and Wei (Tai Yang Zhong Feng), with spontaneous sweating, fever and chills and warms and tonifies the Middle Jiao. With Chai Hu, for Tai Yang Stage moving to Shao Yang Stage.

-Huang Qin - Clears Heat and drains Fire especially from the Upper Jiao, dries Dampness and sedates Liver Yang rising. With Chai Hu, for Heat in the Shao Yang with alternating chills and fever, and nausea. With Bai Shao, for Dysenteric disorders with abdominal pain due to Heat entering the Interior.

-Ren Shen - Strongly tonifies Qi, tonifies the Lungs, strengthens the Spleen and Stomach and generates Fluids.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of the other herbs. With Bai Shao for abdominal pain due to disharmony between the Liver and Stomach. With Bai Shao and Huang Qin, for abdominal pain and dysenteric diarrhea from Damp-Heat.

-Ban Xia - Dries Dampness, transforms Phlegm, descends rebellious Qi, harmonizes the Stomach and stops vomiting. With Sheng Jiang, for vomiting. With Ren Shen,. for

vomiting due to Stomach Deficiency. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting.

-Bai Shao - Nourishes the Blood, regulates the menses, calms and curbs Liver Yang, alleviates pain, preserves Yin and adjusts the Ying and Wei. With Chai Hu for vertigo, dizziness, and flank pain due to Liver Qi Stagnation. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration.

-Chai Hu - Resolves the Shao Yang, reduces fever, spreads Liver Qi, relieves constraint and raises Yang Qi in Spleen and Stomach Deficiency patterns. With Huang Qin and Ban Xia, for Shao Yang disorders with alternating chills and fever and a sensation of fullness in the hypochondria and chest. With Huang Qin, Ban Xia, Ren Shen and Gan Cao, for weak patients. With Gan Cao, for hepatitis and upper right quadrant pain and Wind-Heat fever.

-Sheng Jiang - Releases the exterior, disperses Cold, warms the Middle Jiao, stops vomiting, stops cough, adjusts the Ying and Wei and reduces toxicity of other herbs. With Da Zao, Protects Stomach Qi and regulates the Ying and Wei. With Ban Xia, for vomiting due to many causes including Stomach Cold and productive cough due to Phlegm-Dampness. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis and warms and dispels thin mucus in the Stomach with nausea, hiccup, Stomach pain, acid reflux or vomiting of clear fluid. With Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens.

-Da Zao - Tonifies Qi, strengthens the Spleen and moderates and harmonizes the harsh properties of other herbs.

TREATS

Cholelithiasis. Chronic hepatitis. Acute hepatitis. Jaundice. Spleen disorders. Cholecystitis. Chronic appendicitis. Peritonitis. Intercostal neuralgia. Nephritis. Pyelitis. Nervous exhaustion. Female disorders. Hysteria. Epilepsy. Chiropractic disorders. Chronic Intestinal disorders. Skin rashes triggered by Cold. Hot flashes. Sleep that does not refresh. Migraines with a strong emotional involvement. Cirrhosis of the Liver. Chronic pancreatitis. Seizures. Trigeminal neuralgia. Chronic headaches. Cough. COPD. Depression. Weakness. Menopause syndrome. Arthralgia. Fever. Cardiac disorders. Neuritis. Common cold. Influenza. Pneumonia. Tuberculosis. Pleuritis. Gastralgia. Sour Stomach. Gastric hyperacidity. Gastric ulcer. Duodenal ulcer. Acute colitis. Intestinal ulcer. Common Cold or Influenza in patients with Internal disorders. Allergic rhinitis. Urticaria. Waking during sleep. Tension headaches. Arrhythmia. Acid reflux. Frozen shoulder. Neurasthenia. Painful obstruction. Insomnia. Chronic asthmatic bronchitis. Abdominal pain. Anorexia. Fatigue. Gastroenteritis. Constipation.

* ER XIAN TANG - 二仙湯 - Two Immortals Formula. Formula Of Curculigo And

Epimedium

ACTIONS - Replenishes Kidney Yin and Yang. Tonifies Kidney Jing. Purges Deficiency Fire. Regulates the Chong and Ren.

SYNDROMES - Kidney Yin and Yang Deficiency. Disharmony between the Chong and Ren Channels.

CLINICAL MANIFESTATIONS - Amenorrhea. Irregular menstruation. Hot flashes. Dizziness. Tinnitus. Night sweats. Perspiration. Nervousness. Muscular flaccidity. Fatigue. Mood swings. Cold feet. Lassitude. Frequent, clear urine. Irritability. Headache. Palpitations. Insomnia.

HERBS AND ACTIONS

-Xian Mao - Tonifies the Kidneys, strengthens Yang, expels Cold, eliminates Dampness and strengthens bones and sinews. With Yin Yang Huo, accentuates the effects of the herb.

-Yin Yang Huo - Tonifies Kidneys, strengthens Yang, dispels Wind-Cold-Damp, tonifies Yin and Yang, restrains Ascendant Liver Yang and strengthens sinews and bones.

-Ba Ji Tian - Tonifies the Kidneys,strengthens Yang, strengthens sinews and bones, disperses Wind and expels Damp-Cold.

-Dang Gui - Tonifies, invigorates and harmonizes Blood, regulates menses, disperses Cold, moistens Intestine, unblocks bowels, reduces swelling, expels pus, generates flesh and alleviates pain.

-Huang Bai - Drains Damp-Heat, especially from the Lower Jiao, drains Kidney Fire, drains Fire and relieves toxicity. With Zhi Mu, for Yin Deficiency fever with steaming bones and night sweats.

-Zhi Mu - Clears Heat from the Qi Stage, clears Heat from the Lung and Stomach, drains Fire, nourishes Yin, moistens Dryness, generates fluids and clears Heat.

TREATS

Hypertension. Psoriasis. Irregular menstruation. Hyperthyroidism. Hypofunction of the pituitary. Menopause. Chronic glomerulonephritis. Nephritis. Breast cancer. Insomnia. Amenorrhea. Nephropathy. Tinnitus. Fatigue. Hot flashes. Night sweats. Infertility with Candidiasis. Pyelonephritis. Polycystic Kidneys. Urinary tract infection. Renal vascular disease. Urticaria. Dermatosclerosis. Lupus erythematosis. Perimenopause syndrome. Premature ovarian failure, prevention. Frequent urination. Infertility. Aplastic anemia. Palpitations. Enuresis. Male menopause. Perspiration.

* JIA WEI XIAO YAO SAN (DAN ZHI XIAO YAO SAN) - 加味逍遙散 - Augmented Rambling Formula. Bupleurum and Paeoniae Formula. Moutan and Gardenia Rambling Formula. Free and Relaxed Formula with Moutan and Gardenia

ACTIONS - Pacifies the Liver. Spreads Liver Qi. Strengthens the Spleen. Nourishes the Blood and Yin. Regulates menstruation. Sedates the Heart. Clears Heat.

SYNDROMES - Liver Qi Stagnation turning to Heat with underlying Spleen and Blood Deficiency. Gu Syndrome.

CLINICAL MANIFESTATIONS - Irritability. Short temper. Restlessness. Fever or tidal fever. Red eyes. Dry mouth and throat. Palpitations. Lower abdominal pain. Difficult urination. Painful urination. Increased menstrual flow. Uterine bleeding. Early menstruation. Aching in limbs. Dizziness. Mental instability. Red face. Thirst. Turbid urine. Alternating chills and fever. Red cheeks. Wheezing. Nervousness. Headache. Dry mouth. Anorexia. Infertility. Abdominal pain. Spontaneous sweating or night sweats with fever. Anxiety. Dry eyes. Hypochondriac pain. Somnolence. Insomnia. Aching shoulders. Five Sole Heat. Earache. Premenstrual tension. Hot flashes. Fatigue. Lassitude. Depression. Constipation with flushing up. Pale complexion. Bitter taste in mouth. Vertigo. Abdominal distention near the umbilicus. Epistaxis. Irregular menstruation. Heaviness in the lower abdomen.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution during pregnancy. Contraindicated for those with underlying Deficiency and Cold. This formula may reduce tremors caused by antipsychotic-induced Parkinson's disease. This formula may be effective in treating menopausal symptoms induced by gonadotropin-releasing hormone agonist therapy without a negative effect on serum estradiol levels.

HERBS AND ACTIONS

-Dang Gui - Tonifies Blood, regulates menses, invigorates and harmonizes the Blood and reduces swelling. With Bai Shao, regulates and harmonizes Qi and Blood and relieves genital pain. With Gan Cao, moderates spasms and relieves abdominal pain. With Chai Hu and Bai Shao, for dysmenorrhea from Liver Qi Stagnation and Blood Deficiency. With Bai Shao and Fu Ling, for diarrhea during pregnancy with mild abdominal pain. With Mu Dan Pi, Zhi Zi, Chai Hu and Bai Shao, for early menstruation, bloating during menstruation, and irritability due to Qi Stagnation with Heat.

-Bai Shao - Calms Liver Yang, nourishes Blood, regulates menstruation and astringes Yin. With Dang Gui, nourishes Yin and Blood. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews for epigastric, hypochondriac or flank pain and muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and

harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Bai Zhu - Tonifies the Spleen, tonifies Qi and dries Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Chai Hu - Resolves Shao Yang disorders, reduces fever, spreads Liver Qi and relieves Stagnation. With Bai Shao, for Liver Blood Deficiency with Liver Qi Stagnation and vertigo, dizziness, thoracic and costal pain, and menstrual irregularity due to Liver Qi Stagnation. With Bo He, for emotional depression, a stifling sensation in the chest, and irregular menstruation due to Liver Blood Stagnation and Deficiency. With Gan Cao, for hepatitis and upper right quadrant pain. With Bai Shao, Dang Gui and Bo He, for Liver Qi Stagnation with stress and emotional distress.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, clears Deficiency Fire, activates the Blood, dispels Blood Stasis and clears Liver Fire. With Zhi Zi, Chai Hu and Bai Shao, for Fire from Stagnation leading to Liver Fire or Liver Yang Rising

-Zhi Zi - Clears Heat, reduces Fire, cools the Blood, disperses toxins, stops bleeding, activates the Blood, eliminates irritability and drains Damp-Heat. With Mu Dan Pi, resolves Qi Level Stagnation leading to Heat and Heat in the Blood, for dysmenorrhea, headache, dry, scratchy eyes and intercostal pain due to Liver Blood Deficiency and irregular menstruation, headache, red eyes, and thirst due to Liver Qi Heat from Stagnation. With Chai Hu, Mu Dan Pi and Bai Shao, for irritability and a short temper.

-Gan Cao - Tonifies the Spleen, tonifies Qi, clears Heat, relieves Fire toxicity and moderates and harmonizes the properties of other herbs.

-Bo He - Disperses Wind-Heat, cools and clears the head and eyes, benefits the throat and relieves Stagnation of Liver Qi. With Bai Shao and Chai Hu, for Liver Qi Stagnation with chest and flank distention.

-Sheng Jiang - Reduces the toxicity of other herbs.

TREATS

Menstrual problems. Neurasthenia. Leukorrhea. Chronic endometritis. Hysteria. Narcolepsy. Turbid urine. Oliguria. Retention of urine. Odontorrhagia. Epistaxis. Infertility. Premenstrual tension. Stomatitis. Premenstrual syndrome. Menopause. Anxiety. Stress. Urinary tract infection. Fibrocystic breasts. Abnormal uterine bleeding. Cervical dysplasia. Acne due to disharmony between the Chong and Ren (associated with menstruation). Raynaud’s Disease due to Liver Qi Stagnation with Internal Heat. Candidiasis. Chronic fatigue syndrome. Glaucoma. Metrorrhagia. Amenorrhea. Ischemic optic neuropathy. Vaginal pain. Breast cancer. Insomnia. Conjunctivitis. Dysentery. Cough. Acute tonsillitis. Trigeminal neuralgia. AIDS/HIV. Fever. Auditory hallucinations. Gastrointestinal neurosis. Schizophrenia. Abdominal pain. Anorexia. Hemafecia.

Depression. Herpes genitalia. Dizziness. Psychosis. Goiter. Hiatus hernia. Optic neuritis. Otitis media. Lung cancer. Postpartum uterine bleeding. Globus hystericus. Nocturnal emission. Indigestion. Excessive lactation. Premenstrual breast distention. Cervicitis. Red eyes. Prematurely gray hair. Chronic tonsillitis. Chronic hepatitis. Hepatomegaly. Gingivitis. Anxiety neurosis. Early-stage cirrhosis of the Liver. Urethritis. Cystitis. Irregular menstruation. Early menstruation. Anemia. Constipation. Eczema. Hyperkeratosis of the palms. Leukoderma. Basedow's disease. Climacteric disorders. Chronic or recurrent vaginal infections. Dysmenorrhea. Tendinitis. Menstrual pain and cramps. Emotional instability. Pelvic inflammatory disease. Wheezing due to Liver Fire Attacking the Lungs (mild). Hemorrhoids due to Central Qi Sinking with Liver Qi Stagnation and Damp Heat. Leaky gut syndrome. Giardiasis. Obesity. Polycystic ovary syndrome. Vaginal itch. Breast discharge. Headache. Premature ovarian failure. Irritable bowel syndrome. Gastralgia. Optic atrophy. Hematuria. Asthma. Gu syndrome. Breast cancer. Panic disorder. Stress-related breathing problems. Abdominal fullness and distention. Neurosis. Hypertension. Cushing's syndrome. Bi-Polar disorder. Fatigue. Vertigo. Hoarseness. Hernia. Lochiorrhea. Hot flashes. Palpitations. Meniere's disease. Spermatorrhea. Dermatitis. Abdominal pain during pregnancy. Scleroderma. Post-menopausal uterine bleeding. Cervical polyps. Ear pain. Vaginitis. Bipolar mood disorder.

* LIU WEI DI HUANG WAN - 六味地黄丸 - Six Ingredient Pills With Rehmannia. Rehmannia Six Formula

ACTIONS - Enriches Yin. Nourishes the Essence of the Liver and Kidney.

SYNDROMES - Kidney Yin Deficiency. Heart and Kidney Yin Deficiency. Liver and Kidney Yin Deficiency. Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency.

CLINICAL MANIFESTATIONS - Low back, knees and legs painful and weak. Foot pain. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five sole Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Dry skin. Deafness. Steaming bones. Delayed closing or unclosed fontanel in infants. Tidal fevers. Loose teeth. Dripping urine. Thirst. Dry tongue. Numbness and weakness at the waist and knees. Heel pain. Dry mouth. Dry throat. Blurred vision. Urinary incontinence. Spontaneous and nocturnal emissions. Night sweats.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen Deficiency type diarrhea and indigestion with a white greasy tongue coat. Use caution in areas where diseases are predominantly caused by Dampness. Contraindicated for those with Yang Deficiency. This formula has shown to induce marked improvement in patients who are undergoing chemotherapy.

HERBS AND ACTIONS

-Shu Di Huang - Tonifies the Kidneys and nourishes Jing, Yin and Blood. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Jing and Yin and stops perspiration. With Shan Yao, tonifies the Liver and Spleen. With Shu Di Huang and Shan Yao, for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and astringes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Mu Dan Pi - Clears Heat, cools the Blood clears and Deficiency Fire.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

TREATS

Neurasthenia. Pulmonary tuberculosis. Diabetes mellitus. Diabetes insipidus. Chronic nephritis. Hyperthyroidism. Chronic glomerulonephritis. Chronic urinary tract infections. Chronic renal failure. Hypertension. Failure to thrive. Functional uterine bleeding. Optic neuritis. Optic nerve atrophy. Central retinitis. Nephroatrophy. Senility. Impotence. Infertility. Spermatorrhea. Esophageal cancer. Chronic asthma. Bronchitis. Side effects of steroids. Cushing's syndrome. Thyroid adenoma. Nephrotic syndrome. Post-stroke sequelae. Side effects of chemotherapy. Retarded growth in children. Prostate cancer. Late menstruation. Chronic pharyngitis. Polycystic ovary syndrome. Dysmenorrhea. Hyperglycemia. Obesity. Premature ovarian failure. Common warts. Dizziness. Vertigo. Atrophy (Wei) Syndrome. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Urinary incontinence. COPD. Numbness. Parkinson's disease. Hyperthyroidism. Drug abuse. Constipation. Painful obstruction. Fever. Disciform lupus erythematosus. Myalgic encephalomyelitis. Chronic laryngitis. Impotence. Deafness. Low back pain. Palpitations. Gout. Fatigue. Hypotension. Jaundice. Vaginal discharge. Sciatica. Allergic disorders. Strangury. Gingivitis. Endocrine dyscrasia infertility. Sweating from the chest. Sjogren's Syndrome. Cervical cancer. Intracranial postoperative hydrocephalus. Whole body pain. AIDS/HIV/ARC. Ear pain. Nasal pain. Bronchiaesthenia. Chronic urticaria. Chronic hepatitis. Viral hepatitis. Nocturnal emissions. Spermatorrhea. Irregular menstruation. Addison’s disease. Congestive Heart failure. Sore throat. Dry mouth. Retarded growth

in children. Toothache. Vegetative nerve functional disturbance. Arteriosclerosis. Amenorrhea. Scanty menstruation. Infantile dysplasia. Infantile malnutrition. Menopause. Neurosis. Coronary Heart disease. Atrophic gastritis. Esophagitis. Oliguria. Miscarriage. Chronic prostatitis. Galacturia. Heel pain. Glaucoma. Panarthralgia. Prostatitis. Eczema. Tourette syndrome. Hashimoto's thyroiditis. Stroke. Knee pain. Cough. Meniere's disease. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Acute infectious multiple neuritis. The sequelae of poliomyelitis. Progressive muscular dystrophy. Polyuria in children. Hyperglycemia. AIDS/HIV. Paresthesia. Tremors. Anxiety. Anemia. Osteoarthritis. Fibrocystic breast disease. Behcet's disease. Epstein-Barr virus syndrome. Chronic fatigue syndrome. Chronic tonsillitis. Tinnitus. Knee pain. Hemafecia. Forgetfulness. Diverticulitis. Weakness. Hoarseness. Headache. Interstitial cystitis. Night sweats. Ascites. Aphasia. Periodontitis. Fetal restlessness. Fallopian tube blockage. Dry skin. Chemotherapy for breast cancer. Polymyositis. Erythema induratum. Leukopenia. Foot pain. Prematurely gray hair.

* XIANG SHA LIU JUN ZI TANG - 香砂六君子汤 - Six Gentlemen Formula With Aucklandia And Amomum. Saussurea and Cardamon Combination. Saussurea, Cardamon and the Six Gentlemen Formula. Aplotaxis-Amomum Formula

ACTIONS - Tonifies Qi. Strengthens the Spleen. Harmonizes the Stomach. Regulates Qi. Stops pain.

SYNDROMES - Spleen Qi Deficiency (with Phlegm-Damp and pain). Stomach Qi Deficiency. Stomach Cold. Gu Syndrome.

CLINICAL MANIFESTATIONS - Nausea and vomiting. Emaciation. Sallow complexion. Anorexia with a full feeling after very little food. Weak abdomen. Belching. Abdominal distention or pain (subtle). Rolled lips. Pale lips. Stiff tongue. Tired limbs. Heavy limbs. Chest fullness. Acid regurgitation. Epigastric distention or pain. Muscle weakness in arms and legs. Loose stools or diarrhea. Maybe bleeding. Thin muscles.. Lethargy-fatigue. Does not like to speak. Weak, soft voice. Maybe enuresis. Maybe abundant clear urine. Maybe cold extremities. Maybe borborygmus.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi and strengthens the Spleen and Stomach. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Gan Cao and Fu Ling, for Spleen and Stomach Qi Deficiencies with Dampness with anorexia, diarrhea, vomiting, abdominal distention and fatigue.

-Bai Zhu - Strengthens the Spleen, augments Qi and dries Dampness. With Fu Ling and Dang Shen, for Deficiency Cold of the Middle Jiao with abdominal pain, distention, vomiting and diarrhea. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiencies.

-Fu Ling - Dries Dampness, strengthens the Spleen and moderates the drying nature of Gan Cao. With Ban Xia, stops nausea and vomiting. With Ban Xia and Chen Pi, for nausea, vomiting and anorexia due to congested Fluids. With Mu Xiang, for diarrhea and borborygmus due to Dampness. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Gan Cao - Harmonizes, warms and strengthens the Middle Jiao and moderates the draining properties of Fu Ling. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency.

-Chen Pi - Circulates Qi, dries Dampness, transforms Phlegm, tonifies the Spleen, adjusts the Middle and helps prevent Stagnation from tonic herbs. With Bai Zhu, for manifestations of Damp-Obstruction due to Spleen Deficiency. With Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Sha Ren, for Dampness Obstructing the Spleen's transforming and transporting functions with reduced intake of food, diarrhea, belching, nausea, and a stifling sensation in the epigastrium due to Disharmony of the Stomach Qi, vomiting of unadulterated, or scanty but viscous fluids and assists digestion of greasy tonic herbs.

-Ban Xia - Dries Dampness, resolves Phlegm, harmonizes the Stomach, descends Rebellious Qi and stops vomiting. With Chen Pi, for Stomach Qi Disharmony with epigastric and abdominal distention or pain. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose, watery stools, treats Phlegm, thin mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia. With Ren Shen, for vomiting due to Stomach Deficiency.

-Sha Ren - Aromatically dries Dampness, stops vomiting, moves Qi, warms and strengthens the Spleen and Stomach, warms the Middle, stops diarrhea and prevents Stagnation from tonic herbs.) With Dang Shen, for abdominal pain and diarrhea due to Dampness Obstructing the Spleen and Stomach and morning sickness. With Ban Xia, for morning sickness. With Ren Shen and Bai Zhu, for Spleen and Stomach Deficiencies.

-Mu Xiang - Circulates Qi, stops pain, strengthens the Spleen and dispels Heat and Dampness.
With Sha Ren, Increases the flow of Qi in the digestive system as while reducing distention and Food Stagnation, alleviating pain and strengthening the Spleen. With Bai Zhu, for anorexia with epigastric and abdominal pain and distention. With Sha Ren, Ren Shen and Bai Zhu, for anorexia and abdominal distention and fullness which improves with warmth applied locally.

TREATS

Indigestion. Acute or chronic gastritis. Gastric or duodenal ulcer. Acute or chronic gastroenteritis. Gastroptosis. Gastric distention. Emotional instability. Chronic peritonitis. Irritable bowel syndrome. Post-surgical diarrhea. Cirrhosis of the Liver. Chronic fatigue syndrome. Candidiasis. Pernicious vomiting. Childhood eczema. Chronic dysentery. Abdominal pain. Uterine myoma. Enteritis. Chronic colitis. AIDS/HIV. Hypoglycemia. Food allergies. Bronchitis. Anemia. Breast cancer. Epstein-Barr virus syndrome. Abdominal fullness and distention. Stress. Intestinal tuberculosis. Fatigue. Gastrectasis. Enuresis. Jaundice. Obesity. Dyspnea. Fetal restlessness. Rickets. Nervous exhaustion. Gastralgia. Delayed menstruation due to Phlegm. Morning sickness. Obstruction. Chronic bronchitis. Bronchiectasis. Gastritis. Stomatitis. Anorexia. Leaky gut syndrome. Giardiasis. Acid reflux. Infertility. Hiccups. Optic atrophy. Vaginal discharge. Cholecystitis. Polyuria. Somnolence. Narcolepsy. Candidiasis. Nausea/Vomiting. Gu syndrome. Myalgic encephalomyelitis. Schizophrenia. Diarrhea. Gastric neurosis. Hypothyroidism. Weakness. Edema. Hiatus hernia. Urticaria. Liver cancer. Constipation. Chemotherapy for breast cancer.

* YIN QIAO SAN - 银翘散 - Honeysuckle And Forsythia Formula. Lonicera and Forsythia Combination (UPDATED)

ACTIONS - Disperses Wind-Heat. Cools Heat. Relieves toxicity.

SYNDROMES - Wind-Heat Attacks the Lungs. Wen Bing - Wei Stage Wind-Heat. Dry Heat. Summer Heat with Dampness. Damp Heat.

CLINICAL MANIFESTATIONS - Dry cough. Sore, red, swollen throat. Slight thirst, with desire to drink cold liquids. Runny or blocked nose. Fever with little perspiration. Slight chills. Maybe high fever. Aversion to Wind. Headache. May be dyspnea with flared nostrils.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - This formula must be significantly modified to treat Damp-Heat. Contraindicated for Wind-Cold.

HERBS AND ACTIONS

-Jin Yin Hua - Disperses Wind, clears Heat and relieves toxicity. With Gan Cao, for toxic swelling and sores. With Lian Qiao and Niu Bang Zi , for Wei Stage and Qi Stage Heat and pneumonia with Heat signs. With Lian Qiao, Jing Jie and Bo He, for Wind-Heat Attacks the Lungs. With Lian Qiao, Jing Jie and Niu Bang Zi, for throat swelling and pain.

-Lian Qiao - Disperses Wind, clears Heat and relieves toxicity. With Niu Bang Zi and Bo He, for Wei Stage Heat. With Jin Yin Hua, for Initial stage Wind-Heat.

-Jie Geng - Disperses the Lungs, stops cough, resolves Phlegm and descends Qi. With Gan Cao, for hoarseness and throat swelling and pain due to Wind-Heat Attacks the

Lungs.

-Niu Bang Zi - Disperses Wind-Heat, benefits the throat, relieves Heat and toxins, and spreads Lung Qi. With Bo He, for sores due to Wind-Heat, dry throat, cough with yellow sputum, incomplete expression of measles or pruritic rash. With Jie Geng and Bo He, and Jing Jie, for throat inflammation and productive cough due to Wind-Heat Attacks the Lungs. With Jin Yin Hua, Bo He, Lian Qiao, and Jie Geng, for Sore throat caused by a febrile disorder or Wind-Heat.

-Bo He - Relieves Wind-Heat and benefits the throat. With Jing Jie, for Wind-Heat. With Jing Jie, Lian Qiao and Jin Yin Hua, for Wind-Heat Attacks the Lungs. With Jing Jie, Niu Bang Zi and Lian Qiao, promotes the eruption of measles. With Niu Bang Zi, for Wind-Heat manifesting as sores, rashes, dry throat and cough with yellow sputum.

-Dan Dou Chi - Relieves the exterior. With Niu Bang Zi and Lian Qiao, for Wind-Heat. With Bo He, Jing Jie and Niu Bang Zi, for early stage Wind-Heat with fever and headache.

-Dan Zhu Ye - Generates Fluids, alleviates thirst and clears Heat.

-Jing Jie - Relieves the exterior. With Bo He, for Wind in the head. With Bo He, Jie Geng and Gan Cao, for acute cough associated with Wind. With Bo He, Jin Yin Hua and Lian Qiao, for External Wind-Heat with fever, headache and sore throat. With Bo He, Liang Qiao and Jie Geng, for Wind-Heat.

-Lu Gen - Generates Fluids, alleviates thirst and clears Lung Heat.

-Gan Cao - Harmonizes, generates Fluids, alleviates thirst, moistens the Lungs, resolves Phlegm, stops cough and clears Heat. With Jie Geng, for a sore throat in which the throat is not very red. With Jin Yin Hua, for damp rashes or acne. With Niu Bang Zi, strongly clears throat and Lungs to treat Wind-Heat Attacks the Lungs or Fire toxin flaring upwards.

-Jing Mi - Tonifies the Qi of the Lungs, Spleen and Intestines, stops restlessness, stops thirst and generates fluids.

TREATS

Acute bronchitis. Bronchiectasis. Common cold, initial-stage. Fever. Upper respiratory tract infection. Cough. Influenza. Initial stage of measles. Initial stage of mumps (epidemic parotitis). Pharyngitis. Acute tonsillitis. Acute endometritis. Early stage encephalitis B. Canker sores. Drug-induced dermatitis. Purulent otitis media. Epistaxis. Hordeolum. Acute laryngitis. Otitis media. Nausea/Vomiting. Myalgic encephalomyelitis. Perspiration. Dyspnea. Otorrhea. Pulmonary abscess. Lip pain. Coughing and asthma associated with AIDS/HIV. Pneumonia. Early stage Lung Abscess. Early stage meningitis. Herpes simplex (genitalia). Epstein Barr (herpes type). Mononucleosis.

Chronic Functional Immune Deficiency Syndrome (CFIDS). Allergies. Acute suppurative infection. Sinusitis. Viral myocarditis. Scarlet fever. Headache. Early stage cataracts. Early-stage conjunctivitis. Flat warts. Tinnitus. Deafness. Constipation. Chronic fatigue syndrome. Cervical lymphadenopathy. Puerperal fever. Toothache. Upper and middle back pain. Ear pain. Tongue pain. Sore throat.

* YU PING FENG SAN - 玉屏風散 - Jade Windscreen Formula. The Jade Screen Formula

ACTIONS - Tonifies Qi. Stabilizes the exterior. Stops sweat.

SYNDROMES - Spontaneous sweating due to Qi Deficiency. Spontaneous sweating due to Wei Qi Deficiency. Lung Qi Deficiency.

CLINICAL MANIFESTATIONS - Aversion to Wind and Cold. Spontaneous sweat. Recurrent colds. Shiny, pale complexion. Increased susceptibility to external invasion.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Excess patterns. Contraindicated for those with night sweats due to Yin Deficiency.

HERBS AND ACTIONS

-Huang Qi - Strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, tonifies Wei Qi, stabilizes the exterior and tonifies the Lungs (aids circulation of moisture downward from the face). With Fang Feng, stabilizes the exterior without causing the pathogenic influences to remain.

-Bai Zhu - Strengthens the Spleen, tonifies Qi. stabilizes the exterior and stops sweating. With Huang Qi, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Huang Qi and Fang Feng, for spontaneous sweat with aversion to Wind .

-Fang Feng - Releases the exterior and expels External Wind. With Huang Qi, prevents Wind from entering the skin.

TREATS

Common cold. Influenza. Chronic rhinitis. Allergic rhinitis. Chronic sinusitis. Upper respiratory tract infection. Exacerbation of chronic bronchitis. Mild bronchitis (especially in children). Hyperthyroidism. Bronchitis. Nephrotic syndrome. Cough. Cor Pulmonare. Autonomic dystonia. AIDS/HIV. Fatigue. Spontaneous perspiration. Postpartum convulsions. AIDS/HIV/ARC. Prevents colds and respiratory tract infection. Chronic glomerulonephritis. Urticaria. Bronchial asthma. Abnormal perspiration. Facial paralysis. Neurodermatitis. Pneumonia. Herpes zoster. Hay fever. Chronic obstructive pulmonary disease (COPD). Emphysema. Chronic fatigue syndrome. Nephritis. Dyspnea. Upper back pain. Spontaneous sweating and night sweats associated with AIDS/HIV.

Cervical Spondylosis #1, Da Huang Fu Zi Tang, Nuan Gan Jian, San Bian Di Huang Tang, Shen Ling Liu Huang Tang, Tian Tai Wu Yao San, Xin Jia Xiang Ru Yin, Ye Ju Bai Du Tang, Yue Bi Tang

Recordings Updated in May 2025

* CERVICAL SPONDYLOSIS #1 Formula

ACTIONS - Releases Wind-Cold from the muscle layer. Relaxes and moistens the sinews. Regulates the Ying and Wei. Dispels Wind. Eliminates Dampness. Alleviates pain.

SYNDROMES - Wind-Cold-Dampness with Dampness Predominant.

CLINICAL MANIFESTATIONS - Head, neck, shoulder and upper back aching and pain. The feeling of a bag over the head. Fixed neck pain. Tender points on the neck. A possible palpable cord-like feeling in the neck. A stiff neck. Inhibited movement. Heavy, painful head. Back pain. Generalized pain or muscle ache. Difficulty bending or rotating trunk. Mild fever. Pain, soreness and numbness of the four limbs. Maybe weakness and heaviness of the upper limbs. Heavy-headedness. Aversion to Cold. Prefers Heat. Scanty urination.

HERBS AND ACTIONS

-Ge Gen - Clears Heat, disperses Wind, releases the muscles (especially of the neck and upper back) and relieves sinus congestion.

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Damp from the upper Tai Yang, unblocks Painful Obstruction, alleviates pain and guides Qi to the Tai Yang and DU channels. With Du Huo, for systemic Wind-Dampness. With Chuan Xiong, for headache and generalized body aches and pains associated with the common cold or painful obstruction. With Fang Feng, for pain due to External Wind-Dampness. With Fang Feng, Gao Ben and Chuan Xiong, for Wind-Damp headache.

-Du Huo - Releases the exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks Painful Obstruction (Bi) from the lower Tai Yang alleviates pain, increases joint mobility and guides Qi to the Tai Yang and Du Channels. With Fang Feng, for numbness in the legs. With Qiang Huo, for joint pain and numbness. With Qiang Huo, Fang Feng and Gao Ben, for Wind-Cold-Dampness with headache, chills and fever and muscle and joint pain.

-Gui Zhi - Releases the exterior, adjusts the Ying and Wei, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang, transforms Qi and releases the muscle layer. With Chuan Xiong, expels Wind-Dampness, warms the channels and collaterals, facilitates joint movement and relieves the discomfort of painful obstruction.

-Gao Ben - Expels Wind-Cold and Damp and alleviates pain. With Fang Feng, expels Wind-Dampness from the Tai Yang and reinforces Qiang Huo especially for headaches. With Qiang Huo, for headache and stiffness of the nape of the neck due to Wind-Dampness in the Du channel. With Fang Feng and Qiang Huo, for External Wind-Cold-Dampness.

-Fang Feng - Releases the exterior, expels Wind-Cold-Dampness, stops pain, expels Internal Wind, stops spasms, Moves Qi, tonifies the Spleen and treats gout. With Qiang Huo, Du Huo and Wei Ling Xian, for painful obstruction. with Cang Zhu, for pain due to Wind-Dampness Bi with aching joints, heavy limbs and generalized aching discomfort.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold and alleviates pain - good for headaches. With Fang Feng, Qiang Huo and Gao Ben, for Wind-Damp lateral headache. With Gao Ben, for severe headache without Interior Fire.

-Wei Ling Xian - Dispels Wind-Dampness, unblocks the channels and alleviates pain. With Qiang Huo, for Wind-Damp Bi causing joint pain, especially in the upper joints.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, induces sweating, expels Wind-Dampness and Clears Dampness from the Lower Jiao. With Qiang Huo, for a heavy-headed sensation.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels .

TREATS

Cervical spondylosis.

* DA HUANG FU ZI TANG - 大黃附子湯 - Rhubarb And Prepared Aconite Formula

ACTIONS - Warms the Interior. Disperses Cold. Unblocks the bowels. Alleviates pain.

SYNDROMES - Cold Accumulation in the Interior. Shao-Yang - Yang-Ming (Xu with Fu).

CLINICAL MANIFESTATIONS - Abdominal pain. Constipation. Hypochondriac pain. Chills. Low-grade fever. Cold hands and feet. Intolerance of Cold. Pain in the armpits. Unilateral pain in the abdomen and hypochondrium. Stiffness and spasms beside and below the umbilicus. Pain in the waist and legs.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Interior Heat Excess. Contraindicated for those with Deficiency Cold.

NOTES - If application causes a bowel movement, the prognosis is good, if it causes vomiting, increased chills or a thin pulse, it indicates a worsening of the condition which requires urgent attention.

HERBS AND ACTIONS

-Fu Zi - Warms the Yang, disperses Cold and Dampness, warms the channels and stops pain. With Xi Xin,disperses Cold and stops pain, for both Internal and External Cold damage with aversion to Cold, headache and generalized body aches with aching joints.

-Da Huang - Cleans the Intestines, purges Stagnation, treats hypochondriac pain and directs the actions of the other herbs to the intestines.

-Xi Xin - Expels Cold and disperses accumulations.

TREATS

Chronic dysentery. Uremia. Ulcerative colitis. Chronic colitis. Uncomplicated appendicitis. Uncomplicated intestinal obstruction. Hernia. Hypertension. Gastric spasms. Intestinal spasms. Periarthritis of the shoulder. Phlebitis. Keratitis. Tonsillitis. Chronic renal failure. Urticaria. Dermatitis from allergies to drugs. Uremia. Fever. Abdominal pain. Pyelonephritis. Renal calculi. Cholelithiasis. Chronic pancreatitis. Intestinal colic. Sciatica. Intercostal neuralgia. Migraine. Trigeminal neuralgia. Orchitis. Sties. Conjunctivitis. Purulent gingivitis. Lumbar disc disease. Eczema. Bacillary dysentery. Chronic pelvitis. Polyuria. Constipation. Enteritis.

* NUAN GAN JIAN - 暖肝煎 - WARM THE LIVER DECOCTION. Formula for Warming the Liver Channel

ACTIONS - Warms the Liver and Kidneys. Promotes Qi movement. Dispels Cold. Alleviates pain.

SYNDROMES - Small Intestine Qi Pain. Cold Stagnation in the Liver Channel. Cold type hernia.

CLINICAL MANIFESTATIONS - Sharp, localized lower abdominal pain. Pain aggravated by Cold. Post menstrual pain. Swelling, distention and pain of scrotum. May be nausea and anorexia.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Heat, redness, swelling and pain of the scrotum due to Damp-Heat in Lower Jiao.

HERBS AND ACTIONS

-Dang Gui - Invigorates and tonifies Liver Blood, disperses Cold and alleviates pain. With Fu Ling, strengthens Qi and Blood while promoting their movement.

-Gou Qi Zi - Nourishes and tonifies The Liver and Kidneys, and nourishes Blood and Yin. With Rou Gui, warms and tonifies the Liver and Kidneys.

-Xiao Hui Xiang - Warms the Kidneys, disperses Cold, spreads Liver Qi and alleviates pain. With Rou Gui and Wu Yao, for sharp, localized lower abdominal pain that is aggravated by Cold.

-Rou Gui - Warms the Kidneys, strengthens Ming Men Fire, disperses deep Cold and warms the channels.

-Wu Yao - Moves Qi, alleviates pain, disperses Cold and warms the Kidneys. With Chen Xiang, enhances the actions of Xiao Hui Xiang by moving Qi and alleviating Lower Jiao pain. With Rou Gui, for abdominal pain, especially sensations of Cold and pain in the lower abdomen. With Dang Gui, disperses Cold and stops pain, for abdominal pain due to External Cold.

-Chen Xiang - Moves and descends Qi, warms the Kidneys and alleviates pain. With Wu Yao, for lower abdominal pain, especially with lower abdominal Cold and tension and a stifling sensation in the chest and diaphragm with wheezing, distention, and anorexia. With Rou Gui, for Spleen and Stomach Deficiency Cold with epigastric, abdominal and hypochondriac Cold pain. With Xiao Hui Xian, for Spleen and Stomach Deficiency Cold with epigastric, abdominal and hypochondriac Cold pain. With Mu Xiang, for Rebellious Middle Jiao Qi with belching, hiccup, nausea and vomiting, epigastric and abdominal distention stifling sensation in the epigastrium and diarrhea.

-Fu Ling - Drains Dampness and strengthens the Spleen. With Sheng Jiang, treats nausea and anorexia. With Mu Xiang, for diarrhea and borborygmus due to Dampness.

-Sheng Jiang - Disperses Cold and harmonizes the Stomach.

TREATS

Varicocele. Hydrocele. Inguinal hernia. Orchitis. Urinary stones. Testicular hernia.

Abdominal pain. Endometriosis. Raynaud's disease. Anorexia. Pelvic inflammatory disease. Irritable bowel syndrome. Chronic appendicitis. Dysmenorrhea. Post tubal ligation pain. Vaginal hernia. Prostatitis. Postpartum pain. Infertility. Abdominal Cold. Impotence.

* SAN BIAN DI HUANG TANG - 散边地黄汤 - Scatter The Inclined Rehmannia Decoction

ACTIONS - Invigorates the Blood. Transforms Stasis. Dredges the Liver. Tonifies the Spleen. Nourishes the Kidneys. Tonifies Jing. Fills the Marrow.

SYNDROMES - Complex post-concussion syndrome.

CLINICAL MANIFESTATIONS - Headache. Dizziness. Irritability. Palpitations. Fear. Agitation. Unsteadiness. Anxiety. Depression. Tinnitus. Deafness. Memory loss. Lack of concentration. Irritability. Worry.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Jing and Blood, fills the Marrow and nourishes Liver and Kidney Yin. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Yao and Shan Zhu Yu, for dizziness, a weak and sore low back, night sweats, impotence and spermatorrhea due to Kidney and Liver Yin Deficiency.

-Bai Shao - Nourishes the Blood, calms Liver Yang and Liver Wind and alleviates pain.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Shu Di Huang, Shan Yao and Gou Qi Zi, for True Yin Deficiency.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and alleviates pain.

-Shan Yao - Tonifies Kidney Yin and astringes Jing. With Shan Zhu Yu and Shu Di Huang, for Kidney Deficiency with spermatorrhea and night sweats.

-Bai Zhi - Expels Wind, eliminates Dampness, dispels Cold and alleviates pain. With Chuan Xiong, for headaches.

-Xiang Fu - Spreads and regulates Liver Qi. With Chuan Xiong, for Qi Stagnation combined with Blood Stasis.

-Bai Jie Zi - Promotes Qi movement, dissipates nodules, unblocks the collaterals, expels Phlegm and alleviates pain.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, clears Deficiency Fire, invigorates the Blood and dispels Blood Stasis.

-Gan Cao - Moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

TREATS

Post-concussion syndrome.

* SHEN LING LIU HUANG TANG - 參苓六黃汤 - Ginseng And Poria Six Yellows Decoction

ACTIONS - Strengthens the Spleen. Tonifies Qi. Enriches Yin. Drains Heat.

SYNDROMES - Qi and Yin Deficiency.

CLINICAL MANIFESTATIONS - Enduring low back and sacral soreness and pain. Perineal pain. Testicular sagging and distention. Symptoms worse with fatigue. Dizziness. Insomnia. Heart palpitations.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, promotes urination, reduces edema and generates Body Fluids. With Di Huang and Huang Bai, for Yin Deficiency with night sweats.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Fu Ling, for Spleen and Stomach Deficiency with fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea. With Huang Qi, for Lung and Spleen Qi Deficiency with fatigue, shortness of breath, diarrhea and anorexia.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm.

-Huang Jing - Tonifies Spleen Qi, nurtures Stomach Yin, .moistens Lung Yin, tonifies the Kidneys and strengthens Jing.

-Che Qian Zi - Promotes urination, clears Damp-Heat and clears Liver Heat.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin

and clears Damp-Heat in the Lower Jiao. With Di Huang, powerfully clears Deficiency Fire Blazing Upward with pain and swelling of the gums, epistaxis, hematemesis and other hemorrhage in the upper body.

-Huang Lian - Clears Heat, drains Dampness and stops bleeding. With Di Huang, for Insomnia and delirium due to unremitting Heat injuring the Ying level.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao and drains Deficiency Heat.

-Pu Huang - Invigorates Blood, dispels Blood Stasis and promotes urination.

TREATS

Prostatitis.

* TIAN TAI WU YAO SAN - 天臺烏藥散 - Top Quality Lindera Powder. The Lindera Root Powder

ACTIONS - Promotes Qi movement. Spreads Liver Qi. Scatters Cold. Alleviates pain.

SYNDROMES - Hernia due to Small Intestine Qi Pain. Hernia due to Cold Stagnation in the Liver Channel.

CLINICAL MANIFESTATIONS - Lower abdominal pain radiating to the testicles. May be localized sensation of Cold. Menstrual pain and hardness. Hypochondriac pain. Abdominal pain. Mobile abdominal masses. Swollen or distended testicles. Flank pain. Leukorrhea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat. Do not take with Qi tonics.

HERBS AND ACTIONS

-Wu Yao - Moves Qi, disperses stagnant Liver Qi, warms the Kidneys, disperses Cold and alleviates pain. With Xiao Hui Xiang, Mu Xiang Qing Pi and Gao Liang Jiang, for Cold-type hernia with lower abdominal pain that radiates to the testicles.

-Mu Xiang - Moves Qi, alleviates pain, strengthens the Spleen, prevents Stagnation and adjusts and regulates Intestinal Qi. With Qing Pi, for abdominal pain, distention and belching. With Xiao Hui Xiang, Qing Pi and Gao Liang Jiang, strengthens the actions of Wu Yao. With Bing Lang, for Qi Stagnation in the Stomach and Intestines due to Food Stagnation with abdominal distention, and fullness and distention, anorexia, aversion to the smell of food, nausea without the ability to vomit and an uncomfortable urge to defecate which is often unsuccessful, Intestinal parasites with a pressing pain around

the umbilicus and intermittent focal distention in the abdomen and relieves tenesmus and the passage of mucus in dysenteric disorders. With Wu Yao, for lower abdominal Coldness and pain.

-Xiao Hui Xiang - Warms the Lower Jiao, disperses Cold, spreads Liver Qi, harmonizes the Stomach and alleviates pain. With Chuan Lian Zi, strongly stops pain and regulates Qi to treat bulging disorders and mobile masses in the lower abdomen.

-Qing Pi - Regulates Qi, disperses stagnant Liver Qi, dissipates accumulations, reduces Food Stagnation, dries Dampness and transforms Phlegm. With Wu Yao, Gao Liang Jiang, Xiao Hui Xiang and Mu Xiang, for Cold Invading the Liver channel, with lower abdominal pain radiating down to the testicles or ovaries. With Wu Yao, Chuan Lian Zi, Xiao Hui Xiang, Bing Lang and Mu Xiang, for Intestinal prolapse, feeling of genital prolapse or testicular swelling due to chronic orchitis.

-Gao Liang Jiang - Disperses Cold and alleviates pain. With Xiao Huo Xiang, for abdominal hernial pain.

-Bing Lang - Descends Qi, removes stagnation, unblocks the bowels, relieves nausea and breaks up obstructions in the Lower Jiao. With Mu Xiang and Qing Pi, for Food Accumulation and Qi Stagnation.

-Chuan Lian Zi - Regulates Qi and alleviates pain. Prepared with Ba Dou, soothes the Liver, while its bitter, Cold properties are greatly diminished.

-Ba Dou - Used to prepare Chuan Lian Zi and then discarded.

TREATS

Hernia. Inguinal hernia. Scrotal hernia. Epididymitis. Irritable bowel syndrome. Gastritis. Intestinal obstruction. Endometriosis. Infertility. Low back pain. Colitis. Pelvic inflammatory disease. Hernia of the Small Intestine. Vaginal or testicular hernia. Hypochondriac pain. Orchitis. Primary dysmenorrhea. Peptic ulcer. Prostatitis. Dysmenorrhea. Vaginal discharge. Abdominal pain. Constipation.

* XIN JIA XIANG RU YIN - 新加香薷飲 - Newly Augmented Mosla Formula

ACTIONS - Releases Exterior Summerheat. Releases External Cold. Clears Heat. Resolves Dampness.

SYNDROMES - Severe early-stage Summerheat in the Lungs with superimposed Wind-Cold Invasion.

CLINICAL MANIFESTATIONS - Fever and chills. Anhidrosis. Headache. Thirst. Flushed face. Tightness in the chest. Aversion to Cold. Fatigue. Aching body. Nausea. Reduced,

dark urination.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated when fever is accompanied by sweating. Discontinue when sweating has occurred. Do not use long-term.

HERBS AND ACTIONS

-Xiang Ru - Releases the Exterior, harmonizes the ascending and descending functions of the Spleen and disperses stagnant Fluids by expelling Cold and Dampness from the Middle Jiao. With Bai Bian Dou, for sudden turmoil disorder due to externally contracted Cold in the summertime. With Bai Bian Dou and Hou Po, for Exterior Cold and Interior Dampness presenting with fever, anhidrosis, headache, thirst, vomiting and diarrhea (frequently found in Summerheat stroke). With Jin Yin Hua and Bai Bian Dou, for early stage Summerheat with superimposed contraction of Cold with fever, chills, anhidrosis, headache and a flushed face.

-Bian Dou Hua - Relieves Summerheat, removes Dampness and controls bleeding. (Does not appear in every version.)

-Bai Bian Dou - Clears Summerheat and strengthens the Spleen. With Xiang Ru and Hou Po, for sudden turmoil disorder due to Summeheat and Dampness. With Xiang Ru and Jin Yin Hua, for Summerheat fever without sweat.

-Hou Po - Expels Dampness and disperses fullness due to Stagnation.

-Jin Yin Hua - Clears Heat, relieves Fire Toxicity, expels Wind-Heat and clears Damp-Heat from the Lower Jiao. With Lian Qiao, for toxic Heat.

-Lian Qiao - Clears Heat and toxins and expels Wind-Heat.

TREATS

Common cold. Upper respiratory tract infection. Gastroenteritis. Influenza. Oliguria. Numbness. Nausea/Vomiting. Diarrhea. Food poisoning. Acute pancreatitis. Peptic ulcer. Cholecystitis. Headache. Bacillary dysentery. Cholera. Lyme disease. Abdominal pain. Paresthesia. Fever. Chronic fatigue syndrome. Acute colitis. Heat stroke. Chronic pancreatitis. Gastritis. Fatigue. Indigestion.

* YE JU BAI DU TANG - 野菊敗毒汤 - Chrysanthemum Formula To Defeat Toxin

ACTIONS - Clears Heat. Drains Fire. Relieves toxicity. Cools the Blood. Reduces swelling.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Local inflammation with pus. Deep-rooted, hard and painful boils. Erythema. Swelling. Heat. Carbuncles. Furuncles. Fever and chills. The lesions appear on the head, face and extremities. The lesions are grain-like with a hard base. The lesions are yellowish-purplish in color. Pain. A tingling sensation. Blisters. Fistulae,

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Deficiency fevers. Contraindicated for those with ulcerated lesions.

HERBS AND ACTIONS

-Ye Ju Hua - Drains Fire and resolves toxicity. With Jin Yin Hua and Pu Gong Ying, for furuncles. With Jin Yin Hua, Zi Hua Di Ding and Pu Gong Ying, for carbuncles and furuncles.

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin, drains Fire, relieves toxicity, softens hardness, dissipates nodules and transforms Phlegm-Heat. With Jin Yin Hua and Gan Cao, for boils, carbuncles and furuncles. With Jin Yin Hua, Lian Qiao and Zi Hua Di Ding, for swollen abscesses and toxic sores.

-Lian Qiao - Clears Heat especially in the Upper Jiao, relieves toxicity, reduces abscesses and dissipates clumps. With Ye Ju Hua and Jin YIn Hua, for initial stage warm febrile disease.

-Zi Hua Di Ding - Clears Heat, relieves Fire toxicity and clears hot sores. With Ye Ju Hua, Jin Yin Hua and Lian Qiao, for pustules on the fingertips (snakehead furuncles), red thread furuncles (lymphangitis), carbuncles and other red swellings. With Pu Gong Ying, for Breast abscesses, furuncles, boils and carbuncles and Damp-Heat jaundice. With Ye Ju Hua, Jin Yin Hua and Pu Gong Ying, for various toxic swellings such as erysipelas, abscesses and deep-rooted sores

-Jin Yin Hua - Clears Heat and resolves Fire toxicity. With Lian Qiao, for various Heat disorders. With Gan Cao, for toxic swellings and sores. With Gan Cao and Xuan Shen, for sloughing ulcers from Heat toxicity. With Pu Gong Ying, Ye Ju Hua and Zi Hua Di Ding, for sores, lesions carbuncles, ulceration of the skin and furuncles. With Pu Gong Ying, Ye Ju Hua and Lian Qiao, for boils, carbuncles and furuncles.

-Pu Gong Ying - Reduces abscesses, dissipates nodules and relieves Fire toxicity. With Jin Yin Hua, Ye Ju Hua, Lian Qiao and Zi Hua Di Ding, for all hot, painful, hard, and deep-rooted boils.

-Zhe Bei Mu - Clears Heat, transforms Phlegm and dissipates nodules. With Jin Yin Hua, Pu gong Ying and Ye Ju Hua, for abscesses and other toxic swellings. with Lian Qiao, clears Heat toxin, transforms turbid Phlegm, opens Stagnation and disperses clumped swellings.

-Gan Cao - Clears Heat, relieves Fire toxicity, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Jin Yin Hua, for damp rashes or acne. With Pu Gong Ying, for for abscesses or other toxic swellings. With Jin Yin Hua, Pu Gong Ying, Lian Qiao and Zi Hua Di Ding, for Yang sores marked by redness, swelling and pain.

TREATS

Furuncles. Carbuncles. Erythema. Boils. Fistulas.

* YUE BI TANG - 越婢汤 - Maidservant From Yue Formula. Formula for Edema. Ma Huang and Gypsum Combination

ACTIONS - Induces sweating. Releases the Exterior. Disseminates the Lung Qi. Promotes urination. Eliminates water accumulation. Eliminates Heat.
SYNDROMES - Wind edema.

CLINICAL MANIFESTATIONS - Aversion to Wind. Generalized edema that begins in the face. Slight fever or no fever. Slight but continuous sweating or no sweating. Absence of thirst or. Thirst. Decreased urination. Asthma. Dysuria. Coughing.

HERBS AND ACTIONS

-Ma Huang - Induces sweating, releases the exterior, disseminates and facilitates Lung Qi, calms wheezing, stops coughing, promotes urination, reduces edema and warms and disperses Cold pathogens. With Shi Gao for Wind-edema.

-Shi Gao - Clears Excess Heat from the Lungs. With Sheng Jiang, decreases muscular swelling.

-Sheng Jiang - Releases the exterior, disperses Cold, warms the Lungs and stops cough. With Da Zao for External Wind-Cold.

-Gan Cao - Moistens the Lungs, resolves Phlegm, stops cough and moderates and harmonizes the properties of other herbs.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Edema. Facial edema. Primary nephritis. Dermatic nephritis. Rheumatoid arthritis. Hydrocele. Keratitis. Nephrotic syndrome. Cough. Asthma. Nephritic edema. Sore throat. Arthritis of the lower limbs. Initial stage of dropsy. Carbuncles. Beriberi. Acute nephritis. Eczema. Inguinal hernia. Painful obstruction. Oliguria. Fever. Spontaneous

perspiration.

Acute Kidney Failure #1, Alopecia #6, Alopecia #8, Diabetes #3, Multiple Sclerosis #1, Sciatica #1, Stroke #1, Tendon Bi #1, Urolithiasis #1

Recordings Updated in May 2025

* ACUTE KIDNEY FAILURE #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Fire. Reduces Fire toxicity. Transforms Dampness. Drains water downward/

SYNDROMES - Toxic Damp-Heat.

CLINICAL MANIFESTATIONS - Oliguria. Fever. Thirst. Dry mouth. Low back pain. Colicky pain in the low back, possibly radiating to the groin.

NOTES - This formula is toxic. Do not use for an extended period of time.

HERBS AND ACTIONS

-Da Huang - Drains Heat and Fire, purges accumulations, transforms Dampness, promotes urination and reduces Fire toxicity. With Gan Sui, for accumulation of pathogenic Heat and fluids in the chest and upper abdomen.

-Ba Dou - Purges accumulated Cold, drives out water and reduces edema.

-Gan Sui - Drains water downward and eliminates congested fluids and thin mucus.

TREATS

Acute Kidney failure.

* ALOPECIA #6 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Cools the Blood. Extinguishes Wind. Nourishes Yin. Protects the hair.

SYNDROMES - Blood Heat Generates Wind.

CLINICAL MANIFESTATIONS - Sudden hair loss. Rapidly evolving into large round or oval bare patches. Occasional itching. Maybe loss of hair in the eyebrows, moustache and beard. Maybe a sensation of Heat in the scalp. Maybe irritability. Maybe irascibility. Maybe restlessness.

HERBS AND ACTIONS

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Xuan Shen, for Excess or Deficiency Heat patterns.

-Mu Dan Pi - Clears Heat, cools invigorates and harmonizes the Blood, dispels Blood Stasis, drains pus and reduces swelling. With Sheng Di Huang, for Ying and Xue Stage Heat.

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin and relieves toxicity.

-Ce Bai Ye - Cools the Blood and promotes hair growth. With Sheng Di Huang, for all types of bleeding due to Heat in the Blood.

-Sang Ye - Disperses and scatters Wind-Heat and cools the Blood.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin and moistens Dryness.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, reduces swelling, expels pus and generates flesh.

-Sang Shen - Tonifies the Blood and enriches Yin.

-Bai Xian Pi - Clears Heat, resolves Fire-toxicity, expels Wind and dries Dampness.

TREATS

Alopecia.

* ALOPECIA #8 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Invigorates the Blood. Disperses Wind.

SYNDROMES - Blood Stagnation Generates Wind.

CLINICAL MANIFESTATIONS - Sudden patches of hair loss. Dizziness. Vertigo. Tinnitus. Blurred vision. Sensation of Heat rushing to the head. Insomnia. Dream disturbed sleep. Numbness. Twitching and spasms in the extremities. Trembling tongue. Light-headedness. Headache or a stabbing pain in the scalp precedes alopecia. May persist to develop into complete baldness. Frequent nightmares. Difficulty falling asleep. Restlessness with a feverish sensation. Grinding of the teeth.

HERBS AND ACTIONS

-Dang Gui - Invigorates and harmonizes the Blood. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, clears Heat and cools the Blood.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Tao Ren and Hong Hua, for headache from Blood Stagnation.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Hong Hua, invigorates the Blood for all types of Blood Stagnation.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis and opens the channels.

-Ce Bai Ye - Cools the Blood and promotes hair growth.

-Bai Zhi - Expels Wind.

-Cong Bai - Releases the exterior and induces sweating.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, adjusts the Ying and Wei and reduces the toxicity of other herbs.With Da Zao, nourishes the Blood, prevents injury from harsh Blood movers and assists the movement of Qi.

TREATS

Alopecia.

* DIABETES #3 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes Yin. Reduces Fire.

SYNDROMES - Kidney Yin Deficiency.

CLINICAL MANIFESTATIONS - Polyuria. Frequent nocturia. Cloudy urine. Dry mouth. Night sweats. Five Sole Heat. Tidal fever. dizziness. Tinnitus. Low back and knee soreness and weakness. Itching. Impotence. Premature ejaculation. Dark, blackish facial complexion. Eyes are black or green. Ears are wilted. Limbs emaciated. Feet and shins painful and weak.

HERBS AND ACTIONS

-Shu Di Huang - Strongly enriches Yin, relieves wasting and thirsting disorder, nourishes Jing and Blood and fills the Marrow. With Shan Yao and Ze Xie, for ascendant Fire due to exhaustion of Kidney Yin. With Shan Zhu Yu, Shan Yao and Ze Xie, for Xiao Ke with predominant polyuria.

-Shan Yao - Tonifies Kidney Yin, astringes Jing, tonifies the Spleen, and nourishes Stomach Yin. With Mai Dong and Wu Wei Zi, for Lung Deficiency with cough. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea and night sweats.

-Dan Shen - Activates the Blood, dispels Blood Stasis, clears Heat and soothes irritability.

-Mai Dong - Moistens the Lungs, nourishes Lung and Stomach Yin, generates Fluids, Moistens the Intestines, clears the Heart and eliminates irritability.

-Wu Wei Zi - Tonifies the Kidneys, astringes sweat, generates fluids, astringes Jing and stops diarrhea and spermatorrhea. With Shu Di Huang, Shan Yao and Shan Zhu Yu, for Lung and Kidney Deficiency with coughing and wheezing.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, clears Deficiency Fire, activates the Blood and dispels Blood Stasis. With Ze Xie, Fu Ling and Shan Zhu Yu, for spermatorrhea due to Kidney Yin Deficiency with Heat.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiency of the Liver and Kidneys. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Ze Xie - Promotes urination, leaches out Dampness and drains Kidney Fire.

-Hong Hua - Activates the Blood, dispels Blood Stasis, opens the channels, unblocks

menstruation and alleviates pain.

TREATS

Diabetes.

* MULTIPLE SCLEROSIS #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes and Astringes Jing and Yin. Tonifies Yang.

SYNDROMES - Jing Insufficiency. Yin Deficiency. Yang Deficiency. Kidney Yang Deficiency.

CLINICAL MANIFESTATIONS - Feeling chilled. Withdrawn, subdued behavior. Aversion to Cold. Tinnitus. Cold limbs. Impotence. Spermatorrhea. Premature ejaculation. General debility. Pale face. Low libido. Urinary frequency with abundant, clear urine. Female infertility ("uterus cold and infertile"). Oliguria with edema. Maybe nocturia. Maybe anorexia. Lassitude. Dizziness. Maybe chronic diarrhea or "cock crow" diarrhea. Maybe loose stools. In adults: Hair loss. Graying or whitening of hair. Weak sexual function. Atrophy and weakness of feet with difficulty walking. Poor memory. Senility (premature or mature). Brittle bones. Gradual deterioration of hearing. In children: Retardation in mental and/or physical development. Failure to thrive. Late or incomplete closing of fontanel. Poor bone development. Brittle bones.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Yin, Jing and Blood. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Mai Dong - Moistens the Lung, nourishes Stomach Yin, generates Fluids, clears the Heart, eliminates irritability, moistens Intestines and resolves Phlegm.

-Rou Cong Rong - Tonifies the Kidneys, strengthens Yang and benefits Jing and marrow.

-Ba Ji Tian - Tonifies the Kidneys, strengthens Yang, strengthens sinews and bones, disperses Wind and expels Cold-Damp.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing, nourishes Liver and Kidney Yin and tonifies Kidney Yang. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiencies of the Liver and Kidneys.

-Wu Wei Zi - Tonifies Qi, nourishes Kidney Yin, astringes Jing, tonifies the Heart and calms the Spirit.

-Yuan Zhi - Calms the Spirit, sedates the Heart, expels Phlegm, opens the Orifices and clears the channel joining the Heart and Kidneys.

-Shi Chang Pu - Harmonizes the Middle Jiao, transforms turbid Dampness, opens the Orifices, vaporizes Phlegm, disperses Wind, calms the Spirit, and alleviates Wind-Damp Bi. With Yuan Zhi, calms the Spirit and open orifices

-Pi Pa Ye - Descends Lung Qi, transforms Phlegm, clears Lung Heat, harmonizes the Stomach, descends Stomach Qi and clears Stomach Heat.

TREATS

Multiple sclerosis.

* SCIATICA #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Unblocks Yang Qi. Promotes the movement of Qi. Dispels Wind. Eliminates Dampness. Clears Heat. Unblocks the channels and collaterals. Stops pain.

SYNDROMES - Wind-Cold-Damp Bi.

CLINICAL MANIFESTATIONS - Sciatica pain. The pain is intense and moves around. Swollen painful joints (especially lower limbs). Joints are warm to the touch (may be burning and swollen). The pain is worse at night. Reduced range of motion. Joint degeneration or deformity in the lumbar region. Chills. Anhidrosis. Weight loss. Shortness of breath. Muscular atrophy. Difficulty walking and moving. Thirst. Hemiplegia. Rigidity of the limbs. Headache. Dizziness. Vertigo. Nausea. Vomiting. Edema. Emaciation. Swollen feet. Numbness of the extremities. Paralysis. Fatigue.

HERBS AND ACTIONS

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

-Cao Wu - Disperses Cold, scours out Wind, overcomes Dampness and stops pain.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity and clears Damp-Heat from the Lower Jiao.

-Zi Cao - Clears Heat, cools the Blood, invigorates Blood circulation, relieves Fire toxins.

-Wu Mei - Astringes leakage of Lung Qi, stops leakage of sweat, generates fluids, alleviates thirst and alleviates pain.

-Yi Tang - Tonifies the Middle Jiao and alleviates pain and coldness.

TREATS

Sciatica.

* STROKE #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes the Yin of the Liver and Kidneys. Extinguishes Endogenous Wind. Nourishes the muscles.

SYNDROMES - Liver and Kidney Yin Deficiency Generates Wind

CLINICAL MANIFESTATIONS - Fatigue. Muscle spasms with alternating flexion and extension of the extremities. Prostration. Clonic convulsions. Dizziness - worse with stress or anger. Tinnitus. Aphonia. Insomnia. Dream-disturbed sleep. Sore low back and knees. Nocturnal emissions. Often the patient is on the verge of shock. Hemiatrophy of the muscles. Hemiplegia. Hemianasthesia. Flaccidity of the legs.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-He Shou Wu - Tonifies the Liver and Kidneys, nourishes the Blood and nourishes Jing.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Yin Yang Huo - Tonifies the Kidneys, strengthens Yang, dispels Wind-Cold-Dampness and warms and unblocks the flow of Yang Qi.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Dang Gui and Shu Di Huang, for night sweats due to Yin Deficiency.

-Nu Zhen Zi - Nourishes and tonifies the Liver and Kidney Yin.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin. With Shu Di HUang, for Liver and Kidney Deficiency.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints.

-Sang Zhi - Dispels Wind-Dampness, unblocks the channels and collaterals, benefits the joints and stops spasms.

TREATS

Stroke. Aphasia. Cerebral vascular accident. Hemiplegia.

* TENDON BI #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Warms the channels. Dispels Cold. Eliminates Dampness. Relaxes the tendons.

SYNDROMES - Tendon Bi due to Cold-Damp .

CLINICAL MANIFESTATIONS - Pain and weakness of the tendons and joints. Joints can be bent but not stretched. Excessive eating and drinking. Excessive desire to eat (bulimia). Insatiability. Nightmares. Horrible dreams of fighting etc. Frequent urination. Contracting pain in the affected limb. Heaviness. Limited movement. Pain worse at night. Pain worse in Damp weather. Preference for warmth.

HERBS AND ACTIONS

-Qiang Huo - Releases the exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels, With Du Huo, for Wind-Dampness.

-Du Huo - Dispels Wind-Dampness, disperses Wind-Cold-Dampness, releases the Exterior and alleviates pain. With Qiang Huo, for joint pain and numbness. With Ma Huang, for Wind-Cold with anhidrosis, and body aches and pains.

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

-Cao Wu - Disperses Cold, scours out Wind, overcomes Dampness and stops pain.

-Yi Yi Ren - Strengthens the Spleen, resolves Dampness, expels Wind-Dampness, clears Damp-Heat and relieves pain.

-Ma Huang - Induces sweating, releases the Exterior, promotes urination, reduces edema and warms and disperses Cold pathogens. With Gui Zhi, for Wind-Cold-Damp Bi.

-Mu Gua - Relaxes sinews, increases Qi and Blood circulation and unblocks the channels. With Du Huo, for weakness and atrophy of the muscles of the lower extremities.

-Shen Jin Cao - Dispels Wind, eliminates Dampness, relaxes the sinews, invigorates the collaterals and invigorates Blood.

-Wu Jia Pi - Dispels Wind-Dampness, nourishes and warms Liver and Kidneys, strengthens the sinews and bones, transforms Dampness and reduces swelling.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Chuan Wu and Cao Wu, for Bi syndrome.

TREATS

Tendon Bi. Sciatica.

* UROLITHIASIS #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Promotes the movement of Qi. Resolves hardenings. Invigorates the Blood. Dispels Blood Stasis. Promotes urination. Drains Damp-Heat from the Urinary Bladder.

SYNDROMES - Urinary Bladder Damp-Heat with Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - Urinary frequency. Urinary urgency. Painful urination or. Continuous dripping of urine or. Sudden interruption to the urinary stream. Turbid urine or. Pus and blood in the urine or. Sand and stones in the urine. Colicky pain in the low back, possibly radiating to the groin.

HERBS AND ACTIONS

-Xiang Fu - Spreads and regulates Liver Qi and alleviates pain.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure and resolves hardenings. With Yu Jin, for Liver Qi Stagnation with a stifling sensation in the chest and fullness in the epigastrium and abdomen with Heat signs and stabbing pain in the chest, flanks and abdomen due to Blood Stagnation.

-Yu Jin - Invigorates the Blood, dispels Blood Stasis, regulates Qi flow, clears Heat, cools the Blood and alleviates pain. With Jin Qian Cao, for pain due to Stone Lin.

-Guang Jin Qian Cao - Clears Heat, promotes urination, unblocks painful urinary dysfunction and expels stones.

-Hai Jin Sha - Clears Heat, promotes urination, unblocks painful urinary dysfunction, expels stones, eliminates Damp-Heat, reduces edema and decreases jaundice. With Hua Shi and Gan Cao, for Milky Lin.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat, cools the Blood and reduces abscesses.

-Ze Lan - Invigorates the Blood, dispels Blood Stasis, regulates menstruation, promotes urination and disperses swellings. With Dan Shen and Yu Jin, for chest and hypochondriac pain due to Qi and Blood Stagnation.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei.

-Hua Shi - Promotes urination, drains Heat from the Urinary Bladder, aids the movement of gravel and stones, expels Damp-Heat and stops bleeding due to Heat.

-Gan Cao - Moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

TREATS

Urolithiasis.

1.3.3.11 RT-TCM-11

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_11

Blepharitis #1, Cough #1, Dementia #1, Peripheral Neuropathy #1, Qi And Blood Stagnation #1, Sinusitis #1, Thrombophlebitis #3, Topical #1, Toxic Fire #1

Recordings Updated in May 2025

* BLEPHARITIS #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Damp-Heat. Drains Fire. Relieves Fire toxicity. Clears Wind-Heat affecting the eyes and head.

SYNDROMES - Toxic Heat. Wind-Heat.

CLINICAL MANIFESTATIONS - Inflammation of the lid margins. Redness of the eyelids. Drooping of upper eye lid. Thickening and faking of skin on the lids. Crusting at the lid margins, generally worse on waking. Cysts at the lid margin (hordeolum). Red eye. Burning. Gritty sensation of the eye or foreign-body sensation. Reduced vision. Photophobia. Tearing. Eye itching. Debris in the tear film.

HERBS AND ACTIONS

-Ku Shen - Clears Heat, dries Dampness, disperses Wind and stops itching.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity.

-Fang Feng - Releases the exterior and expels External Wind. With Jing Jie, expels Wind and stops itching for pruritic rash and initial-stage boils.

-Huang Qin - Clears Heat, dries Dampness, drains Fire and detoxifies. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease.

-Jing Jie - Releases the exterior, expels Wind, vents rashes and relieves itching. With Fang Feng, for pruritic itching. With Fang Feng, Jin Yin Hua and Lian Qiao, for early-stage carbuncles, furuncles, and abscesses.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity and vents and disperses External Wind-Heat. With Lian Qiao, for Various Heat disorders. With Lian Qiao and Huang Qin, for unremitting high fever. With Huang Qin, for suppurating boils that have not ulcerated, or have ulcerated but are not discharging pus.

-Di Fu Zi - Clears Damp-Heat, promotes urination, expels Dampness, stops itching and clears Wind-Heat affecting the eyes and head. With Ku Shen, for skin irritation and itchiness due to Damp-Heat.

-Huang Bai - Drains Fire and relieves Fire toxicity. With Huang Lian and Lian Qiao, for skin abscesses and lesions.

-Lian Qiao - Clears Heat (especially in the Upper Jiao), relieves toxicity, reduces abscesses and dissipates clumps. With Jin Yin Hua, for initial stage Wind-Heat.

TREATS

Blepharitis.

* COUGH #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Disperses Wind and Cold. Releases Lung Qi. Relieves cough.

SYNDROMES - Wind-Cold Attacks the Lungs.

CLINICAL MANIFESTATIONS - Cough with a heavy sound. Thin white sputum. Headache. stuffy and runny nose. Aching of limbs. Chilliness. Anhidrosis.

HERBS AND ACTIONS

-Ma Huang - Induces sweating, releases the Exterior, disseminates and facilitates Lung Qi, calms wheezing, stops coughing and warms and disperses Cold pathogens. With Xing Ren and Chen Pi, for wheezing and dyspnea due to Qi and Phlegm Stagnation.

-Xing Ren - Stops cough and calms wheezing. With Ma Huang, for cough and wheezing due to Excess. With Chen Pi, strongly descend Qi and disperse Phlegm-Dampness and calms wheezing to treat cough and wheezing from Phlegm-Dampness leading to Lung Qi Stagnation. With Ma Huang and Gan Cao, for cough with profuse sputum, nasal obstruction and a hoarse voice.

-Jie Geng - Opens the Lungs, spreads Lung Qi, expels Phlegm, benefits the throat and opens and raises Lung Qi, directing the effects of other herbs to the upper body. With Gan Cao, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat.

-Qian Hu - Expels Phlegm and descends Qi. With Bai Qian, for cough due Wind Invasion affecting the Lungs.

-Gan Cao - Moistens the Lungs, resolves Phlegm and stops cough and moderates and harmonizes the harsh properties of other herbs.

-Zi Su Ye - Releases the Exterior, disperses Cold, improves Lung function expands the chest, and relieves Cold induced wheezing. With Jie Geng, for common colds with nasal congestion and productive cough. With Jie Geng, Xing Ren and Qian Hu, for common colds with nasal congestion, lack of sweat and productive cough with stronger cough alleviating effect.

-Xuan Fu Hua - Expels Phlegm, removes pathogenic water and descends Qi.

-Bai Qian - Descends Qi, expels Phlegm and stops cough.

-Chen Pi - Regulates Qi, adjusts the Middle,relieves the diaphragm, dries Dampness, descends Qi and transforms Phlegm It is primarily used for vomiting and belching and for treating Phlegm-Damp coughs.

TREATS

Cough.

* DEMENTIA #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Resolves Phlegm. Opens the Orifices.

SYNDROMES - Turbid Phlegm Blocking the Orifices.

CLINICAL MANIFESTATIONS - Dull appearance. Dementia. Slow response. Poor memory. Muttering to oneself. Stuffy chest. Anorexia. Excessive, sticky salivation.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness and transforms Phlegm. With Chen Pi, for Phlegm-Damp Obstruction. With Fu Ling, for Phlegm, thin mucus and turbid Dampness.

-Chen Pi - Dries Dampness and transforms Phlegm. With Cang Zhu and Fu Ling, for a thick white tongue coat with no desire to drink. With Ban Xia and Fu Ling, for accumulation of Dampness and Phlegm.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen, harmonizes the Middle Jiao, quiets the Heart, calms the Spirit and soothes the nerves.

-Gan Cao - Tonifies the Spleen, augments Qi, resolves Phlegm, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Cang Zhu - Strongly dries Dampness and tonifies the Spleen.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm, removes filth, calms the Spirit, transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen and promotes the movement of Qi. With Tian Nan Xing and Ban Xia, for Wind-Stroke from Phlegm Blocking the Heart Orifices with muddled consciousness and a stiff tongue with aphasia.

-Bai Jie Zi - Warms the Lungs, regulates Qi and expels Phlegm.

-Tian Nan Xing - Dries Dampness and expels Phlegm. With Ban Xia and Shi Chang Pu, for Phlegm turbidity deranging the orifices of the head and veiling them leading to seizures and convulsions. With Cang Zhu, for Wind-Damp painful obstruction.

TREATS

Senile dementia.

* PERIPHERAL NEUROPATHY #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Strengthens the Spleen. Tonifies Qi.

SYNDROMES - Spleen and Stomach Qi Deficiency.

CLINICAL MANIFESTATIONS - Paralysis of the four extremities which is more severe in the lower limbs. Swelling and distention of the hands and feet. Poor appetite. Abdominal distention. Muscular cramping and pain. Possible emaciation. A sallow, yellow lusterless facial complexion. Loose stools.

HERBS AND ACTIONS

-Dan Shen - Invigorates the Blood and dispels Blood Stasis.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Fu Ling, for Spleen and Stomach Deficiency with fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Gui Zhi, warms and transforms fluids, unblocks Yang and promotes urination.

-Shan Yao - Tonifies the Spleen and nourishes Stomach Yin.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction and alleviates pain.

-Xu Duan - Tonifies the Liver and Kidneys, strengthens the sinews and bones, promotes the movement of Blood and alleviates pain.

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation and unblocks the channels.

-Chen Pi - Regulates Qi, adjusts the Middle and relieves the diaphragm.

-Gui Zhi - Warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels.

TREATS

Peripheral neuropathy.

* QI AND BLOOD STAGNATION #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Moves Qi. Invigorates the Blood.

SYNDROMES - Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - Hemiplegia. Pains that move around. Chest and epigastric pain. Flank pain. Insidious abdominal pain. Distention. Depression. Irritability. Pain is worse with pressure. Dark complexion. Fixed, palpable masses. Bleeding with clots. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas,. Varicose and spider veins. Cold hands and feet. Shortness of breath. Weakness. Tendency to hemorrhage dark blood or clots.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain.

-Cang Zhu - Strongly dries Dampness and tonifies the Spleen.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and alleviates pain. With Dang Gui, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. With Dang Gui, Tao Ren and Hong Hua, for headaches from Blood Stagnation. With Chai Hu and Chi Shao, for Liver Qi and Blood Stagnation generating headaches and/or chest pain.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis. With Tao Ren, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain. With Tao Ren, Dang Gui, Chi Shao and Chuan Xiong, for menstrual pain or amenorrhea.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat and cools the Blood. With Chuan Xiong, Dang Gui and Pu Huang, for Blood-Stasis induced gynecological disorders such as immobile abdominal masses, amenorrhea with abdominal pain, abscesses, boils and trauma induced pain.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and disperses Cold. With Huang Qi, for Qi and Blood Deficiency.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Huang Qi, raises the Clear Yang due to abnormal descent of Qi.

-Pu Huang - Invigorates the Blood and dispels Blood Stasis.

TREATS

Post-stroke paralysis. Coronary Heart disease. Chronic hepatitis. Dry skin.

* SINUSITIS #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat and Fire. Resolves Fire toxicity. Disperses Wind and Dampness. Opens the nasal passages. Clears Excess Heat from the Lungs. Clears Blazing Stomach Fire.

SYNDROMES - Stagnation of Heat in the Lungs and Stomach.

CLINICAL MANIFESTATIONS - Yellowish, turbid nasal discharge. Frontal headache. Foul breath. Constant stuffy nose. Mouth breathing during sleep.

HERBS AND ACTIONS

-Jin Yin Hua - Clears Heat and resolves Fire toxicity and vents and disperses External Wind-Heat. With Huang Qin, for suppurating boils that have not ulcerated, or have ulcerated but are not discharging pus. With Dang Gui, reduces obstruction and toxicity for swollen, painful sores and necrosis of surrounding tissue.

-Pu Gong Ying - Reduces abscesses, dissipates nodules, relieves Fire toxicity and clears Heat in the Blood.

-Huang Qin - Clears Heat, dries Dampness, drains Fire and detoxifies.

-Da Qing Ye - Clears Heat and resolves Fire toxicity. With Jin Yin Hua, for toxic Heat sores, erysipelas, mumps, or sore throat.

-Cang Er Zi - Disperses Wind and Dampness and opens nasal passages. With Xin Yi Hua, for blocked nose due to Wind-Cold and chronic sinusitis.

-Xi Xin - Releases Exterior Wind and Cold, warms the Lungs, transforms Phlegm and Thin Mucus and disperses and unblocks the Qi of the nasal orifices.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst, clears Excess Heat from the Lungs and clears Blazing Stomach Fire. With Xi Xin, for toothache and gum swelling due to Blazing Stomach Fire.

-Dang Gui - Tonifies Blood, invigorates and harmonizes the Blood, disperses Cold, moistens the Intestines and unblocks the bowels.

-Xin Yi Hua - Expels Wind-Cold and unblocks the nasal passages. With Cang Er Zi, strongly unblocks nasal obstruction and sinus headache due to Wind-Cold or Wind-Heat

for sinusitis and rhinitis with loss of sense of smell. With Xi Xin, lifts and spreads the clear Qi while unblocking the nasal orifices to treat headache and sinus distention, nasal congestion and thick nasal discharge due to Wind-Cold and with cooling herbs, for Wind-Heat.

-Yu Xing Cao - Clears Heat, relieves toxicity, reduces swellings and abscesses and expels pus (acts especially on the Lungs).

TREATS

Sinusitis.

* THROMBOPHLEBITIS #3 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Nourishes the Blood.

SYNDROMES - Qi and Blood Deficiency.

CLINICAL MANIFESTATIONS - Fatigue. Loose stools. Poor appetite. Dizziness. Pale face. Weak voice. Shortness of breath. Reluctance to speak. Sweating with little or no exertion. Palpitations. Insomnia. Dry skin. Dry hair. Poor memory. Paleness. Scanty periods.

HERBS AND ACTIONS

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Fu Ling, for Spleen and Stomach Deficiency with fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting. With Dang Gui and Shu Di Huang, for Qi and Blood Deficiency with dizziness, weakness and lassitude. With Bai Zhu, Dang Gui and Bai Shao, for Qi and Blood Deficiency.

-Fu Ling - Dries Dampness and strengthens the Spleen. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Dang Gui - Tonifies and invigorates the Blood, moistens the Intestines and regulates the relationship between the Liver and Kidneys. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach and relieves numbness and pain. With Dang Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous

sweating. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Dan Gui, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesia.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, nourishes the Blood and calms the Spirit.

-Chuan Xiong - Invigorates the Blood, activates Qi, releases constraint and alleviates pain. With Dang Gui, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis for Blood Deficiency. With Dang Gui, Shu Di Huang and Bai Shao, for a headache from Blood Deficiency.

-Bai Zhu - Tonifies the Spleen, augments Qi and dries Dampness.

-Bai Shao - Tonifies Blood and preserves Yin. With Shu Di Huang, strongly tonifies Liver Blood. With Shu Di Huang and Dang Gui, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Dang Gui, nourishes Yin and Blood.

-Shu Di Huang - Strengthens the Liver and Kidneys, and nourishes the Yin of the Blood. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Bai Shao, Dang Gui and Chuan Xiong, for anemia. With Ren Shen, Bai Zhu, Fu Ling, Dang Gui and Bai Shao, for anemia with fatigue and weakness. With Dang Gui, Bai Shao and Chuan Xiong for anemia.

TREATS

Thrombophlebitis.

* TOPICAL #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Fire. Relieves Fire toxicity. Clears Heat topically. Invigorates the Blood. Promotes the movement of Qi. Reduces swelling. Expels pus. Generates flesh.

SYNDROMES - Topically for bacterial infections, eczema and swollen or infected boils and carbuncles.

CLINICAL MANIFESTATIONS - Skin rashes. Swollen or infected furuncles or boils.

HERBS AND ACTIONS

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin, softens hardnesses, dissipates nodules, transforms Phlegm-Heat, drains Fire and relieves toxicity.

-Dang Gui - Invigorates and harmonizes the Blood, stops pain due to Blood Stasis,

reduces swelling, expels pus, and generates flesh.

-Chi Shao - Reduces swelling from sores and abscesses.

-Huang Bai - Drains Fire and relieves Fire toxicity.

-Huang Qin - Clears Heat, dries Dampness, drains Fire and detoxifies. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos.

-Huang Lian - Clears Heat topically.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain, reduces swelling, generates flesh and promotes healing.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, reduces swelling and generates flesh. With Mo Yao, topically as a powder for skin lesions and ulcerations.

TREATS

Bacterial infections. Eczema. Swollen or infected furuncles or boils.

* TOXIC FIRE #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Toxic Fire.

SYNDROMES - Toxic Fire.

CLINICAL MANIFESTATIONS - Pain. Swelling in the joints. Fever. Chills. Headache. Fatigue. Severe muscle aches. Conjunctivitis. Hemorrhages. Jaundice. Kidney and Liver dysfunction.

HERBS AND ACTIONS

-Chuan Xin Lian - Clears Heat, dries Dampness and resolves Fire toxicity.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity and clears Damp-Heat from the Lower Jiao.

-Da Qing Ye - Clears Heat, resolves Fire toxicity, cools the Blood and dissipates maculae. With Jin Yin Hua, for Toxic Heat sores, erysipelas, mumps, or sore throat.

-Ban Zhi Lian - Clears Heat, resolves Fire toxins, invigorates the Blood, reduces swellings, promotes urination and reduces edema.

-Tu Fu Ling - Relieves toxicity, eliminates Dampness and benefits the joints.

TREATS

Lyme disease. Leptospirosis.

1.3.3.12 RT-TCM-12

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_12

An Tai Yin #3, Autism #1, Barthinolitis #1, Bronchial Asthma #1, Cervical Spondylosis #3, Hypertension #1, Obesity #1, Sick Sinus Syndrome #1, Ulcer #1

Recordings Updated in May 2025

* AN TAI YIN #3 Formula (Dr. Joel Penner, americandragon.com). Dang Gui And Parsley Combination #3

ACTIONS - Tonifies Blood. Stabilizes pregnancy.

SYNDROMES - Blood Deficiency

CLINICAL MANIFESTATIONS - Vaginal tract bleeding after having stopped menstruating. The amount of Blood is sometimes excessive and sometimes scanty. The Blood is fresh red or pale red. Low back soreness or, low back and knee soreness and weakness. Lower abdominal insidious pain. A sensation of downward sagging. A lusterless facial complexion. Essence spirit withering. Heart palpitations. Shortness of breath. Torpid intake. Nausea. Loose stools. Frequent urination. Heart vexation. Insomnia. A dry mouth. Desire to drink. Dry, bound stools.

HERBS AND ACTIONS

-Dang Shen - Tonifies the Middle Jiao and augments Qi. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting.

-Bai Zhu - Tonifies the Spleen, augments Qi and calms the fetus. With Huang Qin, for restless fetus with internal Heat and unstable pregnancy with Qi Deficiency and Interior Heat.

-Sang Ji Sheng - Nourishes the Blood and calms the womb.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, regulates the menses, disperses Cold and stops pain due to Blood Stasis.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and calms the fetus.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin, strengthens Kidney Yang, stabilizes the menses and stops bleeding. With Du Zhong and Ji Xue Teng, for hypertension due to Liver and Kidney Deficiencies.

-Ji Xue Teng - Invigorates and tonifies the Blood.

Huang Qin - Clears Heat and calms the fetus. With Bai Zhu and Dang Gui, for restless fetus due to Heat.

TREATS

Pernicious vomiting. False labor. Low back pain. Dyspnea. Threatened miscarriage. Habitual miscarriage. Knee pain.

* AUTISM #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Heart Qi. Nourishes Heart Yin and Blood. Activates Heart Blood. Removes Phlegm Obstructing the Orifices. Calms the Shen.

SYNDROMES - Heart Qi, Blood and Yin Deficiency.

CLINICAL MANIFESTATIONS - Shyness. Inattention. Depression. Mood swings. Obsessions. Palpitations. Irritability. Anxiety. Easily startled. Insomnia. Much dreaming. Poor memory. Dizziness. Pale face and lips.

HERBS AND ACTIONS

-Ren Shen - Tonifies Heart Qi and calms the Spirit.

-Mai Dong - Nourishes Lung and Stomach Yin, generates Fluids, clears the Heart and eliminates irritability.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm, calms the Spirit and promotes Blood flow of Qi and Blood. With Yuan Zhi, for forgetfulness and dulled senses.

-Dang Gui - Tonifies, activates and harmonizes the Blood.

-Yuan Zhi - Calms the Spirit, sedates the Heart, clears the channel joining the Heart and Kidney, expels Phlegm and opens the Orifices.

-Ru Xiang- Activates the Blood and promotes the movement of Qi.

-Chuan Xiong - Activates the Blood and promotes the movement of Qi. With Dang Gui, harmonizes, nourishes and activates the Blood and disperses Blood Stasis.

TREATS

Autism.

* BARTHOLINILITS #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Resolves toxins.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Local inflammation with pus. Deep-rooted, hard and painful boils. Erythema. Swelling. Heat. Carbuncles. Furuncles. Fever and chills. Pain.

HERBS AND ACTIONS

-Jin Yin Hua - Clears Heat, resolves Fire toxicity and clears Damp-Heat from the Lower Jiao.

-Pu Gong Ying - Reduces abscesses, dissipates nodules, clears Heat, resolves Dampness and relieves Fire toxicity.

-Tu Fu Ling - Relieves toxicity, eliminates Dampness and clears Damp-Heat from the skin. With Pu Gong Ying, for Damp-Heat in the Liver/Gallbladder.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, invigorates the Blood, dispels Blood Stasis, drains pus and reduces swelling. With Chi Shao, for purpuric rashes.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat, cools the Blood and reduces swelling from sores and abscesses. With Mu Dan Pi, cools the Blood and disperses Stasis.

-Yan Hu Suo - Invigorates the Blood, circulates Qi and stops pain.

-Chai Hu - Spreads Liver Qi and relieves Stagnation.

TREATS

Bartholinitis. Bartholin's cysts.

* BRONCHIAL ASTHMA #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Releases the Exterior. Unblocks Yang. Clears Heat. Dries Dampness. Drains Fire. Detoxifies. Clears Liver Fire. Moistens the Lungs. Resolves Phlegm. Stops cough.

SYNDROMES - External Wind Invasion. Liver Fire Scorches the Lungs.

CLINICAL MANIFESTATIONS - Lung-distension. Wheezing with a productive cough. Dyspnea. Panting. Yellow or white mucus which is difficult to expectorate. Thick phlegm. A dry mouth with a desire to drink. Maybe no thirst A choking sensation in the chest. A sense of fullness in the chest and diaphragm. The eyes look like they are popping out of their sockets. Facial edema. Chills. Oliguria. A mild to moderate fever. Maybe the sound of sputum rattling in the throat. Dry stools. Maybe headache. Maybe nervousness. Maybe anxiety. Coughing fits with hemoptysis. Burning pain in chest and sides. Dizziness. Face and eyes red. Bitter taste in mouth. Dry lips. Short-tempered. Irascibility. Restlessness. Maybe dark urine. Maybe constipation.

HERBS AND ACTIONS

- Huang Qin - Clears Heat, dries Dampness, drains Fire, detoxifies and calms ascending Liver Yang.

-Gan Cao - Moistens the Lungs, resolves Phlegm, stops cough, clears Heat and relieves Fire toxicity.

-Gui Zhi - Releases the Exterior, assists Yang, unblocks Yang and transforms Qi and thin mucus. With Gan Cao, for palpitations and shortness of breath due to injured Yang of the chest.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood and clears Liver Fire.

TREATS

Bronchial asthma. Dyspnea. Chronic obstructive pulmonary disease (COPD).

* CERVICAL SPONDYLOSIS #3 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Expels Damp. Transforms Phlegm. Breaks up Stasis. Unblocks the channels.

SYNDROMES - Phlegm and Blood Stagnation with Blood Stagnation more pronounced.

CLINICAL MANIFESTATIONS - Head, neck, shoulder, upper back and upper arm aching and pain. Severe lancinating pain. Fixed pain. Pain worse at night and better during the day. Pain worse with pressure. Dizziness. Heaviness of the head with a wrapping sensation. Cramping of the four limbs. Vexation. Agitation. Palpitations. Chest oppression. Distention of the flanks. Dry mouth. Poor appetite. Nausea. Vomiting. Loose or sticky stools. A feeling of obstruction in the throat. Coughing with copious sputum. Abdominal and epigastric fullness and distention. The fingernails are cyanosed, sunken, concave and lack luster. Dry, itchy skin. The arm may be contracted. Maybe heaviness, numbness, coldness and/or edema of the limbs. Severe cases:. Mental and spiritual confusion. Loss of consciousness.

HERBS AND ACTIONS

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Xuan Fu Hua - Expels Phlegm and removes pathogenic water. With Zhi Ban Xia, for congested fluids.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness and paralysis.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Ban Xia - Dries Dampness, transforms Phlegm, dissipates nodules and reduces Stagnation.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis and relieves pain.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ban Xia, treats Phlegm, thin mucus and turbid Dampness.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold and adjusts the Ying and Wei, normalizing the flow of Qi at the center. With Ban Xia, for Phlegm-Dampness.

TREATS

Cervical spondylosis.

* HYPERTENSION #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Invigorates Blood. Breaks up Blood Stasis. Prevents stroke.

SYNDROMES - Blood Stagnation.

CLINICAL MANIFESTATIONS - Facial color dark and dull. Emaciation. Sides and ribs distended on both sides (maybe with sharp pain). Enlargement of Liver and Spleen. Suffocating sensation in chest. Tendency to sigh. Melancholy. Depression. Irritability. Inappropriate anger. Women: Irregular menses. Dysmenorrhea. Breast distention and pain before and during menses.

HERBS AND ACTIONS

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat, cools the Blood, clears Liver Fire and relieves eye pain.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat and soothes irritability.

-Niu Xi - Invigorates the Blood, expels Blood Stasis and descends Blood and Fire.

-Zhen Zhu - Sedates the Heart and settles tremors and palpitations.

-Xia Ku Cao - Clears Liver Fire, brightens the eyes and treats hypertension.

TREATS

Hypertension. Stroke prevention.

* OBESITY #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Strengthens the Spleen. Resolves Damp0ness. Reduces Food Stagnation. Resolves Phlegm. Purges accumulations.

SYNDROMES - Spleen Qi Deficiency with Food Stagnation and Phlegm.

CLINICAL MANIFESTATIONS - Obesity with a long history of a bad diet. Dislike of speaking. Sweating on exertion. Aversion to Cold. Puffy face. Poor appetite. Abdominal fullness after eating. Fatigued spirit. Weakness of the extremities. Somnolence. Loose stools. Clear, thin vaginal discharge. Bland taste in the mouth. Epigastric fullness, distention and pain with dislike of pressure. Belching with rotten food smell. Acid regurgitation. Detests food or. Vomits after eating. Distention is reduced after vomiting. Unformed stools or. Knotted constipation.

HERBS AND ACTIONS

-Fan Xie Ye - Drains downward and guides out Stagnation. With Chen Pi, strengthens the actions of restoring normal bowel movements and ameliorates its cold, colicky properties

-Ze Xie - Promotes urination and leaches out Dampness. With Ban Xia, for Turbid Dampness in the Middle Jiao causing epigastric and abdominal distention. With Bai Zhu, for Spleen Deficiency leading to accumulation of Dampness with urinary difficulty, loose stools, diarrhea, Milky Lin or vaginal discharge.

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, promotes urination and reduces edema. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Lai Fu Zi - Reduces Food Stagnation, transforms accumulation, promotes digestion, eliminates distention, descends Qi and reduces Phlegm. With Ban Xia, for distention and vomiting due to Food Stagnation. With Bai Zhu, for Food Stagnation with Spleen Deficiency.

-Shan Zha - Reduces and guides out Food Stagnation, transforms accumulations, transforms Blood Stasis, invigorates Blood circulation and dissipates clumps.

-He Ye - Raises and clears Spleen Yang.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, stops vomiting and harmonizes the Stomach. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Bai Zhu, for anorexia and other symptoms of Damp Obstruction due to Spleen Deficiency.

TREATS

Obesity.

* SICK SINUS SYNDROME #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Warms Yang. Replenishes Qi.

SYNDROMES - Heart and Kidney Yang Deficiency.

CLINICAL MANIFESTATIONS - Chest stuffiness. Twinges in the precordial region. Palpitations. Shortness of breath. Dizziness. Occasional fainting. Fatigue. Weakness. Dizziness. Low back weakness and pain. Aversion to Cold. Cold limbs. Restlessness. Insomnia.

HERBS AND ACTIONS

-Fu Zi - Warms Ming Men Fire and assists Heart, Kidney and Spleen Yang. With Ren Shen, for severe Deficiency of Source Qi and Collapse of Yang with cold extremities, sweating, weak breathing, dizziness and an extremely pale complexion. With Ren Shen and Gui Zhi, for weak Heart Yang with palpitations, shortness of breath and chest pain. With Huang Qi, for spontaneous sweat and chills due to Yang Deficiency. With Xi Xin, for Cold damage both Internal and External with aversion to Cold, headache and generalized body aches with aching joints. With Ma Huang and Xi Xin, for a Wind-Cold Attack with preexisting Yang Deficiency.

-Ren Shen - Powerfully tonifies Yuan Qi, tonifies Heart Qi and calms the Spirit. With Huang Qi, for Qi Deficiency with general debility, anorexia and spontaneous sweat.

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen and raises the Yang Qi of the Spleen and Stomach. With Ren Shen or Dang Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweating. With Fu Zi, for Yang Deficiency with spontaneous sweat.

-Yu Zhu - Nourishes Yin, moistens Dryness, moistens the Lungs, nourishes the Stomach and generates fluids. With Dang Shen, for Painful obstruction of the chest in cases with both Yin and Qi Deficiency.

-Gui Zhi - Assists Heart Yang, warms and facilitates the flow of Yang Qi in the chest and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Ma Huang, for Wind-Cold-Damp Bi. With Fu Zi, for chills, an occipital headache, backache and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi .

-Ma Huang - Induces sweating, releases the Exterior, disseminates and facilitates Lung Qi, calms wheezing, stops coughing and warms and disperses Cold pathogens.

-Xi Xin - Disperses Wind-Cold and Internal Cold and alleviates pain. With Ma Huang, for coughing and wheezing due to Phlegm caused by Wind-Cold and Wind-Cold-Damp Bi pain. \with Ma Huang and Fu Zi, for Exterior Wind-Cold with underlying Yang Deficiency.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Dang Shen, for palpitations due to Heart Qi Deficiency. With Ren Shen, relieves palpitations and anxiety.

TREATS

Sick sinus syndrome.

* ULCER #1 Formula (Dr. Joel Penner, americandragon.com)

ACTIONS - Activates the Blood. Breaks up Stasis. Strengthens the Spleen. Eliminates Dampness. Clears Heat. Increases Blood flow to the mucous membranes.

SYNDROMES - Spleen Qi Deficiency with Blood Stagnation and Heat.

CLINICAL MANIFESTATIONS - Pain that is fixed, stabbing and /or severe. Pan is worse with pressure. Dark complexion. Fixed, palpable masses. Bleeding with clots. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas,. Varicose and spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots. Spontaneous perspiration. Shortness of breath. Occasional fevers. Dyspnea. Abdominal pain and spasms due to Cold. Pain is better with warmth and pressure. Pale face or a sallow, dull complexion. Fatigue. Fidgeting. Lethargy. Dry mouth. Aversion to Cold. Frequent, clear urination. Constipation. Cold extremities. Dry throat. Hematemesis. Irritability. Carbuncles. Palpitations. Hemorrhoids. Fever with a preference for hot drinks. Dry skin.

HERBS AND ACTIONS

-Dan Shen - Activates the Blood, dispels Blood Stasis, clears Heat, soothes irritability, cools the Blood and reduces abscesses.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Hou Po - Promotes the movement of Qi in the Middle Jiao, resolves Stagnation, descends Qi, dries Dampness and transforms Phlegm.

-Sha Ren - Promotes the movement of Qi, aromatically transforms Dampness, strengthens the Spleen, stops vomiting, warms the Middle and stops diarrhea. With Hou Po, for constrained Dampness with Qi Stagnation leading to distention and fullness in the epigastrium and abdomen.

-Wu Mei - Generates fluids, alleviates thirst, expels roundworms, astringes the Intestines, stops diarrhea and alleviates pain.

-Huang Lian - Clears Heat, drains Dampness, drains Fire, resolves Fire toxicity and drains Stomach Fire. With Wu Mei, for Internal Heat with thirst, Dryness, coughing and irritability.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, activates the Blood, dispels Blood Stasis, drains pus and reduces swelling.

TREATS

Peptic, gastric and duodenal ulcers.

1.3.3.13 RT-TCM-13

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_13

BE Lotion, Dang Gui Shao Yao San, Herpes Zoster #2, Kong Xian Dan, Ming Mu Di Huang Wan #2, Obesity #4, Pertussis #1, Topical #2, Yun Pi Yi Shen Tong Du Tang

Recordings Updated in May 2025

* BE LOTION (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Fire. Resolves toxicity. Drains Damp-Heat. Reduces abscesses. Dissipates nodules.

SYNDROMES - Toxic Damp-Heat.

CLINICAL MANIFESTATIONS - Bartholinitis. Eczema.

HERBS AND ACTIONS

-Ye Ju Hua - Drains Fire and resolves toxicity.

-Zi Hua Di Ding - Clears Heat, relieves Fire toxicity and clears hot sores (Chuang Yung) internally and externally. With Ye Ju Hua, for carbuncles and other red swellings. With Pu Gong Ying, for furuncles, boils and carbuncles.

-Pu Gong Ying - Reduces abscesses, dissipates nodules, clears Heat, resolves Dampness, relieves Fire toxicity and clears Heat in the Blood.

-Long Dan - Drains Damp-Heat from the Liver and Gallbladder channels.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao, drains Fire and relieves Fire toxicity.

TREATS

Bartholinitis. Eczema.

* DANG GUI SHAO YAO SAN - 當歸芍藥散 - Dang Gui And Peony Powder

ACTIONS - Nourishes Liver Blood. Softens the Liver. Spreads Liver Qi. Strengthens the Spleen. Resolves Dampness. Reinforces the Spleen and Kidney.

SYNDROMES - Abdominal pain due to Liver and Spleen Disharmony. Abdominal pain due to Spleen and Kidney Deficiency. Hypofunction of the Liver and Spleen with Stagnation of Blood and Qi Stagnation due to Dampness. Problems with pregnancy.

CLINICAL MANIFESTATIONS - Continuous cramping pain in the abdomen. Pain is not severe. Pain is relieved by pressure. Edema of the feet. Urinary difficulty. Slight edema (primarily of the lower limbs). Symptoms generally occur during pregnancy. Pale face. Fatigue. Heaviness of head. Lassitude. Lower abdominal pain. Dizziness. Tinnitus. Lumbago. Edema. Abdominal pain with edema during pregnancy due to Blood Deficiency and abnormal water circulation. Oliguria. Palpitations. Cold feet. Extreme coldness of the hands and feet. Vertigo. Weakness and numbness of lower back and legs during pregnancy or postpartum. Mal position of the fetus. Dysmenorrhea. Irregular menstruation. Right upper quadrant pain. Hepatomegaly. Anemia. Lack of energy. Sore back. Thirst with no desire to drink.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution during pregnancy. Concurrent use of this formula with colchicine was associated with improvement in learning acquisition deficit induced by colchicine. This formula may reduce menopausal symptoms induced by gonadotropin-releasing hormone agonists without negative effects on serum estradiol levels.

NOTES - Danggui-shaoyao-san (DSS), is a famous Chinese herbal formula, which has been widely used in oriental countries for the treatment of various gynecological diseases and other diseases, including neurodegenerative disorders. Although well-

practiced in clinical medicine, the mechanisms involved in DSS for the treatment of neurodegenerative diseases remain elusive. DSS has an effect on free radical-mediated neurological diseases, possesses antioxidant capability, attenuates inflammatory reaction, and reduces cell apoptosis in the hippocampus. DSS improves the function of the dopaminergic, adrenergic, and serotonergic nervous systems. Interestingly, DSS can alleviate cognitive dysfunction of Alzheimer's disease (AD) patients, suggesting that it is a useful therapeutic agent for AD.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis for abdominal pain. With Bai Shao and Chuan Xiong, harmonizes the function of and softens the Liver. With Bai Shao, Fu Ling, Bai Zhu and Ze Xie, for diarrhea during pregnancy with severe abdominal pain.

-Bai Shao - Softens the Liver, stops pain and nourishes the Blood. With Bai Zhu, treats concurrent problems of the Liver and Spleen. With Dang Gui, nourishes Yin and Blood.

-Bai Zhu - Tonifies the Spleen, tonifies Qi and dries Dampness. With Fu Ling and Ze Xie, strengthens Spleen and leaches out Dampness.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Ze Xie - Promotes urination and resolves Dampness. With Bai Zhu, for Spleen Deficiency leading to accumulation of Dampness with urinary difficulty, loose stools, diarrhea Milky Lin or vaginal discharge.

-Chuan Xiong - Activates Blood and regulates Qi.

TREATS

Dysfunctional uterine bleeding. Menopause. Irregular menstruation. Chronic nephritis. Heart pain. Habitual miscarriage. Premature rupture of placenta. Hemorrhoids. Cystitis. Postpartum weakness. Dysmenorrhea. Monoplegia. Vascular diseases. Beriberi. Postpartum scar tissue. Mal position of fetus. Metrorrhagia. Menorrhagia. Endometritis. Pre-eclampsia. Postpartum depression. Uterine fibroids. Infertility. Urinary tract stones. Coronary artery disease. Vascular headaches. Rheumatoid arthritis. Acne. Chilblains. Psoriasis. Swellings from congestive Heart disease. Post-concussion syndrome. Meniere's disease. Tension. Hypotension. Conjunctivitis. Leukorrhea. Luteal insufficiency. Breech presentation. Adnexitis. Chloasma. Edema during pregnancy. Palpitations. Vertigo. Fatigue. Abdominal pain during pregnancy. Dizziness during

pregnancy. Chronic pelvic inflammatory disease. Hypertension during pregnancy. Perimenstrual migraines. Post abortion. Post tubal ligation. Post insertion of IUD. Post Cesarean section. Anemia. Lumbago. Edema. Abdominal pain. Abdominal pain during pregnancy. Abdominal mass which is localized and hard. Threatened miscarriage. Functional menorrhagia. Premenstrual syndrome. Chronic hepatitis. Chronic cholecystitis. Early-stage cirrhosis of the Liver. Perimenopausal syndrome. Breast hyperplasia. Chronic gastritis. Peptic ulcers. Intestinal obstruction. Gout. Trigeminal neuralgia. Sciatica. Eczema. Urticaria. Varicose veins. Renal disease. Ascites from cirrhosis. Thrombotic stroke. Allergic rhinitis. Benign prostatic hypertrophy. Appendicitis. Senile dementia. Hypo chronic anemia. Unstable pregnancy. Pelvic inflammatory disease. Beriberi. Angina pectoris. Amenorrhea. Dizziness. Weakness. Postpartum uterine bleeding. Fetal restlessness. Weakness and numbness of lower back and legs during pregnancy or postpartum.

* HERPES ZOSTER #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Invigorates the Blood. Promotes the movement of Qi. Expels Wind. Drains Heat. Relieves Fire toxicity. Cools the Blood. Alleviates pain.

SYNDROMES - Qi and Blood Stagnation of the skin with Toxic Heat.

CLINICAL MANIFESTATIONS - Slight fever. Lymph node enlargement. Local skin sensitivity and pain. Usually along one side of the body. Papular eruptions. Lymph node enlargement. Nerve pain which may be very severe and may continue after disappearance of the papules. Occurs along the nerve routes, usually of the neck, intercostals, abdomen, lower back or extremities.

HERBS AND ACTIONS

-Ding Xiang - Warms the Middle Jiao, descends Qi, warms the Kidneys, assists Yang and relieves pain.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Chai Hu and Chi Shao, for Liver Qi and Blood Stagnation generating headache and/or chest pain.

-Yu Jin - Invigorates the Blood, dispels Blood Stasis, regulates Qi flow, speeds healing of chronic sores, clears Heat, cools the Blood and alleviates pain. With Zhi Ke, for Liver Qi Stagnation with a stifling sensation in the chest and fullness in the epigastrium and abdomen with heat signs and stabbing pains in the chest, flanks and abdomen due to Blood Stagnation. With Chai Hu, for Liver Qi and Blood Stagnation with flank pain and distention.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, clears Heat, cools the Blood, reduces swelling from sores and abscesses and relieves pain.

-Chai Hu - Resolves Shao Yang disorders, reduces fever, harmonizes the Exterior and Interior, spreads Liver Qi, relieves Stagnation and disperses Wind-Heat. With Zhi Ke, for a stifling sensation in the chest, abdominal pain, poor appetite, and irregular bowel movement. With Gan Cao, for upper right quadrant pain and Wind-Heat fever.

-Ban Lan Gen - Drains Heat, relieves Fire toxicity and cools the Blood.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure and resolves hardenings.

-Gan Cao - Clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

TREATS

Herpes zoster.

* KONG XIAN DAN - 控癇丹 - Control Mucus Special Pill

ACTIONS - Dispels Phlegm and thin mucus.

SYNDROMES - Phlegm lurking above and below the diaphragm. Water retention in the chest and diaphragm.

CLINICAL MANIFESTATIONS - Sudden, excruciating and migrating pain in the thorax, neck, lower back and inguinal region. A tightening sensation in the sinews and bones that evolves into a burning, piercing pain. Cold and painful extremities. Unrelenting, severe headache. Lethargy with a desire to sleep. Anorexia. A temporary loss of taste in the mouth. Coughing up thick, greasy sputum. A rattling sound in the throat at night. Excessive salivation. Abdominal distention. Edema.

HERBS AND ACTIONS

-Gan Sui - Drains water downward, eliminates congested fluids and thin mucus and expels Phlegm.

-Jing Da Ji - Drains water downward and drives out thin mucus.

-Jie Zi - Warms the Lungs, regulates Qi and expels Phlegm.

TREATS

Obesity. Numbness. Hysteria. Edema. Paresthesia. Schizophrenia. Bi-polar disorder.

* MING MU DI HUANG WAN #2 - 明目地黄片二号 - Improve Vision With Rehmannia Pill #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Replenishes the Yin of the Liver and Kidneys. Improves vision. Disperses Wind and Heat.

SYNDROMES - Decreased acuity of vision due to Liver and Kidney Yin Deficiencies.

CLINICAL MANIFESTATIONS - Blurry vision. Dry eyes. Painful eyes. Night blindness. Excessive tearing on exposure to Wind.

HERBS AND ACTIONS

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin, benefits Jing and brightens the eyes. With Shu Di Huang, for Liver and Kidney Deficiencies. With Ju Hua, for Liver and Kidney Deficiencies with Jing and Blood unable to rise and nourish the eyes with tinnitus, headache, and visual impairment.

-Ju Hua - Disperses Wind, clears Heat, calms the Liver, clears the eyes, promotes the movement of Heart Qi and Blood and stimulates Blood circulation. With Gou Qi Zi, for Dizziness and blurred vision due to Liver and Kidney Yin Deficiencies. With Gou Qi Zi, Shu Di Huang, Mu Dan Pi and Shan Zhu Yu, for blurred vision and dizziness due to Liver and Kidney Yin Deficiency

-Bai Ji Li - Calms the Liver, anchors the Yang, Dispels Wind-Heat and brightens the eyes.

-Jue Ming Zi - Clears Liver Heat, clears the vision, benefits the eyes, calms the Liver, anchors Liver Yang and reduces blood pressure. With Ju Hua, for hypertension.

-Shu Di Huang - Tonifies the Kidneys and nourishes Jing, Yin and Blood. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu and Shan Yao, for Dizziness, weak and sore back, impotence, spermatorrhea and night sweats, due to Kidney and Liver Yin Deficiencies. With Shan Yao and Ze Xie, for ascendant Fire due to exhaustion of Kidney Yin. With Shan Zhu Yu, Shan Yao and Ze Xie, for Xiao Ke with predominant polyuria.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and astringes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty,

difficult urination with abdominal distention. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Jing and Yin and stops perspiration. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Yao, tonifies the Liver and Spleen. With Shu Di Huang and Shan Yao, for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency. With Shu Di Huang, Shan Yao and Gou Qi Zi, for true Yin Deficiency.

-Mu Dan Pi - Clears Heat, cools the Blood clears and Deficiency Fire. With Ju Hua, for dizziness and red, swollen eyes due to ascending Liver Fire. With Ze Xie, Fu Ling and Shan Zhu Yu, for spermatorrhea due to Kidney Yin Deficiency with Heat.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

TREATS

Blurry vision. Diabetes. Glaucoma. Hypertension. Weakness. Diminished vision. Ophthalmia. Ophthalmalgia. Fibromyalgia.

* OBESITY #4 (Dr. Joel Penner, americandragon.com)

ACTIONS - Boosts Qi. Tonifies the Spleen. Percolates Dampness.

SYNDROMES - Spleen Qi Deficiency.

CLINICAL MANIFESTATIONS - Obesity with a long history of a bad diet. Dislike of speaking. Sweating on exertion. Aversion to Cold. Puffy face. Poor appetite. Abdominal fullness after eating. Fatigued spirit. Weakness of the extremities. Somnolence. Loose stools. Clear, thin vaginal discharge. Bland taste in the mouth.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, promotes urination and reduces edema. With Dang Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweat. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Han Fang Ji and Bai Zhu, for Wind edema with sweating, heavy sensations of the body and aversion to Wind.

-Han Fang Ji - Promotes urination and reduces edema especially in the lower body.

-Dang Shen - Tonifies the Middle Jiao and augments Qi. With Fu Ling, for Spleen and Stomach Deficiencies with fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiencies.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ban Xia, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention and anorexia due to congested fluids.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, stops vomiting and harmonizes the Stomach. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi.

-Shan Zha - Reduces and guides out Food Stagnation, transforms accumulations, transforms Blood Stasis, invigorates Blood circulation and dissipates clumps.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Bai Zhu, for anorexia and other symptoms of Damp Obstruction due to Spleen Deficiency.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Obesity. Abdominal fullness and distention.

* PERTUSSIS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Stops cough and wheezing. Clears Heat. Descends Qi. Dissolves Phlegm.

SYNDROMES - Retention of Phlegm Fire.

CLINICAL MANIFESTATIONS - Paroxysmal gasping coughs with a strong barking sound. Thick, difficult to expectorate sputum. Noisy inhalation. Red eyes. Occasional Blood in the sputum. Vomiting of mucus.

HERBS AND ACTIONS

-Zi Su Zi - Stops cough and wheezing, descends Qi and dissolves Phlegm. With Ting Li Zi, for accumulation of Phlegm and thin mucus leading to Lung Qi Stagnation and blockage with cough and wheezing which is worse when lying down, edema of the tissues of the face and head, stifling fullness and discomfort in the chest and reduction in the flow of urine.

-Ting Li Zi - Drains the Lungs, reduces Phlegm and calms wheezing. With Da Zao, for cough with excessive sputum, wheezing, and chest pain due to Phlegm preventing the descent of Lung Qi.

-Wu Wei Zi - Astringes leakage of Lung Qi.

-Qing Meng Shi - Descends Qi and reduces Phlegm.

-Jie Geng - Opens the Lungs, spreads Lung Qi and expels Phlegm.

-Zhi Shi - Breaks up Stagnant Qi, reduces accumulation, transforms Phlegm and descends Qi.

-Gua Lou - Clears Heat, transforms Hot Phlegm, moistens Dryness and expands the chest.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi and moderates and harmonizes the harsh properties of other herbs.

TREATS

Pertussis. Whooping cough.

* TOPICAL # 2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Detoxifies.

SYNDROMES - Toxic Heat skin lesions.

CLINICAL MANIFESTATIONS - Lesions appear abruptly on the inner surface of the extremities. May affect the dorsal aspects of the hands and feet. Erythema. Blisters. Ulcerations. Itching. Maybe a moderate fever. May affect the face and neck. May affect the scrotum. Papules. Pustules. Scabs. Indistinct borders.

HERBS AND ACTIONS

-Ban Lan Gen - Drains Heat, relieves Fire toxicity and cools the Blood.

-Da Qing Ye - Clears Heat, resolves Fire toxicity, cools the Blood and dissipates

maculae.

-Huang Bai - Drains Fire and relieves Fire toxicity.

-Shi Gao - Heals eczema, burns and ulcerated sores and wounds topically or internally. With Qing Dai and Huang Bai, for eczema, burns and abscesses.

-Hua Shi - Absorbs Dampness and clears Heat topically. With Huang Bai and Shi Gao, topically as a powder for eczema and other damp skin lesions.

TREATS

Bartholinitis. Eczema

* YUN PI YI SHEN TONG DU TANG (Prof. Chengping Wen)

ACTIONS - Strengthen spleen. Nourish kidney. Dredge governor vessel.

NOTES - Traditional Chinese Medicine (TCM) has been served as complementary medicine for Ankylosing Spondylitis (AS) treatment for a long time. Yun-Pi-Yi-Shen-Tong-Du-Tang (Y-Y-T) is a novel empirical formula designed by Prof. Chengping Wen. Clinical evidence demonstrated that Y-Y-T is beneficial for AS patients in relieving clinical symptoms and enhancing physical quality.

HERBS

-Chuan Shan Long - Dispels Wind and eliminates Dampness. Invigorates the Blood, unblocks the collaterals and relaxes the sinews. Transforms Phlegm and alleviates cough.

-Cang Zhu - Dispels Wind and eliminates Dampness. Invigorates the Blood, unblocks the collaterals and relaxes the sinews. Transforms Phlegm and alleviates cough.

-Tu Fu Ling - Relieves toxicity and eliminates Dampness (benefits the joints). Clears Damp-Heat from the skin. Promotes normal urination (dispels Heat from the Lower Jiao).

-Jin Yin Hua - Clears Heat and resolves Fire toxicity. Vents and disperses External Wind-Heat. Clears Damp-Heat from the Lower Jiao. Cools the Blood and stops bleeding (charred).

-Niu Xi - Invigorates the Blood and expels Blood Stasis. Nourishes Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints. Descends Blood and Fire. Clears Damp-Heat in the Lower Jiao.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain and reduces swelling. Generates flesh and promotes healing.

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain. Reduces swellings, induces ulceration and dispels putrefication. Treats unconsciousness caused by Phlegm Stagnation.

-Huang Qi - Tonifies Qi and Blood. Strengthens the Spleen and raises the Yang Qi of the Spleen and Stomach. Tonifies Wei Qi, stabilizes the Exterior and tonifies the Lungs (aids the circulation of moisture downward from the face). Promotes urination and reduces edema. Promotes the discharge of pus, generates flesh and expels toxins. Generates Body. Fluids. Relieves numbness and pain.

-Gan Cao - Tonifies the Spleen and augments Qi. Moistens the Lungs, resolves Phlegm and stops coughing. Moderates spasms and alleviates pain. Clears Heat and relieves Fire toxicity. Antidote for many toxic substances (internal and topical). Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Cu San Leng - (Cu San Leng substiutes Shui Zhi of the original formula) Forcefully breaks up Blood Stasis, regulates Qi and alleviates pain. Dissolves accumulations. Regulates menstruation. Promotes lactation.

-Huang Lian - Clears Heat and drains Dampness. Drains Fire and resolves Fire toxicity. Clears Heat and stops bleeding. Clears Heat topically. Clears Heart Fire (sedative). Drains Stomach Fire.

TREATS

Ankylosing Spondylitis.

1.3.3.14 RT-TCM-14

Traditional Chinese Medicine

Dan Shen Huo Xue Tang, Dao Qi Tang, Fang Ji Huang Qi Tang, Jiao Gui Tang, Jin Huang San (Gao), Ling Gui Zhu Gan Tang, Long Dan Xie Gan Tang, Qing Ying Jie Yu Tang, Yi Qi Huo Xue

Recordings Updated in May 2025

* DAN SHEN HUO XUE TANG - 丹参活血汤 - Red Sage Root Decoction For Promoting Blood Circulation

ACTIONS - Tonifies Qi and Blood. Invigorates the Blood. Dispels Blood Stasis. Expels Wind-Dampness. Relaxes the sinews and bones.

SYNDROMES - Blood Stagnation.

CLINICAL MANIFESTATIONS - The local skin of the affected area is dark purple in color. There are some hard cord-like subcutaneous swollen masses which are not painful when they are pressed. Coldness. Numbness. Pain.

HERBS AND ACTIONS

-Dan Shen - Invigorates the Blood and dispels Blood Stasis.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat and cools the Blood.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Huang Qi, for many Blood Deficiency and Qi and Blood patterns. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Ji Xue Teng - Invigorates and tonifies the Blood, invigorates the channels and relaxes the sinews. With Sang Ji Sheng and Niu Xi, for Wind-Damp Bi, especially chronic painful obstruction in women and the elderly where there is also Blood Deficiency.

-Sang Ji Sheng - Tonifies Liver and Kidney Yin, strengthens the sinews and bones and expels Wind-Dampness.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin, strengthens the sinews and bones, benefits the joints and Clears Damp-Heat in the Lower Jiao.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis.

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain. With Dang Gui, for Qi and Blood Deficiencies with chronic non-healing sores, numbness, painful obstruction and paresthesias.

-Yu Jin - Invigorates Blood, dispels Blood Stasis, regulates Qi flow, speeds healing of chronic sores and alleviates pain. With Dan Shen, for Heat with Blood Stasis causing chest Bi.

TREATS

Chronic phlebitis.

* DAO QI TANG - 导气汤 - Conduct The Qi Decoction

ACTIONS - Promotes the movement of Qi. Spreads Liver Qi. Scatters Cold. Alleviates hernial pain.

SYNDROMES - Cold-type Shan Qi (bulging disorders - hernias). Foxy Shan Qi.

CLINICAL MANIFESTATIONS - Cold Type Shan Qi: A swollen, firm, cold, retracted scrotum or testicles. Severe: A stone-like hardness. Testicular pain that improves with warmth. Intolerance of Cold. Foxy Shan Qi: A part of the Small Intestine intermittently descends into the groin or scrotum through the inguinal canal. It disappears when the patient lies flat or when manually reduced. It reappears when the patient stands, coughs or sneezes. It may be large or small, changing from time to time. There may or may not be pain radiating to the testes.

HERBS AND ACTIONS

-Chuan Lian Zi - Dredges Liver Qi, releases Stagnation, stops pain. With Xiao Hui Xiang, strongly stops pain and regulates Qi to treat bulging disorders and mobile masses in the lower abdomen. With Xiao Hui Xiang and Wu Zhu Yu, for pain associated with hernia. With Xiao Hui Xiang, Wu Zhu Yu and Mu Xiang, for hernial disorders with lower abdominal pain and distention due to Cold.

-Mu Xiang - Promotes the movement of Qi, alleviates pain, adjusts and regulates stagnant Qi in the Intestines, strengthens the Spleen, prevents Stagnation and harmonizes the Liver and Spleen.

-Xiao Hui Xiang - Warms the Liver and Kidneys, expels Cold, alleviates pain, regulates Qi and harmonizes the Stomach.

-Wu Zhu Yu - Warms the Middle Jiao, disperses Cold, warms the Spleen, promotes the movement of Qi and alleviates pain.

TREATS

Hernia.

* FANG JI HUANG QI TANG - 防己黄芪汤 - Stephania And Astragalus Formula

ACTIONS - Augments Qi. Strengthens the Spleen. Releases the Exterior. Promotes urination. Reduces edema. Regulates water circulation.

SYNDROMES - Wind-Damp Edema. Wind-Damp (no edema). Wind-Damp Bi. Wind-Damp Accumulation with Wei Qi Deficiency (Lung and Spleen Qi Deficiency)

CLINICAL MANIFESTATIONS - Sweating. Aversion to Wind. Heavy sensation in the body. Superficial edema. Urinary difficulty. Knee pain. Abdominal bloating. Edema in lower legs. Fatigue. Edema in women with constitutional Deficiency.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with acute Excess type edema. Contraindicated for those with Dampness Obstructing the Protective Yang. Overdose can cause nausea and anorexia.

HERBS AND ACTIONS

-Huang Qi - Strengthens the Spleen, tonifies Qi, tonifies Wei Qi, stabilizes the exterior, promotes urination and reduces edema. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Fang Ji, for Wind edema with numbness, pain, swelling of the face and extremities, sweating, sensitivity to Wind, and reduced urination.

-Fang Ji - Promotes urination and reduces edema (especially in the lower body), expels Wind-Dampness and alleviates pain. With Huang Qi and Bai Zhu, for Wind-Dampness invasion with Wei Qi Deficiency causing superficial edema, heaviness of the body, and sweating.

-Bai Zhu - Tonifies the Spleen, tonifies Qi, dries Dampness, stabilizes the exterior and stops sweat.

-Gan Cao - Tonifies the Spleen, tonifies Qi and moderates and harmonizes the properties of other herbs.

-Sheng Jiang - Releases the exterior, warms the Middle and adjusts the Ying and Wei. With Da Zao, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen, protects Stomach Qi and reduces irritation of the Gastrointestinal tract by other herbs.

-Da Zao - Strengthens the Spleen, tonifies Qi and moderates and harmonizes the harsh properties of other herbs.

TREATS

Rheumatic Heart disease. Ascites. Acute glomerulonephritis. Chronic nephritis. Dysuria. Cardiac edema. Nephritic edema. Ephidrosis. Periarthritis of the shoulder. Hydronephrosis. Edema in the legs. Perspiration. Arthritis. Low back pain. Fatigue.

Arthralgia. Obesity. Testicular hydrocele. Oliguria. Arthralgia in knees. Irregular menstruation. Rheumatism. Rheumatoid arthritis. Muscle pain. Lumbar disc disease. Bone fractures. Idiopathic edema. Hydrocele. Hircismus. Knee pain. Edema. Strangury.

* JIAO GUI TANG - 椒桂汤 - Sichuan Pepper And Cinnamon Decoction

ACTIONS - Warms the Liver channel. Disperses Cold. Regulates Qi. Stops pain.

SYNDROMES - Excess Cold.

CLINICAL MANIFESTATIONS - A swollen, firm, cold, retracted scrotum or testicles. Severe: A stone-like hardness. Testicular pain that improves with warmth. Intolerance of Cold.

HERBS AND ACTIONS

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, Warms the Middle, releases the muscle layer, warms the channels and collaterals to relieve pain, unblocks Yang, transforms Qi Warms and facilitates the flow of Blood through the vessels.

-Hua Jiao - Warms the Middle Jiao, disperses Cold and alleviates pain.

-Gao Liang Jiang - Warms the Middle Jiao and alleviates pain. With Xiao Hui Xiang, for abdominal hernial pain.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Qing Pi, for intercostal pain due to Qi obstruction in the Liver channel.

-Xiao Hui Xiang - Warms the Liver and Kidneys, expels Cold, alleviates pain, regulates Qi and harmonizes the Stomach.

-Chen Pi - Regulates Qi, adjusts the Middle and relieves the diaphragm. With Qing Pi, for flank pain and chest and abdominal distention due to Liver Qi Stagnation.

-Wu Zhu Yu - Warms the Middle Jiao, disperses Cold, promotes the movement of Qi and alleviates pain.

-Qing Pi - Spreads Liver Qi and breaks up Stagnant Qi. With Chai Hu, restores the Qi circulation between the Upper and Lower Jiaos to treat long-term Qi Stagnation moving to Blood Stasis with fixed pain and occasional palpable lumps.

TREATS

Hernia.

* JIN HUANG SAN (GAO) - 金黃散 - Golden Yellow Powder (Topical). Ru Yi Jin Huang San 如意金黃散. As You Desire Golden Yellow Powder

ACTIONS - Clears Heat. Resolves toxins. Dispels Dampness. Transforms Phlegm. Eliminates Blood Stasis. Reduces swelling.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Red, hot swellings that have not come to a head. They often will be painful, burning and itchy.

HERBS AND ACTIONS

-Tian Hua Fen - Relieves toxicity, expels pus and reduces swelling.

-Huang Bai - Drains Fire and relieves Fire toxicity. With Cang Zhu, eliminates Dampness and clears Heat for Damp-Heat sores.

-Da Huang - Invigorates the Blood, dispels Blood Stasis, clears Heat, reduces Fire toxicity and eliminates Phlegm.

-Jiang Huang - Invigorates Blood, eliminates Blood Stasis, promotes the movement of Qi, opens the channels and collaterals to alleviate pain and reduces swelling. With Da Huang and Bai Zhi, topically for swelling , and pain during the early stages of sores. With Da Huang, Tian Hua Fen and Bai Zhi, for sores and lesions.

-Bai Zhi - Reduces swelling, eliminates toxins and expels pus.

-Hou Po - Promotes the movement of Qi downward, dries Dampness and transforms Phlegm. With Cang Zhu and Chen Pi, for Dampness Accumulation with Qi Stagnation.

-Chen Pi - Regulates Qi, dries Dampness and transforms Phlegm.

-Cang Zhu - Strongly dries Dampness.

-Tian Nan Xing - Dries Dampness, expels Phlegm, reduces swelling and alleviates pain.

-Gan Cao - Clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

TREATS

Carbuncles. Boils. Insect bites. Poison oak. Early stage boils or summer boils, presenting as red swelling, itching, burning pain, and a short root. Abscesses. Contact

dermatitis. Trauma (such as sprains). Deep-set toxic sores. Furunculosis (multiple boils occurring at the same time or with repeated occurrences), which often occur on the neck, back, and hip. Furuncles. Acute Phelgmon (especially with edema). Nasal furuncles. Herpes associated with AIDS/HIV. Acute lymphangitis. Acute lymphadenitis. Acute pyogenic parotitis. Acute mastitis. Epididymitis. Cold injury (e.g. with red-swelling, burning pain). Poison ivy. Burns. Herpes zoster. Chronic ulcers (early stage with red-swelling, burning pain, or with fluid flowing out and itching.) Cyst of the sebaceous glands. Folliculitis. Swellings from trauma. Erysipelas. Acne vulgaris.

* LING GUI ZHU GAN TANG - 苓桂朮甘湯 - Poria, Cinnamon Twig, Atractylodes And Licorice Decoction - Atractylodes And Hoelen Formula

ACTIONS - Warms and transforms Phlegm and congested Fluids. Strengthens the Spleen. Resolves Dampness. Improves metabolic function.

SYNDROMES - Heart Yang Not Vigorous: Water Qi Insults the Heart with Lung and Spleen Qi Deficiency. Congested Fluids in the epigastrium. Phlegm Stagnation due to Spleen Yang Deficiency. Tan Yin. Injury from Cold due to improper use of purgatives or emetics.

CLINICAL MANIFESTATIONS - Fullness in the chest and hypochondrium. Palpitations. Shortness of breath. Coughing up clear, watery sputum. Dizziness. Vertigo (when standing). Dyspnea. Anxiety. Tinnitus. Nausea/Vomiting. Difficult urination. Mild edema. Cold feet. Headache. Migraine. Weak abdomen.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with congested Fluids due to Damp-Heat. Contraindicated for those with Yin Deficiency or Body Fluid Insufficiency patterns. Contraindicated for those with Liver Yang Rising patterns.

HERBS AND ACTIONS

-Fu Ling - Strengthens the Spleen, drains Dampness, harmonizes the Middle Jiao and transforms Phlegm. With Gui Zhi, warms and transforms Fluids, unblocks Yang and promotes urination. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Gui Zhi and Bai Zhu, for Dampness Obstruction causing Lin syndrome, edema, heaviness of the body, and irritability. With Gan Cao, for Spleen and Heart Deficiency causing facial edema, palpitations, and shortness of breath.

-Gui Zhi - Warms the Yang, disperses Cold and helps to resolve congested fluids and descends rebellious Qi. With Gan Cao, for palpitations and shortness of breath due to injured Yang of the chest. With Fu Ling, unblocks the Yang and facilitates the removal of congested fluids associated with Yang Deficiency edema. With Fu Ling, Bi Zhu and Gan Cao, for Phlegm accumulation with dizziness, fullness in the chest and hypochondrium, vertigo and palpitations.

-Bai Zhu - Strengthens the transformative and transportive functions of the Spleen and dries Damp. With Fu Ling and Gui Zhi, for Spleen Deficiency with chest distention and edema. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Gan Cao - Augments Middle Jiao Qi,resolves Phlegm and strengthens the Spleen and moderates and harmonizes the harsh properties of other herbs.

TREATS

Meniere's disease. Neurosis. Rheumatoid arthritis. Chronic nephritis. Chronic gastritis. Chronic gastroenteritis. Chronic bronchitis. Bronchial asthma. Pulmonary emphysema. COPD. Cardiac edema. Nephritic edema. Hyperpnea. Dysuria. Neurasthenia. Instability of the autonomic nervous system. Coronary Heart disease. Cor pulmonale. Myocarditis. Gastroptosis. Functional Stomach disorders. Pleurisy. Central serous retinopathy. Renal calculus. Pediatric inguinal hernia. Pediatric rhinitis. Motor dysfunction. Hydronephrosis. Polyhydramnios. Keshan disease. Migraine. Muscle Bi. Obesity. Palpitations. Headache. Dizziness. Multiple sclerosis. Morning sickness. Myalgic encephalomyelitis. Epstein-Barr virus syndrome. Cirrhosis of the Liver. Anorexia. Fatigue. Pyelonephritis. Dyspnea. Ulcerative colitis. Vomiting associated with AIDS/HIV. Motion sickness. Valvular disease. Cardiac asthma. Basedow's disease. Viral conjunctivitis. Chronic optic nerve disorders. Optic nerve atrophy. Nebulae. Anasarca. Renal atrophy. Hypertension. Hypotension. Sinusitis. Anemia. Rhinitis. Flushing up due to water poisoning. Basilar insufficiency. Mitral valve prolapse. Pericardial effusion. Peptic ulcer. Pertussis. Cataracts. Nephritis. Ascites. Chronic renal failure. Hydrocele. Nephrotic syndrome. Anxiety. Hysteria. Vegetative nerve disturbance. Skin Bi. Cardiac arrhythmia. Acid reflux. Cough. Vertigo. Hay fever. Nausea/Vomiting. Chronic fatigue syndrome. Cholecystitis. Tinnitus. Weakness. Edema. Congestive Heart failure. Indigestion. Excessive amniotic fluid. Abdominal fullness and distention.

* LONG DAN XIE GAN TANG - 龙胆泻肝汤 - Gentiana Longdancao Decoction To Drain The Liver. Gentiana Combination. Decoction to Purge Liver Fire with Gentiana

ACTIONS - Drains Excess Fire from the Liver and Gallbladder. Clears and Drains Damp-Heat from the Lower Jiao. Clears Damp-Heat from the San Jiao.

SYNDROMES - Liver Fire Flaring Up. Damp-Heat in the Liver and Gallbladder. Damp-Heat in the Liver Channel. San Jiao Damp-Heat.

CLINICAL MANIFESTATIONS - Hypochondriac pain. Headache. Dizziness. Red sore eyes. Hearing loss. Swelling in the ears. Bitter taste in the mouth. Irritability. Short temper. Difficult and painful urination with a heat sensation in the urethra. Swollen and itchy genitalia. Yellow, foul smelling leukorrhea. Short menstrual cycle with reddish-purple blood. Ear discharge. Yellow urine. Chest pain. Constipation. Turbid urine. Dry throat. Hematuria. Pain in the armpits. Sweating in the groin.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen and Stomach Deficiency Cold. Contraindicated for those with Yin, Yang or Blood Deficiency. Contraindicated for long-term use.

HERBS AND ACTIONS

-Long Dan - Drains Shi Heat from the Liver/Gallbladder, drains Liver Fire and eliminates Damp-Heat from Lower Jiao. With Chai Hu and Huang Qin, for Liver/ Gallbladder Damp-Heat.

-Huang Qin - Drains Fire, dries Dampness and calms ascending Liver Yang. With Zhi Zi, drains Fire and eliminates Dampness.

-Zhi Zi - Clears Heat, eliminates irritability and drains Damp-Heat. With Huang Qin, drains Fire and eliminates Dampness.

-Mu Tong - Promotes urination. With Che Qian Zi and Ze Xie, drains Heat from Upper Jiao and eliminates Damp-Heat from Lower Jiao through the urine.

-Che Qian Zi - Promotes urination and clears Heat.

-Ze Xie - Promotes urination and clears Damp Heat.

-Chai Hu - Disperses Heat due to Liver/Gallbladder Qi Stagnation and focuses the actions of the formula on Liver/Gallbladder. (Omitted in some versions). With Huang Qin, clears Shao Yang Heat. With Gan Cao, for hepatitis and upper right quadrant pain.

-Di Huang - Nourishes Yin and clears Heat. With Dang Gui, protects Yin and Blood.

-Dang Gui - Nourishes Blood without causing Stasis. With Di Huang, protects Yin and Blood.

-Gan Cao - Harmonizes the Middle Jiao and regulates other herbs.

TREATS

Migraine headache. Viral hepatitis. Eczema. Intercostal neuralgia. Gallstones. Uveitis. Conjunctivitis. Corneal ulcers. Acute glaucoma. Central retinitis. Acute suppurative otitis media. Herpes zoster (initial stage). Herpes simplex (early stages). Herpes genitalia. Pyelonephritis. Cystitis. Urethritis. Pelvic inflammatory disease. Orchitis. Epididymitis. Hyperthyroidism. Endometritis. Meniere's disease. Jaundice. Vaginal inflammation. Vaginal itch. Obesity. Headache. Epistaxis. Nebula. Hemoptysis. Alopecia. Dysentery. Acute gastritis. Hiccups. Vertigo. Senile pruritis. Acute tonsillitis. Hematochezia. Acute pyogenic infection of the perineum. Abdominal pain with dysuria. Acute pyogenic infection of the penis. Hematuria. AIDS/HIV. Dizziness. Bi-Polar disorder. Asthma.

Syphilis. Constipation. Fibrocystic breast disease. Acute icteric hepatitis. Systemic lupus erythematosis. Nephritis. Gonorrhea. Leukemia. Bartholinitis. Polycystic ovary syndrome. Fallopian tube infection. Uterine prolapse. Cervicitis. Allergic rhinitis. Diabetes mellitus. Atopic dermatitis. Mania. Anxiety neurosis. Stress-related breathing problems. Myalgic encephalomyelitis. Schizophrenia. Psychosis. Tinnitus. Deafness. Acute pancreatitis. Anorexia. Menopause syndrome. Premenstrual syndrome. Hematemesis. Drug-induced dermatitis. Palpitations. Short menstruation. Rectal prolapse. Indigestion. Metrorrhagia. Neck pain and stiffness. Dysmenorrhea. Herpes associated with AIDS/HIV. Hangover. Sore throat. Hepatitis C. Chronic tonsillitis. Leukorrhea. Optic neuritis. Venereal ulcer. Groin lymphadenitis. Genital eczema. Boils and carbuncles of the vestibular and external auditory canal. Hypertension. Swollen eyelids. Eye pain. Acute prostatitis. Scrotal eczema. Scrotal abscess. Acute cholecystitis. Acute pyelitis. Encephalitis B. Chronic viral infections. Culosis. Psoriasis. Viral dermatosis. Genital inflammation and swelling. Perineal itching in women. Perineal infection. Furuncle of the vestibulus nasi. Rosacea. Prostatitis. Vaginal pain. Insomnia. Infertility. Keratitis. Acne vulgaris. Common warts. Soft warts. Cough. Dizziness. Otitis media. Chancre. Oliguria. Trigeminal neuralgia. Lacrimation. Vertigo. Mania-depression. Fever. Nausea/Vomiting. Sperm abnormality. Behcet's disease. Cirrhosis of the Liver. Upper gastrointestinal bleeding. Urinary tract infection. Shingles. Syphilis. Male sexual dysfunction. Spermatorrhea. Erysipelas. Endometriosis. Ovaritis. Mastitis. Abnormal vaginal discharge. Oral lichen planus. Sciatica. Prostatic hypertrophy. Boils. Hysteria. Chronic Fatigue Immune Deficiency Syndrome. Epstein-Barr virus syndrome. Impotence. Stress. Chronic pancreatitis. Depression. Allergic purpura. Thrombocytopenic purpura. Fatigue. Enuresis. Hernia. Liver cancer. Oral leukoplakia. Thrush. Otorrhea. Subarachnoid hemorrhage. Cervical polyps. Urolithiasis. Pruritis associated with AIDS/HIV. Vaginitis.

* QING YING JIE YU TANG - 清營解瘀汤 - Clear The Nutritive Level And Break Up Stagnation Decoction

ACTIONS - Clears Heat. Cools the Blood. Invigorates the Blood. Dispels Stasis.

SYNDROMES - Heart Blood Stagnation With Heat.

CLINICAL MANIFESTATIONS - Pain, swelling and obvious tenderness in the superficial veins along the limbs or the thoracoepigastric walls. Hard cord-like swollen masses may be felt. Palpitations. Stabbing pain in the anterior region over the Heart. Suffocating sensation in chest. Maybe drawing pain down internal aspect of arm (especially left arm). Pain (in chest and/or arm) tends to be severe and intermittent. Thirst with a desire for cold drinks. Irritability, irascibility. Feeling of Heat and disturbance in the Heart. Insomnia. Flushed face. Bitter taste in mouth.

HERBS AND ACTIONS

-Yi Mu Cao - Invigorates the Blood and dispels Stasis.

-Zi Cao - Clears Heat, cools the Blood and invigorates Blood circulation.

-Zi Hua Di Ding - Clears Heat and relieves Fire toxicity.

-Bai Shao - Nourishes the Blood, calms Liver Yang and Liver Wind and alleviates pain.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, invigorates the Blood and dispels Blood Stasis.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Acute thrombotic phlebitis.

* YI QI HUO XUE Recipe - YQHXR - (Shanghai TCM-integrated Hospital)

ACTIONS - Anti-fibrotic.

CLINICAL MANIFESTATIONS - Skin fibrosis. Dermal thickening. Systemic sclerosis.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood. Strengthens the Spleen and raises the Yang Qi of the Spleen and Stomach. Tonifies Wei Qi, stabilizes the Exterior and tonifies the Lungs (aids the circulation of moisture downward from the face). Promotes urination and reduces edema. Promotes the discharge of pus, generates flesh and expels toxins. Generates Body Fluids. Relieves numbness and pain.

-Dan Shen - Invigorates the Blood and dispels Blood Stasis. Clears Heat and soothes irritability. Cools the Blood and reduces abscesses. Nourishes the Blood and calms the Spirit.

-Dang Gui - Tonifies the Blood and regulates the menses. Invigorates and harmonizes the Blood and disperses Cold (stops pain due to Blood Stasis). Moistens the Intestines and unblocks the bowels. Reduces swelling, expels pus, generates flesh and alleviates pain. Stops coughing and treats dyspnea.

-Ji Xue Teng - Invigorates and tonifies the Blood. Activates the channels and relaxes the sinews.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. Moistens the Intestines and unblocks the bowels. Drains abscesses.

-Ji Xue Cao - Clears Heat, promotes diuresis, resolves swelling and removes toxicity. Invigorates the Blood, reduces swelling and stops pain. Clears Damp-Heat. Cools the Blood and stops bleeding. Clears the Liver and brightens the eyes.

-Ling Zhi - Tonifies Heart Qi, nourishes Heart Blood and calms the Spirit. Tonifies the Lung Qi, transforms Phlegm and stops cough and wheezing. Tonifies Qi and nourishes Blood.

-Yin Yang Huo - Tonifies the Kidneys, strengthens Yang and increases the libido. Dispels Wind-Cold-Dampness and warms and unblocks the flow of Yang Qi (strengthens the sinews and bones.)

-Fu Ling - Promotes urination and leaches out Dampness. Strengthens the Spleen and harmonizes the Middle Jiao. Strengthens the Spleen. Quiets the Heart, calms the Spirit and soothes the nerves.

-Gan Cao - Tonifies the Spleen and augments Qi. Moistens the Lungs, resolves Phlegm and stops coughing. Moderates spasms and alleviates pain. Clears Heat and relieves Fire toxicity. Antidote for many toxic substances (internal and topical). Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels

TREATS

Systemic Sclerosis.

Ba Xian Chang Shou Wan, Gui Zhi Jia Ge Gen Tang, Huang Lian Wen Dan Tang, Li Zhong Tang, Ma Huang Tang, Qing Dai Gao, Wu Mei Wan, Yi Guan Jian, Zhen Wu Tang

Recordings Updated in May 2025

* BA XIAN CHANG SHOU WAN - 八仙長壽丸 - Eight Immortal Pill For Longevity. Mai Wei Di Huang Wan. The Longevity Pill. Ophiopogonis, Schisandra and Pills of Six Herbs with Rehmannia

ACTIONS - Enriches Yin. Nourishes the Essence of the Kidneys and Lungs. Nourishes Liver Yin. Astringes Lung Qi. Resolves Phlegm. Stops asthma.

SYNDROMES - Lung and Kidney Yin Deficiency. Yin Deficiency in older patients. Kidney Yin Deficiency. Heart and Kidney Yin Deficiency. Liver and Kidney Yin Deficiency.

CLINICAL MANIFESTATIONS - Low back, knees and legs painful and weak. Foot pain. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five Sole Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Dry skin. Deafness. Steaming bones. Tidal fevers. Loose teeth. Cough. Cough with Blood. Impotence. Shortness of breath. Frequent urination. Weakness in the lower body. Hemoptysis. Dripping urine. Thirst. Dry tongue. Numbness and weakness at the waist and knees. Heel pain. Dry mouth. Blurred vision. Asthma. Hot flashes. Nocturnal emissions. Urinary incontinence. Spontaneous and nocturnal emissions. Spermatorrhea. Night sweats. Lusterless complexion. Wan complexion. Generalized weakness and fatigue. Lack of appetite. Phlegm. Maybe decreased urination.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen Deficiency type diarrhea and indigestion. Contraindicated for those with Yang Deficiency with a white greasy tongue coat.

HERBS AND ACTIONS

-Mai Dong - Moistens the Lungs, stops cough, nourishes Stomach Yin, generates fluids, clears the Heart, eliminates irritability and moistens the Intestines.

-Wu Wei Zi - Astringes leakage of Lung Qi, tonifies Qi, astringes Jing, nourishes Kidney Yin, stops diarrhea, astringes sweat, generates fluids, tonifies the Heart and calms the Spirit. With Shu Di Huang, Shan Zhu Yu and Shan Yao, for Lung and Kidney Deficiencies with cough and wheezing.

-Shu Di Huang - Tonifies the Kidneys and Nourishes Yin and Blood. With Shan Yao and Ze Xie, for ascendant Fire due to exhaustion of Kidney Yin. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu, Mu Dan Pi, Fu Ling and Ze Xie, for Liver and Kidney Yin Deficiencies. With Shan Zhu Yu, Shan Yao and Ze Xie, for Xiao Ke with predominant polyuria.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops perspiration. With Shan Yao, tonifies Liver and Spleen. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiencies of the Liver and Kidneys.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats. With Wu Wei Zi and Mai Men

Dong, for Lung Deficiency with cough.

-Fu Ling - Strengthens the Spleen and drains Dampness.

-Mu Dan Pi - Clears Heat and Deficiency Fire.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

TREATS

Neurasthenia. Pulmonary tuberculosis. Diabetes mellitus. Chronic nephritis. Hyperthyroidism. Chronic glomerulonephritis. Spermatorrhea. Chronic urinary tract infection. Hypertension. Failure to thrive. Functional uterine bleeding. Optic neuritis. Optic nerve atrophy. Central retinitis. Nephroatrophy. Senility. Impotence. Esophageal cancer. Chronic asthma. Bronchitis. Side effects of steroids. Chronic bronchitis. Heel pain. Cough. Chronic obstructive pulmonary disease (COPD). Deafness. Knee pain. Hoarseness. Hot flashes. Dyspnea. Dry skin. Foot pain. Allergic disorders. Bronchiaesthenia. Chronic urticaria. Chronic hepatitis. Nocturnal emissions. Irregular menstruation. Addison's disease. Heart failure. Sore throat. Dry mouth. Retarded growth in children. Toothache. Vegetative nerve functional disturbance. Arteriosclerosis. Amenorrhea. Scanty menstruation. Infantile dysplasia. Infantile malnutrition. Menopause. Neurasthenia. Hemoptysis. Laryngitis. Nephrotic syndrome. Oliguria. Hyperglycemia. Tinnitus. Low back pain. Weakness. Loss of voice. Night sweats. Bronchiectasis. Urinary incontinence.

* GUI ZHI JIA GE GEN TANG - 桂枝加葛根汤 - Cinnamon Twig Decoction Plus Kudzu. Cinnamon Combination plus kudzu

ACTIONS - Releases Wind-Cold from the muscle layer. Relaxes and moistens the sinews. Regulates the Ying and Wei.

SYNDROMES - Wind-Cold Attacking the Exterior with Deficiency of Ying and Wei with neck and shoulder stiffness and pain. Tai Yang Zhong Feng with neck and shoulder stiffness and pain.

CLINICAL MANIFESTATIONS - Neck pain and stiffness. Inhibited side to side turning. Fever and chills unrelieved by sweating. Decreased body resistance. Spontaneous perspiration. Rhinitis. Maybe body aches. Dry heaves. Headache. Muscles of the neck and back are very stiff and rigid. Aversion to Wind. Nasal congestion. No thirst.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Exterior Cold with Interior Heat. Use caution during the summer or spells of hot

weather. Contraindicated for those with Wind-Cold without Ying Wei disharmony.

HERBS AND ACTIONS

-Gui Zhi - Releases the exterior, adjusts the Ying and Wei, warms the channels and collaterals to relieve pain, disperses Cold, unblocks Yang, transforms Qi and releases the muscle layer. With Bai Shao, harmonizes the Ying and Wei and warms and tonifies the Middle Jiao.

-Bai Shao - Astringes the Yin and adjusts the Ying and Wei.

-Sheng Jiang - Helps release the exterior, treats nausea and vomiting. strengthens the spreading and mobilizing actions of the other herbs and adjusts the Ying and Wei. With Gan Cao, harmonizes and regulates the Spleen and Stomach. With Da Zao, regulates disharmony between the Ying and Wei. and benefits the Middle Qi.

-Ge Gen - Clears Heat, disperses Wind, releases the muscles (especially of the neck and upper back) and relieves sinus congestion.

-Da Zao - Helps Bai Shao regulate the Ying and Wei. With Gan Cao, tonifies and harmonizes the Middle Jiao.

-Gan Cao - Resolves Phlegm, stops cough, clears Heat and moderates and harmonizes the harsh properties of the other herbs.

TREATS

Common cold. Fever. Upper respiratory tract infection. Rheumatism. Conjunctivitis. Neck pain and stiffness. Upper back pain and stiffness. Middle back pain and stiffness. Shoulder stiffness in the elderly. Influenza. Postpartum fever. Allergic rhinitis. Angioedema. Cough. Bronchitis. Spontaneous perspiration. Cerebrovascular spasm. Eczema. Urticaria. Morning sickness. Frostbite. Tinea. Neuralgia. Abdominal pain due to chills. Eclampsia. Neurasthenia. Nasal obstruction. Pneumonia. Cervical spondylosis.

* HUANG LIAN WEN DAN TANG - 黃連溫膽湯 - Warm Gallbladder Decoction With Coptis. Coptis Decoction for a Warm Gallbladder

ACTIONS - Regulates Qi. Transforms Phlegm. Clears the Gallbladder. Harmonizes the Stomach. Clears Heat.

SYNDROMES - Phlegm-Fire Disturbs the Heart. Gallbladder Deficiency Heat. Disharmony Between the Gallbladder and Stomach with Severe Phlegm Heat. Qi Level Gallbladder Damp-Heat. Toxic Dampness.

CLINICAL MANIFESTATIONS - Dizziness. Vertigo. Nausea and vomiting. Insomnia.

Dream-disturbed sleep with unusual dreams. Palpitations. Anxiety. Profuse white foamy sputum. Restlessness. Timidity. Indecisiveness. Indeterminate gnawing hunger. Seizures accompanied by copious sputum. Chest distention. Expectoration of yellow Phlegm. Bitter taste in the mouth. Chills and fever. Abdominal distention. Frequent dark, scanty urine. Irritability. Depression. Slight thirst. Anorexia after serious illness.

NOTES - This formula treats the same conditions as Wen Dan Tang, but with more severe Heat including more restlessness, irritability and a more intense bitter taste.

HERBS AND ACTIONS

-Zhu Ru - Clears Heat and Phlegm from the Gallbladder and Stomach, cools Blood and descends rebellious Qi. With Ban Xia and Zhi Shi, for insomnia, palpitations and irritability due to Phlegm Heat leading to disharmony between the Gallbladder and Stomach with a stifling sensation in the chest and restlessness. With Ban Xia, Chen Pi and Huang Lian, for Phlegm-Heat in the Stomach with a stifling feeling in the epigastrium and vomiting. With Zhi Shi, for Phlegm-Heat obstructing the flow of Qi with focal distention in the chest and epigastrium, hiccup, dry retching, nausea and acid regurgitation and palpitations, irritability, insomnia and emotional problems due to Gallbladder constraint with Phlegm Disturbing the Heart. With Ban Xia, Chen Pi, Zhi Shi and Fu Ling, for Gallbladder Fire with Phlegm.

-Zhi Shi - Reduces accumulation, descends Qi, transforms Phlegm and reduces distention. With Chen Pi, strengthens the Middle Jiao.

-Ban Xia - Transforms Phlegm, descends rebellious Qi, harmonizes ST and stops vomiting. With Chen Pi, for Spleen and Stomach Qi Disharmony with epigastric and abdominal distention or pain. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools, treats Phlegm, thin mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach. With Huang Lian and Zhu Ru, for vomiting from Stomach Heat.

-Chen Pi - Regulates Qi, tonifies the Spleen, transforms Phlegm and descends Qi. With Ban Xia, for excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Sheng Jiang, for manifestations of Stomach Qi Disharmony and Cold-Dampness Obstructing the Middle with nausea and hiccup. With Zhu Ru and Huang Lian, for Phlegm-Heat induced vomiting. With Ban Xia, Zhu Ru and Sheng Jiang, for nausea and vomiting due to rebellious Stomach Qi.

-Fu Ling - Resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Gan Cao, strengthens the Spleen, drains Dampness, harmonizes the Middle Jiao and calms the Shen. With Chen Pi, for nausea and vomiting due to congested Fluids. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness

and distention, and anorexia due to congested fluids. With Ban Xia, Chen Pi and Sheng Jiang, for Congested fluids in the Stomach causing nausea and vomiting.

-Gan Cao - Resolves Phlegm, clears Heat, tonifies the Spleen and harmonizes and moderates the harsh properties of the other herbs.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, protects the Stomach and moderates and harmonizes the harsh properties of other herbs. With Sheng Jian, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen.

-Sheng Jiang - Regulates the relationship between the Gallbladder and the Stomach and assists in stopping vomiting. With Da Zao, protects the Stomach Qi. With Zhi Ban Xia, for vomiting due to Cold, Thin Mucus. With Zhu Ru, for vomiting due to Heat in patients with Stomach Qi Deficiency. With Zhu Ru and Huang Lian, for vomiting due to Heat. With Chen Pi, for Cold-Dampness Obstructing the Middle with nausea and hiccup.

-Huang Lian -Clears Heart Heat and calms the Shen.

TREATS

Chronic gastritis. Peptic ulcer. Chronic hepatitis. Neurosis. Early stages of schizophrenia. Psychosis. Meniere's disease. Chronic bronchitis. Hypertension. Myocarditis. Pericarditis. Morning sickness. Depression. Sequelae of stroke. Stroke. Male menopause. Epilepsy. Nephropathy. Diabetic retinopathy. Diabetic foot. Organophosphorus poisoning. Labyrinthitis. Vegetative nervous dysfunction with palpitations. Insomnia. Trigeminal neuralgia. Abdominal fullness and distention. Palpitations. Spermatorrhea. Gastroptosis. Hysteria. Side effects of chemotherapy. Manic depression. Acute or chronic tracheitis. Pulmonary emphysema. Asthma. Timidity. Angina pectoris. Premature atrial contractions. Cholecystitis. Severe insomnia. Autonomic dystonia. Alopecia. Tinnitus. Melancholia. Diabetes mellitus. Pneumonia. Hyperthyroidism with insomnia. Vestibular neuronitis with dizziness. Prostatitis. Premenstrual syndrome. Kidney failure (uremia). Bronchitis. Mania. Headache. Nocturnal emission. Dyspnea. Subarachnoid hemorrhage.

* LI ZHONG TANG (WAN) - 李中汤 - Decoction To Regulate The Middle. Ren Shen Tang. Ginseng and Ginger Combination. Regulate the Center Decoction (Pill)

ACTIONS - Warms the Middle Jiao. Dispels Cold. Strengthens the Spleen and Stomach. Tonifies Qi.

SYNDROMES - Spleen Yang Deficiency. Stomach Cold. Small Intestine Deficiency Cold. Middle Jiao Yang Deficiency. Tai Yin Shi (Spleen and Kidney Yang Deficiency - Pulse Slow and tight). Tai Yin Xu (abdominal pain). Sudden turmoil disorder (marked by absence of thirst). Painful Obstruction in chest due to Upper Jiao Yang Deficiency. Cold in chest during recovery from chronic illness (causes spitting of fluids). Loss of Blood

due to Spleen Yang Deficiency. Chronic childhood convulsions.

CLINICAL MANIFESTATIONS - Diarrhea with watery stools. Nausea and vomiting. No thirst. Anorexia. Abdominal and/or epigastric fullness (likes pressure). Abdominal pain. Gastrointestinal weakness. Pale face. Frequent urination. Tends toward fatigue. May have cold limbs. May have headache with fever. Body aches. Epistaxis. Hematemesis. Shortness of breath. Lassitude. Epigastric pain. All Blood from bleeding is pale. Maybe scanty urine with edema. Edema. Insomnia. Hemoptysis. Intestinal bleeding. Chronic bleeding. Hemafecia. Uterine bleeding. Rectal bleeding. Profuse menstrual flow. Chest fullness and pain. Hypochondriac pain that shoots toward the Heart. Intolerance of Cold. Rigid focal distention in the Heart region. Excessive production or drooling of foamy saliva. Emaciation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with External Wind Invasion with fever. Contraindicated for those with Yin Deficiency. Use with caution during pregnancy. For those with sudden turmoil disorder, stop when diarrhea and vomiting have stopped.

HERBS AND ACTIONS

-Gan Jiang - Warms the Spleen and Stomach and eliminates interior Cold. With Gan Cao, for vomiting and epigastric pain due to Spleen and Stomach Deficiency Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency.

-Ren Shen - Reinforces Yang, strongly tonifies Yuan Qi and harmonizes the Middle Jiao. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Bai Zhu - Strengthens the Spleen and dries Dampness. With Ren Shen, tonifies the Spleen and Stomach. With Ren Shen and Gan Jiang, for Middle Jiao Deficiency Cold with abdominal pain, distention, vomiting and diarrhea.

-Gan Cao - Augments the Qi of the Middle Jiao and harmonizes.

TREATS

Acute or chronic gastritis. Acute or chronic gastroenteritis. Gastric weakness. Gastric or duodenal ulcers. Gastroptosis. Irritable bowel syndrome. Chronic colitis. Candidiasis. Chronic bronchitis. Obstruction of the chest. Oral herpes. Functional uterine bleeding. Gastrectasis. Cholera. Fright in children with vomiting. Anemia. Excessive salivation. Stomatitis. Enteritis. Nephropathy. Obesity. Headache. Hypothyroidism. Abdominal fullness and distention. Menorrhagia. Crohn's disease. Oliguria. Neonatal jaundice. AIDS/HIV. Thrush. Breast cancer. Myasthenia gravis. Neurasthenia. Polycystic Kidneys. Stroke. Chronic glomerulonephritis. Knee pain. Celiac disease. Fatigue. Edema. Post-menopausal uterine bleeding. Ulcerative colitis. Vomiting associated with AIDS/HIV. Nausea/Vomiting. Epistaxis. Diarrhea. Tapeworm. Dyspepsia. Mild labor pains. Intoxication. Diabetes. Shoulder ache. Hemoptysis. Chilled feet. Intestinal bleeding.

Hemorrhoidal bleeding. Vaginal discharge. Sneezing of a common cold. Chronic childhood convulsions. Angina pectoris. Sudden turmoil disorder. Bacterial dysentery. Male infertility. Acid reflux. Insomnia. Hiccups. Endometriosis. Colitis. Stomach cancer. Polyuria. Asthma. Alzheimer's disease. Stomatitis. Morning sickness. Abdominal pain. Renal tuberculosis. Diabetic nephropathy. Hepatitis C. Low back pain. Anorexia. Weakness. Hematemesis. Dyspnea. Chronic bacillary dysentery. Cirrhosis of the Liver.

* MA HUANG TANG - 麻黃湯 - Ephedra Decoction. Ephedra Decoction. Ma Huang Combination

ACTIONS - Disperses Wind-Cold. Stops Asthma. Clears the Lungs.

SYNDROMES - Wind-Cold Attacks the Lungs. Tai Yang Shang Han. Wind-Cold Bi - Initial Stage.

CLINICAL MANIFESTATIONS - Itching or tickling in the throat. Wheezing. Sneezing. Gasping. Cough with expectoration of thin, watery or frothy white sputum. General body aches. No thirst. Dyspnea. Headache. Chills with low grade fever. Maybe asthma. Intolerance of Cold. Anhidrosis. Blocked and/or runny nose with watery nasal discharge. Chest discomfort. Neck stiffness.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Lin Syndrome. Contraindicated for those with Yin Deficiency bleeding. Contraindicated for those with bacterial infections (Heat). Contraindicated for those with skin infections. Contraindicated for those with Wind-Heat. Contraindicated for those with a weak pulse. Contraindicated for those with debility. Contraindicated for those with copious urination. Use caution for those with hypertension. Avoid profuse perspiration. Use only for short periods of time.

NOTES - This formula may reduce the adverse effects of interferon in hepatitis C patients.

HERBS AND ACTIONS

-Ma Huang - Strongly promotes diaphoresis, relieves the Exterior, disperses Lung Qi, promotes urination and expels Cold. With Gui Zhi, for Wind-Cold Excess with fever, chills and anhidrosis and Wind-Cold-Damp Bi. With Xing Ren, for cough and wheezing due to Wind-Cold Attacks the Lungs.

-Gui Zhi - Promotes diaphoresis, warms the channels, disperses Cold, releases the exterior, assists the Yang, adjusts the Ying and Wei, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels and releases the muscle layer. With Gan Cao, for palpitations and shortness of breath due to injured Yang of the chest.

-Xing Ren - Disperses Lung Qi, resolves Phlegm and stops cough and wheezing. With Ma Huang and Gan Cao, for cough with profuse sputum, nasal obstruction and a hoarse voice.

-Gan Cao - Tonifies Qi, resolves Phlegm, stops cough and moderates and harmonizes the harsh properties of other herbs. With Ma Huang and Xing Ren, for Wind-Cold Attacks the Lungs with coughing and/or wheezing.

TREATS

Bronchial asthma. Common cold. Rheumatoid arthritis (inflammation intense but short lived). Rhinitis. Acute glomerulonephritis. Infantile enuresis. Painful menstruation. Abdominal masses. Acute pharyngitis. Early stages of mastitis. Lumbar strain. Periarthritis of the shoulder. Raynaud's disease. Trigeminal neuralgia. Sinusitis. Asthma. Chronic obstructive pulmonary disease (COPD). Pericardial effusions. Urticaria. Glomerulonephritis. Benign prostatic hypertrophy (BPH). Phlebitis. Peripheral neuropathy. Epistaxis. Cough. Numbness. Nasal congestion. Allergic sinusitis. Acute nephritis. Toothache. Whole body pain. Sore throat. Upper respiratory tract infection. Influenza. Acute bronchitis. Lobar pneumonia. Allergies. Wind-Cold nosebleeds. Difficult labor. Pelvic inflammatory disease. Otitis media. Traumatic arthropathy. Cervical spine disease. Ankylosing spondylitis. Sciatica. Migraine. Scleroderma. Hay fever. Eczema. Chilblains. Pyelonephritis. Ascites. Solar dermatitis. Enuresis. Headache. Painful obstruction. Pediatric psoriasis. Pulmonary emphysema. Paresthesia. Fever. Allergic rhinitis. Gasping. Dyspnea. Neck pain and stiffness. Nasal pain.

* QING DAI GAO -青黛膏 - Indigo Naturalis Ointment (Topical)

ACTIONS - Relieves inflammation. Stops itching. Clears Heat. Dispels toxins. Absorbs serous fluid.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Papular erythema, may be ulcerated. Rough, thickened skin. Desquamation. Severe itch. Scarlatina-like erythema. Measle-like erythema. Vesicles. Urticaria. Lichenification. Pigment sedimentation with a distinct border. Fixed erythema. Multiform erythema. Suppuration. Epidemolytic erythema.

HERBS AND ACTIONS

-Qing Dai - Clears Heat, resolves Fire toxicity, cools the Blood, disperses Stagnation and reduces swelling internally or topically.

-Huang Bai - Drains Fire and relieves Fire toxicity.

-Hua Shi - Absorbs Dampness and clears Heat topically. With Huang Bai and Shi Gao, topically as a powder for eczema and other damp skin lesions.

-Shi Gao - Heals eczema, burns and ulcerated sores and wounds topically or internally. With Qing Dai and Huang Bai, for eczema, burns and abscesses.

TREATS

Eczema. Cracked nipple. Allergic dermatitis (including poison ivy). Exfoliative dermatitis. Nasal vestibulitis. Lupus erythematosus. Urticaria. Erythema multiforme. Dermatitis (if a crust has formed). Dermatitis medicamentosa. Lacquer rash. Atopic dermatitis. Parasites. Seborrheic dermatitis. Erythema nodosum. Herpes associated with AIDS/HIV.

* WU MEI WAN - 烏梅丸 - Mume Pill. Mume Formula. Mume Elixir, Wu Mei Dan. Mume Stomach Pacifying Pill Wu Mei An Wei Wan. Anti-parasitic Mume Pill Sha Chong Wu Mei Wan. Stomach Pacifying Pill An Wei Wan

ACTIONS - Warms the Internal organs. Warms the Middle Jiao. Warms the Intestines. Drains Heat. Replenishes Qi. Dispels parasites. Calms roundworms. Drains the Liver. Calms the Stomach. Promotes Blood circulation. Relieves pain.

SYNDROMES - Collapse from roundworms. Jue Yin Stage Cold and Heat. Chronic diarrhea or dysentery. Stomach Heat with Kidney Deficiency.

CLINICAL MANIFESTATIONS - Intermittent attacks of abdominal pain. Stifling sensation in the chest and epigastrium. A sensation of warmth in the chest and epigastrium. Irritability in the chest and epigastrium. Vomiting after eating. Extremely Cold extremities. Vomiting of roundworms. Incessant diarrhea. Hunger with no desire to eat. Vomiting immediately after eating. Heat in the Stomach with Cold in the Intestines. Bitter taste in the mouth. Frequent urination. Anxiety. Abdominal pain (better with warmth and pressure). Pain beneath the Heart. Borborygmus. Unquenchable thirst. Running piglet Qi. Pain and Heat in the Stomach. Discharge of small amounts of pus. Irritability. Recurrent nausea and vomiting. Diarrhea. Dry throat. Turbid urine. Polydipsia.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with explosive diarrhea. Contraindicated for those with Damp-Heat dysentery. Use with caution during pregnancy.

HERBS AND ACTIONS

-Wu Mei - Eliminates roundworms and alleviates pain. With Chuan Jiao, Xi Xin and Gan Jing, for roundworms causing abdominal pain, irritability, and vomiting after eating. With Huang Lian, for Internal Heat with thirst, Dryness, cough and irritability.

-Hua Jiao - Warms the Middle Jiao, disperses Cold, relieves diarrhea, kills parasites and

alleviates abdominal pain. With Xi Xin, expels parasites, Warms the organs. with Wu Mei and Huang Lian, for abdominal pain and vomiting due to roundworms, especially in cases of Deficiency Cold.

-Xi Xin- Disperses Wind-Cold and Internal Cold and alleviates pain. With Gui Zhi, facilitates the flow of Yang Qi.

-Huang Lian - Clears Heat and drains Dampness. With Huang Bai, attacks worms.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao.

-Gan Jiang - Warms the Middle and expels Cold. With Fu Zi and Gui Zhi, warms the interior and disperses Internal Cold. With Huang Lian, for epigastric pain and distention, dysentery, indeterminate gnawing hunger, vague abdominal pain or discomfort, belching, and nausea.

-Fu Zi - Disperses Cold and Dampness, warms the channels and stops pain. With Ren Shen, for severe Deficiency of the Source Qi and Collapse of Yang with cold extremities, sweating, weak breathing, dizziness, and an extremely pale complexion. With Xi Xin, for Cold damage both Internal and External with aversion to Cold, headache and generalized body aches with aching joints.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain.

-Ren Shen - Powerfully tonifies Yuan Qi and Spleen and Stomach Qi. With Dang Gui, tonifies Qi and nourishes Blood, preventing injury to normal Qi.

-Dang Gui - Tonifies Blood, regulates the menses, invigorates and harmonizes the Blood and disperses Cold. With Gui Zhi and Xi Xin, for patients with Blood Deficiency who experience cold extremities due to Cold entering the channels.

TREATS

Ascariasis. Biliary ascariasis. Intestinal ascariasis. Ascariasis in children. Roundworms in the bile duct. Hookworms. Chronic gastroenteritis. Post-gastrectomy syndrome. Colitis. Bacterial dysentery. Chronic bacillary dysentery. Functional gastric disorders. Neurogenic vomiting. Corneal ulcers. Glaucoma. Meniere's disease. Chronic pelvic inflammatory disease. Primary dysmenorrhea. Neurogenic headache. Autonomic dystonia. Hysterical psychosis. Asthma. Pneumonia. Headache. Endometriosis. Jaundice. Fever. Abdominal pain. Edema. Ulcerative colitis. Chyluria. Gastritis. Schistosomiasis. Chronic diarrhea. Indigestion. Gastric or peptic ulcer. Irritable bowel syndrome. Intestinal colic. Neurosis. Insomnia. Cholelithiasis. Cholecystitis. Keratitis. Aphthous ulcers. Chronic suppurative otitis media. Morning sickness. Dysfunctional uterine bleeding. Hypertension. The sequelae of meningitis or encephalitis. Vitiligo. Sick sinus syndrome. Diabetes. Recalcitrant hiccups. Gastralgia. Uterine fibroids. Diarrhea

as a complication of AIDS/HIV. Nausea/Vomiting. Anorexia. Temporomandibular joint syndrome (TMJ).

* YI GUAN JIAN - 貫煎 - Linking Decoction. The Liver Reinforcing Decoction

ACTIONS - Enriches Kidney and Liver Yin. Spreads Liver Qi.

SYNDROMES - Liver Yin Deficiency. Liver and Kidney Yin Deficiency (with Liver Qi Stagnation). Liver and Kidney Yin Deficiency with abdominal masses.

CLINICAL MANIFESTATIONS - Hypochondriac and chest pain. Dry, parched mouth and throat. Bitter taste in mouth. Acid regurgitation. Dizziness. Epigastric and abdominal distention. Maybe constipation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with chest pain due to Phlegm or Phlegm-Damp Retention.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood and nourishes the Yin and Blood. With Gou Qi Zi, softens the Liver by nourishing the Blood and Kidney Yin. With Mai Dong and Sha Shen, for dry mouth, thirst and a red tongue due to Stomach Yin Deficiency.

-Gou Qi Zi - Nourishes and tonifies the Liver and Kidneys, and nourishes the Blood and Yin. With Dang Gui, Sha Shen, and Chuan Lian Zi, for Yin Deficiency with Qi Stagnation with epigastric and flank pain, dry mouth and throat, a bitter taste and acid regurgitation.

-Sha Shen - Nourishes the Stomach and Lung Yin. With Mai Dong, enriches and nourishes Stomach and Lung Yin, protects against Liver attacking the Stomach and Lung, treats parched mouth and throat and helps soften the Liver.

-Mai Dong - Nourishes the Stomach and Lung Yin. With Sha Shen, for a dry throat, constipation, thirst and a red tongue with little coat due to pathogenic Warmth or Heat injuring the Stomach Yin or long-term Yin Deficiency.

-Dang Gui - Nourishes and invigorates the Blood.

-Chuan Lian Zi - Disperses Liver Qi, alleviates pain and clears Heat. With Di Huang and Gou Qi Zi, for hypochondriac and chest pain, dry mouth and acid regurgitation from Liver Qi Stagnation along with Liver and Kidney Yin Deficiency.

TREATS

Menstrual disorders. Hernia. Hiatus hernia. Lung consumption. Diabetes mellitus. Abdominal masses. Certain stages of some warm febrile diseases. Chronic hepatitis.

Chronic cirrhosis of the Liver. Elevated Liver enzymes. Costochondritis. Peptic ulcer. Essential hypertension. Chronic gastritis. Pleuritis. Premenstrual syndrome. Perimenopause syndrome. Hyperthyroidism. Knee pain. Headache. Irregular menstruation. Coronary Heart disease. Dizziness. Anemia. Fever during the late stage of Liver cancer. Behcet's disease. Menopause syndrome. Panic attacks. Tinnitus. Acid reflux. Deafness. Forgetfulness. Abdominal pain. Dysmenorrhea. Flaccid paralysis. Late menstruation. Spermatorrhea. Urinary tract infection. Dry skin. AIDS/HIV/ARC. Sore throat. Chronic glomerulonephritis. Testitis. Wasting and thirsting. Hypertension during pregnancy. Addison's disease. Thrombocytopenic purpura. Pulmonary tuberculosis. Chronic orchitis. Neurasthenia. Gastric and duodenal ulcer. Gastrointestinal neurosis. Hypochondriac neuralgia. Early menstruation. Cholecystitis. Intercostal neuritis. Tourette syndrome. Amenorrhea. Breast tenderness. Retinitis pigmentosa. Insomnia. Irritable bowel syndrome. Cough. Meniere's disease. Parkinson's disease. Constipation. Tidal fever. Depression. Anxiety neurosis. Low-grade fever. Abdominal fullness and distention. Neurosis. Low back pain. Weakness. Colitis. Male menopause. Night sweats. Scanty menstruation. Ascites. Sjogren's Syndrome. Systemic lupus erythematosus. Tongue pain.

* ZHEN WU TANG - 真武湯 - True Warrior Decoction - Vitality Combination. Vitality (Vital Energy) Combination

ACTIONS - Warms Yang. Promotes urination.

SYNDROMES - Heart Yang Not Vigorous: Water Qi Insults the Heart with Kidney Yang Deficiency. Kidney Yang Deficiency with Water Flooding. Kidney Yang Deficiency with Water Flooding the Lungs. Spleen and Kidney Yang Deficiency with Water Flooding. Tai Yang moving to Shao Yin Cold. Tai Yang Shang Han with sweating that does not reduce the fever. Jin Ye (Body Fluid) Stasis.

CLINICAL MANIFESTATIONS - Abdominal pain aggravated by Cold. Urinary difficulty. Deep, aching heaviness in the extremities. Generalized edema. Loose stools. Dizziness. Heavy sensation in the head. Palpitations. Cough. Epigastric palpitations. Aversion to Cold. Watery diarrhea. No thirst. Leukorrhea. Hiccup. Profuse perspiration. Cold limbs. Headaches. A husky voice. Hair loss. Asthma. Generalized twitching. Tidal flushing of the genitals by Dampness. Water buildup leading to hernia. Impotence. Prone to infections. Prone to allergies. Prone to Wind erysipelas. Diarrhea. Constipation. Chest pain. Mental and emotional disorders. Light-headedness. Nasal obstruction with clear mucus. Impaired visual acuity. Prone to dormant papules. A sensation of something being stuck in the throat. Incessant sneezing. Swelling and pain of the teeth or gums. Feeling of unsteadiness as if one were about to fall. Distended or heavy sensation of the head. Gradual weight gain. Dyspnea. Abdominal distention and fullness. Pitting edema. Scanty urination or. Frequent, clear, abundant urination at night. Chills. Weak knees. Seminal emissions. Flaccid abdomen. Muscular aching. Chronic lower back pain. Nausea. Cyclic vomiting. Fever, perspiration does not reduce fever. Vertigo. Impaired memory. Shivering and trembling. Catches cold easily. Severe fatigue.

Aches and pains in the body or extremities. Flank pain. Wheezing.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Heat conditions. Contraindicated for those with water accumulation due only to Excess conditions.

NOTES - This formula promotes circulation and metabolism.

HERBS AND ACTIONS

-Fu Zi - Restores Kidney and Spleen Yang. With Bai Zhu, for Spleen Yang Deficiency with a cold, painful abdomen, vomiting and watery diarrhea. With Bai Zhu and Fu Ling, for Kidney and Spleen Yang Deficiency with retention of pathogenic water with abdominal pain, which is worse with Cold, urinary difficulty, and deep aching and heaviness in the extremities. With Fu Ling, for lower body edema and dysuria.

-Bai Zhu - Tonifies the Spleen and dries Dampness. With Fu Ling, strengthens the Spleen and promotes urination. With Sheng Jiang and Fu Ling, reinforces Earth to control Water to treat edema with Kidney Yang Deficiency .

-Fu Ling - Drains Dampness and strengthens the Spleen. With Fu Zi and Sheng Jiang, for edema due to Spleen and Kidney Yang Deficiency.

-Sheng Jiang - Spreads Lung Qi, warms the Stomach, disperses Cold, stops coughing and vomiting, and warms and dispels edema.

-Bai Shao - Preserves Yin, stops abdominal pain and relaxes spasms.

TREATS

Chronic glomerulonephritis. Nephritis. Dizziness. Common cold. Rheumatic valvular Heart disease. Influenza. Congestive Heart failure. Cirrhosis of the Liver. Chronic hepatic disorders. Ascites. Edema. Chronic enteritis. Intestinal tuberculosis. Chronic diarrhea. Meniere's disease. Primary hypertension. Primary hyperaldosteronism. Hypothyroidism. Rheumatoid arthritis with joint effusion. Carbon monoxide poisoning. Post-concussion syndrome. Post concussion headache. Sciatica. Restless legs. Piriformis syndrome. Essential tremors. Allergic rhinitis. Chronic sinusitis. Leukorrhea. Uterine prolapse. Arrhythmia. Palpitations. Chronic eczema. Cough. Coronary Heart disease. Abdominal pain. Dysmenorrhea. Infertility. Hypothyroidism. Dysentery. Polyuria. Emphysema. Cyclic vomiting. Systemic lupus erythematosis. Chronic fatigue syndrome. Crohn's disease. Low back pain. Forgetfulness. Fatigue. Edema during pregnancy. Obesity. Profuse perspiration. Dyspnea. Constipation. Painful obstruction. Chronic bronchitis. Insomnia. Amenorrhea. Cor pulmonare. Asthma. Chronic obstructive pulmonary disease (COPD). Trigeminal neuralgia. Basilar insufficiency. Pleurisy. Neurasthenia. Cerebral bleeding. Indigestion. Gastroptosis. Chronic peritonitis. Renal atrophy. Monoplegia. Pruritis. Renal edema. Chronic renal failure. Benign prostatic

hypertrophy. Prostatitis. Benign prostatic hypertrophy. Cardiac edema. Pneumonia. Hypopituitarism. Chronic gastroenteritis. Chronic pelvic inflammatory disease with effusion. Osteoarthritis. Lumbar disc disease. Facial tics. Scrotal eczema. Infertility. Nephrotic syndrome. Alopecia. Irritable bowel syndrome. Postpartum pain. Endometriosis. Raynaud's disease. Vertigo. Abdominal fullness and distention. Oliguria. Nausea/Vomiting. Celiac disease. Diarrhea. Anorexia. Hypotension. Weakness. Impotence. Anxiety. Spermatorrhea. Shoulder pain. Upper back pain. Thrombophlebitis.

Fungus #1, Hei Xiao Yao San, Huang Qi Jian Zhong Tang, Jin Shui Liu Jun Jian, Shu Qi Huo Xue Tang, Xiao Qing Long Tang, Xing Ren Hua Shi Tang, Zhi Bai Di Huang Wan, Zhi Mei Jing Yin Sai Ji

Recordings Updated in May 2025

* FUNGUS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Resolves Fire-toxicity. Expels Wind. Dries Dampness. Clears Damp-Heat. Stops itching.

SYNDROMES - Damp-Heat.

CLINICAL MANIFESTATIONS - Fungus infection.

HERBS AND ACTIONS

-Bai Xian Pi - Clears Heat, resolves Fire-toxicity, expels Wind, dries Dampness, Clears Damp-Heat and stops itching. With Ku Shen, for Damp-Heat sores that itch.

-Ku Shen - Clears Heat, dries Dampness, disperses Wind, kills parasites and stops itching.

-Bai Ji Li - Dispels Wind and stops itching.

TREATS

Fungus infection. Eczema.

* HEI XIAO YAO SAN - 黑逍遙散 - Black Rambling Powder

ACTIONS - Pacifies the Liver. Spreads Liver Qi. Strengthens the Spleen. Nourishes the Blood. Harmonizes the Liver and Spleen.

SYNDROMES - Liver Qi Stagnation Invades Stomach. Liver Qi Stagnation Invades the Spleen (Liver and Spleen Disharmony). Liver Qi Stagnation with Blood Deficiency. Qi and Blood Stagnation. Blood Deficiency with fatigue. Disharmony between the Ying and Wei with Phlegm, cough, tidal fever and wasting of limbs which may lead to Bone Steaming. Gu Syndrome.

CLINICAL MANIFESTATIONS - Hypochondriac pain. Headache. Vertigo. Bitter taste in the mouth. Dizziness. Frequent sighing. Epigastric pain and distention. Flatulence. Dry mouth and throat. Fatigue. Anorexia. Alternating chills and fever. Irregular menstruation. Breast distention. Lassitude. Insomnia. Shoulder and back pain. Rib pain. Various types of menstrual discharges. Premenstrual cramps. Excessive menstrual bleeding. Tightness or fullness in the chest. Cold extremities. Pain in the arms and legs. Heaviness of the head. Night sweats. Bloating and pain at the umbilicus and abdomen. Diarrhea alternating with constipation. Five Sole heat. Palpitations. Malar flush. Depression. Irritability. Increased desire to sleep. Flatulence.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution during pregnancy. Use with caution for those with Qi Stagnation with underlying Liver and Kidney Yin Deficiency.

NOTES - This formula treats the same conditions as Xiao Yao Wan but with more severe Blood Deficiency.

HERBS AND ACTIONS

-Chai Hu - Relieves Liver Qi Stagnation, pacifies the Liver, relieves the Shao Yang and reduces fever. With Bo He, for depression, a stifling sensation in the chest and irregular menstruation due to Liver Blood Deficiency with Stagnation.

-Dang Gui - Nourishes the Blood, regulates menses and invigorates and harmonizes the Blood. With Bai Shao, nourishes Blood and eases anxiety due to Liver Stagnation.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and fills the Marrow. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Bai Shao - Calms Liver Yang, alleviates pain, nourishes Blood and regulates menstruation. With Chai Hu, for flank pain due to Liver Qi Stagnation.

-Bai Zhu - Tonifies the Spleen and tonifies Qi. With Fu Ling, strengthens the Spleen and

resolves Dampness.

-Fu Ling - Strengthens the Spleen and harmonizes the Middle Jiao.

-Gan Cao - Tonifies Spleen Qi, stops pain and harmonizes the other herbs. With Bai Shao, moderates spasmodic abdominal pain.

-Bo He - Relieves Liver Qi Stagnation, disperses stagnant Heat and enhances Chai Hu's ability to relieve the Liver. With Bai Shao and Chai Hu, for chest and flank distention due to Liver Qi Stagnation.

-Sheng Jiang - Harmonizes, prevents rebellious Qi and normalizes the flow of Qi at the center.

-Zhi Shi - Enhance Chai Hu's function of dispersing the Liver.

TREATS

Chronic hepatitis. Pleurisy. Chronic gastritis. Peptic ulcer. Anemia. Functional uterine bleeding. Menopausal syndrome. Pelvic inflammatory disease. Fibrocystic breasts. Neurasthenia. Optic nerve atrophy. Optic neuritis. Central retinitis. Glaucoma. Acute retrobulbar neuritis. Stress. Meniere's disease. Candidiasis. Acid reflux. Amenorrhea. Headache. Enteritis. Vertigo. Numbness. AIDS/HIV. Nausea. Gu syndrome. Anorexia. Hypotension. Fatigue. Morning sickness. Night sweats. Late menstruation. Liver cancer. Shoulder pain. Middle back pain. Cortical blindness. Nervousness in women. Leukorrhea. Delayed menstruation. Irregular menstruation. Insomnia. Breast distention. Epstein Barr. Chronic Fatigue Immune Deficiency Syndrome (CFIDS). Premenstrual syndrome (from ovulation to 1st day). Premenstrual syndrome with breast distention. Hyperthyroidism. Hepatitis. Leaky gut syndrome. Giardiasis. Tuberculosis. Irritable bowel syndrome. Dizziness. Dysmenorrhea. Paresthesia. Bi-polar disorder. Vomiting. Fever. Stress. Palpitations. Hypertension. Male menopause. Gastroenteritis. Menorrhagia. Scanty menstruation. Indigestion. Constipation. Cirrhosis of the Liver.

* HUANG QI JIAN ZHONG TANG - 黃耆建中湯 - Astragalus Decoction to Construct the Middle. Astragalus Combination. Astragalus Build the Center Decoction. Decoction of Astragalus seu Hedysari for Warming the Middle Jiao

ACTIONS - Warms and tonifies the Spleen and Stomach. Replenishes Qi. Harmonizes the Interior. Alleviates pain

SYNDROMES - Stomach Qi Deficiency. Spleen Yang Deficiency. Deficiency Cold of the Middle Jiao with severe Qi Deficiency. Wei Qi Deficiency

CLINICAL MANIFESTATIONS - Spontaneous perspiration. Shortness of breath. Occasional fevers. Dyspnea. Abdominal pain and spasms due to Cold. Pain is better

with warmth and pressure. Pale face or a sallow, dull complexion. Fatigue. Fidgeting. Lethargy. Dry mouth. Aversion to Cold. Frequent, clear urination. Constipation. Cold extremities. Dry throat. Hematemesis. Irritability. Carbuncles. Palpitations. Hemorrhoids. Fever with a preference for hot drinks. Dry skin.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Eliminate sweet flavor for vomiting from roundworms. Contraindicated for those with Heat from Yin Deficiency. Modify for abdominal distention.

HERBS AND ACTIONS

-Huang Qi - Replenishes Qi, stops perspiration, consolidates Wei, strengthens the Spleen and raises Spleen Yang.
With Gui Zhi, for Qi, Blood, Ying and Wei Deficiencies.

-Yi Tang - Tonifies Spleen and Stomach, alleviates Cold pain and moderates spasmodic abdominal pain.
With Gui Zhi, warms and tonifies the Middle Jiao. With Gui Zhi and Gan Cao, for Middle Jiao Deficiency Cold with abdominal pain. With and Huang Qi, for spleen Deficiency. With Huang Qi, for abdominal pain due to Qi Deficiency.

-Gui Zhi - Warms the Middle Jiao, disperses Cold, releases the exterior, adjusts the Ying and Wei and warms the channels and collaterals to relieve pain. With Bai Shao, harmonizes the Ying and Wei and warms and tonifies the Middle Jiao.

-Bai Shao - Nourishes Blood, regulates menstruation and adjusts the Ying and Wei. With Gan Cao, stops spasmodic abdominal pain. With Yi Tang, Gui Zhi, Sheng Jiang and Gan Cao, for abdominal pain due to Cold from Middle Jiao Deficiency which is better with pressure and somewhat alleviated by eating. With Huang Qi, Gui Zhi, Sheng Jiang and Da Zao for Bi syndrome. With Gui Zhi, Yi Tang, Da Zao, Gan Cao and Sheng Jiang, for severe epigastric or abdominal pain or cramps caused by the Liver overacting on the Deficient, Cold Middle Jiao.

-Gan Cao - Tonifies the Spleen, tonifies Qi, moderates spasms. and moderates and harmonizes the properties of other herbs.

-Sheng Jiang - Releases the exterior, disperses Cold, warms the Middle, stops vomiting and adjusts the Ying and Wei. With Da Zao, harmonizes and protects the Ying and Wei.

-Da Zao - Strengthens the Spleen, tonifies Qi and moderates and harmonizes the harsh properties of other herbs.
With Sheng Jiang, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen.

TREATS

Gastric ulcer. Gastralgia. Chronic gastritis. Gastroptosis. Antral gastritis. Atrophic gastritis. Duodenal ulcer. Suppurative swellings. Neurasthenia. Chronic hepatitis. Aplastic anemia. Pernicious anemia. Irritable bowel syndrome. Allergic rhinitis. Delayed healing of wounds. Leukemia. Hemolytic jaundice. Dysmenorrhea. Chronic dysentery. Polyuria. AIDS/HIV. Abdominal pain. Stress. Hemorrhoids. Fatigue. Vaginal discharge. Palpitations. Rectal prolapse. Strangury. Otorrhea. Urinary incontinence. Inflammatory bowel syndrome. Postpartum fever. Delicate constitution in children. Night sweats. Weakness during convalescence. Chronic otitis media. Chronic ulcerations. Gangrene. Colitis. Anorexia. Leukopenia. Lead poisoning. Hypoglycemia. Yin Jaundice. Prolapse of the gastric mucosa. Pulmonary tuberculosis. Ancylostomiasis. Endometriosis. Stomach cancer. Jaundice. Constipation. Diarrhea. Chronic pancreatitis. Hematemesis. Impotence. Male menopause. Spontaneous perspiration. Indigestion. Dyspnea. Dry skin. Cirrhosis of the Liver.

* JIN SHUI LIU JUN JIAN - 金水六君煎 - Six-gentlemen Of Metal And Water Decoction. Dang Gui, Rehmannia and Six Herbs Combination

ACTIONS - Enriches and moistens the Lungs and Kidneys. Regulates and promotes Qi. Dispels Dampness. Harmonizes the Middle Jiao. Transforms Phlegm.

SYNDROMES - Damp-Phlegm due to Lung and Kidney Yin Deficiency.

CLINICAL MANIFESTATIONS - Copious white, thick sputum. Sputum is difficult to expectorate. Sputum may have a salty taste. Throat parched. Cough. Stifling sensation in the chest and diaphragm. Breathing difficulty. Palpitations. Wheezing (Asthma). Nausea. Vomiting.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi and stops vomiting. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Sheng Jiang, for vomiting due to Dis-harmony of the Stomach Qi. With Zhi Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Ban Xia and Fu Ling, for cough due to accumulation of Dampness and Phlegm.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and transforms Phlegm. With Ban Xia, Chen Pi and Sheng Jiang, for congested fluids in the Stomach causing nausea and vomiting.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, resolves Phlegm, stops cough and moderates and harmonizes the harsh properties of other herbs.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold, stops cough and treats dyspnea. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Chen Pi, Ban Xia, Fu Ling and Gan Cao, for coughing during the night, dyspnea and profuse and salty-tasting sputum due to Kidney and Lung Yin Deficiency.

-Shu Di Huang - Nourishes Liver and Kidney Yin and arrests cough and wheezing. With Chen Pi, Ban Xia, Fu Ling, Dang Gui and Gan Cao, for cough, wheezing and sputum due to Kidney Deficiency.

-Sheng Jiang - Releases the Exterior, induces perspiration. disperses Cold, warms the Middle, stops vomiting, warms the Lungs, stops cough and reduces the toxicity of other herbs. With Ban Xia, for vomiting due to many causes including Stomach Cold and productive cough due to Phlegm-Dampness.

TREATS

Common cold in the elderly. Hemoptysis. Cough. Asthma. Male menopause. Chronic bronchitis in the elderly. Asthma in the elderly. COPD. Nausea/Vomiting. Palpitations.

* SHU QI HUO XUE TANG - 顺气活血汤 - Normalize The Flow Of Qi And Invigorate The Blood Decoction

ACTIONS - Moves Qi. Eliminates Stagnation. Invigorates the Blood. Breaks up Stasis.

SYNDROMES - Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - A history of traumatic injury to the low back and/or hip area. Severe pain. Enduring pain. Fixed pain. Pain is worse at night. Pain extends from the low back to the thigh, possibly radiating to the lower thigh and lateral leg. Pain worse with pressure. Possible pain on coughing. Possible palpable cords or hardness in the buttock area. Possible restricted movement of the lower limbs. Possible systemic symptoms of Qi and Blood Stagnation: Irritability. Premenstrual breast distention and pain. Dysmenorrhea. A dark, sooty facial complexion.

HERBS AND ACTIONS

-Zi Su Geng - Promotes the flow of Qi, harmonizes the Middle Jiao, expands the chest and benefits the diaphragm. With Xiang Fu, for fullness, distention, and discomfort in the epigastrium and abdomen due to Liver attacking the Spleen.

-Su Mu - Invigorates Blood circulation, dispels Blood Stasis, reduces swellings, opens the channels and alleviates pain. With Hong Hua, for traumatic injury with painful, swollen bruises or hematomas.

-Dang Gui - Invigorates and harmonizes the Blood. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis. With Xiang Fu, tonifies the Blood and moves Qi.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis and relieves pain. With Tao Ren, for Blood Stasis. with Xiang Fu, for flank pain, abdominal pain and dysmenorrhea due to Qi and Blood Stagnation.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Hong Hua, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea with abdominal pain, clotting and scanty flow, swollen painful sores and chest pain due to Blood Stasis. With Hong Hua, Dang Gui and Chi Shao, for trauma with pain.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure and resolves hardenings.

-Hou Po - Promotes the movement of Qi in the Middle Jiao and resolves Stagnation.

-Xiang Fu - Spreads and regulates Liver Qi and alleviates pain.

-Mu Xiang - Promotes the movement of Qi and alleviates pain.

-Sha Ren - Promotes the movement of Qi.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain.

TREATS

Piriformis syndrome.

* XIAO QING LONG TANG - 小青龙汤 - Minor Blue Green Dragon Decoction. Minor Blue Dragon Combination. Minor Blue Dragon Decoction. Minor Decoction of Blue Dragon

ACTIONS - Releases the Exterior. Transforms congested Fluids (Thin Mucus). Transforms Phlegm. Warms the Lungs. Descends Qi. Relieves wheezing and coughing.

SYNDROMES - Wind-Cold Attacks the Lungs (severe). Exogenous Wind-Cold Invasion with Water Retention due to Spleen Deficiency. Yi Yin. Zhi Yin.

CLINICAL MANIFESTATIONS - Fever and chills (chills predominant). Anhidrosis. Cough. Wheezing (asthma). Copious, white, stringy, difficult to expectorate sputum.

Stifling sensation in the chest. Lacrimation. General heaviness (especially upper body). General body aches. No thirst. Floating edema (severe). Considerable difficulty breathing while lying down (severe). Intolerance of Cold. Periorbital edema. Dyspnea. Vomiting of frothy saliva during pregnancy. Chest distention. Stiff neck. Dry heaves. Decreased urine. Subcardiac edema. Stridor. Occasional chills on the back. Hiccups. Retching. Dysphagia. Diarrhea. Dysuria. Decreased urination. Flushed face. Dizziness. Headache. Inflammation of the tear ducts.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not use long term. Contraindicated for those with Heat conditions. Contraindicated for those with hemoptysis. Contraindicated for those with coughing due to Yin Deficiency. Contraindicated for those with dry mouth and throat with thick, yellow sputum. Contraindicated for those with a sore throat and a rapid pulse. Use with caution for those with hypertension.

NOTES - The combination of inhaled fluticasone and this formula can be an important modality in the treatment of mild and severe asthma patients.

HERBS AND ACTIONS

-Ma Huang - Induces sweating, releases the exterior, disseminates and facilitates Lung Qi, calms wheezing, stops coughing, warms Cold and circulates water. With Gui Zhi, for Wind-Cold Excess with fever, chills and anhidrosis. With Gan Jiang, for stagnant Fluids. With Gan Jian, Xi Xin and Ban Xia, for wheezing or coughing due to an Exterior Wind-Cold Attack and Cold Stagnation in the Interior.

-Gui Zhi - Releases the exterior, disperses Cold, adjusts the Ying and Wei and warms the channels. With Ma Huang, releases the exterior and Warms Cold. With Bai Shao, warms and tonifies the Middle Jiao.

-Gan Jiang - Warms the Lungs, transforms thin mucus, warms the Middle and expels Cold. With Xi Xin, warms the interior and transforms Fluids. With Xi Xin, Ma Huang and Gui Zhi, releases the exterior. With Ban Xia, for vomiting of saliva or dry heaves due to Cold-induced congested fluids.

-Xi Xin - Releases Wind and Cold, warms the Lungs, disperses Internal Cold, circulates water, transforms Phlegm and opens the nose. With Ma Huang, stops cough and wheezing due to Wind-Cold Attacks the Lungs. With Ma Huang and Gui Zhi, releases the Exterior. With Wu Wei Zi, for coughing and wheezing due to Cold Phlegm.

-Wu Wei Zi - Prevents leakage of Lung Qi, stops cough, astringes sweat and generates fluids. With Xi Xin, regulates the opening and closing of the Lungs, alleviating coughing and calming wheezing for patients with existing thin mucus who are exposed to Wind-Cold leading to acute wheezing and coughing of clear thin sputum. With Gan Jiang and Xi Xin, for Cold in the Lung channel with non-stop coughing and wheezing. With Gan Jiang, Ma Huang and Xi Xin, for coughing and wheezing from Cold Thin Mucus.

-Bai Shao - Nourishes Blood, astringes Yin and adjusts the Ying and Wei. With Gui Zhi, harmonizes the Ying and Wei in Tai Yang Zhong Feng.

-Ban Xia - Transforms Phlegm, descends Qi, dries Dampness and harmonizes the Stomach. With Xi Xin and Gan Jiang, for vomiting due to Cold with copious, frothy sputum with Cold signs and thin mucus in the Lungs.

-Gan Cao - Augments Qi and moderates and harmonizes the harsh properties of other herbs. With Gan Jiang, Xi Xin and Wu Wei Zi, for coughing due to Wind-Cold with sputum.

TREATS

Acute bronchitis. Acute exacerbation of chronic bronchitis. Edematous arthritis. Sinusitis. Bronchial asthma. Influenza. Common cold. Fever. Acute asthmatic bronchitis. Acute upper respiratory tract infection. Cardiopulmonary disease. Congestive Heart failure. Viral conjunctivitis. Enteritis. Atrophic gastritis. Chronic bacillary dysentery. Rheumatic Heart disease. Epilepsy. Periarthritis of the shoulder. Bronchiectasis. Periorbital edema. Conjunctivitis. Headache. Cough. Dizziness. Meniere's disease. Numbness. Dysphagia. Pyelonephritis. Spontaneous perspiration. Morning sickness. Pulmonary emphysema. Infantile allergic rhinitis. Pediatric asthma. Pertussis. Allergic rhinitis. Renal cirrhosis. Senile emphysema. Chronic bronchitis. Chronic obstructive pulmonary disease (COPD). Hay fever. Dacryosolenitis. Peptic ulcer. Nephritis. Pleuritis. Enuresis. Pneumonia. Pulmonary tuberculosis. Bronchial dilation. Inflammation of the tear ducts. Lacrimation. Hiccups. Vertigo. Oliguria. Paresthesia. Nausea/Vomiting. Edema. Chronic renal failure. Dyspnea. Stiff neck. Sore throat.

* XING REN HUA SHI TANG - 杏仁滑石湯 - Apricot Kernel And Talcum Decoction

ACTIONS - Clears Heat and Summerheat. Resolves Dampness.

SYNDROMES - Damp-Heat in all three Jiaos. Damp Summerheat in all three Jiaos.

CLINICAL MANIFESTATIONS - Tidal fever. Sweating. Thirst. Stifling sensation in the chest. Nausea. Severe diarrhea. Scanty urine.

HERBS AND ACTIONS

-Xing Ren - Disperses the Lungs, stops cough and resolves Phlegm. With Hou Po, for Upper and Middle Jiao Dampness with a stifling sensation in the chest and epigastric and abdominal distention with a feeling of fullness.

-Huang Qin - Clears Heat, drains Fire and dries Dampness. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and

pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease.

-Huang Lian - Drains Fire, relieves toxicity, clears Heat and drains Dampness. With Huang Qin for high fever in Warm-Febrile disease.

-Chen Pi - Regulates Qi and dries Dampness.

-Hou Po - Regulates Qi and transforms Dampness. With Huang Lian, for acute diarrhea associated with sudden turmoil disorder from Damp-Heat.

-Yu Jin - Invigorates the Blood, breaks up Stagnation and regulates Qi.

-Hua Shi - Promotes urination, drains Heat from the Bladder, clears Heat, releases Summerheat and expels Damp-Heat through the urine.

-Tong Cao - Promotes urination and clears Heat.

TREATS

Gastroenteritis. Abdominal pain. Oliguria. Nausea/Vomiting. Diarrhea. Perspiration. Encephalitis B. Colitis. Fever. Chronic fatigue syndrome. Fatigue.

* ZHI BAI DI HUANG WAN - 知柏地黄丸 - Anemarrhena, Phellodendron And Rehmannia Pill. Anemarrhena, Phellodendron and Rehmannia Formula. Zhi Bai Ba Wei Wan

ACTIONS - Enriches Yin. Nourishes the Essence of the Liver and Kidneys. Reduces Deficiency Fire.

SYNDROMES - Kidney Yin Deficiency with Fire Flaring. Liver and Kidney Yin Deficiency (with Fire Flaring). Steaming Bone Disorder. Damp-Heat in the Lower Jiao with underlying Kidney Yin Deficiency.

CLINICAL MANIFESTATIONS - Night sweats. Dry mouth and tongue. Lower back and knee pain. Urinary difficulty. Weakness of the lower back, knees and extremities. Steaming bones. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five sole Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Irritability. Dry skin. Deafness. Spontaneous and nocturnal emissions. Tidal fevers. Loose teeth. Dripping urine. Thirst. Swollen gums, painful and light red in color. Numbness and weakness at the waist and knees. Heel pain. Scanty urination. Frequent, scanty, yellow urination. Pain at midline. Lower back and knee pain. Sore throat.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those

with Spleen Deficiency type diarrhea and indigestion with a white greasy tongue coat. Contraindicated for those with Yang Deficiency. Administration of this formula showed effectiveness in treating streptomycin-induced toxicities.

HERBS AND ACTIONS

-Zhi Mu - Clears Heat, drains Fire, enriches Yin, moistens Dryness and generates Fluids. With Huang Bai, for Yin Deficiency with Fire Flaring, Steaming Bone Disorder and Lower Jiao Damp-Heat. with Huang Bai and Shu Di Huang, for Yin Deficiency with Empty Fire.

-Huang Bai - Drains Damp-Heat, drains Kidney Fire and relieves toxicity.

-Shu Di Huang - Nourishes Yin and Blood and tonifies the Kidneys.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops Excess perspiration. With Shan Yao, tonifies the Liver and Spleen. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats.

-Fu Ling - Strengthens the Spleen and drains Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Mu Dan Pi - Clears Heat, cools and invigorates the Blood, clears Deficiency Fire and dispels Blood Stasis .

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Mu Dan Pi, for Steaming Bone Disorder, dizziness, and vertigo. With Fu Ling, promotes urination. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies.

TREATS

Gingivitis. Steaming Bone Disorder. Excess dreaming. Cystitis. Menopause. Amenorrhea. Neurasthenia. Pulmonary tuberculosis. Diabetes mellitus. Chronic nephritis. Hyperthyroidism. Chronic glomerulonephritis. Chronic urinary tract infection. Hypertension. Failure to thrive. Functional uterine bleeding. Optic neuritis. Optic nerve atrophy. Central retinitis. Male infertility. Nephrotic syndrome. Epistaxis. Chronic neuritis. Gouty arthritis. Chronic pharyngitis. Polycystic ovary syndrome. Vaginal itch. Vaginal pain. Infertility. Cataracts. Acne. Dizziness. Meniere's disease. Kidney failure. Polyuria. Prostate cancer. AIDS/HIV. Anemia. Tidal fevers. Lupus erythematosus. Neurosis. Low

back pain. Cushing's syndrome. Palpitations. Herpes genitalia. Hoarseness. Enuresis. Interstitial cystitis. Cervical lymphadenopathy. Otitis media. Night sweats. Puerperal fever. Premature ejaculation. Strangury. Toothache. Otorrhea. Post-menopausal uterine bleeding. Neck stiffness and pain. Viral hepatitis. Thrombophlebitis. Lip pain. Tongue pain. Vaginitis. Nephroatrophy. Senility. Impotence. Spermatorrhea. Esophageal cancer. Chronic asthma. Bronchitis. COPD. Side effects of steroids. Allergic disorders. Bronchiaesthenia. Chronic urticaria. Infectious hepatitis. Nocturnal emissions. Irregular menstruation. Addison's disease. Congestive Heart failure. Sore throat. Dry mouth. Retarded growth in children. Hemospermia. Tinnitus. Deafness. Geriatric dryness. Spontaneous perspiration. Eczema. Prostatic hypertrophy. Prostatitis. Vaginal discharge. Heel pain. Insomnia. Pterygium. Cough. Vertigo. Oliguria. Hematuria. Bladder cancer. Paralysis. Hyperglycemia. Constipation. Thrombocytopenic purpura. Knee pain. Forgetfulness. Chronic leukemia. Weakness. Pyelonephritis. Headache. Sciatica. Morning sickness. Facial paralysis. Hemilateral sweating. Ascites. Dermatitis. Urinary tract infection. Rheumatoid arthritis. Dry skin. Dysmenorrhea. Hydrocephalus. Chronic hepatitis. Polymyositis. Senile vaginitis. Sexual neurosis. Thrush associated with AIDS/HIV.

* ZHI MEI JING YIN SAI JI - Anti-fungal Vaginal Cleansing Formula

ACTIONS - Clears Toxic Heat in the Lower Jiao.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Profuse yellow blood streaked (stained) leukorrhea (vaginal discharge). Sticky with a strong odor. Thirst. General feeling of Heat. Dark urine.

HERBS AND ACTIONS

-Wu Mei - Kills parasites and alleviates pain. With Bin Lang, for abdominal pain due to roundworms in either the intestines or the bile duct.

-Da Suan - Kills parasites, resolves toxicity, warms the Stomach, strengthens the Spleen, promotes the movement of Qi and reduces Stagnation.

-Shi Liu Pi - Kills parasites, astringes the Intestines, stops diarrhea, stabilizes Kidneys and retains Jing. With Bin Lang, for tapeworms and roundworms with abdominal pain.

-Bin Lang - Kills parasites, regulates Qi, reduces accumulations, drains downward and unblocks the bowels.

-Hua Jiao - Kills parasites, warms the Middle Jiao, disperses Cold, dispels Dampness, relieves diarrhea and alleviates abdominal pain.

TREATS

Vaginal discharge. Fungal infections.

1.3.3.17 RT-TCM-17

Traditional Chinese Medicine

Ban Xia Xie Xin Tang, Chai Hu Shen Zhu Tang, Chai Xian Tang, Er Miao San, Flat Warts Topical #1, Ma Gui Ge Ban Tang, San Ren Tang, Tourette Syndrome #1, Wan Dai Tang

Recordings Updated in May 2025

* BAN XIA XIE XIN TANG - 半夏瀉心湯 - Pinellia Decoction To Drain The Epigastrium. Pinellia Combination. Decoction of Pinellia for Purging Stomach Fire. The Stomach Purging Powder with Pinellia

ACTIONS - Harmonizes the Stomach. Descends Rebellious Qi. Disperses clumping. Eliminates focal distention due to Cold and Heat factors.

SYNDROMES - Disharmony Between the Stomach and Intestines with interaction of Cold and Heat factors. Improper purging of the Shao Yang with underlying Stomach Deficiency. Damp-Heat in the gastrointestinal area. Gu Syndrome.

CLINICAL MANIFESTATIONS - Epigastric focal distention. Fullness and tightness with very slight or no pain. Dry heaves. Vomiting. Borborygmus. Diarrhea. Anorexia. Stomach pain. Abdominal pain. Subcardiac distention. Heartburn. Resistance below the Heart. Soft epigastrium. Nausea. Ascites. Gurgling sounds.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with focal distention due to Qi Stagnation or Food Stagnation or Accumulation of Phlegm and Heat. Contraindicated for those with nausea and vomiting due to Yin Deficiency. Diarrhea induced by cisplatin (Platinol) and irinotecan (Camptosar) was effectively controlled by this formula.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, dissipates clumps, descends

Rebellious Qi, harmonizes the Stomach, stops vomiting and eliminates focal distention. With Ren Shen, for vomiting due to Stomach Deficiency. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting. With Huang Lian, Huang Qin and Gan Jiang, for nausea and vomiting due to Heat and Cold.

-Gan Jiang - Warms the Middle, expels Cold, warms the Lungs and transforms thin mucus. With Huang Lian, for epigastric pain and distention, dysentery, indeterminate gnawing hunger, vague abdominal pain or discomfort, belching, and nausea. With Ban Xia, for vomiting of saliva or dry heaves due to Cold-induced congested fluids. With Gan Cao, for epigastric pain and vomiting due to Spleen and Stomach Deficiency Cold. With Ban Xia and Ren Shen, for vomiting due to Deficiency Cold.

-Huang Qin - Clears Heat, dries Dampness, drains Fire and detoxifies. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease.

-Huang Lian - Clears Heat, drains Dampness, drains Fire, resolves Fire toxicity and drains Stomach Fire. With Ban Xia, for Cold and Heat in the Middle Jiao with abdominal fullness, nausea and vomiting. With Ban Xia and Gan Jiang, for Cold and Heat complexes in the Intestines and Stomach marked by focal distention, nausea, vomiting and feelings of oppression in the chest. With Huang Qin, Ban Xia and Gan Jiang, for Damp-Heat in the Middle Jiao.

-Ren Shen - Tonifies Spleen, Stomach and Lung Qi and tonifies Qi in Deficiency patients with Exterior conditions. With Da Zao, benefits the Middle Jiao Qi and prevents injury to the Qi.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, and moderates and harmonizes the harsh properties of other herbs.

-Gan Cao - Tonifies the Spleen, augments Qi, clears Heat, relieves Fire toxicity and moderates and harmonizes the properties of other herbs.

TREATS

Acute gastroenteritis. Atrophic gastritis. Chronic gastritis. Chronic hepatitis. Early-stage cirrhosis of the Liver. Indigestion due to hyper-secretion of acid. Ulcer. Gastric cancer. Ascites. Chronic cholecystitis. Cholelithiasis. Hepatitis C. Chronic asthma. Aphthous ulcers. Insomnia. Morning sickness. Upper gastrointestinal bleeding. Irritable bowel syndrome. Renal failure. Stress. Leaky gut syndrome. Chronic fatigue syndrome. Genital warts. Gastralgia. Gu syndrome. Celiac disease. Abdominal pain. Acid reflux. Anorexia. Fatigue. Hiatus hernia. Chemotherapy for breast cancer. Ulcerative colitis. Systemic lupus erythematosis. Enteritis. Gastromegaly. Duodenal ulcer. Stomatitis.

Motion sickness. Gastroesophageal reflux disease. Colitis. Hyperthyroidism. Conjunctivitis. Coronary artery disease. Amenorrhea. Superficial gastritis. Gastrectasis. Gastroptosis. Infantile indigestion. Cirrhosis of the Liver. Depression. Gastromegaly. Candidiasis. Giardiasis. Anal warts. Colitis. Oliguria. Nausea/Vomiting. Abdominal fullness and distention. Diarrhea. Chronic pancreatitis. Esophageal cancer. Hypoglycemia. Scleroderma. Temporomandibular joint syndrome (TMJ.)

* CHAI HU SHEN ZHU TANG - 柴胡參术湯 - Bupleurum, Ginseng And Atractylodes Decoction

ACTIONS - Soothes the Liver. Clears Stagnation. Tonifies Qi. Nourishes Blood.

SYNDROMES - Liver Qi Stagnation With Qi and Blood Deficiency.

CLINICAL MANIFESTATIONS - Dizziness. Eye pain. Distention and pain in the sides or flanks. Suffocating sensation in the chest. Tendency to sigh. Melancholy. Depression. Anxiety. Irritability. Inappropriate anger. Anorexia. Irregular menses. Dysmenorrhea. Irregular menstruation. Breast distention and pain before and during menses.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi. With Shu Di Huang, for Qi and Yin Deficiency. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Ren Shen, for Qi and Blood Deficiency.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs. With Ren Shen, relieves palpitations and anxiety.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Bai Zhu - Tonifies the Spleen and augments Qi.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Qing Pi, for intercostal pain due to Qi obstruction in the Liver channel.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With Dang Gui, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Qing Pi - Spreads Liver Qi and breaks up Stagnant Qi. With Chai Hu, restores the Qi circulation between the Upper and Lower Jiaos to treat long-term Qi Stagnation moving to Blood Stasis.

TREATS

Optic atrophy.

* CHAI XIAN TANG - 柴陷湯 - Bupleurum Decoction To Raise The Sunken. Bupleurum Chest Bind Decoction. Bupleurum and Scute Combination.

ACTIONS - Clears Heat. Transforms Phlegm. Expands the chest. Releases the Shao Yang.

SYNDROMES - Shao Yang disorders with Phlegm-Heat Stagnation in the chest.

CLINICAL MANIFESTATIONS - Alternating chills and fever. Fullness and focal distention in the chest and diaphragm. Pain in the chest and diaphragm with pressure. Thick, sticky, difficult-to-expectorate Phlegm. Panting. A bitter taste in the mouth. Chest pain with coughing or on deep inhalation.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, descends Qi and alleviates nausea. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach. With Huang Lian and Gua Lou, for Phlegm-Heat clumping in the chest and epigastrium with a stifling, distended sensation in the epigastrium that is aggravated by pressure, coughing of viscous, yellow sputum, a greasy, yellow tongue coat and a slippery, rapid pulse. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting. With Gua Lou, for focal distention in the chest and diaphragm due to clumping of Phlegm and Heat leading to Qi Stagnation and chest Bi due to clumping of sticky, thick and turbid Phlegm.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Lungs and stops cough. With Ban Xia, for productive cough due to Phlegm-Dampness.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity. With Huang Qin, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease.

-Huang Qin - Clears Heat, dries Dampness, drains Fire, detoxifies, cools the Blood, stops bleeding and calms ascending Liver Yang. With Chai Hu, for Heat in the Shao Yang with alternating chills and fever, and nausea.

-Chai Hu - Resolves Shao Yang disorders and reduces fever (harmonizes the Exterior and Interior). With Huang Qin clears Liver and Gallbladder Heat. With Huang Qin and

Ban Xia, for Shao Yang disorders with alternating chills and fever and a sensation of fullness in the hypochondria and chest.

-Gua Lou - Clears Heat, transforms Hot Phlegm and expands the chest. ith Jiang Ban Xia, Huang Qin, Huang Lian and Chai Hu, for cough with chest pain and difficult to expectorate sputum with extreme Heat.

-Ren Shen - Tonifies Lung Qi.

-Gan Cao - Moistens the Lungs, resolves Phlegm, stops cough and moderates and harmonizes the harsh properties of other herbs.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, prevents Phlegm accumulation.

TREATS

Intermittent fever. Common Cold. Bronchial Asthma. Pneumonia. Cholecystitis. Cholelithiasis. COPD. Hypochondriac pain. Influenza. Bronchitis. Pleurisy. Chronic hepatitis. Acute hepatitis. Cough.

* ER MIAO SAN - 二妙散 - Two-Marvel Powder. Powder of Two Effective Ingredients

ACTIONS - Eliminates Heat and Dampness.

SYNDROMES - Damp-Heat in the Lower Jiao. Low back pain due to Heat.

CLINICAL MANIFESTATIONS - Pain in low back and knees. Aches and pains in the bones and sinews. Weakness or atrophy of lower extremities. Scanty yellow urine. Red, hot, swollen and painful feet or knees. Edema in lower legs. Leukorrhea (thick, yellow, foul-smelling). Sores on lower extremities due to Damp. Redness, swelling and pain of the knees with burning sensations. Oliguria. Eczema.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Modify for those with Lung Heat or Liver and Kidney Deficiency.

HERBS AND ACTIONS

-Huang Bai - Drains Damp-Heat, especially from the Lower Jiao and drains Kidney Fire.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, and clears Dampness from the Lower Jiao. With Huang Bai, for pain, swelling, and weakness of the lower extremities due to Wind-Dampness.

TREATS

Arthritis. Urinary tract infection. Vaginitis. Vulvitis. Cervicitis. Beriberi. Rheumatoid arthritis. Gouty arthritis. Muscle Bi. Blepharitis. Eczema. Erythromelalgia. Myasthenia gravis. Herpes genitalia. Edema. Arthralgia. Acute nephritis. Gonococcal arthritis. Low back pain. Knee pain. Inflammation of the lower limbs. Tinea pedis. Eczema. Gonorrhea. Dysmenorrhea. Panarthralgia. Ankylosing spondylitis. Neurodermatitis. Dermatitis. Fungal infections. Weakness. Vaginal discharge. Polymyositis. Foot pain.

* FLAT WARTS TOPICAL #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Eliminates warts topically.

SYNDROMES - Flat warts.

CLINICAL MANIFESTATIONS - Flat warts.

HERBS AND ACTIONS

-Da Qing Ye - Clears Heat, resolves Fire toxicity, cools the Blood and dissipates maculae.

-Ban Lan Gen - Drains Heat, relieves Fire toxicity and cools the Blood.

-Yi Yi Ren - Clears Heat and expels pus.

-Xia Ku Cao - Clears Hot Phlegm and dissipates nodules.

-Long Dan - Drains Damp-Heat from the Liver and Gallbladder channels and drains and pacifies Excess Liver Fire.

TREATS

Flat warts.

* MA GUI GE BAN TANG -麻桂各半汤 - Ephedra And Cinnamon Decoction. Gui Zhi Ma Huang Ge Ban Tang. Cinnamon and Ma Huang Combination

ACTIONS - Dispels Wind-Cold. Regulates the Ying and Wei. Stops itching.

SYNDROMES - Tai Yang Zhong Feng.

CLINICAL MANIFESTATIONS - Pale red eruptions. Worse on exposure to Cold or cold water. Better with Heat. Urticaria. Eczema. Generalized itching. Aversion to Wind. Aversion to Cold.

HERBS AND ACTIONS

-Ma Huang - Induces sweating, releases the Exterior and warms and disperses Cold pathogens. With Xing Ren, for Wind-Cold coughing and wheezing.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Ma Huang, for Wind-Cold Excess conditions with fever and chills but no sweat. With Bai Shao, for External Wind-Cold with disharmony between the Ying and Wei (Tai Yang Zhong Feng), with spontaneous sweating, fever and chills.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei. With Gan Cao, regulates the relationship between the Liver and Spleen. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, adjusts the Ying and Wei and normalizes the flow of Qi at the center. With Gui Zhi, strongly induces sweating for the treatment of External Wind-Cold with chills, fever, body aches and anhidrosis. With Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Ma Huang, Sheng Jiang and Xing Ren, for coughing or wheezing due to Wind-Cold Attacks the Lungs.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, for External Wind-Cold and adjusts the Ying and Wei for treatment of Tai Yang Zhong Feng.

-Xing Ren - Stops coughing and calms wheezing. With Ma Huang and Gan Cao, for coughing with profuse sputum, nasal obstruction and a hoarse voice.

TREATS

Urticaria. Eczema. Erythema multiforme.

* SAN REN TANG - 三仁湯 - Three Seed (Nut) Decoction. Apricot, Coix and Cluster Combination.

ACTIONS - Spreads Qi. Facilitates Qi. Clears Damp-Heat (Clears Damp-Heat from the Qi Level by unblocking Lung Qi, transforming and drying Dampness from the Middle Jiao, Draining Dampness from the Lower Jiao and Clearing Heat.)

SYNDROMES - Damp-Heat (early stage). Summerheat with Damp. San Jiao Upper Jiao Heat. Wei Stage Damp-Heat.

CLINICAL MANIFESTATIONS - Headache. Chills. Afternoon fever. Heavy sensation in the body. Generalized pain. Pale yellow (sallow) complexion. Stifling sensation in chest. Loss of appetite. Feverishness and pain of the body. Fatigue. Lack of thirst or thirst with no desire to drink. Chest and abdominal fullness. Maybe aversion to Cold. Nausea. Heaviness of the head.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only for Damp-Heat disorders where Damp is predominant.

HERBS AND ACTIONS

-Xing Ren - Stops cough and wheezing, moistens the Intestines and unblocks the bowels. With Hou Po, for Upper and Middle Jiao Dampness with a stifling sensation in the chest and epigastric and abdominal distention with a feeling of fullness.

-Dou Kou - Aromatically transforms Dampness, warms the Middle Jiao, stops vomiting, descends Qi, moves Qi and transforms Stagnation. With Xing Ren and Yi Yi Ren, for headache, stifling sensations in the chest, fatigue, dark, scanty urine, diarrhea, and usually with a white, greasy tongue coat as in the early stages of a warm febrile disease. With Hou Po, for distention due to Qi Stagnation or Cold-Damp in the Spleen and Stomach.

-Hou Po - Transforms Dampness, promotes the movement of Qi, and descends Rebellious Qi.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, harmonizes the Stomach and stops vomiting. With Hou Po, for Phlegm-induced cough, vomiting, and epigastric and abdominal distention.

-Yi Yi Ren - Promotes urination, leaches out Dampness, strengthens the Spleen, expels Wind-Dampness, clears Damp-Heat and stops diarrhea. With Xing Ren and Dou Kou, for early-stage Damp-Warmth with Damp predominant.

-Tong Cao - Promotes urination and clears Heat. With Hua Shi and Yi Yi Ren, for Summerheat with Turbid Dampness causing painful urinary dysfunction, a stuffy chest, heaviness in the body and headache. With Dou Kou, Hua Shi and Yi Yi Ren, for painful urination, cloudy urination and heaviness of the body due to Damp-Heat. With Hua Shi, Yi Yi Ren, Ban Xia, Hou Po and Dou Kou, for Damp febrile disorders with sensations of heaviness of the body, lack of thirst, chest oppression afternoon fever and dysuria.

-Dan Zhu Ye - Clears Heat, eliminates irritability, promotes urination and Clears Damp-Heat.

-Hua Shi - Promotes urination, drains Heat from the Bladder, expels Damp-Heat and releases Summerheat.

TREATS

Morning sickness. Fever of unknown origin. Biliary ascariasis. Enteric fever. Pyelonephritis. Brucellosis. Bacillary dysentery. Arthritis. Diabetes. Altitude stress. Cardiopulmonary diseases. Priapism. Restless leg syndrome. Lymphadenitis. Influenza. Headache. Epilepsy. Dizziness. Fever. Myalgic encephalomyelitis. Epstein-Barr virus syndrome. Anorexia. Hernia. Spontaneous perspiration. Rheumatic fever. Poor vision associated with AIDS/HIV. Undulant fever. Postoperative fever. Typhoid fever. Gastroenteritis. Hepatitis. Gastritis. Colitis. Chronic bronchitis. Pneumonia. Otitis media. Cholecystitis. Chronic glomerulonephritis. Obesity with dizziness. Sunstroke. Pyelitis. Cataracts with excessive tearing. Vertigo. Oliguria. Nausea. Chronic fatigue syndrome. Abdominal fullness and distention. Fatigue. Impotence. Middle back pain. Nasal pain.

* TOURETTE SYNDROME #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies the Spleen. Augments Qi. Dries Dampness. Transforms Phlegm. Descends Qi. .Extinguishes Wind. Calms the Liver. Stops spasms and tremors.

SYNDROMES - Wind-Phlegm.

CLINICAL MANIFESTATIONS - Tics. Spasms.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm and Descends Rebellious Qi.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and descends Qi. With Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Ban Xia and Fu Ling, for coughing due to accumulation of Dampness and Phlegm.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Ban Xia, treats Phlegm, thin mucus and turbid Dampness.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs.

-Tian Ma - Extinguishes Wind, calms the Liver, stops spasms and tremors, subdues Rising Liver Yang and alleviates pain.

-Gou Teng - Extinguishes Wind, alleviates spasms, drains Liver Heat and pacifies Liver

Yang. With Tian Ma, calms the Liver and extinguishes Wind.

-Zhen Zhu - Sedates the Heart, settles tremors and palpitations and clears the Liver. With Ban Xia, Fu Ling and Gou Teng, for Continuous palpitations or palpitations with anxiety with disorientation.

TREATS

Tourette syndrome.

* WAN DAI TANG - 完帶湯 - End Discharge Decoction. Decoction to Treat Leukorrhagia. Decoction for Morbid Leukorrhea

ACTIONS - Tonifies the Spleen. Tonifies the Middle Jiao. Disperses Liver Qi Stagnation. Transforms Dampness. Stops vaginal discharge.

SYNDROMES - Spleen Deficiency and Liver Qi Stagnation with Dampness and turbidity in the Lower Jiao. Dai channel dysfunction.

CLINICAL MANIFESTATIONS - Profuse vaginal discharge that is white or pale-yellow. The discharge is thin in consistency, not foul smelling and usually continuous. Fatigue. Lethargy. A shiny, pale complexion. Loose stools. Diarrhea.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with yellow, bloody, thick, sticky or foul smelling discharge due to Liver Stagnation transforming into Heat or Damp-Heat.

HERBS AND ACTIONS

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness, promotes water metabolism and calms the fetus. With Che Qian Zi, for diarrhea due to Dampness. With Cang Zhu, for vaginal discharge. with Shan Yao, Che Qian Zi and Can Zhu, for clear, watery vaginal discharge due to Spleen and Stomach Deficiencies with Dampness.

-Shan Yao - Tonifies the Spleen, nourishes Stomach Yin, stops diarrhea, tonifies Kidney Yin and astringes Jing. With Chai Hu and Bai Shao, for vaginal discharge due to Spleen Deficiency and Liver Qi Stagnation. With Ren Shen and Bai Zhu, for Decreased appetite and lack of energy due to Spleen Deficiency. With Bai Zhu, Cang Zhu, Bai Shao and Chai Hu, for Leukorrhea due to Spleen Qi Deficiency with Liver Qi Stagnation.

-Ren Shen - Powerfully tonifies Qi. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen and clears Dampness from the Lower Jiao.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and helps prevent Stagnation from tonic herbs. With Bai Zhu, for anorexia and other symptoms of Damp-Obstruction due to Spleen Deficiency.

-Che Qian Zi - Promotes urination, clears Damp-Heat and clears Liver Heat. With Cang Zhu, for Damp-Heat vaginal discharge with Spleen Deficiency.

-Bai Shao - Nourishes the Blood, regulates menstruation, calms Liver Yang and softens the Liver. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach. With Chai Hu, for flank pain due to Liver Qi Stagnation.

-Chai Hu - Spreads Liver Qi, relieves Stagnation and raises Yang Qi. With Bai Shao, for Liver Blood Deficiency with Liver Qi Stagnation and vertigo, dizziness, thoracic and costal pain, and menstrual irregularity due to Liver Qi Stagnation. With Gan Cao, for hepatitis and upper right quadrant pain.

-Jing Jie - Stops bleeding.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

TREATS

Leukorrhea. Otitis media. Tinnitus. Impotence. Subdural hematoma. Rhinitis. Pre-eclampsia. Vaginitis. Edema during pregnancy. Irritable bowel syndrome. Vaginal fungus. Vulvitis. Fatigue. Vaginitis. Chronic gastritis. Hepatitis. Colitis. Chronic bacillary dysentery. Chronic pyelonephritis. Nephritis with proteinuria. Cervicitis. Cervical polyps. Infertility. Chronic glomerulonephritis. Streptococci. Hemophilus vaginitis. Diarrhea.

Candida Douche #1, Qing Jie Pian, Ru Ai Xi Ji, Shi Quan Da Bu Tang, Shu Jin Tang, Si Qi Tang, Tao He Cheng Qi Tang, Trichomonas Vaginitis Wash, Tui Chi San

Recordings Updated in May 2025

* CANDIDA DOUCHE #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Dries Dampness. Strengthens Yang. Kills parasites. Stops itching.

SYNDROMES - Damp-Heat in the Lower Jiao.

CLINICAL MANIFESTATIONS - Vaginal yeast infections. Skin lesions with profuse fluid discharge. Fever. Thirst. Dry mouth with no desire to drink. Anorexia. Body heavy. Limbs tired. Fatigue. Digestive disorders. Fullness in chest. Lump in epigastrium. Leukorrhagia with thick, yellowish, foul discharge. Frequent, scanty, reddish urination.

HERBS AND ACTIONS

-Yin Yang Huo - Tonifies the Kidneys and strengthens Yang.

-Bai Xian Pi - Clears Damp-Heat and stops itching. With Ku Shen, for Damp-Heat sores that itch.

-Ku Shen - Clears Heat, dries Dampness kills parasites, stops itching and promotes urination.

TREATS

Yeast infections. Candidiasis.

* QING JIE PIAN - 清解片 - Clear And Relieve Tablet

ACTIONS - Clears Heat. Drains Fire. Relieves toxicity. Relieves inflammation.

SYNDROMES - Toxic Heat.

CLINICAL MANIFESTATIONS - Dermatitis. High fever. Irritability. Fidgeting. Dry mouth. Dry throat. Incoherent speech. Insomnia. Dark urine. Deep-rooted boils. Maculae. Carbuncles. Hematemesis. Hemoptysis. Palpitations. Furuncles. Tinnitus. Purpura. Red face. Rashes. Deep-rooted boils. Red eyes. Itchy skin. Fidgeting. Dry lips. Delirium. Dysentery with fever. Jaundice. Epistaxis. Hematuria. Cloudy mind. Diarrhea.

HERBS AND ACTIONS

- Da Huang - Drains Heat, purges accumulations, reduces Fire toxicity, transforms Dampness and promotes urination.

-Huang Qin - Clears Heat, dries Dampness and detoxifies. With Da Huang, for

constipation.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao and relieves Fire toxicity.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, induces sweating and expels Wind-Dampness. With Huang Bai, for skin lesions due to Wind-Dampness.

TREATS

Contact dermatitis. Red eyes. Purpura.

* RU AI XI JI - 乳癌洗剂 - Breast Cancer Wash (Topical)

ACTIONS - Expels Wind. Eliminates Dampness. Dispels Cold. Warms the channels. Reduces swelling.
Eliminates toxins. Expels pus. Alleviates pain. Inhibits the growth of cancer cells.

SYNDROMES - Toxic Heat with Wind-Cold Dampness.

CLINICAL MANIFESTATIONS - Tumor in the breast. Usually one side. Tumor is often the first symptom. Tumor is firm or hard. It starts small (bean-sized) and grows larger. Usually no pain. It is in a fixed location. The edges are uneven. Located in the center of the nipple or at the edge of the breast tissue. There is dimpling. The tumor gradually generates a dull pain. The pain becomes more severe. The nipple becomes retracted. The areola becomes distorted or a distorted breast contour. The breast becomes red and swollen. It becomes pitted like an orange. There are enlarged supraclavicular or axillary lymph nodes. Advanced nodules become ulcerated.

HERBS AND ACTIONS

-Bai Zhi - Expels Wind, eliminates Dampness, dispels Cold, reduces swelling, eliminates toxins, expels pus and alleviates pain.

-Ai Ye - Warms the channels, stops bleeding, disperses Cold, eliminates Dampness, stops itching, alleviates pain and inhibits the growth of cancer cells.

-Chi Shao - Cools and invigorates the Blood, dispels Blood Stasis, clears Heat, reduces swelling from sores and abscesses, relieves pain and inhibits the growth of cancer cells.

-Chuan Jiao (Hua Jiao) - Warms the Middle Jiao, disperses Cold, dispels Dampness and alleviates pain.

-Cong Bai - Disperses Cold, unblocks Yang, relieves toxicity and disperses clumps.

TREATS

Breast cancer with severe pain.

* SHI QUAN DA BU TANG - 十全大補湯 - All Inclusive Great Tonifying Decoction. Ten Complete Great Tonification Decoction. The Tonification Decoction with Ten Ingredients. Ginseng and Dang Gui Ten Combination

ACTIONS - Replenishes Yang. Warms and tonifies Qi and Blood.

SYNDROMES - Qi, Blood and Yang Deficiency with Cold. Atrophy (Wei Syndrome) due to Qi Deficiency.

CLINICAL MANIFESTATIONS - Anemia. Uterine bleeding. Cold extremities. Pale or sallow face. Dizziness. General fatigue. Coarse skin. Nocturnal emissions. Weak knees. Fatigue. Dyspnea. Night sweats. Irregular menstruation. Insomnia. Intolerance of Cold. Decreased eyesight after a prolonged illness. Anxiety. Intermittent fever. Jaundice. Deficient cough. Shortness of breath. Palpitations. Anorexia. Listlessness. Lassitude. Spontaneous sweating. Spermatorrhea. Continuous spotting. Leukorrhea. Weak legs and knees.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Heat or Excess disorders. This formula may have a marked protective effect against chemotherapy- and radiation-induced toxicities. This formula may have a marked protective effect against cyclophosphamide- or prednisone-induced immuno-suppression. This formula may have a marked protective effect against carboplatin- or cisplatin-induced myclosuppression. This formula may have a marked protective effect against cis-diamminedichloroplatinum-induced nephrotoxicity and bone marrow toxicity. This formula may have a marked protective effect against interferon toxicity. This formula may have a marked protective effect against rifampin-induced neutropenia.

HERBS AND ACTIONS

-Huang Qi - Strengthens the Spleen, tonifies Qi and nourishes Blood. With Ren Shen, for Qi Deficiency. With Bai Zhu, for Spleen Qi Deficiency. With Dang Gui, for Qi and Blood Deficiencies. With Dang Gui, Shu Di Huang, Ren Shen, Bai Zhu and Rou Gui, for flat sores that do not pustulate or ulcers that do not heal.

-Rou Gui - Warms Kidneys, strengthens Yang and assists the generation of Qi and Blood. With Huang Qi and Dang Gui, for Yin-type boils due to Qi and Blood Deficiencies especially those that form but do not ulcerate. With Dang Gui and Chuan Xiong, for dysmenorrhea, postpartum abdominal pain or amenorrhea due to Deficiency Cold of the Chong and Ren channels.

-Ren Shen - Tonifies Yuan Qi and Qi of the Spleen, Lungs and Heart. With Shu Di

Huang, for dysmenorrhea, postpartum abdominal pain or amenorrhea due to Deficiency Cold of the Chong and Ren channel. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu and Fu Ling, for Spleen and Stomach Qi Deficiencies with Dampness with anorexia, diarrhea, vomiting, abdominal distention and fatigue.

-Shu Di Huang - Tonifies the Blood, nourishes Yin, nourishes Jing and fills the Marrow. With Dang Gui and Bai Shao, for dizziness, palpitations, insomnia and menstrual dysfunction due to Blood Deficiency. With Dang Gui, Bai Shao and Chuan Xiong, for anemia. With Ren Shen, Bai Zhu, Fu Ling, Dang Gui and Bai Shao, for anemia with fatigue and weakness.

-Bai Zhu - Tonifies the Spleen, tonifies Qi, dries Dampness and promotes water metabolism. With Ren Shen and Huang Qi, for Restless fetus due to Qi Deficiency. With Shu Di Huang, Dang Gui and Bai Shao, for restless fetus due to Blood Deficiency, often with palpitations. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiencies. With Bai Shao, Shu Di Huang and Chuan Xiong, for menstrual irregularity, amenorrhea, and dysmenorrhea due to Blood Deficiency. With Fu Ling, Ren Shen and Huang Qi, for unstable pregnancy with severe Qi Deficiency.

-Dang Gui - Tonifies the Blood, regulates the menses, invigorates and harmonizes the Blood, moistens the Intestines, unblocks the bowels, reduces swelling, expels pus, generates flesh and alleviates pain. With Huang Qi, for Qi and Blood Deficiencies, pallor, debility, fatigue and/or low grade fever due to excessive blood loss and ulcerated abscesses with insufficient drainage or which drain a clear thin discharge. With Bai Shao, nourishes, regulates and harmonizes Qi and Blood. With Bai Shao, Shu Di Huang and Chuan Xiong, for menstrual irregularity, menorrhea, and dysmenorrhea due to Blood Deficiency or Blood Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Gan Cao, moderates spasms and relieves abdominal pain. With Bai Shao and Fu Ling, for diarrhea during pregnancy with mild abdominal pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. Qith Ren Shen, Bai Zhu, Shu Di Huang and Bai Shao, for general menstrual disorders with fatigue and weakness due to Qi and Blood Deficiencies.

-Bai Shao - Nourishes Blood and regulates menstruation. With Gan Cao, for muscle spasms, especially in the calf, due to Blood Deficiency.

-Chuan Xiong - Activates Blood and regulates Qi. With Rou Gui, for irregular menstruation with Cold in the Blood.

-Fu Ling - Promotes urination, resolves Dampness and strengthens the Spleen. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Gan Cao, for Spleen and Heart Deficiencies causing facial edema, palpitations, and shortness of breath.

-Gan Cao - Tonifies the Spleen, tonifies Qi and moderates and harmonizes the

properties of other herbs. With Ren Shen, relieves palpitations and anxiety.

TREATS

Chilblain. Uterine cancer. Menopause. Postpartum beriberi. Poliomyelitis. Bleeding hemorrhoids. Dental caries. Scrofula. Hypothyroidism. Leukemia. Rectocele. Nephroptosis. Osteoarthritis. Ulcers with a small amount of pus or no pus or pus with no tissue degeneration. Blood loss. Bloody dysentery. Nervous exhaustion. Chronic urticaria. Malaria. Chronic atrophic gastritis. Post-surgical recovery. Meniere's disease. Vascular Bi. Eczema. Infertility. Eyelid twitch. Dizziness. Atrophy (Wei) Syndrome. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Facial paralysis. Jaundice. Hypoglycemia. Food allergies. Chronic fatigue syndrome. Chronic bronchitis. COPD. Anxiety. Palpitations. Post illness debility. Vaginal discharge. Deafness. Thrombocytopenic purpura. Fatigue. Lateral epicondylitis. Spontaneous perspiration. Dyspnea. Postpartum fainting. Hypomenorrhea. Secondary dysmenorrhea. Thrombophlebitis. Dry hair. Carbuncles. Muscle spasms. Anemia. Uterine bleeding. Chronic abscess. Chronic asthma. Chronic cough. Post illness debility. Spermatorrhea. Nocturnal emissions. Leukorrhea. Decreased eyesight after prolonged illness. Underweight after prolonged illness. Cardiac failure. Cancer due to Qi and Blood Deficiencies. Fibromyalgia. Non-healing sores and ulcers. Postpartum recovery. Adjunctive for chemotherapy and radiation treatments. Neutropenia. Gastroptosis. Shwachman syndrome. Sheehan's syndrome. Habitual miscarriage. Amenorrhea. Insomnia. Vertigo. Progressive muscular dystrophy. The sequelae of poliomyelitis. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Stomach cancer. AIDS/HIV. Somnolence. Narcolepsy. Emphysema. Candidiasis. Addison's disease. Anorexia. Tinnitus. Neurosis. Forgetfulness. Hypotension. Lochiorrhea. Night sweats. Rectal prolapse. Dermatitis. Postpartum convulsions. Puerperal fever. Dry skin. Chemotherapy for breast cancer. Ear pain. Vaginal flatulence.

* SHU JIN TANG - 舒筋汤 - Smooth The Tendons, Relax The Muscles Decoction

ACTIONS - Dispels Wind-Cold-Damp. Stops pain. Relieves spasms.

SYNDROMES - Wind-Cold-Damp Bi with Wind-Damp Predominant.

CLINICAL MANIFESTATIONS - General pain. Painful extremities. Lumbago. Limitation of movement. Aversion to Wind and Damp. Heaviness of the body. Moving pain. Poor appetite. Loose stools or. Diarrhea.

HERBS AND ACTIONS

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels.

-Hai Tong Pi - Dispels Wind-Dampness, unblocks the channels and collaterals, promotes urination and reduces edema.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, reduces swelling and alleviates pain. With Gan Cao, moderates spasms.

-Bai Shao - Nourishes the Blood, astringes Yin, calms Liver Yang and Liver Wind and alleviates pain. With Gan Cao, for muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency. With Dang Gui, nourishes Yin and Blood.

-Jiang Huang - Invigorates the Blood, eliminates Blood Stasis, expels Wind and Reduces swelling. With Hai Tong Pi, Qiang Huo and Dang Gui, for Bi syndrome.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Gan Cao - Moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Low back pain.

* SI QI TANG - 四七汤 - Four Ingredient Decoction For The Seven Emotions

ACTIONS - Moves Qi. Descends Rebellious Qi. Transforms Phlegm. Harmonizes the Stomach. Disperses clumping.

SYNDROMES - Phlegm-Accumulation causing problems with any of the Seven Emotions.

CLINICAL MANIFESTATIONS - Anger. Fear. Fright. Depression. Obsession. Grief. Sadness. Melancholy.

NOTES - This formula is suitable for long-term use.

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, dissipates nodules and reduces Stagnation. With Fu Ling, for Phlegm, thin mucus and turbid Dampness. With Sheng Jiang, for vomiting due to Cold, thin mucus. With Hou Po, for Phlegm-Dampness with Qi Stagnation. With Hou Po, Zi Su Ye and Fu Ling, for Plum pit Qi Stagnation.

-Fu Ling - Quiets the Heart, calms the Spirit, soothes the nerves, promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Ban Xia, prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia.

-Zi Su Ye - Promotes the movement of Spleen and Stomach Qi. With Ban Xia and Hou Po, for Spleen and Stomach Qi Stagnation with Accumulation of Phlegm.

-Hou Po - Promotes the movement of Qi in the Middle Jiao, resolves Stagnation, descends Rebellious Qi, dries Dampness and transforms Phlegm. With Ban Xia and Fu Ling, for Phlegm Obstructing the Qi, leading to coughing, vomiting or a sense of something stuck in the throat.

-Sheng Jiang - Adjusts the Ying and Wei, normalizes the flow of Qi at the center and reduces the toxicity of other herbs. With Da Zao, protects the Stomach Qi and reduces irritation of the gastrointestinal tract by other herbs. With Ban Xia, for Phlegm-Dampness.

-Da Zao - Nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, prevents Phlegm Accumulation.

TREATS

Schizophrenia.

* TAO HE CHENG QI TANG - 桃核承氣湯 - Peach Pit Decoction To Order The Qi. Persica and Rhubarb Combination. Purgative Decoction of Persica Seed

ACTIONS - Drains Heat. Breaks up Blood Stasis.

SYNDROMES - Lower Jiao Blood Stagnation with Heat. Tai Yang - Shang Han with Blood Stagnation. Yang Ming Stage with Blood Stagnation. Traumatic injury with intractable pain and difficulty passing stool.

CLINICAL MANIFESTATIONS - Acute lower abdominal pain. Incontinence of urine. Night fevers. Delirious speech. Irritability. Restlessness. Thirst. May be mania (severe). Dysmenorrhea. Amenorrhea. Hard stool. Dark red complexion. Headache. Vertigo. Tinnitus. Insomnia. Palpitations. Constipation. Frequent urination. Emotional instability. Chills in the waist and feet. Afternoon fever. Tremors. Excruciating abdominal pain with cold. Black stool. May be chills and fever. Hemoptysis. Hematuria. Red eyes. Pain and distention of the head. Toothache. Irregular menstruation. Lochioschesis. Severe wheezing. Distention of the chest.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Exterior symptoms still present. Contraindicated during pregnancy. This formula is

recommended for treatment of menopausal symptoms induced by gonadotropin-releasing hormone agonists without a negative effect on serum estradiol levels.

HERBS AND ACTIONS

-Tao Ren - Breaks up Blood Stagnation, invigorates Blood circulation, moistens the Intestines and unblocks the bowels. With Da Huang, for Blood Stasis and Heat in the Lower Jiao.

-Da Huang - Attacks and purges accumulations, clears pathogenic Heat, drains Heat from the Blood, invigorates the Blood and dispels Blood Stasis. With Gui Zhi, for Blood Stasis (removes Stasis and unblocks the flow of Qi), combined Interior/Exterior conditions with chills, headache, fever, sweating and abdominal fullness and pain and abdominal fullness and pain as a result of purging an Exterior condition too soon.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the sinews and dispels retained Blood from the Lower Jiao, effectively unblocking the Blood in the vessels. With Tao Ren, breaks up and eliminates Blood Stasis.

-Mang Xiao - Purges accumulations, guides out Stagnation, softens hardness, clears Heat, drains Fire and moistens Dryness. With Da Huang, moving the stool, drains Heat and Eliminates Blood Stasis.

-Gan Cao - Protects the Stomach, Calms the Middle Jiao and moderates and harmonizes the harsh properties of other herbs.

TREATS

Acute endometriosis. Retained placenta. Acute pelvic inflammatory disease. Intestinal obstruction. Oophoritis. Habitual abortion. Stillbirth. Difficult childbirth. Cystitis. Cholelithiasis. Urolithiasis. Urethritis. Prostatitis. Prostamegaly. Seborrheic dermatitis. Exudative eczema. Urticaria. Acne. Athletes foot. Ringworm. Frostbite. Warts. Prolonged lochia. Ectopic pregnancy. Benign prostatic hypertrophy. Hemorrhagic fever with renal syndrome. Traumatic headache. Sequelae of brain trauma. Recalcitrant migraine. Schizophrenia. Epilepsy. Hordeolum. Brandy nose. Cerebrovascular disease. Varicose veins. Scarlet fever. Cholecystitis. Enteroparalysis. Pharyngitis. Diabetes mellitus. Climacteric disorders. Rheumatism. Hematuria. Metrorrhagia. Headache. Endometriosis. Kidney failure. Jaundice. Bladder cancer. Afternoon fever. Hemorrhoids. Amenorrhea. Enuresis. Palpitations. Liver cancer. Urinary incontinence. Red eyes. Blepharitis. Conjunctivitis. Pterygium. Retinitis. Hemophthalmia. Glaucoma. Conjunctival bleeding. Bleeding of the tongue. Gingivitis with bleeding. Intestinal bleeding. Bleeding of the anus. Uterine bleeding. Hypertension. Myocardial infarction. Habitual constipation. Arteriosclerosis. Pyorrhea. Neuralgia. Rheumatism. Uterine fibroids. Pelvic masses. Neurosis. Swellings. Uterine myoma. Post tubal ligation syndrome. Perimenopausal syndrome. Gonorrhea. Colitis. Cerebral contusion. Headache from

subarachnoid hemorrhage. Trigeminal neuralgia. Hysterical psychosis. Reactive psychosis. Erysipelas. Allergic purpura. Hepatitis. Pyelonephritis. Renal insufficiency. Renal colic. Endometritis. Hemoptysis. Pelvic cellulitis. Periodontitis. Insomnia. Stomach cancer. Oliguria. Hyperglycemia. Bi-polar disorder. Breast cancer. Tinnitus. Hemafecia. Dysmenorrhea. Low back pain. Puerperal fever. Toothache. Ulcerative colitis.

* TRICHOMONAS VAGINITIS WASH (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Eliminates Dampness. Kills parasites. Stops vaginal discharge.

SYNDROMES - Damp-Heat.

CLINICAL MANIFESTATIONS - Yellow vaginal discharge. Discharge is spongy and frothy. Discharge may cloudy or turbid. Discharge may be accompanied by a foul smell. Short, reddish urination. Intense vaginal itching which is difficult to bear.

HERBS AND ACTIONS

-Ku Shen - Disperses Wind, kills parasites and stops itching topically.

-She Chuang Zi - Dries Dampness, kills parasites and stops itching topically.

-Bai Bu - Expel parasites and kills lice. With Ku Shen, as an external wash for lice.

-Huang Lian - Clears Heat topically.

-Lang Du - Kills Intestinal parasites and alleviates pain.

TREATS

Trichomonas vaginitis.

* TUI CHI SAN - 退赤散 - Abate The Red Powder

ACTIONS - Clears Heat. Dispels Stasis.

SYNDROMES - Deep-Lying Heat in the Channels.

CLINICAL MANIFESTATIONS - Sparsely scattered fine vessels on the surface of the whites of the eyes. Slight tearing. Photophobia. Tearing. Slight itching and soreness of the eyes which is worse in the afternoon.

HERBS AND ACTIONS

-Sang Bai Pi - Drains Heat from the Lungs, stops coughing and calms wheezing. With Huang Qin, drains Heat from the Lungs and stops coughing and wheezing.

-Gan Cao - Clears Heat, relieves Fire toxicity, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Huang Qin - Drains Fire, resolves Dampness, detoxifies, cools the Blood, stops bleeding and calms ascending Liver Yang.

-Jie Geng - Opens and raises Lung Qi, directing the effects of other herbs to the upper body. With Gan Cao, for Excess disorders in the Upper Jiao with no disorder in the Lower Jiao.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, clears Deficiency Fire, invigorates the Blood, dispels Blood Stasis and clears Liver Fire.

-Tian Hua Fen - Drains Heat, generates Fluids, clears, drains Lung Heat, transforms Phlegm, moistens Lung Dryness, relieves toxicity, expels pus and reduces swelling.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat, cools the Blood, clears Liver Fire and relieves eye pain. With Mu Dan Pi, cools the Blood and disperses Stasis, for Ying Stage Heat with epistaxis, hemoptysis, hemafecia, hematuria, menorrhagia and skin rashes and Blood Stasis disorders.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, reduces swelling and alleviates pain.

-Gua Lou - Clears Heat, transforms Hot Phlegm and cools and moistens the Lungs.

TREATS

Red eyes.

Candida #1, Fang Feng Tang Jia Jian, Gua Lou Gui Zhi Tang, Hemiplegia Bath #1, Huo Yu Tang, Run Chang Wan, Shu Jin San, Ti Gang Tang, Wang Qiu Zhou Tang

Recordings Updated in May 2025

* CANDIDA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Damp-Heat. Resolves toxins. Stops itching. Tonifies the Kidneys. Invigorates the Blood.

SYNDROMES - Damp-Heat in the Lower Jiao.

CLINICAL MANIFESTATIONS - Skin lesions with profuse fluid discharge. Fever. Thirst. Dry mouth with no desire to drink. Anorexia. Body heavy. Limbs tired. Fullness in chest. Lump in epigastrium. Leukorrhagia with thick, yellowish, foul discharge. Frequent, scanty, reddish urination.

HERBS AND ACTIONS

-Bai Xian Pi - Clears Damp-Heat and stops itching.

-Xu Chang Qing - Resolves toxins and stops itching.

-Yin Yang Huo - Tonifies the Kidneys and strengthens Yang.

-Bei Xie - Resolves turbid Dampness in the Lower Jiao and Clears Damp-Heat.

-Wang Bu Liu Xing - Promotes the movement of Blood and invigorates the channels.

TREATS

Candidiasis. Yeast infection.

* FANG FENG TANG JIA JIAN - 防風湯加減 - Modified Saposhnikvia Decoction

ACTIONS - Dispels Wind. Circulate Qi. Disperse Cold. Eliminate Dampness.

SYNDROMES - Wind Bi. Early stage Wind-Cold-Damp with preponderance of Wind.

CLINICAL MANIFESTATIONS - Wandering joint pain, especially wrists, elbows, knees and ankles. Limited movement. Chills and fever.

HERBS AND ACTIONS

-Fang Feng - Releases the exterior, expels External Wind, expels Wind-Dampness and alleviates pain. With Qin Jiao, for Wind Damp Bi with spasms of the tendons or numbness of the limbs and pain due to Wind-Dampness in patients with Blood

Deficiency. With Ma Huang, dispels Wind-Cold from the Exterior.

-Ma Huang - Induces sweating, releases the exterior, promotes urination, reduces edema and warms and disperses Cold pathogens.

-Dang Gui - Tonifies, activates and harmonizes the Blood, regulates the menses, disperses Cold and stops pain due to Blood Stasis.

-Qin Jiao - Expels Wind-Dampness, opens the channels and soothes the sinews and collaterals.

-Gen Gen - Discharges Exterior conditions. releases the muscles, especially of the neck and upper back, relieves Heat and generates fluids.

-Qiang Huo - Releases the Exterior, dispels Wind-Cold-Dampness from the upper Tai Yang, opens the channels, vitalizes vessels and stops pain. With Fang Feng for pain due to Wind- Damp.

-Jing Jie - Releases the Exterior, expels Wind, moves Qi, Regulates Blood and reduces swelling. With Fang Feng, for Exterior excess.

-Ji Xue Teng - Nourishes and invigorates the Blood, opens the channels and relaxes the sinews - good for numbness, low back pain and knee pain.

-Luo Shi Teng - Dispels Wind-Dampness and opens channels.

TREATS

Arthralgia. Painful obstruction. Chills. Common cold. Fever. Osteoarthritis.

* GUA LOU GUI ZHI TANG - 栝楼桂枝汤 - Trichosanthis And Cinnamon Twig Decoction

ACTIONS - Releases Wind-Cold from the muscle layer. Relaxes and moistens the sinews. Regulates the Ying and Wei.

SYNDROMES - Wind-Cold Attacking the Exterior with Deficiency of Ying and Wei with neck and shoulder stiffness and pain. Tai Yang Zhong Feng with neck and shoulder stiffness and pain.

CLINICAL MANIFESTATIONS - Neck pain and stiffness. Inhibited side to side turning. Fever and chills unrelieved by sweating. Decreased body resistance. Spontaneous perspiration. Rhinitis. Maybe body aches. Dry heaves. Headache. Muscles of the neck and back are very stiff and rigid. Aversion to Wind. Nasal congestion. No thirst.

HERBS AND ACTIONS

-Tian Hua Fen - Drains Lung Heat, transforms Phlegm, moistens Lung Dryness and generates Fluids.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei. With Gan Cao, for muscle spasms, pain and numbness due to Blood Deficiency. With Gui Zhi, harmonizes the Ying and Wei in Tai Yang Zhong Feng.

-Gan Cao - Moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, adjusts the Ying and Wei and normalizes the flow of Qi at the center. With Da Zao, for External Wind-Cold. With Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens.

-Da Zao - Nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, adjusts the Ying and Wei for treatment of Tai Yang Zhong Feng.

TREATS

Stiff neck.

* HEMIPLEGIA BATH #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Dispels Wind-Dampness. Invigorates the Blood. Breaks up Blood Stasis. Circulates Qi. Alleviates pain.

SYNDROMES - Hemiplegia.

CLINICAL MANIFESTATIONS - Atrophy. Paralysis of the limbs. Paralysis of the bladder and rectum.

HERBS AND ACTIONS

-Wei Ling Xian - Dispels Wind-Dampness.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Tou Gu Cao - Invigorates Blood circulation, breaks up Blood Stasis, reduces swelling, Dispels Wind and Dampness and relaxes the muscles and sinews.

-Gui Zhi - Releases the Exterior, assists Yang, releases the muscle layer, warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Chuan Xiong, expels Wind-Dampness, warms the channels and collaterals, facilitates joint movement and relieves the discomfort of painful obstruction.

-Fang Feng - Expels Wind-Dampness and alleviates pain.

-Lu Lu Tong - Promotes the movement of Qi and invigorates the Blood, expels Wind and unblocks the channels.

-Gan Jiang - Dispels Wind-Dampness and warms the channels.

-Da Huang - Invigorates the Blood, clears Heat and dispels Blood Stasis.

TREATS

Hemiplegia. Post-stroke paralysis.

* HUO YU TANG - 火雨汤 - Fire Depression Decoction

ACTIONS - Releases the Exterior. Vents measles. Clears Heat. Relieves toxicity. Raises Yang and lifts Sunken Qi. Spreads Liver Qi. Relieves Stagnation. Nourishes Blood.

SYNDROMES - Wind-Heat in the Exterior with measles. Five sole Heat due to Liver Stagnation.

CLINICAL MANIFESTATIONS - Fever and chills. Headache. Thirst. Sore throat. Abdominal pain due to disharmony between the Liver and Stomach. Epigastric, hypochondriac or flank pain. Muscle spasms, pain and numbness. Chronic dysenteric disorders. Rectal prolapse. Uterine prolapse. Vertigo. Dizziness. Thoracic and costal pain,. Menstrual irregularity. Five Sole Heat.

HERBS AND ACTIONS

-Sheng Ma - Releases the exterior, vents measles, clears Heat, relieves toxicity, raises Yang and lifts Sunken Qi. With Ge Gen, unblocks pores to vent rashes and treat Wind-Heat patterns in which Heat toxin has injured the Fluids of the Stomach with fever, chills, headache and thirst, for early-stage measles with incomplete expression of the rash with fever along with relatively superficial Yang Ming disorders. With Chai Hu, with other Wind-expelling, exterior releasing herbs to treat continuous fever, headache and sore throat from Wind-Heat patterns constrained in the muscle layer and chronic

dysenteric disorders, rectal prolapse, and uterine prolapse due to Yang Deficiency.

-Chai Hu - Resolves Shao Yang disorders, reduces fever (harmonizes the Exterior and Interior), spreads Liver Qi, relieves Stagnation,.raises Yang Qi (specifically the Clear Qi of the Stomach and Gallbladder), disperses Wind-Heat and resolves Phlegm and congestion. With Bai Shao, for Liver Blood Deficiency with Liver Qi Stagnation and vertigo, dizziness, thoracic and costal pain, and menstrual irregularity due to Liver Qi Stagnation. With Gan Cao, for hepatitis with upper right quadrant pain and Wind-Heat fever. With Ge Gen, for Wind-Heat with neck and shoulder pain.

-Ge Gen - Discharges Exterior conditions, releases the muscles, especially of the neck and upper back, relieves Heat, generates fluids (relieves thirst), vents and discharges measles, raises Spleen Yang, stops diarrhea and alleviates symptoms of hypertension. With Chai Hu, for exterior patterns where the the chills gradually improve while the fever gradually increases along with stiffening of the neck and upper back and absence of sweating.

-Bai Shao - Nourishes Blood, regulates menstruation, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind, alleviates pain and softens the Liver. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes sinews for abdominal pain due to disharmony between the Liver and Stomach, epigastric, hypochondriac or flank pain and muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency. With Chai Hu, for flank pain due to Liver Qi Stagnation.

-Fang Feng - Releases the exterior, expels External Wind, expels Wind-Dampness, alleviates pain, Expels Internal Wind, stops spasms, relieves diarrhea and stops bleeding.

-Cong Bai - Releases the exterior, induces sweating, disperses Cold, unblocks the Yang and relieves toxicity.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

TREATS

Measles. Early-stage measles with incomplete expression of the rash. Hepatitis with upper right quadrant pain. Oliguria. Chronic dysenteric disorders. Rectal prolapse. Uterine prolapse. Wind-Heat with neck and shoulder pain. Abdominal pain.

* RUN CHANG WAN - 潤腸丸 - Moisten The Intestines Pill. Moisten the Intestines Pill (from Master Shen's Book.) Pill for Lubricating the Intestines

ACTIONS - Moistens the Intestines. Promotes defecation. Invigorates the Blood. Disperses Wind.

SYNDROMES - Constipation (usually severe) due to Wind-Heat entering the Intestines and injuring the Spleen and Stomach. Constipation due to improper diet or overwork. Constipation due to combined Blood Deficiency, Blood Stasis and Internal Wind due to Blood Deficiency. Constipation due to Heat Attacking the Lungs and Intestines and consuming Body Fluids.

CLINICAL MANIFESTATIONS - Habitual constipation. Lusterless skin and nails. Dry mouth. Unquenchable thirst. Constipation in the elderly or weak individuals. Dizziness. Dry stools that are not difficult to pass. Palpitations. Lack of appetite. Lethargy.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution during pregnancy.

HERBS AND ACTIONS

-Da Huang - Drains Heat, purges accumulations, invigorates the Blood and dispels Blood Stasis.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, moistens the Intestines and unblocks the bowels.

-Qiang Huo - Releases the exterior and expels Wind.

-Tao Ren - Breaks up Blood Stasis, invigorates Blood circulation, moistens the Intestines and unblocks the bowels.

-Huo Ma Ren - Nourishes, moistens and lubricates the Intestines and nourishes the Yin. With Tao Ren and Dang Gui, for habitual constipation.

TREATS

Chronic constipation. Constipation in the initial stage of trauma to the lumbar vertebrae. Constipation as sequela to cerebrovascular accident. Constipation associated with hypertension. Dry skin. Constipation in anemic or elderly people. Constipation in association with prolapse of the lumbar intervertebral discs or compressed fracture of the intervertebral discs. Hemorrhoids.

* SHU JIN SAN - 舒筋散 - Relax The Sinews Powder

ACTIONS - Invigorate the Blood. Break up Stagnation.

SYNDROMES - Blood Stagnation.

CLINICAL MANIFESTATIONS - Lower back pain that is fixed, stabbing and /or severe. Pan is worse with pressure. Dark complexion. difficulty walking. In severe cases, movement is difficult and very painful with restricted range of motion. The pain may be worse in the evening and is unaffected by weather or temperature. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas. Varicose and spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots.

HERBS AND ACTIONS

-Yan Hu Suo - Invigorates the Blood, circulates Qi, stops pain and disperses extravasation.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens Yang and Ming Men Fire, disperses deep Cold, warms the channels, unblocks the channels and vessels, alleviates pain and assists in the generation of Qi and Blood.

-Du Zhong - Tonifies the Kidneys and Liver, tonifies Kidney Yang,strengthens the sinews and bones and aids the smooth flow of Qi and Blood.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels.

-Shan Yao - Tonifies Kidney Yin and astringes Jing.

TREATS

Low back pain.

* TI GANG TANG - 提肛汤 - Lift The Anus Decoction

ACTIONS - Tonifies Middle Jiao Qi. Benefits Qi. Raises Sunken Yang. Lifts prolapsed anus. Nourishes the Blood.

SYNDROMES - Central Qi Sinking with Qi and Blood Deficiency.

CLINICAL MANIFESTATIONS - Protruding hemorrhoids when defecating or when walking, coughing, sneezing or standing for a long time. Non-returning hemorrhoids unless assisted manually or by lying down. Discharge of pale-colored Blood. Forceless defecation. Frequent defecation or. Enduring diarrhea. Fatigue. Lassitude. Prolapse of one or more organs. Sallow complexion. Anorexia. Abdominal and epigastric distention after eating. Four limbs feel tired and heavy. Maybe acid regurgitation or vomiting. Loose stools. Shortness of breath. Dizziness. Palpitations. Insomnia. Dry skin. Dry hair. Poor memory. Paleness. Scanty periods.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, promotes the discharge of pus, generates flesh and expels toxins. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Sheng Ma, raises the Yang Qi of the Spleen, allowing turbid Yin to descend and be eliminated, treating chronic diarrhea, a dragging sensation in the abdomen, fatigue, shortness of breath, uterine bleeding and prolapses. With Bai Zhu and Sheng Ma, for Spleen Qi Sinking with rectal and/or uterine prolapse or excessive uterine bleeding.

-Sheng Ma - Raises Yang and lifts sunken Qi. With Bai Zhu, for Dai channel spasms manifested as dragging sensations in the lower body, usually accompanied by vaginal discharge.

-Dang Shen - Tonifies the Middle Jiao,augments Qi and nourishes the Blood. With Huang Qi, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweating. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Dang Gui - Tonifies, activates and harmonizes the Blood, moistens the Intestines, unblocks the bowels, reduces swelling, expels pus, generates flesh and alleviates pain. With Huang Qi, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesia. With Bai Shao, regulates and harmonizes Qi and Blood. With Chuan Xiong, harmonizes, nourishes and activates the Blood and disperses Blood Stasis.

-Bai Shao - Nourishes the Blood and regulates menstruation.

-Huai Hua - Cools the Blood and stops bleeding. With Di Yu, for hot, bleeding hemorrhoids or other Intestinal bleeding.

-Di Yu - Cools the Blood and stops bleeding.

-Chuan Xiong - Activates the Blood and promotes the movement of Qi. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses and amenorrhea.

TREATS

Hemorrhoids. Anal prolapse.

* WANG QIU ZHOU TANG - 网球肘汤 - Relieve Tennis Elbow Decoction

ACTIONS - Dispels Wind-Cold-Damp. Unblocks the collaterals. Invigorates the Blood. Breaks up Blood Stasis. Stops pain.

SYNDROMES - Wind-Cold-Damp with Blood Stagnation.

CLINICAL MANIFESTATIONS - Elbow pain. Diffuse distending pain or. Stabbing pain. Impaired strength of hand muscles. Limited movement. Pain worse at night. Aversion to Wind and Cold. Aversion to Damp weather. Pain alleviated by movement. Heaviness of the hand. Local tenderness on palpation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Heat Accumulation.

HERBS AND ACTIONS

-Sang Zhi - Dispels Wind-Dampness, unblocks the channels and collaterals, benefits the joints and stops spasms. With Gui Zhi, for pain in the upper extremities.

-Hai Feng Teng - Dispels Wind-Dampness, unblocks the channels, disperses Cold and stops pain. With Gui Zhi, for pain, impaired joint movement and spasms of the sinews due to Wind-Damp Bi.

-Ji Xue Teng - Invigorates and tonifies the Blood, activates the channels and relaxes the sinews.

-Xi Xian Cao - Dispels Wind-Dampness, strengthens the sinews and unblocks the channels and collaterals.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Bai Shao, for External Wind-Cold with disharmony between the Ying and Wei. ith Chuan Xiong, expels Wind-Dampness, warms the channels and collaterals, facilitates joint movement and relieves the discomfort of painful obstruction.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei and alleviates pain.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis and relieves pain.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain and reduces

swelling. With Ru Xiang, dredges the channels and collaterals to treat joint pain.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, activates the channels and alleviates pain. With Mo Yao, for Wind-Cold-Damp Bi with numbness throughout the body and unresponsive extremities.

TREATS

Lateral epicondylitis. Tennis elbow. Epitrochleitis. Elbow pain.

Bu Fei Tang, Dang Gui Liu Huang Wan, Huang Lian Jie Du Tang Wu Wei Xiao Du Yin He Cai, Mi Tuo Seng San, Panarthralgia #2, Ren Shen Bai Du San, Shao Yao Gan Cao Fu Zi Tang, VaginalWash #2, Wu Tou Gui Zhi Tang

Recordings Updated in May 2025

* BU FEI TANG - 補肺湯 - Tonify The Lungs Decoction. Reinforce the Lungs Decoction. Astragalus and Aster Combination

ACTIONS - Augments Qi. Stabilizes the exterior. Resolves Phlegm.

SYNDROMES - Lung Qi Deficiency.

CLINICAL MANIFESTATIONS - Shortness of breath. Spontaneous perspiration. Occasional chills and fever. Cough. Wheezing with thin, scanty sputum. Low energy. Gasping. Apathy. A propensity to catch cold easily. Chest oppression. Weak and low voice. Dyspnea. Fatigue. Taciturnity. Intolerance of Cold. Pale face.

NOTES - At present, there are over fifteen formulas with this name. This is the most commonly used one.

HERBS AND ACTIONS

-Ren Shen - Tonifies Lung Qi and strongly tonifies Yuan Qi. With Huang Qi, tonifies Qi and strengthens Wei Qi for Qi Deficiency with general debility, anorexia, and

spontaneous sweat and Lung Qi Deficiency.

-Huang Qi - Tonifies Wei Qi, stabilizes the exterior and tonifies the Lungs.

-Shu Di Huang - Nourishes Yin and arrests cough and wheezing. With Wu Wei Zi, strengthens the lower body. With Ren Shen, for Qi and Yin Deficiencies.

-Wu Wei Zi - Tonifies Qi, astringes Jing, helps the Kidneys grasp Qi and astringes leakage of Lung Qi. With Huang Qi, for Yang Deficiency with spontaneous sweat.

-Zi Wan - Moistens the Lungs, stops cough and expels Phlegm. With Wu Wei Zi, for productive cough, wheezing and spontaneous perspiration. With Ren Shen, Huang Qi and Wu Wei Zi, for chronic cough due to Lung Deficiency.

-Sang Bai Pi - Drains Heat from the Lungs, descends Lung Qi and stops cough and wheezing.

TREATS

Cough. Pulmonary tuberculosis. Influenza. Emphysema. Polyuria. Asthma. Fever. Allergic sinusitis. Palpitations. Fatigue. Facial edema. Palpitations. Upper respiratory tract infection. Urinary incontinence. Common cold. Chronic bronchitis. Hay fever. Chronic obstructive pulmonary disease (COPD). AIDS/HIV. Allergic rhinitis. Nasal congestion. Weakness. Gasping. Enuresis. Spontaneous perspiration. Dyspnea. Coughing and asthma associated with AIDS/HIV.

* DANG GUI LIU HUANG WAN - 当归六黄汤 - Decoction Of Chinese Angelica And Six Yellow Ingredients. Tangkuei and Six-Yellow Decoction

ACTIONS - Nourishes Yin. Clears Heat. Stabilizes the Exterior. Stops sweating.

SYNDROMES - Kidney and Liver Yin Deficiency Fire with Blood Deficiency.

CLINICAL MANIFESTATIONS - Fever. Night sweats. Red face. Dry mouth. Leukorrhagia with yellow, thick, foul discharge. Constipation. Dark, scanty urine. Irritation. Fidgeting. Insomnia. Five Sole Heat. Irregular menstruation. A thin physique. Nocturnal emissions. Parched lips. Irritability. Dry stools.

HERBS AND ACTIONS

-Dang Gui - Tonifies the Blood, regulates menses and invigorates and harmonizes the Blood.

-Di Huang - Clears Heat, cools the Blood, nourishes the Yin and generates fluids. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Shu Di Huang - Tonifies the Blood and Yin.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and relieves toxicity.

-Huang Qin - Clears Lung Heat, dries Dampness drains Fire, detoxifies and calms ascending Liver Yang. With Huang Lian, for high fever and irritability in warm-febrile disease.

-Huang Bai - Drains Damp-Heat, drains Kidney Fire and relieves toxicity.

-Huang Qi - Strengthens the Spleen, tonifies Qi, generates Body Fluids, raises the Yang Qi of the Spleen and Stomach, nourishes Blood, promotes urination, reduces edema and expels toxins. With Dang Gui, for Qi and Blood Deficiency. With Huang Bai and Di Huang, for Yin Deficiency with night sweats.

TREATS

Lung consumption. Steaming bone disorder. Post febrile disease. Chronic epistaxis. Hyperthyroidism. Pulmonary tuberculosis. Chronic hepatitis. Viral hepatitis. Silicosis. Myocarditis. Insomnia. Abnormal perspiration. COPD. Allergic purpura. Herpes zoster. Night sweats. Indigestion. Metrorrhagia. Chronic bronchitis. Cholecystitis. Nephritis. Urinary tract infection. Neurasthenia. Osteomyelitis. Leukemia. Cervicitis. Hectic fever. Thrombocytopenic purpura. Menopause. Constipation. Herpes simplex. Hypertension. Nocturnal emissions. Strangury.

* HUANG LIAN JIE DU TANG WU WEI XIAO DU YIN HE CAI - 黃連解毒湯五味消毒飲合彩 - Combined Coptis Decoction To Relieve Toxin And Five-ingredient Decoction To Eliminate Toxin

ACTIONS - Cools Blood. Clears Heat. Relieves Toxin.

SYNDROMES - Fire/Heat Toxin induced psoriasis.

CLINICAL MANIFESTATIONS - Lesions develop and spread quickly. Lesions often coalesce together. Lesions are covered by fine scales that shed easily Itching. Burning Pain. High fever. Yellow urine. Thirst. Dry stools.

HERBS AND ACTIONS

-Pu Gong Ying - Clears Heat and resolves Dampness. With Jin Yin Hua, for all hot, painful, hard, and deep-rooted boils.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity, vents and disperses External Wind-Heat and clears Damp-Heat from the Lower Jiao. With Jin Yin Hua, for suppurating boils

that have not ulcerated, or have ulcerated but are not discharging pus.

-Zi Hua Di Ding - Clears Heat, relieves Fire toxicity and clears Hot sores. With Pu Gong Ying, for breast abscesses, furuncles, boils, carbuncles and Damp-Heat jaundice.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and relieves toxicity. With Huang Qin and Zhi Zi, for high fever, irritability, dry mouth and throat, and dark urine due to Fire toxin in the three burners. With Di Huang, for insomnia and delirium due to unremitting Heat injuring the Ying level.

-Huang Qin - Clears Heat, resolves Fire toxins, invigorates the Blood, reduces swellings, promotes urination and reduces edema.

-Huang Bai - Drains Damp-Heat, especially from the Lower Jiao, drains Deficiency Fire, drains Fire and relieves toxicity.

-Zhi Zi Tan - Clears Heat, reduces Fire, drains Damp-Heat, cools Blood and relieves toxicity.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Chi Shao - Clears Heat, cools the Blood, activates Blood and dispels Blood Stasis.

TREATS

Psoriasis due to Fire/Heat Toxin. Allergic dermatitis.

* MI TUO SENG SAN - 密陀僧散 - Lithargyum Powder (Topical)

ACTIONS - Dispels Wind-Dampness. Kills parasites. Stops itching.

SYNDROMES - Wind-Damp.

CLINICAL MANIFESTATIONS - Itching. Weeping skin lesions.

HERBS AND ACTIONS

-Liu Huang - Relieves toxicity, kills parasites and stops itching.

-Xiong Huang - Relieves toxicity and kills parasites topically.

-She Chuang Zi - Dries Dampness, kills parasites and stops itching topically. With Qing Fen, for Itching, weeping skin lesions due to flare-ups of chronic eczema, genital eczema or scabies. With Ming Fan, Liu Huang and Xiong Huang, for weeping skin lesions.

-Mi Tuo Seng - Eliminates toxins and kills parasites topically. With Xiong Huang and Liu Huang, for Severe underarm odor, tinea versicolor, vitiligo, scabies, eczema and pemphigus. With Qing Fen, for general dermatological disorders.

-Ming Fan - Relieves toxicity, dries Dampness, kills parasites, alleviates itching, restrains and inhibits sores, generates flesh and transforms putrefication. With She Chuang Zi, for intense itching of eczema, chronic vaginal discharge, damp scrotum and other pruritic disorders. With Xiong Huang, for Wind-Damp-Heat toxin in the muscles and skin with severe itching that results in a yellow exudate after scratching. With Liu Huang, topically as a powder for scabies.

-Qing Fen - Resolves toxicity, strongly kills parasites, generates flesh, promotes the healing of sores and expels water.

TREATS

Lupus erythematosis. Vitiligo tragomaschalia. Eczema. Dermatomycosis microsporina. Tinea versicolor. Scabies.

* PANARTHRALGIA #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Promotes Qi movement. Unblocks the Channels. Alleviates pain. Expels Wind-Dampness. Disperses Cold. Warms and activates the Channels. Resolves toxicity. Reduces swellings. Invigorates the Blood. Drains water downward. Eliminates congested fluids and thin mucus. Clears Heat.

SYNDROMES - Joint pain as intense as a tiger bite with scary pain in the bones and joints.

CLINICAL MANIFESTATIONS - Joint pain as intense as a tiger bite with scary pain in the bones and joints.

HERBS AND ACTIONS

-Bai Jie Zi - Warms the Lungs, expels Phlegm, promotes Qi movement, dissipates nodules, unblocks the collaterals and alleviates pain.

-Mu Bie Zi - Resolves toxicity, reduces swellings and invigorates the Blood.

-Gan Sui - Drains water downward and eliminates congested fluids and thin mucus Clears Heat, reduces swelling and disperses hardenings

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, activates the channels and alleviates pain.

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

TREATS

Panarthralgia.

* REN SHEN BAI DU SAN - 人参败毒丸 - Ginseng Powder To Overcome Pathogenic Influences. Ginseng and Mentha Formula. Antiphlogistic Powder of Ginseng. Bai Du San

ACTIONS - Releases the Exterior. Augments Qi. Removes Wind-Cold-Damp. Eliminates Painful Obstruction. Circulates Qi and Blood. Stops pain.

SYNDROMES - Wind-Cold-Dampness with Deficient normal Qi. Wind-Cold-Damp Bi. Muscular atrophy due to Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - High fever accompanied by severe chills and shivering. Aversion to Cold. Pain worse at night. Difficult movement. Local inflammation. Migratory pain. Soreness and pain of the extremities. Nasal congestion with sonorous breathing. Anhidrosis. Pain and stiffness of the head and neck. Focal distention and fullness of the chest and diaphragm. A productive cough. May have numbness and heaviness in the limbs. Body aches. Nasal obstruction. Cough with sputum. Stuffy nose. Joint pain. Pain worse with Cold and better with warmth. Pain aggravated by Wind. Pain aggravated by Dampness. Pain is stabbing. Muscle weakness. Pain alleviated by movement. Slight muscle edema. Heaviness of the joints. Cold joints. Headache. Dizziness.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat in the channels. Contraindicated for those with Exterior Wind-Heat. Contraindicated for those with Internal Heat. Contraindicated for those with Yin Deficiency with Exterior Invasion. Contraindicated for those with a strong constitution.

NOTES - This formula warms without drying. This formula unblocks without causing damage. This formula has a stronger Wind relieving and pathogen expelling action than Juan Bi Tang.

HERBS AND ACTIONS

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Du Huo, expels Wind-Cold from the exterior, dispels Dampness and alleviates pain. Qiang Huo is better for superficial Wind-Dampness and upper extremities and Du Huo is better for deeper Wind-Dampness and lower extremities. With Chuan Xiong, for headache and generalized body aches and pains associated with the common cold or painful obstruction. With Jie

Geng, for skin conditions.

-Du Huo - Disperses Wind-Cold-Dampness, opens the channels and alleviates pain. With Qiang Huo, for joint pain and numbness.

-Chuan Xiong - Regulates Qi, helps Qiang Huo and Du Huo release the exterior, moves Blood, expels Wind-Cold, enhancing the pain relieving function of the formula (especially in the head and neck) and treats headaches.

-Chai Hu - Expels Wind-Heat, raises Yang Qi, and resolves Phlegm and congestion. With Bo He, releases the exterior, reduces fever, and expels the pathogenic influences, especially from the muscle layer. With Zhi Ke, for Stifling sensation in the chest, abdominal pain, poor appetite, and irregular bowel movements. With Gan Cao, for Wind-Heat fever.

-Jie Geng - Opens the Lungs, expels Phlegm, expels pus, benefits the throat and directs the effects of other herbs to the upper body. With Zhi Ke regulates the Qi flow in the chest. With Zhi Ke and Qian Hu, improves Lung Qi circulation, expels Phlegm and stops cough. With Gan Cao, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat and Lung abscess with expectoration of pus and pain in the chest and flanks and for Excess disorders in the Upper Jiao with no disorder in the Lower Jiao.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure, resolves hardenings and removes stagnated food. With Chai Hu and Bo He, for Upper Jiao surface Heat problems. With Jie Geng, regulates the flow of Qi in the chest and aids in the transformation of Phlegm for chest congestion.

-Qian Hu - Descends Qi, expels Phlegm and expels Wind-Heat. With Fu Ling and Sheng Jiang, treats the manifestation and root. With Jie Geng and Bo He, for symptoms of Wind-Heat. With Chai Hu, for Wind-Heat constraining the Lungs, leading to a stifling sensation in the chest and cough with profuse sputum.

-Ren Shen - Strengthens Qi to expel pathogenic influences, generates fluids to produce sweat, and strengthens the body's resistance to invasion, preventing a relapse. With Chai Hu, Chuan Xiong, Sheng Jiang and Bo He, moves Qi and expels external pathogens. With Qiang Huo, Chai Hu and Du Huo, for Exterior invasion with Interior Deficiency.

-Fu Ling - Transforms Phlegm, strengthens the Spleen, leaches out Dampness and promotes urination. With Qian Hu, Jie Geng and Zhi Ke, resolves Phlegm and stops cough. With Gan Cao, for Spleen and Heart Deficiencies causing facial edema, palpitations, and shortness of breath.

-Gan Cao - Assists Ren Shen in tonifying Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the

harsh properties of other herbs. With Jie Geng, for pain and swelling of the throat. With Ren Shen, relieves palpitations and anxiety.

-Sheng Jiang - Releases the exterior, warms the Lungs, disperses Cold, stops cough and reduces the toxicity of other herbs. With Da Zao, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen, prevents Phlegm accumulation and treats External Wind-Cold.

-Bo He - Disperses Wind-Heat, vents rashes, clears the head and eyes and benefits the throat.

TREATS

Common cold. High fever. Mumps. Dysentery. Early stages of boils. Eczema. Influenza. Bronchitis. Allergic dermatitis. Upper respiratory tract infection with fever. Nasal congestion. Rheumatism. Eye disorders. Ulcers. Early-stage carbuncle. Cough. Neuralgia. Weakness. Arthralgia. Neck stiffness. Urticaria. Rheumatic arthritis. Chronic lumbago. Arthralgia. Osteoarthritis. Rheumatoid arthritis. Gouty arthritis. Bursitis. Hoarseness. Suppurative infection. Acute viral hepatitis. Malaria. Diarrhea. Dizziness. Nasal obstruction. Pneumonia. Herpes genitalia. Headache. Puerperal fever.

* SHAO YAO GAN CAO FU ZI TANG - 芍药甘草附子汤 - Peony, Licorice And Aconite Decoction

ACTIONS - Softens the Liver. Warms Yang. Benefits Yin. Moderates painful spasms. Relieves pain. Harmonizes the Middle Jiao.

SYNDROMES - Acute cramping due to Yang Deficiency. Shang Han Tai Yang which shows Yang Deficiency symptoms after diaphoresis.

CLINICAL MANIFESTATIONS - Acute muscular cramping. Cold limbs. Fear of Cold. Chills. Convulsions. Anxiety. Back spasms. Knee spasms. Spasms around the waist. Spasms of the gastrocnemius. Sciatica. Low back pain. Stiff shoulders. Pain on urination.

HERBS AND ACTIONS

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach and epigastric, hypochondriac or flank pain.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs.

-Fu Zi - Warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold

and Dampness, warms the channels and stops pain.

TREATS

Acute muscular cramping. Sciatica. Muscular rheumatism. Intestinal hernia. Biliary colic. Renal colic. Hemorrhoidal colic. Low back pain.

* VAGINAL WASH #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Fire. Relieves toxicity. Kills parasites. Stops itching. Alleviates pain.

SYNDROMES - Vaginal ulcerations and erosions.

CLINICAL MANIFESTATIONS - Ulcerations. Erosions.

HERBS AND ACTIONS

-Ku Shen - Disperses Wind, kills parasites and stops itching topically. With Huang Bai and She Chuang Zi, as an herbal wash for general itching or vaginitis due to trichomonas infection. With Huang Bai, She Chuang Zi and Ming Fan, for skin itching with lesions and abscesses topically.

-She Chuang Zi - Dries Dampness, kills parasites and stops itching topically. With Ming Fan and Huang Bai, as a vaginal suppository for itching associated with trichomoniasis. With Ku Shen, for itchy, weeping skin lesions.

-He Shi - Kills parasites and alleviates pain. With Ku Shen, Bai Bu and She Chuang Zi, as a steam and wash for vaginal itching.

-Bai Bu - Expel parasites and kills lice. With Ku Shen, as an external wash for lice.

-Huang Bai - Drains Fire and relieves Fire toxicity topically.

-Ming Fan - Restrains and inhibits sores, generates flesh and transforms putrefication topically. With She Chuang Zi, as an external wash for chronic vaginal discharge with itching and eczema and as a wash for genital itching due to vaginal candidiasis in women. With Bai Bu, as an external wash for eczema.

-Xiong Huang - Relieves toxicity and kills parasites. With Ming Fan, for sores with redness, swelling, itching and pain topically.

TREATS

Vaginal discharge.

* WU TOU GUI ZHI TANG - 烏頭桂枝湯 - Aconite And Cinnamon Twig Combination. Wu Tou and Cinnamon Combination. Decoction of Aconiti and Ramulus Cinnamomi

ACTIONS - Warms the Interior. Reinforces Yang. Releases the Exterior. Regulates the Ying and Wei.

SYNDROMES - Interior Cold due to Yang Deficiency with Wind-Cold Invasion giving rise to Cold-Type Bulging Disorder (hernia). Retention of Cold-Dampness in the Interior with Attack of Wind-Cold. Jue Yin Cold.

CLINICAL MANIFESTATIONS - Abdominal pain. Cold extremities. Numb hands and feet. Generalized body aches. Paralysis of the extremities. Induration and swelling of the scrotum. Hypersalivation. Limited movement of the joints. Abdominal pain referring to the testis. Aversion to Cold. A preference for Warmth. Loose stools. Chills and fever.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Because of the potency of this formula, stop it as soon as it takes effect.

HERBS AND ACTIONS

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain, unblocks Yang and transforms the Qi and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Bai Shao, for External Wind-Cold with disharmony between the Ying and Wei (Tai Yang Zhong Feng), with spontaneous sweating, fever and chills.

-Sheng Jiang - Releases the Exterior, induces perspiration and disperses Cold. With Da Zao, for External Wind-Cold and protects the Stomach Qi and reduces irritation of the gastrointestinal tract by other herbs. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis. with Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens.

-Bai Shao - Calms Liver Yang and Liver Wind and alleviates pain for Bi syndrome due to Blood Deficiency with pain and spasms. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs.

-Gan Cao - Moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen

TREATS

Hernia. Tumors of the spine. Gangrene with somatic and limb chills or weakness with severe pain. Gallstones. Ascariasis leading to chills and aching. Myelitis. Hydrocele of the tunica vaginalis. Rheumatic arthritis. Tuberculous arthritis. Abdominal pain. Sciatica. Acute and chronic appendicitis. Chronic Intestinal stenosis. Gastric ulcers. Chronic pancreatitis. Neuralgia. Arthritis. Rheumatism. Severe arthralgia that is relieved by Warmth and aggravated by Cold. Peritoneal adhesion. Periostitis. Paralysis of the extremities.

An Shen Bu Xin Wan, Ectopic Pregnancy #5, Neurasthenia #4, Qing Hun San, Shu Gan Tang, Tong Qiao Huo Xue Tang, Wu Pi San, Wu Wei Zi Tang, Xiao Yan Tong Mai He Ji

Recordings Updated in May 2025

* AN SHEN BU XIN WAN - 安神補心丸 - Calm The Spirit And Tonify The Heart

ACTIONS - Acts as a sedative and has adaptogenic properties. Enrich the Yin. Nourish the Blood. Tonify the Heart. Calm the Shen. Clear Heat. Augment Qi. Restores the Pulse.

SYNDROMES - Yin And Blood Deficiencies.

CLINICAL MANIFESTATIONS - An ill-defined medical condition characterized by lassitude, fatigue, headache and irritability, associated chiefly with emotional disturbance.

NOTES - This is one of the most reliable and effective formula to provide relief from occasional sleeplessness. By supporting the health of the heart, the inner ear and circulatory system, it is effective in relieving nervous tension and stress. It also is believed to be beneficial in supporting heart health. Helps to calm stress and tension and support normal sleeping cycle. Nourish the heart Yin and blood, while it anchors the Liver Yang. The rehmannia root is effective in nourishing the heart's blood and for reducing incidents of sleeplessness and supporting heart health.

HERBS AND ACTIONS

-Zhen Zhu - Sedates the Heart and settles tremors and palpitations. Clears the Liver and eliminates superficial visual obstructions.

-He Shou Wu - Tonifies the Liver and Kidneys, nourishes the Blood and nourishes Jing.

-Nu Zhen Zi - Nourishes and tonifies Liver and Kidney Yin. Clears Deficiency Heat.

-Dan Shen - Invigorates the Blood and dispels Blood Stasis. Clears Heat and soothes irritability. Nourishes the Blood and calms the Spirit.

-He Huan Pi - Regulates Qi. Calms the Spirit and relieves constraint. Invigorates and harmonizes the Blood, stops pain and reconnects sinews and bones.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine and benefits the marrow. Tonifies the Kidneys and Liver. Benefits the Kidneys and Spleen.

-Mo Han Lian - Nourishes and tonifies Liver and Kidney Yin.

-Di Huang - Clears Heat and cools the Blood. Nourishes Yin. Cools Heart Fire.

-Wu Wei Zi - Tonifies the Kidneys, binds up Essence (astringes Jing). Quiets the Spirit and calms and contains Heart Qi. Tonifies Qi.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm, removes filth, calms the Spirit and disperses Wind. Transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen and promotes the movement of Qi. Promotes Blood flow, reduces swelling and alleviates Wind-Damp Bi.

TREATS

Neurasthenia.

* ECTOPIC PREGNANCY #5

ACTIONS - Invigorates the Blood. Removes Blood Stasis. Tonifies Yang. Tonifies Qi. Restores from collapse.

SYNDROMES - Qi and Tang Deficiency.

CLINICAL MANIFESTATIONS - Abrupt pain in the lower abdomen. Tenderness. Pallor. Cold limbs. Profuse cold sweat. Irritability. Low Blood pressure.

HERBS AND ACTIONS

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain clears Heat and cools the Blood. With Tao Ren, for Blood Stasis induced menstrual disorders, especially those characterized by early period, excessive bleeding and thick purple clots.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, cools the Blood and reduces abscesses.

-Tao Ren - Breaks up Blood Stasis, invigorates Blood circulation and drains abscesses.

-Fu Zi - Restores Devastated Yang, rescues from collapse, disperses Cold and Dampness, warms the channels and stops pain.

-Ren Shen - Tonifies Qi. With Fu Zi, for collapsed Qi and Devastated Yang with spontaneous sweat, ice cold extremities and shortness of breath. With Wu Wei Zi and Mai Dong, for Qi and Yin Deficiency with shortness of breath and spontaneous sweat usually secondary to injury from Heat.

-Mai Dong - Nourishes Yin and generates Fluids

-Wu Wei Zi - Astringes sweat, generates fluids and tonifies Qi.

TREATS

Ectopic pregnancy: ruptured, shock type.

* NEURASTHENIA #4

ACTIONS - Tonifies Qi. Nourishes the Blood. Calms the Shen.

SYNDROMES - Qi and Blood Deficiency.

CLINICAL MANIFESTATIONS - Palpitations. Insomnia. Much dreaming. Wakes early. Sleepiness during the day. Easily startled. Lack of energy. Poor memory. Four limbs tired and lethargic. Distention and fullness of the epigastrium and abdomen. Loss of appetite. Loose stools or. Diarrhea. Sallow complexion. Copious, pale menses. Uterine bleeding or. Light menstrual flow or. Amenorrhea.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Jing and Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Dang Shen, for Qi and Blood Deficiency.

-Dang Shen - Tonifies the Middle Jiao,augments Qi and nourishes the Blood. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting. With Dang Gui and Shu Di Huang, for Qi and Blood Deficiency with dizziness, weakness and lassitude. With Huang Qi, for Lung and Spleen Qi Deficiency with fatigue, shortness of breath, diarrhea and anorexia.

-Huang Qi - Tonifies Qi and Blood. With Dang Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweating. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Long Yan Rou, Dang Gui and Suan Zao Ren, for insomnia and other signs of Qi and Blood Deficiency. With Dang Gui, for fatigue, low grade fever, irritability and thirst in patients with a weak pulse due to Qi and Blood Deficiency.

-Dang Gui - Tonifies, activates and harmonizes the Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Wu Wei Zi - Tonifies Qi, tonifies the Kidneys, astringes Jing, quiets the Shen and calms and contains Heart Qi. With Huang Qi, for Yang Deficiency with spontaneous sweat.

-Suan Zao Ren - Nourishes Heart Yin, tonifies Liver Blood, calms the Shen, astringes sweat and generates fluids. With Dang Shen, Dang Gui, Long Yan Rou and Huang Qi, for Shen disturbance due to Spleen and Heart Deficiencies. With Wu Wei Zi, Dang Shen and Huang Qi, for spontaneous sweating.

-Long Yan Rou - Tonifies and augments the Heart and Spleen, nourishes the Blood and calms the Shen. With Dang Gui, Dang Shen, Suan Zao Ren and Huang Qi, for palpitations and insomnia due to Heart Blood Deficiency especially in cases with Spleen Qi Deficiency. With Huang Qi and Dang Shen, for Qi and Blood Deficiency.

TREATS

Neurasthenia.

* QING HUN SAN - 青魂散 - Clear The Hun Powder

ACTIONS - Invigorates the Blood. Moves Qi.

SYNDROMES - Postpartum Blood Stagnation.

CLINICAL MANIFESTATIONS - Dizziness. Vertigo. Palpitations. Amenorrhea with distention and pain. Dysmenorrhea. A stubborn headache that is fixed and boring. Forgetfulness. Sinus congestion. Constipation. Excess weight in the pelvis. Lower back

ache. Irregular menstruation. Nervousness. Mild, persistent uterine bleeding of purple and black blood during pregnancy. Abdominal pain that is worse with pressure. Abdominal spasms and tension. Immobile masses in the lower abdomen with pain and tenderness. Fatigue. Depression. Low spirits. irritability. Mood swings. Dar or purplish lips. Spider naevi on the face and nose. Fetal instability. Skin eruptions. Scanty menstrual flow. Scaly, dry skin. Retention of lochia. Insomnia. Restless sleep. Shoulder stiffness. Cold low body and feet. Flushed face. Protruding abdomen.

HERBS AND ACTIONS

-Ren Shen - Tonifies Heart Qi and calms the Spirit.

-Jing Jie - Releases the Exterior, dispels Wind and relieves postpartum muscle spasms.

-Ze Lan - Invigorates the Blood and dispels Blood Stasis. With Chuan Xiong, for pain due to trauma, dysmenorrhea, and amenorrhea.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Dizziness. Vertigo. Post concussion syndrome. Amenorrhea. Palpitations. Vaginal bleeding during pregnancy. Chronic migraine. Post traumatic shock syndrome. Chronic depression. Fatigue. Postpartum fainting. Dry skin.

* SHU GAN TANG - 舒肝湯 - Dredge The Liver Decoction. Spread the Liver Decoction. Bupleurum and Evodia Combination

ACTIONS - Dredges the Liver. Regulates the Qi. Dispels Stasis. Opens the channels and collaterals. Relieves pain. Activates the Blood. Clears Heat.

SYNDROMES - Pain in the Liver channel due to Qi and Blood Stagnation.

CLINICAL MANIFESTATIONS - Pain beneath the left side of the rib cage. Rib pain from trauma. Alternating chills and fever. Hypochondriac fullness and pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not use this formula for those who do not present with Liver Stagnation or pain from Blood Stasis. Use caution if Internal bleeding is suspected.

NOTES - The symptoms may be brought on by internal damage from emotions or as

the result of trauma.

HERBS AND ACTIONS

-Huang Lian - Clears Damp-Heat at the Qi Level with diarrhea and nausea or Liver Stomach Disharmony causing Liver Fire with acid regurgitation, belching or nausea.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Bai Shao, for Liver Blood Deficiency with Liver Qi Stagnation and vertigo, dizziness, thoracic and costal pain, and menstrual irregularity due to Liver Qi Stagnation. With Bai Shao, Dang Gui and Chuan Xiong, harmonizes the Blood for irregular menstruation. With Zhi Ke, for a stifling sensation in the chest, abdominal pain, poor appetite, and irregular bowel movements. With Bai Shao, Chuan Xiong and Zhi Ke, for Liver Qi Stagnation with hypochondriac fullness and pain.

-Dang Gui - Tonifies Blood, regulates the menses, invigorates and harmonizes the Blood and disperses Cold (stops pain due to Blood Stasis). With Tao Ren and Hong Hua, for amenorrhea, pain, swelling and other symptoms associated with Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood. With Chai Hu and Bai Shao, for dysmenorrhea from Liver Qi Stagnation and Blood Deficiency. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood, disperses Blood Stasis and treats abdominal pain.

-Qing Pi - Spreads Liver Qi and breaks up Stagnant Qi. With Chai Hu, restores the Qi circulation between the Upper and Lower Jiaos to treat long-term Qi Stagnation moving to Blood Stasis with fixed pain and occasional palpable lumps.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Hong Hua, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea with abdominal pain, clotting and scanty flow, swollen painful sores and chest pain due to Blood Stasis.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure and resolves hardenings.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With Dang Gui, Tao Ren and Hong Hua, for abdominal pain accompanying menstruation, pain due to trauma and headache from Blood Stagnation. With Dang Gui, Tao Ren, Bai Shao and Hong Hua, for dysmenorrhea due to Blood Stasis. With Tao Ren, Hong Hua, Chai Hu and Dang Gui, for sharp stabbing pains in the chest and hypochondriac area due to Blood Stagnation.

-Bai Shao - Nourishes Blood, softens the Liver and relieves pain. With Chai Hu, for flank pain due to Liver Qi Stagnation. With Dang Gui, nourishes Yin and Blood.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks

menstruation and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

TREATS

Intercostal neuralgia. Pancreatitis. Acid reflux. Irregular menstruation. Stomach cancer. Indigestion. Traumatic injury to the ribs. Obesity. Breast cancer. Irritable bowel syndrome. Dizziness.

* TONG QIAO HUO XUE TANG - 通竅活血汤 - Open The Portals And Quicken The Blood Decoction. Unblock the Orifices and Invigorate the Blood Pills. Decoction to Invigorate the Blood Circulation and Open the Orifices. Decoction for Activating Blood Circulation. Persica and Musk Combination

ACTIONS - Invigorates the Blood. Dispels Blood Stasis. Opens the orifices.

SYNDROMES - Blood Stasis in the head, face and upper body. Childhood nutritional impairment.

CLINICAL MANIFESTATIONS - Headache. Vertigo. Chronic tinnitus. Hair loss. Dark purple complexion or. Blue or green facial complexion with or without rosacea or vitiligo. Darkness around the eyes. Brandy nose. Progressive emaciation. Abdominal distention. Purplish discoloration of the sinews. Tidal fever. Dizziness. Deafness. Pale face. Cyanosis. Phthisis. Muscle weakness. Sudden loss of vision.

HERBS AND ACTIONS

-Chi Shao - Invigorates the Blood, dispels Stasis, clears Heat and cools the Blood. With Chuan Xiong for abscesses, boils and trauma induced pain. With Tao Ren, Hong Hua and Chuan Xiong, for Blood Stagnation in the chest.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis and stops pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis. With Tao Ren, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain.

-Chuan Xiong - Invigorates the Blood, moves Qi, expels Wind and stops pain. With Hong Hua for Blood Stasis in the chest.

-Tao Ren - Breaks up Blood Stasis. With Hong Hua, for Rheumatoid arthritis.

-Cong Bai - Releases the exterior, induces sweat, disperses Cold, unblocks the Yang, relieves toxicity and disperses clumps.

-Da Zao - Tonifies the Spleen, tonifies Qi, nourishes the Blood, calms the Spirit and

moderates and harmonizes the harsh properties of the other herbs. With Sheng Jiang, nourishes the Blood and prevents injury from harsh Blood movers and assists the movement of Qi.

-Sheng Jiang - Releases the exterior, expels Cold, Warms the Lungs, transforms Phlegm and disperses and unblocks the Qi of the nasal orifices.

-She Xiang - Opens orifices, revives the Spirit, invigorates the Blood, reduces swelling and stops pain.

TREATS

Chronic epidural hemorrhage. Subarachnoid hemorrhage. Sharp, pounding headaches. Exhaustion of Blood in women. Childhood nutritional impairment. Emaciation in women due to Blood Deficiency. Vascular headache. Rheumatoid arthritis. Alopecia. Sinusitis. Retinal hemorrhage. Syncope due to Blood disorders. Rosacea. Trigeminal neuralgia. Lupus erythematosus. Tinnitus. Dizziness. Weakness. Headache. Intracranial postoperative hydrocephalus. Ear pain. Otitis Media. Cerebral injury. Intradural injury. Cerebral concussion. Post-concussion syndrome. Phthisis. Cerebrovascular accident. Hypersomnia. Carbon monoxide poisoning. Deafness. Cerebral arteriosclerosis. Embolism of the central retinal artery. Pulmonary tuberculosis. Vitiligo. Parkinson's disease. Abdominal fullness and distention. Migraine. Vertigo. Hoarseness. Stiff neck. Facial pain.

* WU PI SAN - 五皮散 - Five-peel Powder - Hoelen And Areca Combination

ACTIONS - Resolve Dampness. Reduces edema. Regulates Qi. Strengthens the Spleen. Reduces swelling.

SYNDROMES - Spleen Deficiency with vigorous Dampness and Qi Stagnation (Pi Shui - Skin Water.)

CLINICAL MANIFESTATIONS - Generalized edema. Sensation of heaviness, distention and fullness in the epigastrium and abdomen.. Labored, heavy breathing. Shortness of breath. Urinary difficulty. Oliguria. Asthma. Chest distention. Edema during pregnancy.. General edema in summer. Heavy extremities. Dyspnea. Gasping. Rapid breathing.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Avoid difficult to digest foods while taking this formula. With severe Spleen Deficiency, use Spleen tonifying herbs.

HERBS AND ACTIONS

-Sang Bai Pi - Descends Lung Qi, promotes urination and reduces edema. With Sheng Jiang, disperses and descends, restoring the water function of the Lung and facilitating

smooth flow into the Bladder. With Da Fu Pi and Fu Ling, for superficial edema with difficult urination.

-Sheng Jiang - Disperses edema and transforms Dampness.

-Fu Ling - Leaches out Dampness, strengthens transporting function of the Spleen and promotes urination.

-Chen Pi - Regulates Qi, adjusts the Middle and relieves the diaphragm, dries Dampness and transforms Phlegm. With Da Fu Pi, eliminates Qi Stagnation to allow free flow of Qi and fluids.

-Da Fu Pi - Promotes movement of Qi, descends Qi, expels Dampness, promotes urination and reduces edema. With Sheng Jiang Pi and Fu Ling Pi, for mild edema or superficial facial edema.

TREATS

Edema during pregnancy. Protein deficiency (malnutritional) edema. Ascites from cirrhosis of the Liver. Congestive Heart failure. Urticaria. Chronic nephritis. Hypertension. Asthma. Chronic glomerulonephritis. Dyspnea. Menopausal edema. Cardiac edema. Nephritic edema. Dropsy. Nephritis. Traumatic injuries. Nephrotic syndrome. Nausea/Vomiting. Gasping.

* WU WEI ZI TANG - 五味子汤 - Schisandra Decoction

ACTIONS - Reinforces and Strengthens Heart Qi.

SYNDROMES - Heart Qi Deficiency.

CLINICAL MANIFESTATIONS - Palpitations, initiated by exercise. Symptoms worse after exertion or when tired. Symptoms relieved by rest. Restless sleep. Insomnia. May be arrhythmia. Dizziness. Shortness of breath. Diminished vocal power. No desire to speak. Physical and mental fatigue. Excessive perspiration (in daytime). Facial pallor. Weakness. Suffocating sensation in the chest. Cold extremities.

HERBS AND ACTIONS

-Wu Wei Zi - Tonifies Qi, astringes sweat, generates fluids, quiets the Spirit and calms and contains Heart Qi. With Ren Shen and Mai Dong, for exhaustion of Qi and Yin with shortness of breath, coughing, and thirst and spontaneous night sweats with Qi Deficiency. With Huang Qi, for Yang Deficiency with spontaneous sweating.

-Mai Dong - Clears the Heart and eliminates irritability.

-Huang Qi - Tonifies Qi and Blood. With Mai Men Dong and Wu Wei Zi, for night sweats.

-Ren Shen - Tonifies Heart Qi and calms the Spirit. With Huang Qi, for Qi Deficiency with general debility, anorexia and spontaneous sweat.

-Suan Zao Ren - Nourishes Heart Yin, tonifies Liver Blood, calms the Spirit, astringes sweat and generates fluids..

-Bai Zi Ren - Nourishes the Heart, calms the Spirit and astringes Yin Deficiency sweat. With Suan Zao Ren, strongly quiets the Spirit, calms the emotions, enriches Yin and Blood, stops night sweats and treats palpitations, irritability and insomnia due to Yin and Blood Deficiency failing to nourish the Heart and Liver.

-He Huan Pi - Calms the Spirit and relieves constraint.

-Gan Cao -Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Heart palpitations. Anxiety. Premature ectopic beats. Spontaneous perspiration. Anemia. Sinus tachycardia. Sick sinus syndrome. Dyspnea.

* XIAO YAN TONG MAI HE JI

ACTIONS - Clears Heat. Cools the Blood. Invigorates the Blood. Dispels Stasis. Dispels Wind-Dampness. Unblocks the channels. Alleviates pain.

SYNDROMES - Heart Blood Stagnation with Heat.

CLINICAL MANIFESTATIONS - Pain, swelling and obvious tenderness in the superficial veins along the limbs or the thoracoepigastric walls. Hard cord-like swollen masses may be felt. Palpitations. Stabbing pain in the anterior region over the Heart. Suffocating sensation in chest. Maybe drawing pain down internal aspect of arm (especially left arm). Pain (in chest and/or arm) tends to be severe and intermittent. Thirst with a desire for cold drinks. Irritability, irascibility. Feeling of Heat and disturbance in the Heart. Insomnia. Flushed face. Bitter taste in mouth.

HERBS AND ACTIONS

-Xuan Shen - Clears Heat and cools the Blood.

-Dang Gui - Tonifies the Blood, invigorates, harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Tao Ren and Hong Hua, for amenorrhea, pain, swelling and other symptoms associated with Blood Stasis.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain. With Tao Ren, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Niu Xi - Invigorates the Blood, expels Blood Stasis. nourishes Liver and Kidney Yin, clears Damp-Heat in the Lower Jiao.

-Fang Ji - Promotes urination, reduces edema especially in the lower body, expels Wind-Dampness and alleviates pain.

-Wei Ling Xian - Dispels Wind-Dampness, unblocks the channels and alleviates pain. With Niu Xi, for Wind-Damp Bi causing joint pain (especially in the lower joints).

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Acute thrombotic phlebitis.

1.3.3.22 RT-TCM-22

Traditional Chinese Medicine

Du Huo Ji Sheng Tang, Fu Gui Li Zhong Tang, Lumbago #1, Mai Wei Di Huang Wan, Qi Li San, Qiang Huo Bai Du San, San Bi Wan Jia Jian, Shu Jing Huo Xue Tang, Yao Tong Ling

Recordings Updated in May 2025

* DU HUO JI SHENG TANG - 獨活寄生湯 - Angelica, Pubescentis And Taxillus Decoction. Angelica Pubescens and Sangjisheng Decoction. Angelica Pubescens and Loranthus Decoction. Tuhuo and Loranthus Combination. Tuhuo and Vaeicum Combination

ACTIONS - Disperses Wind-Dampness. Scatters Cold. Stops Bi pain. Tonifies the

Kidneys and Liver. Tonifies Qi. Nourishes the Blood.

SYNDROMES - Bi Syndrome with Kidney and Liver Deficiency. Bi Syndrome with Qi and Blood Deficiency. Invasion of the muscles and bones by Wind-Cold-Damp. Atrophy disorder (wasting of the lower extremities)

CLINICAL MANIFESTATIONS - Painful joints. Heavy and painful sensations at fixed locations in lower back and extremities with weakness and stiffness or hypertonicity and immobility. Aversion to Cold. Attraction to warmth. Palpitations. Pain in the midline and back during pregnancy. Pain worse at night. General coldness. Sallow complexion. Wandering pain. Pale complexion. Shortness of breath. May be paresthesia and numbness. Cold pain in the low back and knees. Limited movement. Soreness, weakness and numbness of the joints. Tinnitus. Muscle spasms. Dizziness.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for Bi syndrome marked by strong Excess or Damp-Heat. Contraindicated for Bi syndrome marked by Liver and Kidney Yin Deficiencies. Use with caution during pregnancy.

HERBS AND ACTIONS

-Du Huo - Disperses Wind-Cold-Dampness from the Lower Jiao, bones and sinews, vitalizes the vessels and alleviates pain. With Xi Xin, for Shao Yin headache, with splitting pain that involves the teeth and cheeks due to External Wind-Cold and joint pain due to Wind-Cold-Dampness. With Xi Xin and Qin Jiao, for Wind-Damp Bi causing numbness, pain and soreness in the neck, back and lower extremities. With Fang Feng, for numbness in the legs.

-Xi Xin - Releases exterior Wind-Cold, disperses Internal Cold, warms the Lungs transforms Phlegm and scours Wind-Dampness from sinews and bones to stop pain. With Chuan Xiong, for Wind-Cold headache, toothache and Bi pain. With Chuan Xiong and Fang Feng, for Bi syndrome. With Du Zhong and Sang Ji Sheng, for chronic low back and knee pain.

-Fang Feng - Expels Wind-Cold and Dampness and alleviates pain. With Qin Jiao, for Wind-Damp Bi with spasms of the tendons or numbness of the limbs and pain due to Wind-Dampness in patients with Blood Deficiency.

-Qin Jiao - Expels Wind-Dampness and relaxes sinews.

-Sang Ji Sheng - Expels Wind-Dampness, strengthens sinews and bones, tonifies Liver and Kidney Yin and nourishes the Blood. With Du Zhong, and Niu Xi, expels Wind-Dampness and tonifies the Liver and Kidneys.

-Du Zhong - Tonifies the Kidneys and Liver and strengthens sinews and bones. With Sang Ji Sheng, Dang Gui and Chuan Xiong, for low back pain during and after menstruation.

-Niu Xi - Invigorates the Blood, strengthens the sinews and bones, benefits the joints and nourishes the Liver and Kidney Yin. With Sang Ji Sheng and Du Zhong, directs the other herbs toward lower extremities. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency.

-Rou Gui - Warms Kidneys, strengthens Yang, strengthens Ming Men Fire, disperses deep Cold, warms and unblocks the channels and vessels to open the lower back and alleviates pain. With Ren Shen and Shu Di Huang, for palpitations and shortness of breath due to Deficiencies of Heart and Kidneys. With Dang Gui and Chuan Xiong, for dysmenorrhea, postpartum abdominal pain or amenorrhea due to Deficiency Cold of the Chong and Ren channels.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood, disperses Blood Stasis and treats abdominal pain. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Bai Shao and Fu Ling, for diarrhea during pregnancy with mild abdominal pain.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis. With Rou Gui, for irregular menstruation with Cold in the Blood.

-Shu Di Huang - With Dang Gui, for Blood Deficiency Heat. With Ren Shen, for Qi, Blood and Yin Deficiencies. With Dang Gui, Bai Shao and Chuan Xiong, for anemia.

-Bai Shao - Nourishes Blood and alleviates pain. With Fu Ling, strengthens the Spleen. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Du Huo, Qin Jiao, Ren Shen, Dang Gui and Gan Cao, for chronic Bi Syndrome with injury to Qi and Blood leading to spasms of the extremities.

-Ren Shen - Tonifies Qi, calms the Spirit and generates Body Fluids.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and harmonizes the Middle Jiao.

-Gan Cao - Tonifies Middle Qi and moderates and harmonizes the harsh properties of the other herbs. With Ren Shen and Fu Ling, strengthens the Spleen and augments Qi.

TREATS

Chronic lower back pain. Sciatica due to degenerative joint disease. Sequelae of poliomyelitis. Rheumatic sciatica. Chronic arthralgia. Chronic arthritis. Paralysis. Neck pain and stiffness. Osteoarthritis. Rheumatoid arthritis. Coxarthrosis. Bone spurs.

Atrophy of the lower limbs. Hip internal rotation injury. Numbness. Gout. Palpitations. Scapulohumeral periarthritis. Toe Pain. Hip pain. Stroke. Hemiplegia. Prolapse of lumbar intervertebral disc. Psoriasis. Dermatosclerosis. Dendrolimiasis. Hyperosteogeny. Ankylosing spondylitis. Postpartum ache and pains. Bone Bi. Vertebral arthrosis. Gonarthrosis. Postpartum body pain. Paresthesia. Knee pain. Weakness. Scleroderma. Pain in the midline and back during pregnancy.

* FU GUI LI ZHONG WAN - 附桂理中丸 - Prepared Aconite And Cinnamon Pill To Regulate The Middle. Gui Fu Li Zhong Tang. Cinnamon and Prepared Aconite Decoction to Regulate the Middle. Decoction to Regulate the Spleen and Stomach with Aconite and Cinnamon Bark

ACTIONS - Warms and Tonifies the Spleen, Stomach and Kidneys. Dispels Cold. Replenishes Yang.

SYNDROMES - Spleen, Stomach and Kidney Yang Deficiency, with Accumulation of Cold.

CLINICAL MANIFESTATIONS - Diarrhea with undigested food. Aversion to Cold or. Daybreak (Cock Crow) diarrhea. Cold and stiff extremities. Back pain. Reduced appetite. Fullness in the epigastrium and abdomen (likes pressure). Lack of thirst. Vomiting. Loose stools. Trismus.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with External Invasion with fever. Contraindicated for those with sudden turmoil disorder - stop when diarrhea and Yin Deficiency vomiting have stopped.

HERBS AND ACTIONS

-Gan Jiang - Warms the Spleen and Stomach and eliminates interior Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Bai Zhu and Ren Shen, for Spleen Yang Deficiency with a cold abdomen, vomiting and diarrhea. With Fu Zi, for debilitated Spleen and Kidney Yang with incessant diarrhea.

-Ren Shen - Strongly tonifies Source Qi, tonifies Spleen and Stomach Qi, reinforces Yang and rectifies the ascending and descending functions of the the Middle Jiao. With Fu Zi, for Collapsed Qi and Devastated Yang with spontaneous sweat, ice cold extremities and shortness of breath. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Bai Zhu - Aids Ren Shen in tonifying the Spleen and Stomach, strengthens the Spleen and Dries Dampness. With Gan Jiang, Ren Shen and Gan Cao, for Spleen and Stomach Deficiency Cold.

-Rou Gui - Warms the Spleen, tonifies Kidney Yang and relieves pain by dispelling Cold.

With Fu Zi, powerfully tonifies Kidney Yang, for Kidney Yang Deficiency with lower back pain and weakness in the legs and knees. With Fu Zi and Gan Jiang, for Cold, painful abdomen, anorexia, and diarrhea due to Kidney and Spleen Yang Deficiency.

-Fu Zi - Restores Kidney and Heart Yang, relieves pain and Coldness and dispels water and Dampness. With Bai Zhu, for Spleen Yang Deficiency with a Cold, painful abdomen, vomiting and watery diarrhea. With Bai Zhu and Gan Jian, for Internal ascendancy of Yin Cold leading to lack of arousal of Spleen Yang with abdominal pain and Cold with watery diarrhea.

-Gan Cao - Augments Qi of the Middle Jiao and moderates and harmonizes the harsh properties of other herbs. With Ren Shen, relieves palpitations and anxiety.

TREATS

Acute or chronic gastritis. Acute or chronic gastroenteritis. Gastrectasis. Gastric or duodenal ulcers. Colitis. Polyuria. Nausea/Vomiting. Anorexia. Ulcerative colitis. Gastroptosis. Irritable bowel syndrome. Chronic colitis. Cholera. Enteritis. Senile dementia. Abdominal fullness and distention. Celiac disease.

* LUMBAGO #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Expels Cold and Dampness. Warms and opens the channels. Supports the Kidneys.

SYNDROMES - Cold-Damp in the Lower Jiao.

CLINICAL MANIFESTATIONS - Cold pain in the lower back and body. The lower back region feels Cold to the touch. The pain is a deep, unremitting ache. The pain may be occasionally be severe. Twisting and bending are difficult. The pain is aggravated by cold weather. Lying down provides no improvement. Sciatica. Copious urination. Extreme heavy sensation in the lower back. Absence of thirst.

HERBS AND ACTIONS

-Sang Ji Sheng - Expels Wind-Dampness, strengthens sinews and bones, tonifies Liver and Kidney Yin and nourishes the Blood. With Du Zhong, and Niu Xi, expels Wind-Dampness and tonifies the Liver and Kidneys. With Du Huo and Niu Xi, for Kidney and Liver Yin Deficiency and Wind-Dampness causing low back and leg pain, stiffness and soreness. With Xu Duan, Dang Gui and Du Zhong, for restless fetus, and back pain due to Yin and Blood Deficiencies.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Xu Duan - Tonifies the Liver and Kidneys, strengthens the sinews and bones, promotes the movement of Blood and alleviates pain. With Du Zhong, tonifies Liver and Kidneys, strengthens the lower back and secures the Chong and Ren channels to treat aching in the lower back and knees, weakness of the legs which makes walking difficult and especially threatened miscarriage due to instability of the Chong and Ren channels and restless fetus or bleeding during pregnancy accompanied by lower back pain and a sense of dropping in the lower trunk. With Du Zhong and Niu Xi, for deficient Kidneys or Cold-Damp Bi causing low back and leg pain and weakness and contracture of the leg muscles.

-Du Huo - Disperses Wind-Cold-Dampness from the Lower Jiao, bones and sinews, vitalizes the vessels and alleviates pain. With Du Zhong, Sang Ji Sheng and Dang Gui, for Wind-Dampness in a patient with underlying Kidney Deficiency, with low back and knee pain and stiffness. With Xi Xin, for joint pain due to Wind-Cold-Dampness.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Gan Jiang, eliminates Cold Dampness in the Spleen with loss of taste, a sticky sensation in the mouth, nausea, vomiting, diarrhea and a thick, white tongue coat.

-Niu Xi - Invigorates the Blood, strengthens the sinews and bones, benefits the joints and nourishes the Liver and Kidney Yin. With Sang Ji Sheng and Du Zhong, directs the other herbs toward lower extremities. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold and alleviates pain. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses and amenorrhea, and Wind-Damp Invasion blocking the Blood vessels causing pain, numbness and paralysis. With Rou Gui, for irregular menstruation with Cold in the Blood.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood, disperses Blood Stasis and treats abdominal pain.

-Du Zhong - Tonifies the Kidneys and Liver and strengthens sinews and bones. With Sang Ji Sheng, Dang Gui and Chuan Xiong, for low back pain during and after menstruation.

-Gan Jiang - Warms the Middle, expels Cold, rescues Devastated Yang and expels Interior Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Fu Ling and Bai Zhu, for Cold-Dampness in the Lower Jiao leading to a sense of heaviness and Cold in the lower back.

-Rou Gui - Warms Kidneys, strengthens Yang, strengthens Ming Men Fire, disperses

deep Cold, warms and unblocks the channels and vessels to open the lower back and alleviates pain. With Dang Gui and Chuan Xiong, for dysmenorrhea, postpartum abdominal pain or amenorrhea due to Deficiency Cold of the Chong and Ren channels.

-Xi Xin - Releases exterior Wind-Cold, disperses Internal Cold, warms the Lungs transforms Phlegm and scours Wind-Dampness from sinews and bones to stop pain. With Chuan Xiong, for Wind-Cold headache, toothache and Bi pain. With Du Zhong and Sang Ji Sheng, for chronic low back and knee pain. With Du Huo, for joint pain due to Wind-Cold-Dampness.

TREATS

Low back pain. Sciatica. Lumbago.

* MAI WEI DI HUANG WAN - 麦味地黄丸 - Ophiopogonis, Schisandra And Rehmannia Decoction

ACTIONS - Enriches Yin. Astringes and Nourishes the Essence of the Liver and Kidneys.

SYNDROMES - Kidney Yin Deficiency. Heart and Kidney Yin Deficiency. Liver and Kidney Yin Deficiency. Kidney and Lung Yin Deficiency.

CLINICAL MANIFESTATIONS - Low back, knees and legs painful and weak. Foot pain. Light-headedness. Vertigo. Tinnitus. Diminished hearing. Five sole Heat. Chronic dry, sore throat. Toothache. Wasting and thirsting disorder (Xiao Ke). Dizziness. Muscular weakness. Dry skin. Deafness. Steaming bones. Tidal fevers. Loose teeth. Cough. Shortness of breath. Dripping urine. Thirst. Dry tongue. Numbness and weakness at the waist and knees. Heel pain. Dry mouth. Blurred vision. Hemoptysis. Asthma. Hot flashes. Nocturnal emissions. Urinary incontinence. Spontaneous and nocturnal emissions. Night sweats.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution for those with Spleen Deficiency type diarrhea and indigestion. Contraindicated for those with Yang Deficiency with a white greasy tongue coat.

HERBS AND ACTIONS

-Mai Dong - Moistens the Lungs, stops cough, nourishes Stomach Yin, generates fluids, clears the Heart, eliminates irritability and moistens the Intestines.

-Wu Wei Zi - Astringes leakage of Lung Qi, tonifies Qi, astringes Jing, nourishes Kidney Yin, stops diarrhea, astringes sweat, generates fluids, tonifies the Heart and calms the Spirit. With Shu Di Huang, Shan Zhu Yu and Shan Yao, for Lung and Kidney Deficiencies with cough and wheezing.

-Shu Di Huang - Tonifies the Kidneys and Nourishes Yin and Blood. With Shan Yao and Ze Xie, for ascendant Fire due to exhaustion of Kidney Yin. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu, Mu Dan Pi, Fu Ling and Ze Xie, for Liver and Kidney Yin Deficiencies. With Shan Zhu Yu, Shan Yao and Ze Xie, for Xiao Ke with predominant polyuria.

-Shan Zhu Yu - Nourishes Kidney Yin and Yang, astringes Yin and stops perspiration. With Shan Yao, tonifies Liver and Spleen. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiencies of the Liver and Kidneys.

-Shan Yao - Strengthens the Spleen, stabilizes the Kidneys and nourishes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea, dizziness, tinnitus, lower back pain, impotence and night sweats. With Wu Wei Zi and Mai Dong, for Lung Deficiency with cough.

-Fu Ling - Strengthens the Spleen and drains Dampness.

-Mu Dan Pi - Clears Heat and Deficiency Fire.

-Ze Xie - Promotes urination and prevents Kidney Fire as a result of tonification. With Fu Ling and Mu Dan Pi, regulates the Kidneys, Liver and Spleen, drains and tonifies. With Fu Ling, promotes urination. With Mu Dan Pi, for steaming bone disorder, dizziness, and vertigo.

TREATS

Neurasthenia. Pulmonary tuberculosis. Diabetes mellitus. Chronic nephritis. Hyperthyroidism. Chronic glomerulonephritis. Chronic urinary tract infection. Hypertension. Failure to thrive. Functional uterine bleeding. Optic neuritis. Optic nerve atrophy. Central retinitis. Nephroatrophy. Senility. Impotence. Spermatorrhea. Esophageal cancer. Chronic asthma. Bronchitis. Side effects of steroids. Nephrotic syndrome. Chronic tonsillitis. Kidney failure. Hyperglycemia. Deafness. Knee pain. Loss of voice. Hot flashes. Dyspnea. Urinary incontinence. Foot pain. Allergic disorders. Bronchiaesthenia. Chronic urticaria. Chronic hepatitis. Nocturnal emissions. Irregular menstruation. Addison's disease. Heart failure. Sore throat. Dry mouth. Retarded growth in children. Toothache. Vegetative nerve functional disturbance. Arteriosclerosis. Amenorrhea. Scanty menstruation. Infantile dysplasia. Infantile malnutrition. Menopause. Hemoptysis. Chronic laryngitis. Cough. Chronic obstructive pulmonary disease (COPD). Tinnitus. Low back pain. Weakness. Hoarseness. Night sweats. Bronchiectasis. Heel pain.

* QI LI SAN - 七厘散 - Seven-thousandths Of A Tael Powder. Anti-Bruise Powder. Musk and Catechu Formula

ACTIONS - Invigorates the Blood. Dispels Blood Stasis. Promotes the movement of Qi. Reduces swelling. Alleviates pain and bleeding.

SYNDROMES - Qi and Blood Stagnation due to traumatic injury.

CLINICAL MANIFESTATIONS - Bruising, swelling and pain accompanying traumatic injuries. Fractures. Torn sinews. Bleeding due to laceration.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy.

NOTES - This is a frequently used formula.

HERBS AND ACTIONS

-Xue Jie - Activates the Blood, dispels Blood Stasis, alleviates pain and stops bleeding. With Ru Xiang and Mo Yao, for trauma-induced pain, swelling or hemorrhage, especially in the chest and abdomen. With Er Cha and Ru Xiang, for bruising, swelling and pain from trauma. With Er Cha, Mo Yao and Ru Xiang, for bleeding due to External injury.

-Hong Hua - Activates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain.

-Ru Xiang - Activates the Blood, promotes the movement of Qi, relaxes the sinews, invigorates the channels, reduces swelling, generates flesh and alleviates pain. With Mo Yao, for traumatic injury pain and Blood Stasis obstructing the channels with epigastric, flank abdominal and joint pain. With She Xiang and Bing Pian, for pain from trauma.

-Mo Yao - Activates the Blood, dispels Blood Stasis, alleviates pain, reduces swelling, generates flesh and promotes healing.

-She Xiang - Activates the Blood, dissipates masses, reduces swellings, detoxifies, opens the channels and alleviates pain. With Hong Hua, for chest and abdominal pain, amenorrhea and dysmenorrhea due to Blood Stasis.

-Bing Pian - Aromatically opens orifices, revives the Spirit, unblocks closed disorders, clears Heat, drains Fire and alleviates pain.

-Er Cha - Drains Dampness, absorbs suppuration, stops bleeding and generates flesh.

-Zhu Sha - Sedates the Heart and calms the Spirit.

TREATS

Bruising, swelling and pain accompanying traumatic injuries. Fractures. Hematemesis.

Strains. Infantile diarrhea. Wounds. Coronary Heart disease. Hepatitis. Painful obstruction. Gout (topical). Torn sinews. Bleeding due to lacerations. Burns. Non-specific toxic swellings. Herpes zoster. Echymosis. Myocarditis. Rib pain. Stab wounds. Toe Pain (topical).

* QIANG HUO BAI DU SAN - 羌活敗毒散 - Notopterygium Powder To Overcome Toxins

ACTIONS - Dispels Wind. Warms Cold. Eliminates Dampness.

SYNDROMES - Cold Dampness in the Lower Jiao. Tai Yang Cold-Damp.

CLINICAL MANIFESTATIONS - Chronic cold pain in the lower back and body with a heavy sensation. A preference for warmth. Pain worse in Damp weather. Pain radiating downward and to the lower limbs. Limited movement of the lower spine. Severe hardness and stiffness in the lumbar area with obvious tenderness. A cord-like, swollen sensation of the supraspinous ligament on palpation. A movable cord-like sensation at the origin of the sacro-spinal muscle. Pain and other symptoms worsen gradually. A long-lasting course of illness. A heavy sensation in the head. The lower back region feels Cold to the touch. The pain is a deep, unremitting ache. The pain may be occasionally be severe. Twisting and bending are difficult. The pain is aggravated by cold weather. Lying down provides no improvement. Stiffness which is worse on rainy days. Aversion to Cold. Cold extremities. Sciatica. Copious urination. Extreme heavy sensation in the lower back. Absence of thirst. Maybe headaches. Nausea. Loose stools. A poor appetite. Maybe general body aches. Spontaneous contracture of the limbs. Maybe a feverish sensation in the upper body. Craves hot drinks and compresses. Dizziness. Vomiting. Profuse, purulent leukorrhea with a foul odor.

HERBS AND ACTIONS

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction and alleviates pain. With Fang Feng, for pain due to External Wind-Dampness. With Chuan Xiong, for headaches and generalized body aches and pains associated with the common cold or painful obstruction. With Du Huo, for Wind-Dampness. With Fang Feng, Bai Zhi and Cang Zhu, for Wind-Cold. With Cang Zhu, for a heavy-headed sensation.

-Chuan Xiong - Expels Wind, alleviates pain, invigorates the Blood and promotes the movement of Qi.

-Cang Zhu - Induces sweating, expels Wind-Dampness and clears Dampness from the Lower Jiao.

-Du Huo - Disperses Wind-Cold-Dampness, releases the Exterior and alleviates pain, especially in the low back and legs. With Fang Feng, for numbness in the legs. With Qiang Huo, for joint pain and numbness.

-Chai Hu - Resolves Shao Yang disorders, reduces fever, spreads Liver Qi and relieves Stagnation.

-Bai Zhi - Expels Wind, eliminates Dampness, dispels Cold and alleviates pain. With Chuan Xiong, for a headache. With Qiang Huo, for Wind-Cold-Dampness causing fever, chills and headaches. With Fang Feng and Qiang Huo, for Wind-Cold with a headache and a stuffy nose.

-Fang Feng - Expels Wind-Dampness and alleviates pain. With Jing Jie, for exterior patterns in any season. With Cang Zhu, for pain due to Wind-Damp Bi with aching joints, heavy limbs and generalized aching and discomfort. With Jing Jie and Qiang Huo, for Wind-Cold.

-Qian Hu - Expels Wind-Heat, expels Phlegm and descends Qi.

-Jing Jie - Releases the Exterior, expels Wind and relieves muscle spasms.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Low back pain.

* SAN BI WAN JIA JIAN - 三痺囊加減 - Modified Three Kinds Of Rheumatism Pill

ACTIONS - Dispels Wind-Cold-Damp. Tonifies Qi. Strengthens tendons. Nourishes and Activates the Blood. Breaks up Blood Stasis. Stops pain.

SYNDROMES - Wind-Cold-Damp Bi with Blood Stasis. San Bi.

CLINICAL MANIFESTATIONS - Aversion to Wind, Cold and Dampness. Stiff and painful muscles and joints. Limited movement. Pain aggravated by Wind. Sensitive to climatic changes. Pain aggravated by Cold. Numbness of muscles. Pain aggravated by Dampness. Cold joints. Pain worse at night. Low back pain or soreness. Lumbago. Fatigue. Heaviness of the body. Heaviness of the muscles. Preference for warmth. Weak joints. Palpitations. Pale face. Joint deformity. Shortness of breath. Preference for dry weather.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat.

NOTES - This formula has its most predominant action on Dampness.

HERBS AND ACTIONS

-Du Huo - Releases the Exterior, dispels Wind-Cold-Dampness, opens the channels, vitalizes vessels and stops pain. With Qin Jiao, expels Wind-Cold-Damp, relieves arthralgia and stops pain.

-Qin Jiao - Clears Heat, expels Wind-Dampness, relaxes sinews, clears Deficiency Heat and resolves Dampness - good for cramps in the limbs.

-Wei Ling Xian - Dispels Wind-Dampness, opens the channels, alleviates pain, reduces Phlegm and dispels Dampness - good for swelling, arthralgia with numbness and spasms.

-Fang Ji - Expels Wind-Dampness, alleviates pain and promotes urination.

-Mu Gua - Relaxes sinews (increases Qi and Blood circulation), opens the channels and transforms Dampness - good for lower back and extremities.

-Luo Shi Teng - Dispels Wind-Dampness and opens channels.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones and circulates Qi and Blood.

-Huang Qi - Strengthens the Spleen, tonifies Qi, consolidates Wei Qi, stabilizes the Exterior and nourishes Blood. With Gan Cao, strengthens Qi and consolidates Wei. With Gui Zhi, for Qi and Blood Deficiencies and Ying and Wei Deficiencies with numbness and painful obstruction of the musculature.

-Niu Xi - Expels Wind, drains Dampness, opens the channels, invigorates the Blood and eliminates Blood Stasis.- especially good for knee pain and flaccid extremities.

-Ji Xue Teng - Nourishes and invigorates the Blood, opens the channels and relaxes sinews - good for numbness, low back pain and knee pain.

-Sang Ji Sheng - Strengthens the sinews and bones, tonifies Liver and Kidney Yin, expels Wind-Dampness and nourishes the Blood - good for low back and knees. With Du Huo and Niu Xi, for Kidney and Liver Yin Deficiency and Wind-Dampness causing low back and leg pain, stiffness and soreness.

-Dang Gui - Nourishes, invigorates and harmonizes the Blood, disperses Cold and stops pain. With Gan Cao, moderates spasms. With Huang Qi, for Blood Deficiency.

-Fang Feng - Releases the Exterior, expels Wind-Cold-Dampness, stops pain, expels Internal Wind, stops spasms, moves Qi, tonifies the Spleen and treats gout. With Qin Jiao, for Wind Dampness Bi with spasms of the tendons or numbness of the limbs and pain due to Wind-Dampness in patients with Blood Deficiency.

-Gui Zhi - Releases external Wind-Cold from the muscle layer, harmonizes the Ying and Wei, warms the channels and collaterals, relieves pain, disperse, Cold, unblocks Yang, transforms the Qi, warms and facilitates the flow of Yang Qi in the chest and warms and facilitates the flow of Blood through the vessels.
With Fang Ji, for Wind-Cold Damp Bi.

-Gan Cao - Tonifies Qi, harmonizes and protects Stomach.

TREATS

Osteoarthritis of the lumbar spine. Rheumatic diseases. Osteophytosis of the lumbar spine. Acute and chronic rheumatic pain. Rheumatic lumbago. Rheumatoid arthritis. Lumbar muscle strain. Gouty arthritis. Arthralgia. Osteoarthritis. Sciatica. Periarthritis of the shoulder. Fibrositis. Tenosynovitis. Nonarticular rheumatism. Tendinitis. Bursitis.

* SHU JING HUO XUE TANG - 舒經活血湯 - Relax The Channels And Invigorate The Blood Decoction

ACTIONS - Unblocks and relaxes the channels. Invigorates the Blood. Breaks up Blood Stasis. Dispels Wind-Dampness. Strengthens the tendons.

SYNDROMES - Wind-Damp Bi with Blood Deficiency and Blood Stasis.

CLINICAL MANIFESTATIONS - Muscle aches. Joint pain. Radiating pain in the legs. Low back pain. Edema. Numbness in the lower extremities. Pain in the trunk and extremities. Abdominal pain. Sciatica. Aversion to Wind and Cold. Knee pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Avoid foods that are raw, Cold or Damp in nature while using this formulas.

NOTES - This formula is for conditions that are primarily Excess in nature.

HERBS AND ACTIONS

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews. With Dang Gui, nourishes Yin and Blood.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels

causing pain, numbness, and paralysis. With Di Huang, Bai Shao and Dang Gui, for headache due to Blood Deficiency.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, induces sweating and expels Wind-Dampness.

-Fu Ling - Promotes urination and leaches out Dampness.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints.

-Wei Ling Xian - Dispels Wind-Dampness, unblocks the channels and alleviates pain. With Qiang Huo, for Wind-Damp Bi causing joint pain, especially in the upper joints. With Niu Xi, for Wind-Damp Bi causing joint pain, especially in the lower joints.

-Fang Ji - Expels Wind-Dampness, alleviates pain, promotes urination and reduces edema.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Chuan Xiong, for headache and generalized body aches and pains associated with the common cold or painful obstruction. With Fang Feng, for pain due to External Wind-Dampness. With Cang Zhu, for a heavy-headed sensation.

-Fang Feng - Releases the exterior, expels External Wind, expels Wind-Dampness and alleviates pain. With Cang Zhu, for pain due to Wind-Dampness Bi with aching joints, heavy limbs and generalized aching discomfort. With Qiang Huo, for Wind-Dampness. With Qiang Huo and Dang Gui, for Wind-Cold-Damp Bi.

-Long Dan - Drains Damp-Heat from the Liver and Gallbladder channels.

-Bai Zhi - Expels Wind, eliminates Dampness, dispels Cold and alleviates pain. With Chuan Xiong, for headache. With Qiang Huo, for Wind-Cold Dampness causing fever, chills and headaches. With Fang Feng and Qiang Huo, for Wind-Cold with headache and stuffy nose.

-Chen Pi - Regulates Qi, adjusts the Middle, dries Dampness and transforms Phlegm. With Sheng Jiang, for Cold-Dampness Obstructing the Middle. With Cang Zhu and Fu Ling, for a thick white tongue coat with no desire to drink.

-Gan Cao - Moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Bai Shao, moderates spasms and alleviates pain,

for painful spasms of the leg.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold and reduces the toxicity of other herbs.

TREATS

Painful obstruction. Bi syndrome. Neuralgia. Lumbago. Sciatica. Postpartum pain due to thrombosis. Hypertension. Edema. Hip internal rotation injuries. Paresthesia. Peripheral neuropathy. Arthritis. Arthralgia. Gout. Purpura. Hemiplegia. Leg pain. Beriberi. Monoplegia. Numbness. Abdominal pain.

* YAO TONG LING - Relieve Lumbago Decoction/pill

ACTIONS - Dispels Wind-Cold-Damp. Invigorates the Blood. Smooths the channels. Harmonizes the collaterals. Benefits the muscles. Tonifies Kidney Jing. Stops pain.

SYNDROMES - Kidney Jing Deficiency Bi with Wind-Cold-Damp and Blood Stagnation.

CLINICAL MANIFESTATIONS - Low back pain. Sciatica. Leg pain. Preference for pressure and warmth. Pain worse at night. Limitation of joint movement. Local feeling of Cold. Stabbing pain. Muscle spasms. Referred pain toward the legs. Lower back weakness. Nocturia. Stiffness of the back. Numbness of the legs. Feebleness of the knees. Tinnitus.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Wind-Damp-Heat.

HERBS AND ACTIONS

-Du Huo - Disperses Wind-Cold-Dampness, releases the Exterior and alleviates pain. With Xi Xin, for joint pain due to Wind-Cold-Dampness. With Xi Xin and Qin Jiao, for Wind-Damp Bi causing numbness, pain and soreness in the neck, back and lower extremities. With Qiang Huo, for joint pain and numbness.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Chuan Xiong, for headache and generalized body aches and pains associated with the common cold or painful obstruction.

-Qin Jiao - Expels Wind-Dampness, opens the channels and soothes the sinews and collaterals.

-Hai Feng Teng - Dispels Wind-Dampness, unblocks the channels, disperses Cold and stops pain. With Gui Zhi, for pain, impaired joint movement and spasms of the sinews

due to Wind-Damp Bi. With Qin Jiao, Gui Zhi and Dang Gui, for Wind-Damp-Bi causing pain, spasms and numbness.

-Ji Xue Teng - Invigorates and tonifies the Blood, invigorates the channels and relaxes the sinews.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Gui Zhi and Qin Jiao, for Wind-Damp Bi. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. With Qiang Huo, Chuan Xiong and Qin Jiao, for postpartum Bi syndrome.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis. With Gui Zhi, expels Wind-Dampness, warms the channels and collaterals, facilitates joint movement and relieves Bi pain for joint and limb pain due to External Wind-Cold invasion.

-Xi Xin - Releases Exterior Wind and Cold, disperses Internal Cold and alleviates pain. With Chuan Xiong, for Wind-Cold headache, toothache and Bi pain.

-Gui Zhi - Releases the exterior, assists the Yang, warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and tonifies Kidney Yang. With Gui Zhi, Qin Jiao and Du Huo, for Damp-Cold back pain with sore, swollen feeling and localized coldness that is exacerbated by exposure to Cold and accompanied by a deep, slow pulse and a white, greasy tongue coat.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

TREATS

Chronic lumbar muscle strain. Osteoarthritis of the lumbar spine. Sequelae of vertebral fracture. Acute lumbar muscle strain. Protrusion of lumbar intervertebral disc. Sacroiliac sprain. Rheumatic lumbago. Lower back weakness. Sciatica. Osteophytosis of the spine. Traumatic lumbago. Herniated nucleus pulposus. Sciatic nerve lesion. Sacro-coccygeal injury. Bi syndrome.

Recordings Updated in May 2025

* HERPES SIMPLEX VIRUS TYPE 1 TCM-HERBS-MOLECULES

Each group plays for five minutes,

1, Notoginsenoside ST-4, Isoquercitrin, Ursolic acid. Gallium-Curcumin, Copper-Curcumin, Lupeol,
FK-3000, Curcumin, Norcepharadione B, Quercetin

2. Da Qing Ye, Ban Lan Gen, Oblonganoside H, Houttuynoid A, Houttuynoid D, Houttuynoid B, Yu Xing Cao,
Alantolactone, Caffeic acid, Vanillic acid

3. (Yin Chen Hao Tang and molecules), Dong Gua Ren, Zhi Zi, Yin Chen, Da Huang, Tricin, Abyssinone II,
FIT-039, Ent-16-Kauren-19-ol, Apigenin, Linalool

4. Epigallocatechin 3-O-gallate, Epicatechin gallate, Roscovitine, Olomoucine, Kaempferol, Naringenin,
Galangin, 4'-Hydroxymethyltrioxsalen, Harmine, Eugenol

5. Huang Qi, Afzelin, Barbaloin, Leachianone G, Morin, Emodin, Resveratrol, Himachalol, Isoscopoletin,
Beta-Himachalene

6. Neohesperidin, Naringin, Proanthocyanidin A2, Quercitrin, Epicatechin, Sinapic acid, Syringic acid,
Ferulic acid, Gallic acid, P-Anisic acid

* HERPES ZOSTER TCM HERBS AND MOLECULES

Each group plays for five minutes,

1. Glycyrrhizin, Homoharringtonine, Harringtonine, Geniposide, Tetrahydropalmatine, Valacyclovir, Famciclovir, Wogonin, Resveratrol, Genipin

2. Banlangen, Lian qiao, Yanhusuo, Zhi zi, Gan cao, Di huang, Isoquercitrin, FV-100, Quercetin

3. LX9211, Swertiamarin, Sweroside, Gentiopicroside, Valomaciclovir, Ligustilide, N-butylidenephthalide, Limonene-1-2-diol,
Perillic acid, D-limonene

4. PGG, Dang gui, Mu tong, Che qian zi, Huang lian, Ze xie, Long dan, Sorivudine, Xiong huang

5. Brincidofovir, Amenamevir, Baicalin, 6 Alpha hydroxy-geniposide, Shanzhiside, Dehydrocorydaline,
Ixoroside, Baicalein, Gentiolactone, Crisugabalin

6. Chai hu, Alisol B monoacetate, Vitamin B12, Alisol F, Glycyrrhetinic acid, Dehydrocorybulbine, Berberine,
Vitamin B1, Netivudine, Alismol

* HERPES ZOSTER TCM HERBS AFTER FORMATION OF SCARS

Chi shao, Yu jin, Ji xue teng, Mo yao, Ru xiang, Wei ling xian

* HERPES ZOSTER TCM HERBS BEFORE RESOLUTION OF LESIONS

Ye ju hua, Zi cao, Di yu, Di huang, Ku shen

* METABOLIC BONE DISEASE TCM HERBS AND MOLECULES

The aim is to promote bone formation, inhibit bone resorption and, promote bone mineralization. That is, restore bones microarchitecture, enhance bone mass, and promote bone physiological qualities. Each group plays for five minutes,

1. (Er Xian Tang and other herbs), Dan Shen, Du Zhong, Zhi Mu, Yin Yang Huo, Mo Han Lian, Ba Ji Tian,
Xian Mao, Dang Gui, Nu Zhen Zi, Huang Bai

2. Icariin, Naringin, Ursolic acid, Icaritin, Bavachin, Corylin, Quercetin, Luteolin, Genistein, Formononetin

3. Ginsenoside Rg1, Wuzhuyu, Kaempferitrin, Halofuginone, Curcumin, Monascin, Shikonin, Artemisin,
Resveratrol, Norcantharidin

4. Crocin, Salvianolic acid B, Celastrol, Puerarin, Gu Sui Bu + Calcium carbonate, Glabridin, Salidroside,
6-Gingerol, Eriodictyol, Anthocyanidin

5. Epigallocatechin gallate, Polydatin, Secoisolariciresinol, Sweroside, Calcium phosphate, Rutaecarpine,
Kaempferol, Naringenin, Isoliquiritigenin, Isofraxidin

6. Kobophenol A, Ophiopogonin D, Ligustroflavone, Specnuezhenide, Neoeriocitrin, Wedelolactone,
Acerogenin A, Honokiol, Vanillic acid, Apocynin

7. Asperosaponin VI, Poncirin, BNTA, Ugonin K, Gingenoside Rb2, Aucubin, Kirenol, Imperatorin, Bakuchiol,
Costunolide

8. Maohuoside A, Ikarisoside A, Ecdysterone, Curculigoside, Leniolisib, Diosgenin, Morroniside, Monotropein, Geniposide,
5-(Hydroxymethyl)-2-Furaldehyde

9. (Shujin Huoxue formula), Niu Xi, Tao Ren, Bai Shao, Sheng Jiang, Gan Cao, Bai Zhi, Chuan Xiong,
Di Huang, Qiang Huo, Dang Gui, Cang Zhu, Fu Ling, Wei Ling Xian, Fang Ji, Chen Pi, Fang Feng, Long Dan

* RHEUMATOID ARTHRITIS TCM HERBS AND MOLECULES 1

Each group plays for five minutes,

1. (Xinfeng and molecules), Yi Yi Ren, Lei Gong Teng, Huang Qi, Ceanothic acid, Mangiferin, Cirsimaritin, Austricine,
6-Diazo-5-oxo-L-norleucine, P-Coumaric acid, Cinnamic Acid

2. Hesperidin, Kaempferol-3-O-rutinoside, Naringin, Cycloastragenol, Paeoniflorin, 2,3,5,4′-Tetrahydroxyl-diphenylethylene-2-O-glucoside, Quercetin, Imperatorin, Atractylenolide III, Farnesene

3. (Bi-Qi and molecules), Niu Xi, Dan Shen, Ma Qian Zi, Gan Cao, Dang Shen, San Qi, Chuan Xiong,
Huang Qi, Bai Zhu, 2',7-Dihydroxy-4',5'-dimethoxyisoflavone

4. Tetrandrine, Celastrol, Artesunate, Triptolide, Andrographolide, Berberine, Sinomenine, Quercetin,
Emodin, Sodium butyrate

5. (Wuwei Wentong Chubi and molecules), BAPTA-AM, Jiang Huang, Yin yang huo, Rougui, Huang Qin,
Fu Ling, Stigmasterol, Gamma-mangostin, Demethylnobiletin, 2-Methoxy-3-methyl-9,10-anthraquinone

6. Ji Xue Teng, Auranofin, Beta-carotene, Epigallocatechin gallate, Beta-Sitosterol, Chenodeoxycholic acid,
Epicatechin, Apigenin, Caffeine, Anethole

7. (Baihu Guizhi and molecules), Zhi mu, Gan Cao, Gui Zhi, Isosinensetin, Isolicoflavonol, Isorhamnetin,
Pseudobaptigenin, Higenamine, Sodium Danshensu, Shi Gao

* RHEUMATOID ARTHRITIS TCM HERBS AND MOLECULES 2

Each group plays for five minutes,

1. (Huangqin Qingre Chubi and molecules), Chebulagic acid, Tao Ren, Yi Yi Ren, Zhi Zi, Chebulanin,
Huang Qin, Wei Ling Xian, 8-Desoxygartanin, 6-Demethoxytangeretin, Amiloride

2. Uralsaponin A, Ursolic acid, Celastrol, Ku Shen, Rosmarinic acid, Yakuchinone A, Yakuchinone B,
Tanshinone IIA, Sorbitol, Vanillin

3. (Xin’an Jianpi Tongbi and molecule), Yi Yi Ren, Jiang Huang, Yin Yang Huo, Rougui, Zhi Zi,
Lei Gong Teng, Huang Qin, Huang Qi, Fu Ling, KZR-8445

4. Militarin, Astragaloside, Bartogenic acid, Puerarin, Nobiletin, Myricetin , Resveratrol, Nicotine,
p-Hydroxybenzoic acid, Naphthalene

5. (Guizhi Shaoyao Zhimu and molecule), Bai Shao, Ma Huang, Fu Zi, Sheng Jiang, Zhi Mu, Gan Cao,
Bai Zhu, Gui Zhi, Fang Feng, Rutamarin

6. Yan Hu Suo, Irisolidone, Gingerol, Fisetin, Wogonin, Formononetin, Daidzein, Lauric acid, Eugenol,
Hexanal

7. (Wutou and molecules), Bai Shao, Ma Huang, Gan Cao, Psalmotoxin 1, Chuan Wu, Huang Qi, Punicalagin,
Dehydroevodiamine, Purpurin, OLT117

8. CRM Caulosides (B, C, D, G, H) and Leonticin D, SR-2211, Pralnacasan, Piclidenoson, Masitinib,
Nimbolide, T-2328, Rabeximod, Sulfasalazine, Norisoboldine

* T2DM DIABETES TCM HERBS-MOLECULES

Antidiabetic, hypoglycemic, regulate blood glucose level, prevent diabetic complications, decrease the risk of atherosclerosis
and cardiovascular disease, R-glucosidase inhibition, enhance insulin production. Each group plays for five minutes,

1. (Xuefuzhuyu and molecules), Tao Ren, Hong Hua, Dang Gui, Chuan Xiong, Chi Shao, Niu Xi, Chai Hu,
Jie Geng, Zhi Ke, Di Huang, Gan Cao, Mecobalamin, Calcium dobesilate, Metformin

2. (Danshen Dripping Pill -CDDP, Shenmai formula and molecules), Danshen, San Qi, and Bing Pian, INT-767, Trimetazidine, Tauroursodeoxycholate (TUDCA), Metoprolol, Ren Shen, Mai Dong, Wu Wei Zi

3. (Mingmu Dihuang pill), Shu Di Huang, Shan Zhu Yu, Mu Dan Pi, Shan Yao, Fu Ling, Ze Xie, Gou Qi Zi,
Ju Hua, Dang Gui, Bai Shao, Ji Li and Tian Ma (Shi Jue Ming substitute)

4. Alpha-Lipoic acid, Prostaglandin E1, Beraprost, Cenderitide, Cilostazol, Pentoxifylline, Pancreatic kallikrein, Azelnidipine, Temocapril, TouGuCao

5. Huang Qi, Dan Shen, San Qi, Jiang Xiang, Da Huang, Hong Hua, Niu Xi, Ji Xue Teng. Crocin. AG1024

6. (Tang luo ning -TLN and molecules), Insulin LS-84079, ferulic acid, Huangqi, Danshen, Chishao, FuZi, CaoWu, GuiZhi,
BaiShao, JiXueTeng

7. (Chuanxiongqin injection, XiXin injection and molecules), Hyodeoxycholic acid, Metformin, Huang Lian, Sheng Jiang,
Dan Shen, Chuan Xiong, Xi Xin, Dorzagliatin, Empagliflozin, Sitagliptin

* T2DM DIABETES TCM MOLECULES

Antidiabetic, hypoglycemic, regulate blood glucose level, prevent diabetic complications, decrease the risk of atherosclerosis
and cardiovascular disease, R-glucosidase inhibition, enhance insulin production. Each group of molecules plays for five minutes,

1. Tanshinone IIA , Soyasaponin A1, Soyasaponin A2, Soyasaponin I, Astragaloside IV, Momordicine II, Fenugreek saponin I, Fenugreek saponin II, Fenugreek saponin III, Charantin

2. Glycyrrhizin, Gypenoside XLIX, Gypenoside XVII, Dioscin, Saikosaponin B2, Platycodin D, Jujuboside A, Afrocyclamin A, Araloside C, Notoginsenoside Fc

3. Clematichinenoside (AR), Cinnamaldehyde, Harmine, Berberine, Leurosine, Vindoline, Aegeline, Koenidine, Vincristine, Vinblastine

4. Calystegine B2, Cryptolepine, Galalpha1-4Gal, Harmane, Norharmane, Pinoline, Vasicine, Jatrorrhizine, Vasicinol, Palmatine

5. Tembetarine, Lepidine, Mahanimbine, Piperumbellactam A, Radicamine A, Radicamine B, Schulzeine A, Schulzeine B, Avarol, Leonurine

6. 5-Hydroxymethylfurfural, Swerchirin, Tecomine, Tecostanine, Javaberine A, Trigonelline, Puerarin,
Ginsenoside Rg3, Ginsenoside Rg1, 4-Hydroxymephenytoin

Bai He Zhi Mu Tang, Gan Cao Gan Jiang Fu Ling Bai Zhu Tang, Gui Pi Tang, Huan Shao Dan, Huo Xue Zhi Tong Tang, Hyperlipoproteinemia #2, Nu Ke Ba Zhen Wan, Qu Han Bi Tang, Rheumatoid Arthritis #1

Recordings Updated in June 2025

* BAI HE ZHI MU TANG - 百合知母汤 - Lily Bulb And Anemarrhena Decoction

ACTIONS - Moistens the Lungs and Heart. Nourishes Fluids. Nourishes Yin. Clears Deficiency Heat. Cools the Blood.

SYNDROMES - Late-stage or aftermath of Ying or Xue Stage Heat with improper purging damaging Stomach Qi. Bai He Bing (Lily Syndrome) with pronounced Upper Jiao symptoms.

CLINICAL MANIFESTATIONS - Mental disorientation. Irritability. Insomnia. Palpitations. Depression. Restlessness. Hopelessness. Sudden mood swings. Erratic behavior. Feels cold then not cold. Feels hot then not hot. Aversion to life. Dry mouth. Dry stools. Dry throat. Fatigue. Coughing. Irregular stools. Lethargy. Mental instability. Obsessions. Craves food then hates food. Does not like to talk. Does not know what he/she wants. Dark urine. A bitter taste in the mouth. Dizziness. Muddled thinking.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Excess Fire in the Lungs and Heart. Contraindicated for those with Yin Deficiency as the main pathology.

HERBS AND ACTIONS

-Bai He - Nourishes Yin, moistens the Lungs, clears Heat, clears the Heart and calms the Spirit. With Zhi Mu, for Irritability and mental disorientation due to Yin Deficiency or lingering Heat in the late stages of febrile disease.

-Zhi Mu - Clears Heat, drains Fire, clears Heat from the Qi Stage, from the Lungs and from the Stomach.

TREATS

Perimenopausal syndrome. Neurosis. Autonomic dystonia. Sleep walking. Hysteria. Fatigue. Depression. Mental confusion. Nervous breakdown. Neurasthenia. Cough. Palpitations.

* GAN CAO GAN JIANG FU LING BAI ZHU TANG - 甘草干姜茯苓白术汤 - Licorice, Ginger, Poria And White Atractylodes Decoction

ACTIONS - Warms Yang. Strengthens the Spleen. Dispels Cold. Eliminates Dampness.

SYNDROMES - Lower Jiao Cold-Damp.

CLINICAL MANIFESTATIONS - Cold pain in the lower back and body. Sciatica. Copious urination. Extreme heavy sensation in the lower back. Absence of thirst.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with heaviness of the body and backache due to Damp-Heat.

HERBS AND ACTIONS

-Gan Jiang - Warms the Middle, expels Cold, rescues Devastated Yang and expels Interior Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Gan Cao, for epigastric pain and vomiting due to Spleen and Stomach Deficiency Cold. With Fu Ling, Gan Cao and Bai Zhu, for Cold-Dampness in the Lower Jiao leading to a sense of heaviness and Cold in the lower back.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Gan Jiang, eliminates Cold Dampness in the Spleen with loss of taste, a sticky sensation in the mouth, nausea, vomiting, diarrhea and a thick, white tongue coat. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness.

TREATS

Low back pain. Sciatica. Lumbago. Enuresis. Gastritis. Diarrhea. Lumbar disc disease. Chronic pelvic inflammatory disease. Acute gastroenteritis. Allergic rhinitis. Superficial gastritis. Atrophic gastritis. Duodenal ulcer. Arthritis. Impotence. Acute lumbar strain. Renal calculi. Benign prostatic hypertrophy. Eczema. Chronic bronchitis.

* GUI PI TANG - 归脾汤 - Restore the Spleen Decoction - Ginseng and Longan Combination. Decoction to Strengthen Heart and Spleen. Angelica Splenic Decoction

ACTIONS - Augments Qi. Nourishes the Blood. Strengthens the Spleen. Nourishes the Heart.

SYNDROMES - Spleen Not Governing Blood. Heart Blood Deficiency. Heart (Blood) and Spleen (Qi) Deficiency due to worry (excessive deliberation or obsession). Atrophy disorder (Wei Syndrome) due to Spleen and Stomach Qi Deficiency.

CLINICAL MANIFESTATIONS - Memory loss. Forgetfulness. Absent-mindedness. Lack of concentration. Menorrhagia. Palpitations with or without anxiety. Insomnia (difficulty falling asleep). Nightmares. Reduced appetite. Pale, wan complexion. Pale lips and nails. Early menstruation with copious pale blood. Continuous flow with little blood (spotting). Excess perspiration. Night sweats. Irregular menstruation. Leukorrhea. Dizziness (mild and postural, worse with sitting or rising or lying down or when fatigued). Blurred vision. Spots before the eyes. Low spirits. Depression. Bruising easily. Dream

disturbed sleep. Short attention span. Anxiety. Phobias. Panic attacks. Fear. Low grade fever. Withdrawal. Fatigue and lethargy. Weakness. Genital itch. Impotence. Nocturnal emissions. Weak abdomen. Abdominal distention after eating. Premenstrual spotting. Dry skin and hair.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Interior Heat. Contraindicated for those with Yin Deficiency with Heat signs.

HERBS AND ACTIONS

-Ren Shen - Tonifies Spleen, Heart and Yuan Qi. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Huang Qi, Bai Zhu and Gan Cao, tonifies the Spleen to generate Blood. With Bai Zhu and Fu Ling, for Spleen and Stomach Qi Deficiency. With Dang Gui, Long Yan Rou and Yuan Zhi, for Heart and Spleen Deficiency.

-Huang Qi - Tonifies Blood and Spleen Qi. With Dang Gui, generates and nourishes Blood. With Ren Shen, for Qi Deficiency with general debility, anorexia, and spontaneous sweat. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Long Yan Rou, Dang Gui and Suan Zao Ren, for insomnia and other signs of Qi and Blood Deficiency.

-Bai Zhu - Strengthens the Spleen and dries Dampness.

-Fu Ling - Strengthens the Spleen and harmonizes the Middle Jiao. With Ren Shen and Huang Qi, tonifies the Spleen. With Ren Shen and Bai Zhu for weak and deficient Spleen with fatigue, anorexia and loose stools. With Gan Cao, for Spleen and Heart Deficiency causing facial edema, palpitations, and short-ness of breath. With Dang Shen, Suan Zao Ren and Long Yan Rou, for insomnia due to Spleen and Heart Insufficiency.

-Suan Zao Ren - Nourishes Heart Yin and tonifies Liver Blood. With Ren Shen, Fu Shen and Long Yan Rou, for insomnia, palpitations and irritability due to Spleen Qi and Heart Blood Deficiency.

-Long Yan Rou - Nourishes the Blood, calms the Shen, and tonifies and nourishes the Heart and Spleen. With Ren Shen, Dang Gui and Suan Zao Ren, for palpitations and insomnia due to Heart Blood Deficiency, especially in cases with Spleen Qi Deficiency.

-Mu Xiang - Regulates Qi, strengthens the Spleen and prevents indigestion due to the rich nature of the other herbs. With Bai Zhu, especially effective.

-Gan Cao - Harmonizes and tonifies Qi. With Fu Ling and Dang Shen, strengthens the Spleen, augments Qi and treats palpitations due to Heart Qi Deficiency. With Ren Shen, relieves palpitations and anxiety.

-Dang Gui - Nourishes and harmonizes the Blood. With Huang Qi, for many Blood Deficiency patterns.

-Yuan Zhi - Calms the Shen, sedates the Heart and opens Orifices. With Suan Zao Ren, it is especially effective because it balances the contracting, introverted and dispersing, extroverted manifestations of Spirit to ensure the proper balance of openness and sobriety. With Fu Shen and Suan Zao Ren, for symptoms of Heart Blood Deficiency. With Suan Zao Ren, Bai Zhu and Dang Gui, for palpitations and insomnia due to Qi Deficiency. With Huang Qi, Dang Gui and Long Yan Rou, for forgetfulness, palpitations and insomnia.

-Sheng Jiang - Aids in strengthening the Spleen. With Da Zao, improves the appetite and regulates the Ying and Wei, facilitating the actions of the formula.

-Da Zao - Nourishes the Blood, calms the Shen, tonifies the Qi and harmonizes. With Bai Zhu and Dang Shen, for weakness and lassitude due to Spleen and Stomach Deficiency. With Sheng Jiang, prevents tonics from generating Dampness in the Middle Jiao.

TREATS

Anemia. Neurasthenia. Spermatorrhea. Anxiety. Post-concussion syndrome. Myasthenia gravis. Congestive Heart disease. Supraventricular tachycardia. Thrombocytopenia. Thrombocytopenic purpura. Allergic purpura. Cervicitis. Functional Uterine Bleeding. Chronic leukemia. Genital itching. Post illness convalescence. Drug abuse. Hypotension. Insomnia. Dizziness. Vertigo. Choroidopathy. Addiction. Irregular menstruation. Infertility. Premenstrual syndrome. Anxiety. Prolonged menstruation. Eyelid twitch. Premature ovarian failure. Optic atrophy. Atrophy (Wei) Syndrome. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. Hematuria. Bi-polar disorder. Fever. Systemic lupus erythematosus. Metrorrhagia. Chronic hepatitis. Viral hepatitis. Neurosis. Schizophrenia. Chronic pancreatitis. Hemorrhoids. Crohn's disease. Forgetfulness. Fatigue. Dysmenorrhea. Congestive Heart failure. Epistaxis. Interstitial cystitis. Spontaneous perspiration. Early menstruation. Indigestion. Dyspnea. Periodontitis. Habitual miscarriage. Dry skin. Ulcerative colitis. Leukopenia. Vaginal prolapse. Diabetes. Fibrocystic breast disease. Impotence. Depression. Menopause. Personality disorders. Gastric ulcer. Duodenal ulcer. Aplastic anemia. Menorrhagia. Uterine cancer. Breast cancer. Chronic bleeding. Prolonged menstruation. Chronic gonorrhea. Nervous exhaustion. Melancholy. Endometritis. Multiple sclerosis. Postpartum convalescence. Headache. Neurological disorders. Benzene poisoning. Scleroderma. Tourette syndrome. Amenorrhea. Childhood eczema. Nictitation. Alopecia. Uterine fibroids. Vaginal discharge. The sequelae of poliomyelitis. Acute infectious multiple neuritis. Progressive myodystrophy. Hysterical paralysis. Periodic paralysis. Facial paralysis. Cor pulmonare. AIDS/HIV. Palpitations. Benzene poisoning. Anxiety neurosis. Cardiac arrhythmia. Chronic fatigue syndrome. Abdominal fullness and distention. Anorexia. Hemafecia. Ulcerative colitis. Memory loss. Weakness.

Hematemesis. Chronic nephritis. Hypertension. Obesity. Meniere's disease. Night sweats. Scanty menstruation. Nocturnal emissions. Strangury. Gingivitis. Endocrine dyscrasia-uterine Cold. Sweating from the chest. Premenstrual breast distention. Colitis. Cervical cancer. Dry hair. Vaginal bleeding due to intercourse. Insomnia associated with AIDS/HIV.

* HUAN SHAO DAN - 還少丹 - Rejuvenation Special Pill. Return to Youth Pill. Pill for Restoring Yang. Lycium Formula

ACTIONS - Tonifies the Spleen and Kidneys. Nourishes the Heart. Enriches the Yin. Nourishes the Blood and Yang. Augments Qi.

SYNDROMES - Jing and Blood Deficiency due to Kidney, Heart and Spleen Deficiency.

CLINICAL MANIFESTATIONS - Fatigue. Heavy and painful lower back. Dream-disturbed sleep. General weakness. Lack of interest in food or drink. Fever. Night sweats. Seminal emission. Forgetfulness. Toothache. Dizziness. Gum swelling. General pitted edema which is worse in the lower body. Vaginal discharge. Discharge of rice-water like urination without dysuria. Aversion to Cold. Impotence. Decreased libido. Emaciation. Loose teeth. Signs of premature aging. Abdominal Cold. Easily frightened.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Jing and Blood and nourishes Liver and Kidney Yin. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu and Shan Yao, for dizziness, weak and sore back, impotence, spermatorrhea and night sweats due to Kidney and Liver Yin Deficiencies. With Shan Zhu Yu, Shan Yao and Wu Wei Zi, for cough, shortness of breath and accelerated respiration.

-Shan Yao - Tonifies the Kidney Yin, astringes Jing, tonifies the Spleen, nourishes Stomach Yin, stops diarrhea, tonifies Lung Qi and nourishes Lung Yin.

-Niu Xi - Invigorates the Blood, expels Blood Stasis and nourishes the Liver and Kidney Yin. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin, benefits Jing and brightens the eyes.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Wu Wei Zi, for spermatorrhea,

abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiencies of the Liver and Kidneys. With Du Zhong, for low back pain and weakness.

-Fu Ling - Strengthens the Spleen, harmonizes the Middle Jiao, quiets the Heart, calms the Spirit and soothes the nerves.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and tonifies Kidney Yang. With Gou Qi Zi, for low back pain.

-Yuan Zhi - Calms the Spirit and sedates the Heart and clears the channel joining the Heart and Kidney.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing, stops diarrhea and spermatorrhea, quiets the Spirit and calms and contains Heart Qi.

-Chu Shi Zi - Tonifies the Liver and Kidney Yin, clears the Liver and clears the eyes and augments Kidney Qi.

-Xiao Hui Xiang - Warms the Liver and Kidneys, expels Cold, and alleviates pain, regulates Qi, and harmonizes the Stomach.

-Ba Ji Tian - Tonifies the Kidneys and strengthens Yang, disperses Wind-Cold-Damp and strengthens sinews and bones. With Niu Xi, soaked in wine for impotence.

-Rou Cong Rong - Tonifies the Kidneys, strengthens the Yang, benefits Jing and marrow and warms the Womb. With Du Zhong, for high blood pressure. With Du Zhong and Ba Ji Tian, for deficient Kidney induced pain and weakness in the lower back with a feeling of weakness in the sinews and bones. With Ba Ji Tian, tonifies Yang without injuring Yin.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm removes filth, calms the Spirit, disperses Wind, promotes Blood flow reduces swelling, alleviates Wind-Damp Bi, transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen and promotes the movement of Qi.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs.

-Sheng Jiang - Warms the Middle and reduces the toxicity of the other herbs - included in some versions. With Da Zao, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen, protects Stomach Qi and reduces irritation of the gastrointestinal. tract by other herbs and prevents tonics from generating Dampness in the Middle Jiao.

TREATS

Listless Spirit. Spermatorrhea. Abdominal Cold. Impotence. Aldosteronism. Hypothyroidism. Prostatitis. Fever. Low back pain. Forgetfulness. Weakness. Dysmenorrhea. Enuresis. Menopause syndrome. Aphasia. Metrorrhagia. Ophthalmological disorders with significant Kidney Deficiency. Decreased libido. Signs of premature aging. Diabetes mellitus. Chronic nephritis. Renal tuberculosis. Vaginal discharge. Anorexia. Amenorrhea. Fatigue. Edema. Infertility. Obesity. Toothache.

* HUO XUE ZHI TONG TANG - 活血止痛汤 - Invigorate The Blood And Alleviate Pain Decoction

ACTIONS - Invigorates the Blood. Dispels Blood Stasis. Unblocks the channels and collaterals. Reduces swelling and bruising. Relieves pain.

SYNDROMES - Blood Stagnation.

CLINICAL MANIFESTATIONS - Traumatic injuries. Pain. Swelling. Inflammation. Bruising. Tissue and bone damage.

HERBS AND ACTIONS

-Xiang Fu - Spreads and regulates Liver Qi and alleviates pain.

-Xue Jie - Invigorates the Blood, dispels Blood Stasis and alleviates pain.

-Er Cha - Stops bleeding and generates flesh.

-Da Huang - Invigorates the Blood and dispels Blood Stasis. With Dang Gui, for Blood Stasis.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Su Mu, for trauma with pain and swelling. With Tao Ren, invigorates the Blood for all types of Blood Stagnation.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Dang Gui - Invigorates and harmonizes the Blood and stops pain due to Blood Stasis. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood. With Xiang Fu, tonifies the Blood and moves Qi.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen.

-Mu Dan Pi - Invigorates the Blood and dispels Blood Stasis.

-E Zhu - Invigorates Blood circulation, dispels Blood Stasis, regulates Qi and alleviates

pain. With San Leng for Qi and Blood Stagnation with clumping and accumulations leading to pain.

-San Leng - Forcefully breaks up Blood Stasis, regulates Qi and alleviates pain.

-Su Mu - Invigorates Blood circulation, dispels Blood Stasis, reduces swellings, opens the channels, stops bleeding and alleviates pain. With E Zhu, strongly promotes the movement of Qi and Blood, breaks up Blood Stagnation and stops pain. With Hong Hua, for traumatic injury with painful, swollen bruises or hematomas.

-Bai Shao - Nourishes the Blood and alleviates pain. With Gan Cao, for muscle spasms, pain and numbness. With Dang Gui, nourishes Yin and Blood.

-Gan Cao - Moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Traumatic injury. Bone fractures. Joint dislocation. Soft tissue injuries.

* HYPERLIPOPROTEINEMIA #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Resolves Dampness.

SYNDROMES - Damp-Heat.

CLINICAL MANIFESTATIONS - Dizziness. Headache. Heavy-headedness. Vexatious Heat. Chest oppression. Stomach fullness. Nausea. Physical fatigue. Listlessness. Heavy limbs. A bitter taste in the mouth. A dry throat. Obesity. Maybe constipation or. Dry stools. Yellow urine.

NOTES - Hyperlipoproteinemia occurs when there is too much lipid (fat) in the blood. Shorter terms that mean the same thing are hyperlipidemia and hyperlipemia. Dyslipidemia refers to a redistribution of cholesterol from one place to another that increases the risk of vascular disease without increasing the total amount of cholesterol. When more precise terms are needed, ypercholesterolemia and hypertriglyceridemia are used.

HERBS AND ACTIONS

-Long Dan - Drains Damp-Heat from the Liver and Gallbladder channels and drains and pacifies Excess Liver Fire. With Da Huang, for rib pain, a bitter taste, red eyes, jaundice, deafness, hot dysenteric disorders, Dampness and swelling of the scrotum, vomiting, epistaxis, fright, mania and constipation due to Liver Fire.

-Che Qian Cao - Clears Heat and detoxifies.

-Ze Xie - Promotes urination, leaches out Dampness and settles Ministerial Fire in the Kidneys by draining Damp-Heat from the lower Jiao. With Fu Ling, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Chai Hu - Spreads Liver Qi and relieves Stagnation.

-Yin Chen - Clears Heat, facilitates the resolution of Dampness, clears Damp-Heat from the Liver and Gallbladder and relieves jaundice.

-Jue Ming Zi - Clears Liver Heat, clears the vision, benefits the eyes, calms the Liver, anchors Liver Yang and reduces blood pressure and serum cholesterol.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao.

-Shan Zha - Reduces and guides out Food Stagnation, transforms accumulations, transforms Blood Stasis, invigorates Blood circulation, dissipates clumps and treats hypertension, elevated serum cholesterol and coronary artery disease.

-Da Huang - Drains Heat, purges accumulations, transforms Dampness and promotes urination. With Yin Chen Hao, for early-Stage Damp-Heat Jaundice when Heat is stronger than Dampness.

TREATS

Hyperlipoproteinemia.

* NU KE BA ZHEN WAN - 女科八珍丸 - Women's Precious Tea Pills. Gynecological Eight Pearls Pills. Gynecology Eight Treasure Pills

ACTIONS - Tonifies Qi and Blood. Regulates Menstruation.

SYNDROMES - Qi and Blood Deficiency.

CLINICAL MANIFESTATIONS - Fatigue. Dizziness. Anemia. Scanty menses. Heart palpitations. Dry hair and skin. Cracked nails. Anorexia. Irregular menstruation. Painful menstruation. Slight or no menstrual flow. Irritability. Pale complexion. Poor memory or concentration.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during the early stages of acute illness such as cold and flu.

NOTES - It should be used only after bleeding has subsided, not during the menstrual period.

HERBS AND ACTIONS

-Dang Gui - Tonifies, Invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis and regulates the menses. With Bai Shao, regulates and harmonizes Qi and Blood. With Gan Cao, moderates spasms and relieves abdominal pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Bai Shao - Nourishes the Blood, regulates menstruation, Softens the Liver, relieves pain and calms Liver Yang. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews. With Dang Gui, nourishes Yin and Blood.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Fu Ling, for Spleen and Stomach Deficiency with fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting. With Bai Zhu, Gan Cao, Dang Gui and Bai Shao, for Qi and Blood Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses, and amenorrhea.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency. With Dang Shen, Fu Ling and Bai Shao, strengthens the Spleen and augments Qi. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

-Hua Shi - Promotes urination and drains Heat from the Urinary Bladder.

TREATS

Anemia. Irregular menstruation. Scanty menstruation. Recovery from childbirth and illness. Optic atrophy. Anorexia. Fatigue. Dry hair. Dysmenorrhea. Amenorrhea.

Hypoglycemia. Premenstrual syndrome. Slow healing of wounds. Forgetfulness. Palpitations.

* QU HAN BI TANG - 祛寒痺汤 - Disperse Cold Rheumatism Decoction

ACTIONS - Warms the Channels. Dispels Cold. Circulates the Blood. Alleviates pain.

SYNDROMES - Wind-Cold Dampness invades the Channels with predominance of Cold. Cold Bi.

CLINICAL MANIFESTATIONS - Aversion to Cold. Cold extremities. Coldness of the affected area. Cold pain. Pain better with warmth. Pain aggravated by Cold. Sharp, stabbing pain. Shoulder pain. Neck pain. Elbow pain. Low back pain. Hand pain. Hip pain. Knee pain. Foot pain. Lack of thirst. Limited joint movement.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat. Contraindicated for those with Yin Deficiency.

HERBS AND ACTIONS

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

-Cao Wu - Expels Wind-Dampness, disperses Cold, warms and activates the channels and stops pain.

-Bai Fu Zi - Dries Dampness, expels Wind, stops spasms, expels Wind-Cold-Dampness from the Upper Jiao and alleviates pain.

-Gui Zhi - Releases the Exterior, warms the channels to relieve pain, disperses Cold, unblocks Yang, transforms Qi, warms and facilitates the flow of Blood and releases the muscle layer. With Ma Huang, for Wind-Cold Bi. With Bai Shao, warms and tonifies the Middle Jiao. With Chuan Wu and Cao Wu for chills, painful extremities and backache due to Yang Deficiency with Wind-Cold-Damp Bi.

-Ma Huang - Releases the exterior and disperses Cold. With Chuan Wu, for Wind-Cold Bi. With Gui Zhi for Wind-Cold-Damp Bi.

-Xi Xin - Releases exterior Wind and Cold, disperses Internal Cold and alleviates pain. With Ma Huang, alleviates Wind-Cold-Damp Bi pain.

-Ma Qian Zi - Unblocks the channels and alleviates pain.

-Ru Xiang - Invigorates Blood, regulates Qi, relaxes the sinews, opens the channels and alleviates pain. With Mo Yao for Blood Stasis obstructing the channels.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis and alleviates pain.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis and alleviates pain.

-Bai Shao - Alleviates pain and nourishes Blood. With Gan Cao, for muscle spasms especially in the calf, due to Blood Deficiency. With Dang Gui, nourishes Yin and Blood.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Bai Shao, regulates and harmonizes Qi and Blood.

-Mu Gua - Relaxes sinews, unblocks the channels and transforms Dampness. With Dang Gui and Bai Shao, for Blood Deficiency causing muscle spasms.

-Gan Cao - Tonifies the Spleen, tonifies Qi, alleviates pain and moderates and harmonizes the properties of the other herbs. With Bai Shao, for spasms of the calf or other muscles.

TREATS

Rheumatic arthritis. Osteoarthritis. Gouty arthritis. Rheumatic lumbago. Hand pain. Neck pain. Hip pain. Rheumatoid arthritis. Periarthritis of the shoulder. Rheumatic myalgia. Sharp, stabbing rheumatic pain. Knee pain. Elbow pain. Foot pain.

* RHEUMATOID ARTHRITIS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Expels Wind-Cold and Dampness. Warms the channels. Invigorates the Blood.

SYNDROMES - Wind-Cold-Damp with Formation of Heat (Mixed Cold and Heat.)

CLINICAL MANIFESTATIONS - Joint redness, swelling, Heat and pain. Stiffness and inflexibility. Initially the pain eases when exposed to coolness. Later, coolness does not help. but warmth does. Dry mouth. Bitter taste in the mouth. Parched throat. Insomnia. Agitation. Irritability.

HERBS AND ACTIONS

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Du Huo, for Wind-Dampness. With Cang Zhu, for a heavy-headed sensation.

-Du Huo - Dispels Wind-Dampness, releases the Exterior and alleviates pain. With Fang Feng, for numbness in the legs. With Qiang Huo, for joint pain and numbness.

-Gui Zhi - Warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels to relieve pain, releases the Exterior, assists Yang and releases the muscle layer.

-Fang Feng - Expels Wind-Dampness and alleviates pain. With Cang Zhu, for pain due to Wind-Dampness Bi with aching joints, heavy limbs and generalized aching discomfort. With Qiang Huo, for Wind-Dampness. With Qiang Huo and Dang Gui, for Wind-Cold-Damp Bi.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, induces sweating, expels Wind-Dampness and clears Dampness from the Lower Jiao.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and disperses Cold.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain.

TREATS

Rheumatoid arthritis.

Bu Yang Huan Wu Tang, Da Ban Xia Tang, Da Ding Feng Zhu, Deficient Bi #3, Hyperthyroid #5, Promoting Blood Circulation and Reducing Pain, Xiao Xian Xiong Tang, Xue Fu Zhu Yu Tang, You Gui Wan

Recordings Updated in June 2025

* BU YANG HUAN WU TANG - 补阳还伍汤 - Tonify Yang to Restore Five-Tenths Decoction

ACTIONS - Tonifies Qi. Invigorates the Blood. Unblocks the channels. Promotes movement in the limbs

SYNDROMES - Sequelae of Wind-Stroke (post cerebral apoplexy syndrome.) Qi and Yang Deficiency with Blood Stasis Obstructing the Channels. Wind-Phlegm causing Qi

and Blood Stagnation. Atrophy (Wei Syndrome) due to Qi Deficiency with Blood Stasis.

CLINICAL MANIFESTATIONS - Hemiplegia. Paralysis. Atrophy of the lower limbs. Facial paralysis. Slurred speech. Drooling. Dry stools. Frequent urination. Urinary incontinence. Deviation of the eyes and mouth. Excess salivation. Cold extremities.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated immediately after a stroke due to cerebral hemorrhage. Contraindicated for those with Wind-Stroke with a big, forceful or firm, wiry, forceful pulse. Contraindicated for those with Yin Deficiency. Contraindicated for those with Blood Heat. Contraindicated for those with Phlegm Stagnation. Contraindicated during pregnancy. Be sure consciousness is returned and the temperature is normal. Be sure there is no hemorrhage present and there is a moderate pulse.

HERBS AND ACTIONS

-Huang Qi - Tonifies source Qi, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, tonifies Wei Qi, stabilizes the exterior, and tonifies the Blood. With Dang Gui, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesia.

-Dang Gui - Invigorates, harmonizes and nourishes the Blood and alleviates pain. With Huang Qi, for many Blood Deficiency patterns. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood, promotes Qi movement, expels Wind and relieves pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis. With Huang Qi for numbness of the limbs.

-Chi Shao - Clears Heat, cools and invigorates the Blood, the Blood, dispels Blood Stasis and eliminates pain.

-Tao Ren - Dispels Blood Stasis, invigorates Blood circulation, descends Qi, and relieves spasms. With Hong Hua, for Rheumatoid arthritis. With Hong, Hua, Dang Gui, and Chi Shao, for trauma with pain.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis and alleviates pain. With Tao Ren, Invigorates the Blood for all types of Blood Stagnation.

TREATS

Sequelae of cerebrovascular accident. Ischemic cerebrovascular disorder. Cerebrovascular infarction. Cerebral arteriosclerosis. Poliomyelitis. Sequelae of poliomyelitis. Acute myelitis. Sciatica. Thromboangitis obliterans. Thrombophlebitis. Post-stroke hemiplegia. Epilepsy. Neuroses. Hypertension. Chronic nephritis. Benign prostatic hypertrophy. Vascular headache. Raynaud's disease. Numbness. Acute

obstructive cerebral vascular disease. Brain trauma. Myasthenia gravis. Multiple sclerosis. Guillain-Barre disease. Progressive muscular dystrophy. Acute infectious multiple neuritis. Frequent urination. Weakness. Dry skin. Chronic hepatitis. Cerebral thrombosis. Cervical spondylosis. Apoplexy. Paralysis. Brain trauma. Arteriosclerosis obliterans. Stroke. Post-stroke sequelae. Nodular erythema nodosum. Panniculitis. Bell's palsy. Neuralgia. Coronary artery disease. Cor pulmonale. Deep vein thrombosis. Varicose veins. Diabetes. Atrophy (Wei) Syndrome. Polyneuritis. Chronic prostatitis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Paresthesia. Amyotrophic lateral sclerosis (ALS). Fatigue. Aphasia. Urinary incontinence. Unilateral pain.

* DA BAN XIA TANG - 大半夏湯 - Major Pinellia Decoction

ACTIONS - Moves Qi. Stops vomiting. Subdues Rebellious Qi. Tonifies Qi

SYNDROMES - Stagnation and Deficiency of Stomach Qi with Rebellion

CLINICAL MANIFESTATIONS - Repeated vomiting of undigested food. Vomiting soon after eating (food intolerance). Fatigue. Weakness. Indigestion. Epigastrium is hard and full. Nausea. Regurgitation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use caution during pregnancy. Use caution with children. Contraindicated for those with an External Invasion (cold, flu, fever).

HERBS AND ACTIONS

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, stops vomiting, harmonizes the Stomach, dissipates nodules and reduces Stagnation. With Ren Shen, for vomiting due to Stomach Deficiency.

-Ren Shen - Tonifies Spleen and Stomach Qi.

TREATS

Vomiting. Pyloric cramps. Pyloric stenosis. Pyloric obstruction. Gastritis. Indigestion. Stomach cancer. Nervous vomiting. Cardiac achalasia. Scleroderma. Esophageal reflux.

* DA DING FENG ZHU - 大定風珠 - Bolus for Serious Endogenous Wind-Syndrome

ACTIONS - Nourishes Yin. Extinguishes Endogenous Wind

SYNDROMES - Endogenous Wind due to Kidney and Liver Yin Deficiency

CLINICAL MANIFESTATIONS - Fatigue. Muscle spasms with alternating flexion and extension of the extremities. Prostration. Clonic convulsions. Dizziness - worse with stress or anger. Insomnia. Dream-disturbed sleep. Night sweats. Sore low back and knees. Nocturnal emissions. Often the patient is on the verge of shock. Low-grade fever. Dry skin.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin and Fluid Deficiency with vigorous pathogenic Qi. Contraindicated for those with Excess Heat.

HERBS AND ACTIONS

-Bai Shao - Nourishes the Blood, astringes Yin, calms Liver Yang and Liver Wind and alleviates pain. With Gan Cao, and Wu Wei Zi, nourishes Yin and softens the Liver.

-Gan Cao - Moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of other herbs. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing and sweat and generates fluids.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates Fluids. With Bai Shao, for Blood Deficiency Heat.

-Mai Dong - Nourishes Yin and moistens the Lungs and Stomach. With Di Huang, for hematemesis or epistaxis due to Yin Deficiency with Excess Heat.

-Huo Ma Ren - Nourishes Yin and moistens Dryness. With Di Huang and Mai Dong, for Yin Deficiency with constipation.

TREATS

Advanced stage epidemic encephalitis. Prostration. Muscular atrophy. Sclerosis of the funiculus lateralis. Tourette syndrome. Sequelae of encephalitis. Essential tremor. Senile tremors. Hyperthyroidism. Coronary artery disease. Stroke. Post-stroke paralysis. Liver fibrosis. Poliomyelitis. Numbness. Parkinson's disease. Anxiety. Low back. Dizziness. Fatigue. Night sweats. Dyspnea. AIDS/HIV. Meningitis. Clonic convulsions. Wilson's disease (hepatocuticular degeneration). Athetosis. Parkinson's disease. Tongue atrophy after radiation treatment. Urticaria. Restless leg syndrome. Post-stroke insomnia. Chorea minor. Encephalitis B. Insomnia. Paresthesia. Hyperthyroidism. Drug abuse. Low-grade fever. Knee pain. Vertigo. Meniere's disease. Perspiration. Dry skin.

* DEFICIENT BI #3 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies the Liver and Kidneys. Strengthens the tendons and bones. Eliminates Damp-Heat. Tonifies Kidney Jing. Relieves rheumatic pain

SYNDROMES - Qi, Blood and Kidney Jing Deficiency with Damp-Heat

CLINICAL MANIFESTATIONS - Weakness of the knees. Soreness of the lower back. Lumbago. Atrophy of the leg muscles. Lower back weakness. Knee pain. Difficulty walking. Emaciation. Impotence. Poor memory. Dizziness. Night sweats. Five Sole Heat. Aggravation of the pain by Damp weather. Pale complexion. Profuse urination at night. Tinnitus. Hair loss. Sensation of warmth. Thirst. Dry skin.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Blood Stagnation. Contraindicated for those with severe accumulation of Damp-Heat.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and fills the Marrow. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Niu Xi - Invigorates the Blood, dispels Blood Stasis, expels Wind, drains Dampness, tonifies the Kidneys and Liver and strengthens the tendons and bones.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and Tonifies Kidney Yang.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Huang Qi, for Qi and Blood Deficiency. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao and drains Kidney Fire. With Cang Zhu, regulates painful obstruction in the legs and knees and eliminates Dampness and clears Heat for Lower Jiao Damp-Heat with pain, swelling, and weakness in the lower limbs. With Du Zhong, Dang Gui and Niu Xi, for Bi syndrome with sore and weak low back and knees.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen, induces sweating, expels Wind-Dampness and clears Dampness from the Lower Jiao. With Huang Bai. for pain, swelling, and weakness of the lower extremities or skin lesions due to Wind-Dampness and atrophy disorder, vaginal discharge and Damp-sores. With Bai Zhu, for musculoskeletal disorders of the arms and shoulders due to Phlegm Stagnation.

-Bai Shao - Nourishes the Blood and astringes Yin. With Dang Gui and Shu Di Huang,

for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Dang Gui, nourishes Yin and Blood.

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain. With Ren Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweat. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Fang Feng and Bai Zhu, for Wei Qi Deficiency with spontaneous sweat.

-Bu Gu Zhi - Tonifies the Kidneys, strengthens Yang, stabilizes Jing and tonifies and warms Spleen Yang.

-Shan Yao - Tonifies the Spleen, tonifies Kidney Yin and astringes Jing. With Ren Shen and Bai Zhu, for decreased appetite and lack of energy due to Spleen Deficiency.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing and tonifies Qi. With Huang Qi, for Yang Deficiency with spontaneous sweat.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin and benefits Jing. With Shu Di Huang, for Liver and Kidney Deficiency.

-Ren Shen - Powerfully tonifies Yuan Qi. With Shu Di Huang, for Qi and Yin Deficiency. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing , benefits the marrow, tonifies the Kidneys and Liver and benefits the Kidneys and Spleen. With Bu Gu Zhi and Du Zhong, for spermatorrhea, premature ejaculation, and low back pain from Kidney Deficiency. With Du Zhong, enriches and tonifies the Kidneys and Liver, astringes Jing, nourishes Kidney Yin, brightens the eyes and encourages the movement of Primal Yang to treat spermatorrhea, premature ejaculation and lower back pain from Kidney Deficiency.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Cang Zhu, for Damp Cold Painful Obstruction. With Huang Qi and Fang Feng, for spontaneous sweat with aversion to Wind due to Wei Qi Deficiency.

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation and unblocks the channels. With Dang Gui and Bai Shao, for Blood Deficiency causing muscle spasms.

-Gu Sui Bu - Tonifies the Kidney Yang, strengthens the sinews and bones, promotes mending of sinews and bones and activates the Blood.

-Fang Feng - Expels Wind-Dampness and alleviates pain. With Huang Qi, prevents Wind from entering the skin. With Cang Zhu, for pain due to Wind-Damp Bi with aching joints, heavy limbs and generalized aching discomfort. With Qiang Huo, for Wind-Dampness.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Cang Zhu, for a heavy-headed sensation.

TREATS

Wei syndrome. Bi syndrome. Difficulty walking. Rheumatic diseases. Osteoarthritis. Chronic rheumatic pain. Osteoarthritis of the lumbar spine. Gouty arthritis. Gonarthrosis. Coxarthrosis. Rheumatoid arthritis. Sciatica. Knee pain. Neuritis. Myasthenia Gravis. Infantile paralysis. Rheumatic lumbago. Osteophytosis of the spine. Gonarthritis. Coxarthritis. Muscular dystrophy. Muscular atrophy. Sequelae of poliomyelitis. Weakness. Dry skin.

* HYPERTHYROID #5 (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes Yin. Clears Heat. Subdues Yang. Transform Phlegm. Scatters nodulation

SYNDROMES - Liver and Kidney Yin Deficiencies with Liver Yang Rising

CLINICAL MANIFESTATIONS - Goiter. Possible nodulations. Possible exophthalmos. Tension around the eyes. Severe, splitting headaches with dizziness. Aversion to Heat. Restlessness. Hot flashes. Both cheeks slightly red. Dizziness. Dry eyes. Blurred vision. Spots before the eyes. Numbness of limbs. Flaccid paralysis. Weakness. Tinnitus. Deafness. Forgetfulness. Throat dry and painful. Five sole heat. Low-grade fever. Night sweats. Irritability. Insomnia. Palpitations. Excess dreams. Stools difficult to pass. Sudden tinnitus or deafness. Flushed face. Red, swollen, painful eyes. Irascibility with violent angry outbursts. Dry mouth. Bitter taste in mouth. Thirst. Vomiting sour or bitter liquid. Increased food intake. Emaciation. Constipation or dry stools. Maybe rib pain. Spermatorrhea. Irregular menses or scanty menses or amenorrhea. Vaginal discharge.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Xuan Shen and Mai Dong, for a dry throat, irritability, a red tongue, and a fast thready pulse due to Devastated Yin with Blazing Fire.

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin, softens hardness and dissipates nodules. With Di Huang and Mai Dong, for constipation due to Dryness.

-Mai Dong - Moistens the Lung, nourishes Stomach Yin, generates fluids, clears the Heart and eliminates irritability. With Di Huang, and Xuan Shen, for thirst, constipation, irritability and low-grade fever due to Stomach Yin Deficiency. With Suan Zao Ren and Di Huang, for irritability and insomnia due to Yin Deficiency.

-Tian Dong - Nourishes Yin, nourishes the Kidneys, clears Lung Heat, moistens the Lungs, generates fluids and resolves Phlegm. With Mai Dong, for dry cough, thirst, and other symptoms due to Yin Deficiency and injured fluids.

-Gou Qi Zi - Nourishes and tonifies the Liver and Kidneys, nourishes the Blood and nourishes Yin.

-Suan Zao Ren - Nourishes Heart Yin, tonifies Liver Blood and calms the Spirit. With Bai Zi Ren, strongly quiets the Spirit, calms the emotions, enriches the Yin and Blood, stops nightsweats and treats palpitations, irritability and insomnia due to Yin and Blood Deficiency failing to nourish the Heart and Liver and is effective for patients with concurrent constipation.

-Ban Xia - Dries Dampness, transforms Phlegm and descends Rebellious Qi. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Ban Xia, expels Phlegm and stops nausea and vomiting. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention, and anorexia due to congested fluids.

-Chuan Lian Zi - Clears Heat, clears Dampness and regulates Qi.

-Yuan Zhi - Calms the Spirit, sedates the Heart, expels Phlegm, opens the Orifices, clears the Lungs, reduces abscesses and dissipates swellings. With Suan Zao Ren, balances the contracting, introverted and dispersing, extroverted manifestations of Spirit to ensure the proper balance of openness and sobriety.

-Bai Zi Ren - Nourishes the Heart, calms the Spirit and astringes Yin Deficiency sweat. With Yuan Zhi and Suan Zao Ren, for insomnia, and palpitations due to Heart Blood Deficiency. With Wu Wei Zi for night sweats due to Yin Deficiency.

-Wu Wei Zi - Contains leakage of Lung Qi, tonifies Qi, nourishes Kidney Yin, astringes sweat, generates fluids, tonifies the Heart and calms the Spirit. With Suan Zao Ren and Di Huang, for Heart Deficiency with insomnia, irritability, and forgetfulness.

-Kun Bu - Clears Heat, resolves Phlegm and softens Phlegm nodules.

-Hai Zao - Resolves Phlegm, softens Phlegm nodules, clears Heat, promotes urination and reduces swelling. With Kun Bu, for goiter and scrofula.

-Chen Pi - Regulates Qi, tonifies the Spleen, adjusts the Middle, dries Dampness and transforms Phlegm. With Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and relieves toxicity. With Di Huang, for insomnia and delirium due to unremitting Heat injuring the Ying level.

TREATS

Hyperthyroidism.

* PROMOTING BLOOD CIRCULATION AND REDUCING PAIN (Topical Powder)

ACTIONS - Invigorates the Blood

SYNDROMES - Blood Stagnation

CLINICAL MANIFESTATIONS - The local skin of the affected area is dark purple in color. There are some hard cord-like subcutaneous swollen masses which are not painful when they are pressed.

HERBS AND ACTIONS

-Tou Gu Cao - Invigorates Blood circulation, breaks Blood Stasis, reduces swelling, generates flesh, clears Heat, eliminates toxins, cools the Blood and relieves pain (topically), dispels Wind and Dampness and relaxes the muscles and sinews.

-Yan Hu Suo - Invigorates the Blood, circulates Qi, stops pain and disperses extravasation. With Ru Xiang and Mo Yao, for pain due to trauma.

-Dang Gui - Invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis, reduces swelling, expels pus and generates flesh.

-E Zhu - Invigorates Blood circulation, dispels Blood Stasis regulates Qi and alleviates pain. With Su Mu, breaks up Blood Stasis.

-Hai Tong Pi - Dispels Wind-Dampness, unblocks the channels and collaterals, treats itching skin lesions and kills parasites.

-Wei Ling Xian - Dispels Wind-Dampness, unblocks the channels and alleviates pain.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, invigorates the channels, alleviates pain,r educes swelling and generates flesh. With Mo Yao, for Blood Stasis obstructing the channels with epigastric, flank abdominal and joint pain. With Yan Hu Suo, for chest and abdominal pain.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain, reduces swelling, generates flesh and promotes healing. With Hong Hua, for chest and abdominal pain, amenorrhea and dysmenorrhea due to Blood Stasis. With Ru Xiang, topically as a

powder for skin lesions and ulcerations.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction and alleviates pain.

-Bai Zhi - Expels Wind, eliminates Dampness, reduces swelling, eliminates toxins and expels pus. With Qiang Huo, for Wind-Cold Dampness causing fever, chills and headaches.

-Su Mu - Invigorates Blood circulation, dispels Blood Stasis, reduces swellings, opens the channels and alleviates pain. With Ru Xiang and Mo Yao, for trauma-induced pain and swelling.

-Wu Jia Pi - Dispels Wind-Dampness, nourishes and warms the Liver and Kidneys and strengthens sinews and bones.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Su Mu, for trauma with pain and swelling.

-Tu Fu Ling - Relieves toxicity, eliminates Dampness, benefits the joints and clears Damp-Heat from the skin.

TREATS

Chronic phlebitis topically.

* XIAO XIAN XIONG TANG - 小陷胸汤 - Minor Decoction (for Pathogens) Stuck in the Chest

ACTIONS - Clears Heat. Transforms Phlegm. Expands the chest. Dissipates Stagnation

SYNDROMES - Phlegm and Heat Accumulation Beneath the Heart. Phlegm-Heat Stagnation in the chest

CLINICAL MANIFESTATIONS - Focal distention in the chest and epigastrium with or without nodules which is painful when pressed. Coughing up yellow, viscous sputum. Constipation. A bitter taste in the mouth.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with significant Spleen and Stomach Deficiency.

HERBS AND ACTIONS

-Gua Lou - Clears Lung Heat, transforms Hot Phlegm, regulates Qi (unbinds the chest), reduces abscesses, dissipates nodules and eliminates pus. With Huang Lian and Ban

Xia, for Phlegm-Heat accumulating in the chest and epigastrium that is painful when pressed with coughing of thick, yellow sputum (Xiong Bi due to Phlegm and Heat Accumulation Beneath the Heart).

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Qi and alleviates nausea.

TREATS

Hepatitis. Cholecystitis. Acute pancreatitis. Biliary reflux gastritis. Erosive gastritis. Peptic ulcer. Biliary ascariasis. Pyloric obstruction. Upper respiratory tract infection. Pleurisy. Reflux esophagitis. Pulmonary Heart disease. Cough. Exudative pleurisy. Dyspepsia. Acid reflux. Blepharitis. Acne. Acute pericarditis. Costochondritis. Chronic pancreatitis. Congestive Heart failure. Indigestion. Pleurisy with effusion. Pneumonia. Acute bronchitis. Asthma. Bronchiectasis. Spontaneous pneumothorax. Cerebrovascular disease. Psychosis. Insomnia. Gastritis. Acid reflux. Silicosis. Pulmonary tuberculosis. Cholelithiasis. Intercostal neuralgia. Coronary Heart disease. COPD. Hiatus hernia. Psychogenic chest pain. Smoke inhalation. Dysphagia. Acute infectious gastroenteritis. Constipation.

* XUE FU ZHU YU TANG - 血府逐淤湯 - Drive out Stasis in the Mansion of Blood Decoction

ACTIONS - Invigorates the Blood. Dispels Blood Stasis. Spreads Liver Qi. Unblocks the channels. Stops pain

SYNDROMES - Heart Blood Stagnation. Blood Stagnation of the chest and diaphragm. Blood Stasis in children, usually when fever, pain and insomnia develop after trauma

CLINICAL MANIFESTATIONS - Chronic stabbing pain in the chest. Pain in the hypochondrium. Chronic, stubborn headache with a fixed, piercing quality. Palpitations. Chronic incessant hiccups. Five Sole Heat. Choking sensation when drinking. Dry heaves. Depression or low spirits with a sensation of warmth in the chest. Chest distention. Dry, scaly skin. Dark rings under the eyes. Spider naevi on the cheeks, nose, trunk, inner knee and ankle. Dizziness. Chronic tinnitus. Chronic gum disease with dark, purplish, patchy or dark, red atrophic gums. Loose teeth. Painful receding gums. Frequently bleeding gums. Vomiting after intake of water. Persistent daytime drowsiness. Insomnia (persistent with much dreaming). Restless sleep. Forgetfulness. Irritability. Fidgeting. A bad temper. Extreme mood swings. Evening tidal fever. Dark or purplish lips, conjunctiva or nail beds. Dark complexion. Dark sclera. Hair loss on the head and body.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy. Contraindicated for those with Excess menstrual bleeding. Contraindicated

for the weak or debilitated. Contraindicated for those with active hemorrhage disorders.

NOTES - This is an excellent formula for all Blood Stagnation problems, particularly those affecting the upper body.

HERBS AND ACTIONS

-Tao Ren - Dispels Blood Stasis and invigorates Blood. With Hong Hua and Chuan Xiong, invigorates Blood and dispels Stagnation, especially in the upper body. With Hong Hua, Dang Gui and Chi Shao, for menstrual pain, amenorrhea or irregular menstruation due to Blood Stasis and trauma with pain.

-Hong Hua - Invigorates Blood, dispels Blood Stasis and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis. With Tao Ren, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain. With Tao Ren, Dang Gui, Chuan Xiong and Chi Shao, for menstrual pain or amenorrhea.

-Dang Gui - Nourishes and invigorates Blood. With Chi Shao, invigorates Blood primarily in the lower body and nourishes and moistens Dryness. With Di Huang, dispels Blood Stasis without injuring Yin and Blood. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis. With Gan Cao, moderates spasms and relieves abdominal pain. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood, disperses Blood Stasis and treats abdominal pain.

-Chuan Xiong - Invigorates Blood, regulates Qi and alleviates pain. With Chai Hu and Chi Shao, for Qi and Blood Stagnation generating headache and/or chest pain. With Tao Ren, Hong Hua and Dang Gui, for abdominal pain accompanying menstruation, pain due to trauma and headache from Blood Stagnation. With Tao Ren, Hong Hua, Dang Gui and Chai Hu, for sharp stabbing pain in the chest and hypochondriac area due to Blood Stagnation.

-Chi Shao - Activates Blood, dispels Blood Stasis, clears Heat and alleviates pain. With Chuan Xiong and Dang Gui, for Blood-Stasis induced gynecological disorders such as immobile abdominal masses and amenorrhea with abdominal pain. With Tao Ren, for Blood Stasis induced menstrual disorders, especially those characterized by early period, excessive bleeding, and thick purple clots. With Tao Ren, Hong Hua and Chuan Xiong, for Blood Stagnation in the chest.

-Niu Xi - Eliminates Blood Stasis, descends Qi and Blood and invigorates Blood. With Tao Ren, Hong Hua and Dang Gui, for menstrual pain, irregular menstruation and postpartum pain.

-Chai Hu - Spreads Liver Qi, relieves Stagnation, raises Yang and resolves Phlegm. With Zhi Ke, for a stifling sensation in the chest. With Zhi Ke and Jie Geng, expands the chest and promotes Qi movement which circulates Blood. With Gan Cao, for hepatitis

and upper right quadrant pain.

-Jie Geng - Directs the actions of the formula to the upper body.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure and resolves hardenings.

-Di Huang - Cools Blood and clears Heat. With Niu Xi, powerfully clears Deficiency Fire Blazing Upward with pain and swelling of the gums, epistaxis, hematemesis and other hemorrhage in the upper body.

-Gan Cao - Regulates and harmonizes the other herbs. With Jie Geng, for pain and swelling of the throat.

TREATS

Coronary artery disease. Hypertension. Cor pulmonale. Rheumatic valvular heart disease. Intercostal neuralgia. Costochondritis. Post concussion syndrome. Migraine. Trigeminal neuralgia. Psychosis. Menopausal syndrome. Primary dysmenorrhea. Depression. Chronic hepatitis. Chronic pancreatitis. Thrombosis. Cardiac ischemia. Stroke. Cerebral arteriosclerosis. Hyperlipidemia. Insomnia. Mammary gland hyperplasia. Schizophrenia. Post traumatic shock syndrome. Post traumatic stress syndrome. Cerebral tumors. Gingivitis. Palpitations. Chronic prostatitis. Myocardial infarction. Hemoptysis. Headache. Alopecia. Cough. Hiccups. Uterine fibroids. Lung cancer. Chronic obstructive pulmonary disease. Chronic asthma. Stomach cancer. Neonatal jaundice. Anemia. Nausea/Vomiting. Behcet's disease. Somnambulism. Tinnitus. Peritoneal tuberculosis. Hemorrhoids. Dizziness. Allergic purpura. Impotence. Dyspnea. Upper back pain. Subarachnoid hemorrhage. Painful obstruction. Cirrhosis of the Liver. Cancer pain. AIDS/HIV/ARC with a fever. Pelvic inflammatory disease. Amenorrhea. Acne vulgaris. Urticaria. Dysmenorrhea. Endometriosis. Premenstrual syndrome. Irregular menstruation. External injury. Traumatic chest injury. Paralysis. Angina pectoris. Costalgia. Functional neurosis. Ascites. Thoracic strains. Hysteria. Peptic ulcers. Embolism. Bradycardia. Concussion. Post-concussion syndrome. Pneumothorax. Vascular headache. Phlebitis. Pelvic inflammatory disease. Mitral stenosis. Post traumatic insomnia. Chronic, difficult periodontitis. Acid regurgitation. Obesity. Cardiac arrhythmia. Polycystic ovary syndrome. Breast cancer. Premature ovarian failure. Bartholinitis. Optic atrophy. Diabetes. Pulmonary tuberculosis. Emphysema. Crohn's disease. Esophageal cancer. Viral carditis. Fever. Amyotrophic lateral sclerosis (ALS). Prostatic hypertrophy. Neurosis. Deafness. Chronic glomerulonephritis. Forgetfulness. Vertigo. Hematemesis. Infertility. Dry skin. Systemic lupus erythematosus. Urolithiasis. Coronary Heart disease. Ear pain. Poor vision associated with AIDS/HIV.

* YOU GUI WAN - 右歸丸 - Restore the Right (Kidney) Pill

ACTIONS - Warms and tonifies Kidney Yang. Replenishes Jing. Tonifies the Blood

SYNDROMES - Kidney Yang Deficiency with waning of Ming Men Fire (with Spleen and Stomach Deficiency Cold). Atrophy disorder (Wei Syndrome) due to Kidney Qi and Yang Deficiency

CLINICAL MANIFESTATIONS - Exhaustion from long-term illness. Low energy. Lethargy. Aversion to Cold. Coolness of the extremities. Impotence. Spermatorrhea. Aching and weakness of the lower back and knees. Infertility. Premature ejaculation. Seminal emission. Loose stools (sometimes with undigested food). Incontinence of urine. Edema of the lower extremities. Pale face. Spontaneous perspiration. Dizziness. Enuresis.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated when Kidney Deficiency is accompanied by Dampness or turbidity. Avoid cold and raw foods while taking this formula. This formula has been shown to be effective in reversing corticosteroid-induced immune suppression.

HERBS AND ACTIONS

-Fu Zi - Warms Ming Men Fire and assists Heart, Kidney and Spleen Yang. With Shu Di Huang and Rou Gui, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and sore back and legs, impotence, and urinary frequency. With Rou Gui, powerfully tonifies Kidney Yang, for Kidney Yang Deficiency with lower back pain and weakness in the legs and knees and Deficiency of Ming Men Fire with impotence or infertility.

-Rou Gui - Warms the Kidneys, Spleen and Heart and strengthens Yang and Ming Men Fire and assists the generation of Qi and Blood.

-Shu Di Huang - Tonifies the Blood, nourishes the Yin and nourishes Jing and Blood. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Dang Gui and Shu Di Huang, for night sweats due to Yin Deficiency. With Shu Di Huang and Shan Yao , for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency.

-Shan Yao - Strongly tonifies the Kidneys and astringes Jing. With Shan Zhu Yu, for Kidney Deficiency with spermatorrhea and night sweats.

-Gou Qi Zi - Nourishes and tonifies the Liver and Kidneys, benefits Jing and brightens the eyes. With Shu Di Hang, for Liver and Kidney Deficiency. With Shu Di Huang, Fu Zi and Rou Gui, for Kidney Yang Deficiency.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine and benefits marrow. With Du Zhong, enriches and tonifies the Kidneys and Liver, astringes Jing, nourishes Kidney Yin , brightens the eyes and encourages the movement of Primal Yang to treat spermatorrhea, premature ejaculation and lower back pain from Kidney Deficiency.

-Du Zhong - Tonifies the Kidneys and Liver, tonifies Kidney Yang and strengthens the sinews and bones. With Shan Zhu Yu and Tu Si Zi, for Impotence and frequent urination due to Deficiency Cold of the Kidneys.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and disperses Cold. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

TREATS

Nephrotic syndrome. Osteoporosis. Infertility. Impotence (especially due to low sperm count). Anemia. Leukopenia. Spermatorrhea. Metrorrhagia. Irregular menstruation. Multiple sclerosis. Chronic pelvic inflammatory disease. Premature ovarian failure, prevention. Dizziness. Vertigo. Erectile dysfunction. Myasthenia gravis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Prostatic hypertrophy. Polyuria. Senility. Myalgic encephalomyelitis. Knee pain. Fatigue. Hyperlipoproteinemia. Chronic glomerulonephritis. Headache. Vaginal discharge. Heart palpitations. Spontaneous perspiration. Dyspnea. Abdominal pain. Gingivitis. Amenorrhea. Post-menopausal uterine bleeding. AIDS/HIV/ARC. Neurosis. Chronic fatigue syndrome. Asthma. Frequent urination. Chronic nephritis. Diabetes. Sciatica. Lumbago. Hypertrophic myelitis. Late menstruation. Retinitis Pigmentosa. Obesity. Polycystic ovary syndrome. Glaucoma. Blepharitis. Optic atrophy. Atrophy (Wei) Syndrome. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Hypothyroidism. Addison's disease. Sperm abnormality. Epstein-Barr virus syndrome. Forgetfulness. Weakness. Dysphagia. Edema of the lower extremities. Epistaxis. Interstitial cystitis. Menopause. Meniere's disease. Nocturnal emissions. Strangury. Periodontitis. Neck stiffness. Urinary incontinence. Chemotherapy for breast cancer. Prematurely gray hair.

Da Qin Jiao Tang, Fang Feng Tong Sheng San, Ge Hua Jie Cheng San, Huo Xue San Yu Tang #2, Liang Xue Xiao Feng San, Qi Xu Xue Yu Tang, Shen Fu Zai Zao Wan, Tuo Li Xiao Du Yin, Wen Dan Tang

Recordings Updated in June 2025

* DA QIN JIAO TANG - 大秦韮湯 - Major Large Gentian Decoction

ACTIONS - Dispels Wind. Clears Heat. Circulates Qi. Dredges the channels. Nourishes and invigorates the Blood. Harmonizes the Ying and Wei

SYNDROMES - Early-stage and middle-stage Wind Stroke. Wind-Heat Bi. Wind-Predominant Bi

CLINICAL MANIFESTATIONS - Whole body numbness. Deviation of mouth and eyes. Numbness of skin. Dysphagia due to stiffness of the tongue. Hemiplegia. Rigidity of the extremities. Spasms of the extremities. Aversion to Cold. Fever. Chills. Aching joints. Tingling of the skin. Paralysis of the extremities. Numbness and lack of sensation in the hands and feet. Common cold (with above symptoms). Inability to walk. Wandering joints pain

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those in a coma. Contraindicated for those with convulsions. Contraindicated for those with Internal Wind. Use with extreme caution for those with Blood or Yin Deficiency.

NOTES - Modern research says this formula acts to relieve inflammation, stop fever, calm the mind, stop pain and promote blood circulation. This formula can be used when Wind, Cold, Dampness and Heat are severe.

HERBS AND ACTIONS

-Qin Jiao - Clears Heat, expels Wind-Dampness, relaxes the sinews, clears Deficiency Heat and resolves Dampness (good for cramps in the limbs). With Fang Feng, Du Huo and Qiang Huo for Wind-Cold-Damp Bi. With Dang Gui and Bai Shao, for Blood Deficiency with hemiplegia, especially with excess muscle tension in the upper extremities.

-Gan Cao - Tonifies the Spleen, tonifies Qi clears Heat, moderates spasms, alleviates pain and moderates and harmonizes the harsh properties of the other herbs. With Bai Shao, for abdominal pain, intestinal spasms and spasms of the calf or other muscles. With Dang Gui for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness and paralysis.

-Chuan Xiong - Activates the Blood, regulates Qi, expels Wind-Cold and alleviates pain (good for headaches). With Dang Gui for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis. With Di Huang and Bai Shao, for headache due to Blood Deficiency. With Xi Xin, for Wind-Cold headaches and Shao Yin

Cold headaches. With Dang Gui, Shu Di Huang, and Bai Shao, for headache from Blood Deficiency.

-Dang Gui - Nourishes the Blood, invigorates and harmonizes the Blood, disperses Cold and stops pain. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Gan Cao, moderates spasms and relieves abdominal pain. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. With Qiang Huo, Chuan Xiong and Qin Jian, for postpartum Bi syndrome.

-Bai Shao - Nourishes Blood, astringes Yin, soothes Liver, relieves pain and adjusts the Ying and Wei. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision and dysmenorrhea due to Blood Deficiency or Stasis. With Du Huo and Qin Jiao, for chronic Bi Syndrome with injury to Qi and Blood leading to spasms of the extremities.

-Xi Xin - Releases exterior Wind and Cold, disperses internal Cold, warms the Lungs, alleviates pain, disperses and unblocks the Qi of the nasal orifices and circulates water. With Di Huang for headache and toothache due to Wind-Heat. With Chuan Xiong, for Wind-Cold headache, toothache and Bi pain. With Chuan Xiong and Fang Feng, for Bi syndrome. With Bai Zhi, for Wind-Cold toothache. With Qiang Huo and Fang Feng, for Wind-Cold. With Du Huo, for joint pain due to Wind-Cold-Dampness.

-Qiang Huo - Releases the exterior, dispels Wind-Cold-Dampness from the upper Tai Yang, opens the channels, vitalizes vessels, stops pain and guides Qi to the Tai Yang and Du Channels. With Chuan Xiong for headache and generalized body aches and pains associated with the common cold or painful obstruction. With Fang Feng for pain due to Wind-Dampness. With Du Huo, for Wind-Dampness. (Qiang Huo is better for superficial Wind-Dampness and upper extremities and Du Huo is better for deeper Wind-Dampness and lower extremities). With Bai Zhi for headaches. With Bai Zhi, Fang Feng, Xi Xin and Chuan Xiong, for Wind-Cold with aversion to Cold, fever, headaches and muscle aches.

-Fang Feng - Releases the exterior, expels Wind-Cold-Dampness, stops pain, stops spasms and moves Qi. With Qin Jiao, for Wind Dampness Bi with spasms of the tendons or numbness of the limbs and pain due to Wind-Dampness in patients with Blood Deficiency. With Qiang Huo and Dang Gui, for Wind-Cold-Damp Bi.

-Huang Qin - Clears Lung Heat, drains Fire and dries Dampness.

-Shi Gao - Clears Heat, drains Fire, clears excess Heat from the Lungs, and relieves muscles. With Shu Di Huang, for headache, toothache, and thirst due to raging fire caused by devastated Yin. With Di Huang, for Excessive Fire with injured fluids.

-Bai Zhi - Expels Wind, alleviates pain and headache, and expels Dampness. With Xi Xin, for Wind-Cold induced headaches, sinus headaches and orbital headaches. With

Chuan Xiong, for headaches.

-Bai Zhu - Tonifies the Spleen, tonifies Qi, dries Dampness, and stabilizes the exterior.

-Di Huang - Clears Heat, cools the Blood and nourishes Yin and Blood. With Bai Shao, for Blood Deficiency Heat. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and devastated Blood.

-Shu Di Huang - Nourishes Blood and Yin and strengthens Liver and Kidneys. With Dang Gui and Bai Shao, for dizziness, palpitations, insomnia and menstrual dysfunction due to Blood Deficiency.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao, pacifies the Heart, calms the Shen and soothes the nerves. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Du Huo - Releases the exterior, dispels Wind-Cold-Dampness, opens the channels, vitalizes vessels and stops pain. With Qin Jiao, expels Wind-Cold-Damp, relieves arthralgia and stops pain. With Xi Xin and Qin Jiao, for Wind-Damp Bi causing numbness, pain and soreness in the neck, back and lower extremities. With Fang Feng, for numbness in the legs. With Qiang Huo, for joint pain and numbness.

TREATS

Apoplexy. Stroke. Rheumatism. Bell's palsy. Rheumatoid arthritis. Cerebral hemorrhage. Arthritis. Muscle atrophy. Numbness. Dysphagia. Sjogren's Syndrome. Facial paralysis. Rheumatic arthritis. Multiple neuritis. Thrombotic stroke. Cerebral embolism. Hemiplegia. Fibromyalgia. Paresthesia. Fever. Aphasia. Polymyositis.

* FANG FENG TONG SHENG SAN - 防风通圣丸 - Pills of Ledebouriella with Magical Therapeutic Effects

ACTIONS - Disperses Wind. Releases the Exterior. Drains Heat. Unblocks the bowels

SYNDROMES - Heat Excess in the Exterior and Interior. Simultaneous Tai Yang, Yang Ming, Shao Yin Heat disorder. Good for all Wind-Heat disorders with constipation, dark, rough urination, facial sores and red, sore eyes. which can lead to Internal Wind with a stiff tongue and clenched fists.

CLINICAL MANIFESTATIONS - Dizziness. Red, sore eyes. Difficulty swallowing. Nasal congestion and infection. Thick, sticky nasal discharge and saliva. Bitter taste in the mouth. Dry mouth. Focal distention in the chest and diaphragm. Stifling sensation in the chest and diaphragm. Manic behavior. Carbuncles. Heat rash. Headache. Acne. Chills. High fever. Restlessness. Urticaria. Sore throat. Swelling of the throat. Coughing. Reddish urine. Dyspnea. Vertigo. Severe aversion to Cold. Skin rashes. Skin ruptures or

ulcers. Tense abdomen. Shoulder stiffness. Numb extremities. Fatigue. Constipation. Dysuria with reddish urine. Dark, rough urination. Obesity. Fullness of the abdomen. Fullness of the epigastrium. Heaviness in the head.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Deficiency. Contraindicated during pregnancy. Use caution for those with sensitive digestion.

HERBS AND ACTIONS

-Fang Feng - Releases the exterior, expels External Wind, expels Internal Wind and stops spasms. With Bo He, Huang Qin, Jing Jie and Lian Qiao, for Wind-Heat.

-Ma Huang - Releases the exterior moves Lung Qi, stops wheezing and promotes urination. With Shi Gao, for cough from Heat Obstructing the Lungs with wheezing and flaring of nostrils.

-Da Huang - Drains Heat, purges accumulations and reduces Fire toxicity. With Mang Xiao, drains Heat through the stool.

-Mang Xiao - Purges accumulations, eliminates Stagnation, clears Heat, softens hardness and moistens Dryness. With Da Huang, for constipation due to Heat in the Stomach and Intestines.

-Jing Jie - Releases the exterior, expels Wind, moves Qi, vents rashes and relieves itching. With Bo He, releases the exterior to induce sweating, disperses Wind-Heat, vents rashes and alleviates itching. With Fang Feng, for exterior Excess and initial-stage boils.

-Bo He - Disperses Wind-Heat, cools and clears the head and eyes, benefits the throat and vents rashes.

-Zhi Zi - Clears Heat, reduces Fire and eliminates irritability.

-Hua Shi - Promotes urination and drains Heat.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, clears Excess Heat from the Lungs, clears Blazing Stomach Fire, heals sores and wounds, nourishes Body Fluids and stops thirst.

-Lian Qiao - Clears Heat, relieves toxicity and expels external Wind-Heat.

-Huang Qin - Clears Lung Heat and drains Fire.

-Jie Geng - Opens Lungs, spreads Lung Qi, expels Phlegm, expels pus, benefits the throat and directs the effects of other herbs to the upper body. With Gan Cao, for

hoarseness, pain and swelling of the throat due to Wind-Heat. With Dang Gui, for ulcerated abscess where pus is being discharged slowly.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold, alleviates pain and treats headaches.

-Dang Gui - Moistens Intestines, unblocks bowels, reduces swelling, expels pus, generates flesh and alleviates pain.

-Bai Shao - Nourishes Blood and alleviates pain. With Chuan Xiong and Bai Shao, for harmonizing the Blood to Dispel Wind.

-Bai Zhu - Tonifies the Spleen and tonifies Qi to protect the Spleen from the harmful effects of the other herbs.

-Gan Cao - Tonifies the Spleen, tonifies Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the properties of other herbs. With Jie Geng, benefits the throat to improve swallowing.

-Sheng Jiang - Releases the exterior, stops cough and reduces the toxicity of other herbs.

TREATS

Influenza. Erysipelas. Food poisoning. Carbuncles. Urticaria. Dermatitis. Mania. Acne. Heat rash. Obesity. Hypertension. Skin rupture or ulcers. Conjunctivitis. Eczema. Poliomyelitis. Infectious mononucleosis. Headache. Mumps. Obesity. Migraine headache. Abscesses. Hyperlipidemia. Cardiac asthma. Beriberi. Nasal suppuration. Otitis media. Dizziness. Fatigue. Dyspnea. Eye pain. Red eyes. Sore throat. Acute cellulitis. Acute lymphangitis. Cardiac disorders. Apoplexy. Arteriosclerosis. Diabetes. Chronic nephritis. Asthma. Scabies. Red nose. Alopecia. Hemorrhoids. Sciatica. Arthritis. Nasal suppuration. Psoriasis. Furuncles. Common cold. Habitual constipation. Facial boils. Sores. Acute mastitis. Alcoholism. Early-stage gingivitis. Lymphangitis. High fever. Vertigo. Infertility. Otorrhea. Ear pain. Hangover.

* GE HUA JIE CHENG SAN - 葛花解酲散 - Pueraria Flower Powder for Detoxification and Awakening

ACTIONS - Separates and reduces alcohol-Dampness. Warms the Middle. Strengthens the Spleen and Stomach. Clears Damp-Heat

SYNDROMES - Hangover from alcohol consumption. Spleen and Stomach Damp-Heat. Spleen and Stomach Deficiency Cold with Retention of Dampness. Spleen and Stomach Retention of Cold-Dampness

CLINICAL MANIFESTATIONS - Hangover. Headache. Heart irritability. Trembling of the hands and feet. Chest and diaphragm distention. Reduced appetite. Dizziness. Hypochondriac pain. Nausea. Vomiting sour and bitter fluids. Yang jaundice (sclera and skin bright yellow). Pain and fullness in ribs on both sides. Maybe pain in the right hypochondrium. Bitter taste in mouth. Anorexia. Maybe alternating chills and fever. Concentrated, dark urine. Fatigue. Diarrhea. Loose stools. Inhibited urination. Abdominal distention. Women:. Yellow vaginal discharge with foul smell. Pruritis vulvae. Men:. Pain, swelling and burning sensations of testicles.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Do not take long-term.

HERBS AND ACTIONS

-Dou Kou - Promotes the movement of Qi, aromatically transforms Dampness, strengthens the Stomach, warms the Middle Jiao, descends Qi and stops vomiting. With Sha Ren, for fullness and a stifling sensation in the chest, epigastric pain and fullness, nausea, vomiting, diarrhea, anorexia and a thick tongue coat due to Qi Obstruction from Cold-Dampness. With Chen Pi, for fullness and discomfort in the chest and abdomen, belching, nausea, vomiting, and diarrhea due to Spleen and Stomach Deficiencies with turbid Dampness Accumulation.

-Sha Ren - Promotes the movement of Qi, aromatically transforms Dampness, strengthens the Spleen, stops vomiting, warms the Middle and stops diarrhea. With Mu Xiang, increases the flow of Qi in the digestive system while reducing distention and Food Stagnation, alleviating pain and strengthening the Spleen. With Chen Pi, for Dampness obstructing the Spleen's transforming and transporting functions with reduced intake of food and diarrhea, belching, nausea, and a stifling sensation in the epigastrium due to Disharmony of the Stomach Qi and vomiting of unadulterated, or scanty but viscous fluids. With Bai Zhu and Ren Shen, for Spleen and Stomach Deficiency.

-Ge Hua - Relieves hangovers, awakens the Spleen to treat headaches, fever, irritability, thirst, a feeling of fullness and bloating in the chest and diaphragm and vomiting from excessive use of alcohol. With Dou Kou, Chen Pi and Ren Shen, for treatment of hangovers.

-Gan Jiang - Warms the Middle and expels Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Bai Zhu and Ren Shen,for Spleen Yang Deficiency with a cold abdomen, vomiting, and diarrhea. With Fu Ling and Bai Zhu, for Cold-Dampness in the Lower Jiao leading to a sense of heaviness and Cold in the lower back.

-Ze Xie - Promotes urination and leaches out Dampness. With Sha Ren, for scanty urine, abdominal distention and urinary discomfort. With Bai Zhu, for Spleen Deficiency leading to accumulation of Dampness with urinary difficulty, loose stools, diarrhea Milky Lin or vaginal discharge.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Zhu Ling and Ze Xie, for Edema due to Internal Dampness. With Gan Jiang, eliminates Cold Dampness in the Spleen with loss of taste, a sticky sensation in the mouth, nausea, vomiting, diarrhea and a thick,white tongue coat and frequent diarrhea due to Spleen and Stomach Deficiency Cold. With Fu Ling, Zhu Ling and Ze Xie, for edema with Spleen Deficiency. With Gan Jiang, for Deficiency Cold of the Middle Jiao with abdominal pain, distention, vomiting and diarrhea.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and descends Qi. With Qing Pi, for flank pain and chest and abdominal distention due to Liver Qi Stagnation. With Bai Zhu, for anorexia and other symptoms of Damp-Obstruction due to Spleen Deficiency.

-Ren Shen - Powerfully tonifies Yuan Qi, tonifies Spleen, Stomach, Lung and Heart Qi, generates Body Fluids and stops thirst. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Zhu Ling - Promotes urination, leaches out Dampness and dispels Damp-Heat. With Fu Ling, for Lin Syndrome, scanty urine, edema, loose stools, vaginal discharge, jaundice, leg Qi and diarrhea. With Ze Xie, drains Damp, unblocks and drains urinary pathways, and drains Heat from the Bladder. With Fu Ling and Ze Xie, for edema due to Spleen Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Zhu Ling and Ze Xie, strengthens its ability to promote urination and leach out Dampness for dysuria and Phlegm accumulation. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ren Shen and Bai Zhu, for a weak and deficient Spleen with fatigue, anorexia and loose stools. With Mu Xiang, for diarrhea and borborygmus due to Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention.

-Mu Xiang - Promotes the movement of Qi, alleviates pain, adjusts and regulates stagnant Qi in the Intestines, strengthens the Spleen, prevents Stagnation, dispels Damp-Heat and harmonizes the Liver and Spleen. With Sha Ren, for distention, epigastric and abdominal pain, anorexia, nausea, vomiting, diarrhea, dysentery, or tenesmus due to Qi Obstruction and/or Food Stagnation. With Bai Zhu, for anorexia with epigastric and abdominal pain and distention. with Qing Pi, for abdominal pain, distention and belching.
With Sha Ren, Ren Shen and Bai Zhu, for anorexia and abdominal distention and fullness which improves with warmth applied locally.

-Qing Pi - Spreads Liver Qi, breaks up Stagnant Qi, dissipates accumulations, reduces Food Stagnation, dries Dampness and transforms Phlegm.

TREATS

Hangover. Indigestion. Abdominal Cold. Dizziness. Headache. Scleroderma. Gastritis. Alcoholism. Nausea/Vomiting. Reduced appetite. Fatigue. Esophageal reflux. Systemic lupus erythematosis.

* HUO XUE SAN YU TANG #2 - 活血散瘀汤二号 - Quicken the Blood and Scatter Stasis Decoction #2

ACTIONS - Invigorates the Blood. Dispels Stasis. Promotes the circulation of Qi. Alleviates pain

SYNDROMES - Qi and Blood Stagnation

CLINICAL MANIFESTATIONS - Enduring prostatitis that does not heal. Marked, possibly lancinating perineal area pain. Pain radiates to the testes, penis, lower abdomen or low back. Dark circles around the eyes. Possible penile induration. Urinary dribbling. Rough, painful, astringent urination. Painful sexual intercourse. Painful ejaculation. Possible spermatorrhea. Possible hematuria. A hard prostate. Possible nodulation on the prostate. Distension in the chest, epigastrium or abdomen. Distending pain that moves from place to place. Abdominal masses that appear and disappear or. Abdominal masses that do not move. Abdominal distension and pain that is not relieved by a bowel movement. Mood swings. Depression. Frequent sighing. Headache. Irritability. Insomnia. Restlessness. Constipation with small round stools. Dull/dark complexion. Purple lips. Purple nails. Pain that has the quality of boring in, fixed and stabbing and may be worse at night. Bleeding with dark blood and dark clots.

HERBS AND ACTIONS

-Dan Shen - Invigorates the Blood and dispels Blood Stasis.

-Ze Lan - Invigorates the Blood, dispels Blood Stasis, promotes urination and disperses swellings. With Dan Shen, for swelling and pain.

-Chi Shao - Clears Heat, cools the Blood activates Blood and dispels Blood Stasis. With Tao Ren, for Blood Stasis induced menstrual disorders, especially those characterized by early period, excessive bleeding, and thick purple clots. With Mu Dan Pi, for Blood Stasis disorders.

-Tao Ren - Dispels Blood Stasis and invigorates Blood circulation.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and alleviates pain.

-Su Mu - Invigorates Blood circulation and dispels Blood Stasis.

-Mu Dan Pi - Invigorates the Blood, dispels Blood Stasis, clears Heat and cools and harmonizes the Blood.

-Bing Lang - Regulates Qi, reduces accumulations, drains downward and promotes urination.

-Zhi Ke - Promotes the movement of Qi and resolves hardenings.

TREATS

Prostatitis. Spermatorrhea. Hemorrhoids. Constipation.

* LIANG XUE XIAO FENG SAN - 凉血消风散 - Cool the Blood and Eliminate Wind Powder

ACTIONS - Expels Wind. Clears Heat. Cools the Blood. Nourishes Yin and Blood. Eliminates Dampness

SYNDROMES - Wind-Heat with Blood Dryness with Wind-Heat Predominant

CLINICAL MANIFESTATIONS - The lesions have a slightly erythematous base. The scales are dry and powdery. The scales may be very thick on the scalp.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Dang Gui - Tonifies, activates and harmonizes the Blood, reduces swelling, expels pus, generates flesh and alleviates pain.

-Jing Jie - Releases the Exterior, expels Wind, vents rashes and relieves itching. With Dang Gui, for itching and tremors of the hands and feet from Wind due to Blood Deficiency.

-Ku Shen - Clears Heat, dries Dampness, disperses Wind and stops itching. With Chan Tui and Jing JIe, for generalized itching.

-Bai Ji Li - Dispels Wind and stops itching. With Dang Gui, Jing Jie and Chan Tui, for eczema with itching.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin and moistens Dryness.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst and heals eczema, burns and ulcerated sores and wounds. With Zhi Mu, for a high fever from Wind-Heat with irritability and extreme thirst. With Di Huang, for excessive

Fire with injured fluids. With Di Huang and Zhi Mu, for Stomach Fire.

-Gan Cao - Clears Heat, relieves Fire toxicity, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Seborrheic dermatitis.

* Qi XU XUE YU TANG - 气虚血瘀汤 - Qi Deficiency with Blood Stagnation Decoction

ACTIONS - Tonifies Qi. Transforms Stasis. Invigorates the Blood. Unblocks the channels

SYNDROMES - Qi Deficiency Leading to Blood Stagnation

CLINICAL MANIFESTATIONS - Insidious, lingering pain in the chest, flank, epigastric and abdominal areas. Pain worse with exertion. Shortness of breath. Weakness. Possible hemiplegia.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach and relieves numbness and pain.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen and clears Dampness from the Lower Jiao.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and alleviates pain. With Chai Hu and Chi Shao, for Liver Qi and Blood Stagnation generating headaches and/or chest pain.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis. With Tao Ren, invigorates the Blood for all types of Blood Stagnation.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat and cools the Blood. With Tao Ren, for Blood Stasis induced disorders.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Huang Qi, for Qi and Blood Deficiency. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Huang Qi, raises the Clear Yang due to abnormal descent of Qi.

-Pu Huang - Invigorates the Blood, dispels Blood Stasis and stops bleeding by astringing.

TREATS

Chronic hepatitis.

* SHEN FU ZAI ZAO WAN - 人附再造囊 - Ginseng and Aconite Pills for a New Lease on Life

ACTIONS - Supports Yang. Clears the Exterior

SYNDROMES - Yang Deficiency with External Wind-Cold

CLINICAL MANIFESTATIONS - Strong chills or shivering. Possible mild fever. Chronic aversion to Cold. A desire to curl up. Exhaustion. Headaches. General muscle pain. Anhidrosis or. Spontaneous sweating. When there is sweating, the aversion to Cold is more pronounced. Aching in the bones. A low, soft voice. Reluctance to speak. Waxy, pale complexion. Cold body and limbs. There may be an exposure to Wind or Cold prior to the aggravation of the symptoms.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi in Deficiency patients with Exterior conditions. With Huang Qi, for Qi Deficiency with general debility, anorexia and spontaneous sweat.

-Fu Zi - Restores Devastated Yang, rescues from rebellion, warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold and Dampness, warms the channels and stops pain. With Ren Shen, for severe Deficiency of Source Qi and Collapse of Yang with cold extremities, sweating, weak breathing, dizziness and an extremely pale complexion. With Huang Qi, for spontaneous sweating and chills due to Yang Deficiency. With Xi Xin, disperses Cold and stops pain for Cold damage both Internal and External with aversion to Cold, headache and generalized body aches with aching joints.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer, unblocks Yang and transforms Qi. With Bai Shao, for External Wind-Cold with disharmony between the Ying and Wei, with spontaneous sweating, fever and chills. With Fu Zi, for chills and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi. With Chuan Xiong, expels Wind-Dampness, warms the channels and collaterals, facilitates joint movement and relieves the discomfort of painful obstruction.

-Huang Qi - Tonifies Qi and Blood, tonifies Wei Qi, stabilizes the Exterior, tonifies the Lungs and relieves numbness and pain. With Gui Zhi, for Qi and Blood Deficiency and Ying and Wei Deficiency with numbness and painful obstruction of the musculature. With Fu Zi and Sheng Jiang, for profuse perspiration and extreme fatigue due to Yang Deficiency.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Xi Xin and Fang Feng, for Wind-Cold headaches.

-Fang Feng - Releases the Exterior and expels External Wind. With Huang Qi, prevents Wind from entering the skin.

-Qiang Huo - Releases the Exterior and disperses Cold. With Chuan Xiong, for headaches and generalized body aches and pains associated with the common cold or painful obstruction. With Fang Feng, for pain due to External Wind-Dampness.

-Xi Xin - Disperses Wind-Cold and Internal Cold and alleviates pain. With Chuan Xiong, for Shao Yin Cold headaches. With Qiang Huo, Fang Feng and Gui Zhi, for Wind-Cold-Damp Bi pain. With Qiang Huo, Fang Feng and Chuan Xiong, for Wind-Cold.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei. With Huang Qi and Ren Shen, restrains sweating from Deficiency. With Gui Zhi, Sheng Jiang and Da Zao, for Wind-Cold with Deficiency and perspiration.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Middle, adjusts the Ying and Wei, stops vomiting and reduces the toxicity of other herbs. With Da Zao, for External Wind-Cold. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis. With Gui Zhi and Da Zao, harmonizes the Ying and Wei to drive out pathogens.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi and moderates and harmonizes the harsh properties of other herbs.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Common cold in the elderly. Spontaneous perspiration.

* TUO LI XIAO DU YIN - 托裡消毒飲 - Drain the Interior and Detoxify Decoction

ACTIONS - Strengthens the Spleen. Tonifies Qi and Blood. Eliminates Dampness. Expels pus. Draws out toxicity. Promotes the generation of flesh

SYNDROMES - Spleen Deficiency with Accumulation of Pathogenic Dampness. Toxic sores in deficient patients

CLINICAL MANIFESTATIONS - Intermittent discharge of pus. The sores either do not suppurate or only leak pus slowly and fail to heal. Viscous, thin fluid. Mental and physical fatigue. Lassitude. Lack of luster. Poor appetite. Loose stools. Fever.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy because it contains Sp. Gleditsiae Zao Jiao Ci.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi and strengthens the Spleen and Stomach. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Gan Cao and Fu Ling for Spleen and Stomach Deficiency with diarrhea, abdominal distention and fatigue.

-Bai Zhu - Tonifies Qi, strengthens the Spleen and dries Dampness. With Huang Qi for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Gan Cao - Tonifies Qi, strengthens the Spleen, clears Heat, relieves Fire toxicity and harmonizes. With Bai Zhi for pain associated with ulcers. With Jie Geng, for pain and swelling of the throat. With Jin Yin Hua, for damp rashes or acne.

-Dang Gui - Nourishes Blood, reduces swelling, expels pus and generates flesh. With Huang Qi for ulcerated abscesses with insufficient drainage or draining only a clear thin discharge. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.With Jin Yin Hua, reduces obstruction and toxicity for swollen, painful sores and necrosis of surrounding tissue.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With Dang Gui, Huang Qi and Zao Jiao Ci, for chronic non-healing sores with or without pus in deficient patients.

-Bai Shao - Nourishes Blood and preserves Yin. With Dang Gui, nourishes Yin and Blood. With Ren Shen and Huang Qi, restrains sweating from Deficiency.

-Jin Yin Hua - Clears Heat and relieves Fire toxicity. With Zao Jiao Ci, for the initial stage of abscesses and boils. With Gan Cao, for Toxic swelling and sores.

-Bai Zhi - Reduces swelling, expels pus, expels Dampness and alleviates discharge. With Jie Geng and Bai Zhi, for ulcerated boils where pus is not discharged. With Gan Cao for pain associated with ulcers. With Jin Yin Hua and Dang Gui, for early-stage

sores and carbuncles.

-Jie Geng - Resolves Phlegm, promotes discharge of pus, aids suppuration and directs formula to the upper body. With Bai Zhi for ulcerated boils where pus is not discharged. With Gan Cao disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat.

-Huang Qi - Tonifies Qi and Blood, nourishes the muscles, tonifies the Spleen, promotes the discharge of pus and generates flesh. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Dang Gui, for ulcerated abscesses with insufficient drainage or draining only a clear thin discharge. With Ren Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweat.

-Zao Jiao Ci - Dispels Phlegm, dissipates Stagnation, reduces swelling and aids suppuration. With Bai Zhi, for difficulty discharging pus from abscesses.

-Fu Ling - Tonifies Qi, strengthens the Spleen and transforms Phlegm. With Ren Shen and Bai Zhu, for weak and deficient Spleen with fatigue, anorexia and loose stools.

TREATS

Chronic purulent otitis media. Suppurative lymphadenitis. Carbuncles. Gangrene. Otorrhea. Boils. Mastitis. Cellulitis. Herpes simplex. Gingivitis. Abscesses. Inflamed cysts. Bed sores. Otitis media. Conjunctivitis. Genital eruptions. Hordeolum. Diverticulitis. Herpes zoster. Periodontitis.

* WEN DAN TANG - 温胆汤 - Warm Gallbladder Decoction

ACTIONS - Regulates Qi. Transforms Phlegm. Clears the Gallbladder. Harmonizes the Stomach. Dries Dampness. Dispels Heat

SYNDROMES - Phlegm-Fire Disturbs the Heart. Gallbladder Deficiency Heat. Disharmony Between the Gallbladder and Stomach with Phlegm Heat. Qi Stage Gallbladder Damp-Heat

CLINICAL MANIFESTATIONS - Dizziness. Vertigo. Nausea and vomiting. Insomnia. Dream-disturbed sleep with unusual dreams. Palpitations. Anxiety. Profuse white foamy sputum. Restlessness. Timidity. Indecisiveness. Indeterminate gnawing hunger. Seizures accompanied by copious sputum. Flushing up. Chest distention. Expectoration of yellow Phlegm. Bitter taste in the mouth. Chills and fever. Abdominal distention. Frequent dark, scanty urine. Irritability. Depression. Slight thirst. Anorexia after serious illness.

HERBS AND ACTIONS

-Zhu Ru - Clears Heat and Phlegm from the Gallbladder and Stomach, cools Blood and descends rebellious Qi. With Ban Xia and Zhi Shi, for insomnia, palpitations and irritability due to Phlegm Heat leading to disharmony between the Gallbladder and Stomach with a stifling sensation in the chest and restlessness. With Zhi Shi, for Phlegm-Heat obstructing the flow of Qi with focal distention in the chest and epigastrium, hiccup, dry retching, nausea and acid regurgitation and palpitations, irritability, insomnia and emotional problems due to Gallbladder constraint with Phlegm Disturbing the Heart. With Ban Xia, Chen Pi, Zhi Shi and Fu Ling, for Gallbladder Fire with Phlegm.

-Zhi Shi - Reduces accumulation, descends Qi, transforms Phlegm and reduces distention. With Chen Pi, strengthens the Middle Jiao.

-Ban Xia - Transforms Phlegm, descends rebellious. Qi, harmonizes the Stomach and stops vomiting. With Chen Pi, for Spleen and Stomach Qi Disharmony with epigastric and abdominal distention or pain. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools, treats Phlegm, thin mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia.

-Chen Pi - Regulates Qi, tonifies the Spleen, transforms Phlegm and descends Qi. With Ban Xia, for excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Sheng Jiang, for manifestations of Stomach Qi Disharmony and Cold-Dampness Obstructing the Middle with nausea and hiccup. With Ban Xia, Zhu Ru and Sheng Jiang, for nausea and vomiting due to rebellious Stomach Qi.

-Fu Ling - Resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Gan Cao, strengthens the Spleen, drains Dampness, harmonizes the Middle Jiao and calms the Shen. With Chen Pi, for nausea and vomiting due to congested Fluids. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention, and anorexia due to congested fluids. With Ban Xia, Chen Pi and Sheng Jiang, for congested fluids in the Stomach causing nausea and vomiting.

-Gan Cao - Resolves Phlegm, clears Heat, tonifies the Spleen and harmonizes and moderates the harsh properties of the other herbs.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, protects the Stomach and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen.

-Sheng Jiang - Regulates the relationship between the Gallbladder and the Stomach and assists in stopping vomiting. With Da Zao, protects the Stomach Qi. With Ban Xia, for vomiting due to Cold, Thin Mucus. With Zhu Ru, for vomiting due to Heat in patients with Stomach Qi Deficiency. With Chen Pi, for Cold-Dampness Obstructing the Middle with nausea and hiccup.

TREATS

Chronic gastritis. Peptic ulcer. Chronic hepatitis. Neurosis. Early stages of schizophrenia. Psychosis. Meniere's disease. Chronic bronchitis. Hypertension. Myocarditis. Pericarditis. Morning sickness. Menopause syndrome. Depression. Stroke. Male menopause. Epilepsy. Nephropathy. Diabetic foot. Organophosphorus poisoning. Vegetative nervous dysfunction with palpitations. Cardiac arrhythmia. Anxiety. Glaucoma. Irritable bowel syndrome. Dysentery. Dizziness. Vaginal discharge. Polyuria. Nausea/Vomiting. Amyotrophic lateral sclerosis (ALS). Anxiety neurosis. Reactive psychosis. Obsessive compulsive disorder. Migraine. Schizophrenia. Impotence. Otitis externa. Acid reflux. Anorexia. Post-stroke paralysis. Otorrhea. Labyrinths. Gastroptosis. Hysteria. Side effects of chemotherapy. Bi-polar disorder. Acute or chronic tracheitis. Pulmonary emphysema. COPD. Asthma. Timidity. Angina. Premature atrial contractions. Cholecystitis. Severe insomnia. Autonomic dystonia. Alopecia. Tinnitus. Deafness. Melancholia. Diabetes mellitus. Diabetic retinopathy. Pneumonia. Hyperthyroidism with insomnia. Vestibular neuritis with dizziness. Palpitations. Insomnia. Coronary Heart Disease. Gastralgia. Vertigo. Oliguria. AIDS/HIV. Fever. Neurasthenia. Insanity. Involutional psychosis. Senile dementia. Neurosis. Abdominal fullness and distention. Deafness. Otitis media. Chronic pancreatitis. Indigestion. Ear pain.

Ba Zheng San, Ke Yin Fang, Qing Hua Tang, Raynaud's #2, Ren Re San, Tai Yuan Yin, Teng Long Tang, Wu Ling San, Yin Chen Hao Tang

Recordings Updated in June 2025

* BA ZHENG SAN - 八正散 - Eight Herb Powder For Rectification. Dianthus Formula. Powder of Eight Ingredients. Powder for Dispersing Heat and Promoting Urination

ACTIONS - Clears Heat. Purges Fire. Promotes urination. Unblocks painful urinary dysfunction

SYNDROMES - Bladder Damp-Heat. Stone Lin. Blood Lin. Heat in Heart Channel Transferring to the Small Intestine Channel

CLINICAL MANIFESTATIONS - Dark, turbid, scanty, difficult urination or. Frequent, urgent and painful. Urination may be red. Maybe fever. Sores in mouth, on tongue or throat. Dry mouth and throat. Maybe urinary retention (severe). Maybe lower abdominal distention and pain (severe). Thirst. Maybe total obstruction. Parched throat. Severe sore throat. Maybe anuria (severe). Dribbling urination. May be profuse whitish, yellow vaginal discharge. Maybe be urinary calculi. Constipation. Eye redness and pain. Epistaxis. Distending lower back pain. Irritability. Scorched lips.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with chronic Lin Syndrome. Contraindicated during pregnancy. Long term use may produce weakness, palpitations, light headedness and loss of appetite. Contraindicated for those with chronic disease with weakness.. Contraindicated for those with Deficiency Cold.

HERBS AND ACTIONS

-Mu Tong - Promotes urination, unblocks painful urinary dysfunction, clears Damp obstruction and drains Heart Heat through the Small Intestine. With Hua Shi, Che Qian Zi and Zhi Zi, for painful urinary dribbling due to Damp-Heat in the Bladder. With Che Qian Zi, for Heart Fire Transferring to the Small Intestine channel causing edema and painful urinary dysfunction.

-Hua Shi - Drains Heat from the Bladder, aids expulsion of stones, expels Damp-Heat and stops bleeding due to Heat. With Mu Tong, for Heat Lin. With Zhi Zi and Mu Tong, for Lin Syndrome with hot, painful urinary dribbling and scanty, dark, painful urination. With Che Qian Zi, Qu Mai and Bian Xu, clears Damp-Heat by promoting urination. With Mu Tong, Che Qian Zi and Zhi Zi, for Damp-Heat dysuria with pain and cloudy urine.

-Che Qian Zi - Promotes urination and clears Heat. With Mu Tong and Hua Shi, for Lin Syndrome.

-Qu Mai - Promotes urination, drains Damp-Heat from the Bladder and unblocks painful urinary dysfunction. With Hua Shi and Mu Tong, for Lin Syndrome. With Zhi Zi, for Lower Jiao Damp-Heat with burning, painful, dribbling urination. With Che Qian Zi and Hua Shi, for Heat dysuria (Re Lin) with burning and pain during urination.

-Bian Xu - Promotes urination, drains Damp-Heat from the Bladder and eliminates painful urination. With Qu Mai and Che Qian Zi, for Damp-Heat in Lower Jiao or Stone Lin with urinary discomfort. With Qu Mai, for painful urinary dysfunction. With Mu Tong, Che Qian Zi, Zhi Zi and Hua Shi, for Damp-Heat dysuria (Shi-Re Lin).

-Zhi Zi - Drains Heat from the three Jiaos through the urine and stops bleeding. With Hua Shi, for painful urinary dysfunction due to Damp-Heat in the Bladder. With Hua Shi, Bian Xu and Che Qian Zi, for urinary tract infection.

-Da Huang - Drains Damp-Heat and clears Heat through the stool. With Che Qian Zi

and Bian Xu, for hot, painful urinary dysfunction. With Che Qian Zi, Mu Tong and Zhi Zi, for hot, painful urinary dysfunction. With Zhi Zi, for constipation.

-Deng Xin Cao - Promotes urination, leaches out Dampness, unblocks painful urinary dysfunction, clears Heat from the Heart channel by directing Fire downward and calms the Spirit. With Hua Shi, for Damp-Heat in the Heart, Lung and Bladder channels causing incomplete, painful urination. With Mu Tong, for difficult, scanty and burning associated with Heart channel Heat shifting to the Large Intestine or Heat clumping in the Bladder or Damp-Heat lodging in the Lower Jiao.

-Gan Cao - Harmonizes, relieves abdominal pain, clears Heat and relieves Fire toxicity. With Hua Shi, relieves irritability.

TREATS

Acute glomerulonephritis. Cystitis. Interstitial cystitis. Urethritis. Urolithiasis. Acute prostatitis. Stomatitis. Acute urinary tract infections. Pyelonephritis. Uroschesis. Gout. Headache. Pterygium. Kidney failure. Oliguria. Fever. Post-surgical urinary retention. Low back pain. Edema during pregnancy. Enuresis. Strangury. Postpartum convulsions. Cervical cancer. Red eyes. Sore throat. Female Bladder infections. Metrorrhagia. Male gonorrhea. Acute pyelonephritis. Leukorrhagia. Pyelitis. Prostate cancer. Dysuria. Nephritis. Benign prostatic hypertrophy. Epistaxis. Vaginal discharge. Polyuria. Hematuria. Constipation. Chronic hepatitis. Herpes genitalia. Edema. Hernia. Spermatorrhea. Chyluria. Urinary incontinence. Eye pain. Vaginitis. Stranguria associated with AIDS/HIV.

* KE YIN FANG - 咳银方 - Overcome Psoriasis Formula

ACTIONS - Nourishes Blood. Dispels Wind. Moistens Dryness

SYNDROMES - Blood Dryness induced psoriasis

CLINICAL MANIFESTATIONS - Small coin sized moist pale red maculae located on the scalp, body, extremities, and other areas. There is a tightly covered scale. Removing the scale reveals a light pink shining membrane. Beneath the membrane are petechiae. Progress of disease is slow. New lesions appear sporadically. Chronic patients may see it in any season. The lesions heal without scarring. There may be nail involvement with stippling or pitting of the nail plate. Rarely presents as diffuse redness of the skin covered by fine scales. Light-headedness. Pallor.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Xuan Shen - Clears Heat, cools the Blood and nourishes Yin.

-Huo Ma Ren - Nourishes and moistens the Intestines, nourishes Yin and clears Heat.

-Bei Dou Gen - Clears Heat, Resolves toxicity, reduces swelling and resolves Dampness.

-Ku Shen - Clears Heat, dries Dampness and stops itching.

TREATS

Psoriasis due to Blood Dryness.

* QING HUA TANG - 青化汤 - Clear And Transform Decoction

ACTIONS - Nourishes Yin. Clears Damp-Heat. Invigorates the Blood. Breaks up Stasis

SYNDROMES - Yin Deficiency with Damp-Heat and Blood Stagnation

CLINICAL MANIFESTATIONS - Weak low back and limbs. Dizziness. Tinnitus. Tidal fevers. Night sweats. Nocturnal emissions. Steaming bone disorder. Afternoon fevers. Spermatorrhea. Foul smelling diarrhea or dysenteric disorder. Red, swollen, painful knees, legs or feet. Rib and hypochondriac pain. Edema. Painful urinary dysfunction. Fixed abdominal masses. Fixed pain.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin.

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao and drains Kidney Fire. With Che Qian Zi, for burning, painful, hesitant urination.

-Dan Shen - Invigorates the Blood and dispels Blood Stasis.

-Che Qian Zi - Promotes urination and clears Damp-Heat.

-Bei Xie (Fen) - Resolves turbid Dampness in the Lower Jiao.

-Yi Zhi - Warms the Kidneys and astringes Jing and urine.

-Da Huang - Drains Heat, purges accumulations, clears Heat, transforms Dampness, promotes urination, invigorates the Blood and dispels Blood Stasis. With Sheng Di Huang, for Deficiency Fire.

TREATS

Chronic prostatitis. Nocturnal emissions. Spermatorrhea.

* RAYNAUD'S #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Invigorates the Blood. Breaks up Stagnation

SYNDROMES - Qi and Blood Stagnation

CLINICAL MANIFESTATIONS - Pain that is fixed, stabbing and/or severe or. Pains that move around. Distention. Depression. Irritability. Pain is worse with pressure. Dark complexion. Fixed, palpable masses. Bleeding with clots. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas. Varicose and spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots

HERBS AND ACTIONS

-Ji Xue Teng - Invigorates and tonifies the Blood, activates the channels and relaxes the sinews.

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain. With Dang Gui, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesia. With Gui Zhi, for Qi and Blood Deficiency and Ying and Wei Deficiency with numbness and painful obstruction of the musculature.

-Bai Shao - Nourishes the Blood and relieves pain.

-Yu Jin - Invigorates the Blood, dispels Blood Stasis, regulates Qi flow, speeds healing of chronic sores and alleviates pain. With Chai Hu, for Liver Qi and Blood Stagnation with flank pain and distention, dysmenorrhea and irregular menstruation.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals to relieve pain and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels.

-Chai Hu - Spreads Liver Qi and relieves Stagnation. With Bai Shao, for Liver Blood Deficiency with Liver Qi Stagnation.

-Dang Gui - Invigorates and harmonizes the Blood and disperses Cold. With Bai Shao, regulates and harmonizes Qi and Blood.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis and relieves pain. With Bai Shao, for spasms and cramping pain associated with Blood Deficiency and Blood

Stagnation.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen. With Bai Shao, Chai Hu and Dang Gui, for hypochondriac pain due to Liver Qi Stagnation.

-Xi Xin - Disperses Wind-Cold and Internal Cold and alleviates pain.

TREATS

Raynaud's disease.

* REN RE SAN

ACTIONS - Augments Qi. Restores the Pulse. Calms the Shen. Supports Yang. Nourishes Jing

SYNDROMES - Heart and Gallbladder Qi Deficiency

CLINICAL MANIFESTATIONS - Impotence. Inability to get or maintain an erection. Spermatorrhea. Premature ejaculation. Fear of sexual intercourse. Palpitations. Anxiety. Apprehension. Constant worry. Poor concentration. Timidity. Shyness. Easily startled. Nervousness. Irritability. Restless sleep. Insomnia. Dizziness. Emaciation. Shortness of breath. Constipation. Dry mouth and throat. Numbness. Dry cough. Cough with little or no sputum. Cough with blood streaked sputum. Spontaneous perspiration. Night sweats. Five Sole Heat due to stress. Early menses. Restlessness. Dry tongue. Pale copious menstrual flow. Weakness. Memory loss. Excess dreams. Fright. Physical and mental fatigue. Dry, hard stool. Coarse skin. Dry throat. Weakness. A skinny appearance.
A pale complexion.

HERBS AND ACTIONS

-Bai Zi Ren - Nourishes the Heart and calms the Spirit.

-Shu Di Huang - Nourishes Jing and Blood, fills the Marrow and nourishes Liver and Kidney Yin.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin, benefits Jing and brightens the eyes. With Shu Di Huang, for Liver and Kidney Deficiency. With Ju Hua, for Liver and Kidney Deficiency with Jing and Blood unable to rise and nourish the eyes with tinnitus, headache, and visual impairment.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Wu Wei Zi, for spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiency of the Liver and Kidneys. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Wu Wei Zi - Quiets the Spirit, calms and contains Heart Qi, tonifies the Kidneys, astringes Jing and stops diarrhea and spermatorrhea.

-Ren Shen - Tonifies Heart Qi, calms the Spirit and treats impotence.

-Fu Ling - Strengthens the Spleen, quiets the Heart, calms the Spirit and soothes the nerves.

-Ju Hua - Promotes the movement of Heart Qi and Blood and stimulates Blood circulation.

-Zhi Ke - Promotes the movement of Qi and reduces distention and pressure.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens Yang and Ming Men Fire and assists in the generation of Qi and Blood.

TREATS

Impotence. Spermatorrhea.

* TAI YUAN YIN - 胎原饮 - Fetus Original Qi Decoction

ACTIONS - Tonifies Qi and Blood. Calms the fetus

SYNDROMES - Qi and Blood Deficiencies threatening miscarriage during the first trimester of pregnancy

CLINICAL MANIFESTATIONS - Threatened miscarriage during the first trimester of pregnancy or. Miscarriage after several months or premature delivery. Lassitude. Dizziness. Blurred vision. Palpitations. Insomnia. Anorexia. Loose stools. Tiredness. Weariness. Pale complexion. Weak limbs. Abdominal distention. Lumbar soreness. Frequent, clear urine. Clear, watery vaginal discharge. Scanty vaginal bleeding. Pale dilute blood.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi, calms the Spirit and prevents downward movement of the fetus. With Shu Di Huang, for severe Qi and Blood Deficiencies due to loss of Blood. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, regulates the menses, disperses Cold and stops pain due to Blood Stasis. With Huang Qi, for Qi and Blood Deficiencies and pallor, debility, fatigue and/or low grade fever due to excessive blood loss. With Bai Shao, Regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Gan Cao, moderates spasms and relieves abdominal pain. With Ren Shen, Bai Zhu, Bai Shao and Shu Di Huan, for general menstrual disorders with fatigue and weakness due to Qi and Blood Deficiencies.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Bai Shao - Nourishes the Blood and regulates menstruation. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach. With Dang Gui, nourishes Yin and Blood.

-Bai Zhu - Tonifies the Spleen, augments Qi and calms the fetus. With Shu Di Huang , Dang Gui and Bai Shao, for unstable pregnancy with Blood Deficiency.

-Chen Pi - Regulates Qi, adjusts the Middle and helps prevent Stagnation from tonic herbs. With Bai Zhu, for anorexia and other symptoms of Damp-Obstruction due to Spleen Deficiency.

-Du Zhong - Tonifies the Kidneys and Liver, aids the smooth flow of Qi and Blood and calms the fetus.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs. With Ren Shen, relieves palpitations and anxiety.

TREATS

Habitual miscarriage.

* TENG LONG TANG - 腾龙汤 - Soaring Dragon Decoction - Moutan And Persica Combination

ACTIONS - Disperses Blood Stagnation. Activates the Blood. Removes suppuration. Clears Damp-Heat

SYNDROMES - Damp-Heat with Blood Stagnation in the Lower Jiao. Heat and Blood Stasis in the genital area

CLINICAL MANIFESTATIONS - Abdominal distention. Dry, scaly skin. Tightness. A mass-like appearance. Softness on palpation. Absence of thirst. Maybe an aversion to drinks. Tenderness and soreness of the lower abdomen. No fever. Constipation. Condition fails to improve. A right-sided abdominal swelling that is soft when touched and not very painful. Cold extremities. A gray or pale complexion.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy. Contraindicated for those with diarrhea.

HERBS AND ACTIONS

-Yi Yi Ren - Strengthens the Spleen, resolves Dampness, clears Heat, expels pus and clears Damp-Heat. With Dong Gua Zi, for scanty urine and edema due Damp Obstruction. With Dong Gua Zi and Tao Ren, for Lung abscess.

-Dong Gua Zi (Ren) - Clears Heat, expels Phlegm, expels pus, moistens the Lungs and drains Dampness. With Da Huang and Mu Dan Pi, for Intestinal abscess. With Yi Yi Ren, for Lung or Large Intestinal abscess that has formed pus.

-Mang Xiao - Purges accumulations, guides out Stagnation, softens hardness, moistens Dryness, clears Heat, drains Fire and reduces swelling. With Da Huang, for constipation due to Heat in the Stomach and Intestines. With Da Huang and Gan Cao, for moderate constipation due to accumulation of Excess Heat.

-Mu Dan Pi - Clears Heat, cools and harmonizes the Blood, invigorates the Blood, dispels Blood Stasis, drains pus and reduces swelling. With Da Huang, Dong Gua Zi and Tao Ren, for abdominal pain, constipation, and low grade fever associated with unsuppurated abdominal abscess.

-Tao Ren - Breaks up Blood Stasis, invigorates Blood circulation, moistens the Intestines, unblocks the bowels and drains abscesses. With Da Huang, for severe abdominal infection.

-Cang Zhu - Strongly dries Dampness, tonifies the Spleen and clears Dampness from the Lower Jiao.

-Da Huang - Drains Heat, purges accumulations, drains Fire, transforms Dampness, promotes urination,invigorates the Blood, dispels Blood Stasis and reduces Fire toxicity. With Mu Dan Pi, Tao Ren and Mang Xiao, for Intestinal abscess. With Mang Xiao, for abscess, swellings and toxic sores.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Genital warts. Periproctitis. Endometritis. Hemorrhoidal pain. Orchitis. Prostatitis.

Abdominal fullness and distention. Benign prostatic hypertrophy. Peritonitis. Uterine fibroids. Uterine cancer (initial stage). Intestinal abscess. Epididymitis. Constipation.

* WU LING SAN - 五苓散 - Five Ingredient Formula With Poria - Hoelen Five Herb Formula

ACTIONS - Promotes urination. Drains Dampness. Strengthens the Spleen. Disperses water accumulation. Warms the Yang. Promotes the transforming functions of Qi

SYNDROMES - Tai Yang Biao Fu. Spleen Deficiency Edema. Lower Jiao Retention of Water (Yi Yin or Zhi Yin). Tan Yin

CLINICAL MANIFESTATIONS - Headache. Fever (maybe chills). Strong thirst with a desire to drink. Vomits immediately after drinking. Urinary difficulty. Edema. General sensation of heaviness. Diarrhea. Irritability. Simultaneous vomiting and diarrhea. Throbbing sensations below umbilicus. Vomits frothy saliva. Vertigo. Loose stools. Shortness of breath. Cough. Urinary retention. Lower abdominal fullness. Extreme thirst. Palpitations. Lower abdominal distention. Lower abdominal palpitations. Dizziness. Abdominal pain.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - With Spleen Qi and Kidney Deficiency limit dosage, may combine with tonics. For urinary difficulty with Yin Deficiency, protect Yin. Overdose symptoms include - dizziness, vertigo, a bland taste and anorexia. Avoid long term administration. Contraindicated for those with depleted body fluids from profuse perspiration. Contraindicated for those with excessive vomiting. Contraindicated for those with excessive diarrhea. Contraindicated for those with Damp-Heat Accumulation.
This formula can be beneficial in relieving adverse gastrointestinal events such as nausea and dyspepsia associated with the use of selective serotonin re uptake inhibitors (SSRIs).

HERBS AND ACTIONS

-Ze Xie - Promotes urination, resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm.

-Fu Ling - Leeches out Dampness due to deficiency, promotes urination, strengthens the Spleen, and assists the Yang. With Zhu Ling, promotes urination. With Bai Zhu, strengthens the Spleen and promotes urination. With Gui Zhi warms and transforms fluids, unblocks Yang and promotes urination. With Ze Xie, Gui Zhi and Bai Zhu for Dampness Obstruction causing Lin Syndrome, edema, heaviness of the body, and irritability.

-Zhu Ling - Promotes urination, leaches out Dampness and dispels Heat. With Ze Xie, drains Damp, unblocks and drains urinary pathways and drains Heat from the Bladder.

-Bai Zhu - Strengthens the Spleen, aids transformation and transportation of fluids and resolves Dampness. With Fu Ling and Gui Zhi, for Spleen Deficiency with chest distention and edema.

-Gui Zhi - Warms the Ming Men assisting the Bladder in transforming and discharging urine, aids the Spleen to raise up Damp and releases exterior pathogens. With Bai Zhu, for Heart and Spleen Yang Deficiency with palpitations, edema and shortness of breath.

TREATS

Acute or chronic nephritis. Glomerulonephritis. Pyelonephritis. Nephrotic syndrome. Chronic renal failure. Congestive Heart failure. Ascites from cirrhosis of the Liver. Meniere's disease. Chronic hepatitis. Viral hepatitis. Gastroptosis. Gastrectasis. Acute gastroenteritis. Acute enteritis with diarrhea. Genitourinary infections. Neurogenic bladder syndrome. Scrotal hydrocele. Cardiac edema. Varicella. Cholera. Blisters. Urolithiasis. Urinary tract infection. Benign prostatic hypertrophy. Infantile indigestion. Pericardial and pleural effusions. Central serous retinopathy. Catarrhal conjunctivitis. Aphthous ulcers. Flat warts. Eczema. Vomiting and diarrhea due to a common cold. Diabetes. Obesity. Headache. Common cold. Dizziness. Vaginal discharge. Asthma. COPD. Fever. Lupus erythematosus. Abdominal pain. Bronchitis. Anorexia. Edema. Chronic hepatitis. Hernia. Dyspnea. Hypertension during pregnancy. Dacrystitis. Migraine. Uremia. Toxemia during pregnancy. Indigestion. Seasickness. Trigeminal neuralgia. Viral conjunctivitis. Nyctalopia. Otitis media. Nephropyelitis. Cyclic vomiting. Pseudocholera. Cold-type urticaria. Scrotal edema. Gestational hypertension. Cirrhosis of the Liver. Hydrocephalus. Early-stage renal insufficiency. Cystitis. Headache from increased cranial pressure. Motion sickness. Polyhydramnios. Glaucoma. Allergic rhinitis. Diffuse polyps of the vocal cords. Urticaria. Alopecia. Herpes zoster. Gastric relaxation. Hypersalivation. Recurrent headache. Hydrocele. Prostatitis. Influenza. Cough. Vertigo. Oliguria. Emphysema. Multiple sclerosis. Cholecystitis. Diarrhea. Pneumonia. Hypertension. Intestinal tuberculosis. Gastritis. Impotence. Palpitations. Edema during pregnancy. Low back pain. Coronary Heart disease.

* YIN CHEN HAO TANG - 茵陳蒿湯 - Artemisia Scopariae Decoction. Capillaris Combination. Decoction of Capillaris

ACTIONS - Clears Heat. Resolves Dampness. Reduces jaundice

SYNDROMES - Damp-Heat in the Liver and Gallbladder (Yang Jaundice)

CLINICAL MANIFESTATIONS - Whole body jaundice (tangerine color). Slight abdominal distention. Urinary difficulty. Thirst (only wants to sip). Perspiration on the head. Scanty, dark urination. Upper abdominal distention. Maybe grayish pale stools. Nausea / vomiting. Yellow sclera. Edema. Chest discomfort. Constipation. Maybe mania.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin jaundice. Use Da Huang with extreme caution during pregnancy.

HERBS AND ACTIONS

-Yin Chen - Clears Damp-Heat from Liver and Gallbladder and treats all types of jaundice, especially Damp-Heat jaundice. With Zhi Zi strongly relieves Damp-Heat jaundice. With Yin Chen Hao and Zhi Zi, for Damp-Heat jaundice with abdominal distention, fever, constipation, and urinary dysfunction and gallstones.

-Zhi Zi - Clears Heat from the three Jiaos through the urine, drains Damp-Heat and activates the Blood. With Da Huang and Yin Chen Hao, for jaundice due to Damp-Heat in the Liver and Gallbladder.

-Da Huang - Purges Heat, benefits the Gallbladder, activates blood flow through the Liver, strengthens other herbs actions and assists Yin Chen Hao. With Yin Chen Hao, for early-Stage Damp-Heat jaundice when Heat is stronger than Dampness.

TREATS

Acute infectious hepatitis. Chronic active hepatitis. Viral hepatitis. Hepatic necrosis. Cirrhosis of the Liver. Cholelithiasis. Cholecystitis. Malaria. Typhoid fever. Acute leukemia. Leptospirosis. Urticaria. Acne. Oliguria. Jaundice. Biliary atresia. Seborrheic dermatitis. AIDS/HIV. Nausea. Constipation. Acute pancreatitis. Wei Syndrome. Hernia. Herpes simplex. Eye pain. Liver cancer. Pruritis. Eye pain. Beriberi. Nephritis. Stomatitis. Gingivitis. Ophthalmic disorders. Uterine bleeding. Indigestion. Hepatitis A. Hepatitis C. Vaginal discharge. Eczema. Hematuria. Hyperlipidemia. Neonatal jaundice. Vomiting. Hemolytic anemia. Abdominal fullness and distention. Anorexia. Edema. Herpes zoster. Perspiration.

Celiac #1, Gao Tie Fa, Gynecomastia #1, Impotence #1, Infertility #1, Menstruation-Regulating Formula, Metabolic Syndrome #1, Xiao Ke Fang, Zuo Gui Wan

Recordings Updated in June 2025

* CELIAC #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Nourishes Yin. Clears Heat. Eliminates Dampness. Stops diarrhea

SYNDROMES - Qi and Yin Deficiency with Damp-Heat

CLINICAL MANIFESTATIONS - Enduring diarrhea or loose stools. Fatigue. Lack of Strength. Emaciation. Numbness and tingling. A pale face. Malar flushing. Cold extremities. Five Sole Heat. Dizziness. Tinnitus. Palpitations. Insomnia. Night sweats. A dry mouth and throat. Mouth and/or tongue sores. Scanty menstruation. Delayed menstruation. Amenorrhea.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Mai Dong - Nourishes Stomach Yin and generates Fluids. With Ren Shen and Wu Wei Zi, for profuse sweating, wheezing, increased Heart rate and exhaustion due to severe Deficiency of the Heart and Lungs. With Di Huang, for hematemesis or epistaxis due to Yin Deficiency with Excess Heat.

-Wu Wei Zi - Tonifies Qi, astringes Jing and stops diarrhea. With Ren Shen and Mai Dong, for exhaustion of Qi and Yin with shortness of breath, coughing and thirst and spontaneous nightsweats with Qi Deficiency.

-Tian Hua Fen - Drains Heat and generates Fluids. With Mai Dong, Zhi Mu and Wu Wei Zi, for Heat and Dryness in the Lungs and Stomach.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao.

-Ge Gen - Raises Spleen Yang and stops diarrhea. With Shan Yao, for diarrhea due to Spleen and Stomach Qi Deficiency.

-Shan Yao - Tonifies the Spleen, nourishes Stomach Yin and stops diarrhea.

-Bai Bian Dou - Clears Summerheat, resolves Dampness and strengthens the Spleen.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin, moistens Dryness, generates Fluids and clears Deficiency Fire. With Tian Hua Fen and Mai Men Dong, for thirst and irritability due to Lung and Stomach Dryness.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Ren Shen, relieves palpitations and anxiety.

-Ren Shen - Tonifies Spleen and Stomach Qi. With Mai Dong and Wu Wei Zi, for Qi and Yin Deficiency with shortness of breath and spontaneous sweat usually secondary to injury from Heat.

-Zhi Ke - Promotes the movement of Qi and reduces distention and pressure.

TREATS

Celiac disease.

* GAO TIE FA - 膏贴泼 - Cleansing Paste (Topical)

ACTIONS - Purges Fire. Relieves toxicity. Dries Dampness. Moves Qi. Invigorates the Blood. Stops bleeding. Discharges pus. Generates flesh

SYNDROMES - Topically for Toxic Heat with Blood Stagnation

CLINICAL MANIFESTATIONS - Tumor develops quickly. Fluid inside the breast with a lump inside it. Long-standing illness. Pain. Redness. Ulceration. Discharge of yellow or bloody, foul-smelling fluid. Fatigue. Fever. Anxiety. Dry mouth. Thirst. Dark urine. Bitter taste. Red eyes. Insomnia.

HERBS AND ACTIONS

-Mu Xiang - Promotes the movement of Qi, dispels Damp-Heat and alleviates pain.

-Di Huang - Clears Heat and cools the Blood.

-Song Xiang - Dries Dampness, dispels Wind, discharges pus, removes toxins, generates flesh and alleviates pain.

-Xue Jie - Invigorates the Blood, dispels Blood Stasis, stops bleeding, protects the surface of ulcers, prevents decay, generates flesh and alleviates pain. With Mo Yao and Ru Xiang, for pain, swelling or hemorrhage. With Er Cha, Mo Yao and Ru Xiang, for bruising, swelling and pain. With Ming Fan, stops bleeding without causing Stasis for sores that have perforated but fail to heal.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, reduces swelling, generates flesh and alleviates pain.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain, reduces swelling, generates flesh and promotes healing. With Ru Xiang, topically for skin lesions and ulcerations swollen, painful sores and sores that are hard but not painful.

-Er Cha - Drains Dampness and absorbs suppuration Stops bleeding and generates

flesh. With Xue Jie, Ru Xiang and Mo Yao, topically as a powder for non-healing oozing sores.

-Ming Fan - Purges Fire, relieves toxicity, dries Dampness, alleviates itching, restrains and inhibits sores, generates flesh and transforms putrefication. With Xiong Huang, topically for Wind-Damp-Heat toxin in the muscles and skin with severe itching that results in a yellow exudate after scratching. With Er Cha, topically for bleeding from trauma.

-Xiong Huang - Relieves toxicity, dries Dampness, expels Phlegm and inhibits the growth of cancer cells. With Ming Fan, for Wind-Damp sores and sores with redness, swelling, itching and pain.

TREATS

Huge, infected mammary carcinoma. Breast cancer.

* GYNECOMASTIA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes Yin and Blood. Moves Qi and Blood. Breaks up Blood Stasis. Transforms Phlegm. Dissipates nodules

SYNDROMES - Yin and Blood Deficiency with Qi, Blood and Phlegm Stagnation

CLINICAL MANIFESTATIONS - A benign enlargement of the male breast. Although it is usually bilateral, it can be unilateral.
A rubbery or firm mass extending concentrically from the nipples.

HERBS AND ACTIONS

-Jie Zi - Warms the Lungs, regulates Qi, expels Phlegm, promotes Qi movement, dissipates nodules, unblocks the collaterals and alleviates pain.

-E Zhu - Invigorates Blood circulation, dispels Blood Stasis, regulates Qi, dissolves accumulations and alleviates pain.

-Xiang Fu - Spreads and regulates Liver Qi.

-Ban Xia - Dries Dampness, transforms Phlegm, dissipates nodules and reduces Stagnation.

-Tao Ren - Breaks up Blood Stasis, invigorates Blood circulation and drains abscesses.

-Bai Shao - Nourishes the Blood, softens the Liver, astringes Yin and adjusts the Ying and Wei. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang ,

for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis, reduces swelling, expels pus, generates flesh and alleviates pain. With Bai Shao, regulates and harmonizes Qi and Blood. With Xiang Fu, tonifies Blood and moves Qi.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and fills the Marrow. With Dang Gui for Blood Deficiency marked by dizziness, palpitations and insomnia.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Dang Gui and Shu Di Huang, for night sweats due to Yin Deficiency. With Shu Di Huang, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

TREATS

Gynecomastia.

* IMPOTENCE #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Kidney Yang. Warms the Kidneys. Disperses Cold

SYNDROMES - Kidney Yang Deficiency

CLINICAL MANIFESTATIONS - Low libido. An inability to get or sustain an erection. Infertility. Low sperm motility. Low sperm count. Watery ejaculate. Lumbago: low back feels cold, weak and aching. Feeling chilled. Aversion to Cold. Intolerance of cold. Cold limbs. General debility. Pale face. Blurred vision. Poor memory. Urinary frequency with abundant, clear urine or. Oliguria with edema. Maybe nocturia. Edema of the lower limbs with scanty urination. Lassitude. Listlessness. Fatigue. Withdrawn, subdued behavior. Knees feel cold and aching. Cold feet. Dizziness. Tinnitus. Deafness. Impotence. Spermatorrhea. Premature ejaculation. Maybe anorexia. Maybe loose stools. Lower abdominal distention. Constipation or. Loose stools. Maybe chronic diarrhea or "cock crow" diarrhea.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Fu Zi and Rou Gui, for Kidney Yang Deficiency. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine, benefits the marrow, tonifies the Kidneys and Liver and improves vision.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin, benefits Jing and brightens the eyes. With Shu Di Huang, for Liver and Kidney Deficiency. With Shu Di Huang, Fu Zi, Rou Gui and Shan Zhu Yu, for Kidney Yang Deficiency.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang.

-Fu Pen Zi - Tonifies and stabilizes the Kidneys, tonifies Yang, astringes Jing and urine and improves vision.
With Tu Si Zi and Gou Qi Zi, for impotence and spermatorrhea due to Kidney Deficiency.

-Ba Ji Tian - Tonifies the Kidneys and strengthens Yang. With Yin Yang Huo, Fu Zi and Rou Gui, for impotence or infertility associated with waning of Ming Men Fire.

-Yin Yang Huo - Tonifies the Kidneys, strengthens Yang and increases the libido. With Xian Mao, for chills, impotence with cold sperm, cold extremities and infertility.

-Xian Mao - Tonifies the Kidneys, strengthens Yang, expels Cold and eliminates Dampness. With Yin Yang Huo and Ba Ji Tian, for impotence.

-She Chuang Zi - Warms and tonifies the Kidneys and strengthens Yang.

-Fu Zi - Warms Ming Men Fire and assists Heart, Kidney and Spleen Yang. With Tu Si Zi, Rou Gui and Yin Yang Huo, for impotence.

-Rou Gui - Warms the Kidneys, Spleen and Heart and strengthens Yang and Ming Men Fire. With Fu Zi, for Deficiency of Ming Men Fire with impotence or infertility.

TREATS

Impotence.

* INFERTILITY #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Cools the Blood. Nourishes Yin. Clears Deficiency Heat. Invigorates the Blood

SYNDROMES - Kidney Yin Deficiency with Empty Fire Rising

CLINICAL MANIFESTATIONS - Long-term infertility. Early menstruation. Decreased menses with light colored Blood. Emaciation. Dizziness. Night sweating. Blurred vision. Palpitations. Insomnia. Tinnitus. Five sole Heat or. Low-grade fever in the afternoon.

NOTES - This formula is suitable when the tongue is particularly red.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Xuan Shen and Mai Dong, for a dry throat, irritability, a red tongue, and a fast thready pulse due to Devastated Yin with Blazing Fire and constipation due to Excess Heat with Yin Deficiency. With Bai Shao, for Blood Deficiency Heat. With Xuan Shen, for Kidney Yin Deficiency with Fire Blazing with soreness and swelling in the throat, dry mouth and a parched tongue.

-Bai Shao - Nourishes the Blood, regulates menstruation and astringes Yin.

-Di Gu Pi - Cools the Blood, drains Yin Deficiency Fire, eliminates lurking Heat, and clears Heat from the bones.

-Xuan Shen - Clears Heat, cools the Blood and nourishes Yin.

-Mai Dong - Moistens the Lungs, nourishes Yin and nourishes Stomach Yin. With Di Huang, for hematemesis or epistaxis due to Yin Deficiency with Excess Heat.

-Qing Hao - Clears Deficiency fevers.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat, soothes irritability, nourishes the Blood and calms the Spirit.

-Yi Mu Cao - Invigorates the Blood, dispels Blood Stasis, regulates menstruation, clears Heat and resolves toxicity.

TREATS

Infertility.

* MENSTRUATION-REGULATING FORMULA (Dr. Joel Penner, americandragon.com)

ACTIONS - Moves Qi.Invigorates the Blood

SYNDROMES - Qi and Blood Stagnation

CLINICAL MANIFESTATIONS - Pain that is fixed, stabbing and /or severe or. Pains that move around. Distention. Depression. Irritability. Pan is worse with pressure. Dark complexion. Fixed, palpable masses. Bleeding with clots. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas,. Varicose and

spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and regulates the menses. With Tao Ren and Hong Hua, for amenorrhea, pain, swelling and other symptoms associated with Blood Stasis. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis. With Xiang Fu, tonifies the Blood and moves Qi, for premenstrual symptoms, menstrual pain and irregular menstruation. With Tao Ren, Hong Hua, Chuan Xiong and Chi Shao, for amenorrhea due to Blood Deficiency and Stagnation.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Dang Gui, Hong Hua and Chi Shao, for menstrual pain, amenorrhea or irregular menstruation due to Blood Stasis.

-Ze Lan - Invigorates the Blood, dispels Blood Stasis and regulates menstruation. With Chuan Xiong, for pain due to trauma, dysmenorrhea and amenorrhea. With Chuan Xiong, Dang Gui, Tao Ren and Hong Hua, for pain and bruises.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis and relieves pain. With Chuan Xiong and Dang Gui, for Blood-Stasis induced gynecological disorders such as immobile abdominal masses and amenorrhea with abdominal pain. With Tao Ren, for Blood Stasis induced menstrual disorders, especially those characterized by early period, excessive bleeding and thick purple clots. With Xiang Fu, for flank pain, abdominal pain and dysmenorrhea due to Qi and Blood Stagnation. With Tao Ren, Hong Hua and Chuan Xiong, for Blood Stagnation in the chest.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels, unblocks menstruation and alleviates pain. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis. With Yi Mu Cao, for Blood Stasis with abdominal pain or postpartum lochiostasis. With Tao Ren, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain. With Tao Ren, Dang Gui, Chuan Xiong and Chi Shao, for menstrual pain or amenorrhea.

-Niu Xi - Invigorates the Blood, expels Blood Stasis and nourishes Liver and Kidney Yin. With Dang Gui, Tao Ren and Hong Hua, for menstrual pain, irregular menstruation and postpartum pain.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi. With Xiang Fu, for Qi Stagnation combined with Blood Stasis. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses and amenorrhea. With Dang Gui, Tao Ren and Hong Hua, for abdominal pain accompanying menstruation. With Hong Hua and Ze Lan, for amenorrhea.

-Xiang Fu - Spreads and regulates Liver Qi, regulates menstruation and alleviates pain. With Dang Gui and Chuan Xiong, for irregular menstruation and dysmenorrhea due to Qi and Blood Stasis.

-Yi Mu Cao - Invigorates the Blood, dispels Stasis and regulates menstruation. With Dang Gui, for Blood Stasis with infertility, irregular menstruation, lower abdominal pain and fullness and scanty menstruation. With Dang Gui and Chuan Xiong, for dysmenorrhea or lower abdominal pain due to postpartum Blood Stasis. With Ze Lan, for disorders which include both Blood Stasis and accumulation of pathogenic water such as Blood separation (amenorrhea followed by generalized edema).

-Shu Di Huang - Nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Qing Pi - Spreads Liver Qi and breaks up Stagnant Qi. With Xiang Fu, for pain and distention of the flanks due to Liver Qi Stagnation.

-Chen Pi - Regulates and descends Qi, adjusts the Middle and relieves the diaphragm. With Qing Pi, for flank pain and chest and abdominal distention due to Liver Qi Stagnation.

TREATS

Endocrine dyscrasia infertility

* METABOLIC SYNDROME #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Heat. Purges accumulations. Drains Fire. Transforms Dampness. Cools the Blood. Invigorates the Blood. Dispels Blood Stasis. Tonifies Qi and Blood. Moistens Dryness

SYNDROMES - Metabolic syndrome. Dry Heat with Blood and Phlegm Stagnation

CLINICAL MANIFESTATIONS - Alternating fever and chills. Fullness in the chest and hypochondrium with or without pain). Bitter taste in mouth. Nausea. Continuous vomiting. Hard focal distension in the epigastrium. Fullness and pain in the epigastrium. Burning diarrhea or no bowel movement. Despondency. Slight fidgeting. Slight irritability. Headache. Constipation or discharge of fluids rectally. Tinnitus. Diminished hearing. Diminished vision. Red eyes. Manic behavior. Asthma. Mental instability.

HERBS AND ACTIONS

-Da Huang - Drains Heat, purges accumulations, drains Fire, transforms Dampness, promotes urination, eliminates Phlegm, drains Heat from the Blood, invigorates the

Blood and dispels Blood Stasis. With Mang Xiao, eliminates obstruction in the Intestines for severe constipation with passage of liquid but no solid stool.

-Huang Qi - Tonifies Qi and Blood, promotes urination, reduces edema, generates flesh and expels toxins.

-Zhi Zi - Clears Heat, reduces Fire, eliminates irritability, drains Damp-Heat, relieves toxicity and cools and activates the Blood.

-Gan Cao - Tonifies the Spleen, augments Qi, resolves Phlegm, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

-Mang Xiao - Purges accumulations, guides out Stagnation, softens hardness, moistens Dryness, clears Heat and drains Fire. With Da Huang, for constipation due to Heat in the Stomach and Intestines. With Da Huang and Gan Cao, for moderate constipation due to accumulation of Excess Heat.

TREATS

Hyperglycemia. Coronary Heart disease. Obesity. Arteriosclerosis. Stroke.

* XIAO KE FANG - 消渴方 - Wasting And Thirsting Formula

ACTIONS - Clears Lung Heat. Drains Fire. Nourishes Yin. Generates fluids

SYNDROMES - Xiao Ke. Lung Heat

CLINICAL MANIFESTATIONS - Thirst. Drinks a lot of water. Hot esophagus. Dry mouth. Polyuria. Urine can be clear, red or turbid.

HERBS AND ACTIONS

-Huang Lian - Clears Heat, drains Dampness, drains Fire, resolves Fire toxicity and clears Heart Fire. With Di Huang, for insomnia and delirium due to unremitting Heat injuring the Ying level.

-Tian Hua Fen - Clears and drains Lung Heat, transforms Phlegm and moistens Lung Dryness.

-Di Huang - Nourishes Yin, generates fluids, increases saliva and treats wasting and thirsting.

-Ou Jie - Eliminates Heat from the Blood and stops bleeding, especially due to Lung or Stomach Heat.

TREATS

Diabetes - Upper Xiao.

* ZUO GUI WAN - 左歸丸 - Restore the Left (Kidney) Pill. Left Gold Pill. Replenishing the Yin (Left) Pills

ACTIONS - Nourishes Yin. Tonifies the Kidneys. Supplements Jing. Benefits Marrow

SYNDROMES - Kidney Jing Insufficiency. Liver and Kidney Yin Deficiency (especially essence and marrow). Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency

CLINICAL MANIFESTATIONS - Light-headedness. Vertigo. Tinnitus. Soreness and weakness in low back and legs. Spontaneous and nocturnal emissions. Night sweats. Dry mouth and throat. Thirst with a desire to drink. Dizziness. Forgetfulness. Deafness. Rhinitis. Dribbling of urine. Malar flush. Five Sole Heat. Insomnia. Hair loss. Loss of teeth. Infertility. Amenorrhea. Uterine bleeding. Spontaneous perspiration. Spermatorrhea. Poor vision.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution and modify for those with Spleen and Stomach Deficiency. Contraindicated for those with signs of Excess Heat. This formula is not suited for long-term use.

NOTES - This is a stronger version of Zuo Gui Yin and is used in more severe cases.

HERBS AND ACTIONS

-Shu Di Huang - Enriches Kidney Yin and nourishes Jing and Blood. With Gou Qi Zi and Shan Zhu Yu, nourishes Liver Blood.

-Shan Yao - Benefits the Yin and the Spleen tonifies the Kidneys and astringes Jing. With Shu Di Huang and Shan Zhu Yu, for Kidney Deficiency with spermatorrhea and night sweats.

-Gou Qi Zi - Nourishes Blood, tonifies the Liver and kidneys, nourishes Yin and benefits Jing.

-Shan Zhu Yu - Astringes Jing, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Shu Di Huang and Shan Yao, for urinary frequency (day or night), dizziness, tinnitus and lower back pain due to Kidney Deficiency.

-Niu Xi - Invigorates the channels and Blood, and treats atrophy and spasm of the lower extremities.

-Tu Si Zi - Tonifies Kidney Yang, tonifies Kidney and Liver Yin, and astringes Jing and urine.

TREATS

Intestinal hemorrhage. Spermatorrhea. Chronic lumbago. Diabetes. Addison's disease. Tuberculosis of the bones. Chronic bronchitis. Hypertension, especially in the elderly. Impotence. Multiple neuritis. Scanty menstruation. Chronic pharyngitis. Knee pain. Acute gastritis. Optic atrophy. Dizziness. Myasthenia gravis. Multiple sclerosis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Polyuria. Senile dementia. Sperm abnormality. Hyperthyroidism. Fatigue. Herniated lumbar disc. Night sweats. Epstein-Barr virus syndrome. Low back pain. Chemotherapy for breast cancer. Atrophy (Wei) Syndrome. Amyotrophic lateral sclerosis (ALS). Hot flashes. Menopause syndrome. Infertility. Uterine bleeding. Amenorrhea. Chronic nephritis. Lumbar strain. Infertility due to premature ovarian failure. Polyneuritis. Late menstruation. Obesity. Insomnia. Alopecia. Vertigo. Hysterical paralysis. Periodic paralysis. Facial paralysis. Progressive myodystrophia. Progressive myodystrophy. Acute infectious multiple neuritis. Parkinson's disease. Anemia. Deafness. Presbycusis. Age related Hearing loss. Forgetfulness. Weakness. Male menopause. Meniere's disease. Spontaneous perspiration. Myalgic encephalomyelitis. Heel pain. Foot pain.

Amyotrophic lateral sclerosis #1, Amyotrophic lateral sclerosis #2, Bone Spur #1, Cerebral Thrombosis #1, Chronic Kidney Failure #1, Dermatitis Medicamentosa #1, Fu Fang Ku Shen Tang, Gastric Hyperacidity #1, Wen Dan Tang (modified for acid reflux)

Recordings Updated in June 2025

* AMYOTHOPHIC LATERAL SCLEROSIS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies the Liver and Kidneys. Nourishes Yin. Tonifies Yang. Nourishes the Blood. Clears Heat. Activates the Blood. Nourishes the sinews and bones

SYNDROMES - Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency

CLINICAL MANIFESTATIONS - Weakening and wasting of the muscles. All four limbs become involved. May be considerable cramping and stiffness. Partial loss of nervous

control over the muscles. Respiration is affected.

HERBS AND ACTIONS

-Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Xu Duan - Tonifies the Liver and Kidneys, strengthens and reconnects the sinews and bones, promotes the movement of Blood, alleviates pain and generates flesh. With Du Zhong and Niu Xi, for deficient Kidneys or Cold-Damp Bi causing low back and leg pain and weakness, and contracture of the leg muscles.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine, benefits the marrow and tonifies the Kidneys and Liver. With Du Zhong, enriches and tonifies the Kidneys and Liver, astringes Jing, nourishes Kidney Yin, brightens the eyes and encourages the movement of Primal Yang to treat spermatorrhea, premature ejaculation and lower back pain from Kidney Deficiency.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and tonifies Kidney Yang. With Xu Duan, tonifies the Liver and Kidneys, strengthens the lower back and secures the Chong and Ren channels to treat aching in the lower back and knees, weakness of the legs which makes walking difficult and especially threatened miscarriage due to instability of the Chong and Ren channels.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism.

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, moderates and harmonizes the harsh properties of other herbs and alleviates pain. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency. With Di Huang, powerfully clears Deficiency Fire Blazing Upward.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and stops pain due to Blood Stasis. With Huang Qi, for many Blood Deficiency patterns. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat.

-Bai Shao - Nourishes the Blood and astringes Yin. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews.

-Huang Bai - Drains Kidney Fire. With Zhi Mu, for Yin Deficiency fever with steaming bones and night sweats. With Di Huang and Gui Ban, for steaming bone disorder and spermator-rhea due to Yin Deficiency. With Dang Gui and Niu Xi, for a sore and weak low back and legs.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin, moistens Dryness, generates Fluids, clears Deficiency Fire and quenches thirst. With Huang Bai, clears Heat and Drains Fire for Yin Deficiency Fire.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Bai Zhu, for anorexia and other symptoms of Damp Obstruction due to Spleen Deficiency.

TREATS

Amyotrophic lateral sclerosis (ALS)

* AMYOTHOPHIC LATERAL SCLEROSIS #2 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Nourishes the Blood

SYNDROMES - Qi and Blood Deficiency

CLINICAL MANIFESTATIONS - Muscle and flesh wilting. Limpness and lack of strength in the four limbs. Shortness of breath. Disinclination to speak. Fatigue. Loose stools. Poor appetite. Dizziness. Pale face. Weak voice. Reluctance to speak. Sweating with little or no exertion. Palpitations. Insomnia. Dry skin. Dry hair. Poor memory. Paleness. Scanty periods.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, raises the Yang Qi of the Spleen and Stomach, tonifies Wei Qi, stabilizes the Exterior, tonifies the Lungs and relieves numbness and pain. With Dang Gui, generates and nourishes Blood. With Dang Shen, for Qi Deficiency with general debility, anorexia, and spontaneous sweat. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, nourishes the Blood and calms the Spirit.

-Ji Xue Teng - Invigorates and tonifies the Blood, invigorates the channels and relaxes the sinews.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Fu Ling, for Spleen and Stomach Deficiency with

fatigue, a sensation of fullness in the abdomen, dizziness, lethargy, shortness of breath, anorexia and loose stools or diarrhea. With Bai Zhu, for Spleen Qi Deficiency with anorexia, loose stools and vomiting. With Bai Zhi, Gan Cao, Bai Shao and Dang Gui, for Qi and Blood Deficiency.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and alleviates pain. With Huang Qi, for many Blood Deficiency patterns. With Bai Shao, regulates and harmonizes Qi and Blood and treats Blood Deficiency Heat.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind and alleviates pain. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews for muscle spasms, pain and numbness, especially in the calf, due to Blood Deficiency. With Dang Gui, nourishes Yin and Blood.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, clears Heat, cools the Blood and relieves pain. With Bai Shao, for spasms and cramping pain associated with Blood Deficiency and Blood Stagnation.

-Shan Yao - Tonifies the Spleen, nourishes Stomach Yin, tonifies Lung Qi, nourishes Lung Yin, strongly tonifies the Kidneys and astringes Jing. With Fu Ling and Bai Zhu, for Spleen Deficiency with loose watery stools. With Dang Shen, for Spleen and Kidney Deficiency with fatigue, weakness, anorexia and watery stools.

-Bai Zhu - Strengthens the Spleen and dries Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Fu Ling - Dries Dampness, strengthens the Spleen and moderates the drying nature of Gan Cao. With Dang Shen and Bai Zhu, for weak and deficient Spleen with fatigue, anorexia and loose stools.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency. With Dang Shen, Fu Ling and Bai Zhu, strengthens the Spleen and augments Qi.

TREATS

Amyotrophic lateral sclerosis (ALS)

* BONE SPUR #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies, invigorates and harmonizes the Blood. Dispels Blood stasis. Dispels Wind-Dampness. Unblocks the channels. Relaxes the sinews. Increases Qi and

Blood circulation. Dries Dampness

SYNDROMES - Wind-Dampness with Blood Stagnation

CLINICAL MANIFESTATIONS - Bone spur.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis.

-Wei Ling Xian - Dispels Wind-Dampness, unblocks the channels, reduces Phlegm and pathogenic water and alleviates pain. With Niu Xi, for Wind-Damp Bi causing joint pain (especially in the lower joints).

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation, unblocks the channels, harmonizes the Stomach and transforms Dampness.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones and aids the smooth flow of Qi and Blood.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes Liver and Kidney Yin, strengthens the sinews and bones, benefits the joints and clears Damp-Heat in the Lower Jiao. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency.

-Ji Xue Teng - Invigorates and tonifies the Blood, invigorates the channels and relaxes the sinews.

-Bai Zhu - Tonifies the Spleen, augments Qi, Dries Dampness, promotes water metabolism, stabilizes the Exterior and stops sweating. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and transforms Phlegm.
With Bai Zhu, strengthens the Spleen and resolves Dampness.

TREATS

Bone spur.

* CEREBRAL THROMBOSIS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Sedates the Liver. Extinguishes Wind. Nourishes Yin. Anchors Yang. Tonifies Qi. Activates the Blood. Unblocks the channels. Promotes movement in the limbs

SYNDROMES - Liver Wind Stirring Internally: Liver Yang (Liver Fire) Transforms into Wind with Qi and Yang Deficiency and Blood Stasis Obstructing the Channels

CLINICAL MANIFESTATIONS - Dizziness. Vertigo. A feeling of distention in the eyes. Tinnitus. Feverish sensation in the head. Headache. Irritability. Flushed face as if intoxicated. Swelling of the eyes. Frequent belching. Progressive motor dysfunction occurring over hours to days. Development of facial asymmetry. Sudden loss of consciousness. Spasms. Heat and pain of the brain. Mental confusion with moments of lucidity. Inability to fully recover after loss of consciousness. Hiccups. Belching. Irritable Heat in the Heart. Tremors. Limited mobility of the limbs. Hemiplegia. Paralysis. Atrophy of the lower limbs. Facial paralysis. Slurred speech. Drooling. Dry stools. Frequent urination. Urinary incontinence. Deviation of the eyes and mouth. Excess salivation. Cold extremities. Asthenia.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen and relieves numbness and pain.

-Dan Shen - Activates the Blood, dispels Blood Stasis, clears Heat, soothes irritability, nourishes the Blood and calms the Spirit. With Dang Gui, Hong Hua and Chuan Xiong, for external or traumatic injury with pain and bruising.

-Dai Zhe Shi - Calms the Liver, anchors Floating Yang and clears Liver Fire. With Niu Xi, for dizziness, vertigo, headache and tinnitus due to Liver Yang Rising.

-Niu Xi - Activates the Blood, expels Blood Stasis, nourishes Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints. With Dai Zhe Shi for dizziness and vertigo from Liver Yang Rising due to Liver and Kidney Yin Deficiency.

-Dang Gui - Tonifies, activates and harmonizes the Blood. With Huang Qi, for Qi and Blood Deficiency. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood.

-Chi Shao - Activates the Blood, dispels Blood Stasis, relieves pain, Clears Heat, cools the Blood and Clears Liver Fire. With Dang Gui and Tao Ren, for Blood Stasis. With Huang Qi for hemiplegia with Deficiency.

-Chuan Xiong - Activates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, harmonizes, nourishes and activates the Blood and disperses Blood Stasis. With Dang Gui, Hong Hua and Tao Ren, for pain due to trauma

and headache from Blood Stagnation. With Huang Qi for numbness of the limbs. With Huang Qi, Hong Hua and Dang Gui, for numbness of the limbs and paralysis.

-Tian Dong - Nourishes Kidney Yin, clears Lung Heat and sedates Fire.

-Tao Ren - Breaks up Blood Stasis and activates Blood circulation. With Dang Gui, Chi Shao and Hong Hua, for trauma with pain.

-Hong Hua - Activates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Tao Ren, activates the Blood for all types of Blood Stagnation.

TREATS

Cerebral thrombosis.

* CHRONIC KIDNEY FAILURE #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Strengthens the Spleen. Tonifies the Kidneys. Promotes urination. Invigorates the Blood

SYNDROMES - Spleen and Kidney Qi Deficiency With Fluid Binding to Edema

CLINICAL MANIFESTATIONS - Edema below the waist. Fatigue. Cold limbs. Low back and knee soreness and pain. Scanty urination. A dark complexion. Abdominal distention. A sticky feeling in the mouth. A bland taste in the mouth. Either a tendency towards being too hot of too cold. A tendency to loose stools. Shortness of breath. Purple lips and nails. No thirst or thirst with no desire to drink. Asthma. Irregular menstruation.

HERBS AND ACTIONS

-Dan Shen - Invigorates the Blood and dispels Blood Stasis.

-Yu Jin - Invigorates the Blood, dispels Blood Stasis, regulates Qi flow and alleviates pain.

-Mu Dan Pi - Invigorates the Blood and dispels Blood Stasis.

-Ze Lan - Invigorates the Blood, dispels Blood Stasis, promotes urination and disperses swellings. With Yi Mu Cao, for Blood Stasis and accumulation of pathogenic water.

-Niu Xi - Invigorates the Blood, expels Blood Stasis and nourishes Liver and Kidney Yin.

-Dang Gui - Nourishes and invigorates Blood, disperses Cold and stops pain due to Blood Stasis.

-Yi Mu Cao - Invigorates the Blood, dispels Stasis, promotes urination and reduces swelling and edema.
With Dang Gui, for Blood Stasis.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Mu Xiang, for diarrhea and borborygmus due to Dampness. With Zhu Ling, promotes urination.

-Zhu Ling - Promotes urination and leaches out Dampness. With Da Fu Pi, for urinary difficulty, edema, and abdominal distention.

-Hou Po - Moves Qi, transforms Dampness and warms and invigorates the Spleen.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Da Fu Pi, for Spleen Qi Deficiency with Dampness Accumulating in the skin and floating edema.

-Da Fu Pi - Moves Qi, promotes urination, expels Dampness and reduces edema.

-Mu Xiang - Moves Qi, strengthens the Spleen and alleviates pain. With Bai Zhu, for anorexia with epigastric and abdominal pain and distention.

TREATS

Chronic Kidney failure. Oliguria.

* DERMATITIS MEDICAMENTOSA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Eliminates Dampness. Resolves toxicity

SYNDROMES - Toxic Damp-Heat

CLINICAL MANIFESTATIONS - Dermatitis after ingestion of drugs. High fever. Irritability. Fidgeting. Dry mouth. Dry throat. Incoherent speech. Insomnia. Dark urine. Deep-rooted boils. Maculae. Carbuncles. Hematemesis. Hemoptysis. Palpitations. Furuncles. Tinnitus. Purpura. Red face. Rashes. Deep-rooted boils. Red eyes. Itchy skin. Fidgeting. Dry lips. Delirium. Dysentery with fever. Jaundice. Epistaxis. Hematuria. Cloudy mind. Diarrhea.

HERBS AND ACTIONS

-Pu Gong Ying - Clears Heat, resolves Dampness and relieves Fire toxicity.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity, cools the Blood and clears Damp-Heat from the Lower Jiao. With Lian Qiao, for various Heat disorders. With Gan Cao, for toxic swellings and sores.

-Lian Qiao - Clears Heat, relieves toxicity, clears Blood Heat and promotes urination.

-Zhi Zi - Clears Heat, reduces Fire, drains Damp-Heat, cools and invigorates the Blood, relieves toxicity and Reduces swelling. With Mu Dan Pi, resolves Qi Level Stagnation leading to Heat and Heat in the Blood. With Huang Lian, Da Huang and Lian Qiao, for irritability and restlessness with high fever due to Toxic Heat. With Huang Lian, Huang Qin and Lian Qiao, for boils and carbuncles. With Da Huang, for constipation.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, relieves pain, clears Heat, cools the Blood and reduces swelling from sores and abscesses.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen.

-Che Qian Zi - Promotes urination and clears Damp-Heat.

-Ze Xie - Promotes urination and leaches out Dampness. With Fu Ling, for stagnant water and Dampness.

-Da Huang - Drains Heat, purges accumulations, drains Fire, reduces Fire toxicity, drains Heat from the Blood, transforms Dampness and promotes urination. With Chi Shao, for chronic accumulation in the abdomen, blockage of urine and constipation.

-Gan Cao - Clears Heat, relieves Fire toxicity, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Jin Yin Hua, for damp rashes or acne. With Jin Yin Hua and Pu Gong Ying, for Yang sores marked by redness, swelling and pain.

TREATS

Dermatitis medicamentosa. Drug dermatitis.

* FU FANG KU SHEN TANG - 复方苦参汤 - Sophora Compound

ACTIONS - Clears Heat. Dries Dampness. Resolves toxicity. Disperses Wind. Alleviates pain and itching

SYNDROMES - Damp-Heat

CLINICAL MANIFESTATIONS - Main sites involved:. Antecubital and popliteal fossae. Lesions:. Pinpoint papules. Papulovesicles. Vesicles, some of which coalesce. Slight infiltration and severe itching are likely. Bleeding or exudation follows. Rupture of skin

after scratching. The skin is rough and itchy. Disturbing sleep. Scratching will cause slight bleeding or result in the formation of bloody crusts.

HERBS AND ACTIONS

-Shi Gao - Heals eczema, burns and ulcerated sores and wounds.

-Ku Shen - Clears Heat, dries Dampness, disperses Wind, kills parasites and stops itching.

-Zhang Nao - Expels Wind and Dampness, kills parasites, invigorates the Blood, disperses Cold and alleviates pain.

-Lu Dou - Clears Heat and relieves toxins.

-Bing Pian - Clears Heat, drains Fire, resolves toxicity, dissipates nodules and alleviates pain and itching.

TREATS

Summer dermatitis. Itch. Diaper rash. Skin inflammation.

* GASTRIC HYPERACIDITY #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Calms the Liver. Settles Yang. Astringes Fluids. Clears Heat. Transforms Phlegm. Absorbs acidity. Stops pain

SYNDROMES - Gastric Hyperacidity

CLINICAL MANIFESTATIONS - Distention and fullness in the chest and epigastrium. Abdominal distention with occasional pain. Rotten smelling belching. Acid regurgitation. Nausea and vomiting. Aversion to food. Maybe diarrhea. Dysentery. Maybe constipation. Anorexia. Bad breath. Intermittent fever.

HERBS AND ACTIONS

-Wu Wei Zi - Astringes the leakage of Lung Qi, tonifies the Kidneys, astringes Jing and stops diarrhea and spermatorrhea.

-Zhe Bei Mu - Clears Heat and transforms Phlegm.

TREATS

Gastric hyperacidity.

* WEN DAN TANG - 溫膽湯 - Warm Gallbladder Decoction (modified for acid reflux)

ACTIONS - Regulates Qi. Transforms Phlegm. Clears the Gallbladder. Harmonizes the Stomach. Dries Dampness. Dispels Heat

SYNDROMES - Phlegm-Fire Disturbs the Heart. Gallbladder Deficiency Heat. Disharmony Between the Gallbladder and Stomach with Phlegm Heat. Qi Stage Gallbladder Damp-Heat

CLINICAL MANIFESTATIONS - Dizziness. Vertigo. Nausea and vomiting. Insomnia. Dream-disturbed sleep with unusual dreams. Palpitations. Anxiety. Profuse white foamy sputum. Restlessness. Timidity. Indecisiveness. Indeterminate gnawing hunger. Seizures accompanied by copious sputum. Flushing up. Chest distention. Expectoration of yellow Phlegm. Bitter taste in the mouth. Chills and fever. Abdominal distention. Frequent dark, scanty urine. Irritability. Depression. Slight thirst. Anorexia after serious illness.

HERBS AND ACTIONS

-Zhu Ru - Clears Heat and Phlegm from the Gallbladder and Stomach, cools Blood and descends rebellious Qi. With Ban Xia and Zhi Shi, for insomnia, palpitations and irritability due to Phlegm Heat leading to disharmony between the Gallbladder and Stomach with a stifling sensation in the chest and restlessness. With Zhi Shi, for Phlegm-Heat obstructing the flow of Qi with focal distention in the chest and epigastrium, hiccup, dry retching, nausea and acid regurgitation and palpitations, irritability, insomnia and emotional problems due to Gallbladder constraint with Phlegm Disturbing the Heart. With Ban Xia, Chen Pi, Zhi Shi and Fu Ling, for Gallbladder Fire with Phlegm.

-Zhi Shi - Reduces accumulation, descends Qi, transforms Phlegm and reduces distention. With Chen Pi, strengthens the Middle Jiao.

-Ban Xia - Transforms Phlegm, descends rebellious Qi, harmonizes the Stomach and stops vomiting. With Chen Pi, for Spleen and Stomach Qi Disharmony with epigastric and abdominal distention or pain. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools, treats Phlegm, thin mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia.

-Chen Pi - Regulates Qi, tonifies the Spleen, transforms Phlegm and descends Qi. With Ban Xia, for excessive white, viscous sputum due to Phlegm-Damp Obstruction. With Sheng Jiang, for manifestations of Stomach Qi Disharmony and Cold-Dampness Obstructing the Middle with nausea and hiccup. With Ban Xia, Zhu Ru and Sheng Jiang, for nausea and vomiting due to rebellious Stomach Qi.

-Fu Ling - Resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Gan Cao, strengthens the Spleen, drains Dampness, harmonizes the Middle Jiao and calms the Shen. With Chen Pi, for nausea and vomiting due to congested Fluids. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention, and anorexia due to congested fluids. With Ban Xia, Chen Pi and Sheng Jiang, for congested fluids in the Stomach causing nausea and vomiting.

-Gan Cao - Resolves Phlegm, clears Heat, tonifies the Spleen and harmonizes and moderates the harsh properties of the other herbs.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, protects the Stomach and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen.

-Sheng Jiang - Regulates the relationship between the Gallbladder and the Stomach and assists in stopping vomiting. With Da Zao, protects the Stomach Qi. With Ban Xia, for vomiting due to Cold, Thin Mucus. With Zhu Ru, for vomiting due to Heat in patients with Stomach Qi Deficiency. With Chen Pi, for Cold-Dampness Obstructing the Middle with nausea and hiccup.

+Huang Lian - Damp-Heat in the Stomach or Intestines with vomiting and/or acid regurgitation.

+Wu Zhu Yu - Spreads the Liver, descends rebellious Qi. Stops acid regurgitation and vomiting.

TREATS

Chronic gastritis. Peptic ulcer. Chronic hepatitis. Neurosis. Early stages of schizophrenia. Psychosis. Meniere's disease. Chronic bronchitis. Hypertension. Myocarditis. Pericarditis. Morning sickness. Menopause syndrome. Depression. Stroke. Male menopause. Epilepsy. Nephropathy. Diabetic foot. Organophosphorus poisoning. Vegetative nervous dysfunction with palpitations. Cardiac arrhythmia. Anxiety. Glaucoma. Irritable bowel syndrome. Dysentery. Dizziness. Vaginal discharge. Polyuria. Nausea/Vomiting. Amyotrophic lateral sclerosis (ALS). Anxiety neurosis. Reactive psychosis. Obsessive compulsive disorder. Migraine. Schizophrenia. Impotence. Otitis externa. Acid reflux. Anorexia. Post-stroke paralysis. Otorrhea. Labyrinths. Gastroptosis. Hysteria. Side effects of chemotherapy. Bi-polar disorder. Acute or chronic tracheitis. Pulmonary emphysema. COPD. Asthma. Timidity. Angina. Premature atrial contractions. Cholecystitis. Severe insomnia. Autonomic dystonia. Alopecia. Tinnitus. Deafness. Melancholia. Diabetes mellitus. Diabetic retinopathy. Pneumonia. Hyperthyroidism with insomnia. Vestibular neuritis with dizziness. Palpitations. Insomnia. Coronary Heart Disease. Gastralgia. Vertigo. Oliguria. AIDS/HIV. Fever. Neurasthenia. Insanity. Involutional psychosis. Senile dementia. Neurosis. Abdominal fullness and distention. Deafness. Otitis media. Chronic pancreatitis. Indigestion. Ear pain.

1.3.3.30 RT-TCM-30

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_30

Bushen-Tiansui Formula, Danhong Injection, Huangpu Tongqiao Capsule, Kaixin Powder, Kang Shuai Lao Pian,
Neurodegeneration TCM-Formulas-Molecules, Ren Shen Bu Wan, Tongluo Xingnao Tablet, Yinxing Pingchan Recipe

Recordings Updated in June 2025

* BUSHEN-TIANSUI FORMULA (BTF) is based on the traditional Chinese medicine theory of the mutual relationship between the brain and the kidney and is intended to treat neurodegenerative diseases. This formulation has been used for several years to treat patients with Alzheimer's disease- (AD-) like symptoms. Herbs - Tian Dong, Shu Di Huang, Ren Shen, Huang Bai, Sha Ren, Gan Cao, Nu Zhen Zi, Gou Qi Zhi, Yin Yang Huo, Chuan Xiong

* DANHONG INJECTION treatment of cardiovascular (e. g. acute coronary syndrome) and cerebrovascular diseases (e.g. ischemic stroke) in clinics all over China. Herb - Danshen, Honghua

* HUANGPU TONGQIAO CAPSULE (HPTQC) is a traditional Chinese medicine (TCM) that has been used to treat Alzheimer's disease (AD). HPTQC significantly improved the learning and memory function, and decreased neuronal apoptosis in vivo and in vitro. In addition, HPTQC could decrease the mRNA and protein expression levels of GRP78, CHOP, Caspase12, Caspase9, and Caspase3, and the effect trend was consistent with the specific inhibitor of GRP78. Huangpu Tongqiao Capsule (HPTQC) is a Chinese Medicine formula developed by the First Affiliated Hospital of Anhui University of Chinese Medicine that has been used in the treatment of vascular dementia for many years. HPTQC has a protective effect against AD in vitro and in vivo by inhibiting the apoptosis pathway mediated by endoplasmic reticulum stress, which may provide new insight into the protective effects and molecular mechanism of HPTQC against AD. Herbs - Da Huang, Shi Chang Pu, Ren Shen, Zhi Mu, Chuan Xiong, Yi Zhi

* KAIXIN POWDER (KXP) is a classic formula for treating morbid forgetfulness in ancient China. Kaixin Powder is a classic prescription for invigorating Qi, nourishing the mind, and calming the mind. It has pharmacological effects of improving learning and memory ability, resisting oxidation, delaying aging, and promoting the differentiation and

regeneration of nerve cells. It is mainly used in the modern clinical treatment of amnesia, depression, dementia, and other diseases. The mechanisms of KP in treating depression firstly involved the regulation of several pathology modules, including lipid metabolism, synapse function and inflammation. KP could regulate imbalances of lipid homeostasis in high-fat diet induced depressive symptoms. Furthermore, it was validated that cholesterol metabolism dysfunction can be ameliorated by KP, which was correlated with upregulation of the AdipoR1-BDNF (brain-derived neurotrophic factor) co-regulatory pathway. Herbs - Ren Shen, Fu Ling, Shi Chang Pu, Yuan Zhi

* KANG SHUAI LAO PIAN (Anti-aging tablets) is a popular anti-aging that works to promote a healthy heart, brain, as well as nervous and immune systems. Kang Shuai Lao Pian nourishes the spirit, promotes alertness and a healthy attitude. Relaxes you and soothes tensions when experiencing fatigue. Energizes you both mentally and physically so that you can better perform your daily activities as you age. It is suitable for men and women over 50. Continual use is recommended.

KSLP could improve High Fat Diet HFD-induced obesity, glucose tolerance disorder, as well as gut dysbiosis. In the gut, KSLP corrected the increased abundance of Firmicutes and Proteobacteria, increased ratio of Firmicutes/Bacteroidetes, and decreased abundance of Bacteroidetes caused by HFD. KSLP also reversed HFD-induced significant changes in the abundance of certain genus including Intestinimonas, Oscillibacter, Christensenellaceae_R-7_group, Ruminococcaceae_UCG-010, and Aliihoeflea.

KSLP is a promising traditional Chinese medicine (TCM) applicable for individuals with high-fat diet habit. Intestinimonas, Oscillibacter, and Christensenellaceae_R-7_group might be responsible for the regulatory effect of KSLP. Herbs - Ren Shen, Di Huang, Tian Dong, Di Gu Pi, Mai Dong, Fu Ling

* NEURODEGENERATION TCM-FORMULAS-MOLECULES

Each group plays for 5 minutes. In order,

- Kaixin Powder, Sargramostim, T3D-959, Retatrutide, MCC950

- Kang Shuai Lao Pian, Resveratrol, Epsilon-Viniferin, Polydatin, Pimavanserin

-Levodopa, Carbidopa, Entacapone, Selegiline, Curcumin, Salidroside

- Huangpu Tongqiao, Danhong Injection, Gantenerumab, 6h0e: FAB dmCBTAU-22.1 In Complex With Tau Peptide V1088-23

- Tongluo Xingnao, Neflamapimod, Bezisterim, Ezeprogind, MK-8719, Rosmarinic Acid, Nattokinase, Honokiol

- Ren Shen Bu Wan, Acacetin, Spinacetin, Theacrine, Trilobatin

- Qi Bao Mei Ran Dan, Sesamin, Sesamol, Dihydromyricetin

- Bushen-Tiansui

-Yinxing Pingchan, Elabela, Metformin, Phloretin

* REN SHEN BU WAN Ginseng Tonic Pill is a modern patent medicine from Central Medical Manufactory, Tianjin, China. Ren shen, an herbal tonic for heart and spleen qi is reinforced with medicinals to support both kidney yang (rou cong rong, hai ma) and kidney yin (nan sha shen, huai niu xi), which together boost kidney qi. Shan zhu yu astringes the formula into the kidney. The formula is a good tonic for aging patients, as well as those with diminished kidney fire affecting digestion and vitality. It is also used for poor memory or concentration, and weak lower back or knees. Herbs - Ren Shen, Rou Cong Rong, Bei Sha Shen, Shan Zhu Yu, Niu Xi, Fu Ling

* TONGLUO XINGNAO TABLET can improve the learning and memory capacity, reduce pathological changes of hippocampal tissues of rats with chronic cerebral ischemia-induced learning and memory dysfunction model, and promote the expression of Na(+)-K(+)-ATPase in hippocampus. It also promotes the expression of insulin-degrading enzyme in hippocampus and improves learning and memory capacity of AD rats. Its effect in promoting intelligence will be related to increased insulin-degrading enzyme in hippocampus. Herbs - Chuan Xiong, Huang Qin, Dang Gui

* YINXING PINGCHAN RECIPE (YXPC) and its components, i.e. the components for detoxicating (A), for calming liver (B) and for dissolving blood stasis(C), in preventing and treating Parkinson's disease, and the path of its inhibition on nigrostriatal dopaminergic neuron (DAn) apoptosis in model mice of Parkinson's disease. Herbs - Jin Yin Hua, Huang Lian, Huang Qi, Shu Di Huang, Bai Guo Ren, Ge gen, Hong Jing Tian, Bai Shao, Tian Ma, Gou Teng, Gan Cao

1.3.3.31 RT-TCM-31

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_31

Fang Ji Fu Ling Tang, Heart Blood Deficiency #1, Heat Bi #1, Hot Foot Soak #1, Juan Bi Tang, Kidney Failure Enema #1, Medicated Oil #1, Muscle Bi #1, Qi Bao Mei Ran Dan

Recordings Updated in June 2025

* FANG JI FU LING TANG - 防己茯苓湯 - Stephania and Poria Decoction

ACTIONS - Augments Qi. Unblocks Yang. Promotes urination. Reduces edema

SYNDROMES - Skin edema

CLINICAL MANIFESTATIONS - Pitting edema, worse in the extremities. A sensation of heaviness in the body and extremities. Fibrillations in the skin and muscles of the extremities. Dysuria.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with skin edema with Heat Stagnation. Contraindicated for those with Internal edema with a deep pulse.

HERBS AND ACTIONS

-Han Fang Ji - Promotes urination, reduces edema especially in the lower body, expels Wind-Dampness and alleviates pain. With Fu Ling, Gui Zhi and Gan Cao, for edema in constitutionally weak patients and swelling due to Leg Qi.

-Huang Qi - Tonifies Wei Qi, stabilizes the Exterior, aids circulation of moisture downward from the face, promotes urination and reduces edema. With Han Fang Ji, for Wind edema with numbness, pain, swelling of the face and extremities, sweating, sensitivity to Wind, and reduced urination. With Han Fang Ji, Gui Zhi and Fu Ling, for superficial floating edema with swelling of the extremities.

-Gui Zhi - Releases the Exterior, assists Yang, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels, warms the Middle and directs Turbid Yin downward. With Han Fang Ji, for Wind-Cold Damp Bi. With Fu Ling, unblocks Yang and facilitates the removal of congested fluids associated with Yang Deficiency edema.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Gan Cao, for Spleen and Heart Deficiency causing facial edema, palpitations and shortness of breath.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Skin edema. Cardiac edema. Oliguria. Nephritic edema. Nephritis.

* HEART BLOOD DEFICIENCY #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes the Blood. Calms the Shen

SYNDROMES - Heart Blood Deficiency

CLINICAL MANIFESTATIONS - Palpitations. Maybe arrhythmia. Pale nails. Pale lips. Pale inner surface of the eyelids. Restlessness. Insomnia. Poor memory. Vertigo. Numbness.

HERBS AND ACTIONS

- Lu Jiao - Tonifies the Kidneys. strengthens Yang, strengthens Jing and Blood, strengthens the sinews and bones, benefits marrow and tonifies and nourishes Qi and Blood. With Shu Di Huang, for impotence and spermatorrhea (men) and infertility and thin vaginal discharge (women) due to Kidney Deficiency Cold.

-Chuan Niu Xi - Invigorates the Blood, dispels Blood Stasis, tonifies the Kidneys and Liver and strengthens the tendons and bones.

-Rou Cong Rong - Tonifies the Kidneys, strengthens the Yang and benefits Jing and marrow. With Du Zhong, for high blood pressure.

-Tian Men Dong - Nourishes the Kidney Yin.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao and drains Kidney Fire. With Du Zhong, Niu Xi and Dang Gui, for Bi syndrome with sore and weak low back and knees.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing, stops diarrhea and spermatorrhea, tonifies Qi, quiets the Spirit and calms and contains Heart Qi.

-Suo Yang - Tonifies the Kidneys, benefits Jing and marrow, strengthens Yang, nourishes Liver Yin and Blood and strengthens sinews and bones. With Rou Cong Rong, for impotence or infertility due to insufficiency of the Liver and Kidneys along with exhausted Jing and Blood.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Rou Cong Rong, for Blood Deficiency failing to supply the sinews of the Intestines, interfering with peristalsis.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Dang Gui, for Blood Deficiency marked by

dizziness, palpitations, insomnia and menstrual dysfunction.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin. With Shu Di Huang, for Liver and Kidney Deficiency.

-Du Zhong - Tonifies the Kidneys and Liver, strengthens the sinews and bones, aids the smooth flow of Qi and Blood and lowers blood pressure.

TREATS

Palpitations. Forgetfulness. Cardiac arrhythmia.

* HEAT BI #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Resolves Fire toxicity. Expels Wind-Dampness. Alleviates pain. Invigorates the Blood. Expels Blood Stasis

SYNDROMES - Heat Bi

CLINICAL MANIFESTATIONS - Arthralgia involving one or several joints of the extremities. Knee swelling is frequent. Local redness and Heat. Swelling with excruciating pain. Severe limitation of movement. Pain better during the day and worse at night. Fever. Sometimes slight chills and fever. Thirst. Dryness of the mouth and tongue. Irritability. Nervousness. Restlessness. Aversion to Heat. Desire for Cold drinks. Dark urine.

HERBS AND ACTIONS

-Jin Yin Hua - Clears Heat, resolves Fire toxicity, vents and disperses External Wind-Heat and clears Damp-Heat from the Lower Jiao. With Lian Qiao, for various Heat disorders.

-Lian Qiao - Clears Heat, especially in the Upper Jiao and relieves toxicity. With Jin Yin Hua, for initial stage Wind-Heat.

-Fang Feng - Releases the exterior, expels External Wind, expels Wind-Dampness and alleviates pain. With Qin Jiao, for Wind Dampness Bi with spasms of the tendons or numbness of the limbs.

-Qin Jiao - Expels Wind-Dampness, opens the channels, soothes the sinews and collaterals, moistens the Intestines and unblocks the bowels.

-Yan Hu Suo - Invigorates the Blood, circulates Qi and stops pain.

-Du Huo - Dispels Wind-Dampness and alleviates pain. With Fang Feng, for numbness

in the legs.

-Sang Ji Sheng - Tonifies Liver and Kidney Yin, strengthens the sinews and bones and expels Wind-Dampness. With Du Huo and Niu Xi, for Kidney and Liver Yin Deficiencies and Wind-Dampness causing low back and leg pain, stiffness and soreness.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints.

TREATS

Heat Bi. Rheumatoid arthritis. Fever. Osteoarthritis. Arthralgia.

* HOT FOOT SOAK #1 (Dr. Joel Penner, americandragon.com) Topical

ACTIONS - Invigorates the Blood. Clears Damp-Heat

SYNDROMES - Blood Stasis. Damp-Heat

CLINICAL MANIFESTATIONS - Pain that is fixed, stabbing and /or severe. Pain is worse with pressure. Dark complexion. Fixed, palpable masses. Bleeding with clots. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas. Varicose and spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots. Tongue, red purple if there is Heat and blue purple if there is Cold. Soreness, heaviness and lack of strength of the four extremities or of the two lower extremities. Possible progressive paralysis or atrophy. Insensitivity, numbness or tingling of the four extremities. Limb aching and pain. Burning Heat which is ameliorated by Cold. Generalized fever which is not easily alleviated. Possible deviation of the face, mouth and eyes. Poor appetite. Thirst with no desire to drink. Nausea/vomiting. Abnormal vaginal discharge. Red, hot, rough, painful urination. Loose stools.

HERBS AND ACTIONS

-Xi Xian Cao - Dispels Wind-Dampness, strengthens the sinews, unblocks the channels and collaterals, clears and transforms Damp-Heat and eliminates toxins.

-Ji Xue Teng - Invigorates and tonifies the Blood, activates the channels and relaxes the sinews.

-Ren Dong Teng - Clears Heat, resolves toxicity, dispels Wind-Dampness, soothes the sinews, unblocks the channels and clears Damp-Heat from the Lower Jiao.

-Ai Ye - Warms the channels, disperses Cold, eliminates Dampness and alleviates pain.

-Wu Jia Pi - Dispels Wind-Dampness, nourishes and warms the Liver and Kidneys,

strengthens the sinews and bones, transforms Dampness and reduces swelling.

-Tou Gu Cao - Invigorates Blood circulation, breaks up Blood Stasis, reduces swelling, clears Heat, eliminates toxins, cools the Blood, relieves pain, drains Damp-Heat, dispels Wind and Dampness and relaxes the muscles and sinews.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain.

-Ku Shen - Clears Heat, dries Dampness and disperses Wind.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain and reduces swelling.

TREATS

Peripheral neuropathy.

* JUAN BI TANG - 蠲痺湯 - Remove Painful Obstruction Decoction

ACTIONS - Removes Wind-Dampness. Disperses Cold. Eliminates Painful Obstruction. Circulates Qi and Blood. Stops pain

SYNDROMES - Wind-Cold-Damp Bi. Muscular atrophy due to Qi and Blood Stagnation

CLINICAL MANIFESTATIONS - Joint pain, especially in the wrist, ankle, knee and elbow. Muscle pain. There may be numbness and heaviness in the limbs. The pain is worse with Cold and better with warmth. The pain is aggravated by Wind. The pain aggravated by Dampness. The pain is stabbing. Muscle weakness. Difficult movement. Numbness of the muscles and skin. Hemiplegia, especially of the upper limbs. The pain alleviated by movement. Slight muscle edema. Heaviness of the joints. Cold joints. Aversion to Cold. The pain worse at night. Local inflammation. Migratory pain. Deviation of the eyes and mouth. Spasm of the limbs.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat in the channels.

NOTES - Warms without drying. Unblocks without causing damage. Stronger Wind relieving and pathogen expelling action than Juan Bi Tang from Selected Formulas.

HERBS AND ACTIONS

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction (Bi), alleviates pain, increases joint mobility and guides Qi to the Tai Yang and DU channels. With Du Huo, relieves pain in the upper and lower

parts of the body.

-Du Huo - Releases the Exterior, dispels Wind-Cold-Dampness, opens the channels, vitalizes vessels and stops pain. With Qiang Huo for joint pain and numbness.

-Qin Jiao - Clears Heat, expels Wind-Dampness, relaxes the sinews, clears Deficiency Heat and resolves Dampness. With Sang Zhi, and Hai Feng Teng, expels Wind-Dampness.

-Sang Zhi - Expels Wind, clears the channels, eases the joints, stops spasms and regulates water metabolism, especially useful for muscle spasms and painful obstruction of the upper extremities.

-Hai Feng Teng - Expels Wind-Damp, clears the channels, disperses Cold, stops pain - good for immobile joints. With Gui Zhi for pain, impaired joint movement and spasms of the sinews due to Wind-Damp Bi.

-Dang Gui - Nourishes Blood, invigorates and harmonizes Blood, disperses Cold and stops pain. With Chuan Xiong, nourishes and invigorates Blood to subdue Wind and stop pain.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold and stops pain.

-Ru Xiang - Breaks up Blood Stagnation, invigorates the Blood, regulates Qi, relaxes the sinews, opens the channels, reduces swelling. and treats localized pain.

-Mu Xiang - Moves Qi, revives the Spleen, dispels Dampness, improves fluid metabolism and sedates pain.

-Gui Zhi - Releases External Wind-Cold from the muscle layer, harmonizes the Ying and Wei, warms the channels and collaterals, relieves pain, disperses Cold, unblocks Yang, transforms Qi, warms and facilitates the flow of Yang Qi in the chest and warms and facilitates the flow of Blood through the vessels.

-Gan Cao - Moderates and harmonizes the harsh properties of the other herbs and prevents injury to normal Qi.

TREATS

Osteoarthritis. Rheumatoid arthritis. Gouty arthritis. Bursitis. Facial paralysis. Fibromyalgia. Numbness. Wei Syndrome. Hemilateral sweating. Neck pain and stiffness. Low back pain. Rheumatic fever. Rheumatic arthritis. Chronic lumbago. Arthralgia. Stroke. Cerebral vascular accident. Paresthesia. Scapulohumeral periarthritis. Weakness. Frozen shoulder. Gout. Temporomandibular joint syndrome (TMJ).

* KIDNEY FAILURE ENEMA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Drains Heat and Fire. Purges accumulations. Transforms Dampness. Promotes urination. Reduces Fire toxicity

SYNDROMES - Damp-Heat

CLINICAL MANIFESTATIONS - Oliguria.

HERBS AND ACTIONS

-Da Huang - Drains Heat and Fire, purges accumulations, transforms Dampness, promotes urination and reduces Fire toxicity. With Di Huang, for Deficiency Fire.

-Pu Gong Ying - Clears Heat, resolves Dampness and unblocks painful urinary dysfunction.

-Chi Shao - Clears Heat and cools the Blood. With Da Huang, for blockage of urine.

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids.

-Ban Lan Gen - Drains Heat, relieves Fire toxicity and cools the Blood.

-Hou Po - Promotes the movement of Qi downward and dries Dampness. With Zhi Shi, for Dampness or Phlegm as long as clumped Qi is at the root of the problem. With Zhi Shi and Da Huang, for relatively severe accumulation and Stagnation with abdominal distention and pain and constipation.

-Zhi Shi - Breaks up Stagnant Qi, reduces accumulation, descends Qi and unblocks the bowels. With Da Huang, for Diarrhea, dysentery, and abdominal pain due to Damp-Heat.

TREATS

Kidney failure. Oliguria.

* MEDICATED OIL #1 (Dr. Joel Penner, americandragon.com) Topical

ACTIONS - Disperses Wind-Cold. Unblocks nasal passages. Drains Dampness. Absorbs suppuration. Aromatically opens orifices

SYNDROMES - Nasal congestion

CLINICAL MANIFESTATIONS - Nasal congestion.

HERBS AND ACTIONS

-E Bu Shi Cao - Disperses Wind-Cold, unblocks the nasal passages resolves Phlegm and stops cough.

-Er Cha - Drains Dampness, absorbs suppuration, clears Heat, clears the Lungs and transforms Phlegm.

-Bing Pian - Aromatically opens orifices, revives the Spirit and unblocks closed disorders.

TREATS

Nasal congestion. Allergic sinusitis. Allergic rhinitis.

* MUSCLE BI #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Warms the Spleen and Kidneys. Tonifies Qi and Blood

SYNDROMES - Muscle Bi due to Spleen and Kidney Deficiencies

CLINICAL MANIFESTATIONS - Muscle weakness and numbness. Pale complexion. Muscle softness and atrophy. Emaciation. Difficulty swallowing. Aversion to Cold.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood and Jing and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Shan Zhu Yu, nourishes Kidney Yin and secures Jing, while restraining urination and sweating. With Shan Zhu Yu and Shan Yao, for dizziness, weak and sore back, impotence, spermatorrhea and night sweats, due to Kidney and Liver Yin Deficiencies. With Fu Zi and Rou Gui, for Kidney Yang Deficiency.

-He Shou Wu - Tonifies the Liver and Kidneys and nourishes Blood.

-Shan Yao - Tonifies Kidney Yin and astringes Jing.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing, tonifies Liver and Kidney Yin and strengthens Kidney Yang. With Dang Gui and Shu Di Huang, for night sweats due to Yin Deficiency. With Shu Di Huang, Shan Yao, and Fu Zi, for Kidney Yang Deficiency.

- Lu Jiao - Tonifies the Kidneys. strengthens Yang, strengthens Jing and Blood, strengthens the sinews and bones, benefits marrow and tonifies and nourishes Qi and Blood. With Shu Di Huang, for impotence and spermatorrhea (men) and infertility and

thin vaginal discharge (women) due to Kidney Deficiency Cold.

-Fu Zi - Warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold and Dampness, warms the channels and stops pain. With Rou Gui, for Damp-Cold Bi in the channels with generalized aches and pains and difficulty rotating the trunk. With Rou Gui and Shu Di Huan, for Kidney Yang Deficiency with waning of Ming Men Fire with aversion to Cold, weak and sore back and legs, impotence, and urinary frequency.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens the Yang and Ming Men Fire, disperses deep Cold, warms and unblocks the channels and vessels and alleviates pain. With Fu Zi, Shan Zhu Yu and Shu Di Huang, for Kidney Yang Deficiency.

-Ba Ji Tian - Tonifies the Kidneys, strengthens Yang, disperses Wind-Cold-Damp and strengthens the sinews and bones.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis and regulates the menses.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Dang Gui and Shu Di Huang, for Qi and Blood Deficiencies with dizziness, weakness and lassitude. With Shu Di Huang and He Shou Wu, for Blood Deficiency.

-Zhi Ma Qian Zi - Unblocks the channels and collaterals, disperses clumps, reduces swelling and alleviates pain.

TREATS

Muscle Bi.

* QI BAO MEI RAN DAN - 七宝美髯丸 - Seven-Treasure Special Pill for Beautiful Whiskers

ACTIONS - Enriches the Kidney Jing. Nourishes the Liver Blood

SYNDROMES - Kidney Jing and Liver Blood Deficiency

CLINICAL MANIFESTATIONS - Premature graying of the hair. Hair loss. Loose teeth. Spontaneous emissions. Nocturnal emissions. Weak and sore low back and knees.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution or do not use for those with Spleen Deficiency.

HERBS AND ACTIONS

-He Shou Wu - Tonifies the Liver and Kidneys, nourishes Blood, nourishes Jing and expels Wind from the skin by nourishing the Blood. With Gou Qi Zi, Bu Gu Zhi and Tu Si Zi, for premature graying of hair due to Kidney and Liver Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao.

-Niu Xi - Invigorates the Blood, expels Blood Stasis and nourishes Liver and Kidney Yin.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and disperses Cold for Blood Stasis with Blood Deficiency.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin and benefits Jing. With He Shou Wu, Dang Gui, Niu Xi and Tu Si Zi, for prematurely gray hair and loose teeth.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and urine, benefits the marrow and tonifies the Kidneys and Liver.

-Bu Gu Zhi - Tonifies the Kidneys, strengthens Yang and stabilizes Jing.

TREATS

Prematurely gray hair. Dental problems. Premature aging. Decreased sperm motility. Lumbago. Aplastic anemia. Chronic infectious hepatitis. Impotence. Alopecia. Male infertility. Nocturnal emissions. Spermatorrhea. Low sperm count. Frequent urination. Osteoporosis. Menopause syndrome. Knee pain.

Hemiplegia #1, Influenza #3, Insect Dermatitis #1, Insomnia #1, Lupus #1, Lyme Disease #1, Nephrotic Syndrome #1, Paraplegia #1, Parkinson's #1

Recordings Updated in June 2025

* HEMIPLEGIA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Invigorates the Blood. Breaks up Stasis

SYNDROMES - Qi Deficiency with Blood Stagnation

CLINICAL MANIFESTATIONS - Hemiplegia. Weak limbs. Lack of strength. Fatigue. Loose stools. Anorexia. Dizziness. Pale face. Weak voice. Reluctance to speak. Sweating with little or no exertion. Pain that is fixed, stabbing and /or severe. Pan is worse with pressure. Dark complexion. Purple lips. Purple nails. Dry skin. Blue, dark or purplish discoloration of skin in small or large areas. Varicose and spider veins. Cold hands and feet. Tendency to hemorrhage dark blood or clots.

HERBS AND ACTIONS

-Ren Shen - Tonifies Qi. With Shu Di Huang, for severe Qi and Blood Deficiency.

-Huang Qi - Tonifies Qi and Blood, tonifies Wei Qi, stabilizes the Exterior and relieves numbness and pain. With Ren Shen, for Qi Deficiency with general debility, anorexia, fatigue, tired extremities and spontaneous sweating.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and alleviates pain. With Huang Qi, for Qi and Blood Deficiency. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness and paralysis.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation.

-Lu Lu Tong - Promotes the movement of Qi, invigorates the Blood, opens the Middle Jiao, unblocks the channels, expels Wind and promotes water metabolism.

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

TREATS

Hemiplegia. Post-stroke paralysis.

* INFLUENZA #3 (Dr. Joel Penner, americandragon.com)

ACTIONS - Releases the Exterior. Clears Heat. Regulates the throat

SYNDROMES - Wind-Heat Attacking the Lungs

CLINICAL MANIFESTATIONS - Inflammation of throat and/or tongue. Fever and chills

with more fever than chills. Sweating or. Absence of sweating. Cough with sticky yellow sputum. Aversion to Wind and Heat. Yellow nasal discharge. Thirst with desire for cold drinks. Headache. General bodily soreness and malaise. Throat is red. The tonsils are swollen and engorged but without any particular pus spots. Red bumps around mouth and lips (herpes simplex). Nasal obstruction. Sore, swollen throat. Dyspnea. Chest pain. Dry mouth. Rapid breathing. Maybe constipation. Maybe scanty urine.

HERBS AND ACTIONS

-Jin Yin Hua - Disperses Wind, clears Heat and relieves toxicity. With Lian Qiao and Niu Bang Zi , for Wei Stage and Qi Stage Heat and pneumonia with Heat signs. With Lian Qiao, Jie Geng, Ban Lan Gen and Niu Bang Zi, for pain and swelling of the throat.

-Lian Qiao - Disperses Wind, clears Heat and relieves toxicity. With Niu Bang Zi, for Wei Stage Heat. With Jin Yin Hua, for Initial stage Wind-Heat.

-Ban Lan Gen - Drains Heat, relieves Fire toxicity, cools the Blood and benefits the throat.

-Ge Gen - Discharges Exterior conditions, releases the muscles especially of the neck and upper back, relieves Heat, generates fluids and relieves thirst.

-Sang Ye - Disperses and scatters Wind-Heat, clears Heat from the Lungs, stops coughing and moistens Dryness. With Ju Hua, for Wind-Heat induced cough, eye redness, swelling, fever, headache, sore throat and pain.

-Ju Hua - Disperses Wind, clears Heat and detoxifies. With Ban Lan Gen, for Wind-Heat with a sore throat.

-Niu Bang Zi - Disperses Wind-Heat, benefits the throat, relieves Heat and toxins, and spreads Lung Qi. With Jie Geng, for throat inflammation and productive cough due to Wind-Heat. With Lian Qiao, unblocks and drains Heat toxin and disperses clumps and swellings, for a sore, swollen throat.

-Dan Zhu Ye - Generates Fluids, alleviates thirst and clears Heat.

-Jie Geng - Disperses the Lungs, stops cough, resolves Phlegm and descends Qi. With Sang Ye and Ju Hua, for Wind-Heat coughing with a mild fever and thirst.

TREATS

Influenza.

* INSECT DERMATITIS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Toxic Heat. Stops itching

SYNDROMES - Toxic Heat

CLINICAL MANIFESTATIONS - Dermatitis. High fever. Irritability. Fidgeting. Dry mouth. Dry throat. Incoherent speech. Insomnia. Dark urine. Deep-rooted boils. Maculae. Carbuncles. Hematemesis. Hemoptysis. Palpitations. Furuncles. Tinnitus. Purpura. Red face. Rashes. Deep-rooted boils. Red eyes. Itchy skin. Fidgeting. Dry lips. Delirium. Dysentery with fever. Jaundice. Epistaxis. Hematuria. Cloudy mind. Diarrhea.

HERBS AND ACTIONS

-Jin Yin Hua - Clears Heat and resolves Fire toxicity. With Gan Cao, for toxic swellings and sores. With Pu Gong Yin, Ye Ju Hua and Zi Hua Di Ding, for sores, lesions carbuncles, ulceration of the skin and furuncles.

-Pu Gong Ying - Relieves Fire toxicity. With Jin Yin Hua and Ye Ju Hua, for sores, lesions and ulcerations of the skin.

-Ye Ju Hua - Drains Fire and resolves toxicity.

-Zi Hua Di Ding - Clears Heat, relieves Fire toxicity and clears hot sores. With Ye Ju Hua, for red swellings.

-Huang Qin - Clears Heat, dries Dampness, drains Fire and detoxifies. With Zhi Zi, for sores due to Heat toxin.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity. With Huang Qin, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis and rashes and irritability in warm-febrile diseases. With Huang Qin and Zhi Zi, for a high fever, irritability, dry mouth and throat and dark urine due to Fire toxin in the three burners.

-Zhi Zi - Clears Heat, reduces Fire, resolves Dampness and relieves toxicity.

-Che Qian Zi - Promotes urination and clears Damp-Heat.

-Gan Cao - Clears Heat and relieves Fire toxicity, antidote for many toxic substances, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Pu Gong Yin, for abscesses or other toxic swellings. With Jin Yin Hua, Pu Gong Ying and Zi Hua Di Ding, for Yang sores marked by redness, swelling and pain.

TREATS

Insect dermatitis.

* INSOMNIA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Heat. Drains Fire. Nourishes Yin. Cools Heart Fire. Promotes urination. Quiets the Heart. Calms the Spirit

SYNDROMES - Heart Fire

CLINICAL MANIFESTATIONS - Insomnia. Difficulty falling asleep. Dream disturbed sleep. Ulceration, erosion, and pain of mouth and tongue. Thirst with a desire for cold drinks. Restlessness. Irritability. Irascibility. Feeling of Heat and disturbance in the Heart. Flushed face. Bitter taste in the mouth. Scanty, dark urine. Maybe painful urination. Maybe hematuria.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Cinnabaris Zhu Sha is toxic and should only be taken in low doses for a short time. (It is not used any longer.)

HERBS AND ACTIONS

-Sheng Di Huang - Clears Heat, cools the Blood, Nourishes Yin, generates fluids and cools Heart Fire.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin and moistens Dryness. With Huang Bai, clears Heat and Drains Fire for Yin Deficiency Fire.

-Zhi Zi - Clears Heat, reduces Fire and eliminates irritability.

-Huang Bai - Drains Kidney Fire. With Zhi Zi,resolves constraint and directs Qi downward for clearing Heat and Fire from the Liver channel.

-Mu Tong - Drains Heart Heat through the Small Intestine. With Deng Xin Cao, for difficult, scanty and burning urination associated with Heart channel Heat shifting to the Large Intestine or Heat clumping in the Bladder or Damp-Heat lodging in the Lower Jiao.

-Gan Cao - Clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

-Deng Xin Cao - Promotes urination, leaches out Dampness, unblocks painful urinary dysfunction, clears Heat from the Heart channel by directing Fire downward and calms the Spirit.

-Fu Ling - Promotes urination, leaches out Dampness, quiets the Heart, calms the Spirit and soothes the nerves.

-Mai Men Dong - Clears the Heart, eliminates irritability and nourishes Yin.

-Shan Yao - Tonifies Kidney Yin and astringes Jing.

-Han Sui Shi - Clears Heat, promotes urination, reduces edema and directs Fire downward.

-Zhu Sha - Sedates the Heart and calms the Spirit.

TREATS

Insomnia.

* LUPUS #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Tonifies Qi. Nourishes Yin

SYNDROMES - Qi and Yin Deficiency

CLINICAL MANIFESTATIONS - Fatigue. Long-standing low-grade fever. A pale face. Poor appetite. Loose stools. Dizziness. Weak voice/reluctance to speak. Malar flush. Anxiety. Hot flashes. Dysphoria with Five Sole Heat. General malaise. Lack of Spirit. Spontaneous perspiration or. Night sweats. Chest oppression. Shortness of breath. Red patches on the face. Arthralgia. Palpitations. Hair loss.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, promotes the discharge of pus, generates flesh, expels toxins and generates Body Fluids. With Dang Gui, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesias. With Mai Dong and Wu Wei Zi, for night sweats.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With HUang Qi, for Lung and Spleen Qi Deficiency with fatigue, shortness of breath, diarrhea and anorexia. With Dang Gui and Shu Di Huang, for Qi and Blood Deficiency with dizziness, weakness and lassitude. With Wu Wei Zi and Mai Dong, for injury to Qi and fluids with shortness of breath and thirst.

-Nu Zhen Zi - Nourishes and tonifies Liver and Kidney Yin and clears Deficiency Heat.

-Wu Wei Zi - Astringes leakage of Lung Qi, tonifies Qi,tonifies the Kidneys, astringes Jing, and sweat and generates fluids.

-Mai Men Dong - Nourishes Lung and Stomach Yin and generates Fluids. With Huang

Qi, Dang Gui and Wu Wei Zi, for irritability due to severe loss of fluids due to sweating.

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, reduces swelling, expels pus, generates flesh and alleviates pain. With Huang Qi, for ulcerated abscesses with insufficient drainage or which drain a clear thin discharge.

-Tai Zi Shen - Strengthens the Spleen, tonifies Qi and generates Body Fluids. With Wu Wei Zi, nourishes Fluids.

-Mo Han Lian - Nourishes and tonifies Liver and Kidney Yin. With Nu Zhen Zi, for dizziness, blurred vision, and pre-mature graying of the hair due to severe Liver and Kidney Yin Deficiency with ascendant Yang.

-Qin Jiao - Clears Deficiency Heat.

-Sang Zhi - Dispels Wind-Dampness, unblocks the channels and collaterals, benefits the joints and stops spasms.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat, cools the Blood and reduces abscesses.

TREATS

Lupus erythematosis.

* LYME DISEASE #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Clears Toxic Heat

SYNDROMES - Toxic Fire

CLINICAL MANIFESTATIONS - Pain. Swelling in the joints. Fever. Chills. Headache. Fatigue. Severe muscle aches. Conjunctivitis. Hemorrhages. Jaundice. Kidney and Liver dysfunction. End-stage: Dementia. Confusion. Memory loss. Delusions. Eventually, complete neurological breakdown.

HERBS AND ACTIONS

-Da Qing Ye - Clears Heat, resolves Fire toxicity, cools the Blood and dissipates maculae.

-Tu Fu Ling - Relieves toxicity, eliminates Dampness, benefits the joints and clears Damp-Heat from the skin.

-Ban Lan Gen - Drains Heat, relieves Fire toxicity, cools the Blood and benefits the throat.

-Zhi Zi - Clears Heat, reduces Fire, eliminates irritability, drains Damp-Heat, cools the Blood and relieves toxicity. With Huang Lian, Huang Qin and Lian Qiao, for boils and carbuncles. With Lian Qiao, for Heat entering the Pericardium.

-Chuan Xin Lian - Clears Heat, resolves Fire toxicity, dries Dampness and cools the Blood.

-Huang Qin - Clears Heat, dries Dampness, drains Fire, detoxifies, cools the Blood and calms ascending Liver Yang. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease. With Huang Lian and Zhi Zi, for acute febrile disease. With Zhi Zi, for sores due to Heat toxin. With Huang Lian, Huang Bai, and Zhi Zi, for lesions and sores with redness, swelling and pain.

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao, drains Fire and relieves Fire toxicity. With Zhi Zi, resolves constraint and directs Qi downward for clearing Heat and Fire from the Liver channel. With Huang Lian and Lian Qiao, for skin abscesses and lesions.

-Lian Qiao - Clears Heat, especially in the Upper Jiao, relieves toxicity and clears Blood Heat. With Ban Lan Gen, for any externally contracted Heat disorder. With Ban Lan Gen and Huang Lian, for acute infectious diseases.

-Qing Hao - Clears Summerheat or Damp-Heat, cools the Blood and clears Liver Heat.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity. With Huang Qin and Zhi Zi, for high fever, irritability, dry mouth and throat, and dark urine due to Fire toxin in the three burners.

-Gan Cao - Clears Heat ,relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

TREATS

Lyme disease.

* NEPHROTIC SYNDROME #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Warms the Kidneys. Strengthens the Spleen. Promotes diuresis to reduce edema

SYNDROMES - Spleen and Kidney Yang Deficiency

CLINICAL MANIFESTATIONS - Sallow complexion. Mental fatigue. Cold extremities. Bodily edema which is more severe in the region below the waist. Anorexia. Loose stool. Weakness of the loins. Oliguria.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, strengthens the Spleen, promotes urination and reduces edema. With Dang Shen, for Qi Deficiency. With Fu Zi, for Yang Deficiency with spon-taneous sweat.

-Dang Shen - Tonifies the Middle Jiao, augments Qi and assists herbs that drain downward when there is significant Qi Deficiency. With Fu Ling, for Spleen and Stomach Deficiency. With Bai Zhu, for Spleen Qi Deficiency.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Fu Ling and Yi Yi Ren, for Spleen and Stomach Deficiency with Dampness. With Fu Zi and Fu Ling, for edema due to Spleen and Kidney Yang Deficiency. With Huang Qi, for Lung and Spleen Qi Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Zhu Ling, promotes urination.

-Yi Yi Ren - Strengthens the Spleen and resolves Dampness. With Fu Ling for Spleen Deficiency with Excess Dampness and edema.

-Fu Zi - Disperses Cold and Dampness, warms the channels and stops pain. With Fu Ling, for Lower body edema and dysuria.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens the Yang and Ming Men Fire and assists the generation of Qi and Blood. With Fu Zi, powerfully tonifies Kidney Yang, for Kidney Yang Deficiency with lower back pain and weakness in the legs and knees.

-Zhu Ling - Promotes urination and leaches out Dampness.

-Mu Xiang - Promotes the movement of Qi, strengthens the Spleen, prevents

Stagnation and alleviates pain. With Bai Zhu, for anorexia with epigastric and abdominal pain and distention.

-Yin Yang Huo - Tonifies the Kidneys, strengthens Yang and increases the libido.

TREATS

Nephrotic syndrome.

* PARAPLEGIA #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Reinforces the Kidneys. Strengthens the bones. Invigorates the Blood. Dispels Blood Stasis. Relaxes muscles and tendons. Unblocks the collateral. Nourishes the nervous system. Recovers the urination and defecation functions. Promotes spinal cord growth

SYNDROMES - Traumatic injury to the spinal cord

CLINICAL MANIFESTATIONS - Paraplegia.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain.

-San Qi - Reduces swelling, alleviates pain, removes extravasated Blood and invigorates the Blood.

-Shu Di Huang - Nourishes Jing and Blood, fills the Marrow and nourishes Liver and Kidney Yin.

-Gou Teng - Extinguishes Wind, alleviates spasms, drains Liver Heat and pacifies Liver Yang.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi.

-Dong Chong Xia Cao - Tonifies Kidneys, strengthens the Yang and augments Jing.

-Xue Jie - Invigorates the Blood, dispels Blood Stasis and alleviates pain.

TREATS

Paraplegia.

* PARKINSON'S #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Nourishes the Blood. Invigorates the Blood. Clears the channels

SYNDROMES - Liver Blood Deficiency with Blood Stagnation

CLINICAL MANIFESTATIONS - Tremor, spasms or involuntary movements (chorea). Trembling feet and hands. Involuntary shaking of head. Tremor worse with emotional disturbances. Tremors disappear during sleep. Pill rolling tremor of the thumb and index finger or wrist. Maybe to and fro tremor of the head. Fixed facial expression like crying or smiling. Staring, unblinking eyes. Mouth slightly open often with drooling. Greasy facial skin. Seborrheic scaling. Muscular rigidity. Impaired movement. Stooping posture. Maybe oculogyric crisis. Gout. Speech difficulties. Pale complexion. Pale lips. Blurred or failing vision. Spots before eyes. Dizziness. Dry eyes. Pale nail beds. Irritability. Frightens easily. Insomnia with much dreaming. Tinnitus. Numbness of limbs. Light menses or amenorrhea. Late menses. Maybe trismus.

HERBS AND ACTIONS

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold and alleviates pain. With Bai Shao, regulates and harmonizes Qi and Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Gou Ji - Tonifies the Liver and Kidneys, strengthens the sinews and bones, expels Wind-Dampness and relieves pain. With Dang Gui, for Long term disease leading to lower extremity swelling.

-He Shou Wu - Tonifies the Liver and Kidneys, nourishes the Blood and nourishes Jing.

-Bai Shao - Nourishes the Blood, calms Liver Yang and Liver Wind, astringes Yin, adjusts the Ying and Wei and alleviates pain. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis.

-Dan Shen - Nourishes and invigorates the Blood, dispels Blood Stasis, clears Heat and calms the Spirit.

-Gu Sui Bu - Tonifies Kidney Yang, strengthens the sinews and bones, invigorates the Blood and promotes mending of sinews and bones.

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation and unblocks the channels. With Dang Gui and Bai Shao, for Blood Deficiency causing muscle spasms.

TREATS

Parkinson's disease.

Foot Health Care Lotion-TCM, Foot Sole Callus-TCM, Gegen Qinlian Decoction, Miliaria Wash-TCM, Miliaria-Damp-Heat Type TCM, Miliaria Itch Repelent-TCM, Miliaria Preventing Liquor-TCM, Qiong Yu Gao, Zhi Tong Sheng Ji Powder

Recordings Updated in June 2025

* FOOT HEALTH CARE LOTION-TCM

The foot health care lotion Chinese medicinal composition has the effects of clearing away heat and toxic materials, promoting blood circulation to remove blood stasis, sterilizing, inhibiting bacteria, resisting bacteria, diminishing inflammation, dispelling wind, eliminating dampness, killing insects, healing sores, dredging collaterals, relieving itch, detoxifying, eliminating swell, promoting blood circulation to arrest pain, exfoliating scrub and the like, and can be used for treating and preventing dermatophytosis, improving human body blood circulation, prompting metabolism, prompting heart and cerebral vascular function, eliminating fatigue and improving sleeping.

Herbs - Xie Bai, Ge Gen, Hua Jiao, Sheng Jiang, San Qi, Wu Hua Guo, Hong Hua, Cha Ye, Bai Qian, Ai Ye, Ming Fan, Mi Cu, Rou Gui, Yuan Zhi, Cang Zhu.

* FOOT SOLE CALLUS-TCM

Herbs - Ai Ye, Hong Hua, Hua Jiao, Mang Xiao, Mi Cu, Shui

* GEGEN QINLIAN DECOCTION

Gegen Qinlian decoction (GQD) is a well-known classical TCM for diarrhea related to damp-heat syndrome. Effective in colon or liver-related diseases including ulcerative

colitis (UC) and type 2 diabetes.

Gegen Qinlian decoction enhances immunity and protects intestinal barrier function in colorectal cancer patients via gut microbiota. It also has anti-inflammatory effects on ameliorating hyperuricemia.

GQD significantly improves lung tissue damage, reduces pulmonary edema, and improves respiratory function in Acute Lung Injury.

GQD has been utilized to manage the inflammatory symptoms of metabolic diseases and to protect against renal damage in China.

Herbs - Gegen, Huangqin, Huanglian, Gancao.

* MILIARIA WASH-TCM

Herbs - Huang Bai, Ming Fan, Xu Chang Qing, Ju Hua, Di Fu Zi.

* MILIARIA-DAMP-HEAT TYPE-TCM

This formula warms the meridians and expells cold, sterilizes, diminishes inflammation and relieves itching. It has low side effects and increases body immunity.

Herbs - Ai Ye, Jin Yin Hua, Ren Dong Teng.

* MILIARIA ITCH REPELENT-TCM

Herbs - Bai Bu, Ai Ye, Ku Shen, Huang Bai, Bo He, Bing Pian, chlorhexidine acetate.

* MILIARIA PREVENTING LIQUOR-TCM

Diminish inflammation, detoxify, dispell miliaria and release itching, Activates blood and resolves stasis. The formula has a definite therapeutic effect on miliaria and other symptoms.

Herbs - Huang Lian, Sheng Di Huang, Ku Shen, Xiong Huang, Du Huo, Huang Qin, Ye Ju Hua, Di Fu Zi, Bo He, Bing Pian.

* QIONG YU GAO - 琼玉膏 - Precious Jade Syrup, Beautiful Jade Paste

ACTIONS - Enriches Yin. Moistens the Lungs. Augments Qi. Tonifies the Spleen

SYNDROMES - Lung Qi and Yin Deficiency. Lung Yin and Spleen Qi Deficiency. Lung and Kidney Yin Deficiency

CLINICAL MANIFESTATIONS - Dry cough with little sputum. Dry throat. Hemoptysis. Muscle wasting. Emaciation. Dizziness. Tinnitus. Fatigue. Weakness. Shortness of breath. Malar flush. Spontaneous sweating. Weak lower extremities.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with soft stools or bloating after eating. If signs of External invasion are present, discontinue until those signs have been resolved.

NOTES - This formula is primarily designed to treat Yin Deficiency.

HERBS AND ACTIONS

-Ren Shen - Tonifies Lung Qi.
-Sheng Di Huang - Nourishes Yin, generates fluids, increases saliva and treats wasting and thirsting.
-Fu Ling - Strengthens the Spleen and transforms Phlegm.

TREATS

Cough. Diabetes. Insomnia. Laryngeal tuberculosis. Pharyngeal tuberculosis. Chronic laryngitis. Immune system deficiency. Weakness. Dyspnea. Pulmonary tuberculosis. Aphonia. Dry throat. Chronic bronchitis. Bronchiectasis. Dermatitis. Tinnitus. Fatigue.

* ZHI TONG SHENG JI POWDER

Zhi Tong Sheng Ji is indicated for leg ulcers, venous leg ulcers, arterial ulcers, and diabetic foot ulcers. Leg ulcers caused by vasculitis, vasculopathy, necrobiosis lipoidica, pyoderma gangrenosum, malignancy, and hypertension.

Herbs - San Qi, Xue Jie, Ming Fan, Ku Fan, Bai Ji, Ruxiang, Mo Yao, Song Xiang, Er Cha.

Anti-Wart Powder, Bi Yan Pian, Hair Growth-TCM, Houpo Mahuang Tang, Mingjing Granule, Sacroiliitis-TCM, Tiannianyin, Xin Yi San,
Yi Gan San

Recordings Updated in June 2025

* ANTI-WART POWDER (Dr. Joel Penner, americandragon.com)

ACTIONS - Eliminates filiform warts

SYNDROMES - Filiform warts

CLINICAL MANIFESTATIONS - Filiform warts

NOTES - Tear off the warts when they feel like they are coming loose.

HERBS AND ACTIONS

-Hua Rui Shi - Stops bleeding, invigorates the Blood and disperses Blood Stasis.
-Procaine Powder - Local anesthetic.
-Bing Pian - Clears Heat, alleviates pain, dissipates nodules and alleviates itching.

TREATS

Filiform warts.

* BI YAN PIAN - 鼻炎片 - Cool Sinus Teapills, Nose Inflammation Pills, Nose Inflammation Tablets, Nasal Inflammation pills

Disperses Wind, Clears Heat, Expels Toxic-Heat, Transforms Phlegm, Unblocks the Nose.

Wind Heat obstructing the nasal passages and congealing the nasal fluids into Phlegm Heat.

Presenting with nasal congestion, swollen and inflamed mucus membranes, watery or thick yellow or purulent and malodorous nasal mucus, sneezing, reduction or loss of sense of smell, nasal voice, sinus congestion and pain, frontal or sinus headache, dizziness, red itchy eyes, excessive tearing.

-Cang Er Zi, Xin Yi, Bai Zhi and Bo He "release the exterior", decongest the head, dry phlegm, and alleviate headache.

-Jie Geng a phlegm-resolving herb which guides the formula upward.

-Zhi Mu a heat-clearing, fire-reducing herb which soothes and moistens hot, irritated membranes.

-Wu Wei Zi an astringent herb which restrains excessive secretions.

-Jing Jie a surface-releasing herb which opens the nasal passages and alleviates itching.

-Lian Qiao a heat/toxin-eliminating herb which alleviates redness and swelling.

-Fang Feng a surface-releasing herb which alleviates head pain and congestion.

Allergic Rhinitis, Acute and Chronic Rhinitis, Perennial Rhinitis, Acute and Chronic Sinusitis, Post-Nasal Drip, Upper Respiratory Tract Infection, Common Cold, Influenza.

* HAIR GROWTH

Sheng Di Huang, Shu Di Huang, Dang Gui, Mo Han Lian, Ce Bai Ye, Hei Zhi Ma, He Shou Wu

* HOUPO MAHUANG TANG - 厚樸大黃湯

Hou Po, Ma Huang, Gan Jiang, Xing Ren, Shi Gao, Ban Xia, Xi Xin, Xiao Mai, Wu Wei Zi

Post-influenza cough with expectoration of excessive sputum and throat disorder.

* MINGJING GRANULE

Huang Qi, Dan Shen, Gou Qi Zi, Mo Han Lian, Pu Huang, Da Ji

Neovascular age-related macular degeneration.

* SACROILIITIS-TCM

Tian Ma, Du Zhong, Niu Xi, Chuan Xiong, Rou Cong Rong

Sacroiliitis is inflammation of the sacroiliac joint, which connects the lower spine to the hip bone. It can cause pain in the lower back, buttocks, and legs. It may be caused by injury, infection, or autoimmune disorders.

* TIANNIANYIN FORMULA

He Shou Wu, Niu Xi, Fu Ling, Dan Shen, Yin Yang Huo

Anti-aging effects. Can improve the immune function of aged males by preventing atropy of spleen and facilitating the reproductive activity of lymphocytes. Testosterone boost. Can can increase cell proliferating nuclear antigen expression and decrease apoptotic index in anterior pituitary cells. Regulatory effects on blood lipid and its metabolic products.

* XIN YI SAN - 辛夷散 - Magnolia Flower Formula

ACTIONS - Expels Wind-Cold, Unblocks the nasal passages

SYNDROMES - Wind-Cold with sinus congestion or rhinitis

CLINICAL MANIFESTATIONS - Nasal congestion and pain, Persistent copious nasal discharge, Loss of sense of smell, Runny nose, Difficulty breathing, Headache.

HERBS AND ACTIONS

-Xin Yi Hua - Expels Wind-Cold and unblocks nasal passages. With Xi Xin, lifts and spreads the clear Qi while unblocking the nasal orifices to treat headache and sinus distention, nasal congestion and thick nasal discharge due to Wind-Cold. With Bai Zhi and Xi Xin, improves the efficacy of Xin Yi. With Bai Zhi and Fang Feng, for nasal obstruction with clear nasal discharge due to Wind-Cold.

-Chuan Xiong - Activates Blood, regulates Qi, expels Wind-Cold and alleviates pain especially headaches. With Qiang Huo and Gao Ben, for Wind-Damp lateral headache. With Xi Xin, for Wind-Cold headaches and Shao Yin Cold headaches. With Xi Xin and Fang Feng, for Wind-Cold Headaches. With Gao Ben, for severe headache without Interior Fire.

-Mu Tong - Promotes urination.

-Xi Xin - Releases exterior Wind and Cold, warms the Lungs, transforms Phlegm, alleviates pain, relieves toothache and disperses and unblocks the Qi of the nasal orifices. With Chuan Xiong, for Wind-Cold headache, toothache and Bi pain. With Bai Zhi, for Wind-Cold toothache. With Qiang Huo and Fang Feng for Wind-Cold.

-Fang Feng - Releases the exterior. disperses Cold, expels Wind-Cold-Dampness and alleviates pain. With Qiang Huo, for Wind-Dampness.

-Qiang Huo - Releases the Exterior. disperses Cold. expels Wind-Cold-Dampness, alleviates pain and guides Qi to the Tai Yang and Du Channels. With Chuan Xiong, for

headaches and generalized body aches and pains associated with the common cold. With Fang Feng for pain due to External Wind-Dampness. With Bai Zhi, for headache. With Fang Feng, Bai Zhi and Xi Xin, for Wind-Cold with aversion to Cold, fever, headaches and muscle aches. With Fang Feng, Gao Ben and Chuan Xiong, for Wind-Damp headache.

-Gao Ben - Expels Wind-Cold, alleviates pain and dispels Wind-Dampness. With Xi Xin, for Wind-Cold-Damp headache, vertex headaches, stiff neck and toothaches. With Chuan Xiong and Bai Zhi, accentuates pain relieving effects and are often used together for headaches. With Qiang Huo, for headache and stiffness of the nape of the neck due to Wind-Dampness in the Du channel. With Qiang Huo and Fang Feng, for External Wind-Cold-Dampness. With Chuan Xiong and Xi Xin, for headache due to Cold and Dampness.

-Sheng Ma - Releases the exterior, clears Heat, relieves toxicity and raises the Yang. With Bai Zhi for Yang Ming headache.

-Bai Zhi - Expels Wind-Cold, alleviates pain and headache, expels Dampness, alleviates discharge and opens nasal passages. With Gao Ben, for Wind-Cold induced headaches, especially those at the vertex. With Xi Xin, for Wind-Cold induced headaches, sinus headaches, orbital headaches and toothache aggravated by cold air. With Fang Feng and Qiang Huo for Wind-Cold with headache and stuffy nose. With Gan Cao, for stomachache. With Chuan Xiong, for headache. With Qiang Huo, for Wind-Cold Dampness causing fever, chills and headaches.

-Gan Cao - Resolves Phlegm, stops cough, alleviates pain and moderates and harmonizes the properties of other herbs.

TREATS

Common cold, Stuffy nose, Nasal congestion, Chronic rhinitis, Sinusitis, Rhinitis, Nasal polyps, Nasal empyema, Allergic rhinitis, Allergy, Sinus congestion, Sinus headache.

* YI GAN SAN - 抑肝散 - Restrain the Liver Powder, Bupleurum Formula

ACTIONS - Calms the Liver, Regulates the Liver Qi and Blood, Relieves spasms, Dispels Heat, Strengthens the Spleen

SYNDROMES - Liver Channel Deficiency Heat in children, Liver Blood Deficiency with Liver Heat in children, Liver Wind

CLINICAL MANIFESTATIONS - Muscle spasms, Feverishness, Bruxism, Palpitations, Anxiety, Fever and chills, Alternating chills and fever, Spitting of sputum or saliva, Abdominal distention, Reduced appetite, Restless sleep, Nervousness, Rigidity and pain of the neck and head, Opisthotonos, Numbness of the limbs, Vertigo, Dizziness,

Hemiplegia, Irritability, Insomnia, Clenching or grinding of teeth, Easily frightened, Restlessness.

NOTES - Originally used for Liver Blood Deficiency with Liver Heat in infants, today it is used to treat adults who lead stressful lifestyles, with insomnia.

HERBS AND ACTIONS

-Bai Zhu - Tonifies the Spleen, tonifies Qi and dries Dampness.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Dang Gui - Tonifies, harmonizes and invigorates the Blood and regulates menses.

-Chuan Xiong - Activates the Blood and regulates Qi. With Dang Gui, for Blood Deficiency.

-Gou Teng - Extinguishes Wind, stops spasms, drains Liver Heat and pacifies Liver Yang.

-Chai Hu - Resolves Shao Yang disorders, reduces fever, spreads Liver Qi, relieves Stagnation and raises Yang Qi.

-Gan Cao - Moderates and harmonizes the effects of the other herbs.

TREATS

Seizure disorders, Hysteria, Night seizures, Hyperthyroidism, Night terrors, Hypertension, Neurosis, Menopausal disturbance, Indigestion, Hemiplegia, Visual hallucinations, Epilepsy, Neurasthenia, Climacteric disorders, Excitability, Anxiety, Infantile night crying, Insomnia, Palpitations, Stroke, Aphasia.

Foot Clavus-TCM, Fumanjian, Jia Wei Cang Er Pian, Jia Wei Xin Yi San, Liang Ge San, Plantar Fasciitis-TCM, Qishe Tablet, Tuo Li Xiao Du San, Xiaosheng Powder

Recordings Updated in June 2025

* FOOT CLAVUS-TCM

A TCM formula to treat foot clavus, also known as corn.

Herbs - Ya Dan Zi , Danshen, Ai Ye, Ding Xiang, Di Gu Pi, Ban Xia

* FUMANJIAN

Fumanjian (FMJ) treats dementia by promoting qi circulation, alleviating depression, eliminating turbidity, cultivating positivity, and dispelling evil spirits.

Herbs - Shengdihuang, Maidong, Baishao, Shichangpu, Shihu, Mudanpi, Fuling, Chenpi, Mutong, Zhimu

* JIA WEI CANG ER PIAN - Xanthium Nasal Formula

Xanthium Nasal Formula (Jia Wei Cang Er Pian) treats severe nasal congestion with yellow, green, or creamy sinus discharge and is commonly used for phlegm-heat patterns. Unblock the nasal passages. Release the exterior, dispel wind-damp, dry and resolve phlegmy discharge. The formula can relieve headache pain and open all of the sensory orifices to clear the head. Xanthium Nasal Formula (Jia Wei Cang Er Pian) is the formula of choice for phlegm-heat pattern when the discharge is yellow or creamy or green. In this pattern there must be phlegm or dampness because the formula is drying.

Xanthium Nasal Formula
1. Clears heat
2. Moves and cools blood
3. Transforms phlegm
4. Dries dampness
5. Frees the nasal passages

Herbs - Huang Qin, Chi Shao, Cang Er Zi, Bai Zhi, Xin Yi Hua, Bo He, Ku Ding Cha, Ge Gen

* JIA WEI XIN YI SAN - Xanthium & Magnolia Formula

Xanthium & Magnolia Formula (Jia Wei Xin Yi San) treats severe nasal congestion with copious clear nasal discharge and/or post-nasal drip. This formula is commonly used as a symptomatic treatment for seasonal allergies. Xanthium & Magnolia Formula (Jia Wei Xin Yi San) is appropriate when the pattern is wind-cold or wind-heat with copious clear discharge. In this pattern there must be phlegm or dampness because the formula is

drying.

Xanthium & Magnolia Formula
1. Dispels wind
2. Dries dampness
3. Frees the nasal passages

Herbs - Bai Zhi, Cang Er Zi, Xin Yi Hua, Chi Shao, Gao Ben, Chuan Xiong, Tong Cao, Ge Gen, Gan Cao, Cha Ye

* LIANG GE SAN - 凉膈散 - Cool the Diaphragm Powder, Forsythia and Rhubarb Formula, The Diaphragm Cooling Powder

ACTIONS - Drains Fire. Unblocks the bowels by Clearing the Upper Jiao and Draining the Middle and Lower Jiaos

SYNDROMES - Colon Heat. Heart Fire Flaring Up. Heat Stagnation (unformed Heat in the Upper Jiao with Heat Accumulation in the Middle Jiao). Constipation with Heat in the Upper Jiao. Qi Stage Gallbladder Heat

CLINICAL MANIFESTATIONS - Sensation of Heat and irritability in the chest, diaphragm and abdomen. Delirious speech (severe). Hemoptysis. Thirst. Flushed face. Red or scorched lips. Tongue sores. Sore throat. Swollen tongue. Red eyes. Epistaxis. Constipation. Toothache. Alternating chills and fever. Hematemesis. Fever. Bitter taste in mouth. Red urine. Dry, chapped lips. Dark, scanty urine. Restlessness. Vomiting. Red mouth or ulcers on the mouth. Hypochondriac pain. Rashes. Insomnia. Mania.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Weak patients. Contraindicated during pregnancy.

HERBS AND ACTIONS

-Da Huang - Drains Heat and Fire, purges accumulations, transforms Dampness, promotes urination, Invigorates the Blood, dispels Blood Stasis and reduces Fire toxicity. With Mang Xiao, eliminates obstruction in the Intestines and treats abscess, swellings and toxic sores. With Mang Xiao and Gan Cao (Tiao Wei Cheng Qi Tang), drains Yang Ming Heat. With Huang Qin, Zhi Zi and Lian Qiao, for strong pathogenic Heat in the Upper and Middle Jiaos.

-Mang Xiao - Softens hardness, purges accumulations, clears Heat, drains Fire, reduces swelling and eliminates Stagnation. With Da Huang, for constipation due to Colon Heat.

-Gan Cao - Clears Heat, relieves Fire toxicity and harmonizes.

-Huang Qin - Drains Fire, clears Heat, dries Dampness, detoxifies and clears Lung and Liver Heat. With Zhi Zi, powerfully clears and drains lurking Heat from the Lungs with fever, fullness in the chest, cough with yellow sputum and epistaxis or hematemesis, Clears Damp-Heat and jaundice, treats sores due to Heat toxin and irregular vaginal bleeding due to Liver Fire.

-Zhi Zi - Clears Heat from all three Jiaos through the urine and resolves Dampness.

-Lian Qiao - Clears Lung Heat, relieves toxicity, reduces abscesses and dissipates clumps.

-Bo He - Helps release Upper Jiao Heat, benefits the head and throat and relieves Liver Qi Stagnation.

-Dan Zhu Ye -Clears Heat from the Lung, Stomach and Heart, promotes urination and clears Damp-Heat.

TREATS

Childhood convulsions. Patch-like rashes. Pox with collapsed sores. Skin disorders. Upper respiratory tract infection. Tonsillitis. Meningitis. Encephalitis B. Hypertension. Cholecystitis. Cholelithiasis. Furuncles. Acute conjunctivitis. Pediatric pneumonia. Some gynecological disorders. Malnutrition. Infections. Cough. Pertussis. Influenza. Herpetic pharyngitis. Herpes labialis. Epistaxis. Acute nephritis. Abdominal Heat. Tracheitis. Hematuria. Fever. Dysphagia. Reflux esophagitis. Glossitis. Urinary tract infections. Neck pain. Red eyes. Sore throat. Hemoptysis. Constipation. Malaria. Acute pancreatitis. Emotional upset. Epidemic meningitis. Measles. Thrush. Stomatitis. Chronic Laryngitis. Psychosis. Furuncles on head. Diphtheria. Acute bronchitis. Lobar pneumonia. Periodontitis. Suppurative tonsillitis. Bronchiectasis with or without hemoptysis. Common cold. Infectious parotitis. Candidiasis. Gingivitis. Diarrhea. Insomnia. Pneumonia. Oliguria. Jaundice. Hemorrhoids. Esophageal cancer. Hematemesis. Bad breath. Toothache. Facial pain. Thrush associated with AIDS/HIV. Sepsis.

* PLANTAR FASCIITIS-TCM

Herbs - Bai Zhi, Dang Gui, Chuanxiong, Danshen, Renshen, Hong Hua

Treats plantar fasciitis.

* QISHE TABLET

Qishe Tablet is a chinese herbal medicine for chronic neck pain due to cervical degenerative disc disease.

Herbs - Huangqi, Dangshen, Sanqi, Chuanxiong, Zhimu, Lujiao

* TUO LI XIAO DU SAN

Tuo Li Xiao Du San (TLXDS) belongs to the category of formulas that clear internal abscesses and sores.

Its main actions are:

1) Draws out toxicity

2) Expels pus from the interior

Herbs - Huang Qi, Dang Shen, Bai Zhu, Gan Cao, Fu Ling, Bai Zhi, Dang Gui, Bai Shao, Chuan Xiong, Jin Yin Hua, Jie Geng

Treats refractory wounds, diabetic wounds.

* XIAOSHENG POWDER

Xiaosheng Powder may reduce or inhibit the intensity of inflammatory response and the release of pro-inflammatory cytokines through immune regulation, so as to affect the apoptosis of ocular surface epithelial cells, lymphocytes, and lacrimal glands. And it prevents the apoptosis of goblet cells to exert its pharmacological effects, inhibiting or delaying the formation of dry eye.

Xiaosheng Powder soothes the liver, nourishes yin and moistens the eyes, so as to rescue liver and Qi function and, promote body fluids to nourish the eyes.

Herbs - Di Huang, Dang Shen, Mai Dong, Chai Hu, Bo He, Dang Gui, Bai Shao, Wuweizi

Treats - Dry Eye disease.

Anti-Cancer Tumor-TCM, Guan Jie Yan Wan, Lianhua Qingke, Nao Xin Tong, Tian Qi Du Zhong Wan, Tung Shueh Pill, Tuo Li Xiao Du San-refined, Wu Bi Shan Yao Wan, Xianling Gubao Capsule

Recordings Updated in June 2025

* ANTI-CANCER TUMOR-TCM

Chinese herbal formula contains three Chinese medical botanical drugs, Huang Lian, Huang Qin, BaiWei and Polyinosinic-polycytidylic acid (sodium). The Formula targets three important processes, tumor maintenance (tumor stem cells), progression, and metastasis, and influences the response of tumors to host immunosuppression, for the potentially effective treatment of cancer patients.

Polyinosinic-polycytidylic acid (sodium) is a synthetic analog of double-stranded RNA and an agonist of toll-like receptor 3 (TLR3) and retinoic acid inducible gene I (RIG-I)-like receptors (RIG-I and MDA5). Polyinosinic-polycytidylic acid sodium can be used as a vaccine adjuvant to enhance innate and adaptive immune responses, and to alter the tumor microenvironment. Polyinosinic-polycytidylic acid sodium can directly trigger cancer cells to undergo apoptosis.

* GUAN JIE YAN WAN - 关节炎片 - Joint Inflammation Teapills, Plum Flower - Joint Obstruction Teapills, Mulberry Leaves & Job's Tears

Joint Inflammation Pills are a modern prescription formulated to treat Damp Heat Bi syndrome primarily affecting the joints of the lower extremities. Although half of the prescription is comprised of warm herbs, the overall effect of the formula is cooling. Due to the presence of significant Dampness in this clinical picture, warm mobilizing herbs are particularly useful, as Dampness is fundamentally a Yin pathogen. Cang zhu, Hai tong pi, Gui zhi, Wu zhu yu, Du huo, and Sheng jiang function to warm, open and circulate the channels and collaterals while eliminating Dampness. The bland, bitter and cold Dampness-clearing herbs Yi yi ren and Han fang ji make up 34% of the prescription, while the remaining cool Dampness draining herbs Niu xi, Qin jiao, Xiang jia pi and Huang qin assist in clearing Heat and reducing Dampness and swelling.

Contraindicated during pregnancy. Contraindicated during early stages of acute illness such as cold and flu, and during acute infections.

* LIANHUA QINGKE

Lianhua Qingke LHQK is composed of Mahuang, Lian Qiao, Huang Qin, Sang Ye, Xing Ren, Qian Hu, Ban Xia, Chen Pi, Zhe Bei Mu, Niu Bang Zi, Jin Yin Hua, Da Huang, Jie Geng, Gan Cao, Shi Gao

Lianhua Qingke (LHQK) is used for treating acute tracheobronchitis. Effective managing airway mucus hypersecretion in acute exacerbation of chronic obstructive pulmonary disease. Targets both inflammation and excessive mucus production to effectively alleviate airway obstruction.

* NAO XIN TONG

Reinforcing Qi and promoting blood circulation, removing blood stasis and dredging collaterals.

NXT can reduce blood viscosity and normalize blood pressure and it can prevent and treat the headache, dizziness, cervical spondylopathy, weakness in mental energy caused by hyperlipemia, arteriosclerosis and blood supply insufficiency.

Reported side effects include gastrointestinal discomfort, dry mouth and bitter taste in the mouth, dizziness, headache, toothache. Do not use during pregnancy.

Herbs - Huangqi, Danggui, Chishao, Chuanxiong, Honghua, Taoren, Danshen, Niuxi, Jixueteng, Guizhi, Sangzhi, Moyao, Ruxiang, Quan Xie, Dilong, Shui Zhi

Cardiovascular disease. Cerebrovascular disease. Atherosclerosis. Diabetes Type 2. Hyperglycemia. Diabetic nephropathy. Hyperlipidemia. Lipid metabolism. Glucose metabolism. Insulin sensitivity. Alzheimer's disease. Hemiplegia due to stroke. Numb extremities. Stiff tongue and retardation in speech, Palpitation. Short breath due to chest paralysis. Chest distress. Chest pain due to coronary heart disease. Deviated mouth and eyes. Involuntary drooling. Dementia. Urinary and fecal incontinence.

* TIAN QI DU ZHONG WAN - 田七杜仲丸 - Panax Notoginseng Eucommia Ulmoides Pills

Nourishes Kidney Yin. Dispels Wind. Eliminates Damp. Unblocks Channels. Tonifies Qi. Invigorate Blood

In addition to treating low back issues, Tian Qi Du Zhong Wan is effective in treating muscle ache and spasm anywhere in the body. This prescription is an excellent complement to acupuncture treatment and can be used to treat a wide variety of sports injuries where muscle ache is the primary complaint.

The prescription includes San qi, Du zhong, Rou gui and Ru xiang are included to move the blood and dispel blood stasis in the muscles of the low back. According to TCM theory, sub-acute and chronic muscle ache is referred to as Qi and Blood stagnation due to Qi and Blood deficiency. Accordingly, Ren shen, Du zhong and Sang ji sheng are found in the formula to nourish Qi, Blood and Yang in order to eliminate stagnation through tonifying the underlying deficiencies. The spicy warmth of Du huo dispels Wind,

Cold, and Dampness, relieves obstruction, and functions as a guiding herb to the low back. Finally, Wu wei zi tonifies the Kidneys, secures Essence, generates fluids, and strengthens the low back.

Chronic dull aching, stiffness and/or weakness in the lower back and knees that may be interspersed with occasional flare-ups of sharp pain associated with overwork and strain.

* TUNG SHUEH PILL

This formula is used for joint and muscle pain - basically pain that in modern terms is described as arthritis or rheumatism. It is also good for acute and chronic injuries.

Herbs

-Jiang Huang is an anti-inflammatory and is especially helpful for painful shoulders.

-Qian Nian Jian strengthens the tendons and bones. It has a strong tonifying action and is also used for pain and swelling due to traumatic injuries. In China it is widely used for treating the elderly.

-Mu Gua is one of the more effective herbs for relaxing the tendons. It is beneficial for joint pain due to changes in weather and for pain in the lower extremities.

-Bu Gu Zhi is helpful for painful or weak lower back and extremities.

-Gui Ban strengthens the bones and is said to be good for weakness of the lower back and knees.

-Dang Gui used for numbness and pain in the extremities and painful joints.

-Rou Gui is said to disperse cold in the body and alleviate pain. It is used for joint pain caused by wet and cold weather changes and back pain.

-Ru Xiang promotes the circulation of energy in the body. It alleviates pain and is used for joint pain that moves in the body and pain that is affected by damp weather.

-Mo Yao circulates the blood and alleviates joint pain.

-Mu Xiang is used to relieve stagnation.

-Dong Gua Ren is useful for circulating fluids in the body. In Chinese medicine fluid stagnation creates joint pain that feels heavy, distended or swollen.

-Ba Ji Tian is useful for back, leg, and joint pain, as well as, muscle spasms and

cramps.

-Du Zhong is good for low back pain, it is also combined with Xu Duan for fractured or broken bones to promote the healing of bones.

-Yan Hu Suo has an excellent ability to activate the Qi and Blood circulation in the body. Corydalis can treat pain in the upper and lower extremities and also be used for traumatic injuries.

-Xu Duan or "restore what is broken." It is good for sore and painful lower back and knees, stiffness in the joints and weakness in the legs. It is said to promote the growth of bones when used for fractures.

-Niu Xi is good for the tendons, bones, and joints. It is often used with Du Zhong for pain and weakness of the lower back and extremities. It is commonly used for sports injuries.

-Hong Hua alleviates pain. It is used to disperse blood stagnation and open the channels.

* TUO LI XIAO DU SAN-refined

Tuo Li Xiao Du San (TLXDS) is a refined Chinese medicine formula consisting of four herbs: Danggui (Radix Angelica sinensis), Huangqi (Radix Astragali),Baizhi (Angelica dahurica),and Zaojiaoci (thorns of Gleditsia sinensis)

Treats - Impaired wound healing in diabetes. Refractory wounds.

* WU BI SHAN YAO WAN - 無比山藥丸 - Incomparable Dioscorea Pill

ACTIONS - Nourishes the Yin. Assists the Yang. Augments the Qi. Strengthens the Kidneys

SYNDROMES - Kidney Deficiency

CLINICAL MANIFESTATIONS - Soreness or pain of the waist and back. Dizziness. Tinnitus. Frequent, clear urination. Dribbling urination that starts and stops.

HERBS AND ACTIONS

-Shan Yao - Tonifies Qi, tonifies the Spleen ,nourishes the Stomach Yin, stops diarrhea, tonifies the Kidney Yin and astringes Jing.
With Shan Zhu Yu and Tu Si Zi, for leukorrhea due to Spleen and Kidney Deficiencies.

-Rou Cong Rong - Tonifies the Kidneys, strengthens the Yang, benefits Jing and marrow

and warms the Womb. With Shan Zhu Yu, Tu Si Zi and Wu Wei Zi, for Impotence, spermatorrhea, and weakness in the lower back and lower extremities from severely Deficient Kidneys. With Du Zhong, for high blood pressure. With Ba Ji Tian, tonifies Yang without injuring Yin.

-Wu Wei Zi - Tonifies the Kidneys, astringes Jing and stops diarrhea and spermatorrhea.

-Tu Si Zi - Tonifies the Kidneys and Spleen, strengthens Yang, nourishes Yin, astringes Jing and urine, benefits marrow and astringes diarrhea. With Du Zhong, enriches and tonifies the Kidneys and Liver, astringes Jing, nourishes Kidney Yin , brightens the eyes and encourages the movement of Primal Yang to treat spermatorrhea, premature ejaculation and lower back pain from Kidney Deficiency.

-Du Zhong - Tonifies Yang, tonifies the Kidneys and Liver and strengthens the sinews and bones. With Shan Zhu Yu and Tu Si Zi, for impotence and frequent urination due to Deficiency Cold of the Kidneys.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin, strengthens the sinews and bones and benefits the joints. With Du Zhong, for low back and extremity pain and weakness due to Bi pain or Kidney Deficiency. With Sheng Di Huang, powerfully clears Deficiency Fire Blazing Upward with pain and swelling of the gums, epistaxis, hematemesis and other hemorrhage in the upper body.

-Ze Xie - Promotes urination, drains Kidney Fire, leaches out Dampness, and settles ministerial Fire in the Kidneys by draining Damp-Heat from the lower Jiao.

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin, generates fluids, increases saliva and treats wasting and thirsting.

-Shan Zhu Yu - Tonifies Liver and Kidney Yin, strengthens Kidney Yang, stabilizes the Kidneys, astringes Jing and Body Fluids, stops excessive sweating and supports that which has collapsed. With Wu Wei Zi, for Spermatorrhea, abnormal sweating, palpitations and shortness of breath due to Yin and Yang Deficiencies of the Liver and Kidneys.

-Fu Ling - Dispels Dampness, promotes water metabolism, nourishes the Heart and calms the Shen.

-Ba Ji Tian - Tonifies Kidneys and strengthens Yang. With Tu Si Zi and Rou Cong Rong, for impotence, spermatorrhea and premature ejaculation due to Kidney Yang Deficiency. With Niu Xi, for impotence.

-Chi Shi Zhi - Astringes the Intestines and stops diarrhea.

TREATS

Hematuria. Chronic nephritis. Urolithiasis. Turbid urine. Strangury.

* XIANLING GUBAO CAPSULE

Xianling Gubao Capsule (XLGBC), is often used to treat osteoarthritis (OA), osteoporosis, fractures, and other musculoskeleton disorders.

Its main components are Yinyanghuo, Xuduan, Buguzhi, Danshen, Zhimu, Dihuang, among which the Yinyanghuo(Herba Epimedii), Xuduan(Radix Dipsaci), Buguzhi(Fructus Psoraleae) invigorate the kidney, strengthen the muscles and strengthen the bones, Danshen(Radix Salviae Miltiorrhiae) activate blood circulation, remove blood stasis, and stop pain, Zhimu(Rhizoma Anemarrhenae) and Dihuang(Radix Rehmanniae) cool the blood, enrich the blood, and nourish kidney yin, has the effect of nourishing liver and kidney, activating blood circulation and clearing collaterals, strengthening tendons and strengthening bones, has good overall security.

1.3.3.37 RT-TCM-37

Traditional Chinese Medicine

Cardiospasm-TCM, Dry Skin -1, PM2.5-TCM, Pu Ji Xiao Du Yin modified for foot sole pain, Qiangxin Recipe, Qing'e Formula modified, Wei Fu Chun Tablet, Xiao Huo Luo Dan, Yang Xue Run Fu Tang Yi Hao

Recordings Updated in June 2025

* CARDIOSPASM TCM

A herbal medicine for Achalasia or Cardiospasm.

Herbs - Zhi Shi, Zhi Ke, Zhi Qiao

* DRY SKIN #1 (Dr. Joel Penner, americandragon.com)

ACTIONS - Dispels Wind from the face and head. Moistens the skin. Clears Heat. Disperses swelling

SYNDROMES - Wind-Cold and Dryness. Yin Deficiency with Yang Rising

CLINICAL MANIFESTATIONS - Dry skin.

HERBS AND ACTIONS

-Xing Ren - Moistens the Intestines and expels Wind-Cold.

-Tian Hua Fen - Drains Heat, generates Fluids, transforms Phlegm, moistens Lung Dryness, relieves toxicity, expels pus and reduces swelling.

-Hong Zao - Nourishes and cools the Blood.

TREATS - Dry skin.

* PM2.5-TCM

Traditional Chinese medicine formula for improving lung injury induced by fine particles, and the formula is indicated to be used for preventing and treating the fine particle-induced subacute lung injury. Fine particulate matter, also referred to as PM2.5, refers to particulate matter having an aerodynamic diameter of 2.5 μm or less in ambient air. T he organism, and its main chemical components are elemental carbon, organic carbon compounds, sulfates, nitrates, ammonium salts, etc. Air pollution has relevance to the o ccurrence of various diseases such as cardiovascular diseases, diabetes, tumors and st rokes.

The traditional Chinese medicine formula comprises. Sang Ye, Mai Men Dong, Zhi Mu, Sha Shen, Ren Shen

* PU JI XIAO DU YIN Modified for stabbing foot sole pain - 普濟消毒飲 - Universal Benefit Decoction to Eliminate Toxin

Herbs - Huang Qin, Huang Lian, Da Qing Ye, Zhe Bei Mu, San Qi, Lian Qiao, Jiang Can, Xuan Shen, Ban Lan Gen, Gan Cao, Sheng Ma, Ren Shen

TREATS - Stabbing foot sole pain.

* QIANGXIN RECIPE

Qiangxin recipe is used to improve cardiac function, prevent stroke, and strengthen the immune system.

Herbs - Hong Jing Tian, Ling Zhi, Proanthocyanidin

* QING-E FORMULA-MODIFIED

Modified Qing-e Formula protects against UV-induced skin oxidative damage via the activation of Nrf2/ARE defensive pathway. Qing-e Formula-Modified improves skin barrier protection and UV-induced damage. The fornula may increase antioxidant levels and reduce UV-induced lipid peroxidation, thereby protecting from UV-induced oxidative damage by promoting Nrf2 transcription into the nucleus to mediate the expression of antioxidant genes. Qing-e Formula-Modified could attenuate UV-induced oxidative stress damage in the skin, and its mechanism of action may be related to the activation and nuclear translocation of Nrf2. MQEF has promising applications in protecting skin cells from UV radiation-induced damage and premature skin aging.

Herbs - Danshen, Buguzhi, Du Zhong

* WEI FU CHUN TABLET

The combination of specific herbs helps get gastrointestinal functions back to normal. Pharmacological tests show the medicine can raise the immunity, improve the functions of the whole body and inhibit pylorus spirillum. Clinical experiments prove the medicine is indicated for chronic superficial gastritis, atrophied gastritis, intestinal metaplasia or untypical epithelial hyperplasia of gastric mucosa. It can relieve the clinical symptoms of functional indigestion, poor appetite, abdominal distention and stomach ache, weakness and fatigue, etc. It can also be used for adjuvant treatment of gastric carcinoma after chemotherapy or radiotherapy. Obviously effective in the chronic superficial gastritis, atrophic gastritis, secret anguish upper abdomen, distention after meals, belching etc.

Herbs - Hong Shen, Zhi Ke, Xiang Cha Cai

* XIAO HUO LUO DAN - 小活络丹 - Minor Invigorate the Channels Special Pill, Huo Luo Dan, Invigorate the Collaterals Special Pill Myrrh and Aconite Formula, Minor Pills for Activating Circulation in Collateral Channels

ACTIONS - Dispels Wind, Eliminates Dampness, Transforms Phlegm, Invigorates the Blood, Unblocks the collaterals, Alleviates pain, Warms the channels and collaterals

SYNDROMES - Obstruction of the channels by Wind-Cold-Dampness, Blood Stasis and Phlegm, Stubborn Bi, Windstroke

CLINICAL MANIFESTATIONS - Chronic pain, weakness and numbness (especially in the lower extremities) due to Windstroke, Muscle spasms, Cramps, Heaviness and pain in the lower back and legs, Fixed or migrating pain in the bones in the bones and joints with reduced range of motion, Long-term numbness or paralysis in the hands and feet.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Because this formula is quite harsh, warming and drying, it should only be prescribed for those with a relatively

strong constitution. Contraindicated for those with Yin Deficiency. Contraindicated during pregnancy.

HERBS AND ACTIONS

-Cao Wu - Disperses Cold, scours out Wind, overcomes Dampness and stops pain.

-Chuan Wu - Expels Wind-Dampness, disperses Cold, warms and activates channels and stops pain. With Mo Yao, Ru Xiang and Di Long, for Wind-Cold-Dampness or Phlegm- Dampness and Blood Stasis lingering and stagnating in the channels and collaterals.

-Tian Nan Xing - Dries Dampness, expels Phlegm, disperses Wind-Phlegm in the channels, stops spasms, reduces swelling and alleviates pain.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain and reduces swelling. With Di Long and Chuan Wu, for Wind-Stroke with spasms and rigidity and Wind-Damp-Cold-Bi. With Ru Xiang, for Wind-Cold-Damp Bi with numbness throughout the body and unresponsive extremities.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, invigorates the channels and alleviates pain.
With Mo Yao, for Traumatic injury pain.

- Di Long - Drains Heat, settles convulsions, extinguishes Wind, stops spasms and unblocks and promotes movement in the channels and collaterals. With Chuan Wu, Cao Wu and Ru Xiang for Cold Bi. With Chuan Wu and Tian Nan Xing, for Wind-Damp Bi.

TREATS

Windstroke, Hemiplegia after cerebrovascular accident, Osteoarthritis, Peripheral nerve disorders, Periarthritis of the shoulder, Sciatica, Hemiplegia, Cerebral vascular accident, Arthralgia, Hemilateral sweating, Wind-Cold-Damp Bi, Rheumatoid arthritis, Bone spurs, Arthritis, Soft tissue injuries, Post stroke sequelae, Apoplexy, Weakness, Paralysis, Unilateral pain.

* YANG XUE RUN FU TANG YI HAO - Nourish the Blood and Moisten the Skin Decoction #1

ACTIONS - Enriches Yin. Moistens Dryness. Clears Heat. Expels Wind

SYNDROMES - Blood Deficiency

CLINICAL MANIFESTATIONS - Dizziness. Palpitations. Insomnia. Dry skin. Dry hair. Poor memory. Paleness. Fatigue. Scanty periods.

HERBS AND ACTIONS

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Shu Di Huang - Nourishes Jing and Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, moistens the Intestines, unblocks the bowels, reduces swelling, expels pus, generates flesh and alleviates pain. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Huang Qi, for many Blood Deficiency patterns. With Tao Ren and Hong Hua, for symptoms associated with Blood Stasis.

-Huang Qi - Tonifies Qi and Blood Tonifies Wei Qi, stabilizes the Exterior tonifies the Lungs, aids the circulation of moisture downward from the face and generates Body Fluids.

-Mai Men Dong - Moistens the Lungs and Intestines, nourishes Lung and Stomach Yin and generates fluids. With Sheng Di Huang, for Yin Deficiency with Excess Heat. With Tian Men Dong, for Lung and Kidney Yin Deficiency.

-Tian Men Dong - Nourishes the Kidney Yin, clears Lung Heat, sedates Fire, moistens the Lungs, nourishes the Kidneys and generates fluids. With Mai Men Dong, for Yin Deficiency with injured fluids.

-Tao Ren - Dispels Blood Stasis, invigorates Blood circulation and moistens Intestines.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain. With Tao Ren, invigorates the Blood for all types of Blood Stagnation.

-Jing Jie - Releases the Exterior, expels Wind, vents rashes and relieves itching.

-Bai Ji Li - Dispels Wind and stops itching.

-Huang Qin - Clears Heat and dries Dampness.

TREATS

Dry skin. Dry hair.

Dantonic Pill, Die Da Wan, Ji Sui Kang, Jiang Huang Wan, Qing Xin Li Ge Tang, San Wu Bei Ji Wan, Xiang Sha Ping Wei San, Yinzhihuang Granule, Zhi Shi Dao Zhi Wan

Recordings Updated in June 2025

* DANTONIC PILL

Dantonic or Compound Danshen Dripping Pills (CDDP) is a well-known traditional Chinese medicine used for the treatment of myocardial ischemic diseases, such as angina pectoris (AP), myocardial infarction, and sudden death. Dantonic Pill, also known as the "Cardiotonic Pill," is a botanical drug consists of extracts of Danshen (Radix Salviae Miltiorrhizae) and Sanqi (Radix Notoginseng) with borneol (Bingpian) in a capsule form. The drug is currently approved in 26 countries outside the USA for the treatment and prevention of chronic stable angina pectoris and other cardiovascular disease related conditions.

* DIE DA WAN - 跌打丸 - Trauma Pill

ACTIONS - Invigorates the Blood. Transforms Blood Stasis. Harmonizes the Nutritive Qi. Reduces swelling. Alleviates pain

SYNDROMES - Blood Stasis due to traumatic injury

CLINICAL MANIFESTATIONS - Pain. Bruising. Pain with a fixed location. Swelling. Distended aches.

NOTES - This formula moves Wei Qi to the surface of the body.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, disperses Cold, stops pain due to Blood Stasis, reduces swelling, expels pus, generates flesh and alleviates pain. With Ru Xiang, Mo Yao and Zi Ran Tong, for strains and fractures. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for Wind-Damp Invasion blocking the Blood vessels causing pain, numbness, and paralysis.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews,

invigorates the channels, reduces swelling, generates flesh and alleviates pain. With Mo Yao, for traumatic injury pain, blood Stasis obstructing the channels with joint pain and Wind-Cold-Damp Bi with numbness throughout the body and unresponsive extremities.

-Mo Yao - Invigorates the Blood, dispels Blood Stasis, alleviates pain and reduces swelling.

-Xue Jie - Invigorates the Blood, dispels Blood Stasis, stops bleeding and alleviates pain. With Ru Xiang and Mo Yao, for trauma-induced pain, swelling or hemorrhage, especially in the chest and abdomen.

-Ma Huang - Warms and disperses Cold pathogens.

-Zi Ran Tong - Dispels Blood Stasis, relieves pain and promotes healing of bones and sinews. With Ru Xiang and Mo Yao, for for pain and swelling due to traumatic injury, especially for fractures.

TREATS

Traumatic injury. Painful obstruction. Hip internal rotation injuries.

* JI SUI KANG - 脊髓康

Jisuikang is a Chinese herbal formula used for neurological function after spinal cord injury. Jisuikang can upregulate BDNF and NGF expression for a prolonged period after spinal cord injury and promote repair of acute spinal cord injury, with its effect being similar to prednisolone.

Herbs - Huang Qi, Dang Gui, Chi Shao, Di Long, Chuan Xiong, Tao Ren, Hong Hua

* JIANG HUANG WAN - 姜黄片 - Curcuma Longa Pill

ACTIONS - Clears Heat. Drains Dampness. Invigorates Blood. Eliminates Blood Stasis. Promotes the movement of Qi. Expels Wind. Opens the channels and collaterals. Alleviates pain

SYNDROMES - Liver and Kidney Deficiency with Heat. Qi and Blood Deficiency with Heat. Wind-Cold-Damp Invasion with Heat

CLINICAL MANIFESTATIONS - Hip pain.

HERBS AND ACTIONS

-Jiang Huang - Invigorates Blood, eliminates Blood Stasis, promotes the movement of

Qi, expels Wind and opens the channels and collaterals to alleviate pain.

-Hu Zhang - Invigorates the Blood, dispels Blood Stasis, unblocks the channels, clears Heat, resolves Dampness and stops pain.

-Nu Zhen Zi - Nourishes and tonifies the Liver and Kidney Yin and clears Deficiency Heat.

-Ru Xiang - Invigorates the Blood, promotes the movement of Qi, relaxes the sinews, invigorates the channels and alleviates pain.

-Huang Qin - Clears Heat and dries Dampness. With Huang Lian, drains pathogenic Heat from the Upper and Middle Jiaos.

-Xia Ku Cao - Clears Liver Fire.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold and reduces the toxicity of other herbs. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis.

-Gui Zhi - Releases the exterior, assists the Yang, adjusts the Ying and Wei, releases the muscle layer and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels.

-Lu Cha - Harmonizes the Stomach, descends Rebellious Stomach Qi, relieves diarrhea and dispels Dampness.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Sheng Jiang, for vomiting and hiccups due to Disharmony of the Stomach Qi.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs.

-Huang Lian - Clears Heat and drains Dampness.

TREATS

Hip internal rotation injuries. Hip pain.

* QING XIN LI GE TANG - 清心利膈汤 - Clear the Heart and Enable the Diaphragm Decoction, Clear the Epigastrium and Benefit the Diaphragm Decoction

ACTIONS - Purges Fire in the Lungs and Stomach. Dispels Heat. Resolves toxicity. Unblocks the stool

SYNDROMES - Lung Heat. Stomach Heat

CLINICAL MANIFESTATIONS - High fever with slight chills. Maybe a slight aversion to Cold. Slight aversion to Wind. Painful red. swollen throat. Maybe small pustules on the tonsils. Phlegm in the throat. Sweating. Headache. Stuffy, runny nose. Dry mouth. Bad breath. Chest congestion and distention. Dysuria with yellow urine. Sores on the tongue or mouth. Irritability. Difficulty swallowing. Thirst with a desire for cold liquids. Constipation. Anxiety. Insistence on cold foods. Cough. Yellow, sticky mucus.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - This formula is intended for short-term use only. Contraindicated during pregnancy. Contraindicated for nursing mothers. Use caution for young children, the debilitated, the elderly and those with loose stools.

HERBS AND ACTIONS

-Zhi Zi - Clears Heat and eliminates irritability. With Huang Lian, Da Huang and Lian Qiao, for irritability and restlessness with high fever due to Toxic Heat and carbuncles and furuncles with or without abscesses and ulcerations. With Huang Lian, Huang Qin and Lian Qiao, for Boils and carbuncles. With Lian Qiao, for Heat entering the Pericardium and Heat remaining in the Heart channel with sores in the mouth, or on the tongue, dark, scanty urine, or urinary discomfort. With Da Huang, for constipation.

-Mang Xiao - Purges accumulations, eliminates Stagnation, clears Heat and reduces swelling. With Da Huang, for constipation due to Heat in the Stomach and Intestines. With Da Huang and Gan Cao, for moderate constipation due to accumulation of Excess Heat. With Da Huang, Huang Qin and Zhi Zi, for Heat in the Lungs and Stomach.

-Jing Jie - Releases the exterior and expels Wind. With Bo He, Jie Geng and Gan Cao, for acute cough due to Wind. With Lian Qiao and Bo He, for Wind-Heat common cold. With Bo He, releases the exterior to induce sweating, disperses Wind in the head and vents rashes and alleviates itching.

-Gan Cao - Moistens the Lungs, stops cough, clears Heat, relieves toxicity and harmonizes. With Jie Geng and Jing Jie, for acute cough due to Wind. With Jie Geng, for pain, swelling, and hoarseness of the throat. With Niu Bang Zi, strongly clears throat and Lungs to treat Wind-Heat attacks the Lungs or Fire toxin flaring upwards.

-Fang Feng - Releases the exterior and expels Wind. With Jing Jie, for Wind-Cold, Exterior patterns in any season, pruritic rash, initial-stage boils and to expel Wind and stop itching. With Bo He, Huang Qin, Jing Jie and Lian Qiao, for Wind-Heat. With Bo He, Lian Qiao, Huang Qin and Huang Lian, for acne due to Wind-Heat Attacking the upper body.

-Lian Qiao - Clears Heat and toxins and expels Wind-Heat. With Niu Bang Zi and Bo He, for Wei Stage Heat.

-Niu Bang Zi - Disperses Wind-Heat, benefits the throat, relieves toxins and moistens the Intestines, for Wind-Heat constipation. With Jie Geng and Bo He, for Wind-Heat sore throat. With Da Huang, for severe sore throat due to Fire toxin. With Lian Qiao, unblocks and drains Heat toxin, disperses clumps and swellings for sore, swollen throat, swellings like mumps, boils and other Heat toxin lesions and ulcerations and abscesses of the tongue and mouth. With Bo He, for sores due to Wind-Heat, dry throat, cough with yellow sputum, incomplete expression of measles or pruritic rash. With Xuan Shen and Jie Geng, for pain and swelling of the throat.

-Huang Lian - Drains Fire and relieves toxicity. With Huang Qin, drains pathogenic Heat from the Upper and Middle Jiaos for high fever, redness, swelling and pain of the head and face, dry mouth, parched throat, ulcerations of the mouth and tongue, epistaxis, rashes and irritability in warm-febrile disease. With Huang Qin and Zhi Zi, for high fever, irritability, dry mouth and throat, and dark urine due to Fire toxin in the three burners. With Huang Qin and Da Huang, for hematemesis and rectal bleeding due to Blood Heat. With Huang Qin, Da Huang and Lian Qiao, for abscesses, lesions, carbuncles, furuncles, burns, swelling and inflammation due to toxic Heat.

-Bo He - Disperses Wind-Heat and cools and clears the head and eyes, benefits the throat and vents rashes. With Jing JIe, for Wind-Heat. With Jing Jie, Niu Bang Zi and Lian Qiao, promotes the eruption of measles.

-Huang Qin - Clears Heat and drains Fire. With Huang Lian and Fang Feng, for Intestinal Wind with hemafecia. With Huang Lian and Zhi Zi, for acute febrile disease. With Zhi Zi, powerfully clears and drains lurking Heat from the Lungs with fever, fullness in the chest, cough with yellow sputum and epistaxis or hematemesis.

-Jie Geng - Spreads Lung Qi, resolves Phlegm and benefits the throat. With Niu Bang Zi, for throat inflammation and productive cough due to Wind-Heat. With Huang Qin and Gan Cao, for Hoarseness, pain and swelling of the throat due to Wind-Heat.

-Da Huang - Drains Heat, purges accumulations and relieves toxicity. With Huang Lian, for a feeling of fullness and distention due to Heat accumulation. With Huang Lian, Huang Qin, Zhi Zi and Mang Xiao, for strong pathogenic Heat in the Upper and Middle Jiaos and Upward Flaring of Heat attacking the head.

-Xuan Shen - Drains Fire and relieves toxicity. With Niu Bang Zi, Jie Geng and Bo He, for pain and swelling of the throat and purpuric rashes due to Wind-Heat. With Jie Geng and Gan Cao, for sore throat with Dryness and pain. with Niu Bang Zi and Bo He, for Initial stages of Wind-Heat where there are slight signs of toxicity.

TREATS

Laryngitis. Tonsillitis. Bad breath. Peritonsillar abscess. Epiglottitis.

* SAN WU BEI JI WAN - 三物辈急囊 - Three Substance Pill for Emergencies, Rhubarb, Ginger and Croton Formula, Pills of Three Ingredients for Sudden Syncope

ACTIONS - Harshly Purges Cold Accumulation. Alleviates pain

SYNDROMES - Sudden onset of severe Cold Accumulation due to Cold Food Stagnation in the Stomach and Intestines

CLINICAL MANIFESTATIONS - Sudden epigastric and abdominal pain and distention. The pain is so intense that it feels like an awl is piercing the abdomen. Rough, uneven breathing. Stabbing pain in the chest. Lockjaw. A cyanotic complexion. Asthma. Dyspnea. Oliguria. A pale face. No bowel movements. Rapid breathing. Constipation. Cold limbs. Possible loss of consciousness (severe cases).

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Sm. Crotonis Ba Dou is a toxic substance that should be used with extreme caution. Contraindicated for elderly or weak patients. Contraindicated during pregnancy. Contraindicated for those with acute abdominal pain due to Heat or Summerheat. Use only when absolutely necessary and in small doses.

HERBS AND ACTIONS

-Ba Dou - Warmly unblocks and vigorously purges accumulated Cold, drives out water and reduces edema.

-Gan Jiang - Warms the Middle, expels Cold, rescues Devastated Yang and expels Interior Cold.

-Da Huang - Drains Heat and purges accumulations.

TREATS

Post-operative adhesions. Intestinal obstruction. Acute cholecystitis. Sudden syncope. Ascites. Liver cancer. Recalcitrant constipation. Acute appendicitis. Food poisoning. Lockjaw. Cirrhosis of the Liver.

* XIANG SHA PING WEI SAN - 香砂平胃散 - Cyperus and Amomum Calm the Stomach Powder

ACTIONS - Strengthens the Spleen. Resolves Dampness. Promotes digestion

SYNDROMES - Food Stagnation

CLINICAL MANIFESTATIONS - Epigastric fullness, distention and pain with dislike of

pressure. Chest and diaphragm oppression. Full, painful abdomen. Belching with rotten food smell. Acid regurgitation. Detests food or. Vomits after eating. Vomiting sour, rotten food. Distention is reduced after vomiting. Unformed stools or. Knotted constipation or. Stool are hot and foul-smelling. Diarrhea. Anorexia. Foul gas.

HERBS AND ACTIONS

-Cang Zhu - Strongly dries Dampness and tonifies the Spleen. With Hou Po and Chen Pi, for epigastric fullness, fatigue and discomfort, anorexia, vomiting and/or diarrhea with a turbid, greasy tongue due to Dampness Obstructing the Middle Jiao. With Xiang Fu, for chest, epigastric and abdominal pain, distention and discomfort due to Dampness and Qi Obstruction.

-Hou Po - Promotes the movement of Qi in the Middle Jiao, resolves Stagnation, resolves Food Stagnation and promotes the movement of Qi downward. With Cang Zhu, for Dampness obstructing Spleen Yang with epigastric fullness, abdominal and epigastric distention, nausea, vomiting, anorexia, loss of taste and a thick, greasy tongue coat. With Xiang Fu and Chen Pi, for epigastric and abdominal bloating due to Dampness Obstructing the Qi. With Shan Zha, Mai Ya and Shen Qu, for Food Stagnation causing accumulation and leading to belching with a rotten odor. With Cang Zhu and Chen Pi, for Stomach Excess with epigastric fullness and distention, acid regurgitation, distasteful belching, and nausea and vomiting.

-Zhi Ke - Promotes the movement of Qi, reduces distention and pressure, resolves hardenings and removes stagnated food.

-Chen Pi - Regulates Qi, adjusts the Middle, descends Qi and relieves the diaphragm. With Sheng Jiang, for vomiting and hiccups due to Disharmony of the Stomach Qi.

-Sha Ren - Promotes the movement of Qi, aromatically transforms Dampness, strengthens the Spleen, stops vomiting, warms the Middle and stops diarrhea. With Cang Zhu, for Cold-Damp induced diarrhea and dysentery. With Chen Pi, for belching, nausea, and a stifling sensation in the epigastrium due to Disharmony of the Stomach Qi.

-Xiang Fu - Spreads and regulates Liver Qi and alleviates pain. With Cang Zhu, for indigestion, pain and distention in the flanks and abdomen, nausea, vomiting, and acid regurgitation.

-Shan Zha - Reduces and guides out Food Stagnation, transforms accumulations and stops diarrhea. With Mai Ya, Shen Qu and Zhi Ke, for abdominal distention, belching, and anorexia due to Food Stagnation with more intense symptoms such as pain. With Zhi Ke, for epigastric and abdominal distention. With Shen Qu, for general indigestion and Food Stagnation.

-Mai Ya - Reduces Food Stagnation, improves digestion, strengthens the Stomach and

facilitates the smooth flow of Liver Qi. With Chao Mai Ya, for indigestion due to Food Stagnation.

-Shen Qu - Reduces Food Stagnation, promotes digestion, moves Qi and harmonizes the Stomach. With Zhi Ke, for reduced appetite and fullness and distention of the epigastrium and abdomen due to Cold Stagnation. With Mai Ya and Shan Zha, for abdominal distention, belching, diarrhea and anorexia due to Food Stagnation and indigestion.

-Sheng Jiang - Warms the Middle, stops vomiting, normalizes the flow of Qi at the center and reduces the toxicity of other herbs. With Chen Pi, for Cold-Dampness Obstructing the Middle with nausea and hiccup.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain.

-Gan Cao - Tonifies the Spleen, augments Qi, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

TREATS

Indigestion. Nausea/Vomiting. Acid reflux. Anorexia. Diarrhea. Constipation.

* YINZHIHUANG GRANULE

Yinzhihuang granules (YZHG) is a patented Chinese medicine for the treatment of acute, chronic and severe hepatitis caused by the damp-heat toxin and can also be used for comprehensive treatment of other types of severe hepatitis, hepatitis B, liver disease, neonatal jaundice, liver injury, non-alcoholic fatty liver disease (NAFLD), alcoholic liver disease, elevated liver enzymes, viral hepatitis, drug-induced hepatitis, intrahepatic cholestasis of pregnancy, ABO maternal-fetal blood group incompatibility, and inflammation-cancer transformation of the hepar process. Yinzhihuang granules (YZHG) can clear away heat and toxic materials, promote diuresis and eliminate jaundice. The mechanism of YZHG in the treatment of hepatitis B appears to be mainly related to the cell cycle, human T-cell leukemia virus 1 infection, cellular senescence, viral carcinogenesis, and p53 signaling pathway.

Herbs - Huang Qin, Jin Yin Hua, Yin Chen, Zhizi

* ZHI SHI DAO ZHI WAN - 枳實導滯丸 - Unripe Bitter Orange Pill to Guide out Stagnation. Immature Bitter Orange Pill to Guide out Stagnation

ACTIONS - Reduces and guides out Stagnation and Accumulation. Clears Heat. Dispels Dampness

SYNDROMES - Food Stagnation in the Stomach transforming into Damp-Heat with Intestinal Obstruction. Diarrhea due to Injury by Food

CLINICAL MANIFESTATIONS - Abdominal pain (worse with pressure). Abdominal and epigastric distention. Dysentery. Scanty dark urine. Constipation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use only for Excess patterns. Contraindicated for those with dysenteric disorders without Qi Stagnation. Contraindicated for those with loose stool or diarrhea who do not have Food Stagnation. Contraindicated during pregnancy. Avoid consumption of Cold, raw foods while using this formula.

HERBS AND ACTIONS

-Zhi Shi - Breaks up stagnant Qi, reduces accumulation, descends Qi, unblocks bowels, transforms Phlegm and removes stagnant food. With Da Huang, for constipation, dysentery, distention and pain due to Food Stagnation and Blockage due to Damp-Heat.

-Da Huang - Drains Damp-Heat and purges accumulations. With Huang Lian, for fullness and distention due to Heat Accumulation.

-Shen Qu - Reduces Food Stagnation and harmonizes the Stomach. With Bai Zhu, for Food Stagnation and diarrhea due to Spleen Deficiency.

-Fu Ling - Drains Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Huang Qin - Clears Heat and dries Dampness. With Da Huang and Zhi Shi, for dysentery with tenesmus due to Food Stagnation transforming into Damp-Heat.

-Huang Lian -Clears Heat, drains Dampness and drains Stomach Fire.

-Bai Zhu - Strengthens the Spleen and resolves Dampness. With Zhi Shi, for epigastric and abdominal distention due to Spleen and Stomach Deficiency with Food Stagnation.

-Ze Xie - Clears Heat and promotes urination.

TREATS

Diarrhea due to Food injury. Acute or chronic gastroenteritis. Urinary tract infection. Acute indigestion. Acute enteritis. Asthma. Constipation. Abdominal fullness and distention. Abdominal pain. Hematemesis. Gastric ulcer. Bad breath. Epstein-Bar syndrome. Dysenteric disorders. Chronic hepatitis. Acute hepatitis. Cirrhosis of the

Liver. Trigeminal neuralgia. Acid reflux. Oliguria. Bronchitis. Nausea/Vomiting. Anorexia. Gastritis. Myalgic encephalomyelitis.

https://archive.org/details/Resonant_Therapy-TCM_39

Bai Hu Jia Ren Shen Tang, Bai Hu Tang, Cang Er San, Gujiansan Compound, Huang Lian Tang, Huo Xiang Zheng Qi San, Sang Xing Tang, Sheng Yu Tang, Zhu Ye Shi Gao Tang

Recordings Updated in June 2025

* BAI HU JIA REN SHEN TANG - 白虎加人參湯 - White Tiger plus Ginseng Decoction. Ginseng and Gypsum Combination

ACTIONS - Clears Qi-Stage Heat. Drains Stomach Fire. Generates Fluids. Alleviates thirst. Nourishes Qi

SYNDROMES - Yang Ming Jing with Qi and Body Fluid Deficiency. Qi-Stage Heat with Qi and Body Fluid Deficiency. Injury to Qi and Fluids due to Summerheat, vomiting or purgation

CLINICAL MANIFESTATIONS - High fever. Profuse sweat. Generalized weakness. Severe chills. Aversion to Heat. Red face. Red eyes. Severe thirst. Thirst may be unquenchable. Irritability. Anxiety. Pruritis. Headache. Toothache. Gum bleeding. Epistaxis. Dry lips. Dry tongue. Dry mouth. May be sensitive to Cold in the upper back. Polyuria. Delusions. Eye congestion. Burning sensation on the skin. Itching skin. Abdominal fullness without resistance. Dry, coarse skin. Listlessness. May be heavy labored breathing. Delirious speech (serious cases). Mania (serious cases)

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - True Cold and false Heat manifesting fever with a desire for warmth, no desire to drink, agitated movements of the limbs in an otherwise subdued patient with flooding, weak pulse.

HERBS AND ACTIONS

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst, clears Excess Heat from the Lungs and clears Blazing Stomach Fire. With Zhi Mu, clears Heat from the Lungs and Stomach to alleviate irritability, moisten dryness, and

enrich Yin. With Zhi Mu, Gan Cao and Jing Mi, for Heat in the Qi or Yang Ming Stage. With Ren Shen, for excessive Heat with Qi Deficiency.

-Zhi Mu - Clears Heat from the Qi Stage, from the Lung and from the Stomach, nourishes Yin, moistens Dryness, generates fluids, clears Deficiency Fire and quenches thirst.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs. With Jing Mi, benefits the Stomach, protects fluids, and prevents the extremely Cold properties of the other herbs from injuring the Middle Jiao.

-Jing Mi - Tonifies Qi and Yang, stops restlessness, generates fluids, stops thirst and tonifies the Lungs, Spleen and Intestines.

- Ren Shen - Tonifies Qi, generates fluids and stops thirst. With Shi Gao and Zhi Mu, for Heat injuring the Qi and Yin fluids with fever, irritability, intense thirst and profuse sweating.

TREATS

Pneumonia. Cerebral bleeding. Basedow's disease. Dermatitis. Uremia. Nephritis. Cholecystitis. Nocturnal enuresis. Encephalitis B. Meningitis. Lobar pneumonia. Heat stroke. Bacterial infections. Urticaria. Epistaxis. Gastritis. Asthma. Abdominal fullness and distention. Weakness. Profuse perspiration. Toothache. AIDS/HIV/ARC. Influenza. High fever. Diabetes mellitus. Periodontitis. Common cold. Influenza. Measles. Erysipelas. Scarlet fever. Typhoid fever. Emotional disorders. Eczema. Pruritis. Gingivitis. Viral infections. Hemophthalmia. Hyperglycemia. Bronchitis. Bad breath. Upper respiratory tract infection. Peripheral neuropathy. Red eyes.

* BAI HU TANG - 白虎湯 - White Tiger Decoction. Gypsum Combination

ACTIONS - Clears Qi Stage Heat. Drains Stomach Fire. Generates Fluids. Alleviates thirst

SYNDROMES - Yang Ming Jing. Qi-level Stomach Heat. Jue Yin Heat

CLINICAL MANIFESTATIONS - High fever. Profuse sweat. Generalized weakness. Severe chills. Aversion to Heat. Red face. Red eyes. Severe thirst. Thirst may be unquenchable. Irritability. Anxiety. Pruritis. Headache. Toothache. Gum bleeding. Epistaxis. Dry lips. Dry tongue. Dry mouth. May be sensitive to Cold in the upper back. Polyuria. Delusions. Eye congestion. Burning sensation on the skin. Itching skin. Abdominal fullness without resistance. Dry, coarse skin. Listlessness. May be heavy labored breathing. Delirious speech (serious cases). Mania (serious cases)

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with fever due to Spleen and Stomach Yin Deficiency manifesting as fever, spontaneous sweat, extreme fatigue, aversion to Wind, and a Deficiency floating pulse. Contraindicated for those with True Cold and False Heat manifesting fever with a desire for warmth, no desire to drink, agitated movements of the limbs in an otherwise subdued patient and flooding, weak pulse. Contraindicated for those with Yang Ming Fu. Use caution for those with a floating, wiry and thin pulse. Use caution for those with a submerged pulse. Use caution for those with absence of thirst. Use caution for those with absence of sweating.

HERBS AND ACTIONS

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst, clears Excess Heat from the Lungs and clears Blazing Stomach Fire. With Zhi Mu, clears Heat from the Lungs and Stomach to alleviate irritability, moisten dryness, and enrich Yin. With Zhi Mu, Gan Cao and Jing Mi, for Heat in the Qi or Yang Ming Stage. With Ren Shen, for excessive Heat with Qi Deficiency.

-Zhi Mu - Clears Heat from the Qi Stage, from the Lung and from the Stomach, nourishes Yin, moistens Dryness, generates fluids, clears Deficiency Fire and quenches thirst.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs. With Jing Mi, benefits the Stomach, protects fluids, and prevents the extremely Cold properties of the other herbs from injuring the Middle Jiao.

-Jing Mi - Tonifies Qi and Yang, stops restlessness, generates fluids, stops thirst and tonifies the Lungs, Spleen and Intestines.

TREATS

Encephalitis B. Meningitis. Pneumonia. Lobar pneumonia. Heat stroke. Diabetes mellitus. Periodontitis. Common cold. Influenza. Hemorrhagic fever. Some fevers related to cancers. Acute stomatitis. Gastritis. Rheumatoid arthritis. Epistaxis. Bronchial asthma. High fever. Thrombocytopenic purpura. Weakness. Headache. Profuse perspiration. Toothache. Measles. Nasal pain. Diabetes. Erysipelas. Scarlet fever. Typhoid fever. Emotional disorders. Eczema. Pruritis. Gingivitis. Hyperthyroidism. Dermatitis. Recalcitrant allergic dermatitis. Unrelenting seepage after burns. Rheumatism. Chronic hepatitis. Viral hepatitis. Psoriasis. AIDS/HIV. Constipation. Abdominal Fullness and distention. Pyelonephritis. Sciatica. Osteoarthritis. Eclampsia. Rheumatic fever. Red eyes.

* CANG ER SAN - 蒼耳散 - Xanthium Formula

Cang Er San is used to disperse wind while opening the nasal passages helps beat allergy symptoms commonly experienced during the hot season with a Wind-Heat Attacking the Head pattern. Symptoms, copious, purulent, and even foul-smelling nasal discharge, nasal obstruction, dizziness, frontal headache. Treats rhinorrhea, acute and chronic rhinitis, acute and chronic sinusitis, allergic rhinitis.

Herbs - Bai Zhi, Cang Er Zi, Cong Bai, Bo He, Xin Yi, Cha Ye

* GUJIANSAN COMPOUND

Gujiansan Compound was developed by the Ruikang Hospital Affiliated with Guangxi University of Chinese Medicine, contains the compound medicines below and has been clinically used to treat patients with avascular necrosis of the femoral head (ANFH).

Herbs - Xi Yang Shen, Tai Zi Shen, Huang Qi, Lu Jiao, San Qi, Gu Sui Bu, Ling Zhi, Dan Shen, Qian Jin Ba, Jin Yin Hua, Xi Xin Hong Hua, Shi Chang Pu.

* HUANG LIAN TANG - 黃蓮湯 - Coptis Decoction. Coptis Combination

ACTIONS - Regulates Cold and Heat. Harmonizes the Stomach. Descends Rebellious Qi

SYNDROMES - Heat above and Cold below caused by Transmission of External Cold to the Middle Jiao. Heat in the chest and Cold in the Stomach

CLINICAL MANIFESTATIONS - Stifling sensation and irritability in the chest. Nausea with an urge to vomit. Abdominal pain. Fever with slight chills. Diarrhea. Vexation. Borborygmus. Thirst.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - This formula is not effective for nausea, vomiting and abdominal pain due to Qi or Food Stagnation. Contraindicated for those with nausea, vomiting and abdominal pain due to Yin Deficiency.

HERBS AND ACTIONS

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity.

-Gan Cao - Tonifies the Spleen, augments Qi and moderates and harmonizes the harsh properties of other herbs.

-Gan Jiang - Warms the Middle, expels Cold and dispels Wind-Dampness seeping into the Lower Jiao. With Ban Xia, for vomiting of saliva or dry heaves due to Cold-induced congested fluids. With Gan Cao, for epigastric pain and vomiting due to Spleen and

Stomach Deficiency Cold. With Ban Xia and Ren Shen, for vomiting due toe Deficiency Cold.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer, unblocks Yang, transforms Qi and thin mucus, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels, warms the Middle and directs Turbid Yin downward.

-Ren Shen - Tonifies Spleen and Stomach Qi and tonifies Qi in Deficiency patients with Exterior conditions.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi and stops vomiting. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi and moderates and harmonizes the harsh properties of other herbs.

TREATS

Acute gastritis. Hyperacidity of the Stomach. Gastric and duodenal ulcers. Gastroenteritis. Epigastric pain. Hangover. Hiccup. Cholera. Abdominal pain. Indigestion. Atrophic gastritis. Allergic colitis. Cholecystitis. Acid reflux. Stomatitis. Dysentery. Acute enteritis. Nausea/Vomiting. Diarrhea.

* HUO XIANG ZHENG QI TANG - 藿香正氣汤 - Agastache Powder to Rectify the Qi. Agastache Formula. Powder for Dispelling Turbidity with Agastache

ACTIONS - Releases the Exterior. Transforms Dampness. Regulates Qi. Harmonizes the Middle Jiao

SYNDROMES - Exogenous Wind Cold with Spleen and Stomach Deficiency (External/Internal Damp). Summer Heat with Cold complications. San Jiao - Cold-Damp in the Upper Jiao

CLINICAL MANIFESTATIONS - Fever and chills. Headache. Chest and gastric fullness and oppression. Pain in the epigastrium and abdomen. Nausea and vomiting. Borborygmus. Diarrhea. Loss of taste. Aversion to Cold. Cough. Indigestion. No perspiration. Chest discomfort. Sore throat. Disorientation. Madness. General lassitude. Anorexia. Delirious speech. Maybe loss of voice. Intermittent chills and fever. Afternoon fever and tight. Sudden turmoil disorder. Malarial disorders. Loose stools.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Damp-Heat with thirst, dry throat, greasy yellow tongue coat. Modify for Wind-Heat or Fire due to Deficiency. Contraindicated for those with Yin or Blood Deficiencies.

HERBS AND ACTIONS

-Huo Xiang - Aromatically transforms Dampness, harmonizes the Middle Jiao, stops vomiting and releases the exterior. With Zi Su Ye and Hou Po, for fever and chills, a stifling sensation in the chest and epigastrium, cough and nausea due to Wind-Cold with Dampness Obstructing the Middle Jiao. With Ban Xia, Fu Ling and Hou Po, for early stages of Damp-Warmth when Dampness predominates with fever, a stifling sensation in the chest, nausea, a sense of being encumbered a sticky sensation in the mouth and a lack of thirst. With Zi Su Ye, transforms Dampness, regulates Qi, harmonizes the Stomach, stops nausea and vomiting and treats turbid Dampness Obstructing the Spleen with lethargy, a stifling sensation in the chest, nausea , loss of appetite, diarrhea or loose stools and a thick tongue coat and releases the Exterior to treat Externally contracted pathogens such as Externally- contracted Cold during Hot, Damp summer weather, with fever, lethargy, a stifling sensation in the chest and nausea. With Zi Su Ye and Bai Zhi, for Summer-Dampness with Wind-Cold. With Ban Xia, for nausea and vomiting.

-Hou Po - Transforms Dampness, promotes the movement of Qi, warms and invigorates the Spleen, and descends Rebellious Qi. With Ban Xia and Fu Ling, for Phlegm Obstructing the Qi, leading to coughing, vomiting or a sense of something stuck in the throat.

-Chen Pi - Regulates Qi, tonifies Spleen, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and descends Qi. With Sheng Jiang, for vomiting and hiccups due to Disharmony of the Stomach Qi and Cold-Dampness Obstructing the Middle with nausea and hiccup. With Ban Xia, for a stifling sensation in the chest and cough with excessive white, viscous sputum due to Phlegm-Damp Obstruction.

-Zi Su Ye - Releases the exterior, disperses Cold and moves Spleen and Stomach Qi. With Huo Xiang, releases the exterior, regulates Qi, warms the Middle, and transforms turbidity. With Jie Geng, for Common colds with nasal congestion and productive cough. with Huo Xiang, releases the exterior, regulates Qi, warms the Middle, and transforms turbidity for influenza and common cold due to Wind-Cold-Dampness and is especially effective for abdominal pain, vomiting, and diarrhea and for externally-contracted Cold during Hot, Damp summer weather, with fever, lethargy, a stifling sensation in the chest and nausea. with Ban Xia and Hou Po, for Spleen and Stomach Qi Stagnation with accumulation of Phlegm. With Chen Pi, Ban Xia and Huo Xiang, for Stomach flu or acute enteritis due to Spleen and Stomach Qi Stagnation.

-Bai Zhi - Expels Wind and disperses Cold. With Gan Cao, for stomachache and ulcer pain. With Jie Geng, for ulcerated boils when pus has not been discharged.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, harmonizes the Stomach and stops vomiting. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi. With Fu Ling, treats Phlegm, thin mucus

and turbid Dampness. With Sheng Jiang, for vomiting due to Cold, Thin Mucus. With Huo Xiang, for nausea with lethargy, anorexia, poor concentration and a swollen, pale tongue with a greasy, white coat due to turbid Dampness in the Spleen and Stomach, vomiting during the summer and fever, vomiting, lethargy and diarrhea associated with Summerheat. With Hou Po, for Phlegm-induced cough, vomiting, and epigastric and abdominal distention, Phlegm-Dampness with Qi Stagnation, Phlegm and Qi Obstruction with a sensation of fullness in the chest with coughing and wheezing, nausea, vomiting and a sensation of distention in the hypochondrium and Plum-pit Qi Stagnation. with Hou Po, Zi Su Ye and Fu Ling, for Plum-pit Qi Stagnation.

-Da Fu Pi - Promotes movement of Qi, descends Qi, expels Dampness, promotes urination and reduces edema. With Hou Po and Chen Pi, for epigastric and abdominal distention and discomfort with difficult bowel movements associated with stagnant Qi and Dampness.

-Bai Zhu - Tonifies the Spleen, tonifies Qi, dries Dampness and stabilizes the exterior. With Da Fu Pi, strengthens the Spleen, assists transportation, dredges clogged Stagnation, facilitates the removal of pathogenic water and Dampness, and reduces edema for treatment of Spleen Qi Deficiency with Dampness Obstruction (loss of appetite, epigastric and abdominal fullness and distention, and edema) and Spleen Qi Deficiency with Dampness accumulating in the skin with floating edema. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency. With Fu Ling and Sheng Jiang, for edema with Kidney Yang Deficiency.

-Fu Ling - Promotes urination, resolves Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Ban Xia, expels Phlegm and stops nausea and vomiting. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention, and anorexia due to congested fluids. With Ban Xia, Chen Pi and Sheng Jiang, for congested fluids in the Stomach causing nausea and vomiting. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Jie Geng - Opens Lungs, spreads Lung Qi and expels Phlegm. With Gan Cao, for hoarseness, pain and swelling of the throat due to Wind-Heat, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat, Lung abscess with expectoration of pus and pain in the chest and flanks and Excess disorders in the Upper Jiao with no disorder in the Lower Jiao. With Ban Xia, for cough due to Wind-Cold Invasion or long-standing Phlegm-Dampness.

-Sheng Jiang - Releases the exterior, warms the Middle and adjusts the Ying and Wei. With Da Zao, adjusts the Ying and Wei for treatment of Tai Yang Zhong Feng, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen, protects Stomach Qi and reduces irritation of the gastrointestinal tract by other herbs. With Ban Xia, for productive cough due to Phlegm-Dampness. With Zi Su Ye, for vomiting and diarrhea from seafood poisoning.

-Da Zao - Strengthens the Spleen, tonifies Qi and moderates and harmonizes the harsh properties of other herbs.

-Gan Cao - Tonifies the Spleen, tonifies Qi and moderates and harmonizes the properties of other herbs.

TREATS

Influenza (Stomach flu). Intestinal flu. Nonspecific acute colitis. Acute gastroenteritis. Common cold. Heat stroke. Infantile cough. Infantile eye ailments. Acute colitis. Diaper rash. Coronary artery disease. Headache. Irritable bowel syndrome. Abdominal pain. Nausea/Vomiting. Abdominal fullness and distention. Anorexia. Hot skin with perspiration. Tumors of the ears. Nasal pain. Vomiting associated with AIDS/HIV/ARC. Infantile toothache due to stagnant food. Infantile sore throat. Viral enteritis. Acute gastritis. Acute enteritis. Mild miasmic malaria. Dyspepsia. Sunstroke. Food poisoning. Fungal infection. Toxicity secondary to chemotherapy. Gastralgia. Dysentery. Fever. Abdominal Cold. Diarrhea. Psychosis. Indigestion. Chemotherapy for breast cancer. Diarrhea associated with AIDS/HIV

* SANG XING TANG - 桑杏湯 - Mulberry Leaf and Apricot Kernel Decoction. Morus and Armeniaca Decoction.
Morus and Apricot Kernel Combination. Decoction of Morus Leaf and Apricot Kernel. Decoction of Morus and Apricot Seed

ACTIONS - Clears and Disperses Wind-Heat and Dryness. Moistens the Lungs

SYNDROMES - External Wind, Heat and Dryness

CLINICAL MANIFESTATIONS - Dry hacking cough. Chest pain during severe coughing fits. Headache (lighter and more on the surface). Moderate fever. Dry throat. Dry skin. Dry nose. Aversion to Cold. Headache. Thirst. Maybe hemoptysis. Little sticky or no Phlegm.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency.

HERBS AND ACTIONS

-Sang Ye - Relieves Wind-Heat, clears Lung Heat, moistens Dryness and stops cough. With Xing Ren, for headache, fever, and dry non-productive cough from External Warm-Dryness disorders.

-Xing Ren - Regulates Lung Qi, stops cough and wheezing, moistens the Intestines and unblocks bowels. With Sang Ye, for non-productive dry cough due to Wind-Heat.

-Zhi Zi - Clears Heat, reduces Fire, eliminates irritability, drains Damp-Heat, cools the Blood and relieves toxicity.
With Dan Dou Chi, for insomnia and irritability from Deficiency due to Heat lingering in the chest.

-Dan Dou Chi - Expels Wind-Cold or Wind-Heat, eliminates irritability and relieves stuffy sensations in the chest.

-Zhe Bei Mu - Clears Heat, transforms Phlegm and stops cough.

-Bei Sha Shen - Moistens the Lungs, stops cough, nourishes Stomach Yin, generates fluids, clears Heat and moistens the Exterior.

TREATS

Flu with dry cough. Upper respiratory tract infection. Measles during the disappearance of the rash. Pharyngitis. Pertussis. Hemoptysis. Acute laryngitis. Bronchial asthma. Fever. Loss of voice. Sjogren's Syndrome. Tongue pain. Common cold. Acute and chronic bronchitis. Bronchiectasis. Pulmonary tuberculosis. Pleurisy. Nasal Dryness. Cough. Acute tonsillitis. COPD. Hoarseness. Headache. Dry skin. Sore throat.

* SHENG YU TANG - 聖愈湯 - Sage-Like Healing Decoction. Dang Gui Four Plus Combination

ACTIONS - Augments Qi. Tonifies the Blood. Preserves the Blood. Tonifies Yin

SYNDROMES - Qi and Blood Deficiency with lower abdominal aching. Atrophy disorder (Wei Syndrome) due to Blood Deficiency

CLINICAL MANIFESTATIONS - A constant ache in the lower abdomen that occurs during or just after menstruation. The pain responds favorably to pressure. Scanty and pale menstrual flow. Pale complexion. Palpitations. Thirst. Listlessness. Menstrual bleeding that is light in color. Lethargy. Weak limbs. Withdrawn behavior. Restlessness. Insomnia. Sensation of Heat. Maybe irritability.

NOTES - There are several formulas with this name.

HERBS AND ACTIONS

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin, generates fluids and cools Heart Fire. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Shu Di Huang - Nourishes the Blood, nourishes Liver and Kidney Yin, nourishes Jing and Blood and fills the Marrow. With Dang Gui, for Blood Deficiency marked by

dizziness, palpitations, insomnia and menstrual dysfunction. With Ren Shen, for Qi and Blood Deficiency.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and alleviates pain. With Dang Gui, for Blood Deficiency causing menstrual problems including dysmenorrhea, scanty menses, and amenorrhea.

-Ren Shen - Tonifies Qi. With Shu Di Huang, for severe Qi and Blood Deficiency due to loss of Blood. With Huang Qi, for Qi Deficiency with general debility, anorexia, and spontaneous sweat.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood, regulates the menses, disperses Cold and stops pain due to Blood Stasis. With Huang Qi, for Qi and Blood Deficiency. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Huang Qi - Tonifies Qi and Blood and relieves numbness and pain. With Dang Gui, for Qi and Blood Deficiency with chronic non-healing sores, numbness, painful obstruction and paresthesia.

TREATS

Sores and abscesses that bleed profusely and cause insomnia and irritability. Early menstruation. Amenorrhea. Atrophy (Wei) Syndrome. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Congestive Heart failure. Polymyositis/Dermatomyositis. Diabetes. Anemia. Blood Loss. Dysmenorrhea. Threatened miscarriage. The sequelae of poliomyelitis. Acute infectious multiple neuritis. Progressive muscular dystrophy. Hysterical paralysis. Periodic paralysis. Facial paralysis. A constant premenstrual ache. Palpitations. Lochioschesis.

* ZHU YE SHI GAO TANG - 竹葉石膏湯 - Lophatheri and Gypsum Decoction. Bamboo Leaves and Gypsum Combination. Decoction of Bamboo Leaf and Gypsum

ACTIONS - Clears Heat. Generates fluids. Tonifies Qi. Harmonizes the Stomach

SYNDROMES - Qi Stage Lung and Stomach Heat Injuring the Qi and Fluids. Stomach Fluid Deficiency. Summerheat Stroke

CLINICAL MANIFESTATIONS - Lingering fever from a febrile disease. Vomiting. Irritability. Thirst with a desire to drink. Parched mouth, lips and throat. Choking cough. Restlessness. Insomnia. Nausea. Anorexia. Profuse perspiration. A dry mouth. Indigestion. Toothache. Listlessness. Chest oppression. Ulcerations of the mouth. Coarse skin. Cough. Night sweats. Stifling sensation in the chest or epigastrium.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with febrile disease where both normal and pathogenic Qi are abundant. Contraindicated for those with febrile disease where the fever remains high. Contraindicated for those with febrile disease where the Qi and Yin have not been injured. Contraindicated for those with febrile disease, a stifling sensation in the chest, dry heaves, and a yellow greasy tongue coat due to Damp-Heat.

HERBS AND ACTIONS

-Dan Zhu Ye - Clears Heat, eliminates irritability, promotes urination and clears Damp-Heat. With Shi Gao, clears Yang Ming Heat and relieves irritability and lingering fever from febrile disease with insomnia, irritability and a scanty dry tongue coat.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst, clears lung Heat and Blazing Stomach Fire. With Dan Zhu Ye and Mai Men Dong, for lingering fever from late stage febrile disease with dysphoria, thirst and a red tongue with no coat. With Ren Shen, for excessive Heat with Qi Deficiency. With Ren Shen, and Mai Men Dong for excessive Heat with Qi and Yin Deficiency.

-Ren Shen - Tonifies Qi. With Mai Men Dong, tonifies Qi and generates fluids.

-Mai Men Dong - Moistens the Lungs and Stomach, nourishes Yin, generates fluids, clears the Heart and eliminates irritability. With Ban Xia, Gan Cao and Jing Mi, for Stomach Yin Deficiency with hiccups and vomiting.

-Ban Xia - Descends Qi and stops vomiting. With Ren Shen, for vomiting due to Stomach Deficiency.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs. With Jing Mi, assists Ren Shen in tonifying Qi, Nourishes the Stomach and harmonizes the Middle Jiao. With Ren Shen, relieves palpitations and anxiety.

-Jing Mi - Tonifies the Qi of the Lungs, Spleen and Intestines, stops restlessness, stops thirst and generates fluids.

TREATS

Pneumonia (recovery stage). Encephalitis B (recovery stage). Measles (recovery stage). Meningitis (recovery stage). Hemorrhagic fever (recovery stage). Influenza (recovery stage). Ephidrosis. Common cold. Bronchitis. Bronchial asthma. Pertussis. Systemic lupus erythematosis. Fever. Gingivitis. Glossitis. Summerheat stroke. Septicemia. Hyperglycemia. Nausea/Vomiting. Depression. Schizophrenia. Anorexia. Hematemesis. Herpes simplex. Menopause syndrome. Profuse perspiration. Indigestion. Constipation. Rheumatic fever. Pulmonary emphysema. Pulmonary

gangrene. Tuberculosis. Scarlet fever (recovery stage). Diabetes mellitus. Polyphagia. Pharyngitis. Nephritis. Fevers from post-surgical infections. Fevers in response to chemotherapy or radiation therapy. Stomatitis. Nervous exhaustion. Toothache. Insomnia. Hiccup. COPD. Anxiety neurosis. Panic attacks. Bipolar disorder. Neurasthenia. Allergic purpura. Herpes zoster. Hot flashes. Bad breath. Night sweats. Thrush. Puerperal fever.

Recordings Updated in June 2025

* BI SHU LING - 鼻舒靈 - Nose Soothing Elixir

ACTIONS - Clears Heat. Tonifies Qi. Eliminates Dampness. Activates the Blood. Calms the Liver. Opens the nasal passages

SYNDROMES - Lung Qi Deficiency with Liver Qi Stagnation Invading the Spleen, Blood Stagnation and Deficiency Heat

CLINICAL MANIFESTATIONS - Chronic variable and intermittent nasal and sinus congestion or. Continuous or sustained nasal congestion. Chronic discharge of copious thin white or sticky mucus which does not smell (even though the patient may perceive it to). The discharge is aggravated to exposure to Wind and Cold. It may be worse when lying down or at night and better during the day. Pale, swollen mucous membranes. Variable and transient sense of smell or. Transient, declining sense of smell or loss of sense of smell or. Permanent loss of sense of smell. Dull or thick headache with dizziness. Easily catches cold. Heavy-headedness. Dizziness. Shortness of breath. Weak voice or. Reluctance to speak. Fatigue. Spontaneous sweating. Weak cough with thin white or watery sputum. Waxy, pale complexion. Sinus pain. Generally severe frontal, maxillary or temporal headache. Chronic sinus inflammation and congestion which is worse with stress or emotional upset. May have occasional postnasal discharge. Frontal or temporal headaches. Neck and shoulder tension. Red eyes. Facial flushing. Irritability. Easily angered. Hypochondriac tension or discomfort. Bitter taste in the mouth. Chronic, continuous nasal congestion or. Post nasal drip with sticky yellow or

white. Nasal mucous membranes appear swollen, hard and or dark purple. Reduction or loss of sense of smell.

HERBS AND ACTIONS

-Yu Xing Cao - Clears Heat, relieves toxicity, reduces swellings and abscesses and expels pus, especially in the Lungs.

-Pu Gong Ying - Clears the Liver, clears Heat and resolves Dampness.

-Chai Hu - Spreads Liver Qi, relieves Stagnation, disperses Wind-Heat and resolves Phlegm and congestion. With Huang Qin, restores the normal functioning of the Liver and Gallbladder.

-Cang Er Zi - Disperses Wind and Dampness and opens the nasal passages.

-Huo Xiang - Aromatically transforms Dampness and releases the Exterior.

-Yi Yi Ren - Strengthens the Spleen, resolves Dampness, expels Wind-Dampness and relieves pain.

-Dan Shen - Activates the Blood, dispels Blood Stasis, clears Heat and soothes irritability.

-Huang Qin - Clears Heat, dries Dampness and calms ascending Liver Yang.

-Bai Zhu - Tonifies the Spleen, augments Qi and dries Dampness.

-Chuan Xiong - Activates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm, removes filth, calms the Spirit, disperses Wind, transforms turbid Dampness, harmonizes the Middle Jiao, awakens the Spleen, promotes the movement of Qi, promotes Blood flow, reduces swelling and alleviates Wind-Damp.

TREATS

Chronic sinusitis. Red eyes.

* DING ZHI WAN - 定志丸 - Settle the Emotions Pill

ACTIONS - Calms the Shen. Tonifies the Heart Qi. Pacifies timidity

SYNDROMES - Heart and Gallbladder Qi Deficiency. Heart Qi Deficiency and

Stagnation due to Phlegm Turbidity

CLINICAL MANIFESTATIONS - Insomnia or frequent waking, often early in the morning. Unable to fall back to sleep. Nightmares. Waking terrified. Easily frightened or startled. Easily unsettled by seeming trivial events. Apprehension. Restlessness. Fearfulness. Inappropriate worry. Timidity. Phobias. Anxiety (frequent and severe). Feeling disheartened. Forgetfulness. Frequent panic attacks. Palpitations. Shortness of breath. Incessant laughter and glee. Lethargy. Fatigue. Depression. Postnatal depression. Spontaneous sweating. Worry. Dizziness.

HERBS AND ACTIONS

-Ren Shen - Tonifies Heart Qi and calms the Spirit. With Fu Ling, Shi Chang Pu and Yuan Zhi, for confusion and forgetfulness.

-Fu Ling - Quiets the Heart, calms the Spirit and soothes the nerves. With Shi Chang Pu and Yuan Zhi, for insomnia and palpitations due to Spleen and Heart Insufficiency or Phlegm Obstructing the Heart.

-Shi Chang Pu - Opens the Orifices, vaporizes Phlegm, removes filth, calms the Spirit and disperses Wind.
With Yuan Zhi and Fu Ling, for forgetfulness, tinnitus, and impaired hearing. With Ren Shen, Fu Ling and Yuan Zhi, for forgetfulness and dulled senses.

-Yuan Zhi - Calms the Spirit and sedates the Heart and clears the channel joining the Heart and Kidney.
With Ren Shen, Fu Ling and Shi Chang Pu, calms the spirit.

TREATS

Anxiety neurosis. Mental disorders. Obsessive-compulsive disorder. Seizures. Palpitations. Bi-polar disorder. Anxiety. Sinus tachycardia. Premenstrual syndrome. Spontaneous perspiration. Dyspnea. Postnatal depression. Depression. Myopia. Cardiac arrhythmia. Insomnia. Neurosis. Panic attacks. Neurasthenia. Fatigue. Spermatorrhea.

* HU QIAN WAN - 虎潛丸 - Hidden Tiger Pill

ACTIONS - Enriches Yin. Descends Fire. Strengthens the sinews and bones

SYNDROMES - Atrophy disorder (Wei Syndrome) due to Liver and Kidney Deficiency

CLINICAL MANIFESTATIONS - Weakness and soreness of the lower back and knees. Deterioration of the sinews and bones with a general reduction in function. Wasting of the muscles of the legs and feet. Difficulty walking. Dizziness. Tinnitus. Spontaneous

emissions. Urinary incontinence.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Wei Syndrome due to Spleen and Stomach Deficiency or Damp-Heat.

HERBS AND ACTIONS

-Huang Bai - Drains Damp-Heat especially from the Lower Jiao, drains Kidney Fire, drains Fire and relieves Fire toxicity.

-Zhi Mu - Clears Heat, drains Fire, nourishes Yin, clears Deficiency Fire, moistens Dryness, generates Fluids and quenches thirst. With Huang Bai, clears Heat and Drains Fire for Yin Deficiency Fire and steaming Bone disorder from Yin Deficiency with night sweats, dizziness, and vertigo.

-Shu Di Huang - Nourishes Jing and Blood, strongly enriches Yin and fills the Marrow. With Gui Ban, for dizziness, insomnia, tinnitus, forgetfulness, afternoon fevers, and night sweats due Yin Deficiency with Yang Rising. With Huang Bai and Zhi Mu, for Lower Jiao Wasting and Thirsting with Yin Deficiency Heat. With Gui Ban, Suo yang and Zhi Mu, for weakness and soreness of the knees due to Kidney Yin Deficiency Fire.

-Gui Ban - Nourishes Yin, anchors Yang,benefits the Kidneys, strengthens the bones, nourishes the Blood, enriches Yin and stabilizes the Chong and Ren channels.

-Bai Shao - Nourishes the Blood, astringes Yin, calms Liver Yang and Liver Wind and alleviates pain.

-Hu Gu - Dispels Wind-Dampness, controls pain and strengthens the sinews and bones.

-Suo Yang - Tonifies the Kidneys, benefits Jing and marrow, strengthens Yang, nourishes Liver Yin and Blood and strengthens sinews and bones. With Shu Di Huang and Gui Ban, for soreness and weakness of the back and knees.

-Gan Jiang - Warms the Middle, expels Cold and dispels Wind-Dampness seeping into the Lower Jiao.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm.

TREATS

Atrophy (Wei) Syndrome. Amyotrophic lateral sclerosis (ALS). Tinnitus. Spermatorrhea. Urinary incontinence. Dizziness. Lumbago. Muscular atrophy. Flaccidity of the muscles and bones. Chronic arthritis. Hypocalcemia. Physical retardation in infants. Lateral spinal sclerosis. Consumptive fever. Rheumatoid arthritis. Tuberculosis of the knee. Stroke with numbness and weakness. Post-stroke sequelae. Cervical spondylosis.

Sciatica. Peripheral neuropathy. Knee pain. Atrophy and degeneration of the nervous system. Atrophy and degeneration of the reproductive system. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. Weakness. Stroke. Polymyositis/Dermatomyositis.

* MOISTEN SKIN-TCM

Moisten Skin TCM with He Shou Wu nourishes the skin and nails, prevents graying of hair, Gou Qi Zi and Di Huang, will moisten the skin from the inside.

* POST-STROKE REHABILITATION-TCM

Post-Stroke Rehabilitation TCM, is a health facility designed formula composed of Huang qi, Danshen, Shao yao, Jue Ming Zi, Chuan Xiong, Dang Gui, and Gan Cao. This formula demonstrated neuroprotective effects by protecting cultured neurons against N-methyl-D-aspartate excitotoxicity and reducing ischemic injury. It may be useful on long-term effects after snakebite envenomation along Er Xian (RT-TCM 08) and Tiannianyin (RT-TCM 34).

* POST-STROKE SPASTICITY-TCM

Post-Stroke Spasticity TCM is Baishao Luoshi decoction (白芍络石方) an excellent representative of TCM which can prevent and treat post stroke spasticity. Baishao Luoshi decoction can ameliorate spasticity and enhance the motor function of hemiplegic upper limb, improve the daily living ability in PSS patients, and with a reliable security. Baishao Luoshi decoction can rescue the synaptic structure injured by ischemia, promote nerve growth and improve synaptic plasticity. .

Herbs - Baishao, Luo Shi Teng

* QI YIN SAN LIANG SAN

Qi Yin San Liang San treats adverse skin reactions, the most common side effect of epidermal growth factor receptor inhibitors (EGFRIs) in the treatment of cancer, significantly affecting the survival rate and quality of life of patients. Qi Yin San Liang San Decoction (QYSLS) comes from folk prescription and is currently used in the clinical treatment of adverse skin reactions caused by EGFRIs. Among cancer-targeted therapy, epidermal growth factor receptor inhibitors (EGFRIs) are widely used in clinical practice to treat cancer patients harboring activating mutations in EGFR, especially for

non-small cell lung cancer, breast cancer, colorectal carcinoma. With the applications of EGFRIs, multiple adverse reactions are present in several patients, in which cutaneous adverse reaction (including rashes, xerosis, pruritus, paronychia, et al.) and diarrhea are the most common adverse effects. QYSLS is widely used in clinical practice, including skin and gastrointestinal diseases.

Herbs - Huang Qi, Jin Yin Hua, Dang Gui, Gan Cao, Quan Xie.

* SHI BI MAN (UPDATE -Revised in 2025/08/13)

Shi Bi Man is a mixture of a variety of Chinese herbs, including ginseng radix, tea polyphenols, polygonum multiflorum, radix angelicae sinensis, aloe, linseed and green tea extract. Shi Bi Man promotes hair regeneration by activating the FGF pathway in dermal papilla cells. Shi Bi Man also ameliorates psoriasis via inhibiting IL-23/Th17 axis and CXCL16-mediated endothelial activation. Shi Bi Man regulates lactic acid metabolism and drives hair follicle stem cell activation to promote hair regeneration.

Herbs - Ren Shen, Cha Ye, He Shou Wu, Dang Gui, Lu Hui, Ya Ma Zi, Lv Cha, Nutritional Flavonoids (404.7 Hz), Hair Regrowth Related Genes (531.7), Hair Regrowth Complex (605.6 Hz)

* ZUO JIN WAN - 左金丸 - Left Metal Pill. Left Gold Pill. Coptis and Evodia Pills

ACTIONS - Clears Liver Heat (Fire). Descends Rebellious Qi. Stops vomiting

SYNDROMES - Liver Qi Stagnation. Liver Qi Invades the Stomach (with Heat). Heat in the Liver Channel with Stomach Disharmony. Excess Fire in the Liver Channel with Heat in Stomach

CLINICAL MANIFESTATIONS - Hypochondriac pain and distention. Indeterminate gnawing hunger. Epigastric distention and pain. Vomiting. Acid regurgitation. Belching. Bitter taste. Dry mouth. Nausea. Dry lips. Hiccups.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Acid regurgitation due to Stomach Deficiency Cold. Do not use to treat hypochondriac pain due to Liver, Gallbladder or Blood Deficiencies. Contraindicated during pregnancy. This formula may have a protective effect against aspirin-induced damage to Stomach mucosa.

HERBS AND ACTIONS

-Huang Lian - Drains Liver Fire, clears Stomach Heat, and descends rebellious Qi. With Wu Zhu Yu, for Liver or Stomach Fire with epigastric and abdominal upset and pain and acid regurgitation.

-Wu Zhu Yu - Circulates Qi, relieves Stagnation, warms the Middle Jiao, disperses Cold and descends rebellious Stomach Qi. With Huang Lian, for Heat induced disharmony between Liver and Stomach.

TREATS

Acute gastritis. Peptic ulcer. Esophageal reflux. Hiatus hernia. Acid regurgitation. Cholecystitis. Pernicious vomiting. Gastralgia. Uterine fibroids. Fever. Hypertension. Cirrhosis of the Liver. Nausea/Vomiting. Chronic gastritis. Bacillary dysentery. Allergic colitis. Esophagitis. H. pylori infection. Hepatitis. Morning sickness. Hiccups. Stress. Indigestion. Hangover.

Bushen Huoxue Tongluo, Erlong Zuoci Formula, Gushen Shuer Pian, Internet Addiction-TCM, Internet Gaming Disorder-TCM, Jian Er Preparation, Soft Tissue Injuries-TCM, Xingshuian Prescription, Zuo Gu Shen Jing Tong

Recordings Updated in June 2025

* BUSHEN HUOXUE TONGLUO

Bushen Huoxue Tongluo Granules (BHT). BHT is developed for those with the most common TCM syndrome, kidney essence deficiency, and stagnation of Qi and blood

flowing in the meridian around the ears, in patients with chronic tinnitus. Tinnitus is the perception of sound in the absence of external auditory stimulation. From the view of TCM, BHT is of generally neutral nature (not hot or cold), which enlarges the scope of its clinical application. BHT is Er Long Zuo Ci Pill with several other herbs with an effect of activating blood circulation, dredging the meridians, and tranquilizing the mind. Herbs,

-Dihuang, Shanzhuyu, Xuduan have the effect of tonifying kidney essence. Mudanpi, Danshen, Chuanxiong, and Taoren have the effect of activating blood circulation.

-Fuling, Chaihu, Fabanxia, Gegen, and Shichangpu have the effect of dredging the meridians.

-Suanzaoren, Cishi, and Zhenzhu have the effect of suppressing hyperactive liver yang and tranquilizing the mind.

* ERLONG ZUOCI FORMULA - 耳聾左慈丸

Erlong Zuoci decoction (ELZCD), a typical traditional Chinese medicine (TCM) prescription, has long been clinically used in treatment of deafness and tinnitus with the syndrome of "kidney yin deficiency".

Er Long Zuo Ci Pill is modified from a classic TCM formula. The formula is designed following the core treatment strategy suitable for those patients with syndrome of kidney essence deficiency and Qi and blood stagnation, who generally have symptoms of low back pain, general fatigue, or dark or pale tongue from a Chinese medicine perspective.

Er Long Zuo Ci Pill is composed of eight herbs, namely,

- Rehmannia glutinosa (Gaertn.) DC (Orobanchaceae) (Dihuang),
- Cornus officinalis Siebold & Zucc (Cornaceae) (Shanzhuyu),
- Paeonia × suffruticosa Andrews (Paeoniaceae) (Mudanpi),
- Bupleurum falcatum L (Apiaceae) (Chaihu),
- Poria cocos (Schw.) Wolf (Fuling),
- Magnetitum (Cishi),
- Dioscorea oppositifolia L (Dioscoreaceae) (Shanyao), and
- Alisma plantago-aquatica subsp. orientale (Sam.) Sam (Alismataceae) (Zexie), which has the main effect of tonifying kidney essence.

* GUSHEN SHUER PIAN

Gushen Shuer Pian replenishes essence and marrow, strengthens waist and kidneys, strengthens muscles and bones, relaxes muscles and activates collaterals, nourishes blood and relieves pain. Used for diseases caused by bone hyperplasia. The medication

could effectively alleviate aural fullness, dizziness, lassitude of loins and knees, dysphoria with feverish sensation in chest, insomnia, and fatigue, etc. No adverse effect was reported during treatment; no abnormal results were reported in blood, urine, faces, heart function, liver function and kidney function examination. Gushen Pian had beneficial effect on deafness and tinnitus and could effectively alleviate aural fullness, insomnia, etc., without any adverse effects.

Herbs - Gu Sui Bu, Ci Shi, Dan Shen, Tu Fu Ling, Shu Di Huang, Hei (Da) Dou, Nu Zhen Zi, Niu Xi, Xian Mao, Tu Si Zi, Fang Ji, Gou Qi Zi

* INTERNET ADDICTION-TCM

A patent of herbal decoction approved by the China National Intellectual Property Administration (CNIPA)
in 2010 to treat internet addiction specifically.

Herbs - Yun Ling, Qing Ban Xia, Zhu Ru, Dan Shen, Muli, Gou Teng, Shi Gao, Dan Nan Xing, Dang Shen, Long Gu, Gan Cao, Chen Pi, Zhi Qiao, and Qing Meng Shi.

* INTERNET GAMING DISORDER-TCM

Zhu Sha, Fuling and Baiziren not only can nourish the internal metabolic kinetic systems but also help for sedation, which wise mind will help Internet Gaming Disorder patients to get rid of rigid behavioral gaming patterns and narrow cognition from the game.

* JIAN ER PREPARATION

Jian Er Preparation is composed of Huang Qi, Ge Gen, Dan Shen, and Gu Sui Bu. JEP exhibits multifunctional properties such as reduction of blood lipids, prevention of arteriosclerosis, improvement of microcirculation, and reduction of oxidative stress. In the age-related hearing loss model, JEP was shown to decrease the cochlear and auditory cortex malondialdehyde content, lessen mitochondrial DNA damage, and reduce the expression of apoptosis-related protein caspase 3 in cochlear cells, thus protecting against presbycusis119. JEP which has been used for the treatment of patients with Sensorineural hearing loss (SNHL) also has a good clinical ability to protect hearing in humans.

* SOFT TISSUE INJURIES-TCM

Chinese medicine for the treatment of Soft Tissue Injuries synovitis, bursitis and synovial membrane hydrops.

Herbs - Hong Hua, Fu Zi, Cao Wu, Sheng Di Huang, San Qi, Gu Sui Bu, Tou Gu Cao, Bing Pian, Dang Gui, Niu Xi, San Bai Bang, Gan Cao

* XINGSHUIAN PRESCRIPTION

Xingshuian Prescription is used for narcolepsy based on neurobiological mechanism, without convulsive symptoms or orexin deficiency, now known as Narcolepsy Type 2 (NT2). The focus of the present formula is on deficiency in origin and excess in superficiality, where the deficiency in this disease belong to different types The prescription works to tonify deficiency and strengthen, refresh and induce resuscitation. The treatment of narcolepsy with Xingshuian Prescription can significantly improve the clinical signs and symptoms and has a good effect.

Herbs - Xian He Cao, Ma Huang, Ba Ji Tian, Hua Jiao, Mu Gua, Jiang Huang, Niu Huang

* ZUO GU SHEN JING TONG - 做故身经通

Wind-cold-damp bi syndromes with particular issues in the lower back and legs - sciatic pain, heaviness in the lower body, hip and knee pain, arthritis in those areas (osteo or rheumatoid).

Zuo Gu Shen Jing Tong works by dredging the meridians and removing obstructions from the channels while relaxing the tendons and muscles, strengthening the bones and tonifying the Kidneys. Zuo Gu Shen Jing Tong also dispels Cold and Damp. From the perspective of TCM, proper bone development depends on the strength of the Kidney system. Zuo Gu Shen Jing Tong's action of tonifying the Kidneys improves overall vitality and resilience.

Herbs - Ji Xue Teng, Ba Ji Tian, Xi Xian Cao, Shu Di Huang, Yan Hu Suo, Wei Ling Xian, Jiang Huang, Shen Jin Cao, Ru Xiang, Mo Yao, Chuan Xiong

The herbs can be divided into 3 groups according to their functions.

The first group of herbs invigorates Qi and Blood to remove stasis. This group includes the chief herbs of this formula which are Ru Xiang (Boswellia) and Mo Yao (Myrrh). Together, Ru Xiang and Mo Yao strongly invigorate the blood. Yan Hu Suo (Corydalis root) and Chuan Xiong (Szechuan Lovage rhizome) also activate Qi and Blood in the body. Jiang Huang (Turmeric) similarly relieves blood stasis and opens the channel pathways. Also included is Ba Ji Tian (Morinda) which is used to strengthen the sinews and bones and supplement the Liver and Kidney.

The second group of herbs address wind-dampness, open the meridians and relax the muscles and sinews. Xi Xian Cao (Siegesbeckia) and Wei Ling Xian (Clematis root) are

used together especially for this purpose. Shen Jin Cao (Lycopodium) also dispels damp, relaxes the tendons and sinews and opens the channels.

The final group of herbs tonify blood and also relieve discomfort. Ji Xue Teng (Spatholobis stem) not only activates and tonifies the blood but also relaxes the tendons and opens the channels. Shu Di Huang (processed Rehmannia root) tonifies the Kidneys which play an important role in maintaining bone and joint health, especially in the lower back and legs. Shu Di Huang is an important tonifying herb used to nourish blood and Yin.

Cat General Health-TCM, Pesticide Intoxication Sequelae-TCM, She Gan Ma Huang Tang, Shen Yuan Dan, Urticaria #1, Vascular Headache #1, Xinyang Tablet, Yang Deficiency Edema #1, Yue Yin Cha

Recordings Updated in June 2025

* CAT GENERAL HEALTH-TCM

Cat General Health-TCM is Catnip (nepetalactone), Gan Cao, Dang Gui, Ren Shen, Bai Zhu, Valerian root (valerenic acid)

-Catnip nepetalactone triggers feel-good pheromones in their bodies. Can make some cats aggressive or combative.

-Gan Cao is like natural cortisone and has anti-inflammatory properties. It can alleviate your cat's allergies and help with respiratory issues like colds. Gan Cao may also be used for, Liver disease, Skin Health, Hair growth, Digestive issues. Gan Cao could raise blood pressure in cats who already have high blood pressure. It can cause blood sugar problems. Older cats and cats with diabetes should not have it.

-Dang Gui is a blood tonic that cleans the liver and nourishes and detoxifies the blood. It can be used to treat anemia, dry skin, and dizziness. It also helps alleviate the symptoms of certain conditions, such as Shortness of breath, Heat intolerance, Chronic diarrhea, Weight loss, Palpitations, Anxiety, Hyperthyroidism. Blood deficiency syndrome often arises from an inability to process nutrients in the body. Dang Gui can help with this. Dang Gui has also been incorporated into blended herbal formulas for calming down and soothing aches. It promotes smooth muscle relaxation and is

warming to the body system.

-Ren Shen is a warming qi tonic that helps the spleen and stomach. It also enhances the immune system and may help stimulate appetite in kitties experiencing a decreased appetite and weight loss. Some of the other functions of ginseng are that it: Supports blood flow to the heart muscle. Reduces resting blood sugar levels. Improves memory. Boosts energy. There is some anecdotal evidence that animal ginseng can improve physical performance and cognitive function. It has also been related to assisting with adrenal gland function. Practice caution when using ginseng on cats with hypertension or hyperactivity.

-Valerenic acid from Valerian root helps them get energized and motivates them to move around and exercise. Valerenic acid can even help cats with separation anxiety. Some cats who become frightened or startled by loud noises like fireworks or thunder will often chill out when they get a whiff of some valerian root. It helps to decrease stress and anxiety.

-Bai Zhu supports digestive health. It can help treat everything from diarrhea and constipation to abdominal distention. Bai Zhu has many impressive qualities and assists the spleen and stomach. Some of the benefits are that it: Improves immune system. Has anti-inflammatory qualities. Protects the liver. Combats stress. Bai Zhu is also commonly used to treat chronic diarrhea and edema. It is considered a white atractylodes, which is ideal for treating a wide array of stomach ailments. It regulates and balances fluids in the body.
(https://pawsitiveivc.com/blog/chinese-herbal-therapy-for-cats/)

* PESTICIDE INTOXICATION SEQUELAE-TCM

Traditional Chinese medicine preparation for treating sequelae of pesticide intoxication. Pesticides include herbicides, insecticides, nematicides, fungicides...

The preparation helps clearing heat, removing toxicity, promoting diuresis, treating stranguria, tonifying the spleen, regulating the function of the stomach and the like. The medicine treats both manifestation and root cause, functions of the liver and the kidney for expelling toxicity and removing the toxicity can be restored, the medicine can directly act on blood vessels and viscera so as to remove the residual agricultural chemical components from the body, so that the self-regulation functions of a blood system, a digestive system and a respiratory system are restored. The autoimmunity is improved, and through comprehensive treatment, the purposes of the physical equilibrium between yin and yang, the improvement of microcirculation, and the thorough cure for the sequelae of the pesticide intoxication are finally achieved.

Herbs - Lu Dou, Gan Cao, Lian Qiao, Shi Gao, Da Huang, Sheng Ma, Tong Cao, Fang Feng, Bai Zhu, Zhu Ling, Ju Hua, Ge Gen, Huo Xiang, Chen Pi, Niu Huang, Ban Lan Gen, Che Qian Cao, Ren Shen Ye.

* SHE GAN MA HUANG TANG - 射干麻黄汤 - Belamcanda and Ephedra Decoction. Belamcanda and Ma Huang Combination

ACTIONS - Warms the Lungs. Transforms Cold and Thin Mucus lingering in the chest. Descends Qi. Stops cough

SYNDROMES - Wind-Cold with Cold Thin Mucus. Tan Yin. Cough and asthma due to Cold. Retention of Cold-Phlegm in the Lungs

CLINICAL MANIFESTATIONS - Pronounced coughing. Pronounced wheezing. Aversion to Cold. Headache. Rales. Dyspnea. Profuse, clear, watery sputum or. Scanty, clear sputum. A feeling of fullness and a stifling sensation in the chest and diaphragm. Rattling sounds in the throat. Heaviness and pain of the body. Swollen face and extremities. Pale or cyanotic face. No thirst or. Thirst, prefers warm drinks. Body aches. May feel thirsty but prefers warm drinks.

HERBS AND ACTIONS

-She Gan - Transforms Phlegm, clears the Lungs and eliminates wheezing. With Xi Xin, Zhi Ban Xia and Sheng Jiang, for dyspnea and cough with profuse white or clear sputum.

-Ma Huang - Induces sweating, releases the Exterior, disseminates and facilitates Lung Qi, calms wheezing and stops coughing.

-Zi Wan - Relieves coughs and expels Phlegm. With Kuan Dong Hua, for cough and wheezing with copious sputum and rebellious Qi. With Wu Wei Zi, for productive cough, wheezing, and spontaneous sweating.

-Kuan Dong Hua - Moistens the Lungs, descends Qi, stops cough and transforms Phlegm. With Wu Wei Zi and Zhi Ban Xia, for cough and wheezing due to congested fluids.

-Zhi Ban Xia - Dries Dampness and transforms Phlegm.

-Xi Xin - Disperses Wind-Cold and Internal Cold, alleviates pain, warms the Lungs and transforms Phlegm and Thin Mucus. With Ma Huang, alleviates cough and wheezing due to Phlegm caused by Wind-Cold. With Wu Wei Zi, regulates the opening and closing of the Lungs, alleviating cough and calming wheezing for patients with existing thin mucus who are exposed to Wind-Cold leading acute wheezing and coughing of clear thin sputum. With Zi Wan and Kuan Dong Hua, for chronic, persistent cough.

-Wu Wei Zi - Astringes leakage of Lung Qi and stops cough. With Ma Huang and Xi Xin, for cough due to Wind-Cold.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Lungs, stops cough and reduces the toxicity of other herbs. With Da Zao, for External Wind-Cold. With Ma Huang, strongly creates sweating to treat all externally contracted Wind-Cold disorders, especially those in which Wind-Cold has constrained Lung Qi with cough and wheezing and the failure of Lung Qi to descend causing nausea and vomiting.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Severe cough with mild or no Exterior symptoms. Asthma. Chronic bronchitis. Eosinophilia. Asthmatic bronchitis. Dyspnea. Pulmonary emphysema. Pertussis. Adenovirus pneumonia. Chronic obstructive pulmonary disease (COPD). Emphysema.

* SHEN YUAN DAN

Shen Yuan Dan is a Qi tonifying and blood stasis eliminating formulation, shen-yuan-dan (SYD), a commonly used traditional Chinese medicine (TCM), to treat angina pectoris.

Shen Yuan Dan treatment can reduce hypoxia-induced myocardial apoptosis by upregulating miR-24 expression. Acute myocardial infarction (AMI) corresponds to acute ischemic myocardial necrosis. It is a severe coronary heart disease, which is characterized by a drastic reduction or interruption in blood supply to the coronary artery, resulting in severe and long-term ischemia of the corresponding myocardium, culminating in myocardial necrosis. Acute myocardial infarction (AMI) is the leading cause of malignant arrhythmia, heart failure, and sudden death.

Herbs -

-Danshen - Activating blood and removing stasis; inducing menstruation to relieve menalgia; eliminating the heart-fire; cooling-blood.
Inhibiting increase of blood serum level of triglycerides, reversing renal injury induced, reversing cerebral ischemia-reperfusion injury, relieving myocardial ischemia, ameliorating diabetic vascular injury.

-Huangqi - Invigorating Qi for strengthening superficies; diuresis; promoting granulation. Inhibiting myocardial ischemia-reperfusion injury, myocardial hypertrophy, vascular endothelial dysfunction, coronary heart disease, atherosclerosis, cardiac fibrosis, viral myocarditis, and diabetes mellitus, exerting antioxidant activity.

-Dangshen - Tonifying middle-Jiao and Qi; promote the production of body fluid; strengthening spleen; and tonifying lung. Preventing hypoxia-induced platelet activation

and resultant procoagulant state, promoting mouse immune function, inhibiting the development of diet-induced obesity and hyperlipidemia, and relieving myocardial ischemia-reperfusion injury.

-Xuanshen - Removing pathogenic heat from blood; nourishing yin for lowering fire; clearing toxic material, dispersing mass. Reversing heart and cerebral ischemia/reperfusion injury, relieving diabetic nephropathy, inhibiting the ventricular remodeling induced by hypertension, attenuating arteriosclerosis.

-Shuizhi - Broken blood stasis, pursue action of silt, stimulate the menstrual flow. Promoting blood circulation and removing stasis, relieving atherosclerosis, alleviating thrombus burden, improving blood hyperviscosity and related metabolic disorders.

-Dilong - Dredging collaterals, relieving cough and asthma, clearing heat, diuretic. Exerting anti-thrombus, reversing mitochondrial injury and pro-fibrotic events, protecting brain microvascular endothelial cells after oxygen-glucose deprivation/reperfusion.

-Tubiechong - Broken blood stasis, reunion of fractured tendons and bones. Relieving atherosclerosis, exerting antiangiogenesis.

-Yanhusuo - Removing blood stasis; regulating Qi; and relieve pain. Degrading the blood clot and delaying the plasma recalcification time, inhibiting inflammation, myocardial fibrosis, and platelet aggregation, improving the hypercoagulable state.

* URTICARIA #1

ACTIONS - Dispels Wind. Scatters Cold. Harmonizes the Ying and Wei

SYNDROMES - Wind-Cold

CLINICAL MANIFESTATIONS - Urticaria. The rash is itchy and pink or white. Worse with Cold. Better with warmth. Severe chills. Mild or no fever. Headache. Generalized discomfort. Stiff neck and shoulders. Body aches. Joint ache. Nausea. Vomiting. Hiccups. Anhidrosis. Gasping. Stabbing joint pain. Itchy throat. Cough. Asthma. Aversion to Wind and Cold. Maybe low back pain. Maybe frozen shoulder. Maybe dyspnea. Maybe epistaxis (severe).

HERBS AND ACTIONS

-Jing Jie - Releases the Exterior, expels Wind, vents rashes and relieves itching.

-Fang Feng - Releases the Exterior and expels External Wind. With Jing Jie, expels Wind and stops itching for Wind-Cold and pruritic rashes. With Qin Jiao, for Wind Dampness. with Ma Huang, dispels Wind-Cold from the Exterior.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer and warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels. With Ma Huang, for Wind-Cold Excess conditions with fever and chills but no sweat.

-Ma Huang - Induces sweating, releases the Exterior and warms and disperses Cold pathogens.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei. With Gui Zhi, harmonizes the Ying and Wei.

-Qin Jiao - Expels Wind-Dampness, opens the channels and soothes the sinews and collaterals.

-Bai Xian Pi - Clears Damp-Heat and stops itching.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, adjusts the Ying and Wei and normalizes the flow of Qi at the center. With Gui Zhi, strongly induces sweating for treatment of External Wind-Cold with chills, fever, body aches and anhidrosis.

-Fu Ping - Induces sweating, releases the exterior, unblocks the muscle layer, vents rashes and relieves itching. With Ma Huang, for Wind-Edema patterns with swollen face, urinary difficulty and anhidrosis.

-Gan Cao - Moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS - Urticaria.

* VASCULAR HEADACHE #1

ACTIONS - Invigorates the Blood. Promotes the movement of Qi. Expels Wind. Alleviates pain. Extinguishes Wind,. Alleviates spasms. Drains Liver Heat. Pacifies Liver Yang

SYNDROMES - Blood Stagnation with Liver Wind and Heat

CLINICAL MANIFESTATIONS - Dizziness and vertigo to the point of falling over. Headache with a drawing sensation. Numbness and tremor of limbs. Twitching and involuntary writhing of hands and feet. Dysphasia. Unsteady gait. Sudden loss of consciousness. Tongue stiffness with aphasia. Facial paralysis. Hemiplegia.

HERBS AND ACTIONS

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi, expels Wind and alleviates pain.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, nourishes the Blood and calms the Spirit.

-Niu Xi - Invigorates the Blood, expels Blood Stasis, nourishes the Liver and Kidney Yin and descends Blood and Fire.

-Gou Teng - Extinguishes Wind, alleviates spasms, drains Liver Heat, pacifies Liver Yang and releases the exterior.

-Bai Zhi - Expels Wind, eliminates Dampness, unblocks the nasal passages, dispels Cold and alleviates pain. With Chuan Xiong, for headache. With Jiang Can, for frontal headache.

-Jiang Can - Extinguishes Wind and stops spasms and convulsions.

TREATS - Vascular headache.

* XINYANG TABLET

Xinyang tablet (XYT) has been used clinically for heart failure (HF) for over twenty years. XYT is a potential intervention to counter sepsis-induced myocardial dysfunction (SMID) by influencing macrophage autophagy and M2 polarization. XYT attenuates chronic hypoxia-induced right ventricular remodeling via inhibiting cardiomyocytes apoptosis. Hypoxia-induced pulmonary hypertension (HPH) is one of the fatal pathologies developed under hypobaric hypoxia and eventually leads to right ventricular (RV) remodeling and RV failure. XYT exerts protective effects against pressure overload induced myocardial fibrosis (MF), which might be associated with the induction of pyroptosis-mediated MLK3 signaling. XYT alleviated cardiac dysfunction in a cardiac pressure overload model by regulating the RIPK3/FUNDC1-Mitochondrial unfolded protein response and mitophagy.

Herbs - Huang Qi, Yin Yang Huo, Hong Shen, Yi Mu Cao, Mao Dong Qing, Ting Li Zi, Che Qian Zi.

* YANG DEFICIENCY EDEMA #1

ACTIONS - Warms the Kidneys. Promotes diuresis

SYNDROMES - Kidney Yang Deficiency with Water Flooding

CLINICAL MANIFESTATIONS - Edema in the limbs and face. Edema of whole body

particularly at and below the waist after several months of pregnancy. Pitting edema. Lusterless complexion. Low back pain, aching and heaviness. Abdominal distention with full sensations. Oliguria. Cold limbs. Face gray and congested or pale. Feeling nervous and cold with mental weariness. Palpitations. Shortness of breath. Abdominal fullness. Weakness in the waist. In severe cases:. Ascites. Edema of scrotum.

HERBS AND ACTIONS

-Zhi Fu Zi - Warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold and Dampness, warms the channels and stops pain. With Bai Zhu and Fu Ling, for Kidney and Spleen Yang Deficiency with retention of pathogenic water with abdominal pain, which is worse with Cold, urinary difficulty, and deep aching and heaviness in the extremities. With Fu Ling, for lower body edema and dysuria.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold and warms the Middle.

-Fu Ling - Promotes urination, leaches out Dampness and strengthens the Spleen. With Bai Zhu, strengthens the Spleen and resolves Dampness.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness, promotes water metabolism and calms the fetus. With Fu Ling and Sheng Jiang, for edema with Kidney Yang Deficiency.

-Bai Shao - Nourishes the Blood, astringes Yin and adjusts the Ying and Wei.

TREATS - Edema during pregnancy.

* YUE YIN CHA - 悦音茶 - Pleasing Voice Tea

ACTIONS - Disperses Wind-Heat. Benefits the throat. Moistens the Lungs. Resolves Phlegm. Clears Heat. Relieves Fire toxicity. Invigorates the Blood. Transforms Phlegm. Opens the channels

SYNDROMES - Heat and Fire in the throat with Phlegm and Blood Stasis

CLINICAL MANIFESTATIONS - Chronic simple laryngitis: Episodic hoarseness which is most prevalent upon arising in the morning. As the physical activity increases the sound improves. The next morning the hoarseness returns. Over long periods of time there is fatigue of the voice and sound cannot be emitted for an extended period. Throat discomfort and pain upon emitting sounds. There is often a habit of clearing ones throat but no evident sputum is coughed up. The hoarseness is more evident when attempting to make a high pitched sound. Diffuse hyperemia of the laryngeal mucosa. The vocal cords have lost their original pearl white color and turned pink or progressed to a deeper red. The vertical capillaries running parallel to the border of the vocal cords are

enlarged. The border is thickened. The glottis cannot be closed completely, or. The bilateral vibration is not balanced. The exterior of the vocal cords are often covered by a sticky secretion which forms sticky silk - like strands connecting the interglottic space.

Chronic hypertrophic laryngitis: Episodic hoarseness which is most prevalent upon arising in the morning. As the physical activity increases the sound improves. The next morning the hoarseness returns. Over long periods of time there is fatigue of the voice and sound cannot be emitted for an extended period.

Throat discomfort and pain upon emitting sounds. There is often a habit of clearing ones throat but no evident sputum is coughed up. The hoarseness is more evident when attempting to make a high pitched sound. A long history of hoarseness and aphonia. Hoarseness is very evident. Coughing is relatively mild. Occasionally there are acute flare ups causing a further increase in hoarseness and deterioration in the sound quality. Symmetrical swelling of the laryngeal mucosa is observed but the distribution is not even and is more marked in the arythenoid space where it stands out high. When a sound is emitted it forms one or several plica in the arythenoid space. The vocal cord is thickened, appearing like a stick that is rough and not smooth and often takes on a nodular or polypoid form which is covered by a sticky secretion. If the disease progresses to the areas below the glottis, it prevents the vocal cords from uniting and triangular fissures appear. If the disease progresses to the areas below the glottis, it prevents the vocal cords from uniting and triangular fissures appear. The ventricular folds are enlarged and often press on the vocal folds when a sound is emitted. The aryepiglottic fold may also be thickened but enlargement of the epiglottis is extremely rare.

HERBS AND ACTIONS

-Wu Mei - Astringes leakage of Lung Qi, generates fluids and alleviates thirst.

-Ju Luo - Disseminates the flow in the channels and collaterals, promotes the movement of Qi, and transforms Phlegm. It is used for Phlegm stagnating in the channels and collaterals with cough and chest and flank pain and especially for distention in the vessels of the Lung due to rebellion of protective Qi.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain.

-Gan Cao - Moistens the Lungs, resolves Phlegm, clears Heat, relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

-Bo He - Disperses Wind-Heat and cools and clears the head and eyes and benefits the throat.

TREATS - Chronic laryngitis.

Astragalus Immortal Prescription, Co-Herba Houttuyniae Oral Liquid, HemoHIM, Radiation Poisoning TCM, Radioprotection Formula TCM, Wumai Danghuang Oral Liquid, Wuzi Yanzong Pill, Yiqi Jiedu Decoction, Yiqi Yangyin Fang

Recordings Updated in June 2025

* ASTRAGALUS IMMORTAL PRESCRIPTION

This prescription has been shown to elevate the activities of GSH-Px and SOD while suppressing MDA levels in the liver. Furthermore, it protects the liver from radiation induced oxidative damage.

Herbs - Sheng Di Huang, Mai Men Dong, Huang Qi, E Jiao

* CO-HERBA HOUTTUYNIAE ORAL LIQUID

Contains Yu Xing Cao, Ren Shen, Gou Qi Zi. This liquid suppresses the rate of radiation induced chromosomal aberrations. It also enhances the anti-stress ability of mice by improving immune functions. Moreover, Panax ginseng C.A.Mey. and Lycium barbarum L. improve immune functions and inhibit radiation effects by promoting the repair of damaged cells and tissues.

* HEMOHIM

HemoHIM is used to overcome side effects of chemotherapy in patients with cancer. Recent studies have reported that HemoHIM possesses anti-inflammatory, antioxidative, and antidiabetic effects. HemoHIM also suppresses the increased inflammatory cell count and pro-inflammatory cytokines in BALF induced by cigarette smoke (CS) and lipopolysaccharide (LPS) exposure, which was accompanied by a reduction of inflammatory cell infiltration into lung tissue as seen in the histopathology. Furthermore, HemoHIM profoundly decreased the phosphorylation of Erk and the expression of MMP-9 and iNOS in the lung tissue of CS and LPS exposed mice.

Herbs - Dang Gui, Chuan Xiong, Bai Shao

HemoHIM was designed to aid scientists combat daily radiation exposure. Proper

functioning of hematopoiesis is the basis of a healthy immune system. HemoHIM has been clinically tested and proven to strengthen the immune system. HemoHIM can restore balance in our body, ensuring that the functions of our immune system are neither weak nor overly active. It boosts the function of natural killer cells, NK cells, which are immune cells that eliminate harmful cells in our body. Using the metaphor of our army, they are akin to tanks aiding T and B cells in defending our body against infections.

HemoHIM also increases red blood cell production, which creates an oxygen-rich environment where harmful cells cannot survive. The benefits of HemoHIM are manifold and it can be consumed by anyone looking to enhance their immune system or overall health. It is perfect for:

* Individuals working long hours,
* Students needing to stay awake for their studies,
* Elderly people requiring more energy,
* Athletes expending a lot of energy,
* Exhausted homemakers, and so on.

HemoHIM can also improve the health of individuals suffering from issues such as: High cholesterol, High blood pressure, Diabetes, Allergies, Cancers, Constant cold, Arthritis WIH, Gout, Irregular monthly cycle, Chronic inflammatory activities.

* RADIATION POISONING TCM

Actions: Clearing heat and resolving toxins, boost qi and nourish yin, activate blood circulation and remove blood stasis.

Herbs - Huangqin, Huzhang, Huangqi, Gouqizi, Maidong, Jianghuang, Danshen, Ciwujia, Gancao

* RADIOPROTECTION FORMULA TCM

The radioprotective prescription has been shown to improve the survival rate, white blood cell count, thymus index, spleen index, and the DNA content of bone marrow cells thereby reducing radiation induced immune damage in mice models.

Herbs - Huang Qi, Ling Zhi, Gou Qi Zi, Fu Ling

* WUMAI DANGHUANG ORAL LIQUID

Wumai Danghuang Oral Liquid is composed of Wu Wei Zi, Mai Men Dong, Dang Shen, Huang Qi. This prescription exhibits its antiradiation effects by elevating SOD,

degrading MDA and inhibiting the generation of free radicals. In addition, Wumai Danghuang Oral Liquid exhibits protective and repair effect on radiation induced immune injuries.

* WUZI YANZONG PILL

Wuzi Yanzong Pill (WZYZ) is a Chinese herbal prescription that is used as a therapeutic option for male infertility. Clinically, it has significant therapeutic effects on oligospermia and asthenozoospermia. WZYZ improves sperm quality by suppressing DNA damage. A double-blind randomized controlled trial confirmed that WZYZ is an excellent therapeutic option for men with low fertility who cannot be cured by conventional western medicines. Pelvic exposure to radiation reduces testicular weight, sperm quality and leads to testicular oxidative stress and abnormal testicular structure. WZYZ protects against suppressed serum testosterone levels, reduces MDA levels and oxidative stress indices (OSI) in the testis.

Herbs - Gou Qi Zi, Fu Pen Zi, Che Qian Zi, Tu Si Zi, Wu Wei Zi

Wu Zi Yan Zong Wan - 五子衍宗片- Five Ancestors Tea Pills. FORMULA ACTIONS - Tonifies the Kidneys. Nourishes and astringes Jing. Benefits the eyes. Tonifies Kidney Yang. Tonifies the Blood. SYNDROMES - Kidney Qi, Yang and Jing Deficiency. CLINICAL MANIFESTATIONS - General weakness. Sexual dysfunction. Impotence. Premature ejaculation. Male infertility. Frequent urination. Dribbling of urine. Lumbar pain or weakness. Depression. Fatigue and poor memory following ejaculation. Weak bladder. Low sperm count. TREATS - Impotence. Poor erection. Low sexual drive. Premature ejaculation. Impotence caused by panic induced Kidney Deficiency. Lumbar pain or weakness. Fatigue. Chronic prostatitis. Chronic nephritis. Female infertility due to Yang and Jing Deficiencies. Recurrent mouth ulcers. Uterine hypoplasia. Weakness. CONTRAINDICATIONS - Contraindicated during the early stages of acute infection or illness, such as cold or flu.. Contraindicated for conditions due to Damp-Heat. NOTES - This formula is primarily used improving the sperm quality of men. It is also good as a general tonic for aging men.

* YIQI JIEDU DECOCTION

Yiqi Jiedu Decoction is used for injuries caused by radiotherapy. Radiation damage in the testis affects morphological structures, sperm motility rate, sperm count, serum levels of testosterone (T), estradiol (E2), follicle-stimulating hormone (FSH), and luteinizing hormone (LH). YQJD decoction is able to accelerate the recovery of sperm indexes, testosterone, and estradiol levels of sex hormones in mice after irradiation and demonstrated good protective effects on the testis. The Yiqi Jiedu Decoction (YQJD) enhances testicular index, structural recovery of the testis, decreases the apoptotic rate of spermatogenic cells, and maintains spermatogenic functions after irradiation. These results suggest that YQJD plays a protective role by intervening in TLR5 downstream

signaling pathways.

Herbs - Huang Qi, Dang Gui, Gou Qi Zi, Xi Yang Shen, Bai Shao, Shan Zha, Fu Ling, Ma Chi Xian

* YIQI YANGYIN FANG

Yiqi Yangyin Fang this prescription increased the number of bone marrow cells, hematopoietic progenitor cells, and hematopoietic stem cells. It also improved bone marrow suppression after radiation by suppressing intracellular ROS levels.

Herbs - Huang Qi, Ren Shen, Nu Zhen Zi, Mo Han Lian, Dang Gui, Bai Zhu, Fu Ling, Gan Cao

*** NOTE: Other radioprotective formulas,

- Si Wu Tang (see RT-TCM 03), promotes hematopoietic and immune system recovery after irradiation by increasing the number of peripheral white blood cells and bone marrow colony-forming units. Si Wu Tang induces the antioxidant Nrf2 pathway, partially inhibits DNA damage, prevents the activation of nuclear transcription factor activating protein-1 (AP-1) and NF-κB, thereby, inhibiting ionizing radiation-induced damage and o ncogenesis.

- Bu Zhong Yi Qi Tang (see RT-TCM 08), has been shown to significantly elevate periph eral white blood cell counts in mice after irradiation and relieves platelet damage. Furthe r, it suppresses lipid peroxides generated by the accumulation of free radicals and impro ves the hematopoietic microenvironment.

- Xue Bi Jing (see RT-TCM 03) improves the survival rate of irradiated mice by suppress ing ROS production in bone marrow cells and alleviated radiation induced hematopoieti c cell injury.

Chai Ge Jie Ji Tang, Chin Koo Tieh Shang Wan, Modified Figwort And Thunberg Fritillary Decoction, Perspiration Syndrome-TCM, Spontaneous Perspiration-TCM, Tang Luo Ning, XiongShao Capsule, Xuan Shen Bei Mu Tang, Yi Di Yin

Recordings Updated in June 2025

* CHAI GE JIE JI TANG - 柴葛解肌湯 - Bupleurum and Kudzu Decoction to Release the Muscle Layer. Bupleurum and Pueraria Decoction to Release the Muscle Layer

ACTIONS

Dispels Wind. Releases the muscle layer. Clears Interior Heat

SYNDROMES

Tai Yang - Yang Ming. Wind-Cold turning to Heat

CLINICAL MANIFESTATIONS - Fever and chills with fever increasing and chills decreasing. Headache. Anhidrosis. Stiffness and pain of the extremities. Orbital pain. Eye pain. Shoulder and neck tension. Dry nasal passages. Irritability. Insomnia. Thirst. Epistaxis.

CONTRAINDICATIONS
Contraindicated for those with no Interior Heat. Do not use if the Yang Ming has been already attacked with constipation and abdominal pain. Avoid acrid, oily or spicy foods while taking this formula.

HERBS

-Chai Hu - Disperses Wind-Heat and resolves Phlegm and congestion. With Gan Cao, for Wind-Heat fever.

-Ge Gen - Discharges Exterior conditions, releases the muscles, especially of the neck and upper back, relieves Heat and generates fluids. With Chai Hu, for Exterior patterns where the the chills gradually improve while the fever gradually increases along with stiffening of the neck and upper back and absence of sweating. With Chai Hu, Shi Gao and Huang Qin, for Wind-Heat.

-Qiang Huo - Releases the Exterior, disperses Cold, expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Bai Zhi, for headaches.

-Bai Zhi - Expels Wind, eliminates Dampness, unblocks the nasal passages, dispels Cold and alleviates pain. With Ge Gen, for Wind-Cold trapped at the level of the muscles and interstices. With Huang Qin, for Wind-Heat headache.

-Huang Qin - Drains Fire, detoxifies, cools the Blood and stops bleeding. With Qiang Huo, for Cold-Dampness at the Exterior with Heat in the Interior.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst and clears Excess Heat from the Lungs. With Sheng Jiang, decreases muscular swelling.

-Jie Geng - Opens the Lungs, spreads Lung Qi, expels Phlegm, benefits the throat and opens and raises Lung Qi, directing the effects of other herbs to the upper body. With Gan Cao, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness and pain and swelling of the throat due to Wind-Heat.

-Bai Shao - Nourishes the Blood, Astringes Yin and adjusts the Ying and Wei. With Chai Hu, for flank pain due to Liver Qi Stagnation.

-Gan Cao - Moistens the Lungs, resolves Phlegm, stops cough and moderates and harmonizes the harsh properties of other herbs.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Lungs, stops cough and reduces the toxicity of other herbs. With Da Zao, for External Wind-Cold.

-Da Zao - Moderates and harmonizes the harsh properties of other herbs.

TREATS

Common cold. Influenza. Gingivitis. Conjunctivitis. Tonsillitis. Toothache. Headache. AIDS/HIV. Epidemic viral infection. Upper respiratory tract infection. Fever. High fever. Trigeminal neuralgia. Pneumonia. Neck pain and stiffness. Eye pain.

* CHIN KOO TIEH SHANG WAN

Controls bleeding, removes stagnation of blood and Qi, reduces swelling, relieves pain and soothes the soft tissues of muscles and tendons. Aids the healing of broken bones, sprains and soft tissue injuries. Ideal for sports injuries.

Caution - Not to be taken by pregnant women.

Herbs - Angelica Root -Dang Gui, Notoginseng Root -San Qi, Frankincense Resin -Ru Xiang, Myrrh Resin -Mo Yao, Dragon's Blood Resin -Xue Jie, Carthamus Flower -Hong Hua, ipsacus Rhizome -Xu Duan

* MODIFIED FIGWORT AND THUNBERG FRITILLARY DECOCTION Plus Paniculated Swallow-Wort Root, Cicada Slough And Puncturevine Caltrop Fruit

Treats pathogens accumulated in ear. Itching or itching and pain in one ear or both ears,

and with a strong urge for scratching. There may be a stuffy sensation and whisper ringing in the ear, the ear canal is packed with grey debris attached with yellow-white mold spots. The ear canal looks red and swelling and may drain out thick discharges after removed the debris. The tongue is red and with greasy coating, and the pulse is taut. TCM remedy should aim to disperse wind, detoxify, clear heat and resolve phlegm.

Herbs - Sheng Di, Shu Di, He Shou Wu, Dang Gui, Mu Dan Pi, Xuan Shen, Bai Ji Li, Jiang Can, Hong Hua, Gan Cao, Chan Tui, Di Fu Zi, Ku Shen

* PERSPIRATION SYNDROME TCM

Hyperhidrosis is a disorder of excessive sweating due to the overstimulation of cholinergic receptors on eccrine glands. This disorder is characterized by sweating beyond what the body uses for homeostatic temperature regulation.

Herbs - Ren Shen, Bai Zhu, Da Zao, Huang Lian, Gui Zhi, Fu Ling, Chuan Bei Mu

* SPONTANEOUS PERSPIRATION TCM

Spontaneous perspiration happens mostly in the day and increases during physical activities. Night sweats, as the name suggests, happens mostly at night, especially when the person is sleeping; some people will even be awakened by this type of perspiration.

Herbs - Huang Qi, Bai Shao, Gui Zhi, Fu Ling, Wu Wei Zi, Shan Zhu Yu, Bai Zhu, Wu Bei Zi, Dan Shen, Da Zao

* TANG LUO NING

Tang Luo Ning (TLN) is an effective traditional Chinese medicine for the treatment of Diabetic Peripheral Neuropathy (DPN)

Tang Luo Ning attenuates oxidative and endoplasmic reticulum stress and apoptosis in the experimental DPN models both in vivo and in vitro.

The major pathological features in DPN include axonal atrophy and demyelination. Earlier studies have shown that TLN can reduce apoptosis induced by mitochondrial damage in a high glucose environment. TLN also improves mitochondrial function and diminishes Schwann cell dysfunction.

Sciatic motor nerve conduction velocity and digital sensory nerve conduction velocity were reduced in DPN and were significantly improved by TLN.

Herbs - Huangqi, Danshen, Jixueteng, Mugua, Gouji, Chishao, Niuxi and Yanhusuo

* XIONGSHAO CAPSULE

XiongShao capsule ameliorates streptozotocin-induced diabetic peripheral neuropathy in rats via inhibiting apoptosis, oxidative-nitrosative stress and advanced glycation end products.

XSC has been beneficial in preventing restenosis after percutaneous coronary intervention in patients with coronary heart disease in certain aspects.

Herbs - Chi Shao, Chuan Niu Xi, Chuan Xiong, Di Gu Pi, Fang Feng, Gui Zhi, Hai Zao, Huang Jing, Huang Qi, Sang Zhi, Da Ji, and Wa Song

* XUAN SHEN BEI MU TANG - 玄參貝母 - Figwort and Thunberg Fritillary Decoction

Syndromes - Blood and qi deficiencies

Treats - Intermittent itching inside the ear, the outer ear looks dry and shrunken, and the skin of outer ear and ear canal is rough and flaky. The tongue is pale, and the pulse is taut. TCM remedy should aim to replenish qi and blood, extinguish wind and moist dryness.

Indications: Itchy ear with hot sensation and discharges, due to phlegm and fire irritations.

Herbs - Fang Feng, Bai Zhi, Man Jing Zi, Huang Bai, Tian Ma, Gan Cao, Fu Ling, Zhe Bei Mu, Tian Hua Fen, Ban Xia, Xuan Shen

* YI DI YIN

This is a tonic with a lot of blood movers. Be careful if using comadin or other Western Prescribed herbs. May be careful with Viagra and other ED medications. Liu Wei Di Huang is an often used and popular formula. The addition of Suo Yang and Yin Yang Huo are warm and hot herbs to stoke the fire which may have diminished in older age in both women and men.

Improves Erectile Dysfunction in Diabetic Patients

Herbs - Sheng Di, Shan Zhu Yu, Shan Yao, Ze Xie, Fu Ling, Suo Yang, Yin Yan Huo, Mu Dan Pi, Dan Shen, Hua Niu Xi, Tu Si Zi, Tai Zi Shen, E Zhu, Chen Pi

Danshen Chuanxiongqin Injection, Dao Tan Tang, Feng Jiao, Jia Wei Xuan Bi Tang, Lian Qiao Bai Du Pian, Ren Shen Yang Rong Tang, Shen Jin Gui Zhi Shao Yao Zhi Mu Tang, Si Wu Tang He Liu Wei Di Huang Wan Jian Jian, Tian-Huang Formula

Recordings Updated in June 2025

* DANSHEN CHUANXIONGQIN INJECTION

Danshen Chuanxiongqin Injection is a TCM preparation composed of the extract of Salvia miltiorrhiza Bunge (Danshen) and Conioselinum anthriscoides (Chuanxiong). The injection was listed in 2004 and is currently included in « Guidelines on the Rational Use of Chinese Drugs in Ischemic Stroke » as a recommended medication for the treatment of cerebral infarction and coronary heart disease.

* DAO TAN TANG - 導痰湯 - Guide Out Phlegm Decoction. The Phlegm Resolving Decoction. Conduct Phlegm Decoction

ACTIONS - Dries Dampness. Clears Phlegm. Promotes Qi movement. Relieves Stagnation

SYNDROMES - Phlegm Confuses the Heart Orifice. Collapse due to Phlegm. Fainting from Wind-Phlegm. Phlegm Stagnation in the chest and diaphragm

CLINICAL MANIFESTATIONS - Fainting. Vertigo. Headache. Accumulation of congested Fluids that won't dissipate. Vomiting. Stifling sensation of chest and diaphragm. Distention of chest and diaphragm. Distention and fullness of hypochondria and flanks. Dizziness. Palpitations. Nausea. Restlessness when sitting or lying down. Coughing and wheezing. Copious sputum. Thick, gummy nasal discharge and saliva. Difficult breathing. Reduced appetite

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Yin Deficiency or Heat.

HERBS AND ACTIONS

-Ju Hong - Dries Dampness, transforms Phlegm, harmonizes the Middle Jiao and

regulates Qi (more drying and aromatic than Chen Pi). With Ban Xia, for viscous sputum due to Phlegm-Damp Obstruction. With Sheng Jiang, for vomiting and hiccups due to Stomach Qi Disharmony.

-Ban Xia - Dries Dampness, transforms Phlegm, descends rebellious Qi, harmonizes the Stomach, stops vomiting and reduces distention. With Ju Hong, for Stomach Qi Disharmony with epigastric and abdominal distention or pain.

-Fu Ling - Strengthens the Spleen, harmonizes the Middle Jiao, transforms Phlegm and dries Dampness. With Ban Xia, Ju Hong and Sheng Jiang, for congested Fluids in the Stomach manifesting as nausea and vomiting.

-Gan Cao - Tonifies the Spleen, augments Qi, resolves Phlegm and harmonizes (this herb does not appear in every version).

-Zhi Shi - Breaks up stagnant Qi, reduces accumulation, transforms Phlegm and reduces distention. With Ju Hong, strengthens the Middle Jiao.

-Tian Nan Xing - Disperses Wind-Phlegm in the channels, dries Dampness and expels Phlegm. With Ban Xia, Ju Hong, and Zhi Shi, for Phlegm-Damp Obstruction.

-Sheng Jiang - Warms the Lungs and transforms Phlegm.

TREATS

Chronic tracheitis. Chronic bronchitis. Emphysema. Goiter. Obesity. Meniere's disease. Glaucoma. Insomnia. Dizziness. Stomach cancer. Esophageal spasm. Trigeminal neuralgia. Asthma. Hyperthyroidism. Nausea/Vomiting. Anorexia. Forgetfulness. Dyspnea. Sore throat. Amenorrhea. Epilepsy. Schizophrenia. Depression. Coma. Pleurisy. Headache. Cough. Vertigo. Pyloric spasm. Esophageal cancer. COPD. Parkinson's disease. Obesity. Myasthenia gravis. Cervical spondylosis. Palpitations. Hemiplegia.

* FENG JIAO

Feng Jiao is bitter, pungent, cold; spleen and stomach meridians entered. Furthermore Feng Jiao (propolis) is warm in nature. This means that Feng Jiao tends to help people who have too much 'Cold' in their body. Feng Jiao also tastes pungent. Pungent ingredients tend to promote the circulations of Qi and Body Fluids.

ACTIONS
Softens hard skin and tissues. Reduces inflammation and eases pain. Strengthens the immune system and the body, relieves consumptive thirst, eliminates blood-fat; removes toxicity and resolves swelling, astringes to promote tissue regeneration.

INDICATIONS
Calluses. Burns. Scalds. Mouth ulcers. Stomach ulcers. Cervical ectropion. Skin fissures. Premature senility. Hyperlipidemia. Diabetes. Chapped skin.

CAUTIONS
It is contraindicated to those who suffer from allergies.

* JIA WEI XUAN BI TANG - 加味宣痺湯 - Modified Disband Painful Obstruction Decoction

ACTIONS - Clears Heat. Eliminates Dampness. Invigorates the collaterals. Stops pain

SYNDROMES - Bi Syndrome due to Damp-Heat in the Channels and Collaterals. Wei Syndrome due to Accumulation of Damp-Heat

CLINICAL MANIFESTATIONS - Heat and pain in the joints and muscles. Severe limitation of movement. Fever and shaking chills. Lusterless yellow complexion. Scanty, dark urine. Pain worse on cloudy or rainy days. Arthralgia involving one or several joints. Local redness and Heat of the extremities. Swelling with excruciating pain. Pain better during the day and worse at night. Numbness of the muscles. Thirst. Dryness of the mouth. Irritability. Muscular atrophy. Restlessness. Anorexia. Desire for Cold drinks. Loose stools. Aversion to Heat. Fullness of the chest. Pain improved with Cold and worse with Heat. Muscular swelling. Muscle redness. General heaviness.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Bi Syndrome due to Wind-Cold-Damp. Contraindicated for those with Wei Syndrome not caused by Damp-Heat.

HERBS AND ACTIONS

-Han Fang Ji - Expels Wind-Dampness, purges Damp-Heat, alleviates pain, promotes urination and reduces edema. With Yi Yi Ren and Can Sha, for Wind-Damp Bi and Wind-Damp-Heat Bi.

-Xing Ren - Regulates the Lung's water metabolism function.

-Yi Yi Ren - Promotes urination, strengthens the Spleen, clears Heat, expels Wind-Dampness, soothes numbness and clears Damp-Heat. With Can Sha, strengthens the Spleen, resolves Dampness and treats painful obstruction.

-Can Sha - Dispels Wind Dampness, harmonizes the Stomach and transforms turbid Dampness. With Han Fang Ji, Yi Yi Ren and Lian Qiao, for Damp-Heat Bi and Wind-Damp Bi.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, and reduces

swelling. With Can Sha, dries Dampness and eliminates turbidity.

-Lian Qiao - Clears relatively superficial Heat.

-Zhi Zi - Clears Heat, eliminates irritability, drains Damp-Heat and reduces swelling. With Hua Shi, Lian Qiao and Chi Xiao Dou, assists in clearing Heat and draining Dampness through the urine.

-Hua Shi - Promotes urination and expels Damp-Heat.

-Chi Xiao Dou - Promotes urination, clears Heat, clears Damp Heat and reduces swelling.

-Jiang Huang - Invigorates Blood, promotes movement of Qi, alleviates pain and expels Wind.

-Hai Tong Pi - Expels Wind-Dampness, unblocks the channels, clears Heat, promotes urination and reduces edema.

-Sang Zhi - Dispels Wind-Dampness especially in the upper extremities, unblocks the channels, benefits the joints, stops spasms, regulates water metabolism and reduces edema.

TREATS

Rheumatic fever. Rheumatoid arthritis. Gouty arthritis. Connective tissue disorders. Arthralgia. Subacute lupus erythematosus. Guillain-Barre syndrome. Fever. Rheumatic arthritis. Rheumatic Heart disease. Erythema arthriticum. Mononeuropathy. Brachial neuritis. Polyneuritis. Myasthenia gravis. Osteoarthritis.

* LIAN QIAO BAI DU PIAN - 连翘败毒片 - Forsythia Fruit Tablet for Removing Toxin. Forsythia Expelling Poison Tablet

ACTIONS - Clears Heat. Relieves toxicity. Alleviates pain. Cools the Blood. Stops itching

SYNDROMES - Toxic Wind-Heat

CLINICAL MANIFESTATIONS - Localized itching, redness, swelling, heat, inflammation or suppuration of the skin. Fever. Headache. Thirst. Sore throat. Dry throat. Constipation.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated during pregnancy.

HERBS AND ACTIONS

-Lian Qiao - Clears Heat (especially in the Upper Jiao), relieves toxicity, reduces abscesses, dissipates clumps and clears Blood Heat. With JIn Yin Hua, for initial-stage Wind-Heat.

-Jin Yin Hua - Clears Heat, resolves Fire toxicity, cools the Blood and vents and disperses External Wind-Heat. With Huang Qin, for suppurating boils that have not ulcerated, or have ulcerated but are not discharging pus. With Lian Qiao and Huang Qin, for unremitting high fever.

-Da Huang - Drains Heat, purges accumulations, invigorates the Blood, dispels Blood Stasis and reduces Fire toxicity. With Zhi Zi, Huang Qin and Lian Qiao, for strong pathogenic Heat in the Upper and Middle Jiaos.

-Zhi Zi - Clears Heat, reduces Fire, eliminates irritability, Drains damp-Heat, cools the Blood, relieves toxicity, reduces swelling and activates the Blood. With Lian Qiao, for Heat entering the Pericardium.

-Huang Qin - Clears Heat, dries Dampness, drains Fire, cools the Blood and detoxifies. With Zhi Zi, powerfully clears and drains lurking Heat from the Lungs with fever, fullness in the chest, cough with yellow sputum and epistaxis or hematemesis and sores due to Heat toxin.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, clears Heat, cools the Blood, reduces swelling from sores and abscesses and relieves pain.

-Bai Xian Pi - Clears Heat, resolves Fire-toxicity, expels Wind, dries Dampness and stops itching.

-Fang Feng - Releases the Exterior, expels External Wind, expels Wind-Dampness and alleviates pain.

-Chan Tui - Disperses Wind, clears Heat, vents rashes and relieves itching.

TREATS

Abscess (early stage). Early-stage painful skin infection (with incomplete expression of rash). Urticaria. Furuncle (early stage). Psoriasis. Skin allergy.

* REN SHEN YANG RONG TANG - 人參養榮湯 - Ginseng Decoction to Nourish Luxuriance. Ginseng Decoction to Nourish the Nutritive Qi. Ginseng Nutri Combination. Ginseng Nutritive Combination. Ren Shen Yang Yong Tang. Ren Shen Yang Ying Tang. Nutrient System Nourishing Decoction with Ginseng

ACTIONS - Tonifies Qi. Nourishes the Blood. Warms Yang. Strengthens the Spleen and Lungs. Nourishes the Heart. Calms the Shen

SYNDROMES - Qi, Yang, and Blood Deficiency. Heart and Spleen Qi and Blood Deficiency due to overexertion. Chronic non-healing sores

CLINICAL MANIFESTATIONS - Amnesia. Palpitations. Feverishness. Anorexia. Emaciation. Pale face. Insomnia. Dyspnea on mild exertion. Fatigue. Shortness of breath. Weight loss. Dry skin. Dry mouth. Dry throat. Dry lips. Uterine bleeding. Irregular menstruation. May suddenly lose consciousness. Slack jaw. Restless at night. Lassitude. Tendency toward being frightened easily. Weakness. Sallow complexion. Dizziness. Tremors in the limbs. Spontaneous perspiration. Fever and severe chills. General debility. Mental instability. Coughing and gasping. Night sweats. Amnesia. Diarrhea. Turbid urine. Nocturnal emission. Impotence. Constipation. Feeble breathing. Tired limbs.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Qi and Blood Deficiency patterns accompanied by symptoms of pronounced Cold.

HERBS AND ACTIONS

-Ren Shen - Strongly tonifies source Qi, augments Qi of the Lung, Spleen and Heart, calms the Shen, generates Body Fluids and relieves fatigue. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Gan Cao and Fu Ling, for Spleen and Stomach Qi Deficiency with Dampness with anorexia, diarrhea, vomiting, abdominal distention and fatigue. With Shu Di Huang, for severe Qi and Blood Deficiency due to loss of Blood and Qi and Yin Deficiency. With Huang Qi, for Lung Qi Deficiency and Qi Deficiency with general debility, anorexia, and spontaneous sweat. With Shu Di Huang, Bai Zhu, Bai Shao and Fu Ling, for Qi and Blood Deficiency.

-Huang Qi - Strengthens the Spleen, tonifies Qi and Blood , generates Body Fluids, raises the Yang Qi of the Spleen and Stomach, tonifies the Lungs, and generates flesh. With Ren Shen or Dang Shen , for Qi Deficiency with general debility, anorexia, and spontaneous sweat. With Bai Zhu, for Spleen Qi Deficiency with weakness, lassitude and loose stools. With Dang Gui, for Blood Deficiency due to hemorrhage with fatigue, low grade fever, irritability and thirst in patients with a weak pulse due to Qi and Blood Deficiency and Qi and Blood Stagnation with chronic non-healing sores, numbness, painful obstruction and paresthesia. With Dang Gui and Rou Gui, for fiat sores that do not pustulate or ulcers that do not heal. With Dang Gui, Shu Di Huang, Ren Shen, Bai Zhu and Rou Gui, for flat chronic sores and non-healing ulcers.

-Bai Zhu - Tonifies the Spleen, tonifies Qi and dries Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Fu Ling - Benefits the Spleen by draining Dampness. With Ren Shen and Bai Zhu, for weak and deficient Spleen with fatigue, anorexia and loose stools. With Gan Cao, for

Spleen and Heart Deficiency causing facial edema, palpitations, and shortness of breath.

-Dang Gui - Tonifies Blood, regulates the menses, invigorates and harmonizes the Blood, disperses Cold, moistens the Intestines, unblocks the bowels, reduces swelling, expels pus, generates flesh and alleviates pain. With Huang Qi, for pallor, debility, fatigue and/or low grade fever due to excessive Blood loss and ulcerated abscesses with insufficient drainage or which drain a clear thin discharge. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Shu Di Huang, and Rou Gui to expel pus and generate flesh in chronic non- healing sores. With Bai Shao, regulates and harmonizes Qi and Blood for Blood Deficiency Heat. With Huang Qi, Shu Di Huang, Rou Gui, and Ren Shen, expels pus and generates flesh in chronic non-healing sores.

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin. With Dang Gui and Bai Shao, for dizziness, palpitations, insomnia and menstrual dysfunction due to Blood Deficiency. With Ren Shen, for Qi, Blood and Yin Deficiency. With Ren Shen, Bai Zhu, Fu Ling, Dang Gui and Bai Shao, for anemia with fatigue and weakness.

-Bai Shao - Calms Liver Yang, alleviates pain, Nourishes the Blood, regulates menstruation and astringes Yin. With Dang Gui, nourishes the Blood and softens the edginess that results from Liver Stagnation. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach and epigastric, hypochondriac or flank pain. With Ren Shen and Huang Qi, restrains sweating from Deficiency. With Ren Shen, Huang Qi and Bai Zhu, for menstrual disorders with Qi Deficiency signs such as fatigue, weakness, and pale and scanty menstrual Blood.

-Chen Pi - Regulates Qi, tonifies the Spleen (improves its transportive functions), adjusts the Middle, dries Dampness, descends Rebellious Qi and helps prevent Stagnation from tonic herbs. With Bai Zhu, for anorexia and other symptoms of Damp Obstruction due to Spleen Deficiency and prevents bloating. With Sheng Jiang, for vomiting and hiccups due to Disharmony of the Stomach Qi. With Bai Zhu, for anorexia and other symptoms of Damp-Obstruction due to Spleen Deficiency.

-Yuan Zhi - Calms the Spirit and sedates the Heart and clears the channel joining the Heart and Kidney, reduces abscesses and dissipates swellings.

-Wu Wei Zi - Replenishes Qi, astringes leakage of Lung Qi, nourishes Kidney Yin, astringes essence, stops diarrhea, astringes sweat, generates fluids, tonifies the Heart and calms the Shen. With Huang Qi, for Yang Deficiency with spontaneous sweat.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood, calms the Spirit and moderates and harmonizes the harsh properties of other herbs. With Sheng Jiang, protects the Spleen and Stomach and harmonizes. With Ren Shen, Bai

Zhu and Fu Ling, for weakness and lassitude due to Spleen and Stomach Deficiency. With Sheng Jian, alleviates epigastric pain, nausea, and vomiting by strengthening the Spleen and enhances the effects of other Qi and Blood tonifying herbs by facilitating their digestion and absorption.

-Rou Gui - Warms the Kidneys, Spleen and Heart, strengthens the Yang and Ming Men Fire, disperses deep Cold, warms the channels, unblocks the channels and vessels, alleviates pain and assists the generation of Qi and Blood. With Ren Shen and Shu Di Huang, for palpitations and shortness of breath due to Deficiency of the Heart and Kidneys. With Huang Qi and Dang Gui, for Yin-type boils due to Qi and Blood Deficiency especially those that form but do not ulcerate.

-Shen Jiang - Warms the Middle and stops vomiting and reduces the toxicity of other herbs.

-Gan Cao - Tonifies the Spleen and augments Qi, assists in tonifying source Qi and moderates and harmonizes the harsh properties of other herbs. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency and palpitations due to Heart Qi Deficiency. With Ren Shen, relieves palpitations and anxiety.

TREATS

Postpartum illness. Post-illness weakness. Tuberculosis. Pleurisy. Depression. General debility due to prolonged external injury. Consumptive disorders. Chronic non-healing sores. Anemia. Chronic fatigue syndrome. Insomnia. Raynaud's disease. Syncope. Infertility. Uterine bleeding. Breast cancer. Rheumatic Heart disease. Tuberculous abscess. Mastitis. Cough. Hay fever. Hypoglycemia. Food allergies. Candidiasis. Numbness. Alzheimer's disease. Anorexia. Dizziness. Weakness. Dysmenorrhea. Idiopathic thrombocytopenic purpura. Paralysis. Spontaneous perspiration. Irregular menstruation. Spermatorrhea. Dermatitis. Constipation. Chemotherapy for breast cancer. Thrombophlebitis. Diminished visual acuity associated with AIDS/HIV. Varicose veins of the lower legs. Delayed menstruation. Chronic weakness. Thinness. Amnesia. Impotence. Baldness. Blood dyscrasia. Nervous exhaustion. Emaciation. Connective tissue diseases. Amenorrhea. Nephritis. Irregular menstruation. Chronic hepatitis. Viral hepatitis. Lung cancer. Gastric ulcer. Carbuncle. Chronic dacrystitis. Optic atrophy. Chronic Kidney failure. Somnolence. Narcolepsy. Paresthesia. Senile dementia. Systemic lupus erythematosus. Tinnitus. Palpitations. Fatigue. Gasping. Headache. Jaundice. Night sweats. Hemilateral sweating. Scleroderma. Nocturnal emissions. Dyspnea. Dry skin. Leukopenia.

* SHEN JIN GUI ZHI SHAO YAO ZHI MU TANG - 伸筋桂枝芍藥知母湯 - Lycopodium, Cinnamon Twig, Peony and Anemarrhena Decoction. Bamboo Pearls

ACTIONS - Alleviates pain in the joints and extremities. Dispels Wind-Damp. Warms the channels. Dispels Stagnation. Opens blocked collaterals. Calms the Shen. Clears Heat.

Nourishes Yin. Clears Yin Deficiency Heat

SYNDROMES - Wind-Dampness with Yin Deficiency Heat

CLINICAL MANIFESTATIONS - Inflammation, swelling, pain, numbness and degeneration in the joints, sinews, and connective tissues. Dizziness. Tinnitus or deafness. Poor memory. Aching, soreness or weakness of the low back. Spermatorrhea or. Premature ejaculation. Aching in the bones. Aching in the leg and heel. Dry mouth. Thirst. Night sweats. Five Sole Heat. Malar flush. Low grade fever in the afternoon. Dry throat, maybe recurrent sore throat. Dry stools and/or. Constipation. Urine short and red. Heightened libido. Maybe insomnia. Maybe frequent dreams. Maybe blurred vision.

HERBS AND ACTIONS

-Shen Jin Cao - Dispels Wind, eliminates Dampness, relaxes the sinews, invigorates the collaterals and invigorates the Blood.

-Sang Ji Sheng - Tonifies Liver and Kidney Yin, strengthens the sinews and bones and expels Wind-Dampness.

-Wu Jia Pi - Dispels Wind-Dampness, nourishes and warms the Liver and Kidneys, strengthens sinews and bones, transforms Dampness and reduces swelling.

-Gui Zhi - Releases the Exterior, assists Yang, adjusts the Ying and Wei, releases the muscle layer, warms the channels and collaterals, relieves pain, unblocks Yang, transforms Qi and thin mucus, assists Heart Yang, warms and facilitates the flow of Yang Qi in the chest, warms and facilitates the flow of Qi through the channels and collaterals and Blood through the vessels, warms the Middle and descends Turbid Yin. With Bai Shao, expels External Wind-Cold and warms and tonifies the Middle Jiao. With Zhi Fu Zi, for chills and painful extremities due to Yang Deficiency with Wind-Cold-Damp Bi.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, softens the Liver and relieves pain. With Gan Cao, regulates the relationship between the Liver and Spleen and nourishes the sinews. With Fang Feng and Bai Zhu, for Painful diarrhea and borborygmus. With Gui Zhi, harmonizes the Ying and Wei.

-Zhi Mu - Clears Heat, drains Fire from the Lungs and Stomach, nourishes Yin, moistens Dryness, generates Fluids, clears Deficiency Fire and quenches thirst. With Gan Cao, regulates Cold and Heat, harmonizes the Exterior and Interior and treats malarial diseases with Tai Yin turbid Dampness fuming upward.

-Sheng Jiang - Releases the Exterior, induces perspiration, disperses Cold, warms the Middle, stops vomiting, warms the Lungs, stops cough, adjusts the Ying and Wei, normalizes the flow of Qi at the center and reduces the toxicity of the other herbs. With Gui Zhi, strongly induces sweating for External Wind-Cold with chills, fever, body aches

and anhidrosis and warms and dispels thin mucus in the Stomach for nausea, hiccup, Stomach pain, acid reflux and/or vomiting of clear fluid.

-Bai Zhu - Tonifies the Spleen, augments Qi, Dries Dampness and promotes water metabolism.

-Fang Feng - Expels Wind-Dampness, expels Internal Wind, stops spasms, relieves diarrhea, stops bleeding and alleviates pain.

-Fu Zi - Warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold and Dampness, warms the channels and stops pain. With Bai Zhu, for Wind-Damp Bi and Spleen Yang Deficiency with a cold, painful abdomen, vomiting and watery diarrhea.

-Di Long - Clears Heat and unblocks and promotes movement in the channels and collaterals.

-Gan Cao - Tonifies Qi, moistens the Lungs, resolves Phlegm, stops cough, clears Heat, relieves Fire toxicity, moderates spasms, alleviates pain, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Bai Shao, moderates spasms and alleviates pain, for painful spasms of the leg or abdomen.

TREATS - Gu syndrome

* SI WU TANG HE LIU WEI DI HUANG WAN JIAN JIAN - 四物汤和六味地黄丸加減 - Benefit Metal Decoction. Metal Pearls

ACTIONS - Cools the Blood. Extinguishes Wind. Nourishes Yin. Protects the hair

SYNDROMES - Blood Heat Generating Wind

CLINICAL MANIFESTATIONS - Sudden hair loss. Rapidly evolving into large round or oval bare patches. Occasional itching. Maybe loss of hair in the eyebrows, moustache and beard. Maybe a sensation of Heat in the scalp. Maybe irritability. Maybe irascibility. Maybe restlessness

HERBS AND ACTIONS

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes Yin and generates fluids. With Mu Dan Pi, for Kidney Yin Deficiency. With Ce Bai Ye, for all types of bleeding due to Heat in the Blood.

-Nu Zhen Zi - Nourishes and tonifies the Liver and Kidney Yin and clears Deficiency Heat.

-Sang Shen - Tonifies the Blood, enriches Yin and generates Fluids.

-Mu Dan Pi - Clears Deficiency Fire.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis, Clears Heat and cools the Blood. With Mu Dan Pi, cools the Blood and disperses Stasis.

-Bai Shao - Nourishes the Blood, astringes Yin and calms Liver Yang and Liver Wind. With Dang Gui, nourishes Yin and Blood.

-Shan Zhu Yu - Stabilizes the Kidneys, astringes Jing and Body Fluids, tonifies Liver and Kidney Yin and strengthens Kidney Yang.

-Xuan Shen - Clears Heat, cools the Blood, nourishes Yin, drains Fire and relieves toxicity. With Mu Dan Pi, for erysipelas and purplish rashes. With Sheng Di Huang, for Excess or Deficiency Heat patterns.

-Hei Zhi Ma - Nourishes and fortifies Liver and Kidney Yin, nourishes Jing and Blood and extinguishes Wind.

-Tu Si Zi - Nourishes Yin, astringes Jing, benefits the marrow and tonifies the Kidneys and Liver.

-Fu Shen - Quiets the Heart, calms the Spirit and soothes the nerves.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Bai Shao, for Blood Deficiency Heat.

-Ce Bai Ye - Cools the Blood and promotes hair growth.

-Dai Zhe Shi - Calms the Liver, anchors Floating Yang, clears Liver Fire and cools the Blood.

TREATS - Alopecia

* TIAN-HUANG FORMULA

Tian-Huang formula (THF) is a patented and clinically approved Chinese medicinal prescription with hypolipidemic effects.

Herbs - San Qi, Huang Lian

Jian Yang Dan, JinChan YiShen TongLuo Formula, Li Jin Tang, San Zi Yang Qin Tang, Shenqi Compound, Wang Yi Jian, Xuan Bi Tang, Yu Zhen San, Zhi Shi Xiao Pi Wan

Recordings Updated in June 2025

* JIAN YANG DAN - 建陽丹 - Build Yang Pills. Vitality Pearls

ACTIONS - Tonifies the Spleen, Lungs and Kidneys. Warms Yang

SYNDROMES - Yang Deficiency

CLINICAL MANIFESTATIONS - Chills. Cold limbs. Inability to get warm. Loose stools. Profuse clear urine. Spontaneous sweating. Lassitude.

HERBS AND ACTIONS

-Fu Zi - Warms Ming Men Fire, assists Heart, Kidney and Spleen Yang, disperses Cold and Dampness, warms the channels and stops pain. With Gan Jiang, warms the Spleen and Kidneys, benefits Yang, disperses Cold, counteracts the Internal consequences of an External Wind-Cold attack, treats overabundance of Yin fluids due to Deficiency Cold and Cold-Damp Bi. With Gan Jiang and Gan Cao, for cold extremities and diarrhea with undigested food due to Collapse of the Spleen and Kidney Yang. With Bai Zhu, for Spleen Yang Deficiency with a Cold, painful abdomen, vomiting and watery diarrhea and Wind-Damp Bi. With Gan Jiang and Bai Zhu, for Internal ascendance of Yin Cold leading to lack of arousal of Spleen Yang with abdominal pain and Cold with watery diarrhea.

-Bai He - Nourishes Stomach Yin, harmonizes the Middle Jiao, moistens the Lungs, clears Heat, stops cough, clears the Heart and calms the Spirit.

-Huang Jing - Tonifies Spleen Qi, nurtures Stomach Yin, moistens Lung Yin, tonifies the Kidneys and strengthens Jing.

-Ci Wu Jia - Tonifies the Spleen and Stomach Qi to aid transformation and transportation, warms the Kidneys to aid Yang in warming the Spleen, augments Heart Qi, calms the Shen, invigorates the Blood and unblocks the collaterals.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness, stabilizes the Exterior and stops sweating.
With Gan Jiang, eliminates Cold Dampness in the Spleen with loss of taste, a sticky

sensation in the mouth, nausea, vomiting, diarrhea and a thick, white tongue coat, treats bleeding due to Deficiency of Spleen Yang with hemafecia or hematuria and frequent diarrhea due to Spleen and Stomach Deficiency Cold.

-Gan Jiang - Warms the Middle, expels Cold, dispels Wind-Dampness seeping into the Lower Jiao, rescues Devastated Yang, expels Interior Cold, warms the Lungs, transforms thin mucus, warms the channels,unblocks the pulse and stops bleeding. With Huang Lian, for epigastric pain and distention, dysentery, indeterminate gnawing hunger, vague abdominal pain or discomfort, belching, and nausea. With Gan Cao, for epigastric pain and vomiting due to Spleen and Stomach Deficiency Cold.

-Yin Yang Huo - Tonifies the Kidneys, strengthens Yang, dispels Wind-Cold-Dampness, warms and unblocks the flow of Yang Qi and strengthens the sinews and bones.

-Bu Gu Zhi - Tonifies the Kidneys, strengthens Yang, stabilizes Jing, tonifies and warms Spleen Yang and stops diarrhea.

-Gan Cao - Tonifies the Spleen, augments Qi, moistens the Lungs, resolves Phlegm, stops coughing, clears Heat, relieves Fire toxicity, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

-Huang Lian - Clears Heat, drains Dampness, drains Fire, resolves Fire toxicity and stops bleeding.

TREATS - Gu syndrome.

* JINCHAN YISHEN TONGLUO FORMULA

JinChan YiShen TongLuo (JCYSTL) Formula ameliorates mitochondrial dysfunction and apoptosis in diabetic nephropathy through the HIF-1α-PINK1-Parkin pathway.

TCM believes that the core pathogenesis of DN is kidney deficiency and collateral obstr uction," and JCYSTL has the effect of tonifying kidney and clearing collateral," thus allev iating the damage to kidney structure and function caused by diabetes.

The JCYSTL formula is a decoction of eight Chinese herbal medicines: Dong Chong Xia Cao, Huang Qi, Xuan Shen, E Zhu, Jiang Can, Shui Zhi, Gui Jian Yu, Niu Xi

* LI JIN TANG - 利金湯 - Benefit Metal Decoction, Metal Pearls

ACTIONS - Descends Lung and Large Intestine Qi. Transforms Phlegm. Clears Heat. Detoxifies. Promote the flow of Qi. Invigorates the Blood. Regulates fluid metabolism in Upper and Middle Jiaos. Resolves Toxins. Nourishes Lung Yin. Calms the Shen

SYNDROMES - Phlegm-Heat

CLINICAL MANIFESTATIONS - Cough with sticky, yellow, difficult to expectorate sputum. Rapid breathing with a harsh voice. Restless fever. Sore throat. Constipation. Dry stools. Mania. Shortness of breath. Dyspnea. Nausea. Vomiting. Chest and/or epigastric fullness. Pain in the ribs.

HERBS AND ACTIONS

-Bai He - Nourishes Stomach Yin, harmonizes the Middle Jiao, moistens the Lungs, clears Heat, stops coughing, clears the Heart and calms the Spirit. With Hua Shi, for dark urine and dysuria.

-She Gan - Clears Heat, relieves Fire toxicity, transforms Phlegm and clears the Lungs. With Huang Qin, for a sore throat and coughing due to Lung Heat. With Huang Qin and Jie Geng, for pain and swelling of the throat with hoarseness due to Fire Excess. With Xing Ren and Jie Geng, for coughing, pain and swelling of the throat with difficulty expectorating due to Lung Heat.

-Jie Geng - Opens the Lungs, spreads Lung Qi and expels Phlegm. With Ban Xia, for coughing due to Wind-Cold Invasion or long-standing Phlegm-Dampness.

-Xing Ren - Stops cough, calms wheezing, moistens the Intestines and unblocks bowels.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi harmonizes the Stomach and stops vomiting. With Chen Pi, for epigastric and abdominal distention or pain due to disharmony of the Stomach Qi and a productive cough and a stifling sensation in the chest due to Phlegm-Damp Obstruction or Spleen Qi Deficiency. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao.
With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention and anorexia due to congested fluids.

-Chen Pi - Regulates and descends Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Fu Ling and Ban Xia, for coughing due to accumulation of Dampness and Phlegm.

-Huang Qin - Clears Heat, cools the Blood, dries Dampness, drains Fire, detoxifies and calms ascending Liver Yang. With Bai Shao, for dysenteric disorders with abdominal pain due to Heat entering the Interior.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind and alleviates pain.

-Hua Shi - Expels Damp-Heat, releases Summeheat and resolves Dampness.

-Jiang Can - Dispels Wind, disperses Wind-Heat, stops itching and pain, transforms Phlegm, softens hardness, eliminates toxins and dissipates nodules.

TREATS - Gu syndrome.

* SAN ZI YANG QIN TANG - 三子養親湯 - Three Seed Decoction to Nourish One's Parents. Decoction of Three Seeds Nourishing the Parents. San Zi Yang Qin Tang Three-Seed Decoction to Nourish One's Parents

ACTIONS - Descends Qi. Relaxes the diaphragm. Reduces Food Stagnation. Resolves Phlegm

SYNDROMES - Cold in the Lungs with Food Stagnation. Cold Phlegm Obstructs the Lungs. Phlegm Retention with Qi Stagnation. Han Tan. Elderly person with a weak Spleen and Stomach and Phlegm due to Food Stagnation. Emergency Rebellious Qi Conditions

CLINICAL MANIFESTATIONS - Cough. Wheezing. Copious sputum. Chest distention. Anorexia. Indigestion. Hiccup. Shortness of breath.

HERBS AND ACTIONS

-Bai Jie Zi - Warms the Lungs, regulates Lung Qi, resolves Phlegm and relaxes the diaphragm. With Lai Fu Zi restores the smooth flow of Qi and reduces Phlegm to treat coughs and wheezing especially when the chest and diaphragm feel full of Phlegm, particularly Cold-Phlegm, and the descent of Lung Qi is impaired. With Lai Fu Zi and Zi Su Zi for cough with copious, clear, bubbly sputum, and pain, fullness, and distention of the chest due to Cold-Phlegm Obstructs the chest and flanks.

-Zi Su Zi - Stops cough, calms wheezing, descends Qi and dissolves Phlegm.

-Lai Fu Zi - Reduces Food Stagnation, transforms accumulation, eliminates distention, descends Qi and reduces Phlegm.

TREATS

Chronic bronchitis. Bronchial asthma. Obesity. Hiccup. Chronic obstructive pulmonary disease (COPD). Nausea/Vomiting. Globus hystericus. Indigestion. Bronchiectasis. Emphysema. Pediatric asthma. Diaphragm spasms. Vascular Bi. Cough. Cor

pulmonare. Anorexia. Upper respiratory tract infection. Dyspnea.

* SHENQI COMPOUND

Shenqi Compound improves lower extremity atherosclerosis of patients with type 2 diabetes by affecting blood glucose fluctuation. Shenqi compound can reduce blood glucose fluctuation and low-grade inflammation, and protect blood vessels.

SQ has the potential to alter the composition of intestinal microbiota, particularly in relation to intestinal inflammation, thereby contributing to the improvement of the hyperglycemic profile in T2DM. SQ, has significant impact in reducing blood glucose levels, mitigating inflammatory cytokines, enhancing lipid profiles, and alleviating insulin resistance. Moreover, SQ positively influences the diabetes model animals by regulating the diversity of intestinal microbiota and augmenting various metabolic pathways.

Herbs - Ren Shen, Huang Qi, Sheng Di Huang, Shan Yao, Shan Zhu Yu, Tian Hua Fen, Dan Shen, Da Huang

* WANG YI JIAN - 网易煎 - Retinal Changes Decoction

ACTIONS - Enriches the Kidneys. Tonifies Yang. Nourishes the Blood. Tonifies Qi. Invigorates the Blood. Unblocks the channels

SYNDROMES - Qi, Blood, Yin and Yang Deficiency

CLINICAL MANIFESTATIONS - Decreased visual acuity which is worse at night and when fatigued. A pale and possibly sallow, yellow complexion. Fatigue. Lack of strength. Shortness of breath on slight exertion. Dry skin. Brittle nails. Low back and knee weakness and pain. Tinnitus. Dizziness. Impaired memory. Decreased hearing. Decreased libido. Cold hands and feet. Chilliness of the upper back. Aversion to Cold. Nocturia. Maybe seminal emission. Constipation. Spider Naevi. Cherry hemangiomas or other varicosities. Age spots.

HERBS AND ACTIONS

-Ji Xue Teng - Invigorates and tonifies the Blood, activates the channels and relaxes the sinews.

-Dang Shen - Tonifies the Middle Jiao, augments Qi, nourishes the Blood and promotes the generation of Body Fluids. With Dang Gui and Shu Di Huang, for Qi and Blood Deficiency with dizziness, weakness and lassitude.

-Shu Di Huang - Nourishes the Blood and nourishes Liver and Kidney Yin.

-Tu Si Zi - Tonifies the Kidneys and Liver, improves vision, strengthens Yang, nourishes Yin, astringes Jing and urine and benefits the marrow.

-Lu Lu Tong - Promotes the movement of Qi, invigorates the Blood, opens the Middle Jiao and unblocks the channels.

-Mi Meng Hua - Clears the Liver, brightens eyes and reduces superficial visual obstruction. With Gou Qi Zi and Tu Si Zi, for blurred or otherwise impaired vision due to Liver and Kidney Deficiency.

-Nu Zhen Zi - Nourishes and tonifies Liver and Kidney Yin and clears Deficiency Heat. With Shu Di Huang and Gou Qi Zi, for diminished visual acuity due to Liver and Kidney Yin Deficiency.

-Gou Qi Zi - Nourishes and tonifies Liver and Kidney Blood and Yin, benefits Jing and brightens the eyes. With Shu Di Huang, for Liver and Kidney Deficiency.

-Fu Zi - Warms Ming Men Fire and assists Heart, Kidney and Spleen Yang.

-Ba Ji Tian - Tonifies the Kidneys and strengthens Yang.

-Chong Wei Zi - Invigorates the Blood, clears Heat and clears the eyes.

-Dang Gui - Tonifies, invigorates and harmonizes the Blood. With Tao Ren and Hong Hua, for Blood Stasis. With Bai Shao, regulates and harmonizes Qi and Blood. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood.

-Bai Shao - Nourishes the Blood, astringes Yin, adjusts the Ying and Wei, calms Liver Yang and Liver Wind and alleviates pain. With Shu Di Huang and Dang Gui, for dizziness, blurred vision and dysmenorrhea due to Blood Deficiency or Stasis.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Hong Hua, invigorates the Blood for all types of Blood Stagnation.

-Hong Hua - Invigorates the Blood, dispels Blood Stasis, opens the channels and alleviates pain.

-Sheng Ma - Raises Yang and lifts sunken Qi. With Chai Hu, for prolapse due to Yang Deficiency. With Dang Gui and Tao Ren, raises the clear Qi, allowing turbidity to descend and moistening the Intestines.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS - Macular degeneration.

* XUAN BI TANG - 宣痺湯 - Disband Painful Obstruction Decoction. Decoction to Relieve Bi Syndrome. Decoction for Removing the Meridian Obstruction

ACTIONS - Clears and Resolves Damp-Heat. Unblocks the channels. Disbands painful obstruction

SYNDROMES - Damp-Heat Bi. Wei Syndrome due to Damp-Heat Accumulation (modified)

CLINICAL MANIFESTATIONS - Heat and pain in the joints. Reduced mobility. Fever and shaking chills or. Fever with sweating. Lusterless yellow complexion. Scanty, dark urine. Pain worse on cloudy or rainy days. Arthralgia involving one or several joints. Local redness and Heat of the extremities. Swelling with excruciating pain. Severe limitation of movement. Oliguria. Pain worse better the day and worse at night. Thirst. Dryness of the mouth. Irritability. Restlessness. Desire for cold drinks. Aversion to Heat.

HERBS AND ACTIONS

-Guang Fang Ji - Expels Wind-Dampness, dispels Damp-Heat in the Upper Jiao, disperses superficial swelling, promotes urination, dries Dampness, stops pain and strengthens the Spleen (affects all three Jiaos). With Yi Yi Ren, for Damp-Heat-induced extremity pain.

-Xing Ren - Regulates the Lung's water metabolism function.

-Yi Yi Ren - Promotes urination, strengthens the Spleen, clears Heat, expels Wind-Dampness, soothes numbness and clears Damp-Heat. With Can Sha, strengthens the Spleen, resolves Dampness and treats painful obstruction.

-Can Sha - Dispels Wind Dampness, harmonizes the Stomach and transforms turbid Dampness. With Han Fang Ji, Yi Yi Ren and Lian Qiao, for Damp-Heat Bi and Wind-Damp Bi.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi, and reduces swelling. With Can Sha, dries Dampness and eliminates turbidity.

-Lian Qiao - Clears relatively superficial Heat and promotes urination.

-Zhi Zi - Clears Heat, eliminates irritability, drains Damp-Heat and reduces swelling. With Hua Shi, Lian Qiao and Chi Xiao Dou, assists in clearing Heat and draining Dampness through the urine.

-Hua Shi - Promotes urination and expels Damp-Heat.

-Chi Xiao Dou - Promotes urination, clears Heat, clears Damp Heat and reduces

swelling.

TREATS

Rheumatic fever. Rheumatic arthritis. Rheumatoid arthritis. Rheumatic Heart disease. Gouty arthritis. Connective tissue disorders. Mononeuropathy. Myasthenia gravis. Perspiration. Temporomandibular joint syndrome (TMJ). Arthralgia. Subacute lupus erythematosus. Guillain-Barre syndrome. Fever. Erythema arthriticum. Polyneuropathy. Neuralgic aneuropathy. Low back pain. Osteoarthritis. Painful obstruction.

* YU ZHEN SAN - 玉真散 - True Jade Powder. Powder for Tetanus

ACTIONS - Dispels Wind. Transforms Phlegm. Relieves muscular tetany. Stops convulsions. Alleviates pain

SYNDROMES - Toxic Wind-Heat due to incised wounds. Wind-Phlegm (Feng Tan)

CLINICAL MANIFESTATIONS - Stiffness and spasms of the jaw. Stiff and tense neck and jaw. Spasms of the extremities. Mouth closed. Lip spasms. Dizziness. Insomnia. Vomiting. Deviation of the eyes. Rigidity of the entire body. Opisthotonis. Trismus.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - * Bai Fu Zi and Tian Nan Xing are very toxic and should be used with extreme caution. Contraindicated during pregnancy. Contraindicated for those with Body Fluid or Yin Deficiency. Do not take long-term. Do not use for advanced-stage muscular tetany. If severe hemorrhaging occurs due to trauma, modify with Blood nourishing and sinew relaxing herbs.

HERBS AND ACTIONS

-Bai Fu Zi - Dries Dampness, transforms Phlegm, expels Wind and stops spasms. With Tian Nan Xing, Fang Feng and Tian Ma, for tetanus, muscle spasms and stiffness of the neck and opisthotonis with clenched jaws.

-Tian Nan Xing - Disperses Wind-Phlegm in the channels, stops spasms and alleviates pain. With Fang Feng, Bai Zhi and Tian Ma, for muscular tetany with lockjaw and opisthotonis.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction and alleviates pain. With Fang Feng, for Wind-Dampness.

-Bai Zhi - Expels Wind, eliminates Dampness, dispels Cold and alleviates pain.

-Fang Feng - Expels Internal Wind, stops spasms and alleviates pain. With Tian Nan Xing, for headache, generalized body aches and numbness due to Wind-Phlegm Obstructing the channels. With Tian Nan Xing, Tian Ma and Bai Fu Zi, for opisthotonis,

trismus, spasms and convulsions due to Liver Wind.

-Tian Ma - Extinguishes Wind, calms the Liver, stops spasms and tremors, subdues Rising Liver Yang and alleviates pain. With Tian Nan Xing and Bai Fu Zi, for tetany and opisthotonis.

TREATS

Neurotoxic clostridial diseases. Tetanus. Botulism. Post-traumatic pain. Trismus. Insomnia. Rabies. Kyphosis. Facial paralysis. Chorea. External ulcerations. Dizziness. Vomiting. Neck stiffness.

* ZHI SHI XIAO PI WAN - 枳实消痞囊 - Unripe Bitter Orange to Reduce Distention

ACTIONS - Moves Qi. Reduces focal distention. Eliminates fullness. Strengthens the Spleen. Harmonizes the Stomach

SYNDROMES - Spleen Qi Deficiency with Liver Qi Stagnation with Cold and Heat

CLINICAL MANIFESTATIONS - Distention and fullness in the upper epigastrium. Lack of thirst. Lack of appetite. Fatigue. Weakness. Maybe focal distention in the chest and abdomen. A wan complexion. Lethargy. Poor digestion. Irregular bowel movements (sometimes loose, sometimes hard)

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Use with caution for those with severe Qi Deficiency.

HERBS AND ACTIONS

-Zhi Shi - Breaks up Stagnant Qi, reduces accumulation, descends Qi, unblocks the bowels, removes Stagnant Food, transforms Phlegm, reduces distention and resolves hardenings. With Hou Po, for distention, swelling and pain due to Food Stagnation and Qi Stagnation. With Hou Po, Huang Lian, Bai Zhu and Ban Xia, for distention and fullness in the upper epigastrium, lack of appetite, fatigue and weakness from a Cold-Heat complex secondary to Spleen and Stomach Deficiency. With Bai Zhu, for distention in the epigastrium and abdomen due to Spleen and Stomach Deficiency with Food Stagnation.

-Hou Po - Promotes the movement of Qi in the Middle Jiao, resolves Stagnation, descends Qi, dries Dampness and transforms Phlegm. With Zhi Shi, for abdominal or chest distention, focal epigastric distention, wheezing, shortness of breath, nausea, rebellious Qi or constipation from Cold, Heat, Dampness or Phlegm as long as clumped Qi is at the root of the problem. With Gan Jiang, for acute diarrhea from Cold attacking the Middle. With Huang Lian, for acute diarrhea associated with sudden turmoil disorder from Damp-Heat.

-Huang Lian - Clears Heat, drains Dampness and drains Stomach Fire. With Ban Xia and Gan Jiang, for Cold and Heat complexes in the Intestines and Stomach marked by focal distention, nausea, vomiting and feelings of oppression in the chest.

-Ban Xia - Dries Dampness, transforms Phlegm, descends Rebellious Qi and stops vomiting. With Huang Lian, for epigastric distention and indigestion due to a simultaneous invasion of Hot and Cold pathogenic influences into the Stomach. With Hou Po, for Phlegm-Dampness with Qi Stagnation to open Phlegm and Qi Obstruction with a sensation of fullness in the chest with coughing and wheezing, nausea, vomiting and a sensation of distention in the hypochondrium.

-Ren Shen - Tonifies Spleen, Stomach and Lung Qi. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Bai Zhu - Tonifies the Spleen, augments Qi, dries Dampness and promotes water metabolism. With Dang Shen and Gan Jiang, for Deficiency Cold of the Middle Jiao with abdominal pain, distention, vomiting and diarrhea. With Zhi Shi, for Spleen Deficiency with Qi Stagnation with anorexia, epigastric focal distention and fullness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency. With Zhi Shi, Ren Shen, Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency with Qi and Food Stagnation. With Gan Jiang, Ren Shen and Gan Cao, for Spleen and Stomach Deficiency Cold.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ren Shen and Bai Zhu, for a weak and deficient Spleen with fatigue, anorexia and loose stools. With Ban Xia, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools.

-Mai Ya - Reduces Food Stagnation, improves digestion, strengthens the Stomach and facilitates the smooth flow of Liver Qi. With Gan Jiang, for indigestion due to Spleen and Stomach Deficiencies.

-Gan Jiang - Warms the Middle and expels Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Bai Zhu and Ren Shen, for Spleen Yang Deficiency with a cold abdomen, vomiting and diarrhea. With Ban Xia, for vomiting of saliva or dry heaves due to Cold-induced congested fluids. With Gan Cao, for epigastric pain and vomiting due to Spleen and Stomach Deficiency Cold. With Ban Xia and Ren Shen, for vomiting due to Deficiency Cold.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels.

TREATS

Anorexia. Chronic gastritis. Functional gastrointestinal disorders. Cholecystitis.

Cushing's syndrome. Fatigue. Chronic atrophic gastritis. Indigestion. Intestinal obstruction. Cholelithiasis. Weakness. Diabetic gastroparesis.

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_47

Colon Support-TCM, FlexMLT-TCM, Gengnianchun, Heel Pain-TCM, Minor Injuries-TCM, Osteo8-Formula-TCM, Podopathy-Foot Pain-TCM, Rosy Tincture, Zheng Gu Shui

Recordings Updated in June 2025

* COLON SUPPORT-TCM

Supports colon function with gentle relief. https://kamwostore.com/

Herbs - Zhi Shi (bitter Orange Young Fruit), Fan Xie Ye (Senna Leaf), He Shou Wu (Fo-Ti Dried Root Tuber), Hei Zhi Ma (Black Sesame Seed), Da Huang (Chinese Rhubarb Root), Dang Gui Wei (Dong Quai Root Tail), Shu Di Huang (Rehmannia Root Tuber prepared)

* FLEXMLT-TCM

Flex is explicitly designed to treat chronic or mid-to-late stages of musculoskeletal injuries, with atrophy of the soft tissues (muscles, tendons, ligaments, and cartilage), decreased mobility of the joints, cartilage degeneration, and generalized weakness and pain.
Invigorates blood circulation in the extremities to treat chronic or mid-to-late stages of musculoskeletal injuries soft tissue injuries, help protecting the joints/cartilage against wear and tear from repetitive movements supports the recovery of soft tissues and benefits the joints chondroprotective (delays joint space narrowing), and osteogenic (promotes bone formation), neuroregenerative (stimulates growth/repair of nerve tissues), analgesic (pain-relieving), and anti-inflammatory properties.

HERBS

-Dang Shen (Radix Codonopsis) - qi tonic (SP/LU) that also nourishes the blood
-Dang Gui (Radix Angelicae Sinensis),
-Shu Di Huang (Radix Rehmanniae),
-Bai Shao (Radix Paeoniae Alba) - all blood tonics with the ability to nourish

yin/preserve yin, this helps to promote blood circulation and the generation of new tissue; Dang gui and bai shao are a classic pair of herbs used to tonify blood in many different conditions
-Chuan Niu Xi (Radix Cyathulae) - blood moving, goes to the Liver and Kidneys to strengthen sinews/bones and pairs with dang gui to invigorate blood which is good for traumatic pain and healing soft tissue
-Wu Jia Pi (Cortex Acanthopanacis),
-Qian Nian Jian (Rhizoma Homalomenae),
-Xu Duan (Radix Dipsaci) - the first two dispel wind-damp and xu duan is a yang tonic; All three go to the Kidneys and Liver to strengthen the sinews and bones, good for stiffness and weakness
-Chu Shi Zi (Fructus Broussonetiae),
-Zhi He Shou Wu (Radix Polygoni Multiflori Praeparata) - yin tonics that nourish the Liver and Kidneys and will strengthen muscles, tendons, cartilage, and ligaments

Cautions:
-This formula should not be used during the acute phases of injuries with bleeding and bruises, as there are many tonic or warm herbs that may worsen the condition.
-May enhance the overall effectiveness of Coumadin (Warfarin), an anticoagulant drug.

* GENGNIANCHUN

It is currently used in the clinic to alleviate declining functions related to ageing.
Herbs - Shengdi, Huanglian, Baishao, Zhimu, Roucongrong, Bajitian, Fuling, Yinyanghuo, Huangbai, Gouqizi, Tusizi, Guiban

* HEEL PAIN-TCM

Common Chinese medicine herbs used for heel pain.

Function: Increase blood circulation and relieve pain.

Herbs - Tou Gu Cao (Caulis Impatientis), Ru Xiang (Frankincense), Chuan Niu Xi (Cyathula Root), Wei Ling Xian (Radix Clematidis), Mo Yao (Myrrh).

* MINOR INJURIES-TCM

A formula for the treatment of minor injuries like sprains and avulsions. Other inflammatory conditions like chronic musculo-tendinous pain and or fasciitis. anti-oxidant, anti-inflammatory and pro-angiogenic
Herbs - Hong Hua, Xuduan, Da Huang, Dang Gui, Niu Xi

* OSTEO8 FORMULA-TCM

Replenishes Kidney jing (essence) for patients with symptoms of osteoporosis and bone fractures. Spleen Qi Deficiency with Lower Jiao Dampness. Strengthening the bones, replenishing Kidney jing, move qi, activate blood, reduce swelling, alleviate pain, benefit bone, strengthen Spleen, bone fracture recovery, protection against long-term degenerative conditions like osteoporosis; encourage blood vessel formation, help with wound healing and tissue regeneration.

HERBS

-Lu Jiao (Cornu Cervi) - yang tonic, replenishes Kidney jing (essence), nourishes blood and strengthens sinews and bones
-Gu Sui Bu (Rhizoma Drynariae), Xu Duan (Radix Dipsaci) - yang tonics, these are a good pair of herbs for bone fractures or bad sprains to promote mending of bones and to relieve soreness, weakness, and pain
-Gui Ban (Plastrum Testudinis), Gou Qi Zi (Fructus Lycii), E Jiao (Colla Corii Asini) - yin and blood tonics, all go to the Liver and Kidneys to nourish essence and support bone and tissue healing
-Dang Gui (Radix Angelicae Sinensis), Ren Shen (Radix et Rhizoma Ginseng) - blood and qi tonics respectively, added to provide overall strengthening for the body during recovery

* PODOPATHY-FOOT PAIN-TCM

The traditional Chinese medicine composition has effects of clearing away heat and toxic materials, removing stasis, dredging collaterals, relaxing muscles, stimulating blood circulation, diminishing inflammation and relieving pain, is a pure traditional Chinese medicine preparation, is safe and reliable, is free of toxic and side effects. Podopathy such as dry feet, chapping feet and beriberi, and also realizes a good treatment effect for constipation.

Herbs - Pu Gong Ying, Xiao Ji, Che Qian Zi, Zi Hua Di Ding

* ROSY TINCTURE

Rosacea is considered to be chi and heat stagnation, and Blood stagnation in the Lung and Stomach channel — which open onto the nose, the sides of the nose, and the cheeks. ROSY contains a carefully chosen combination of herbs and flowers designed to cool and nourish the blood, increase microcirculation, strengthen capillaries, and help drain the heat from the Lung and Stomach channels.

Herbs - Sheng Di Huang, Dang Gui, Huang Qin, Hong Hua, Chuang Xiong, Zhi Mu, Pu Gong Ying, Chi Shao

Shi Gao, Mu Dan Pi, Zhi Zi, Jie Geng, Gan Cao

* ZHENG GU SHUI Bone Setting Water

Zheng Gu Shui is a popular liniment for pain relief and injury recovery in traditional Chinese medicine. Bone Setting Water's blend of herbs, combined with its analgesic and anti-inflammatory properties, make it a versatile remedy for various musculoskeletal conditions.

Uses - Pain Relief. Improved Circulation. Injury Recovery. Musculoskeletal anti-inflammatory.

HERBS

-Zhang Nao (Camphor): Relieves pain, antifungal, anti-itch, anti parasitic, and improves circulation.
-Bo He Nao (Menthol): Relieves pain, cooling, opens pores, and allows other herbs to permeate the skin.
-Hu Zhang (Knotweed rhizome): Relieves pain and promotes circulation, anti-inflammatory, antibacterial, and antiplatelet (unblocks circulation where anticoagulants are ineffective.)
-E Zhu (Curcumae rhizome): Promotes circulation, relieves pain, and antibacterial.
-Rou Gui (Saigon cinnamon bark): Promotes circulation, encourages generation of qi and blood, antiplatelet, antibacterial, warming, and relaxes muscles.
-Bai Zhi (Angelica root): Relieves pain, antibacterial and antifungal, and relaxes muscles.
-Hua Jiao (Chinese prickly ash): Warming, relieves and numbs pain, antiparasitic and antibacterial, and promotes circulation.
-Xu Chang Qing (Paniculate swallow-wort root): Relieves joint pain, pain due to trauma, heals rashes, sores, and relieves skin itching including eczema and snakebite.
-Qian Jin Ba (Moghania root): Strengthens sinew and bone, decreases inflammation, and relieves arthritis and bone pain.
-San Qi (Notoginseng root): Stops bleeding, relieves pain, and reduces swelling, bruising, and inflammation.
-Shan Jin Che (Arnica flower): Anti-inflammatory, relieves bruising, muscle soreness, and aching joints.
-Yan Hu Suo (Corydalis): Anti-inflammatory, promotes circulation, calms overactive and painful nerves.

1.3.3.48 RT-TCM-48

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_48

Bao He Wan, Cerebral Infarction-TCM, Clear Tincture, Gui Ling Gan Lu Yin, Nutritional Flavonoids-TCM, Sinus Relief-TCM. Spirulina Mix-TCM, Xinkeshu Tablets, Ya-Ba Meth Withdrawal-TCM Herbs-Molecules

Recordings Updated in June 2025

* BAO HE WAN - 保和丸 - Preserve Harmony Pill. Citrus and Crataegus Formula. Pills for Indigestion. Po Chai Pills

ACTIONS - Disperses Food. Harmonizes the Stomach

SYNDROMES - Food Stagnation in the Stomach

CLINICAL MANIFESTATIONS - Distention and fullness in the chest and epigastrium. Abdominal distention with occasional pain. Rotten smelling belching. Acid regurgitation. Nausea and vomiting. Aversion to food. Maybe diarrhea. Dysentery. Maybe constipation. Anorexia. Bad breath. Intermittent fever.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - Contraindicated for those with Spleen Deficiency. Use with caution during pregnancy.

NOTES - With modifications, this formula relieves chemotherapy-induced nausea and vomiting in cancer patients.

HERBS AND ACTIONS

-Shan Zha - Reduces all types of Food Stagnation especially meat and fatty foods. With Shen Qu, for general indigestion and Food Stagnation. With Lai Fu Zi and Shen Qu, reduces stagnation and accumulation caused by overindulgence in food and drink of all types. With Mai Ya and Shen Qu, for abdominal distention, belching, diarrhea and anorexia due to Food Stagnation and childhood nutritional impairment due to improper breast feeding.

-Shen Qu - Reduces Food Stagnation, promotes digestion, reduces stagnant alcohol, moves Qi and harmonizes the Stomach.

-Lai Fu Zi - Descends Qi and reduces accumulation of Phlegm from stagnant grains. With Shan Zha, Shen Qu and Chen Pi, for abdominal distention, borborygmus, belching and acid regurgitation due to stagnation in ST or Intestines. With Ban Xia, for distention and vomiting due to Food Stagnation.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness, transforms Phlegm and descends Qi.

With Ban Xia, moves Qi and transforms stagnation to harmonize the Stomach and stop nausea and vomiting.

-Ban Xia - Descends Qi, transforms Phlegm, harmonizes the Stomach and reduces distention. With Chen Pi, for Stomach Qi Disharmony with epigastric and abdominal distention or pain. With Fu Ling, expels Phlegm and stops nausea and vomiting, hiccups, coughs with clear, profuse Phlegm and loose and watery stools, treats Phlegm, Thin Mucus and turbid Dampness and prevents turbid Phlegm and Dampness from disturbing the Heart with dizziness, palpitations and insomnia.

-Fu Ling - Strengthens the Spleen, drains Dampness, harmonizes the Middle Jiao and transforms Phlegm. With Ban Xia, expels Phlegm and stops nausea and vomiting. With Ban Xia and Chen Pi, for nausea, vomiting, chest fullness and distention, and anorexia due to congested fluids.

-Lian Qiao - Clears Heat due to Stagnation.

-Mai Ya - Added to reduce stagnation from grains.

TREATS

Acute gastroenteritis. Acute exacerbations of chronic gastroenteritis. Chronic hepatitis. Acute hepatitis. Acute pancreatitis. Chronic pancreatitis. Atrophic gastritis. Obesity. Insomnia. Abdominal pain. Asthma. Cough. Pertussis. Nausea/Vomiting. Gastric hyperacidity. Peptic ulcer. Celiac disease. Diarrhea. Acute or chronic cholecystitis. Indigestion. Gastralgia. Gastrointestinal influenza. Gastrolithiasis. Anorexia. Acid regurgitation. Hiccups. Stomach cancer. Bronchitis. Pneumonia. Constipation. Abdominal fullness and distention. Hematemesis. Bad breath. Temporomandibular joint syndrome (TMJ). Anorexia associated with AIDS/HIV.

* CEREBRAL INFARCTION-TCM

Cerebral Infarction is caused by blockage of blood circulation and insufficient blood oxygen supply in the brain, which will cause irreversible injury to the brain function of patients. The formula promote blood circulation and remove blood stasis, stimulate meridians and collaterals, strengthen the liver and nourish the kidneys.

Huang Qi can invigorate qi, Niu Xi can relax veins and activate blood, Di Long can regulate veins, and Chuan Xiong has the effect of activating qi and blood. The combination of TCM herbs can significantly reduce the blood viscosity of patients, inhibit platelet aggregation, and repair necrotic nerve cells, which can substantially optimize the prognosis and sequelae of cerebral infarction.

Herbs - Di Long, Dang Gui, Tu Bie Chong, Shui Zhi, Hong Hua, Niu Xi, Chi Shao, Chuan Xiong, San Qi, Ji Xue Teng, Huang Qi

* CLEAR TINCTURE

CLEAR (tincture) is designed for acne prone skin and developed for cystic acne, it can work on any hot, superficial breakouts. CLEAR is designed to calm blemishes and deep eruptions by healing skin from within. The TCM herbs in this formula are known to clear heat and disperse stagnation, since acne is considered to reflect internal heat in the Stomach, Lung, or blood levels.

Herbs - Jin Zhan Ju, Jing Jie, Lian Qiao, Fang Feng, Dang Gui, Chuang Xiong, Chi Shao, Bai Zhi, Jie Geng, Chai Hu, Chen Pi, Huang Qin, Zhi Zi, Gan Cao

* GUI LING GAN LU YIN - 桂苓甘露飲 - Cinnamon and Poria Sweet Dew Drink. Cinnamon and Poria Sweet Dew Decoction

ACTIONS - Expels Summerheat. Clears Heat. Regulates Qi. Resolves Dampness

SYNDROMES - Summerheat with Internal Stagnation of water and Dampness

CLINICAL MANIFESTATIONS - Fever. Headache. Irritability. Extreme thirst. Dysuria with reduced urine. Oliguria with reddish urine. Foul smelling vaginal discharge. Yellow urine. Dirty complexion. Severe: simultaneous vomiting and diarrhea. Abdominal fullness, pain or stifling sensation. All symptoms and signs occur during the summer.

CONTRAINDICATIONS AND HERB/DRUG INTERACTIONS - This formula treats Summerheat and Dampness with overwhelming Heat and Dampness or Heat more pronounced than Dampness. It is contraindicated for those with Dampness more pronounced than Heat.

HERBS AND ACTIONS

-Hua Shi - Promotes urination, drains Heat from the Urinary Bladder, expels Damp-Heat, releases Summeheat and resolves Dampness. With Gan Cao, for Summerheat causing painful urinary dysfunction, thirst, irritability, and fever.

-Gan Cao - Tonifies the Spleen, augments Qi, clears Heat and moderates and harmonizes the harsh properties of other herbs.

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability and quenches thirst.

-Han Shui Shi - Clears Heat, drains Fire from the Yang Ming/Qi Level and expels Summerheat. With Shi Gao, for Excess Qi Level Heat. With Shi Gao and Huan Shi, for Heat in the Yang-Ming/Qi level and Summerheat with high fever, thirst and irritability.

-Rou Gui - Leads the Fire back to its source.

-Zhu Ling - Promotes urination, leaches out Dampness and dispels Damp-Heat. With Zhu Ling, drains Damp, unblocks and drains urinary pathways and drains Heat from the Bladder.

-Fu Ling - Promotes urination and leaches out Dampness. With Ze Xie, facilitates the removal of water and leaches out Dampness to treat stagnant water and Dampness leading to edema, jaundice, diarrhea, Milky Lin, and scanty, difficult urination with abdominal distention. With Ze Xie and Zhu Ling, for dysuria. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Zhu Ling, promotes urination.

-Ze Xie - Promotes urination and leaches out Dampness. With Bai Zhu, for Spleen Deficiency leading to accumulation of Dampness with urinary difficulty, loose stools, diarrhea, Milky Lin or vaginal discharge.

-Bai Zhu - Dries Dampness and promotes water metabolism. With Zhu Ling and Ze Xie, for edema due to Internal Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency. With Fu Ling, Zhu Ling and Ze Xie, for edema with Spleen Deficiency.

TREATS

Acute gastroenteritis. Cholera. Heat stroke. Kidney stones. Urethritis. Thrush. Abdominal pain. Headache. Dysentery. Diarrhea. Infantile diarrhea. Vomiting. Allergy. Fever. Vaginal discharge.

* NUTRITIONAL FLAVONOIDS-TCM

Nutritional flavonoids with a focus on skin, hair and nails, and water.

Icariin, Corilagin, Gallic acid, Oleuropein, Caffeine, Hydroxysafflor yellow A, Linoleic acid, β-sitosterol, Bicyclo(10.1.0)tridec-1-ene, Quercitrin, L-Maackiain, Medicarpin, Shikimic acid, Procyanidin B-3, Ginsenoside Rb1, Anthraquinone, Sabinene, Isobornyl acetate, 2,3,5,4′-Tetrahydroxystilbene 2-O-β-D-glucoside, Emodin, Oregonin, Myristoleic acid, Linoleic acid, Decursin , 3-Deoxysappanchalcone, 7-Hydroxycoumarin, Protocatechuic acid, Ferulic acid, Kaempferol, Isoquercetin, 3,4,5-Tri-O-Caffeoylquinic acid, Octaphlorethol A, α-Tocopherol, Oleic acid, Costunolide, Morroniside, Timosaponin BII, Apo-9′-fucoxanthinone, Soyasaponin I, Kaikasaponin III, Myricitrin, Myricetin, Afzelin, Quercetin, Amentoflavone, Ginsenoside Ro, Physcion, 12-Methoxycarnosic acid, Avicequinone C, Dieckol, Sinapic acid, Octaphlorethol A, Fisetin, Phlorofurofucoeckol A, Eckol, Dieckol, Epigallocatechin-3-gallate, Epicatechin-3-gallate, Epigallocatechin, Epicatechin.

* SINUS RELIEF-TCM

Sinus Relief-TCM soothes sinuses and supports nasal function.

HERBS

-Bai Zhi (Fragrant Angelica Root)
-Fang Feng (Siler Root)
-Gan Cao (Chinese Licorice Root)
-Huang Qin (Chinese Skullcap Root)
-Lian Qiao (Forsythia Fruit)
-Xin Yi Hua (Magnolia Flower Bud)
-Ye Ju Hua (Wild Chrysanthemum Flower)
-Jing Jie (Schizonepeta Aerial Parts)

* SPIRULINA MIX-TCM

Spirulina Mix TCM formula balances and supports the immune system, reduces blood lipid levels, lowers blood sugar levels, helps daily colon cleanse, and menopause in women.

Herbs - Luo Xuan Zao, Kun Bu, Hou Po, Huang Qi, Che Qian Zi, Shan Yao, Rou Gui, Yi Yi Ren

* XINKESHU TABLETS

Xinkeshu tablets help maintain endothelial homeostasis in coronary artery disease patients with anxiety, depression, endothelial dysfunction, coronary artery disease, angina pectoris,

Herbs - Dan Shen, Ge Gen, San Qi, Shan Zha, Mu Xiang

* YA-BA METH WITHDRAWAL-TCM HERBS-MOLECULES

AT1R blockade has been suggested to be a therapeutic target for the cognitive deficits associated with a wide range of central nervous system disorders, including Alzheimer's disease, HIV infection, neuropathic pain, Parkinson's disease, schizophrenia, and depression.
ATR type 1 (AT1R) antagonist, candesartan cilexetil, effectively reduced METH self-administration and reinstatement, in conjunction with the counter-regulation of D2R and AT1R. Methamphetamine (METH) use disorder.

Adenosine has an inhibitory effect in the central nervous system (CNS). Caffeine's stimulatory effects are credited primarily (although not entirely) to its capacity to block adenosine receptors, thereby reducing the inhibitory tonus of adenosine in the CNS. This reduction in adenosine activity leads to increased activity of the neurotransmitters dopamine and glutamate.Dipyridamole helps treat cardiomyopathy, and potentiates the effects of adenosine

- Addiction - Candesartan cilexetil, Adenosine, Dipyridamole, Beta-sitosterol, S-Scoulerine, Isocorypalmine, Medicarpin, Hyndarin, Decylubiquinone, Nicotinamide

- Withdrawal moles - Pseudoginsenoside F11, Ginsenoside Re, Ginsenoside Rb1, Baicalein, Rhynchophylline, Hispidulin, Kolaviron, Sauchinone, Chlorogenic acid, Caftaric acid, Resveratrol, Limonene, Ginkgolide B, Silibinin, Barakol, Cinnamaldehyde

-Support - Ana-12, RO-5166017, Ibudilast, Selank

1.3.3.49 RT-TCM-49

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_49

Chai Hu Li Zhong Tang, Dahuang Baiji Spray, Danggui Buxue Tang, Kushen Injection, Phlegm-purging Decoction, San Huang Gu Ben Zhi Ke, Shenma Yizhi Decoction, Shenzhi Jiannao Formula, Throat Stuck Fish Bone-TCM

Recordings Updated in June 2025

* CHAI HU LI ZHONG TANG

Chai Hu Li Zhong Tang (CHLZT) significantly reduces serum levels of total cholesterol and triglyceride, also significantly reduces the numbers of lipid droplets in the liver tissues. CHLZT improves the non-alcoholic fatty liver disease condition by regulating the hepatic lipid metabolism.

Herbs - Chai Hu, Huang Qin, Ban Xia, Dang Shen, Baizhu, Fu Ling, Sheng Jiang, Gancao, Gan Jiang, Da Zao

* DAHUANG BAIJI SPRAY

Dahuang Baiji Spray is Dahuang and Baiji. Used for radioactive skin damage, regulates

ALOX5 and inhibits inflammation.

Herbs - Bai Ji, Da Huang

* DANGGUI BUXUE TANG

Danggui Buxue Tang (DBT) has good therapeutic effects on radiation-induced myocardial damage.

Herbs - Huang Qi, Dang Gui

* KUSHEN INJECTION

Kushen Injection is a complex mixture of compounds extracted from two medicinal plants and has been used in Chinese hospitals to treat cancer for over twenty years. Kushen Injection is Kushen and Baituling. It has remarkable therapeutic effects.

Kushen Injection has been approved by the State Food and Drug Administration (SFDA) of China for clinical use since 1995 (State medical license no. Z14021231) and it has been clinically used to treat a variety of cancers including lung cancer, liver cancer, breast cancer, pancreas cancer, esophageal cancer, ovarian cancer and colorectal cancer.

Kushen injection as a supportive treatment for colorectal cancer, has been found to relieve pain, bleeding and other inflammatory reactions during radiotherapy thus reducing the severity of radiation-induced gastrointestinal mucositis.

* PHLEGM-PURGING DECOCTION

Phlegm-purging decoction, a classic Chinese herbal compound for dementia, could effectively reduce hippocampal neuron damage by reducing glutamate concentration and NMDAR expression.

Herbs - Tian Nan Xing, Ban Xia, Chen Pi, Shi Chang Pu, Zhu Ru, Zhi Shi, Ren Shen, Fu Ling, Sheng Jiang, Gan Cao

* SAN HUANG GU BEN ZHI KE

The Chinese herbal formula San Huang Gu Ben Zhi Ke has shown good clinical efficacy in COPD in preclinical studies. Animal experiments have shown that it has mucosal immune barrier function and can maintain airway wall integrity, reduce inflammatory cell infiltration, promote inflammatory damage repair, and relieve narrow airway conditions.

It is hypothesized that SHGBZK will have beneficial effects in reducing the frequency and duration of acute exacerbations, improving the exercise capacity function of patients with stable COPD diagnosed with a deficiencies in lung qi and spleen qi.

Herbs - Huang Qi, Huang Jing, Chen Pi, Bai Bu, Wu Wei Zi, Chi Shao, Huang Qin

* SHENMA YIZHI DECOCTION / 参麻益智汤

SMYZD is a compound formula with functions of supplementing qi, activating blood circulation, calming the liver and suppressing liver yang. Preclinical studies support that SMYZD could intervene in complicated molecular pathways underlying the pathogenesis of Vascular dementia and as mitochondrial targeted therapy for neurodegenerative diseases.

Herbs - Tian Ma, Gui Jian Yu, Ren Shen, Chuan Xiong

* SHENZHI JIANNAO FORMULA /参知健脑方

Shenzhi Jiannao Formula could reduce the level of APP, Aβ1-42 and 8-OHdG, so as to protect mitochondrial function and improve learning and memory ability.

Herbs - Zhi Mu, Chi Shao, Ren Shen

* THROAT STUCK FISH BONE-TCM

A simple remedy to dislodge fish bones stuck in the throat.

Herbs - Wei Ling Xian, Cao Guo, Sha Ren

1.3.3.50 RT-TCM-50

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_50

Anti-Diabetic Foot Ulcer Formula, Liver Detox Formula, Niu Huang Jie Du Pian, Plum Flower-Tian Ma Teapills, Shen Ying Yang Zheng Dan, SHL Oral Liquid, Sinew Herbal Ice, Smart Soup Herbal Formula, ZD-I Formula

Recordings Updated in June 2025

* ANTI-DIABETIC FOOT ULCER FORMULA

The anti-diabetic foot ulcer formula contains ingredients active in modifying tissue glucose homeostasis in vitro but these biological activities could not be associated with improved glycaemic control of diabetes in vivo.

Herbs - Huang Qi, Sheng Di Huang, Ba Qia, Bai Zhu, He Shou Wu, and Fang Ji

* LIVER DETOX FORMULA (Dr. Jake Fratkin's Herbal Formula)

TCM Application: Soothes liver qi, moves liver blood, tonifies liver blood, nourishes liver yin, clears liver heat.

Liver Detox Formula promotes Phase 1 and Phase 2 liver detoxification of environmental toxins and heavy metals by normalizing TCM functions of the liver. Environmental toxins are ubiquitous in the food, air and water, and include plastics, phthalates, solvents, pesticides, and herbicides.

The formula is also an excellent regulator of liver function according to TCM, and can be used for gynecological disorders due to liver dysregulation, and liver enzyme elevation due to infection.

Herbs - Dang Gui, Bai Zhu, Huang Qin, Bai Shao, Xiang Fu, Yu Jin, Wu Wei Zi, Gou Qi Zi, Mai Dong

* NIU HUANG JIE DU PIAN - 牛黃解毒片 - Cattle Gallstone Pill for Detoxification. Antiphlogistic Pills with Calculus Bovis

ACTIONS - Purges Fire. Detoxifies. Draws out pus

SYNDROMES - Intense Heat or Fire in the Liver and Stomach

CLINICAL MANIFESTATIONS - Headache. Dizziness. Red eyes. Tinnitus. Oral ulcers. Bleeding gums. Constipation.

HERBS AND ACTIONS

-Niu Huang - Drains Heat, clears the Live and resolves Fire toxicity.

-Xiong Huang - Dries Dampness, expels Phlegm and relieves toxicity.

-Bing Pian - Clears Heat, drains Fire, resolves toxicity, alleviates pain and dissipates nodules.

-Da Huang - Clears Heat, purges accumulations and reduces Fire toxicity.

-Shi Gao - Clears Blazing Stomach Fire, heals eczema, burns and ulcerated sores and wounds.

-Huang Qin - Drains Fire and detoxifies.

-Jie Geng - Expels pus. With Gan Cao, for Lung abscess with expectoration of pus and pain in the chest and flanks. With Gan Cao and Huang Qin, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat.

-Gan Cao - Clears Heat, relieves Fire toxicity and moderates and harmonizes the properties of other herbs.

TREATS - Tonsillitis. Periodontitis. Pharyngitis. Oral ulcers. AIDS/HIV. Acute leukemia. Comedones (blackheads). Boils. Furuncles. Constipation. Conjunctivitis. Tinnitus. Toothache. Red eyes.

* PLUM FLOWER-TIAN MA TEAPILLS, Gastrodia Teapills

Plum Flower Tian Ma Teapills is a Chinese Herbal Medicine which addresses chronic deficiency patterns (of Liver & Kidney yin) that result in Liver yang rising.

This formula is specifically recommended for those with chronic/recurring headaches (pounding, tension, and migraine headaches to give a few examples) and dizziness & vertigo that are rooted in Liver and Kidney yin deficiencies. Other secondary symptoms that point to the appropriate use of this formula include: insomnia, irritability, fatigue, and a red, flushed face w/ the sensation of heat rushing to the head.

This formula also extinguishes wind and can be used concurrently when headaches and dizziness are accompanied by aching, painful, stiff joints where the symptoms get worse in cold and damp weather (wind-damp bi syndrome). Contraindicated during pregnancy.

-Shu Di Huang - Prepared Rehmannia - Radix Rehmanniae Preparata
-Dang Gui - Angelica Root - Radicis Angelicae Sinensis
-Qiang Huo - Notopterygium - Rhizoma et Radix Notopterygii
-Du Zhong - Eucommia Bark - Cortex Eucommiae
-Tian Ma - Gastrodia - Rhizoma Gastrodiae
-Xuan Shen - Scrophularia - Radix Scrophulariae
-Huai Niu Xi - Achyranthes Root - Radix Achyranthis Bidentatae
-Bi Xie - Tokoro - Rhizoma Dioscoreae Hypoglaucae

-Du Huo - Pubescent Angelica Root - Radix Angelicae Pubescentis
-Fu Zi - Aconite (prepared) - Radix Aconiti Lateralis Praeparata

* SHEN YING YANG ZHENG DAN, Nourishing Bolus

FORMULA ACTIONS - Enriches the Blood. Moistens Dryness. Expels Wind. Regulates Blood flow

SYNDROMES - Blood Deficiency due to Wind-Dryness

CLINICAL MANIFESTATIONS - Headache. Dizziness. Vertigo. Tinnitus. Blurred vision. Sensation of Heat rushing to the head. Insomnia. Dream disturbed sleep. Numbness. Twitching and spasms in the extremities. Trembling tongue. Light-headedness. Pallor. Broken skin. Dry skin. Sometimes bleeding and pain. Worse in Cold weather. Better during the summer.

HERBS AND ACTIONS

-Dang Gui - Tonifies, invigorates and harmonizes the Blood and disperses Cold. With Shu Di Huang, for Heat symptoms due to Yin Deficiency and Devastated Blood. With Chuan Xiong, harmonizes, nourishes and invigorates the Blood and disperses Blood Stasis.

-Chuan Xiong - Invigorates the Blood, promotes the movement of Qi and expels Wind.

-Bai Shao -Nourishes the Blood, astringes Yin and calms Liver Yang and Liver Wind. With Dang Gui, nourishes Yin and Blood. With Dang Gui and Shu Di Huang, for dizziness, blurred vision, and dysmenorrhea due to Blood Deficiency or Stasis.

-Shu Di Huang - Nourishes Jing and Blood and nourishes Liver and Kidney Yin. With Dang Gui, for Blood Deficiency marked by dizziness, palpitations, insomnia and menstrual dysfunction. With Dang Gui, Bai Shao and Chuan Xiong, for anemia.

-Tian Ma - Extinguishes Wind and calms the Liver. With Chuan Xiong, for overwhelming attacks of Wind leading to migraines and dizziness so severe that the person feels as if they are about to fall over.

-Qiang Huo - Releases the Exterior, disperses Cold and guides Qi to the Tai Yang and Du channels.

-Tu Si Zi - Strengthens Yang, nourishes Yin, astringes Jing and tonifies the Kidneys and Liver.

-Mu Gua - Relaxes the sinews, increases Qi and Blood circulation and unblocks the channels. With Dang Gui and Bai Shao, for Blood Deficiency causing muscle spasms.

TREATS - Alopecia. Dry skin. Seborrheic baldness. Dandruff.

* SHL ORAL LIQUID

SHL oral liquid is a patented drug, and as evident from the name SHL, it consists of three main herbal ingredients: shuang, which stands for shuanghua (双花) or jinyin hua (金银花), otherwise known as honeysuckle (including several species of the genus lonicera); huang, which refers to huangqin (黄芩), a.k.a. Chinese skullcap (Scutellaria baicalensis); and lian, which is short for lianqiao (连翘), and is commonly called golden bell (Forsythia suspensa). According to TCM theory, the particular formula can expel pathological wind, relieve exterior symptoms, cleanse one of excess heat, and detoxify.

* SINEW HERBAL ICE

Plica syndrome, also called synovial plica syndrome, is a condition involving anterior knee pain. It is due to chronic or acute irritation and inflammation of the plica and synovial tissue around the plica. Under most circumstances, plica are normal non-painful structures.

Stasis is what causes swelling, inflammation, hematoma, and the discoloration of bruises. Stasis can prevent your body from healing fully and slows down the healing process. The herbal properties work to eliminate this so the body can reabsorb the fluids and increase the flow of blood so that pain relief and healing can take place. The increased circulation aids in this process and brings vital oxygen and nutrients to the injured area so it can repair and heal.

Sinew Herbal Ice contains Chinese herbs that kill pain, but painkilling herbs are not mere analgesics that mask pain. The herbs used work to break up stasis, or stagnant blood and fluids, and increase circulation to the injured area. Stasis is what causes swelling, inflammation, hematoma, and the discoloration of bruises. Stasis can prevent your body from healing fully and slows down the healing process. The herbal properties work to eliminate this so the body can reabsorb the fluids and increase the flow of blood so that pain relief and healing can take place. The increased circulation aids in this process and brings vital oxygen and nutrients to the injured area so it can repair and heal.

* anterior or anteromedial knee pain (in front and towards the midline of the patella)
* clicking may be present when bending the knee
* a high-pitched snapping may be present when bending the knee
* the knee may give away during activity
* the knee may lockup or catch during activity
* symptoms are usually aggravated by activities that require the knee to bend
* the medial or inferior aspect of the patella is usually tender

* swelling may occur, especially after prolonged physical activity

Herbs - Hong Hua (Safflower), Pu Gong Ying (Dandelion), Zhi Zi (Gardenia), Huang Bai (Phellodendron), Da Huang (Rhubarb), Huang Qin (Scutellaria Root)

* SMART SOUP HERBAL FORMULA

Smart Soup herbal formula, has been applied for many centuries, and is still prescribed by Chinese medical physicians to patients with aging-related cognitive impairment.

SS, a three-herb formula officially documented in Gu Jin Yi Jian, a book published in 1576, is composed of Rhizoma Acori Tatarinowii (AT), Poria cum Radix Pini (PRP) and Radix Polygalae (RP). Each component is frequently used in different TCM formulae for their pharmacological efficacies against dysfunctions of the central nervous system (CNS). AT has been shown to exhibit a neuroprotective action and attenuates learning and memory deficits. PRP has been reported to possess sedative activity. RP shows repairing effects on the memory and behavioral deficits in rats, exhibits neuroprotective effects, enhances cognition and memory in elderly adults.

Herbs - Shi Chang Pu, Fu Shen, Yuan Zhi

* ZD-I FORMULA

ZD-I Formula treats Osteoarthritis at a cellular level. ZD-I improves the proliferative capacity of mesenchymal stem cells MSCs, implying that it could have a therapeutic benefit associated with microfracture to the repair focal, full-thickness chondral defect by stimulating MSCs. Furthermore, ZD-I inhibits the mineralization of human mesenchymal stem cells hMSCs through down-regulation of osteogenic markers.

Herbs - Niu Xi, Fang Ji, Da Huang, Wei Ling Xian, Gan Cao, Yan Hu Suo, Ci Wu Jia

1.3.3.51 RT-TCM-51

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_51

Aging Tcm Herbs-Molecules, External Ear Skin Tissue Vitality-TCM, Eyelids And Eyelashes TCM Formulation, Fat Metabolism-TCM, Fat Metabolism-TCM Short, Female Senior TCM Pelvic Floor Lift, Male Senior Pelvic TCM Floor Lift, Scalp Health Formula TCM-Molecules, Tendon Repair TCM

* AGING TCM HERBS-MOLECULES

ACTIONS - Promotes longevity, metabolic health, and cellular resilience.

PURPOSE - Promote longevity via senolytics, NAD+ support, and sirtuin activation. Enhance metabolic health through AMPK activation and insulin sensitization. Support detoxification and cellular resilience via NRF2 and methylation balance. Integrate TCM to nourish vital organs and balance systemic energy.

COMPONENTS
-Fisetin - Senolytic, antioxidant, anti-inflammatory
-Quercetin - Antioxidant, senolytic (with synergy to fisetin), mast cell stabilizer
-Metformin HCL - PK activator, insulin sensitizer, longevity candidate
-Berberine - AMPK activator, glucose metabolism, gut microbiome modulator
-Resveratrol - SIRT1 activator, antioxidant, mimics caloric restriction
ROLE - Cellular aging, metabolic optimization, and bioavailability enhancement. Fisetin and quercetin may clear senescent cells; metformin and berberine improve insulin sensitivity and mitochondrial function; resveratrol supports sirtuin pathways.

-Phosphatidylcholine, Cholesterol - Enhance bioavailability, support membrane integrity
ROLE - Phosphatidylcholine and Cholesterol serve as delivery enhancers or liposomal carriers.

-Huang Qi - Tonifies Qi and Blood
ROLE - Immunomodulation, telomere support (via astragaloside IV)

-Nicotinamide mononucleotide, TMG (Betaine), L-Sulforafane - NMN boosts NAD+ levels, TMG (Trimethylglycine/Betaine)ensures methylation balance (important when using NAD+ precursors), and sulforaphane activates protective genes via NRF2.
ROLE - Supports cellular detoxification, epigenetic health, and energy metabolism.

- Liu Wei Di Huang Wan Formula
- Shu Di Huang - Anti-inflammatory, neuroprotective
- Shan Zhu Yu - Antioxidant, anti-aging
- Shan Yao - Adaptogenic, supports digestion
- Fu Ling - Diuretic, immune support
- Mu Dan Pi - Anti-inflammatory, cardiovascular support
- Ze Xie - Lipid metabolism, diuretic
ROLE - Nourish kidney and liver essence, support immune and metabolic balance, and clear dampness and heat

NOTES
- Interactions: Metformin, berberine, and resveratrol may interact with medications or affect blood sugar.
- Bioavailability: Liposomal delivery (phosphatidylcholine/cholesterol) is used to enhance absorption.

- TCM complexity: Herbal synergy is key, but individual constitution matters in TCM.
- Pair with grounding (barefoot earth contact) to stabilize biofields and/or the 'Grounding' mp3 (RTS Rife Frequencies)

* EXTERNAL EAR SKIN TISSUE VITALITY-TCM

External ear changes in seniors (such as dryness, thinning, discoloration, or sagging) relate to Kidney and Liver decline, since these organs govern aging, hair, skin, and connective tissues.

The ears reflect Kidney health in TCM. Age-related changes (pale, thin, or sagging ears) suggest Kidney Jing depletion. Liver Blood deficiency can also lead to dry, brittle skin.

Here is a TCM formula to support external ear health:

Herbs for Skin & Tissue Vitality:

- He Shou Wu - Famous "anti-aging" herb that darkens hair, moisturizes skin, and strengthens tendons. Often used for dry, thinning, or wrinkled skin, including the ears.

- Gou Qi Zi - Nourishes Liver and Kidney Yin, supports collagen and skin hydration.

- Sang Shen - Rich in antioxidants, promotes blood circulation to skin.

- Dang Gui - Moisturizes dry skin and improves microcirculation.

* EYELIDS AND EYELASHES TCM FORMULATION

In Traditional Chinese Medicine (TCM), inflamed eyelids (blepharitis) and vanishing eyelashes (madarosis) are often associated with Internal Heat, Dampness, Blood Deficiency, or Liver / Kidney imbalances. Here’s a TCM formula approach for internal use to address these issues:

Formula Actions
- Reduces eyelid inflammation (Heat / Dampness).
- Nourishes Blood / Liver / Kidney to support eyelash regrowth.

Base Formula: Modified Long Dan Xie Gan Tang (Gentiana Drain the Liver Decoction)

- For Heat/Dampness in Liver Channel
- Long Dan Cao (Gentiana) - Clears Liver heat/damp
- Huang Qin (Scutellaria) - Clears heat, reduces inflammation
- Shan Zhi Zi (Gardenia) - Drains fire, cools blood

- Ze Xie (Alisma) - Resolves dampness
- Che Qian Zi (Plantago) - Clears damp-heat, promotes urination
- Dang Gui (Angelica Sinensis) - Nourishes blood, prevents excessive drying
- Sheng Di Huang (Rehmannia) -Cools blood, nourishes yin
- Ju Hua (Chrysanthemum) - Clears liver heat, benefits eyes
- Gou Qi Zi (Lycium Berry) - Nourishes liver/kidney, strengthens eyes

Modifications
- For Blood Deficiency (pale lids, dry eyes): + Bai Shao, Shu Di Huang.
- For Spleen Deficiency (fatigue, loose stools): + Bai Zhu, Huang Qi.
- For Severe Inflammation: + Jin Yin Hua, Lian Qiao.

* FAT METABOLISM-TCM

Fat-Breaking & Metabolism-Boosting Herbs
Lv Cha - Green Tea (rich in EGCG, promotes fat oxidation)
Jiao Gu Lan - Gynostemma pentaphyllum (AMPK activator)
Shan Zha - Hawthorn (lowers triglycerides, breaks down fats)
Ge Gen - Kudzu Root (contains puerarin, anti-obesity effects)
He Ye - Lotus Leaf (reduces lipid absorption, promotes lipolysis)

Blood-Activating & Anti-Cellulite Herbs
Dan Shen - Red Sage (improves microcirculation)
Jiang Huang - Turmeric (curcumin reduces fat inflammation)
Yan Hu Suo - Corydalis (pain relief, may help with lipomas)

Qi-Regulating & Dampness-Resolving Herbs
Bai Zhu - Atractylodes (strengthens Spleen, reduces dampness)
Chen Pi - Dried Tangerine Peel (regulates Qi, reduces bloating)
Jie Geng - Platycodon (resolves phlegm, aids fat metabolism)

* FAT METABOLISM-TCM Short

Shortened Formula
He Ye - Reduces lipid absorption, promotes lipolysis. (Fat-Breaking & Metabolism-Boosting Herbs)
Shan Zha - Lowers triglycerides, breaks down fats, (Fat-Breaking & Metabolism-Boosting Herbs)
Dan Shen - Improves microcirculation. (Blood-Activating & Anti-Cellulite Herbs)
Chen Pi - Rregulates Qi, reduces bloating. (Qi-Regulating & Dampness-Resolving Herbs)

* FEMALE SENIOR TCM PELVIC FLOOR LIFT

Bu Zhong Yi Qi Tang (Modified) + Kidney Yang Tonics. This formula strengthens the Spleen Qi (to lift pelvic muscles) and Kidney Yang (to improve vitality and circulation). Helps restoring female pelvic floor muscles and improving blood flow (especially in older adults) involves a combination of Qi-tonifying, Kidney-Yang-supporting, and blood-activating herbs. Pelvic floor dysfunction, urinary issues, or uterine pprolapse concerns in aging women often relate to Kidney Yang deficiency, Spleen Qi sinking, or Blood stagnation.

Key Differences in Female Pelvic Floor Issues

Women are more prone to:
- Uterine prolapse (due to childbirth, aging, or chronic Qi sinking).
- Stress urinary incontinence (from weakened Qi or Kidney Yang).
- Pelvic blood stagnation (contributing to pain, fibroids, or poor circulation).
- Postpartum or menopausal pelvic weakness (linked to Blood and Kidney Essence depletion).

TCM Herbal Formula: Bu Zhong Yi Qi Tang (Modified) + Kidney Yang Tonics. This formula strengthens the Spleen Qi (to lift pelvic muscles) and Kidney Yang (to improve vitality and circulation).

HERBS

Core Formula
-Huang Qi - Tonifies Qi, lifts sinking Spleen Qi, strengthens muscles.
-Dang Shen - Supports Qi and Spleen function.
-Bai Zhu - *Strengthens Spleen, resolves dampness.
-Sheng Ma - Lifts Qi to help with pelvic organ support.
-Chai Hu - Promotes Qi circulation, helps with lifting.

Uterine Support & Prolapse Prevention
-Yi Mu Cao - Activates Blood, resolves pelvic stagnation (helpful for postpartum or menstrual pain).
-Fu Pen Zi - Strong astringent for urinary incontinence, spermatorrhea, or vaginal discharge. Also tonifies Kidney Yang, making it ideal for pelvic weakness.
-Shan Yao - Tonifies Spleen and Kidney, mildly astringent (good for prolapse or loose stools). Less focused on leakage but excellent for overall pelvic support.
-Dang Gui - Nourishes Blood, supports uterine tone.

Menopausal/Kidney Yin-Yang Balance
-Shu Di Huang - (if Yin-deficient with dryness).
-Ba Ji Tian - (if Kidney Yang deficiency dominates).

For Blood Stagnation (Pelvic Pain, Fibroids)
-San Leng & E Zhu - Break Blood stasis.

Modifications
-Shan Yao - Tonify Qi and Blood after Postpartum weakness.
-Long Yan Rou - Tonify Qi and Blood after Postpartum weakness.
-Huang Bai - Chronic yeast infections/dampness.
-Bai Xian Pi - Chronic yeast infections/dampness.
-Zhi Ke - Pelvic organ prolapse (severe) + Huang Qi to enhance lifting.

* MALE SENIOR TCM PELVIC FLOOR LIFT

Bu Zhong Yi Qi Tang (Modified) + Kidney Yang Tonics. This formula strengthens the Spleen Qi (to lift pelvic muscles) and Kidney Yang (to improve vitality and circulation). Helps restoring male pelvic floor muscles and improving blood flow (especially in older adults) involves a combination of Qi-tonifying, Kidney-Yang-supporting, and blood-activating herbs. Pelvic floor dysfunction, urinary issues, or erectile concerns in aging men often relate to Kidney Yang deficiency, Spleen Qi sinking, or Blood stagnation.

HERBS

Core Formula
-Huang Qi - Tonifies Qi, lifts sinking Spleen Qi, strengthens muscles.
-Dang Shen - Supports Qi and Spleen function.
-Bai Zhu - *Strengthens Spleen, resolves dampness.
-Sheng Ma - Lifts Qi to help with pelvic organ support.
-Chai Hu - Promotes Qi circulation, helps with lifting.

Additions for Kidney Yang & Blood Flow:
-Xu Duan - Strengthens tendons, supports pelvic floor.
-Du Zhong - Tonifies Kidney Yang, strengthens lower back.
-Rou Gui - Warms Kidney Yang, improves circulation.
-Dan Shen - Activates blood, improves microcirculation.
- Niu Xi - Directs blood downward, supports pelvic circulation.

Modifications
-Yi Zhi Ren - For frequent urination/incontinence.
- Shan Yao - For frequent urination/incontinence.
-Yin Yang Huo - For erectile dysfunction.
-Ba Ji Tian - For erectile dysfunction.
-Hong Hua - For blood stagnation (pain/swelling).

* SCALP HEALTH FORMULA TCM-MOLECULES

An advanced scalp serum to support hair growth, strengthen follicles, improve scalp health, and enhance delivery of actives. This is an emulsion with liposomal and probiotic

fusion at a pH of ~5.5 (scalp-friendly).

* Water-Soluble Actives and Function
- Taurine - Cellular energy, anti-inflammatory
- Caffeine - Stimulates hair follicles, improves circulation
- MCT Oil C10 - Antimicrobial, supports nutrient absorption
- N-Chlorotaurine / N-Bromotaurine / Bromamine T - Antimicrobial, anti-inflammatory
- 2-Hydroxypropyl-β-cyclodextrin - Solubilizer, enhances delivery
- Dipalmitoylphosphatidylcholine - Liposome stabilizer
- Cationic lipid - Liposome formation, enhances penetration
- Cholesterol - Liposome membrane component
- Chitosan - Film-forming, antimicrobial
- Phosphatidylcholine (soy) - Liposome base
- Ethanol - Solvent, penetration enhancer
- N-Acetylcysteine - Antioxidant, detoxifying
- Niacinamide - Anti-inflammatory, improves barrier function
- Propylene glycol - Humectant, solvent

* Oil-Soluble Actives and Function
- Tributyrin - Anti-inflammatory, scalp microbiome support
- Baicalein - Tanshinone IIA / Cryptotanshinone / Dihydrotanshinone / TCM actives, anti-inflammatory, antioxidant
- Catalpol - Neuroprotective, hair follicle stimulation
- Dioleoylphosphatidylethanolamine - Lipid bilayer support
- Transcutol P - Solubilizer, enhances penetration
- Synthetic KRT6-KRT16 peptides - Keratin signaling, follicle stimulation
- Oleic acid - Emollient, penetration enhancer
- Phytosphingosine - Barrier repair, antimicrobial
- GHK-Cu - Peptide for hair growth and skin regeneration
- Hyaluronate Decasaccharide - Hydration, anti-aging
- 1-O-Acyl Ceramide - Barrier repair
- Ethyl Linoleate - Anti-inflammatory, lipid replenishment

* Probiotic-Liposome Fusion Complex and Function
- Lactobacillus ferment lysate - Microbiome support, anti-inflammatory
- Xylitol / Fructooligosaccharides - Prebiotics, microbiome balance
- Aqueous Core 5.5 Ph - Carrier for hydrophilic actives -Trehalose - Stabilizer, antioxidant

*Performance-Boosting Additives and Function
- Stearylamine - Liposome charge modifier, enhances delivery
- Alpha-Tocopherol - Antioxidant
-Tween80 - Emulsifier, solubilizer

* TCM Herbal Boost (hair thickness) and Function
*Shu Di Huang - Nourishes blood, supports hair growth

*He Shou Wu - Traditional hair tonic, anti-aging
*Huang Qin - Anti-inflammatory, antioxidant
*Dang Gui - Blood circulation, scalp nourishment

* TENDON REPAIR TCM

TCM formula for tendon repair especially for chronic tendinosis, stiffness, and weakness due to Liver / Kidney Deficiency, Blood Stagnation, or poor tendon nourishment.

HERB ACTIONS
-Sang Ji Sheng - Strengthens tendons, expels Wind-Damp, nourishes Liver / Kidney. Antioxidant, anti-inflammatory. Improves tendon elasticity, reduces stiffness, benefits joints.

-Ji Xue Teng - Invigorates Blood, relieves stagnation. Increases microcirculation, may support collagen synthesis. Enhances blood flow to tendons, reduces chronic pain.

-Du Zhong - Tonifies Kidney, strengthens bones/tendons. Contains aucubin (anti-inflammatory, promotes connective tissue repair) .Supports tendon and ligament healing. Strengthens bones and tendons.

-Niu Xi - Moves Blood downward, benefits knees/legs. Anti-arthritic, improves joint function. Directs herbs to lower body, reduces swelling Guides blood downward, good for leg pain.

-San Qi - Stops pain, resolves Blood stasis, promotes healing. Anti-inflammatory, enhances tissue repair. Reduces tendon inflammation,

Enhancements
+Gu Sui Bu - For bone/tendon healing.
+Rou Gui - For severe cold pain.

FORMULA ACTIONS
1. Nourishes Liver & Kidney (Sang Ji Sheng, Du Zhong) - Strengthens tendons long-term.
2. Invigorates Blood (Ji Xue Teng, Niu Xi, San Qi) - Breaks stagnation, improves circulation to damaged tendons.
3. Reduces Inflammation & Pain (San Qi, Du Zhong) - Accelerates healing.
4. Targets Lower Body (Niu Xi) - Guides herbs to legs/calves.

CAUTIONS
- Not for acute injuries with heat/redness.
- San Qi may thin blood (caution with anticoagulants).
- Niu Xi is contraindicated in pregnancy.

1.3.3.52 RT-TCM-52

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_52

Dao Chi San, Fu Zi Li Zhong Wan, Gui Lu Er Xian Jiao, Jiangtangshuluofang, Qing Fei Yi Huo Tang-Modified for Smoking Cessation, Qing Wei San, Si Wu Tang-Modified for Ichthyosis, Xie Huang San, Yu Nu Jian,

* DAO CHI SAN - 導赤散 - Guide Out the Red Powder. Rehmannia and Akebia Formula. Powder to Conduct Heart Fire Downwards. Conduct the Redness (Heat) Powder. Powder of Fresh Rehmannia and Clematis Stem to Conduct Fire Downward. Fire-Inducing Powder

FORMULA ACTIONS - Clears the Heart. Nourishes Yin. Promotes urination. Relieves Lin Syndrome

SYNDROMES - Heart Fire Flaring Up. Small Intestine Excess Heat Heart. Kidney Yin Deficiency. Heat in the Heart and Small Intestine Channels

CLINICAL MANIFESTATIONS - Irritability with a sensation of Heat in the chest. Thirst with a desire to drink cold beverages. Red face. Fever. May be sores around the mouth. Dark, scanty urine. Rough urination. Fidgeting. Warm sensations in the chest. Sores on the tongue. Painful urination (stabbing). Urination short and hesitant. Hematuria. Oliguria. Maybe blood in the urine. Sluggish urination. Irritability. Fatigue.

HERBS AND ACTIONS

-Sheng Di Huang - Cools Heart Fire, nourishes Yin, cools Blood and generates Fluids.

-Mu Tong - Clears Heat from the Heart channel and clears Heat and promotes urination through the Small Intestine channel. With Dan Zhu Ye and Sheng Di Huang, for mouth ulcers, burning throat pain, irritability and insomnia due to Heart Fire.

-Dan Zhu Ye - Alleviates irritability by clearing Heat from the Heart. With Mu Tong and Sheng Di Huang, for Heat in the Heart channel manifesting as chest Heat and irritability, mouth and tongue sores and dark, scanty urine.

-Gan Cao - The tips treat painful urinary dysfunction, relieve toxicity and harmonize.

TREATS - Stomatitis. Nightmares. Acute urinary tract infections. Urethritis. Cystitis. Acute glomerulonephritis. Herpes zoster. Oral cavity infection. Infertility. Prostatitis. Amenorrhea. Blepharitis. Dizziness. Oliguria. Constipation. Anxiety neurosis. Panic

disorder. Neurasthenia. Tinnitus. Low back pain. Congestive Heart failure. Bad breath. Myalgic encephalomyelitis. Gonorrhea. Tongue pain. Deafness. Oral herpes. Tongue ulcers. Canker sores. Thrush. Dysuria. Infectious parotitis. Exanthema maculosum. Acute eczema. Prostatic hypertrophy. Pterygium. Hematuria. Senility. Alzheimer's disease. Depression. Bi-polar disorder. Neurosis. Fatigue. Glossitis. Spermatorrhea. Strangury. Toothache. Epstein-Barr virus syndrome. Red eyes. Sore throat.

CONTRAINDICATIONS - Use caution for those with Spleen and Stomach Deficiency. This formula may not be appropriate for those with repetitive stomatitis.

* FU ZI LI ZHONG WAN - 附子理中丸 - Prepared Aconite Pill to Regulate the Middle. Aconite, Ginseng and Ginger Combination.

FORMULA ACTIONS - Warms Yang. Dispels Cold. Tonifies Qi. Strengthens the Spleen

SYNDROMES - Colon Cold. Spleen Yang Deficiency. Spleen and Stomach Deficiency Cold. Stomach Cold. Spleen and Kidney Yang Deficiency. Tai Yin Deficiency with Cold

CLINICAL MANIFESTATIONS - Severe abdominal and epigastric pain (likes pressure). Cold body. Diarrhea with undigested food. Aversion to Cold. Cold and stiff or rigid extremities. Reduced appetite. Fullness in the epigastrium and abdomen (likes pressure). Lack of thirst. Maybe scanty urine with edema. Nausea and vomiting. Loose stools. Trismus. Constipation (Cold type). Gastric spasms. Mild perspiration. Maybe syncope. Maybe abundant clear urine

HERBS AND ACTIONS

-Gan Jiang - Warms the Spleen and Stomach and eliminates interior Cold. With Gan Cao, for vomiting and epigastric pain due to Spleen and Stomach Deficiency Cold. With Bai Zhu, for diarrhea due to Spleen Deficiency. With Bai Zhu and Ren Shen, for Spleen Yang Deficiency with a cold abdomen, vomiting, and diarrhea. With Fu Zi, counteracts the Internal consequences of an External Wind-Cold attack, warms the Spleen and Kidneys, benefits Yang, and disperses Cold for debilitated Spleen and Kidney Yang with incessant diarrhea, Devastated Yang, overabundance of Yin fluids due to Deficiency Cold and Cold-Damp Bi .

-Ren Shen - Tonifies Yuan Qi, reinforces Yang and harmonizes the middle Jiao. With Fu Zi, for Collapsed Qi and Devastated Yang (spontaneous sweat, ice cold extremities, shortness of breath, etc.). With Bai Zhu, tonifies the transformation and transportation functions of the Spleen.

-Bai Zhu - Tonifies the Spleen, tonifies Qi and dries Dampness. With Ren Shen, tonifies the Spleen and Stomach and dries Dampness. With Gan Jiang, eliminates Cold Dampness in the Spleen with loss of taste, a sticky sensation in the mouth, nausea, vomiting, diarrhea and a thick,white tongue coat and treats bleeding due to Deficiency

of Spleen Yang with hemafecia or hematuria and frequent diarrhea due to Spleen/ Stomach Deficiency Cold.

-Fu Zi - Restores Kidney and Heart Yang, relieves pain, disperses Cold, dispels Dampness and warms the Spleen. With Bai Zhu and Gan Jiang, for Cold abdominal pain with watery diarrhea. With Gan Jiang and Gan Cao, strengthens its actions of fortifying Qi and benefiting the Yang for cold extremities and diarrhea with undigested food due to Collapse of the Spleen and Kidney Yang. With Ren She, Bai Zhu and Gan Jian, for Spleen Yang Deficiency. With Ren Shen, Gan Cao and Gan Jiang, for Heart Yang collapse with vomiting, a fading pulse, icy extremities and profuse perspiration.

-Gan Cao - Tonifies the Qi of the Middle Jiao and harmonizes. With Ren Shen, relieves palpitations and anxiety.

CONTRAINDICATIONS - Contraindicated for those with External invasion with fever. For those with sudden turmoil disorder, stop when diarrhea and vomiting have stopped. Contraindicated for those with Yin Deficiency. Contraindicated during pregnancy.

TREATS
Acute gastritis. Chronic gastritis. Acute or chronic gastroenteritis. Gastrectasis. Gastric or duodenal ulcers. Gastroptosis. Irritable bowel syndrome. Chronic colitis. Sudden turmoil disorder with muscle spasms. Gastroatonia. Gastralgia. Dysentery. Enteritis. Dysmenorrhea. Infertility. Hypothyroidism. Vaginal discharge. Stomach cancer. Polyuria. Alzheimer's disease. Diarrhea. Anemia. Somnolence. Narcolepsy. Celiac disease. Neurasthenia. Tinnitus. Chronic hepatitis. Low back pain. Hemafecia. Chronic peptic ulcer. Forgetfulness. Vertigo. Hypotension. Weakness. Edema. Prostatic hypertrophy. Chronic prostatitis. Chronic hepatitis. Menopause. Ascites. Strangury. Ulcerative colitis. Leukopenia. Nausea/Vomiting. Infantile diarrhea. Cholera. Chronic oral ulcers due to Spleen and Stomach Deficiency Cold. Toxemia during pregnancy. Nervous vomiting in children. Bleeding. Hemorrhoidal bleeding. Indigestion. Constipation (Cold type). Stomach prolapse. Rectal prolapse. Acid reflux. Keratomalacia. Abdominal pain. Postpartum pain. Endometriosis. Raynaud's disease. Abdominal fullness and distention. Colitis. Oliguria. AIDS/HIV. Addison's disease. Behcet's disease. Chronic fatigue syndrome. Abdominal Cold. Crohn's disease. Deafness. Otitis media. Chronic glomerulonephritis. Reduced appetite. Hemorrhoids. Dizziness. Thrombocytopenic purpura. Fatigue. Dysphagia. Chronic nephritis. Nephrotic syndrome. Intestinal tuberculosis. Gastric spasms. Abdominal fullness and distention. Hydrocephalus. Cirrhosis of the Liver.

* GUI LU ER XIAN JIAO - 龟鹿二仙胶 - Tortoise and Deer Two Immortals Glue

A renowned TCM tonic formula that deeply nourishes Kidney Jing (Essence), strengthens Yang and Yin, and supports longevity. It is especially used for deficiency syndromes related to aging, impotence, infertility, and weak bones.

HERBS AND FUNCTIONS
-Gui Ban - Nourishes Kidney Yin, strengthens bones, and replenishes Jing.
-Lu Jiao - Warms Kidney Yang, boosts vitality, and strengthens tendons/bones.
-Ren Shen - Greatly tonifies Qi, enhances immune function, and supports energy.
-Gou Qi Zi - Nourishes Liver and Kidney Yin, benefits eyesight, and supports Jing.

TCM ACTIONS & INDICATIONS
- Tonifies Kidney Jing (Essence) and Bone Marrow - For weak bones, osteoporosis, or delayed development.
- Boosts Yang and Nourishes Yin - Balances both aspects of Kidney energy (unlike single-direction tonics).
- Enhances sexual function - Used for impotence, low libido, infertility (male & female), and premature aging.
- Supports recovery from chronic illness or severe deficiency - Helps rebuild vitality after long-term sickness.

APPLICATIONS
Osteoporosis or arthritis (due to Kidney Jing deficiency).
Male sexual dysfunction (erectile dysfunction, low sperm count).
Female infertility, menopausal weakness, or hormonal imbalances.
Chronic fatigue, adrenal exhaustion, or post-illness recovery.
Anti-aging & longevity support (historically used by the elderly to maintain vitality).

CONTRAINDICATIONS/CAUTIONS

Not for excess heat or damp-heat conditions (e.g., infections, inflammatory disorders).
Caution in hypertension (due to Ren Shen's potential to raise blood pressure in sensitive individuals).
Avoid in early pregnancy unless prescribed by a TCM practitioner.

* JIANGTANGSHULUOFANG - Decrease Glucose Free Collaterals Prescription (Dr. Dashun Chen)

Hyperglycemia reproduces a pattern of apoptosis in Schwann cells. The application of Jiangtangshuluofang normalizes levels of serum insulin and glycosylated hemoglobin and inhibits the apoptosis of Schwann cells surrounding sciatic nerves. The mechanism is thought to be related to the inhibition of proapoptotic factors caspase-3 and Bax and promoting of expression of Bcl-2, an antiapoptotic factor.

TCM views of the etiology and pathogenesis of Diabetic Peripheral Neuropathy: With an increased duration of disease in diabetes, a Deficiency of Yin burns body fluid and blood, resulting in Empty Heat. This increases blood viscosity, resulting in Blood Stasis, as well as blockage of sinews and channels; excessive intake of foods high in fat and sugar content results in the Deficiency of Spleen and Stomach, resulting in the accumulation of Dampness and Phlegm, which has a synergistic effect with stasis;

sinew and channels demonstrate poor nourishment because of the deficiency of Liver and Kidney; the Deficiency of Yin results in a deficiency of Yang, which generates an inner cold that results in microvascular coagulation. These four aspects result in a decreased peripheral flow of Qi and Blood to muscles, sinew, and channels. With regard to visceral organ systems, DPN is related to the Liver, Spleen, and Kidney. The nature of DPN is Deficiency secondarily complicated by Excess; the Deficiency is the root, and the Excess is a subsequent manifestation. The root cause is Deficiency in Qi, Yin, and yang; the subsequent complication is Blood Stasis and Phlegm accumulation.

Indication
Diabetic Peripheral Neuropathy, pattern of Deficiency of Qi and Yin. Fluid Deficiency Heat and Blood Stasis, Deficiency of Blood turning into Wind.

Function
Nourish Yin tonify Qi, clear Heat and moisten dryness, activate Blood and remove stasis, dispel Wind and free collaterals.

Actions
-Shengdihuang, Shanzhuyu, Gouqi zi and Gegen regender fluid and clear heat, nourish yin of liver, kidney and lung.
-Huangqi tonifies Qi. Danshen, Puhuang and Shuizhi remove stasis and free collaterals.
-Huanglian clears heat. Chantui and Jili relieve itching.

Herbs - Shengdihuang, Shanzhuyu, Gouqizi, Gegen, Huangqi, Danshen, Puhuang, Shuizhi (Hirudo), Huanglian, Chantui, Jili

* QING FEI YI HUO TANG (清肺抑火汤) Modified for Smoking Cessation

Compulsive cigarette smoking, viewed through Traditional Chinese Medicine (TCM), is considered a disorder of both the body and mind, often linked to Phlegm-Heat, Lung and Spleen imbalances, Liver Qi stagnation, and Heart Fire. Qing Fei Yi Huo Tang is a classical TCM formula designed to clear Lung Heat, resolve Phlegm, and purge Fire - making it particularly relevant for smokers suffering from heat-toxin accumulation (e.g., chronic cough, yellow phlegm, dry throat, and irritability).

This formula helps detoxify the Lungs while addressing the Heat and Phlegm driving addiction. Combine with Liver-soothing and Shen-calming herbals (e.g., Xiao Yao San or Tian Wang Bu Xin Dan also available).

Indications for Smokers
- Persistent cough with yellow, sticky phlegm
- Dry mouth, sore throat (from smoking-induced Lung Heat)
- Irritability, restlessness (Heart Fire agitation)
- Constipation or dark urine (internal Heat signs)

Composition & Key Herbs
-Huang Qin - Clears Lung and Upper Jiao Heat.
-Zhi Zi - Drains Fire, especially from Heart and Lungs.
-Sang Bai Pi - Clears Lung Heat, stops cough.
-Xing Ren - Descends Lung Qi, relieves wheezing.
-Gua Lou - Resolves Phlegm-Heat in the chest.
-Chuan Bei Mu - Transforms sticky Phlegm.
-Da Huang - Purges excess Heat (used if constipation present).
-Jie Geng - Directs herbs upward to the Lungs.

Modifications for Smoking Cessation
1. For severe cravings (Heart Fire) - Lian Zi Xin, Zhu Ru.
2. For Liver Qi stagnation (mood swings) - Chai Hu.
3. For weak Spleen (fatigue, dampness) - Bai Zhu. Fu Ling.
4. For Yin deficiency (dryness - Mai Dong, Sha Shen.

Cautions
- Not for Cold or Deficient patterns (e.g., weak cough with clear phlegm, fatigue).
- Da Huang (Rhubarb) is purgative (stop if diarrhea occurs).

* QING WEI SAN - 清胃散 - Clear the Stomach Powder Also Known As: Coptis and Rehmannia Formula Powder for Clearing Away Stomach

Heat HERBS AND ACTIONS

-Huang Lian - Clears Stomach Fire, drains Heat, relieves toxicity and stops bleeding.

-Sheng Ma - Relieves toxicity, raises and disperses Heat and guides other herbs upwards. With Huang Lian, clears and drains Heart and Stomach Fire with gum swelling, toothache and ulcerations of the mouth and tongue. With Sheng Di Huang, for toothache from Stomach Fire.

-Mu Dan Pi - Cools the Blood and clears Heat. With Sheng Di Huang, for Ying and Xue Stage Heat with a high fever, scarlet tongue, thirst, a rash all over the body, epistaxis and hemoptysis or residual Warm pathogen which has injured the Yin and Kidney Yin Deficiency with steaming bones.

-Sheng Di Huang - Cools the Blood, nourishes Yin, cools Heart Fire and generates Fluids. With Sheng Ma, cools Heat in the Lungs and Stomach stopping hemoptysis and hematemesis.

-Dang Gui - Reduces swelling, expels pus, generates flesh and alleviates pain.

FORMULA ACTIONS - Drains Stomach Fire Cools Blood Nourishes Yin

SYNDROMES - Stomach Fire Blazing Stomach Heat

CLINICAL MANIFESTATIONS - Toothache (especially when pain extends into the head) Toothache is worse with Heat and better with Cold Facial swelling Fever Bad breath Dry mouth and tongue Bleeding gums Sores on the gums Maybe scanty, red urine Swollen, painful tongue Swollen, painful lips Swollen, painful jaw Pain is better with Cold and worse with Heat Swelling and pain of the throat Feverish cheeks Temporal headache.

CONTRAINDICATIONS - Contraindicated for those with toothache due to Wind-Cold. Contraindicated for those with toothache tooth and gum problems due to KI Deficiency.

TREATS - Stomatitis Gingivitis. Ulcerative gingivitis. Trigeminal neuralgia. Periodontal disease. Periodontitis, Acid regurgitation. Hordeolum. Acne. Oliguria. Constipation. Nause / Vomiting. Chronic pancreatitis. Gastritis. Hiccups. Indigestion. Nasal pain. Hangover. Glossitis. Idiopathic halitosis. Toothache. Infections affecting the head. Swelling of the larynx and pharynx. Halitosis. Epistaxis. Gastralgia. Stomach cancer. Hematuria. Fever. Acute pancreatitis. Peptic ulcer. Cholecystitis. Acute infectious gastroenteritis. Temporomandibular joint syndrome (TMJ). Lip pain.

* SI WU TANG (四物汤) Modified for Ichthyosis (Fish Scale Skin)

Si Wu Tang (Four Substances Decoction) is a classic blood-nourishing formula in Traditional Chinese Medicine (TCM), traditionally used for blood deficiency, dry skin, and menstrual disorders. Since ichthyosis is characterized by excessive dryness, scaling, and impaired skin barrier function, a modified Si Wu Tang can help by nourishing blood, promoting moisture, and improving skin metabolism.

Core Ingredients (Si Wu Tang - Blood Tonic)

- Shu Di Huang (熟地黄) - Rehmannia (nourishes blood & Yin)
- Dang Gui (当归) - Angelica sinensis (promotes blood circulation)
- Bai Shao (白芍) - White peony root (softens liver, relieves dryness)
- Chuan Xiong (川芎) - Ligusticum (activates blood, reduces stasis)

Additions for Ichthyosis (Key Modifications)

- He Shou Wu (何首乌) - Fo-ti root (nourishes blood, improves skin & hair)
- Mai Men Dong (麦门冬) - Ophiopogon (moistens lung & skin Yin)
- Tian Men Dong (天门冬) - Asparagus root (clears lung heat, moistens)
- Dan Shen (丹参) - Salvia (improves microcirculation in skin)
- Di Gu Pi (地骨皮) - Lycium root bark (clears deficient heat, reduces itching)
- Bai Xian Pi (白鲜皮) - Dictamnus (anti-inflammatory, relieves itching)

SYNDROMES - Blood deficiency with dryness. Lung & Kidney Yin deficiency (affecting skin moisture). Blood stasis (leading to thickened, scaly skin)

FORMULA ACTIONS - Nourishing blood & Yin (to moisturize skin). Promoting blood circulation (to reduce scaling). Clearing mild heat/wind (to relieve itching)

* XIE HUANG SAN - 瀉黃散 - Drain the Yellow Powder. Xie Pi San. Drain the Spleen Powder. Ledebouriella and Gardenia Formula. Powder for Expelling Hidden Fire of the Spleen and Stomach. Spleen Heat Expelling Powder

FORMULA ACTIONS - Drains Latent Fire from the Spleen and Stomach

SYNDROMES - Latent Fire in the Spleen and Stomach

CLINICAL MANIFESTATIONS - Mouth ulcers. Bad breath. Thirst. Frequent hunger. Dry mouth and lips. Epistaxis. Tongue thrusting in children. Irritability.

HERBS AND ACTIONS

-Shi Gao - Clears Heat in the Qi Stage, drains Fire, relieves irritability, quenches thirst and clears Blazing Stomach Fire.

-Zhi Zi - Clears Heat, reduces Fire, eliminates irritability and resolves Dampness.

-Fang Feng - Releases the exterior, expels External Wind, raises Yang, expels Wind-Dampness and alleviates pain.

-Huo Xiang - Aromatically transforms Dampness, releases the Exterior, dispels Summerheat and transforms turbidity.

-Gan Cao - Clears Heat and relieves Fire toxicity and moderates and harmonizes the harsh properties of other herbs.

CONTRAINDICATIONS - Contraindicated for those with Stomach Yin Deficiency. Contraindicated for those with tongue thrusting due to congenital Qi Deficiency.

NOTES - This formula has shown to reduce fever, relieve inflammation, tranquilize the mind, promote diuresis and promote the secretion of gastric juice.

TREATS - Aphthous ulcers. Acute gastritis with halitosis. Behcet's disease. Oral thrush. Hordeolum. Atopic dermatitis. Myalgic encephalomyelitis. Lip pain. Ulcerating stomatitis. Halitosis. Rosacea. Eczema. Fever. Epistaxis. Epstein-Barr virus syndrome. Tongue pain.

* YU NU JIAN - 玉女煎 - Jade Woman Decoction. Rehmannia and Gypsum Combination. The Fair Maiden Decoction. Gypsum Decoction

FORMULA ACTIONS - Drains Heat from the Stomach Replenishes Yin

SYNDROMES - Stomach Heat with Yin Deficiency due to Stomach Fire Injuring the Kidney Yin

CLINICAL MANIFESTATIONS - Toothache. Loose teeth. Bleeding gums. Frontal headache. Irritability. Fever. Thirst with a desire to drink cold beverages. Epistaxis. Dysphoria. Excess hunger. Hemoptysis. Dry throat. Hematemesis. Restlessness. Night sweats. Warm sensations.

HERBS AND ACTIONS

-Shi Gao - Clears Fire from the Stomach, relieves irritability, fever and thirst and is specific for toothache due to Stomach Fire. With Zhi Mu, for high fever from Wind-Heat or Qi Stage Heat or Yang Ming Heat with irritability and extreme thirst and epidemic diseases. With Shu Di Huang, for headache, toothache, and thirst due to raging fire caused by devastated Yin.

-Shu Di Huang - Nourishes Kidney Yin to cool Stomach Fire.

-Zhi Mu - Clears Heat from the Qi Stage, from the Lungs and from the Stomach, nourishes Yin, moistens Dryness, Generates Fluids, clears Deficiency Fire and quenches thirst. With Shi Gao, clears Heat from the Stomach and nourishes Yin.

-Mai Dong - Nourishes Yin in the Upper and Middle Jiaos. moistens the Stomach, generates fluids and alleviates irritability.

-Niu Xi - Conducts Heat downward and stops bleeding in the mouth.

CONTRAINDICATIONS - Contraindicated for those with diarrhea or loose stool.

TREATS - Toothache. Gingivitis. Stomatitis. Glossitis. Trigeminal neuralgia. Chronic gastritis. Headache. Stomach flu. Bleeding peptic ulcers. Chronic colitis. Acid reflux. Hyperglycemia. Behcet's disease. Tinnitus. Acute pancreatitis. Peptic ulcer. Allergic purpura. Indigestion. Tongue pain. Periodontitis. Diabetes mellitus. Oral inflammation. Epistaxis. Hyperthyroidism. Viral myocarditis. Hemoptysis. Dysentery. Hemafecia. Stomach cancer. Hematemesis. Fever. Thrombocytopenic purpura. Pneumonia. Chronic pancreatitis. Cholecystitis. Night sweats. Dysmenorrhea.

1.3.3.53 RT-TCM-53

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_53

Ding Chuan Tang, Gan Mai Da Zao Tang, Kong Sheng Zhen Zhong Dan, Shen Ling Bai Zhu San, Shen Tong Zhu Yu Tang, Sheng Mai Yin Wan, Suan Zao Ren Tang, Tian Ma Gou Teng Yin, Tian Wang Bu Xin Dan

* DING CHUAN TANG - 定喘汤 - Arrest Wheezing. Ma Huang and Ginkgo Combination. Ma Huang and Ginkgo Combination for Stabilizing Dyspnea. Asthma Relieving Decoction. Decoction for Asthma

ACTIONS - Disseminates and descends Lung Qi. Stops asthma (wheezing). Stops cough. Clears Heat. Transforms Phlegm

SYNDROMES - Exogenous Wind-Cold Turning to Interior Phlegm-Heat

CLINICAL MANIFESTATIONS - Coughing and wheezing. Copious, thick yellow, difficult to expectorate sputum. Labored breathing. Aversion to Cold. Fever or fever and chills. Spontaneous sweat. Red face. Thirst with a preference for cold beverages. Fidgeting. Restlessness. Dyspnea. Thirst with a desire to drink. Headache. Rapid breathing.

CONTRAINDICATIONS - Contraindicated for those with Wind-Cold with no sweat and internally contracted Phlegm-Heat. Don't use too long in acute situations. Contraindicated for those with chronic asthma with Qi Deficiency and a frail pulse. Use with caution in early stages of a Wind Invasion showing dyspnea with Anhidrosis. Contraindicated for those with chronic wheezing or cough caused by Lung and Kidney Yin Deficiency.

HERBS AND ACTIONS

-Bai Guo - Astringes the Lungs, stops asthma, stops cough, transforms Phlegm and prevents Ma Huang from causing excessive dispersion and depletion. With Ma Huang, calms wheezing With Sang Bai Pi, Xing Ren and Ma Huang for cough and wheezing with excessive yellow sputum due to Lung Deficiency with Hot Phlegm.

-Ma Huang - Releases the exterior, disperses Cold, unblocks and descends Lung Qi, warms and disperses Cold pathogens and stops wheezing. With Xing Ren for Wind-Cold cough and wheezing with copious sputum due to congested fluids.

-Zi Su Zi - Stops cough and wheezing, dissolves Phlegm and descends Lung Qi. With Zhi Ban Xia and Kuan Dong Hua assists in descending Qi, stopping wheezing, and expelling Phlegm. with Xing Ren, for cough and wheezing with constipation.

-Gan Cao - Resolves Phlegm, stops cough, clears Heat and moderates and harmonizes the harsh properties of other herbs. With Ma Huang and Xing Ren, for coughing or wheezing due to Wind-Cold Attacks the Lungs.

-Kuan Dong Hua - Moistens the Lungs, descends Qi, stops cough and transforms Phlegm. With Xing Ren for cough and wheezing due to Phlegm obstruction. Sm. Armeniacae Xing Ren - Stops cough and asthma, resolves Phlegm and assists Ma Huang in arresting wheezing and expanding the Lungs. With Sang Bai Pi, for productive cough, wheezing and hoarseness due to Lung Heat. With Ma Huang and Gan Cao, for cough with profuse sputum, nasal obstruction and a hoarse voice.

-Sang Bai Pi - Drains Heat from the Lungs, stops cough and calms wheezing. With Huang Qin, drains Heat from the Lungs, and stops cough and wheezing.

-Huang Qin - Cleans the Lungs and sedates Heat. Rz. Pinelliae Preparatum Zhi Ban Xia - Dries Dampness, transforms Phlegm, and stops cough. With Huang Qin, for Phlegm-Heat induced Rebellious Qi with cough, nausea, and vomiting.

TREATS - Acute or chronic bronchitis. Bronchial asthma. Bronchiolitis. Emphysema complicated by infection. Cough. Pertussis. Headache. Common cold. Pulmonary emphysema. Bronchiopneumonia. Chronic prostatitis. COPD. Fever. Dyspnea.

* GAN MAI DA ZAO TANG - 甘麥大棗湯 - Licorice, Wheat and Jujube Decoction. Licorice and Jujube Combination

HERBS AND ACTIONS

-Gan Cao - Tonifies the Spleen and augments Qi, clears Heat and relieves Fire toxicity, moderates spasms and alleviates pain. With Da Zao and Xiao Mai, for restless organ syndrome.

-Xiao Mai - Nourishes Heart Qi and eliminate irritability to treat irritability, restlessness and insomnia as in restless organ disorder. With Gan Cao and Da Zao, for emotional disorders, disorientation, emotional instability, and irritability due to mild Deficiency of the Spleen Qi and Heart Blood.

-Da Zao - Tonifies the Spleen and Stomach, augments Qi, nourishes the Blood and calms the Spirit.

ACTIONS - Nourishes the Heart. Calms the Shen. Harmonizes the Middle Jiao. Relieves acute conditions. Relaxes tension. Tonifies Spleen Qi

SYNDROMES - Heart Blood Deficiency with Liver Qi Stagnation. Restless Organ Syndrome. Dry Organ disorder

CLINICAL MANIFESTATIONS - Absent-mindedness. Frequent feelings of extreme sadness with an urge to cry. Inability to control one's emotions. Depression. Restless sleep. May be night sweats. Lack of mental focus. Tight abdominal muscles. Irritability.

Abnormal speech or behavior. Disorientation. Frequent yawning. Sadness. Overly sensitive or self-conscious Insomnia.

TREATS - Neurosis. Neurasthenia. Epilepsy. Infantile night crying. Depression. Gastrointestinal spasms. Chorea. Uterine cramping. General anxiety disorder. Attention deficit hyperactivity disorder. Parkinson's disease. Migraines. Ectopic heartbeats. Convulsions Bi-polar disorder. Somnambulism. Yawning. Impotence. Hysteria. Autonomic dystonia. Schizophrenia. Menopause syndrome. Enuresis. Insomnia. Sleep walking. Coughing due to spasms of the trachea. Night terrors in children. Nervous exhaustion. Spasms of the extremities. Sinus tachycardia. Mania. Premenstrual syndrome. Globus hystericus. Celiac disease. Hoarseness. Male menopause.

* KONG SHENG ZHEN ZHONG DAN - 孔圣枕中丹 - Confucius' Sage Wisdom Pillow

A classic Traditional Chinese Medicine (TCM) formula primarily used to improve cognitive function, memory, and concentration. It is named after Confucius (Kong Sheng), reflecting its traditional use by scholars and students to enhance mental clarity.

HERBS AND FUNCTIONS
-Shi Chang Pu - Opens the orifices, resolves phlegm, and calms the spirit.
-Yuan Zhi - Benefits intelligence, calms the heart, and resolves phlegm.
-Long Gu - Anchors the spirit, calms the mind, and stops excessive dreaming.
-Gui Ban - Nourishes Yin, tonifies the kidneys, and supports memory.

TCM ACTIONS & INDICATIONS
- Tonifies Heart and Kidney connection (Heart-Kidney imbalance leading to poor memory).
- Calms the Shen (Spirit) - Helps with anxiety, restlessness, and insomnia.
- Enhances memory and learning - Traditionally used for forgetfulness, poor concentration, and "brain fog.
- Supports cognitive function in students or elderly individuals.

APPLICATIONS
ADHD, poor memory, and learning difficulties (often combined with other formulas).
Insomnia with excessive dreaming or mental restlessness.
Age-related cognitive decline or mild dementia (as an adjunct therapy).

CONTRAINDICATIONS/CAUTIONS
- Not suitable for excessive phlegm-damp or heat patterns without modification.
- Pregnancy: Use with caution (some ingredients may have strong effects).

* SHEN LING BAI ZHU SAN - 參苓白術散 - Ginseng, Poria and Atractylodis Macrocephalae Powder. Ginseng and Atractylodes Formula

FORMULA ACTIONS - Augments Qi. Strengthens the Spleen. Resolves Dampness. Stops diarrhea

SYNDROMES - Lung and Spleen Qi Deficiency. Dampness due to Spleen Qi Deficiency. Atrophy disorder (Wei Syndrome) due to Spleen and Stomach Qi Deficiency

CLINICAL MANIFESTATIONS - Loose stools or watery diarrhea. Weak extremities. Weight loss. Distention and a stifling sensation in chest and epigastrium. Pale wan complexion. Abdominal distention. Indigestion. Vomiting. Fatigue. Chills. Maybe vomiting. Leukorrhea. Reduced appetite. Borborygmus. Edema. Reduced appetite. Diarrhea with onset of menstrual flow. Cough with copious sputum. Leukorrhea in obese women.

HERBS AND ACTIONS

-Ren Shen - Strongly tonifies Spleen and Lung Qi. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu and Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency with anorexia, diarrhea, vomiting, abdominal distention and fatigue.

-Bai Zhu - Strengthens the Spleen and dries Dampness. With Fu Ling and Yi Yi Ren, for Spleen and Stomach Deficiency with Dampness. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency. With Ren Shen, Fu Ling, Yi Yi Ren and Sha Ren, for diarrhea due to Spleen and Stomach Deficiency with Dampness.

-Fu Ling - Dries Dampness, strengthens the Spleen, harmonizes the Middle Jiao and transforms Phlegm. With Bai Zhu, strengthens the Spleen and dries Dampness. With Ren Shen and Bai Zhu, for a weak and deficient Spleen with fatigue, anorexia and loose stools.

-Gan Cao - Harmonizes, warms and strengthens the Middle Jiao. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency.

-Shan Yao - Tonifies the Spleen and Lungs and stops diarrhea. With Fu Ling and Bai Zhu, for Spleen Deficiency with loose, watery stools. With Dang Shen, for Spleen and Kidney Deficiency with fatigue, weakness, anorexia, and watery stools. With Ren Shen and Bai Zhu, for decreased appetite and lack of energy due to Spleen Deficiency.

-Bai Bian Dou - Strengthens the Spleen and resolves Dampness. With Lian Zi, strengthens the Spleen and stops diarrhea. With Bai Zhu and Shan Yao, for diarrhea or vaginal discharge due to Spleen Deficiency. With Ren Shen, Fu Ling, Bai Zhu and Yi Yi Ren, for Spleen and Stomach Deficiency with Dampness.

-Lian Zi - Tonifies the Spleen and astringes diarrhea. With Ren Shen, Bai Zhu and Shan Yao, for chronic Spleen Deficiency diarrhea. With Dang Shen, Fu Ling and Bai Zhu , for Spleen Deficient diarrhea with poor appetite.

-Yi Yi Ren - Strengthens the Spleen, drains Dampness and transforms Phlegm. With Fu Ling, for Spleen Deficiency with Excess Dampness and edema. With Fu Ling and Bai Zhu, for Spleen Deficiency diarrhea. with Fu Ling, Bai Zhu and Shan Yao, for Spleen and Stomach Deficiency with loose stools and reduced appetite.

-Sha Ren - Aromatically transforms Dampness, moves Qi and stops diarrhea, allowing the formula to tonify without stagnating. With Bai Zhu and Dang Shen, for abdominal pain and diarrhea due to Dampness Obstructing the Spleen and Stomach and morning sickness. With Bai Zhu and Ren Shen, for Spleen and Stomach Deficiency.

-Jie Geng - Unblocks Lung Qi and expels Phlegm. With Zhi Gan Cao, disseminates Lung Qi, expels Phlegm, resolves toxicity, and expels pus for productive cough with hoarseness, pain and swelling of the throat due to Wind-Heat and Lung abscess with expectoration of pus and pain in the chest and flanks. With Gan Cao and Yi Yi Ren, for Lung abscess with chest pain, fever, cough with foul-smelling, yellow, sticky sputum.

TREATS - Chronic gastritis. Chronic hepatitis. Chronic bronchitis. Chronic nephritis. Chronic glomerulonephritis. Diabetes mellitus. Malabsorbtion syndromes. Malnutrition (especially in children). Chronic gastroenteritis. Anemia. Gastrointestinal side effects of radiation or chemotherapy. Chronic diarrhea. Duodenal ulcer. Proctitis. Cirrhosis of the Liver. Cognitive impairment. Abnormal vaginal discharge. Ulcerative enterophthisis with diarrhea. Irregular menstruation. Childhood eczema. Rhinitis. Eyelid edema. Cough. COPD. Common cold in the elderly. Myasthenia gravis. Multiple sclerosis. Polyneuritis. Guillain-Barre disease. Acute myelitis (inflammation of the spinal cord). Progressive muscular dystrophy. The sequelae of poliomyelitis. Stomach cancer. Nausea/Vomiting. Epstein-Barr virus syndrome. Chronic tonsillitis. Sore throat. Candidiasis. Gout. Weakness. Edema. Osteoporosis. Strangury. Tinnitus. Peripheral neuropathy. Pharyngitis. Sweating from the hands and feet. Cervical Polyps. Tongue pain. Neurasthenia. Atrophy (Wei) Syndrome. Proteinuria. Pulmonary tuberculosis. Asthma. Emphysema. Chronic enteritis. Anorexia during convalescence. Infantile diarrhea. Severe fatigue during convalescence. Intestinal tuberculosis. Gastroptosis. Uterine bleeding. Hypothyroidism. Irritable bowel syndrome. Dyspepsia. Chronic colitis. Nephritis. Compromised immune system. Rhinitis. Obesity. Chronic pancreatitis with diarrhea. Chronic pharyngitis. Acne. Keratomalacia. Hordeolum. Optic atrophy. Acute infectious multiple neuritis. Progressive myodystrophy. Progressive myodystrophia. Hysterical paralysis. Periodic paralysis. Facial paralysis. AIDS/HIV. Myalgic encephalomyelitis. Chronic fatigue syndrome. Post-glandular fever. Immune deficiency. Abdominal fullness and distention. Chronic sinusitis. Amenorrhea. Fatigue. Premenstrual tension. Indigestion. Dyspnea. Deafness. Polymyositis/Dermatomyositis. Constipation. Cervicitis. Ulcerative colitis.

* SHEN TONG ZHU YU TANG - 身痛逐瘀湯 - Cnidium and Notopterygium Combination. Drive Out Blood Stasis from a Painful Body Decoction

FORMULA ACTIONS - Invigorates the circulation of Qi and Blood Removes Blood Stagnation in the channels and collaterals. Unblocks painful obstruction. Alleviates pain. Relieves arthralgia.

SYNDROMES - Painful obstruction due to Qi and Blood Stagnation

CLINICAL MANIFESTATIONS - Muscle ache of the neck, back, legs and shoulder. Whole body pain. Shoulder pain. Elbow pain. Pain at the waist. Arm pain. Low back pain. Leg pain. Sciatica.

HERBS AND ACTIONS

-Qin Jiao - Dispels Wind-Dampness and relaxes the sinews.

-Chuan Xiong - Invigorates the Blood and promotes the movement of Qi, expels Wind and alleviates pain. With Dang Gui, for pain, numbness and paralysis from Wind-Dampness and Stagnant Qi blocking the Blood channels preventing nourishment from reaching the sinews.

-Tao Ren - Breaks up Blood Stasis and invigorates Blood circulation. With Dang Gui and Hong Hua for pain associated with Blood Stasis. With Hong Hua, invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea with abdominal pain, clotting and scanty flow, swollen painful sores, chest pain due to Blood Stasis and Rheumatoid arthritis.

-Hong Hua - Invigorates Blood, dispels Blood Stasis and alleviates pain. With Tao Ren, Invigorates the Blood for all types of Blood Stagnation such as dysmenorrhea, amenorrhea, swollen painful sores and chest and abdominal pain. With Tao Ren and Dang Gui, for pain associated with Blood Stasis. With Chuan Xiong, for chest and abdominal pain due to Qi and Blood Stasis.

-Gan Cao - Moderates spasms, alleviates pain and harmonizes.

-Qiang Huo - Expels Wind-Cold-Dampness, unblocks painful obstruction, alleviates pain and guides Qi to the Tai Yang and Du channels. With Chuan Xiong, for headache and generalized body aches and pains associated with the common cold or painful obstruction.

-Mo Yao - Invigorates Blood, dispels Stagnation, reduces swelling and alleviates pain. With Hong Hua, for chest and abdominal pain, amenorrhea and dysmenorrhea due to Blood Stasis.

-Dang Gui - Invigorates and harmonizes the Blood, disperses Cold and stops pain due to Blood Stasis. With Chuan Xiong for pain , numbness and paralysis from Wind-Dampness and Stagnant Qi blocking the Blood channels preventing nourishment from reaching the sinews. With Tao Ren and Hong Hua for pain associated with Blood

Stasis. With Gan Cao, moderates spasms and relieves abdominal pain.

-Wu Ling Zhi - Invigorates the Blood, disperses Blood Stasis and alleviates pain. With Xiang Fu for epigastric pain.

-Xiang Fu - Spreads and regulates Liver Qi and alleviates pain. With Wu Ling Zhi for epigastric pain. With Chuan Xiong, for Qi Stagnation combined with Blood Stasis.

-Chuan Niu Xi - Expels Wind, invigorates the channels and Blood for pain due to Wind-Dampness.

-Di Long - Drains Heat and stops spasms and convulsions and unblocks and promotes movement in the channels and collaterals.

CONTRAINDICATIONS - Contraindicated during pregnancy.

NOTES - This formula works on the entire body. This formula is often successful when other Bi syndrome formulas have failed.

TREATS - Muscle ache of the whole body. Arthralgia. Rheumatoid arthritis. Lumbago. Arthritis. Carpal tunnel syndrome. Lateral epicondylitis. Epitrochleitis. Scapulohumeral periarthritis. Middle back pain. Whole body pain. Sciatica. Leg pain. Neuralgia. Hyperosteogeny. Allergic purpura. Elbow pain. Tennis elbow. Osteoporosis. Peripheral neuropathy. Neck pain. Hip pain.

* SHENG MAI YIN WAN - 生脉饮片 - Replenish Pulse Pills

FORMULA ACTIONS - Replenishes Qi and Yin Generates Body Fluids

SYNDROMES - Lung Qi and Yin Deficiency

CLINICAL MANIFESTATIONS - Chronic cough or Dry cough. Insomnia. Night sweats. Spontaneous perspiration. Weakness. Palpitations. Shortness of breath. Fever. Irritability.

HERBS AND ACTIONS

-Ren Shen - Tonifies Yuan, Spleen, Stomach, Lung and Heart Qi, generates Body Fluids and stops thirst. With Mai Men Dong and Wu Wei Zi, for Qi and Yin Deficiency with shortness of breath and spontaneous sweating usually secondary to injury from Heat.

-Mai Men Dong - Moistens the Lungs, nourishes Yin, stops cough, nourishes Stomach Yin, generates fluids clears the Heart and eliminates irritability.

-Wu Wei Zi - Astringes leakage of Lung Qi, stops cough, astringes sweat, generates fluids, tonifies the Kidneys, astringes Jing, stops diarrhea and spermatorrhea, quiets the Spirit and calms and contains Heart Qi. With Mai Men Dong, for exhaustion of Qi and Yin with shortness of breath, cough, and thirst and spontaneous night sweats with Qi Deficiency.

-Dan Shen - Invigorates the Blood, dispels Blood Stasis, clears Heat, soothes irritability, nourishes the Blood and calms the Spirit.

CONTRAINDICATIONS - Use with extreme caution in cases with high fever. Use with extreme caution when External pathogenic factors have not been eliminated.

TREATS - Chronic fatigue syndrome. Acute collapse. Pulmonary tuberculosis. Myocarditis. Rectal prolapse. Stomatitis. Chronic gastritis. Diabetes. Spontaneous perspiration. Night sweats. Obstinate insomnia. Hashimoto's thyroiditis. Weakness. Palpitations. Coronary artery disease. Heat stroke. Impotence. Arrhythmia. Neurosis. Acute infectious hepatitis. Bronchial asthma. Cor pulmonare. Acute inferior myocardial infraction. Toxic shock. Congestive Heart-failure. Insomnia. Fatigue. Dyspnea.

* SUAN ZAO REN TANG - 酸棗仁湯 - Sour Jujube Decoction. Zizyphus Combination Decoction of Wild Jujube Seed

FORMULA ACTIONS - Nourishes Liver Blood Nourishes the Heart Calms the Shen Clears Heat in Liver and Heart Eliminates irritability

SYNDROMES - Heart Blood Deficiency. Heart and Liver Blood Deficiency. Liver Yin Deficiency with Empty Fire. Disturbing Heart Liver Blood Deficiency with Deficiency Heat Rising

CLINICAL MANIFESTATIONS - Irritability. Anxiety. Palpitations. Night sweats. Dizziness. Vertigo. Dry throat and mouth no thirst. Fidgeting. Insomnia. Insomnia due to stress. Excessive dreams. Lack of energy. Weakness and fatigue. Weak abdomen. Restlessness. Sleepiness. Light-headedness. Impatience.

HERBS AND ACTIONS

-Suan Zao Ren - Calms the Shen and nourishes the Heart and Liver. With Fu Ling and Zhi Mu, for insomnia and irritability due to Liver Yin Deficiency.

-Fu Ling - Quiets the Heart, calms the Shen and tonifies the Spleen and Stomach.

-Zhi Mu - Enriches the Yin, clears Heat and moistens Internal Dryness modifying the properties of Chuan Xiong.

-Chuan Xiong - Regulates the Liver Qi and invigorates the Blood.

-Gan Cao - Tonifies the Spleen and moderates and harmonizes the properties of the other herbs.

TREATS - Insomnia. Nervousness. Neurasthenia. Forgetfulness. Anemia. Nervous exhaustion. Somnolence. Excessive worrying. Dizziness. AIDS/HIV. Hyperthyroidism. Anxiety neurosis. Impotence. Stress. Palpitations. Fatigue. Congestive Heart failure. Night sweats. Dry skin. Nightmares. Cardiac neurosis. Paroxysmal tachycardia. Menopause syndrome. Schizophrenia with irritability and insomnia. Nocturnal emissions. Spermatorrhea. Menopause syndrome. Anxiety. Vertigo. Fever. Low-grade fever. Panic attacks. Neurosis. Chronic hepatitis. Hypertension. Weakness. Hysteria. Red eyes.

NOTES - This formula is especially effective for insomnia due to Deficiency, irritability or consumption.

* TIAN MA GOU TENG YIN - 天麻芶藤飲 - Gastrodia and Uncaria Decoction

FORMULA ACTIONS - Calms the Liver Extinguishes Wind Clears Heat Invigorates the Blood Tonifies the Liver and Kidneys

SYNDROMES - Liver Wind Stirring Internally: Liver Yang (Liver Fire) Generates Wind Liver Yin Deficiency with Liver Yang Rising

CLINICAL MANIFESTATIONS - Headache. Dizziness. Vertigo. Tinnitus. Blurred vision. Sensation of Heat rushing to the head. Insomnia. Dream disturbed sleep. Numbness. Twitching and spasms in the extremities. Hemiplegia. Paralysis. Convulsions. Trembling tongue. Deviation of mouth and eyes. Coma.

HERBS AND ACTIONS

-Tian Ma - Extinguishes Wind, calms the Liver, stops spasms and tremors and subdues rising Liver Yang. With Gou Teng and Shi Jue Ming, calms the Liver and extinguishes Wind.

-Gou Teng - Extinguishes Wind, stops spasms, drains Liver Heat and pacifies Liver Yang. With Tian Ma, calms the Liver and extinguishes Wind.

-Xia Ku Cao - Clears Liver Fire and brightens the eyes. Clears Hot Phlegm and dissipates nodules. Treats hypertension. (substitutes Shi Jue Ming)

-Zhi Zi - Clears Heat and cools and activates Blood. With Huang Qin, clears Heat and drains Fire preventing Heat from rising through the Liver channel.

-Huang Qin - Drains Fire and calms ascending Liver Yang. With Zhi Zi, powerfully clears

and drains lurking Heat from the Lungs with fever, fullness in the chest, cough with yellow sputum and epistaxis or hematemesis.

-Yi Mu Cao - Invigorates the Blood preventing Blood from rising to the head with rising Liver Yang.

-Chuan Niu Xi - Invigorates and descends Blood and expels Wind. With Du Zhong and Sang Ji Sheng, tonifies and nourishes the Liver and Kidneys.

-Du Zhong -Tonifies the Kidneys and Liver, aids the smooth flow of Qi and Blood and lowers Blood pressure.

-Sang Ji Sheng - Nourishes Liver and Kidney Yin, nourishes Blood and treats hypertension.

-Yuan Zhi - Calms the Spirit, sedates the Heart and clears the channel joining the Heart and Kidney. Expels Phlegm, opens the Orifices, clears the Lungs and stops coughing. Reduces abscesses and dissipates swellings. (substitutes Ye Jiao Teng)

-Fu Shen - Pacifies the Heart, calms the Shen and soothes the nerves.

TREATS - Cerebrovascular disease. Dizziness. Essential hypertension. Renal hypertension. Hypertensive encephalopathy. Aphasia. Apraxia. Headache. Eyelid twitch. Vertigo. Cerebral hemorrhage. Stroke. Ischemic stroke. Neurasthenia. Paresthesia. Parkinson's disease. Alzheimer's disease. Stress. Puerperal fever. Palpitations. Facial paralysis. Otorrhea. Dysmenorrhea. Eye pain. Red eyes. Epilepsy. Neurosis. Puerperal eclampsia. Hemiplegia. Trigeminal neuralgia. Apoplexy. Migraine. Insomnia. Alopecia. Meniere’s disease. Cerebral embolism. Cerebral infarction. Facial spasms. Transitory ischemic attacks. Numbness. AIDS/HIV. Tinnitus. Otitis media. Menopause syndrome. Paralysis. Multiple sclerosis. Neck pain and stiffness. Coronary Heart disease. Ear pain.

CONTRAINDICATIONS - Contraindicated for those with Liver Wind due to Yin Deficiency.

* TIAN WANG BU XIN DAN - 天王補心丹 - Emperor of Heaven's Special Pill to Tonify the Heart.Ginseng and Zizyphus Formula. Emperor's Tea. The King's Mind Easing Tonic Pills. Celestial Emperor’s Heart Supplementing Elixir. The Heavenly King's Tonic Pills

FORMULA ACTIONS - Enriches the Yin Nourishes the Blood. Tonifies the Heart and Kidneys. Calms the Shen. Clears Heat

SYNDROMES - Heart Yin Xu. Heart and Kidney Yin Xu (with Fire Flaring). Heart and Kidney Yin Xu with Heart Blood Xu

CLINICAL MANIFESTATIONS - Irritability. Palpitations. Anxiety. Fatigue. Insomnia. Very restless sleep. Inability to think or concentrate even for short periods. Nocturnal emissions. Forgetfulness. Dry stools. Mouth sores. Tongue sores. Low grade afternoon fever. Dream disturbed sleep. Night sweats. Constipation.

HERBS AND ACTIONS

-Sheng Di Huang - Cools Heart Fire, clears Heat, cools the Blood and enriches Yin and Blood. With Xuan Shen, for dry throat, irritability, a red tongue and a thready rapid pulse due to Yin Xu with Fire Flaring.

-Ren Shen - Tonifies Heart Qi and calms the Shen. With Fu Ling, assists Heart Qi. With Mai Men Dong and Wu Wei Zi, for Qi and Yin Xu.

-Tian Men Dong - Enriches the Yin and generates Fluids. With Mai Men Dong, for Yin Xu with injured Fluids. With Mai Men Dong and Xuan Shen, clears Xu Heat and nourishes Yin.

-Mai Men Dong - Enriches the Yin and clears the Heart. With Ren Shen and Wu Wei Zi, for exhaustion, increased Heart rate, profuse perspiration and wheezing due to severe Heart and Lung Xu.

-Xuan Shen - Enriches Yin and clears Heat.

-Dan Shen - Invigorates, cools and nourishes the Blood and clears Heat. With Dang Gui, nourishes Blood to nourish the Heart without causing Stasis. With Suan Zao Ren and Bai Zi Ren, for Heart Blood Xu with palpitations and insomnia.

-Fu Ling - Strengthens the Spleen and pacifies the Heart. With Suan Zao Ren, Wu Wei Zi and Yuan Zhi, for palpitations and insomnia.

-Yuan Zhi - Calms the Shen, sedates the Heart and opens the channel between the Heart and Kidneys. With Bai Zi Ren, calms the Shen.

-Dang Gui - Nourishes and invigorates Blood.

-Wu Wei Zi - Tonifies Qi, tonifies Kidney Jing, nourishes the Heart, calms the Shen, generates Fluids and astringes excessive perspiration. With Suan Zao Ren, astringes Heart Qi. With Suan Zao Ren and Sheng Di Huang, for Heart Qi Xu with insomnia, irritability and forgetfulness.

-Bai Zi Ren - Nourishes the Heart and Kidneys, calms the Shen and astringes Yin Xu perspiration. With Yuan Zhi and Suan Zao Ren, for insomnia, and palpitations due to Heart Blood Xu.

-Suan Zao Ren - Nourishes Heart Yin, augments Liver Blood, calms the Shen and astringes sweat. With Wu Wei Zi, prevents leakage of Heart Qi.

-Jie Geng - Directs actions of the formula upwards.

-Zhu Sha - Sedates the Heart and anchors and calms the Shen. With Suan Zao Ren, Bai Zi Ren and Dang Gui, for insomnia or palpitations with anxiety due to Blood Xu.

TREATS - Coronary Heart disease. Menopause syndrome. Chronic urticaria. Aphthous ulcers. Neurasthenia. Insomnia. Hypertension. Hyperthyroidism. Goiter. Amenorrhea. Angina pectoris. Impotence. Dizziness. AIDS/HIV. Numbness. Parkinson's disease. Drug abuse. Senility. Constipation. Obsessive-compulsive disorder. Post-traumatic stress disorder (PTSD). Shock. Hysteria. Neurosis. Forgetfulness. Fatigue. Night sweats. Nocturnal emissions. Post-menopausal uterine bleeding. Palpitations. Hyperparathyroidism. Mental disturbances. Anemia. Congestion. Stomatitis. Emotional instability. Ephidrosis. Sinus tachycardia. Anxiety. Infertility. Viral myocarditis. Attention deficit disorder. Hepatitis. Hematuria. Thromboangitis obliterans. Paresthesia. Tremors. Bi-polar disorder. Low-grade fever. Anxiety neurosis. Involutional psychosis. Panic attacks. Low back pain. Weakness. Congestive Heart failure. Spermatorrhea. Dermatitis. Insomnia associated with AIDS/HIV.

CONTRAINDICATIONS - Contraindicated for those with Spleen and Stomach weakness with loose stools. Contraindicated for those with Phlegm-Damp Stagnation. Do not take long term. While taking this formula, avoid cilantro, garlic, radishes seafood and liquor.

NOTES - Recommended for people who do a lot of reading. Good for people who have taken tranquilizers and sleeping pills for a long time and they have lost their effect.

Dai Zong Fang, Esophageal Stricture-TCM, Jian Pi Wan, Kang Ning Wan, Ling Jiao Gou Teng Tang, Mai Men Dong Tang, Qi Bai Gao, Qing Fei Yi Huo Hua Tan Wan, Yi Qi Yang Yin Huo Xue Fang

* DAI ZONG FANG - A Natural Approach to Gut-Liver Health & Metabolic Balance

Formula Composition
DZF combines six potent herbs with synergistic effects:
-Huang Lian - Clears heat, reduces inflammation, modulates gut bacteria.

-Zhi Shi - Moves stagnation, aids digestion.
-Ban Xia - Resolves phlegm-dampness, supports gut barrier.
-Gua Lou - Clears heat-phlegm, lubricates intestines.
-Rou Gui - Warms digestion, balances cold-heat mismatch.
-Hong Qu - Regulates lipids, supports circulation.

DZF targets the gut-liver axis to improve metabolic health:
Repairs Gut Health
- Restores beneficial microbes (Lactobacillus, Bifidobacterium).
- Strengthens the intestinal barrier (prevents "leaky gut").
- Reduces endotoxins (LPS) that drive inflammation.
Boosts Liver Function
- Reduces fat accumulation (steatosis) by blocking lipogenesis.
- Enhances fat breakdown (fatty acid oxidation).
- Improves insulin sensitivity.
Dual-Action Lipid Control
- Blocks intestinal fat absorption (Huang Lian + Hong Qu).
- Optimizes cholesterol metabolism (similar to statins, but natural).

DZF may help those with:
- Fatty liver (NAFLD/NASH)
- Type 2 diabetes or prediabetes
- High cholesterol/triglycerides
- Bloating, indigestion, or heat-damp patterns (e.g., bitter taste, sticky stools)
- Metabolic syndrome (obesity + insulin resistance)

Traditional vs. Modern Use
- TCM Perspective: Balances Spleen-Stomach Damp-Heat and Liver Qi Stagnation.
- Modern Research: Validated in db/db mice for gut microbiota modulation and metabolic benefits.

Safety & Considerations
- Contraindications: Not for cold-deficient syndromes (e.g., chronic diarrhea with cold limbs).
- Herb-Drug Interactions:
  - Hong Qu may enhance statins (monitor for muscle pain).
  - Huang Lian may lower blood sugar (caution with antidiabetics).

Notes
- Multi-target therapy: Addresses root causes (gut dysbiosis + liver dysfunction).
- Natural alternative: Fewer side effects than synthetic lipid-lowering drugs.
- Holistic benefits: Improves digestion, energy, and metabolic markers.

* ESOPHAGEAL STRICTURE-TCM

Esophageal Stricture can be addressed with Traditional Chinese Medicine (TCM) by focusing on Regulating Qi, Resolving Phlegm, Promoting blood circulation, and Moistening dryness.

This formula Harmonizes Stomach Qi, lubricates the esophagus, and reduces constriction while being gentle enough for seniors.

Modified Xuanfu Daizhe Tang (旋覆代赭汤) + Additional Herbs

FORMULA ACTIONS - Promotes downward Qi movement, resolves phlegm, and lubricates dryness

HERBAL COMPOSITION

-Xuanfu Hua - Descends rebellious Qi, resolves phlegm in the chest.
-Daizhe Shi - Anchors Qi downward, relieves reflux and constriction.
-Ban Xia - Resolves phlegm, harmonizes stomach, opens obstruction.
-Sheng Jiang - Warms the middle Jiao, aids digestion, stops nausea.
-Dang Shen - Tonifies Qi (for seniors with deficiency).
-Gua Lou - Lubricates dryness, clears phlegm-heat in the esophagus.
-Yu Jin - Moves Qi and blood, relieves chest tightness.
-Mai Dong - Moistens esophageal dryness, nourishes Yin.
-Bai Shao - Relaxes spasms, soothes esophageal tension.
-Gan Cao - Harmonizes the formula, protects mucous membranes.

Modifications

-Gan Jiang - For Cold Phlegm (white tongue coating, aversion to cold)
-Huang Lian - For Heat (red tongue, burning sensation)
-San Leng - For Severe Blood Stasis (purple tongue, stabbing pain)
-Shi Hu - For Severe Dryness (scanty saliva, dry throat)

PRECAUTIONS

- Daizhe Shi (Hematite) is contraindicated in severe Spleen Qi Deficiency with chronic diarrhea.
- If stricture is due to tumors or severe scarring, TCM should complement (not replace) conventional treatments.

* JIAN PI WAN - 健脾片 - Strengthen the Spleen Pill. Ginseng Stomachic Pills

FORMULA ACTIONS - Strengthens the Spleen. Harmonizes the Stomach. Reduces Food Stagnation. Stops diarrhea

SYNDROMES - Spleen and Stomach Qi Deficiency with Food Stagnation

CLINICAL MANIFESTATIONS - Reduced appetite. Difficulty digesting. Abdominal and epigastric bloating. Watery diarrhea. Loose stools.

HERBS AND ACTIONS

-Bai Zhu - Tonifies the Spleen, augments Qi and dries Dampness. With Sha Ren and Ren Shen, for Spleen and Stomach Deficiency. With Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao. With Bai Zhu, strengthens the Spleen and resolves Dampness. With Ren Shen and Bai Zhu, for weak and deficient Spleen with fatigue, anorexia and loose stools. With Mu Xiang, for diarrhea and borborygmus due to Dampness.

-Ren Shen - Tonifies Spleen and Stomach Qi. With Bai Zhu, tonifies the transformation and transportation functions of the Spleen. With Bai Zhu, Fu Ling and Gan Cao, for Spleen and Stomach Qi Deficiency with Dampness with anorexia, diarrhea, vomiting, abdominal distention and fatigue.

-Shan Yao - Tonifies the Spleen, nourishes Stomach Yin and stops diarrhea. With Bai Zhu and Fu Ling, for Spleen Deficiency with loose watery stools. With Dang Shen, for Spleen and Kidney Deficiency with fatigue, weakness, anorexia, and watery stools. With Ren Shen and Bai Zhu, for decreased appetite and lack of energy due to Spleen Deficiency.

-Dou Kou - Astringes the Intestines, stops diarrhea, warms the Middle Jiao, regulates Qi and alleviates pain. With Mu Xiang, for poor appetite, diarrhea, and Cold abdominal pain due to Spleen and Stomach Deficiency Cold leading to constrained Middle Jiao Cold. With Sha Ren and Shan Zha, for loss of appetite and poor digestion.

-Shan Zha - Reduces and guides out Food Stagnation, transforms accumulations and stops diarrhea. With Shen Qu, for general indigestion and Food Stagnation.

-Shen Qu - Reduces Food Stagnation, moves Qi,promotes digestion and harmonizes the Stomach. With Bai Zhu and Dang Shen, for Food Stagnation and diarrhea due to Spleen Deficiency. With Mu Xiang and She Ren, for abdominal pain associated with Food Stagnation. With Mai Ya and Shan Zha, for abdominal distention, belching, diarrhea and anorexia due to Food Stagnation; indigestion and childhood nutritional impairment due to improper breast feeding.

-Mai Ya - Reduces Food Stagnation, improves digestion and strengthens the Stomach. With Shen Qu, dry-fried for indigestion due to Food Stagnation.

-Mu Xiang - Promotes the movement of Qi, adjusts and regulates stagnant Qi in the

Intestines, strengthens the Spleen, prevents Stagnation and alleviates pain. With Bai Zhu, for anorexia with epigastric and abdominal pain and distention. With Huang Lian, for dysentery and diarrhea, especially when accompanied by tenesmus and abdominal distention and discomfort. With Sha Ren, Ren Shen and Bai Zhu, for anorexia and abdominal distention and fullness which improves with warmth applied locally.

-Chen Pi - Regulates Qi, adjusts the Middle, relieves the diaphragm, dries Dampness and transforms Phlegm. With Bai Zhu, for anorexia and other symptoms of Damp Obstruction due to Spleen Deficiency. With Dang Shen, Bai Zhu, Shen Qu, Mai Yan Shan Zha and Gan Cao, for indigestion.

-Sha Ren - Promotes the movement of Qi, aromatically transforms Dampness, strengthens the Spleen, stops vomiting, warms the Middle and stops diarrhea. With Mu Xiang, increases the flow of Qi in the digestive system while reducing distention and Food Stagnation, alleviating pain and strengthening the Spleen. With Bai Zhu and Dang Shen, for abdominal pain and diarrhea due to Dampness Obstructing the Spleen and Stomach and morning sickness. With Chen Pi, for Dampness obstructing the Spleen's transforming and transporting functions with reduced intake of food and diarrhea; belching, nausea, and a stifling sensation in the epigastrium due to Disharmony of the Stomach Qi and vomiting of unadulterated, or scanty but viscous fluids.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity. With Mu Xiang, for dysenteric disorders due to Damp-Heat Obstructing the Intestines. With Mu Xiang and Bing Lang, for hot dysenteric disorders with Qi Stagnation and Damp-Heat in the Middle Jiao with intense tenesmus.

-Gan Cao - Tonifies the Spleen, augments Qi, moderates and harmonizes the harsh properties of other herbs and guides the herbs to all twelve channels. With Dang Shen, for anorexia, fatigue and loose stools due to Spleen Deficiency. With Ren Shen, Fu Ling and Bai Zhu, strengthens the Spleen and augments Qi.

TREATS - Chronic gastritis. Chronic colitis. Chronic enteritis. Chronic pancreatitis. Diarrhea. Fetal restlessness. Indigestion. Celiac disease, Duodenal ulcer. Cirrhosis of the Liver. Poor appetite.

CONTRAINDICATIONS - Contraindicated in acute cases of Food Stagnation from contaminated food or over consumption.

* KANG NING WAN (抗宁丸 or 康宁丸)

Kang Ning Wan is a traditional Chinese herbal formula primarily used for digestive disorders, colds, flu, and mild respiratory issues. It is known for its antibacterial, antiviral, and digestive-regulating effects, making it a popular remedy for stomachaches, food stagnation, and early-stage respiratory infections.

KEY FUNCTIONS & USES

Relieves Digestive Issues - Bloating, indigestion, diarrhea, or stomachache caused by food stagnation or mild infections.
Helps regulate spleen and stomach Qi - Fights Mild Infections (Cold & Flu)
Used for early-stage colds, sore throat, or mild fever - Contains herbs with antiviral and anti-inflammatory properties.
Harmonizes Stomach & Intestines - Useful for traveler's diarrhea, food poisoning, or gastrointestinal discomfort.

COMMON INGREDIENTS. (Exact composition may vary by brand; classic versions include:)

-Huang Lian - Antibacterial, clears heat
-Mu Xiang - Regulates Qi, relieves pain
-Bing Pian - Anti-inflammatory, cooling
-Chen Pi - Aids digestion
-Hou Po - Relieves bloating
-Ban Xia - Resolves phlegm, stops vomiting

PRECAUTIONS & SIDE EFFECTS

- Not for long-term use (only for acute symptoms).
- Avoid during pregnancy unless prescribed by a TCM doctor.
- May interact with antibiotics or blood thinners.

* LING JIAO GOU TENG TANG - 羚角芶藤湯 - Antelope Horn and Uncaria Decoction. Ling Yang Gou Teng Tang .

FORMULA ACTIONS - Cools the Liver. Extinguishes Wind. Increases Fluids. Relaxes the sinews. Stops convulsions

SYNDROMES
- Phlegm Obstructs the Heart Orifice-Tense Type (Yang Obstruction).
- Liver Wind Stirring Internally: Extreme Heat Generates Wind.
- Wen Bing Xue Level Heat (Xue Fen) Generating Wind
- Phlegm-Heat.

CLINICAL MANIFESTATIONS - Persistent high fever Irritability. Restlessness. Dizziness. Vertigo. Twitching. Spasms of the extremities. Insomnia. Tinnitus. Bitter taste in the mouth. Deafness. Dry throat. Stiff neck with convulsions. Severe headache. Loss of consciousness. Maybe opisthotonos. Maybe expectoration of thick, yellow sputum.

HERBS AND ACTIONS

-Zhen Zhu - Calms the Liver, anchors the Yang and drains Liver Fire.

-Gou Teng - Balances the liver and Pericardium, calms Wind and extinguishes Fire.

-Sang Ye - Clears the Liver and eyes. With Ju Hua, clears Heat and dispels Wind from the Lungs and Liver and strengthens the formula's Wind-extinguishing functions.

-Ju Hua - Calms the Liver and extinguishes Wind. With Gou Teng, Sheng Di Huang and Bai Shao, for headaches due to Liver Wind with Yin Deficiency Fire.

-Bai Shao - Calms Liver Yang and astringes Yin. With Sheng Di Huang, nourishes Yin and generates Fluids to soften the Liver and relax sinews. With Gou Teng and Ju Hua, for headache and dizziness due to Liver Yang Rising. With Gan Cao, for abdominal pain due to disharmony between the Liver and Stomach and epigastric, hypochondriac or flank pain.

-Sheng Di Huang - Clears Heat, cools the Blood, nourishes the Yin and Blood, cools Heart Fire and increases Fluids. With Bai Shao, for Blood Deficiency Heat.

-Chuan Bei Mu - Clears Heat and transforms Phlegm. With Zhu Ru, clears Heat and transforms Phlegm.

-Fu Shen - Transforms Phlegm, pacifies the Heart, calms the Shen and treats irritability and restlessness caused by Heat attacking the Shen.

-Zhu Ru - Clears Heat and transforms Hot Phlegm.

-Gan Cao - Resolves Phlegm, clears Heat, detoxifies and harmonizes. With Bai Shao, strengthens Yin, relaxes sinews and moderates painful spasms

TREATS - Essential hypertension. Hypertensive encephalopathy. Cerebrovascular accident. Encephalitis B. Meningitis. Pneumonia. Stroke. Aphasia. Glaucoma. Catarrhal otitis media. Headache. Dizziness. Kidney failure. Fever. Tinnitus. Bad breath. Facial paralysis. Post-concussion syndrome. Lupus erythematosus. Eclampsia. Convulsions. Mania with convulsions. Chromaffinoma. Dysentery. Shingles. Post-stroke sequelae. Meniere's disease. Insomnia. Vertigo. Ebola. Constipation. Deafness. Epistaxis. Hemiplegia. Liver cancer. Seizures and epilepsy during pregnancy. Stiff neck.

CONTRAINDICATIONS - Contraindicated for those with Wind due to Deficiency.

* MAI MEN DONG TANG - 麥門冬湯 - Ophiopogonis Decoction. Decoction of Ophiopogonis Root

FORMULA ACTIONS - Benefits the Stomach. Generates Fluids. Descends Qi. Harmonizes the Middle Jiao

SYNDROMES - Stomach Fire Blazing Stomach and Lung Yin Deficiency Lung Wei Syndrome (atrophy)

CLINICAL MANIFESTATIONS - Cough with little yellow sputum. Spitting saliva. Wheezing. Shortness of breath. Dry, uncomfortable sensation in throat. Hiccups. Dry mouth. Coughing up difficult-to-extectorate Phlegm. Nausea. Scanty urination. Hoarseness. Thirst. Asthma. Flushed face. Five Sole Heat. Vomiting.

HERBS AND ACTIONS

-Mai Dong - Nourishes Lung and Stomach Yin, clears Deficiency Heat from the Stomach, generates Fluid in the Stomach and Lungs and moistens the Intestines. With Zhi Ban Xia, Geng Mi and Gan Cao, for Stomach Yin Deficiency with hiccups and vomiting.

-Ren Shen - Revives Qi and Yin and generates Fluids. With Mai Dong, strongly tonifies Qi and nourishes Lung and Stomach Yin.

-Jing Mi - Tonifies Qi and generates Fluids. With Gan Cao and Da Zao, assists Stomach Qi and generates Fluids.

-Da Zao - Strengthens the Spleen, tonifies Qi, nourishes Blood and harmonizes.

-Gan Cao - Clears Heat, relieves toxins, moistens the Lungs and harmonizes.

-Ban Xia - Moves Stomach Qi, descends Qi and assists distribution of Stomach Qi to the Lungs. With Ren Shen, for vomiting due to Stomach Deficiency.

TREATS - Pertussis. Pulmonary atelectasis. Pneumonia. Chronic tracheitis. Acute and chronic pharyngitis. Chronic laryngitis. Esophageal cancer. Tuberculosis of the pharynx. Diabetes. Bronchiectasis. Reactive lymphoid hyperplasia. Morning sickness. Cough. Cough from interstitial pneumonia. Headache. Hiccups. Hyperglycemia. Fever. Bad breath. Dyspnea. Lip pain. Hoarseness. Hypertension. Arteriosclerosis. Gastritis. Atrophic gastritis. Peptic ulcer. Esophageal reflux. Acute or chronic bronchitis. Pulmonary tuberculosis. Lung cancer. Asthma. Side effects of radiation therapy. Stomach cramps. Sjogren's syndrome. Gastralgia. Oliguria. Chronic obstructive pulmonary disease. Nausea / Vomiting. Weakness. Indigestion. Radiotherapy for breast cancer.

CONTRAINDICATIONS - Use with caution for those with cough or hiccup due to Wind-Cold or Heat. Contraindicated for those with Dampness. Use with caution for those with high fever and irritability due to Exterior Heat. Contraindicated for those with Lung atrophy due to Deficiency Cold.

HERB/DRUG INTERACTIONS - This formula was found to be effective in treating

enalapril-induced cough. This formula was found to be effective in treating capsaicinl-induced cough.

* QI BAI GAO - 七白膏 - Seven Whites Paste

Qi Bai Gao is a topical paste to whiten skin, fade dark spots, and improve complexion. The "seven white herbs" work synergistically to clear heat, nourish yin, and dispel dampness -common causes of dull skin in TCM.

-Bai Zhu - Strengthens spleen, removes dampness
-Fu Líng - Brightens skin, reduces swelling
-Bai Shao - Nourishes blood, soothes irritation
-Bai Lian - Heals blemishes, antibacterial
-Bai Zhǐ - Evens skin tone, anti-pigmentation
-Bai Jiang Can - Exfoliates, promotes collagen
-Bai Jí - Moisturizes, heals scars

Added for enhanced effects.
-Zhen Zu
-Yi Yi Ren

* QING FEI YI HUO HUA TAN WAN - 清肺抑火化痰丸 - Clear the Lungs, Suppress Fire and Transform Phlegm Pill

FORMULA ACTIONS - Clears and purges Lung Heat. Transforms Phlegm. Stops cough and asthma

SYNDROMES - Lung and Stomach Heat

CLINICAL MANIFESTATIONS - Cough. Yellow Phlegm. Dry mouth. Thirst with a desire to drink. Constipation. Sore throat. Hematemesis. Hemoptysis.

HERBS AND ACTIONS

-Huang Qin - Drains Fire and detoxifies. With Zhi Zi, powerfully clears and drains lurking Heat from the Lungs with fever, fullness in the chest, coughing with yellow sputum and epistaxis or hematemesis.

-Zhi Zi - Clears Heat, reduces Fire and eliminates irritability in the San Jiao. With Da Huang, for constipation.

-Chuan Bei Mu - Clears Heat, transforms Phlegm, stops coughing and nourishes and moistens the Lungs.

-Huang Bai - Drains Fire and relieves Fire toxicity. With Zhi Zi, resolves constraint and directs Qi downward for clearing Heat and Fire from the Liver channel.

-Jie Geng - Opens the Lungs, spreads Lung Qi, expels Phlegm and benefits the throat.

-Ku Shen - Clears Heat and dries Dampness.

-Qian Hu - Expels Phlegm, descends Qi and expels Wind-Heat (most suitable when Wind-Heat constrains the Lungs).

-Tian Hua Fen - Clears and drains Lung Heat, transforms Phlegm and moistens Lung Dryness.

-Da Huang - Drains Fire, purges accumulations, invigorates the Blood, dispels Blood Stasis and eliminates Phlegm. With Huang Lian, for a feeling of fullness and distention due to Heat Accumulation.

TREATS - Cough. Bronchial asthma. Bronchitis. Bronchiectasis. Pneumonia. Emphysema. COPD. Pulmonary tuberculosis.

* YI QI YANG YIN HUO XUE FANG - 翊气阳阴活血方 - Boost Qi, Yang and Yin and Activate the Blood Formula.

FORMULA ACTIONS - Tonifies Qi and Blood. Promotes urination. Invigorates the Blood. Dispels Blood Stasis. Nourishes Yin. Generates Fluids. Clears Heat. Drains Kidney Fire. Cools the Blood

SYNDROMES - Qi, Blood and Yin Deficiency with Blood Stagnation and Heat

CLINICAL MANIFESTATIONS - Lassitude. Fatigue. Shortness of breath. Dizziness. Tinnitus. Palpitations. Emaciation. Lack of strength. Dry, rough eyes Possible distended feeling in eyes A pale, lusterless face Possible malar flush Restless Insomnia Poor memory. Dry, parched throat. Tasteless feeling in the mouth. Low back and knee soreness and weakness. Low grade fever. Five Sole heat. Possible sweating. Possible tremors of the hands and tongue. Scanty intake. Abdominal distention after meal. Loose stools.

HERBS AND ACTIONS

-Huang Qi - Tonifies Qi and Blood, promotes urination, reduces edema and generates Body Fluids.

-Dan Shen - Invigorates, nourishes and cools the Blood, dispels Blood Stasis, clears Heat and soothes irritability.

-Yu Jin - Invigorates the Blood, dispels Blood Stasis, regulates Qi flow, clears Heat and cools the Blood.

-Mai Men Dong - Nourishes Lung and Stomach Yin and generates fluids.

-Fu Ling - Promotes urination, leaches out Dampness, strengthens the Spleen and harmonizes the Middle Jiao.

-Nu Zhen Zi - Nourishes and tonifies the Liver and Kidney Yin and clears Deficiency Heat.

-Yu Zhu - Nourishes Yin, moistens Dryness, moistens the Lungs, nourishes the Stomach and generate fluids.

-Huang Lian - Clears Heat, drains Dampness, drains Fire and resolves Fire toxicity.

-Mu Dan Pi - Clears Heat, cools, harmonizes and invigorates the Blood, clears Deficiency Fire and dispels Blood Stasis. With Chi Shao, for Blood Stasis disorders.

-Ze Xie - Promotes urination, leaches out Dampness and Drains Kidney Fire. With Fu Ling, facilitates the removal of water and leaches out Dampness.

-Chi Shao - Invigorates the Blood, dispels Blood Stasis,clears Heat, cools the Blood and relieves pain. With Bai Shao, for spasms and cramping pain associated with Blood Deficiency and Blood Stagnation.

-Bai Shao - Nourishes the Blood and astringes Yin.

TREATS - Hyperglycemia. Coronary Heart disease. Obesity. Primary Sjogren's syndrome. Diabetes mellitus. Abdominal fullness and distention. Low back pain. Forgetfulness. Fatigue. Dyspnea. Arteriosclerosis. Stroke. Diabetic nephropathy. Acute viral mydcarditis.
Insomnia. Tinnitus. Knee pain. Weakness. Palpitations.

1.3.3.55 RT-TCM-55

Traditional Chinese Medicine

https://archive.org/details/Resonant_Therapy-TCM_55

Arthritis-Skin Replenishment Tea, Chikungunya TCM, Collagen Replenishment TCM Herbs Molecules, Fat-metabolizing Tea Blend,
OA-Skin Dryness Tea, OA-Skin Repair Decoction, OA-Skin Support Brew, Oral Health Support - TCM, Shen Yi Bu Yuan Tang,

* ARTHRITIS-SKIN REPLENISHMENT TEA

For seniors dealing with arthritis-related skin dryness (a common issue due to Kidney / Liver Yin deficiency and Blood stasis in TCM), here's an herbal tea to nourish joints, improve skin hydration, and support collagen synthesis safely.

Herbal Tea: Arthritis-Skin Replenishment Decoction
Targets: Dry skin, joint stiffness, and poor circulation.

Ingredients
- Shu Di Huang - Nourishes Kidney / Liver Yin and Blood (moistens dryness).
- Dang Gui - Blood tonic, improves circulation to skin/joints.
- Sang Ji Sheng - Strengthens tendons, relieves joint ache.
- Bai Shao - Calms pain, softens stiff muscles.
- Yi Yi Ren - Reduces dampness (if swollen joints).
- Gou Qi Zi - Antioxidant for skin/joint repair.
- Chen Pi - Digestive weakness

* CHIKUNGUNYA TCM - 基孔肯雅热

Chikungunya is a viral disease transmitted by mosquitoes, characterized by high fever, severe joint pain, rash, and fatigue. In Traditional Chinese Medicine (TCM), it is classified as a Damp-Heat epidemic disease or Heat Toxin with Damp Obstruction".

This TCM Formula is for Chikungunya (Acute Phase - Fever & Joint Pain). A commonly used base formula is a modified Qing Hao Bie Jia Tang (青蒿鳖甲汤) combined with Si Miao San (四妙散) to clear heat, resolve dampness, and alleviate joint pain.

Modified Qing Hao Bie Jia Tang + Si Miao San

- Qing Hao - Clears heat, especially in epidemic diseases
- Bie Jia - Nourishes yin, clears deficiency heat
- Sheng Di Huang - Clears heat, cools blood
- Zhi Mu - Clears heat and dampness
- Mu Dan Pi - Cools blood, reduces inflammation
- Cang Zhu - Resolves dampness
- Huang Bai - Clears damp-heat
- Yi Yi Ren - Resolves dampness, relieves joint pain
- Niu Xi - Promotes blood circulation, directs herbs downward
- Fang Feng - Expels wind-damp, relieves pain
- Gan Cao - Harmonizes formula

Modifications
- ShiGao, Jin Yin Hua - For high fever + thirst
- Qin Jiao, Wei Ling Xian - For severe joint swelling / pain
- Huo Xiang, Pei Lan - For nausea / vomiting (damp stagnation)

* COLLAGEN REPLENISHMENT TCM

Formula designed to maximize collagen synthesis, skin barrier repair, and anti-aging effects while minimizing redundancy:

1. Collagen Synthesis & Stability
- Hydrolyzed Marine Collagen Peptides (Bioavailable Gly-Pro-Hyp)
- Ch-OSA (Silicon for collagen cross-linking)
- L-Ascorbic Acid (Vitamin C, essential for hydroxylation)
*Synergy: Collagen peptides provide building blocks; Ch-OSA stabilizes fibrils; vitamin C ensures proper maturation.

2. Barrier Repair & Ceramide Network
- Ceramide NP + EOP + AP (Full-spectrum stratum corneum repair)
- 1-O-Acyl-Ceramide (Stabilizes lipid "rivets")
- Sphingosine (Boosts endogenous ceramide production)
*Synergy: Ceramides NP/EOP/AP rebuild lamellar layers; 1-O-acyl strengthens cohesion; sphingosine amplifies synthesis.

3. Antioxidant & MMP Inhibition
- TetraHydroResveratrol (THR) (SIRT1 activator, 10x more stable than resveratrol)
- Ling Zhi (Reishi) (Triterpenes inhibit MMP-1)
- Gou Qi Zi (Lycium) (Zeaxanthin quenches ROS)
*Synergy: THR and Ling Zhi protect collagen from degradation; Gou Qi Zi neutralizes free radicals.

4. Hydration & Glycosaminoglycan Support
- Hyaluronate Decasaccharide (Low-MW HA for deep hydration)
- Bai He (Lily Bulb) (Mucilage polysaccharides)
- Shi Hu (Dendrobium) (Dendrobium polysaccharides)
*Synergy: Decasaccharide penetrates skin; Bai He/Shi Hu provide TCM-based humectancy.

5. Wound Healing & Fibroblast Activation
- GHK-Cu (Copper peptide for collagen I/III synthesis)
- Ji Xue Cao (Centella asiatica) (Asiaticoside stimulates fibroblasts)
- Zinc Picolinate (Regulates collagenase, supports healing)
*Synergy: GHK-Cu and Centella directly activate fibroblasts; zinc balances remodeling.

6. Circulation & Nutrient Delivery
- Dang Gui (Angelica sinensis) (Ferulic acid improves microcirculation)
*Role: Ensures actives reach skin via improved blood flow (supports other groups).

* FAT-METABOLIZING TEA BLEND

Is a digestive aid and metabolic supporter recipe, helps the body efficiently process the fuel you give it. This traditional-inspired tea blend combines powerful botanicals known for their supportive role in digestion and healthy metabolism. It's not a magic potion, but a synergistic blend designed to gently assist your body's natural processes.

Ingredients:

-Shan Zha - The cornerstone of this blend. Renowned in herbalism for its ability to support healthy digestion of fats, particularly by helping to maintain already healthy triglyceride levels.

-Dan Shen - Works to improve microcirculation, ensuring efficient nutrient delivery and waste removal at the cellular level, which is crucial for metabolic health.

- Chen Pi - Aids digestion by regulating Qi (energy flow), helping to soothe the stomach and reduce uncomfortable bloating after meals.

- Lv Cha - Adds a metabolic boost with its high concentration of EGCG, a potent antioxidant clinically shown to promote the oxidation (burning) of fat for energy.

* OA-SKIN DRYNESS TEA

A friendly easygoing approach for osteoarthritis (OA) with skin dryness, Gou Qi Zi + Da Zao Tea.

- Gou Qi Zi - Antioxidant for skin/joint repair.
- Da Zao - Augments Qi and moistens internal Dryness. It also clears Heat.

* OA SKIN REPAIR DECOCTION

For osteoarthritis (OA) with skin dryness, TCM focuses on nourishing Kidney / Liver Yin, moving Blood stagnation, and moistening dryness while reducing joint inflammation. Below is a herbal combination.

Internal Herbal Formula: "OA-Skin Repair Decoction"
Targets: Joint degeneration, stiffness, dry/itchy skin.

Ingredients
- Shu Di Huang - Tonifies Kidney/Liver Yin (roots of OA in TCM).
- Dang Gui - Moves Blood, relieves joint pain, hydrates skin.
- Du Zhong - Strengthens tendons/bones (TCM "bone tonic").
- Ji Xue Teng - Invigorates Blood, improves joint circulation.
- Bai Shao - Relaxes muscles, reduces spasms.
- Gou Qi Zi - Antioxidant for skin/joint repair.
- Mu Dan Pi - Cools blood (red/swollen joints) with heat signs.
- Rou Gui - Warms joints aflicted with cold pain.
- Shen Qu - Helps weak digestion.

* OA-SKIN SUPPORT BREW

Simplified, daily-friendly version of the protocol for osteoarthritis (OA) and skin dryness, designed for seniors who need an easy yet effective routine.

Daily Herbal Tea: "OA-Skin Support Brew"

Features
- Light enough for daily use but still targets OA and dryness.
- No heavy herbs (e.g., Shu Di Huang) to burden digestion.

Ingredients
-Gou Qi Zi - Antioxidant for joints/skin.
-Dang Gui - Blood nourishment.
-Sang Ji Sheng - Gentle joint strengthener.
-Bai Shao - Relieves stiffness.
-Long Yan Rou - Mild Blood tonic (adds sweetness).

* ORAL HEALTH SUPPORT-TCM

- Huang Lian - Contains berberine, which fights oral bacteria like Streptococcus mutans (a major cause of cavities). Often used in mouth rinses.

- Huang Bai - Another berberine-rich herb that reduces oral infections.

- Jin Yin Hua - Has antimicrobial effects; used for gum inflammation.

- Gan Cao - Anti-inflammatory and may inhibit cavity-causing bacteria.

- Mo Yao - Used in TCM for gum diseases and toothaches.

- Ding Xiang - A natural analgesic and antiseptic for tooth pain (often applied as oil).

* SHEN YI BU YUAN TANG - 肾益补元汤 - Kidney-Boosting and Primordial Qi-Restoring Decoction

This formulation is primarily used in senior health to address Kidney and Liver deficiencies, Aging-related decline, and associated syndromes.

FORMULA OVERVIEW
- Core Kidney Tonics - Shu Di Huang, He Shou Wu, Shan Zhu Yu, Gou Qi Zi, Ba Ji Tian.
- Yang Support - Rou Gui, Fu Zi.
- Qi & Digestion - Ren Shen, Shan Yao, Chen Pi.
- Yin/Heat Balance - Mai Dong, Mu Dan Pi.
- Dampness Regulation - Fu Ling, Ze Xie.

FORMULA ACTIONS
Tonifies Kidney Yin & Yang. Strengthens Spleen & Qi. Astringes Essence & Stops Leakage. Clears Deficiency Heat & Dampness. Enhances Vitality & Longevity

SYNDROMES & CLINICAL MANIFESTATIONS
- Kidney Yin & Yang Deficiency - Fatigue, weak lower back/knees, tinnitus, nocturia, cold limbs, low libido.
- Liver Blood & Essence Deficiency - Dizziness, blurred vision, premature graying, dry eyes.
- Spleen Qi Weakness - Poor appetite, loose stools, weak digestion.
- Senile Decline - Memory loss, slow recovery, frailty.
- Mild Damp-Heat or Deficiency Heat - Night sweats, low-grade fever, scanty dark urine.

HERB ACTIONS
- Shu Di Huang - Nourishes Kidney/Liver blood and Yin.
- He Shou Wu - Tonifies Liver/Kidney, supports hair and vitality.
- Shan Zhu Yu - Astringes Kidney essence, reduces frequent urination.
- Shan Yao - Strengthens Spleen and Kidneys, stabilizes blood sugar.
- Gou Qi Zi - Nourishes Liver/Kidney, improves vision.
- Wu Wei Zi - Astringes Lung/Kidney Qi, improves mental focus.
- Mu Dan Pi - Clears deficiency heat, cools blood.
- Fu Ling & Ze Xie - Drain dampness to prevent edema and urinary issues.
- Rou Gui & Fu Zi - Warm Kidney Yang, improve circulation.
- Ren Shen - Greatly tonifies Qi, enhances energy and immunity.
- Mai Dong - Nourishes Yin & moistens dryness.
- Ba Ji Tian - Tonifies Kidney Yang & Strengthens Bones/Tendons
- Chen Pi - Regulates Qi & Relieves Stagnation

TREATS - Age-related fatigue & weakness. Osteoporosis & joint pain. Cognitive decline & memory issues. Benign prostate hyperplasia (BPH) & urinary frequency.

Hypertension (due to Yin deficiency). Mild diabetes (Xiao Ke syndrome). Sexual dysfunction (erectile dysfunction, low libido)

CONTRAINDICATIONS & CAUTIONS - Excess Heat or Fire. Damp-Heat with Infection. Hypertension (Yang Excess Type) - Use cautiously with rising Liver Yang (headaches, irritability). Digestive Weakness with Stagnation. Fu Zi is contraindicated in pregnancy.

1.4 FREQUENCY ALCHEMY

Soundwave Activation for Mind, Body & Memory:

Activate Your Mind & Body with Science-Backed Sound Frequencies. This collection ble nds Solfeggio tones, chakra harmonics, and binaural beats with mathematically encode d patterns (Pi, Tesla 3-6-9) designed to enhance focus, relaxation, and energy flow.

- Explore inner spiritual genetic memory, your role in a remote past.

- The reproductive trigger in Humans which recruits different genes in both sexes now available together as a single recording which does not include sex related hormonal support. This trigger might attract feral spirits who suffer temporary memories blackout.

- Immune recognition' (MHC peptides) optimization can be a tool to spot on the fly long gone past social relationships.

- Twin Flame synchronization through immersive audio.

- Chakra Resonance, Solfeggio Frequencies.

- Mathematical Sequences (Pi, Tesla 3-6-9)

- Includes references to The Alien Interview, Lawrence R. Spencer’s research, and links to expanded materials for deeper study.

- Cognitive Augmentation via Non-Terrestrial Data Streams (Ref: Alien Interview, L.R. S pencer).

(Supplemental materials: Raelian Embassy Petition, Post-Interview Analysis.)

* Use for meditation, biohacking, or expanded awareness.

1.4.1 Chakras Body Tuner

https://archive.org/details/Chakras_Body_Tuner

Chakras Body Tuner

The Three Realms of Body, Mind and Spirit and the Four Functions of Willing, Feeling, Thinking and Sensing in the relationship to the 7 major Chakras using its Body Tuner fre quencies.

1st. Chakra - Sensing - 99 Hz
2nd. Chakra - Thinking - 104.25 Hz
3rd. Chakra - Feeling - 132 Hz
4th. Chakra - Willing - 159.75 Hz
5th. Chakra - Body - 185.25 Hz
6th. Chakra - Soul - 213 Hz
7th. Chakra - Spirit - 240.75 Hz

MEDITATION
01.- Soul Willing - 213, 159.75 Hz
02.- Soul Feeling - 213, 132 Hz
03.- Soul Thinking - 213, 104.25 Hz
04.- Soul Sensing - 213, 99 Hz

05.- Body Willing - 185.25, 159.75 Hz
06.- Body Feeling - 185.25, 132 Hz
07.- Body Thinking - 185.25, 104.25 Hz
08.- Body Sensing - 185.25, 99 Hz

09.- Spirit Willing - 240.75, 159.75 Hz
10.- Spirit Feeling - 240.75, 132 Hz
11.- Spirit Thinking - 240.75, 104.25 Hz
12.- Spirit Sensing - 240.75, 99 Hz

CONCENTRATION
01.- Soul Willing - 213, 159.75 Hz
02.- Body Sensing - 185.25, 99 Hz
03.- Spirit Thinking - 240.75, 104.25 Hz
04.- Soul Feeling - 213, 132 Hz
05.- Body Willing - 185.25, 159.75 Hz
06.- Spirit Sensing - 240.75, 99 Hz
07.- Soul Thinking - 213, 104.25 Hz
08.- Body Feeling - 185.25, 132 Hz
09.- Spirit Willing - 240.75, 159.75 Hz
10.- Soul Sensing - 213, 99 Hz
11.- Body Thinking - 185.25, 104.25 Hz

12.- Spirit Feeling - 240.75, 132 Hz

CONTEMPLATION
01.- Spirit Feeling - 240.75, 132 Hz
02.- Body Thinking - 185.25, 104.25 Hz
03.- Soul Sensing - 213, 99 Hz
04.- Spirit Willing - 240.75, 159.75 Hz
05.- Body Feeling - 185.25, 132 Hz
06.- Soul Thinking - 213, 104.25 Hz
07.- Spirit Sensing - 240.75, 99 Hz
08.- Body Willing - 185.25, 159.75 Hz
09.- Soul Feeling - 213, 132 Hz
10.- Spirit Thinking - 240.75, 104.25 Hz
11.- Body Sensing - 185.25, 99 Hz
12.- Soul Willing - 213, 159.75 Hz

1.4.2 Chakras Energetic Stimulation

https://archive.org/details/Chakras_Energetic_Stimulation

Chakras Energetic Stimulation

The Three Realms of Body, Mind and Spirit and the Four Functions of Willing, Feeling, Thinking and Sensing in the relationship to the 7 major Chakras using its Energetic Stim ulation frequencies.

1st. Chakra - Sensing - 194.18 Hz - Earth's Day
2nd. Chakra - Thinking - 210.42 Hz - Synodic Moon
3rd. Chakra - Feeling - 126.22 Hz - The Sun
4th. Chakra - Willing - 136.10 Hz - Earth Year
5th. Chakra - Body - 141.27 Hz - Mercury
6th. Chakra - Soul - 221.23 Hz - Venus
7th. Chakra - Spirit - 172.06 Hz - Platonic Year

MEDITATION
01.- Soul Willing - 221.23, 136.10 Hz
02.- Soul Feeling - 221.23, 126.22 Hz
03.- Soul Thinking - 221.23, 210.42 Hz
04.- Soul Sensing - 221.23, 194.18 Hz

05.- Body Willing - 141.27, 136.10 Hz
06.- Body Feeling - 141.27, 126.22 Hz
07.- Body Thinking - 141.27, 210.42 Hz

08.- Body Sensing - 141.27, 194.18 Hz

09.- Spirit Willing - 172.06, 136.10 Hz
10.- Spirit Feeling - 172.06, 126.22 Hz
11.- Spirit Thinking - 172.06, 210.42 Hz
12.- Spirit Sensing - 172.06, 194.18 Hz

CONCENTRATION
01.- Soul Willing - 221.23, 136.10 Hz
02.- Body Sensing - 141.27, 194.18 Hz
03.- Spirit Thinking - 172.06, 210.42 Hz
04.- Soul Feeling - 221.23, 126.22 Hz
05.- Body Willing - 141.27, 136.10 Hz
06.- Spirit Sensing - 172.06, 194.18 Hz
07.- Soul Thinking - 221.23, 210.42 Hz
08.- Body Feeling - 141.27, 126.22 Hz
09.- Spirit Willing - 172.06, 136.10 Hz
10.- Soul Sensing - 221.23, 194.18 Hz
11.- Body Thinking - 141.27, 210.42 Hz
12.- Spirit Feeling - 172.06, 126.22 Hz

CONTEMPLATION
01.- Spirit Feeling - 172.06, 126.22 Hz
02.- Body Thinking - 141.27, 210.42 Hz
03.- Soul Sensing - 221.23, 194.18 Hz
04.- Spirit Willing - 172.06, 136.10 Hz
05.- Body Feeling - 141.27, 126.22 Hz
06.- Soul Thinking - 221.23, 210.42 Hz
07.- Spirit Sensing - 172.06, 194.18 Hz
08.- Body Willing - 141.27, 136.10 Hz
09.- Soul Feeling - 221.23, 126.22 Hz
10.- Spirit Thinking - 172.06, 210.42 Hz
11.- Body Sensing - 141.27, 194.18 Hz
12.- Soul Willing - 221.23, 136.10 Hz

1.4.3 Chakras Awareness-Focus

https://archive.org/details/Chakras_Awareness_And_Focus

Chakras Awareness And Focus

The Three Realms of Body, Mind and Spirit and the Four Functions of Willing, Feeling, Thinking and Sensing in the relationship to the 7 major Chakras using its Awareness an

d Focus frequencies.

1st. Chakra - Sensing - 256 Hz - Root
2nd. Chakra - Thinking - 288 Hz - Sacral
3rd. Chakra - Feeling - 320 Hz - Solar Plexus
4th. Chakra - Willing - 341 Hz - Heart
5th. Chakra - Body - 384 Hz - Throat
6th. Chakra - Soul - 448 Hz - 3rd Eye
7th. Chakra - Spirit - 480 Hz - Crown

MEDITATION
01.- Soul Willing - 448, 341 Hz
02.- Soul Feeling - 448, 320 Hz
03.- Soul Thinking - 448, 288 Hz
04.- Soul Sensing - 448, 256 Hz

05.- Body Willing - 384, 341 Hz
06.- Body Feeling - 384, 320 Hz
07.- Body Thinking - 384, 288 Hz
08.- Body Sensing - 384, 256 Hz

09.- Spirit Willing - 480, 341 Hz
10.- Spirit Feeling - 480, 320 Hz
11.- Spirit Thinking - 480, 288 Hz
12.- Spirit Sensing - 480, 256 Hz

CONCENTRATION
01.- Soul Willing - 448, 341 Hz
02.- Body Sensing - 384, 256 Hz
03.- Spirit Thinking - 480, 288 Hz
04.- Soul Feeling - 448, 320 Hz
05.- Body Willing - 384, 341 Hz
06.- Spirit Sensing - 480, 256 Hz
07.- Soul Thinking - 448, 288 Hz
08.- Body Feeling - 384, 320 Hz
09.- Spirit Willing - 480, 341 Hz
10.- Soul Sensing - 448, 256 Hz
11.- Body Thinking - 384, 288 Hz
12.- Spirit Feeling - 480, 320 Hz

CONTEMPLATION
01.- Spirit Feeling - 480, 320 Hz
02.- Body Thinking - 384, 288 Hz
03.- Soul Sensing - 448, 256 Hz
04.- Spirit Willing - 480, 341 Hz
05.- Body Feeling - 384, 320 Hz

06.- Soul Thinking - 448, 288 Hz
07.- Spirit Sensing - 480, 256 Hz
08.- Body Willing - 384, 341 Hz
09.- Soul Feeling - 448, 320 Hz
10.- Spirit Thinking - 480, 288 Hz
11.- Body Sensing - 384, 256 Hz
12.- Soul Willing - 448, 341 Hz

1.4.4 Chakras Resonance

https://archive.org/details/Chakras_Resonance

Chakras Resonance

The Three Realms of Body, Mind and Spirit and the Four Functions of Willing, Feeling, Thinking and Sensing in the relationship to the 7 major Chakras using its Resonance fre quencies.

1st. Chakra - Sensing - Red - 8 Hz
2nd. Chakra - Thinking - Orange - 9 Hz
3rd. Chakra - Feeling - Yellow - 10 Hz
4th. Chakra - Willing - Green - 10.5 Hz
5th. Chakra - Body - Sky Blue - 12 Hz
6th. Chakra - Soul - Indigo - 13 Hz
7th. Chakra - Spirit - Violet - 15 Hz

MEDITATION
01.- Soul Willing - 13, 10.5 Hz
02.- Soul Feeling - 13, 10 Hz
03.- Soul Thinking - 13, 9 Hz
04.- Soul Sensing - 13, 8 Hz

05.- Body Willing - 12, 10.5 Hz
06.- Body Feeling - 12, 10 Hz
07.- Body Thinking - 12, 9 Hz
08.- Body Sensing - 12, 8 Hz

09.- Spirit Willing - 15, 10.5 Hz
10.- Spirit Feeling - 15, 10 Hz
11.- Spirit Thinking - 15, 9 Hz
12.- Spirit Sensing - 15, 8 Hz

CONCENTRATION

01.- Soul Willing - 13, 10.5 Hz
02.- Body Sensing - 12, 8 Hz
03.- Spirit Thinking - 15, 9 Hz
04.- Soul Feeling - 13, 10 Hz
05.- Body Willing - 12, 10.5 Hz
06.- Spirit Sensing - 15, 8 Hz
07.- Soul Thinking - 13, 9 Hz
08.- Body Feeling - 12, 10 Hz
09.- Spirit Willing - 15, 10.5 Hz
10.- Soul Sensing - 13, 8 Hz
11.- Body Thinking - 12, 9 Hz
12.- Spirit Feeling - 15, 10 Hz

CONTEMPLATION
01.- Spirit Feeling - 15, 10 Hz
02.- Body Thinking - 12, 9 Hz
03.- Soul Sensing - 13, 8 Hz
04.- Spirit Willing - 15, 10.5 Hz
05.- Body Feeling - 12, 10 Hz
06.- Soul Thinking - 13, 9 Hz
07.- Spirit Sensing - 15, 8 Hz
08.- Body Willing - 12, 10.5 Hz
09.- Soul Feeling - 13, 10 Hz
10.- Spirit Thinking - 15, 9 Hz
11.- Body Sensing - 12, 8 Hz
12.- Soul Willing - 13, 10.5 Hz

1.4.5 Chakras Solfeggio Energy Tuner

https://archive.org/details/Chakras_Solfeggio_Energy-Tuner

Chakras Solfeggio Energy Tuner

The Three Realms of Body, Mind and Spirit and the Four Functions of Willing, Feeling, Thinking and Sensing are connected to the 7 major Chakras. The Solfeggio scale provid es here the energy tuner frequencies used to fix the boundaries of the relationship betw een Realms and Functions.

1st. Chakra - Sensing - 396 Hz - Liberating guilt and fear
2nd. Chakra - Thinking - 417 Hz - Undoing situations and facilitating change
3rd. Chakra - Feeling - 528 Hz - Transformation and miracles (DNA Repair)
4th. Chakra - Willing - 639 Hz - Connecting/relationships

5th. Chakra - Body - 741 Hz - Awakening intuition
6th. Chakra - Soul - 852 Hz - Returning to spiritual order
7th. Chakra - Spirit - 963 Hz - Immortal Spirit

01 - MEDITATION
01.- Soul Willing - 852 Hz, 639 Hz
02.- Soul Feeling - 852 Hz, 528 Hz
03.- Soul Thinking - 852 Hz, 417 Hz
04.- Soul Sensing - 852 Hz, 396 Hz

05.- Body Willing - 741 Hz, 639 Hz
06.- Body Feeling - 741 Hz, 528 Hz
07.- Body Thinking - 741 Hz, 417 Hz
08.- Body Sensing - 741 Hz, 396 Hz

09.- Spirit Willing - 963 Hz, 639 Hz
10.- Spirit Feeling - 963 Hz, 528 Hz
11.- Spirit Thinking - 963 Hz, 417 Hz
12.- Spirit Sensing - 963 Hz, 396 Hz

02 - CONCENTRATION
01.- Soul Willing - 852 Hz, 639 Hz
02.- Body Sensing - 741 Hz, 396 Hz
03.- Spirit Thinking - 963 Hz, 417 Hz
04.- Soul Feeling - 852 Hz, 528 Hz
05.- Body Willing - 741 Hz, 639 Hz
06.- Spirit Sensing - 963 Hz, 396 Hz
07.- Soul Thinking - 852 Hz, 417 Hz
08.- Body Feeling - 741 Hz, 528 Hz
09.- Spirit Willing - 963 Hz, 639 Hz
10.- Soul Sensing - 852 Hz, 396 Hz
11.- Body Thinking - 741 Hz, 417 Hz
12.- Spirit Feeling - 963 Hz, 528 Hz

03 - CONTEMPLATION
01.- Spirit Feeling - 963 Hz, 528 Hz
02.- Body Thinking - 741 Hz, 417 Hz
03.- Soul Sensing - 852 Hz, 396 Hz
04.- Spirit Willing - 963 Hz, 639 Hz
05.- Body Feeling - 741 Hz, 528 Hz
06.- Soul Thinking - 852 Hz, 417 Hz
07.- Spirit Sensing - 963 Hz, 396 Hz
08.- Body Willing - 741 Hz, 639 Hz
09.- Soul Feeling - 852 Hz, 528 Hz
10.- Spirit Thinking - 963 Hz, 417 Hz
11.- Body Sensing - 741 Hz, 396 Hz

12.- Soul Willing - 852 Hz, 639 Hz

1.4.6 Decagonal Frequencies

https://archive.org/details/Decagonal_Frequencies

Decagonal Frequencies

1. - The first recording plays a decagonal set of numbers. Originally referring to the Pyth agorean scale in a representation of the number 384 (http://www.smphillips.8m.com/th e-holistic-pattern.html), The file uses all the digits outside the decagon, while the vertice s play twice the time of the others.

Meditation upon the Vissudha chakra is said to bring about; vision of the three periods, Past, Present and Future; freedom from disease, old age; destruction of dangers; and th e ability to move the three realms of Body, Mind and Spirit.

384-192-96-48-24-12-6-3 Hz - Vissudha Chakra (5th) -Throat

Through meditation on Svadhisthana, the following occult powers are said to be obtaine d. One is freedom from all enemies, and becomes a master spiritual teacher. The words flow like nectar in well-reasoned discourse. One gains loss of fear of water, awareness of astral entities, and the ability to taste anything desired for oneself or others.

288-144-72-36-18-9 Hz - Svadhisthana Chakra (2nd) -Sexual Organs

Meditating on the Muladhara chakra, a person becomes master of speech and leader a mong people, an adept to all kinds of learning. Free from all diseases, with its inmost spi rit filled with gladness. Develops, too, an absolute disposition noted by deep and musica l words.

256-128-64-32-16-8-4-2 Hz - Muladhara Chakra (1st) -Root

2. - The 2nd recording recreates the same decagonal pattern of the 1st, though, taking 448 Hz to calculate the sequence.

Meditation upon Ajna supposedly grants the following occult powers, to quickly enter an others body at will. To become omniscient, realize unity with the Spirit, origin and suppo rt of the phenomenal universe. The ability to create, preserve and destroy the three real ms of Body, Mind and Spirit.

448-224-112-56-28-14-7-3.5 Hz - Ajna Chakra (6th) -Third Eye

3. - In like manner 480 Hz is used in the computation of the 3rd track.

Through meditating on Manipura, one is said to attain the occult power, to create, destro y or save the world.

320-160-80-40-20-10-5-2.5 Hz - Manipura Chakra (3rd) -Navel

Meditating on Sahasrara is said to bring about the occult powers, of transforming into th e divine, and being able to do whatever one wishes.

480-240-120-60-30-15-7.5-3.75 Hz - Sahasrara Chakra (7th) -Crown

4. - Further, the 4th recording takes into consideration 341 Hz.

Meditation on Anahata is said to bring about the following occult powers, to become a m aster of speech, dearer than the dearest to the other sex. The senses are completely un der control, and can enter at will into another's body. (Wikipedia)

341-170.5-85.25-42.625-21.312-10.656-5.328-2.664 Hz - Anahata Chakra (4th) -Heart

1.4.7 Decagon-Solfeggio Arrangement

https://archive.org/details/Decagon-Solfeggio_Arrangement

Decagon-Solfeggio Arrangement

The Solfeggio frequencies in decagonal arrangement.

Originally referring to the Pythagorean scale in a representation of the number 384 (http: //www.smphillips.8m.com/the-holistic-pattern.html). Decagonal arrangements play the di gits outside the decagon, while the vertices play twice the time of the others.

1.4.8 Alien Interview Book

https://exopoliticshongkong.com/uploads/Alien_Interview.pdf

The content of this book is the letter, official Top Secret U.S. Army Air Force interview tr anscripts and personal notes I received from the late Matilda O'Donnell MacElroy. Her l etter to me asserts that this material is based on a series of interviews she conducted wi

th an extraterrestrial being as part of her official duty as a nurse in the U.S. Army Air For ce. The extraterrestrial she interviewed identitied itself as an officer, pilot and engineer o f The Domain Expeditionary Force, a race of beings who have been using the asteroid b elt in our solar system as a intergalactic base of operations for the past 10,000 years. H er dying request was that the transcripts finally be released to the world. In a letter recei ved with the transcripts, Mrs. MacElroy says: "Mankind needs to know the answers to q uestions which are contained in these documents: Who are we? Where did we come fro m? What is our purpose on Earth? If there is intelligent life elsewhere in the universe wh y have they not contacted us? It is vital that people understand the devastating consequ ences to our physical and spiritual survival if we fail to take effective action to undo the l ong-standing and pervasive effects of alien intervention on Earth." (Lawrence R Spence r)

14. Some Thoughts

The Beginning Of The Story

There was a surprise attack against an expeditionary base of The Domain in the Himala ya's range 8000 years ago. The aggression involved forces from the 'Old Empire'. Unkn owingly, the Domain had stepped into an ongoing 'Old Empire' operation in Earth, wher e they had created a prison planet from an experimental garden without native populatio n.

A part of the 'Old Empire' fleet, after the fall of their home planet into The Domain's han ds, was nearby in support of a Mind Control operation which was being held on this plan et against the population of 'untouchables' from their territories. They had claimed the pl anet as their own, and any transgression according to their laws, deserved punishment. The Domain's expeditionary party headquarters was stationed here as part of a bigger o peration of expansion at this end of the galaxy, after having staked claim of Earth.

By the time being, the Amnesia Machinery from the 'Old Empire' keeps working unsuper vised in three unknown locations. Waiting for the day someone is able to neutralize it an d begin a new era, where people will be able to choose freely between leaving Earth or staying and recover slowly their memory of past lives after death. Meanwhile, some plan etary cultures of strong service-to-self orientation, part of the 'Old Empire', still use Earth to drop here their 'untouchables' now for free. In contrast, The Domain stands as a servi ce-to-others culture where this amnesia practice is not tolerated.

Self management of life in a population under these circumstances, takes another twist. First, one should be able to recall its own origin as being far away from Earth and secon d realize there is not a single reason to be here. Service-to-self political orientation has been and is still the main protagonist, promoted subvertly by the own operators of the 'O ld Empire' through history until now. Whereas service-to-others initiatives by members o f The Domain helped notably to counter their influence they had limited success. Ignora nce that death, likewise, has been manipulated to fit the purpose of the prison is general ized. The resulting Thought evolution has Science ignoring completely the reality of the Spirit and its study, while Religions take advantage of the amnesia between lives to sec ure allegiance purporting nonexistent paradises, hells and gods. Likewise, governments, corporations and financial institutions exert a deep pressure over citizens to keep them from straying away of imposed rules.

Service-To-Self Answers

The meaning of life is reproduction and survival; you can degrade yourself/others to the point you pass unnoticed, or agreed upon, else there will be a punishment. People are j ust an infinitesimal part in this process, if they don't agree, someone will put them back i nto place.

Biological death happens to biological bodies, but the mission is and will always be to pr ovide another challenge. You'll lose identity, and memories, only Self will be able to find its nature in the future.

Peace and fulfillment can only be achieved as a full-time tax paying slave, but wars and unrest make it worth the cost. Make your life a purposeful one by climbing relentlessly th e social ladder, were you can let your light shine, as an example of achievement.

The only chaos you'll find comes from others, so you will have to face this up to establis h truth. There's a star shinning upon you because you belonged to the gods' family befo re you were born. The Universe was created by the silent Power of the Witness.

Your mission in life is to be above others, actively teaching by any means those who do n't conform to the model. If you had to think of a god remember there nobody better tha n yourself. Others are reflecting the idea of perfection upon you, so take it and make yo ur will. The divine He or She has to be likewise; hence play it by the rules, then carry on business.

Truth is relative to the Witness point of view, source of the Universe. Life after death is u pon Self, so live the here and now. Happiness and contentment depend on the power of being able to do what suits best to Self at the right time.

Death is unavoidable for now, until humans find the technology. Self realization comes f rom handling personal power across the challenge. Love is until death makes us apart, t he sharing is never lost. Enlightnment is knowing, understanding and fulfilling Self need s, thus becoming an example. Your unique potentials are within yourself, wake up and p articipate. Keep trust upon you, but exercise the ability to cash on your potentials by obs erving trends, and seizing the moment. There won't be second chances.

If you want more answers after the previous round, keep reading. You don't need to kno w yourself, you are the evidence of yourself. When you see the world with your eyes, fe el it under your feet, above your head, in your hands, then you know everything. You we re born with a particular sex, hence the meaning of life is to find a partner and place in s ociety. This meaning comes from observation, understanding the expectations of those around, and giving people what they want, need, or deserve according to your fair criteri a.

Wisdom is the ability of getting the most while giving the least. In your deep sleep, feel e verything coming to you because you own all that it takes. Your dreams come from the unaware part of Self in the struggle for understanding risks. Deep dreams, sometimes w ill reveal common people misunderstandings, others give you clues on different aspects on experience.

To find your mission in life believe in luck, your good star, and work hard to find the time and place it will be revealed, so you can grasp it up, just for you to make it happen. To fi nd truth you don't need to go far away, or into elaborate thoughts, get inspiration from lif e, instinct and trickery will work to fill the needs. You know something is either true or fal se only in the end, when it looses meaning for everyone else but you, and may be disca rded.

Besides, do never trust others giving you these answers, it could be a trap since this is t he way of nature. Trust only in yourself, else your inner strength and purpose may resen t. Other people's answers are valid just for themselves, you're already in a steady positi on. Figure out what the answers are when the challenges reach your stand. There's no need to rush until the common dream is at a stake.

Service-To-Others Answers (Airl)

(Open the link in your browser to see the picture) https://postimg.cc/sQwTkZYP

I will provide information to you that I think will be beneficial to the well-being of the imm ortal spiritual beings who comprise humanity, and that will foster the survival of all the m yriad life forms and the environment of Earth. The skill required to modify the planet into an ecologically interactive environment that will support billions of diverse species was a n immense undertaking. Specialized consultants from nearly every biotechnology comp any in the galaxy were brought in to help with the project. What you see now on Earth is the huge variety of life forms left behind.

All sentient beings are immortal spiritual beings. You are an "IS-BE", because the prima ry nature of an immortal being is that they live in a timeless state of "is", and the only re ason for their existance is that they decide to "be". Each IS-BE is completely unique in i dentity, power, awareness and ability. No matter how lowly their station in a society, eve ry IS-BE deserves the respect and treatment that I myself would like to receive from oth ers. Each person on Earth continues to be an IS-BE whether they are aware of the fact or not.

Since an IS-BE is not a physical universe entity it has no location in space or time. An I S-BE is literally, "immaterial". They can span great distances of space instantly. They ca n experience sensations, more itensely than a biological body, without the use of physic al sensory mechanisms. An IS-BE can exclude pain from their perception.

Before the formation of the physical universe there was a vast period during which unive rses were not solid, but wholly illusionary. You might say that the universe was a univer se of magical illusions which were made to appear and vanish at the will of the magician. In every case, the "magician" was one or more IS-BEs.

The physical universe is formed from the convergence and amalgamation of many other individual universes, each one of which were created by an IS-BE or group of IS-BEs. T he collision of these illusory universes comingled and coalesced and were solidified to f orm a mutually created universe. Because it is agreed that energy and forms can be cre ated, but not destroyed, this creative process has continued to form an ever-expanding universe of nearly infinite physical proportions.

Each IS-BE entered into the physical universe when they lost their own, "home" univers

e. That is, when an IS-BE's "home" universe was overwhelmed by the physical universe, or when the IS-BE joined with other IS-BEs to create or conquer the physical universe.

On the home planet of an IS-BE their material possessions were not lost, stolen or forgo tten when the being died or left the body. An IS-BE could return and claim the possessio ns.

The first development of biological bodies began in this universe about seventy-four trilli on years ago. It rapidly became a fad for IS-BEs to create and inhabit various types of b odies for an assortment of nefarious reasons: especially for amusement, this is to experi ence various physical sensations vicariously through the body.

Since that time there has been a continuing "de-evolution" in the relationship of IS-BEs t o bodies. As IS-BEs continued to play around with these bodies, certain tricks were intro duced to cause IS-BEs to get trapped inside a body so they were unable to leave again.

This was done primarily by making bodies that appeared sturdy, but were actually very f ragile. An IS-BE, using their natural power to create energy, accidentally injured a body when contacting it. The IS-BE was remorseful about having injured this fragile body. Th e next time they encountered a body they began to be "careful" with them. In so doing, t he IS-BE would withdraw or minimize their own power so as not to injure the body. A ve ry long and treacherous history of this kind of trickery, combined with similar misadventu res eventually resulted in a large number of IS-BEs becoming permanently trapped in b odies.

Of course this became a profitable enterprise for some IS-BEs who took advantage of th is situation to make slaves of others. The resulting enslavement progressed over trillion s of years, and continues today. Ultimately the dwindling ability of IS-BEs to maintain a personal state of operational freedom and ability to create energy resulted in a vast and carefully guarded hierarchy or class system.

Every speck of dust in space, from the size of the tiniest subatomic particle, to the size o f a sun or a magelantic cloud the size of many galaxies, was created from the nothingne ss of a thought. Even the tiniest, individual cells were contrived and coordinated to enab le a microbial entity to sense, and navigate through infinitesimally small spaces. These also came from an idea thought up by an IS-BE.

You, and every IS-BE on Earth, have participated in the creation of this universe. Even t hough you are now confined to a fragile body made of flesh; you live for only 65 short ro tations of your planet around a star; you have been given overwhelming electric shock tr eatments to wipe out your memory; you must learn everything all over again each lifetim e; in spite of all these circumstances, you are who you are and will always be. And, dee p down, you still know that your are and what you know. You are still the essence of you.

The most fundamental problems that must be solved in order to ensure that Earth will n ot be destroyed by technology, are social and humanitarian problems. Therefore, do not

look to scientists to save Earth or the future of humanity. Any so-called "science" that is solely based on the paradigm that existence is composed only of energy and objects m oving through space is not a science. Such beings utterly ignore the creative spark origi nated by an individual IS-BE and collective work of the IS-BEs who continually create th e physical universe and all universes. Every science will remain relatively ineffective or destructive to the degree that it omits or devaluates the relative importance of the spiritu al spark that ignites all of creation and life.

Do not rely on the dogma of physical sciences to master the fundamental forces of creat ion any more than you would trust the chanted incantations of an incense-burning sham an. The net result of both of these is entrapment and oblivion. Scientists pretend to obse rve, but they only suppose that they see, and call it fact. Like the blind man, a scientist c an not learn to see until he realizes that he is blind. The "facts" of Earth science do not i nclude the source of creation. They include only the result, or byproducts of creation. Th e "facts" of science to not include any memory of the nearly infinite past experience of e xistence. The paradigm of science is that creation is all, and the creator is nothing. Relig ion says the creator is all, and the creation is nothing. These two extremes are the bars of a prison cell. They prevent observation of all phenomenon as an interactive whole.

The true geniuses of civilization are those IS-BEs who will enable other IS-BEs to recov er their memory and regain self-realization and self-determination. This issue is not solv ed through enforcing moral regulation on behavior, or through the control of beings thro ugh mystery, faith, drugs, guns or any other dogma of a slave society. And certainly not through the use of electric shock and hypnotic commands!

The survival of Earth and every being on it depends on the ability to recover the memor y of skills you have accrued through the trillenia; to recover the essence of yourself. We are interested in preventing destruction, as well as accelerating the development of tech nologies that will sustain the infrastructures of the global biosphere, hydrosphere and at mosphere. If humanity is to survive, it must cooperate to find effective solutions to the di fficult conditions of your existence on Earth. Humanity must rise above its human form a nd discover where they are, and that they are IS-BEs, and who they really are as IS-BE s in order to transcend the notion that they are merely biological bodies. Once these rea lizations have been made, it may be possible to escape your current imprisonment. Oth erwise, there will be no future for the IS-BEs on Earth.

When one knows that these activities exist, the effects can be observed clearly. The mo st obvious examples of these actions against the human race can be seen as incidents of sudden, inexplicable behavior. They are playing insidious games with no purpose and no goal other than to control and destroy IS-BEs who could otherwise manage themselv es perfectly well, if left alone. Why not keep the inmates fighting between themselves? Why not empower madmen to run the governments of Earth?

The human race will continue to shadow box with this for a long time -as long as it remai ns the human race. Until then, the IS-BEs on Earth will continue to live series of consec utive lives, over and over and over. In between each lifetime an IS-BE is sent back agai

n, to begin all over, as though the new life was the only life they had ever lived. They be gin anew in pain, in misery, and mystery.

Some IS-BEs have been transported to Earth more recently than others. Some IS-BEs have been on Earth only a few hundred years, so they have no personal experiences wi th the earlier civilizations of Earth. They have no experiences of having lived on Earth, s o could not remember a previous existence here, even if their memory was restored. Th ey might, however, remember lives they lived elsewhere on other planets and in other ti mes. Others have been here since the first days of Lemuria. In any case, the IS-BEs of Earth are here forever, until they can break the amnesia cycle, conquer the electronic tr aps set up by their captors and free themselves.

Immortal Spiritual Beings are the source and creators of illusions. Each one, individually and collectively, in their original, unfettered state of being, are an eternal, all-powerful, al l-knowing entity.

IS-BEs create space by imagining a location. The intervening distance between themsel ves and the imagined location is what we call space. An IS-BE can perceive the space a nd objects created by other IS-BEs.

IS-BEs are not physical universe entities. They are a source of energy and illusion. IS-B Es are not located in space or time, but can create space, place particles in space, creat e energy, and shape particles into various forms, cause the motion of forms, and animat e forms. Any form that is animated by an IS-BE is called life.

An IS-BE can decide to agree that they are located in space or time, and that they, them selves, are an object, or any other manner of illusion created by themselves or another or other IS-BEs. The disadvantage of creating an illusion is that an illusion must be conti nually created. If not continually created, it disappears. Continual creation of an illusion r equires incessant attention to every detail of the illusion in order to sustain it.

A common denominator of IS-BEs seems to be the desire to avoid boredom. A spirit onl y, without interaction with other IS-BEs, and the unpredictable motion, drama, and unant icipated intentions and illusions being created by other IS-BEs, is easily bored.

What if you could imagine anything, perceive everything, and cause anything to happen, at will? What if you couldn't do anything else? What if you always knew the outcome of every game and the answer to every question? Would you get bored?

The entire back time track of IS-BEs is immeasurable, nearly infinite in terms of physical universe time. There is no measurable "beginning" or "end" for an IS-BE. They simply e xist in an everlasting now.

Another common denominator of IS-BEs is that admiration of one's own illusions by oth ers is very desirable. If the desired admiration is not forthcoming, the IS-BE will keep cre ating the illusion in an attempt to get admiration. One could say that the entire physical

universe is made of unadmired illusions.

The origins of this universe began with the creation of individual, illusionary spaces. The se were the "home" of the IS-BE. Sometimes a universe is a collaborative creation of illu sions by two or more IS-BEs. A proliferation of IS-BEs, and the universes they create, s ometimes collide or become commingled or merge to an extent that many IS-BEs share d in the co-creation of a universe.

IS-BEs diminish their ability in order to have a game to play. IS-BEs think that any game is better than no game. They will endure pain, suffering, stupidity, privation, and all man ner of unnecessary and undesirable conditions, just to play a game. Pretending that one does not know all, see all and cause all, is a way to create the conditions necessary for playing a game: unknowns, freedoms, barriers and/or opponents and goals. Ultimately, playing a game solves the problem of boredom.

In this fashion, all of the space, galaxies, suns, planets, and physical phenomena of this universe, including life forms, places, and events that have been created by IS-BEs and sustained by mutual agreement that these things exist.

There are as many universes as there are IS-BEs to imagine, build and perceive them, each existing concurrently within its own continuum. Each universe is created using its o wn, unique set of rules, as imagined, altered, preserved or destroyed by one or more IS-BEs who created it. Time, energy, objects and space, as defined in terms of the physica l universe, may or may not exist in other universes. The Domain exists in such a univers e, as well as in the physical universe.

One of the rules of the physical universe is that energy can be created, but not destroye d. So, the universe will keep expanding as long as IS-BEs keep adding more new energ y into it. It is nearly infinite. It is like an automobile assembly line that never stops runnin g and none of the cars are ever destroyed.

Every IS-BE is basically good. Therefore, an IS-BE does not enjoy doing things to other IS-BEs which they themselves do not want to experience. For an IS-BE there is no inher ent standard for what is good or bad, right or wrong, ugly or beautiful. These ideas are a ll based on the opinion of each individual IS-BE.

The closest concept that human beings have to describe an IS-BE is as a god: all-knowi ng, all-powerful, infinite. So, how does a god stop being a god? They pretend NOT to kn ow. How can you play a game of "hide and seek" if you always know where the other pe rson is hiding?

You pretend NOT to know where the other players are hiding, so you can go off to "see k" them. This is how games are created. You have forgotten that you are just "pretendin g". In so doing, IS-BEs become entrapped and enslaved inside a maze of their own devi sing.

How does one create a cage, lock one's own self inside the cage, throw away the key, a nd forget there is a key or a cage, and forget there is an "inside" or "outside", and even f orget there is a self? Create the illusion that there is no illusion: the entire universe is re al, and that no other universe exists or can be created.

On Earth, the propaganda taught and agreed upon is that the gods are responsible, and that human beings are not responsible.You are taught that only a god can create univer ses. So, the responsibility for every action is assigned to another IS-BE or god. Never o neself.

No human being ever assumes personal responsibility for the fact that they, themselves -individually and collectively- are gods. This fact alone is the source of entrapment for e very IS-BE.

(Selected excerpts from the Alien Interview book edited by Lawrence R. Spencer)

Raelian Embassy

Rael, Claude Maurice Marcel Vorilhon, is the founder of the Raelian Movement. In his te achings they claim humans were created by aliens. He has earned a good number of te stimonies both 'good' and 'bad' from people. Since he is controversial, people who adhe re to the system's old beliefs and practices may try to expose him in a bad light. Wherea s his true followers, bound for new frontiers, revere his messages.

Personally, his message rings true to me, possibly the Elohim and the Domain's civilizati on mentioned in Alien Interview are the same, no matter how different is the source of th e experience. I really praise his endeavor of calling common people from all over the wo rld to teach the truth, or reaching out to the polls to create an Embassy for the Elohim.

Check out the project's website at elohimembassy.org

https://www.youtube.com/watch?v=fB37tB5vT_4

Do you want to sign the petition for the Elohim Embassy at change.org?

What is the human tragedy all about? (Airl)

Biological flesh bodies live for only a very short time -only 60 to 150 years, at most -whe reas doll bodies can be re-used and repaired almost indefinitely.

The first development of biological bodies began in this universe about seventy-four trilli

on years ago. It rapidly became a fad for Immortal Spiritual Beings (IS-BEs) to create an d inhabit various types of bodies for an assortment of nefarious reasons: especially for a musement, this is to experience various physical sensations vicariously through the bod y.

Since that time there has been a continuing "de-evolution" in the relationship of IS-BEs t o bodies. As IS-BEs continued to play around with these bodies, certain tricks were intro duced to cause IS-BEs to get trapped inside a body so they were unable to leave again.

This was done primarily by making bodies that appeared sturdy, but were actually very f ragile. An IS-BE, using their natural power to create energy, accidentally injured a body when contacting it. The IS-BE was remorseful about having injured this fragile body.

The next time they encountered a body they began to be "careful" with them. In so doin g, the IS-BE would withdraw or minimize their own power so as not to injure the body. A very long and treacherous history of this kind of trickery, combined with similar misadve ntures eventually resulted in a large number of IS-BEs becoming permanently trapped i n bodies.

Of course this became a profitable enterprise for some IS-BEs who took advantage of th is situation to make slaves of others. The resulting enslavement progressed over trillion s of years, and continues today.

(Selected excerpts from the Alien Interview book edited by Lawrence R. Spencer)

Could you elucidate Immortal Spiritual Beings? (Airl)

Immortal Spiritual Beings, which I refer to as "IS-BEs", for the sake of convenience, are the source and creators of illusions. Each one, individually and collectively, in their origi nal, unfettered state of being, are an eternal, all-powerful, all-knowing entity.

IS-BEs create space by imagining a location. The intervening distance between themsel ves and the imagined location is what we call space. An IS-BE can perceive the space a nd objects created by other IS-BEs.

IS-BEs are not physical universe entities. They are a source of energy and illusion. IS-B Es are not located in space or time, but can create space, place particles in space, creat e energy, and shape particles into various forms, cause the motion of forms, and animat e forms. Any form that is animated by an IS-BE is called life.

An IS-BE can decide to agree that they are located in space or time, and that they, them selves, are an object, or any other manner of illusion created by themselves or another or other IS-BEs.

The disadvantage of creating an illusion is that an illusion must be continually created. If

not continually created, it disappears. Continual creation of an illusion requires incessan t attention to every detail of the illusion in order to sustain it.

A common denominator of IS-BEs seems to be the desire to avoid boredom. A spirit onl y, without interaction with other IS-BEs, and the unpredictable motion, drama, and unant icipated intentions and illusions being created by other IS-BEs, is easily bored.

What if you could imagine anything, perceive everything, and cause anything to happen, at will? What if you couldn't do anything else? What if you always knew the outcome of every game and the answer to every question? Would you get bored?

The entire back time track of IS-BEs is immeasurable, nearly infinite in terms of physical universe time. There is no measurable "beginning" or "end" for an IS-BE. They simply e xist in an everlasting now.

Another common denominator of IS-BEs is that admiration of one's own illusions by oth ers is very desirable. If the desired admiration is not forthcoming, the IS-BE will keep cre ating the illusion in an attempt to get admiration. One could say that the entire physical universe is made of unadmired illusions.

The origins of this universe began with the creation of individual, illusionary spaces. The se were the "home" of the IS-BE. Sometimes a universe is a collaborative creation of illu sions by two or more IS-BEs. A proliferation of IS-BEs, and the universes they create, s ometimes collide or become commingled or merge to an extent that many IS-BEs share d in the co-creation of a universe.

IS-BEs diminish their ability in order to have a game to play. IS-BEs think that any game is better than no game. They will endure pain, suffering, stupidity, privation, and all man ner of unnecessary and undesirable conditions, just to play a game. Pretending that one does not know all, see all and cause all, is a way to create the conditions necessary for playing a game: unknowns, freedoms, barriers and/or opponents and goals.

Ultimately, playing a game solves the problem of boredom. In this fashion, all of the spa ce, galaxies, suns, planets, and physical phenomena of this universe, including life form s, places, and events that have been created by IS-BEs and sustained by mutual agree ment that these things exist.

There are as many universes as there are IS-BEs to imagine, build and perceive them, each existing concurrently within its own continuum. Each universe is created using its o wn, unique set of rules, as imagined, altered, preserved or destroyed by one or more IS-BEs who created it. Time, energy, objects and space, as defined in terms of the physica l universe, may or may not exist in other universes. The Domain exists in such a univers e, as well as in the physical universe.

One of the rules of the physical universe is that energy can be created, but not destroye d. So, the universe will keep expanding as long as IS-BEs keep adding more new energ

y into it. It is nearly infinite. It is like an automobile assembly line that never stops runnin g and none of the cars are ever destroyed.

Every IS-BE is basically good. Therefore, an IS-BE does not enjoy doing things to other IS-BEs which they themselves do not want to experience. For an IS-BE there is no inher ent standard for what is good or bad, right or wrong, ugly or beautiful. These ideas are a ll based on the opinion of each individual IS-BE.

The closest concept that human beings have to describe an IS-BE is as a god: all-knowi ng, all-powerful, infinite. So, how does a god stop being a god? They pretend NOT to kn ow. How can you play a game of "hide and seek" if you always know where the other pe rson is hiding?

You pretend NOT to know where the other players are hiding, so you can go off to "see k" them. This is how games are created. You have forgotten that you are just "pretendin g". In so doing, IS-BEs become entrapped and enslaved inside a maze of their own devi sing.

How does one create a cage, lock one's own self inside the cage, throw away the key, a nd forget there is a key or a cage, and forget there is an "inside" or "outside", and even f orget there is a self? Create the illusion that there is no illusion: the entire universe is re al, and that no other universe exists or can be created.

On Earth, the propaganda taught and agreed upon is that the gods are responsible, and that human beings are not responsible. You are taught that only a god can create univer ses. So, the responsibility for every action is assigned to another IS-BE or god. Never o neself. No human being ever assumes personal responsibility for the fact that they, the mselves -- individually and collectively -- are gods. This fact alone is the source of entra pment for every IS-BE.

It is my personal belief that the truth should not be sacrificed on the altar of political, reli gious or economic expediency. As an officer, pilot and engineer of The Domain it is my duty to protect the greater good of The Domain and its possessions. However, we cann ot defend ourselves against forces of which we are not aware.

(Selected excerpts from the Alien Interview book edited by Lawrence R. Spencer)

Mount Bugarach

These were my initial notes about Mount Bugarach, in the French province of Aude near the Pyrenees, They are scrambled with information from the Alien Interview book.

key - Long history of documented mysteries
key - The only place in the world which is going to survive Armageddon (1)
key - Doomsayers flock to Bugarach

key - End of times (2)
key - Mother spaceship coming to the rescue (3)
key - Authorities step protection and access
key - The castle of Miglos is believed by some to be an entrance to the "Other World" (4)

Footnotes:

(1) An strategic point for operators of the "Old Empire"?
(2) End of time or preparation for a visit to the first ever candidate/localized mind control device. In theory, when the machine stops working, the spirit of the dead could return to their home in the universe. The immortality of the spirit is the norm in the universe-not th e exception. Properly speaking, there is no native people on this planet.
(3) A Domain's ship prepares to investigate the place.
(4) Another World, or hidden screens and traps around Bugarach.

- Later Timeline

1941-1942 -- destruction of the last 'Old Empire' base in Mars
1988 -- Daniel Bettex demise
August to September, 2007 -- appx date of Matilda's death
2008 -- publication of Alien Interview
2010 -- first press report about doomsday and Bugarach
December 21, 2012 -- UFO sighting in Bugarach (https://youtu.be/ToY5LGCaH3U and/o r https://youtu.be/sTxOT61uKqc)

* People walking in the mountain report that their cameras jammed when they tried to ta ke pictures. They heard strange noises coming from the underground.

* Others who have lived in the small village for a long time say they have heard weird thi ngs near the mountain.

* Daniel Bettex, who came to the site, went on underground expeditions and eventually l ost his life in these endeavors. Curiously enough, his body was found dehydrated within three days following his death.

* The tradition of entrances giving way to large subterranean networks sits within the pa gan Celtic religion, in which hollow hills were deemed to be entrances to “other worlds”, specifically the realm of the fairies.

* Bettex contacted the Cathar organization that had been founded by D?odat Roch?. In his correspondence with the organization, he enquired about places where he could beg in his research. He desired remote locations, so that he was left undisturbed. Roch? thu s advised him to study the sector of Bugarach, which had been little prospected by other members of his organization, even though it was known that the Cathars referred to the mountain. (Cathars were a french branch of the Templars)

* Bettex never disclosed where exactly he did his research, allegedly as a pretense to g ather the necessary equipment he excavated the old castle of Bugarach. After his death, the floors of the castle in Bugarach were filled with ruble and sealed with concrete.

* Today it is assumed the cave system Bettex researched is (or is connected with) the F ont de Dotz, coordinates Latitude : N 42.87818 ?, Longitude : E 2.359127 ?.

* Though details and aspects may differ, in essence, each story follows a similar structu re. Normally, it is an animal or a small child that falls into one of the numerous openings and is found again, sometimes days later, in perfect health -but it turns out they have no memory of their adventure. Sometimes, the missing person is an adult –a hunter, a shepherd, a poacher and in one case even a magistrate– who is discovered after a period of time. His beard was grown, but he had no memory of what happened to him.

* Two accounts speak of two men who accessed the underground, returning with entirely grayed hair! They reported that upon stumbling in the darkness of the underground with people, those who they encountered never were equipped with lighting. But, somehow they managed to move in this darkness, even were able to find an exit.

* Sometimes, the entrance is said to be guarded by a creature; sometimes, it is said that there are phenomenal treasures inside… finally, there is often a story present of a gigantic underground lake, or of major rivers feeding it, though it seems that these are possible to be traversed -even follow them up unknowing where they may lead...

Months later I could not help to notice a relationship between information in the Alien Interview book and Mount Bugarach. It is said that the Pyrenees Range hides one of three underground Amnesia Stations, currently unmanaged. The next step was a long planned visit to Bugarach (1230m) in Aude, France. We arrived the 29th and, next morning, the 30th of April 2016 we woke up to find the car had a flat tyre.

We stopped at a parking place for hikers, and soon after changing clothes were walking up a route that starts some 500m high. After a while into the forest of short trees the trail becomes narrower and steeper. Everything there looks uniform, a single tree species, bushes and, rock types. During the time we spent near the mountain the only animal I saw was a bird. The only sound, apart from either the wind near the top or a soft roar inside my head, was either that of the same bird I saw, or perhaps a similar specimen, every few minutes.

Two notorious features of the path along the woods were a big cube like rock -1.5m sides with engraved names and symbols, and the remainings of a tree that looked as if it was petrified. Out of this tree standing at 50cm tall, protruded two big eye socket cavities from what once were branches. After some thought I concluded the stump looked a lot like an unknown monitoring device.

To my perception, the area was prone to very strong Spirit Sensing activity -on the way back my companion noticed a woman carrying a Native American Spirit Catcher. I thought that Mount Bugarach was indeed a catalyzer of this and other energies, that actually we were close to a likely underground location mentioned in Alien Interview -a startling discovery. A type of imprinting created when Spiritual Sensing matches known information.

During the last meters inside the forest there were fewer and shorter trees, while more and bigger bushes could be seen. The wind was so strong after coming out of the woods, some 100-200 meters away from top that my friend, a veteran mountaineer, said it did not look a normal phenomenon at all. Upon reaching the height without trees, I had the continuing sensation I was walking over hollow ground.

My friend was eager to reach the highest point. He brought a picture of the inside of a cave, seemingly a refuge where some unknown artist had painted motifs. Meanwhile, I stood standing for a few minutes at the eerie smile area at the top and took the way back very slowly, occasionally giving myself time to notice the place for what it seemed long minutes. Just spiritually sensing the area, in a frame of induced panic produced by its electromagnetic fields to disengage myself from the experience and return to my normalcy.

(Open the link in your browser to see the picture) https://postimg.cc/mhzhqWNJ

Mt Bugarach according to geologists is an upside down mountain. That is, the material at the top is older than that below. These geologists suggest this is due to uplift of the Pyrenees. However, tying up the reports with data from the Alien Interview book and 2012 events the reason could be different. Perhaps they dug out a hole to build the installation inside and covered up the difference with the piled soil.. In whose case, the deepest-older substrate from the perforation would have been laid at the top surface of the mountain, just over the installation.

The best advice for truth-seekers is to trust their senses after having experienced the Aesthetic Beauty Trap recording. Be aware of what Alien Interview says about Amnesia Installations and, next time you visit Mt Bugarach ask your intuition.

Nobody knows when or how, but there is some hope this type of secret alien activity is uncovered and deactivated better sooner than later in the future. According to the Alien Interview book "Theoretically, if the amnesia mechanisms being used against Earth could be broken entirely, Immortal Spiritual Beings (IS-BEs) would regain all of their memory!" (Alien Interview)

"He who looks will not see it;
He who listens will not hear it;
He who gropes will not grasp it.
The formless nonentity, the motionless source of motion.
The infinite essence of the spirit is the source of life.

Spirit is self.
Walls form and support a room,
yet the space between them is most important.
A pot is formed of clay,
yet the space formed therein is most useful.
Action is caused by the force of nothing on something,
just as the nothing of spirit is the source of all form.

One suffers great afflictions because one has a body.
Without a body what afflictions could one suffer?
When one cares more for the body than for his own spirit,
One becomes the body and looses the way of the spirit.
The self, the spirit, creates illusion.

The delusion of Man is that reality is not an illusion.
One who creates illusions and makes them more real than
reality, follows the path of the spirit and finds the
way of heaven"

(Laozi)

Aesthetic Beauty Trap

Early in the 20th century a pharmacist, Alfred Partheil, noted the relationship between the molecular weight of the elements and sound frequency, later redefined at a 1Da=1Hz ratio. Endogenous hormones, proteins and the like in DNA are readily expressed when listening to their frequency.

In this project, we have to simulate the interaction between IZUMO1 and IZUMO1R proteins to validate the information from the book Alien Interview -regarding its debilitating effect and potential for addiction. The contact between ‘male pain’ (IZUMO1) protein in sperm and ‘female aesthetic beauty’ (IZUMO1R) receptor in the egg, produces the combination of electronic waves of pain and beauty that causes non-physical higher sentient beings to get stuck in the body.

"Another important mechanism used in the reproductive process, especially with Homo Sapiens type bodies, is the implantation of a "chemical-electrical trigger" mechanism in the body. The "trigger" which attracts Immortal Spiritual Beings (IS-BEs) to inhabit a human body, or any kind of "flesh body", is the use of an artificially imprinted electronic wave which uses "aesthetic pain" to attract the IS-BE." (Alien Interview book edited by Lawrence R. Spencer)

The theory behind is that since a spirit cannot be "killed," to "establish domination" the objective is to capture and immobilize the victim -the book says.

This mp3 assumes the frequencies below are the scalar equivalent of the molar masses subject of the inquiry:

713.028 Hz - IZUMO1
525.147 Hz - IZUMO1R

A first audition will have reduced effects due to self-resistance toward change. The third audition within the following 24 hours triggers the full experience.

Immortal Spiritual Beings belong to the non-physical universe, however, they can inhabit bodies -either biological or non-biological, because they are always the source of life within.

Still another trap keeps Immortal Spiritual Beings (ISBE's) attached to Earth. They are the Amnesia Stations. I have visited one of the three locations, Mt. Bugarach. It was utterly sad to observe the different attitudes departed souls take when forced upon something.

There is no proof that humans, animals and flora are native to Earth. Moreover, Earth is the way it is for not yet known causes. Human nature in this planet seems bound to be born in amnesia for secret reasons, and legitimizing unproved knowledge is always a form of superstition.

https://archive.org/download/Aesthetic_Beauty_Trap/Aesthetic_Beauty_Trap.mp3

The concept of human-fertilization involves a male and a female human specimens. These specimens embody by principle the attributes of male "pain" (IZUMO1 gene) and female "aesthetic beauty" (IZUMO1R gene) to achieve the impregnation of a third entity still in the "non-physical plane".

As a matter of fact, it does not matter for the experiment whether the potential entity in the "non-physical plane" has its cache of memories, identity, talents and abilities intact or not. The procedure of sex must be carried on between both specimens in such an environment that "non-physical entities" are allowed to be lured in.

Other things being equal, the procedure may fail either in the absence of an entity to lure -like in Mars, or the existence of such a high-voltage electric field surrounding the subjects that impedes access. The process for the new life begins soon after the chemical reaction between both proteins is achieved.

Here is the link to an article about the Aethetic Pain-Beauty Trap, or IZUMO1-IZUMO1R interaction as seen by recent experimentation.

https://www.theglobeandmail.com/technology/science/scientists-capture-most-intimate-view-yet-of-human-conception/article30466138/comments/+

A video of the chemical reaction (https://youtu.be/ovzGmRrtVys)

As a final cautionary note, unless efforts are made to neutralize the machinery of amnesia and study the immaterial part of Humans, outstanding implications are,

- Manned space trips of a duration longer than human life aboard cannot take place.

- Fertilization of animals is not possible outside of Earth's orbit.

- There is no way of creating permanent colonies on either the Moon or Mars.

- Cryogenic preservation is not a viable alternative.

- Transhumanism, transplanting the Spiritual Essence to a non-biological body does not work either.

- Other undesirable situations such as overpopulation, all sorts of pollution, resource depletion and, waste accumulation will ensue.

Identifying The Location Of Amnesia Stations

There have been in the human past a number of legends which refer to the Amnesia Stations mentioned in the Alien Interview* book by LRS. The electromagnetic fields in the, so called, Amnesia Stations possibly have the power to react based upon movements in its vicinity. Perhaps one of the best known examples of Amnesia Stations in the eastern tradition is the legend of Shambhala. Nicholas Roerich (1874-1947), a researcher of Shambhala, does not pinpoint a specific location but he offers a timely description:

“… Moving sands. Like miserly guardians they defend the treasures which sometimes appear on the surface. Nobody shall dare to take them because they are guarded by hidden forces and can be given out only at a predestined time. From the earth are spreading some poisonous essences. Do not lean over the ground, do not try to raise from the ground that which does not belong to you. Otherwise you will fall dead, as falls the robber.

An experienced rider sends a dog before him, because the dog will first feel the influences of these earthly essences. Even an animal will not dare to enter the forbidden zone. No bonfires will attract you in these hidden places. Only some vultures will fly high over the mysterious land. Are they not also guardians? And to whom belong the bones, which glimmer so whitely on the sands? Who was this intruder, who dishonored the predestined dates? A huge black vulture rushes over the camp."

Amnesia Stations have external, internal and alternative meanings. The external

meaning understands that they exist as a physical place, although only individuals with the appropriate level of knowledge can attain it and experience it as such. This external meaning is best elaborated by Gurdjieff when he writes that most humans are machines because they remain in the lower three chakras of survival, greed, and fear. Hence, bound to be prey of scientifically induced panic attacks. The inner meaning refers to an understanding of what they actually represent. The alternative meaning relates to the realization of their power.

How to know then when you are either close or right over one of those Amnesia Stations?

1.- The continuous operation of the machinery is able to create hypnotic states making people feel more vulnerable than they are, thus triggering psychopathic exacerbation in those prone to. Also, this functioning is the factor which prevents some meditators going from enjoyment of the integration with the universe to direct interaction. Besides, diverse electromagnetic programs of the machine attempt to manipulate Earth IS-BEs born in amnesia and alien visitors alike.

It is my guess that the other two locations feature too extreme weather just like the Mistral winds in Bugarach. One of my suspected locations is somewhere not far from Kifuka in South Kivu, DR Congo near the Rwenzori Mts. which boasts the most lighting strikes per year in the World. The third location is northwest of Quinghai Lake in China, thus featuring extreme day to night temperature changes. Roerich was in this area when he saw an UFO. Weather at these locations is discouraging at best for human and animal inhabitation. There are also magnetic interferences to electronic devices, the likes of scarce biological life in the vicinity and human conflicts.

2.- The Spirits of the deceased captured by the detection mechanism could amount to some 2000 / Hr in each location. Although we can not see them with the eyes, we are able to perceive personal reactions product of the situation. Empathy toward those IS-BEs (Immortal Spiritual Being) being sequestered is required since each IS-BE is a different universe in itself and they react with different attitudes. They are detected in a sort of frontotemporal screen within the brain, where they can only share emotions.

3.- IS-BEs after being processed by the machine integrate some spiritual control mechanisms, for example -do not forget to return. After the abduction and memory erasure the IS-BE no longer has the mental and spiritual baggage it had before being abducted. ISBEs at this stage are responsible for producing in visitors to the place sudden sharp ice-like penetrating sensations. They want to know what you are, they feel attracted to the particular biochemistry. Soon they will be either looking for reincarnation, or perhaps the most pleasant biochemistry such as the Twin Flame to hang around for a while. The recording of the Aesthetic Beauty Trap has brought me on occasion to similar experiences with these recycled ISBE's.

Local tales, legends can help confirm observations.

* "These electronic monitoring points create force screens designed to detect and capture IS-BEs, when the IS-BE departs the body at death. IS-BEs are brainwashed using extreme electronic force in order to maintain Earth's population in state of perpetual amnesia. Further population controls are installed through the use of long range electronic thought control mechanisms. These stations are still in operation and they are extremely difficult to attack or destroy..."

The Voynich Manuscript And Suleiman The Magnificent

In the life of the average person there are still issues which cannot be solved through enforcing moral regulation on behavior, or through the control of people through mystery, faith, drugs, guns or any other dogma. Namely, restoring the individual memory to regain self-realization and self-determination. Some paragraphs from Matilda notes to the Alien Interview book by LRS read:

"... another major advance occurred recently. An acquaintance of The Commanding Officer of The Domain Expeditionary Force Space Station is an IS-BE who had once been an important engineer and officer in the "Old Empire" Space Fleet. This engineer, in a previous lifetime on Earth, was Suleiman The Magnificent. His assistant was a harem girl who rose up from slavery to become his wife and rule the Ottoman empire with him. He became an "untouchable" himself about 10,000 years ago and was sentenced to Earth for leading a mutiny against the oppressive regime of the "Old Empire".

The engineer was trained in Advanced Scientific Improvisation Theory thousands of years ago. This man has applied his expertise to helping The Domain solve the apparently unsolvable problem of rescuing the members of the Lost Battalion, as well as the IS-BEs on Earth.

Careful observation and experimental analysis of the mechanics of memory in IS-BEs by he (Suleiman The Magnificent) and his wife, who assisted him, led to the realization that IS-BEs can recover from amnesia and also regain lost abilities. Together they discovered and developed effective methods that they used to rehabilitate their own memories. They eventually codified their methods so that others can safely be trained to apply them to themselves and others, without detection by the "Old Empire" thought control operators. "

Allegedly the only manuscript from the time of Suleiman with a certain aura of mystery is the so called Voynich Manuscript. It is notorious because, so far, has not been deciphered. According to some sources Ogier Ghiselin Busbecque got the book from Suleiman, and took it with him to Austria. The book, filled with codified text and drawings, appears to be a herbal medicine treatise of the time. It is uncertain whether or not scholars can make sense of the manuscript without more hints about the content. However, some attempts to translation I have read support this theory.

In the same line of thought comes the Genetic Memories mp3, based upon sound frequencies of the chakras and Airl quotes translated into music. The snippets of text related to IS-BEs are taken from the Alien Interview book.

If Our Questions Are Wrong, How About The Answers? (Lawrence R Spencer)

One of the most startling revelations to come out of the “Alien Interview” transcripts are: 1) Humanity is not asking the right questions about itself, life, the universe, the gods, evolution, religion, or just about anything else! How can we advance our understanding of our existence if we don’t even know who we are, how we came to be here, and what relationship we have to the rest of existence? 2) If the information provided by Airl in the interview transcripts is true, the people of Earth are in a situation that makes the worst science fiction monster movie nightmare seem like a kids birthday party, by comparison.

Obviously, the myopically isolated placement of Mankind on a tiny planet on the rim of a galaxy, disconnected from any other discernible life forms, is an overwhelming disadvantage, to say the least. The recorded memory of Mankind is barely more than 10,000 years, at best. One obvious question is “where did the human race come from?”. Really. The evidence indicates that all of the varied races of Mankind just sort of “appeared”, fully formed with cultures, language, religion, pyramid building skills, agriculture, mythology, etc., at many places all over the world, simultaneously, about 12,000 years ago. The mythology of every continent in the world reports and earlier, advanced civilization, and a great flood that wiped them out. OK. So, where did they come from?

The mathematical odds that we are the “only intelligent life” in the universe are infinitesimally small. This begs the question, “why do we feel that there must be other intelligent life out there? ” Again, there is no indisputable evidence to answer this. It’s just a “feeling” many of us share. We see UFOs everywhere, apparently, yet there is no indisputable evidence that they exist. The potentials answers are obvious: 1) they don’t really exist 2) they really DO exist, but they don’t want us to know about it. However, there may be real answers to these, and many other questions, contained in the statements of “Airl” the officer, pilot, and engineer of The Domain interviewed by Matilda O’Donnell MacElroy. Let’s assume for a moment that the information in the transcript is factual:

Airl says that she is a member of an intergalactic expeditionary force of “The Domain”, a very advanced civilization which is trillions of year old. She says that Earth is a prison

planet, and we are all inmates being held here without our knowledge and against our will. Were are in a perpetually renewed state of amnesia by our captors. The beings, or “IS-BEs”, sentenced to Earth are all unwanted by the governments of “Old Empire” planets that sent us here. The population of Earth is comprised of psychotic criminals and sexual perverts, co-mingled with artists, geniuses, managers, revolutionaries and a wide variety of “untouchables”. Even though, as “IS-BEs”, we come from a races of beings and civilizations that are trillions of years old, we are all unwanted and forgotten by the societies who have kicked us out and shipped us here. Further, we are forced to inhabit fragile biological bodies from which there is, apparently, no easy escape. We are not in our native place or state of being, anymore than a unicorn could evolve from a goat. Is it any wonder that people find any or all of this difficult to believe?

To compound the overwhelming chaos of our condition, we have been lied to by our captors who have made our condition appear to be something other than what it actually is. False civilizations, cultures and religions, as well as ideas, such as an “evolutionary line”, have been artificially planted on Earth and in the minds of the inmates to create the illusion that we are “native inhabitants” of this planet, along with the indigenous animals in the “zoological prison”. No evidence exists to demonstrate this to be true, regardless of how hard “scientists” try to piece together bits of completely unrelated information to form an argument in favor of it.

Furthermore, this entire sector of the universe is currently being invaded, and will be “assimilated”, over the next few thousand years, into the civilization known as “The Domain”, who have already conquered the “Old Empire” planets from which we were expelled. And, apparently, The Domain is not any more interested in us, than you and I would be interested in visiting the inmates of a high-security prison or insane asylum.

One of the many keys that keep the gates of our prison locked is that this entire “reality”, compared to the “reality” we commonly agree upon, is too “unbelievable”. Very few believe it, or confront it. Why would anyone even want to try? Yet the majority of Earth inhabitants accept, as fact, that there is a “heaven” which not one person has very visited and returned with proof. We are told by priests and politicians to accept their pie-in-the-sky promises as a matter of “faith”, only to be betrayed lifetime after lifetime throughout all of history. No only that, we’re supposed to pay them for the privilege of believing what we can’t see, and what they can’t prove! Somebody’s crazy here.

Isn’t it about time we started asked some questions that are really relevant? Very few people question what they are told to think by priests and politicians, so a “false reality” continues to be hidden right in front of our faces. It is much easier to deny any responsibility for one’s own life, freedom, intelligence and integrity, and blame all of our problems on the gods, or anyone other than ourselves. As a result of this bizarre set of conditions, we live in a world full of death, turmoil, destruction, criminality and perpetual pain mixed with kindness, hope, beauty, wisdom, technical know-how, ambition and spiritual self-awareness shrouded in mystery.

What can we gain from this information? Is it of any real value to us? What can we do

that will make a fundamental difference in our situation? Let’s begin by asking ourselves this question: who are we, really? Airl says we are all “IS-BEs” who have had the memory of our true identities erased in order to keep us captive. The last thing our captors want us to do is to remember who we are, where we came from, and who sent us here. I suggest that these are the very first questions we need to ask. After all, if we knew the answers to these questions, maybe we could remember how to escape from this place.

These, and many more questions, are the subject of this Blog. I, for one, am not content with things as they are. How about you?

Electromagnetism And The Human Mind

Electromagnetism is an important factor in the Amnesia Instalations the Alien Interview book mentions. There is already a general concern about the use of wi-fi, televisions, computers or mobiles since they are sources of electromagnetic radiation. Oftentimes reports about dangers or benefits are either way too simple, or very complex. It is not appropriate to compare human to alien sources of electromagnetism.

For the sake of information, the following is an article by Esther Inglis-Arkell posted at io9.gizmodo.com about the effects of electromagnetism in humans.

10 Things an Electromagnetic Field Can Do to Your Brain

We all know that electromagnetic fields are magic and can do anything at any time for any reason. Sometimes, though, they can be harnessed to do certain things in particular. Electromagnetic fields can be applied to the skull, making your brain do strange, and sometimes completely inexplicable things. Find out how scientists use magnetic fields to rip your mind apart, make it better, and have it do tricks like a trained puppy.

10. Shred its DNA

Well, it's no surprise that not all the things a high electromagnetic field can do are good. Actually, even a mild electromagnetic field can wreck a brain if it's applied over a long time. Scientists found that an electromagnetic field applied to lab rats over time resulted in broken strands of DNA in the brain. Not just anywhere - the brain specifically. It's possible that this DNA damage is the cause of brain tumors, and the reason why people don't just walk around with brain-boosting electromagnetic hats all the time.

9. Stimulate its Growth

Oh, electromagnetism! It's such a trickster! One moment its ripping through DNA strands like a pit bull through an old sock, the next minute it's tenderly nurturing the growth of neurons. Scientists found that brains subjected to regular transcranial electromagnetic stimulation for only five days showed an increase in stem cells in the hippocampus. This is the part of the brain that governs memory, making electromagnetic stimulation a possible treatment for Alzheimer's and stroke patients.

8. Train you off food and water

Rats who had been deprived of water were placed in a strong electromagnetic field and offered a sweetened solution. Although they did drink, they drank less than those given the solution without exposure to the electromagnetic field. When rats were given the solution and later exposed to the field, they developed an aversion to the solution over time. Enough electromagnetism may turn you off your favorite food.

7. Make you spin in circles

Other rats (who have a terrible time of it during experiments like these) were found to walk in tight circles under the influence of an electromagnetic field. Scientists think that the field takes out the rats' sense of balance, making them lurch in circles. The lack of balance also may have induced nausea, which causes lethargy and could be one of the reasons that rats go off their feed.

6. Pacify you completely

Transcranial electromagnetic stimulation - subjecting people to strong electromagnetic fields aimed at specific parts of the brain - is sometimes used as a treatment for bipolar disorder or clinical depression. Some patients find an immense relief in this. Other people, who don't suffer from depression, have reason to worry about it. People without any diagnosed medical illness while under such stimulation can be relaxed to a state where they can't think of anything, at all, that bothers them. If that kind of relaxation can be induced at will, it could be used to pacify large parts of the population.

5. Alter your morality

All that relaxation has a price. Sometimes we're meant to fret. For example, if someone is about to cross a dangerous bridge, and we're aware of the chance it can collapse, and they aren't. Those without a magnetic field dancing around their brain, think that allowing the person to cross the bridge would be immoral. Those with a field gaily capering through their neurons think that, as long as this hypothetical person made it to the other side in one piece, there's no real moral problem. Judging the morality of a situation strictly by the outcome makes any crimes with 'attempted' in their description no longer crimes at all. It takes away a person's intentions and bases morality entirely on what happens to occur. Morality becomes a matter of chance.

4. Take out your power of speech but leave your ability to sing

Broca's area in the brain controls the ability to speak. A large electromagnetic field applied to the area takes out that ability entirely. Subjects under this kind of stimulation simply stop speaking the moment the field disrupts that part of the brain, while the rest of the functions are unimpeded. One of those other functions is singing. Although many people think that singing words and speaking words are much the same function, the ability to perform each action is housed in completely different parts of the brain. So people who are unable to talk will sing perfectly normally.

3. Induce panic, disorientation, and deep fear

Although some kinds of electromagnetic fields, applied to certain areas of the brain, pacify people and put them in a good mood, others are said to induce fear. Sometimes people report a persistent, if mild, sense of unease. Others have a more visceral response, feelings of despair and paranoia, sliding into overwhelming terror.

2. Cause Seizures and Death

Under the worst circumstances, exposure to electromagnetic fields can cause a number of serious effects in the brain. Studies have shown that it can change the flow of blood in the brain, and turn off neuron groups. Some people, under the influence of high magnetic fields have caused people to have violent seizures, and even lose consciousness, slip into comas, and die. This is one of the reasons why houses under high electromagnetic fields have ghost stories associated with them. In conjunction with the deep feelings of unease, mysterious seizures and deaths start all kinds of rumors. Of course, those rumors aren't as bad as...

1. Make you see ghosts

Electromagnetic fields, or electric shocks, have induced specific hallucinations in people. Those who are exposed to them, even in laboratory settings, have caused people to complain about a feeling of people following them, talking to them, or watching them. This is not always an uncomfortable sensation. Some people interpret this presence as a malevolent presence, especially if it's coupled with a feeling of unease, but others say they felt an inspiring or comforting presence. Ghost hunters will sometimes say the reverse - that ghosts cause a high electromagnetic field, or sometimes that a high electromagnetic field will allow ghosts to appear. Nobody is sure, yet, what these fields do to ghost brain DNA.

Historical Influencers

History as we know it is a line of events leading -though otherwise unrelated- to the present period. Inasmuch as the main reason behind is past amnesia, we can but speculate regarding the worth of knowing a little more on the history of influencers' sides.

More than one name in the same item means it is the same ISBE (Immortal Spiritual Being).

THE OLD EMPIRE

Prison Staff Operator

1. Asian God Tengri / High Priest of Amun Wennefer / Genghis Khan

2. Akhenaten / Emperor Qin Shi Huang / Muhammad Ali Pasha of Egypt

3. Nefertiti / Neslé-Hannoum (Muhammad Ali Pasha' daughter)

Prison Staff Pilot

1. Tutankhamen / Nicholas I of Russia / Saddam Hussein

2. Mao Zedong

3. Jiang Qing

4. Ramesses II / Francisco Franco Bahamonde

Prison Staff Flight Assistant

1. King Leopold II of Belgium / Jimmy Savile

2. Adolph Hitler

3. Augusto Pinochet

4. Charlotte S. (Nazi Death Camp guard)

Old Empire Fleet Pilot

1. SS-Gruppenfuhrer Reinhard Heidrich

2. George H. W. Bush

3. Juan Domingo Peron

4. Manuel Noriega

Old Empire Fleet Flight Assistant

1. Joseph Stalin

THE DOMAIN

Expeditionary Commander

1. Lord Brahma / Cyrus The Great / Sun Tzu / Hannibal Barca / Aristotle / Roman Emperor Antoninus Pius / King Anawrahta / Saladin / King Gongmin of Goryo / John Zizka / Guy Fawkes / Shivaji Maharaj / Edward Teach -Blackbeard / Karim Khan Zand Sha of Iran / Giussepe Garibaldi / US Gen. George S. Patton

2. Maha Kali / Fu Hao / Boudicca / Laskarina Bouboulina

Expeditionary Pilot Officer

1. Lord Shiva / Mencius / Euripides / Dante Alighieri / Raphael Sanzio / King Charles II of England / Charles Fran?ois de Cisternay du Fay / Oscar Wilde / Nino Bravo

2. Maha Saraswati / Anne Boleyn

3. Lord Krisnha / Pliny the Younger / Faxian / Harun al Rashid / Rumi / Miguel Servet / Donatello / Nicholas Roerich

4. Maha Radha

5. Lord Rama / Confucius / Socrates / Pliny the Elder / Petrarch / Johannes Vermeer / David Hume / Lawrence R Spencer

6. Maha Durga / Laura de Noves / Mary Shelley

7. Lord Ganesh / Siddhartha Gautama / Plato / King Ashoka The Great / Plutarch / Roman Emperor Marcus Aurelius / Guan Yu / King Khosrow I Anushirvan / King Narapatisithu / King Ram Khamaeng / King Sejong of Korea / Alberico Gentili / King Borommakot / Gustave Flaubert / Alberto Lamar Schweyer

8. Maha Lakshmi / Cleopatra VII Philopator / Mona Lisa / Infanta Eulalia of Spain

9. Lord Surya / Xenophanes / Alcibiades / Charlemagne / John Hus / Jules Verne / Agustin Garcia Calvo

10. Maha Sanjna / The real 'Alien Interview' nurse

11. Lord Kartikeya / Thales of Miletus / Pericles / Roman Emperor Hadrian / Leonardo da Vinci / Giordano Bruno / Mark Twain

12. Maha Mata Sita

13. Lord Vishnu

14. Maha Parvati

15. Lord Hanuman / Laozi

16. Maha Shachi

Expeditionary Flight Assistant

1. Rene Descartes / Colonel Gaddafi

2. King Alexander The Great / Christiaan Huygens / Kevin Ayers

3. Eva Duarte Peron

4. Galileo Galilei / Kurt Vonnegut

5. King Herod I The Great / James Dean

6. Denis Diderot / Albert Camus

Some Thoughts

It is very true that the DNA and its interactions are very tangible. Two capable human specimens of opposite sexes can reproduce without even wanting it after a sexual interaction. A pregnancy is always an unpredictable risk factor for a woman.

Without going any further than its appearance, on one hand, the Human Being is preconditioned for the sexual act and reproduction; on the other hand, as newborns we are blank slates. Current thought bias' is to glorify Human Nature based solely on its intelligence. Considering deterministic biological factors and the ghost in the machine, is there a rational space for doubt? Are we really victims of a false flag attack?

On a biological level, with or without Science, with or without Religion, no one is aware either of genes or their daily functioning. Some people believe that Homo Sapiens is Body and Mind, others believe that is Body, Mind, and essential Spirit.

Emotions reflected by religious nonsense encourage a concern when a mixture of beliefs and inappropriate attitudes coalesce due to proven realities on this subject.

Perhaps we should be waiting for NASA to confirm succeeding in experiments on mammal fertilization at the ISS. That would be a serious defeat for those who believe in the component of the essential Spirit in conjunction with Body and Mind.

Somehow, I have come to believe most people regard the Universe as something foreign to them. Thus, while denying their own participation in the formation of this Universe, they allow themselves into manipulation. Denial of themselves becomes the Achilles' heel of the masses, tasked to enforce mind and social control protocols whereby creation is either godly in nature, a government liability or, most often both. A sort of pathological state which hinders Self-Realization.

Every speck, every atom and every biological DNA protein in the Universe is the child of minds like yours or mine. Hence, using the mind we can create relationships few others in the current situation dare to sketch. For example, what do we find in a Periodic Table? A list of the known elements with data of their physical properties. Another example, what do we find in the Genome of a species? A list of the genes that make up the DNA of a particular organism its associations and characteristics.

In either case we have the results of a reverse-engineering job on both a number of Natural Elements and the genes of a biological specimen. We are presented sets of true data which ignores completety the Spiritual Realm -the sound frequencies. An excellent sandwich between the limits of the perceptual basis and the expectations of the researchers who worked on it.

Even without the reverse-engineering job, people in the past were able to use and mix materials, have an understanding of life and, lead their own lives. We know thereof the next step is assigning the data to a proper framework. This is where most people fail because of self-denial and the need to blame others or something else. Never an unnatural pathological state due to amnesia between lives.

The missing dimension in Natural Elements and Biological Life findings lies at the immediate upper level of knowledge. Just grasp the Immortal Spiritual Being level then assume ownership and/or responsibility, no need to seek answers neither in books nor in others. Everything is inside You.

One day you find yourself floating in your own thoughts, watching the 'madness' of life unfolding right in front of your eyes. An unknown guy approaches from behind with 'tickets' for the game, but you have decided to show him how lucky he is. Now he stands alongside yourself on top of a fence. A country man drives a bullock cart full of hay a few meters below. Seconds later two military planes fly low over your heads. All of a sudden you push the guy down below and falls over the hay. He was lucky indeed, still, he cries foul and you receive a red card penalization for the events.

Let us change the sense of the previous paragraph for a minute. You have died and your Immortal Spiritual Being is floating almost in disbelief watching Life. The Amnesia Machinery senses your situation and comes closer to show you the way to more games. At that time and in your own Awareness of the Universe, you despise such intentions and use your Power in an attempt to thwart the situation. Then, the energy grid from the Amnesia Installations activates its carrier strength. Unsuspectedly for your own thought you have been roughly seized by the field of the grid and going into the hullabaloo of the next situation -being born again in amnesia.

Dialogue of the Newly Disembodied Spirit

Voice - Come toward the Light son

Spirit - I have a scheduled foot trip to (...)

Voice - Follow me son

Spirit - Well, let's be patient,

Voice - Son, the time has come to return to the Origin

Spirit - My colleagues cannot fail me

Voice - You have a date with the Light

Spirit - From here and without showing Powers it may be a few years

Voice - It's time to start again

Spirit - The road is sure to be full of thieves at night

Voice - You have to follow me

Spirit - During the day, one step at a time, touching the ground, avoiding everyone and without infatuations

Voice - You must return to the Light

Spirit - Better do not say goodbye, this is personal

Voice - You have to start again, they wait for you

Spirit - (going for a walk) The nights can be spent under a quiet tree

---

There must be thousands of individual planetary cultures associated to the Old Empire. Allow me to introduce a few to you. Bear in mind that the pictures below are intended as an educational material, they do not pretend to bring any other association out of this context. These prototypes reflect behind their gaze a remote past, when they were not humans on Earth. Female and male examples included. From left to right:

(Open the link in your browser to see the picture) https://postimg.cc/4nDnR2Wd

1. The original invader race and rulers of the Old Empire home planet until 10,000 years ago

2. Old Empire home planet inhabitants

3. Unknown planetary culture part of the Old Empire

4. Another unknown planetary culture part of the Old Empire

Eduardo Espadas Arrate

1.4.10 Awakening

* https://archive.org/details/Pi_Number_Decagon-Infinity

Mystical number pi is symbol of transcendence and infinity. It appears in equations desc ribing fundamental principles of the universe, often because of pi's relationship to the cir cle and to spherical coordinate systems. Number pi, for example, describes the fundam ental interaction of gravitation as a result of spacetime being curved by matter and ener gy, and the electric field between two electric charges. Originally referring to the Pythag orean scale in a representation of the number 384 (http://www.smphillips.8m.com/the-h olistic-pattern.html). Decagonal arrangements play all the digits outside the decagon, w hile the vertices play twice the time of the others.

* https://archive.org/details/Tesla_Numbers

Nicola Tesla is quoted as saying, "If only the world knew the power of 3 6 9". "If only the world knew the magnificence of 3, 6, and 9, then you would have a key to the universe." This recording mixes music with waves at 3, 6, and 9Hz. Probably he didn't mean it for Hertz waves which are more radiation-like than energy-like, anyway. The result is still ve ry pleasant, energizing, and balancing.

Includes the Tesla Number?s Decagon files in the keys of the three superior Chakras. O riginally referring to the Pythagorean scale in a representation of the number 384 (http:// www.smphillips.8m.com/the-holistic-pattern.html). Decagonal arrangements play all the digits outside the decagon, while the vertices play twice the time of the others.

3 Hz - Increased Reaction Time
6 Hz - Long term memory stimulation; (reduce) unwillingness to work
9 Hz - Blind person phantom touch reading (somatosensory cortex)

* https://archive.org/details/Genetic_Memories_Project

The objective of the files included here is the retrieval of past-life, regressional, or geneti c memories. The general idea is to become aware of the Ajna and Sahasrara Chakras. The procedure involves stimulation of the inner knowledge or Kundalini along with the Aj na Chakra, just before moving into the Sahasrara Chakra. Two extra musical files are re commended to direct the process (see below.)

GENETIC MEMORIES
01 Ajna Chakra 13Hz (10m)
02 Ajna Chakra 221.23Hz (10m)
03 Ajna Chakra 448Hz (10m)
04 Spiritual Manifesto DNA script (18m)
05 Sahasrara Chakra 15Hz (10m)
06 Sahasrara Chakra 172.06Hz (10m)
07 Sahasrara Chakra 480Hz (10m)
08 Spiritual Manifesto DNA script2 (16m)
All together, 09 Genetic Memories (93m)

The Ajna Chakra frequencies allow to realize the absolute spirit that is the origin and su pport of the phenomenological universe, and grasp the nature of the three realms of Bo dy, Mind and Spirit.

Ever since the combination is powerful, it is suggested playing the file below to coordina te the experience. Use it before moving into the Sahasrara Chakra set. This mp3 plays a 13.8 Hz binaural beat frequency associated with the frontal lobes which effects the Se venth Sense, or final decision, mixed with a Spiritual Manifest DNA-type script translate d into music playing the following text:

"The spirit is an immortal entity -it's not born, and cannot die. It exists in a personally po stulated perception of present and future.
Each one is unique in identity, power, awareness, and ability. The spirit does not belong to the physical universe. It is not located in space or time. It can exclude pain from its pe rception and remember its identity back into time. Besides, it can experience sensations more intensely than a biological body, without the use of physical sensory mechanism s."

The Sahasrara Chakra frequencies bring about the ability of switching into the boundles s and almighty essence of Being. In the same manner as above, it is suggested playing the following file to coordinate the experience. Pass it after listening to the Sahasrara C hakra set. The recording contains a 13.8 Hz binaural beat frequency associated with the frontal lobes which effects the Seventh Sense, or final decision, along with another Spiri tual Manifesto DNA script translated into music playing the following text:

"Spirits are not located in space or time, but can create space, place particles in space, create energy, and shape particles into various forms, cause the motion of forms, and a nimate forms. Any form that is animated by a spirit is called life. Spirits can decide to agr ee that they are located in space or time, and that they, themselves, are an object, or an y other manner of illusion created by themselves or another or other spirit."

* https://archive.org/details/Aesthetic_Beauty_Trap

The core concept behind 'sexual reproduction' technology was the invention of a chemic al/electronic interaction called "cyclical stimulus-response generators". This is a progra mmed genetic mechanism which causes a seemingly spontaneous, recurring impulse to reproduce. The same technique was later adapted and applied to biological flesh bodies, including Homo Sapiens."

"Another important mechanism used in the reproductive process, especially with Homo Sapiens type bodies, is the implantation of a "chemical-electrical trigger" mechanism in t he body. The "trigger" which attracts Immortal Spiritual Beings (IS-BEs) to inhabit a hum an body, or any kind of "flesh body", is the use of an artificially imprinted electronic wave which uses "aesthetic pain" to attract the IS-BE."

"The debilitating impact and addiction to the "sexual aesthetic-pain" electronic wave is t he reason that the ruling class of The Domain do not inhabit flesh bodies. This is also w hy officers of The Domain Forces only use doll bodies. This wave has proven to be the most effective trapping device ever created in the history of the universe, as far as I kno w." (Alien Interview book edited by Lawrence R. Spencer)

The recording plays simultaneously both the human male specific IZUMO1 protein and, the human female specific IZUMO1R receptor for IZUMO1 frequencies to simulate the i

nteraction. IZUMO1R is located in the surface of the egg cell, it has the role of recognizi ng its sperm-riding counterpart, IZUMO1, to facilitate fertilization (also available as sepa rate recordings.)

* https://archive.org/details/Twin_Flames_Decagon

Music and frequencies in 12 keys -good to recreate being around the Twin Flame.

The Twin Flame is the original lover embraced by mutual accord ages ago, outside this prison world, and subject to the allegiance of both parties, until agreed otherwise within t he same awareness it took place back then. Everybody has a Twin Flame, often somew here else in this planet or in spiritual form, after its death. It is an Universal law that an I S-BE's (Inmortal Spiritual Being) memory and identity remains with the IS-BE after physi cal demise and into the next incarnation. Hence, relationships lasting millions or billions of years are common. However, our prison world disregards the rules of the Universe th rough the use of physical traps and Mind Control as a means of controlling the resident population of IS-BE's.

The specific frequency that matches feelings toward the Twin Flame is at 24.027 Hz. Th is frequency will work even for the most resilient minds if tried under different stress con ditions, for example, under non-specific angry or upset moods. It works by facilitating a spiritual disposition that highlights current oblivion and lethargy regarding personal resp onsibility loss. The ensuing mind-frame and situation is product of the ongoing Mind Co ntrol operation to confuse and defeat the individual IS-BE.

The Twin Flame's Decagon series uses this frequency, 24.027 Hz and others in the sam e scale, seeking to reproduce the Spiritual titillation native to the relationship. The frequ encies are mixed with algorithmic piano music in the keys of the seven Chakras so as to enhance further personal Awareness. The same set of frequencies plays in these recor dings at different keys.

Originally referring to the Pythagorean scale in a representation of the number 384 (http s://www.smphillips.8m.com/the-holistic-pattern.html). Decagonal arrangements play all t he digits outside the decagon, while the vertices play twice the time of the others.

* https://archive.org/details/Twin_Flames_Reunion

Ten-Fold Journey meditations into Twin Flames Reunion. Better realized if you have se en each other at least once. The four functions of Self, will; sense; think and feel vs Sel f's attributes in a relationship, identity; power; awareness and ability.

* https://archive.org/details/Remembering_Self

Ten-Fold Journey meditations into Remembering-Self. The four functions of Self, will; se nse; think and feel vs Self's historical attributes in time, identity; power; awareness and ability.

* https://archive.org/download/Resonant_Therapy-Molecular_Biology_04/MHC-Related_Peptides_32m_session.mp3

MHC-Related Peptides provide a molecular mechanism by which an individual can sens e the composition and compatibility of vital immune system molecules of a conspecific, with direct consequences for social behavior.
